Change Log

Date	Change Description
2024-03-08	Initial release.
2024-03-26	Updated Getting started on page 8 , Program guide on page 12 , and Deploying FortiFlex on page 24 .

Introduction

FortiFlex allows you to easily manage VM usage entitlements. You can use the FortiFlex portal to create VM configurations, generate licensing tokens, and monitor resource consumption in the form of points.

FortiFlex subscribers can create multiple sets of a single VM entitlement that corresponds to a licensed virtual machine. Resource consumption is based upon predefined points that are calculated on a daily basis (PST/PDT time zone).

Virtual Machines with usage entitlements require a per-VM unique token to be installed on every VM. These tokens can be injected into the VM once the configurations and vCPU quantities are defined in the FortiFlex portal, and the VMs are deployed on the customer-managed platform in supported clouds and hypervisors.

FortiFlex v24.1.1 release information

New features and updates in v24.1.1

Access the points calculator through an API endpoint

The points calculator can now be accessed through an API endpoint, providing the current price, latest price, and the effective date for the latest price.

See [Points calculator on page 64](#).

FortiEDR MSSP updates

The FortiEDR MSSP product type now includes XDR as an add-on. The number of EDR and XDR endpoints are the same when creating a configuration.

See [Configuration details on page 45](#).

Getting started

Review the following content when getting started with FortiFlex:

- [Program requirements on page 8](#)
- [Registering FortiFlex on page 9](#)
- [FortiFlex Portal on page 10](#)

Program requirements

The FortiFlex program requires the following items:

- A primary FortiCloud account or IAM user account.
- FortiFlex Program SKU (either Enterprise/prepaid or MSSP/postpaid) purchased from Fortinet's resellers and distributors.
- FortiFlex Point Pack SKU (only applicable to Enterprise/prepaid) purchased from Fortinet's resellers and distributors.

Version and feature support

FortiFlex is supported in the following Fortinet solutions.

Product support

FortiFlex can be used to create VM usage entitlements for the following products:

- FortiOS 6.4.3 and higher
- FortiWeb 7.0.1 and higher
- FortiManager 7.2.1 and higher
- FortiAnalyzer 7.2.2 and higher
- FortiPortal-VM 7.0.3 and higher
- FortiADC 7.4.0 and higher
- FortiClient EMS 7.2.2 and higher
- FortiWeb Cloud 23.3.a and higher

Version support

FortiFlex licensed devices are supported in the physical and virtual versions of FortiManager and FortiAnalyzer.

- FortiManager 6.4.3 and higher
- FortiAnalyzer 6.4.3 and higher

VDOMs

FortiFlex natively supports VDOMs and no longer requires perpetual licenses.

You can add and stack up to 500 VDOMs to FortiGate-VM regardless of its CPU capacity. The number of VDOMs to be added is determined by VDOM license you purchased.

FortiFlex supported VDOMs in the following products:

- FortiOS 6.4.9 and higher

FortiToken

FortiToken is supported on FortiFlex FortiGate-VMs.

Registering FortiFlex

FortiFlex is an annually contracted program that can be registered through the FortiCloud Asset Management portal.

FortiFlex program-related SKUs are available for purchase from Fortinet's resellers and distributors. There may be certain conditions to be eligible to join the program. Consult your Fortinet sales representatives.

To register FortiFlex:

1. Log into your FortiCare account. The *Asset Management* portal opens.
2. Go to *Products > Product List*.
3. Click *Register More* and follow the steps in the registration wizard.
4. Log out of your account after the registration is complete.

For information about product registration, see [Registering products](#) in *Asset Management Administration Guide*.

The program begins on the date of registration. It may take up to four hours for the registration to validate in FortiCloud.

To access the FortiFlex portal:

1. Log in to your FortiCare account. The *Asset Management* portal opens.
2. In the banner, click *Services > Assets & Accounts > FlexVM*.

To view your FortiFlex license:

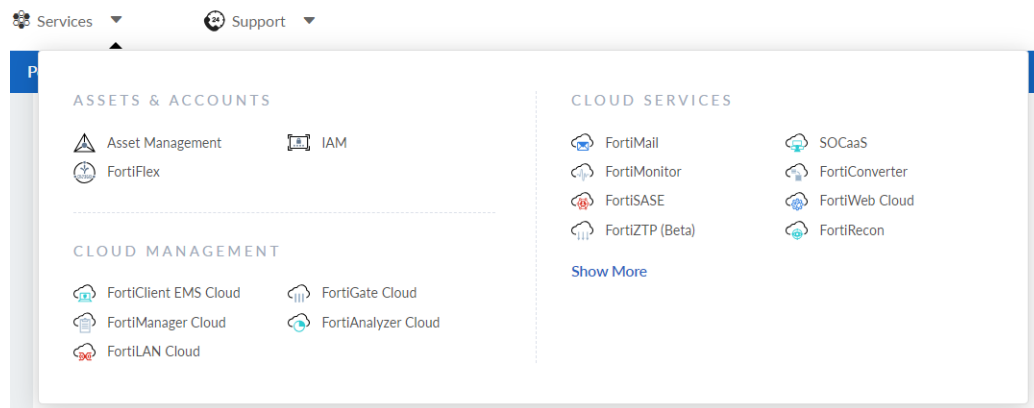

1. Log into your FortiCare account. The *Asset Management* portal opens.
2. Click *Account Services*.

FortiFlex Portal

The FortiFlex portal allows you to monitor point consumption, configure virtual machine entitlements, create licensing tokens, and run reports.

Accessing the portal

You can access the FortiFlex portal from the *Services* menu in Asset Management. The FortiFlex option appears in the *Asset & Accounts* section when there is a valid FortiFlex license.

Adding a secondary user

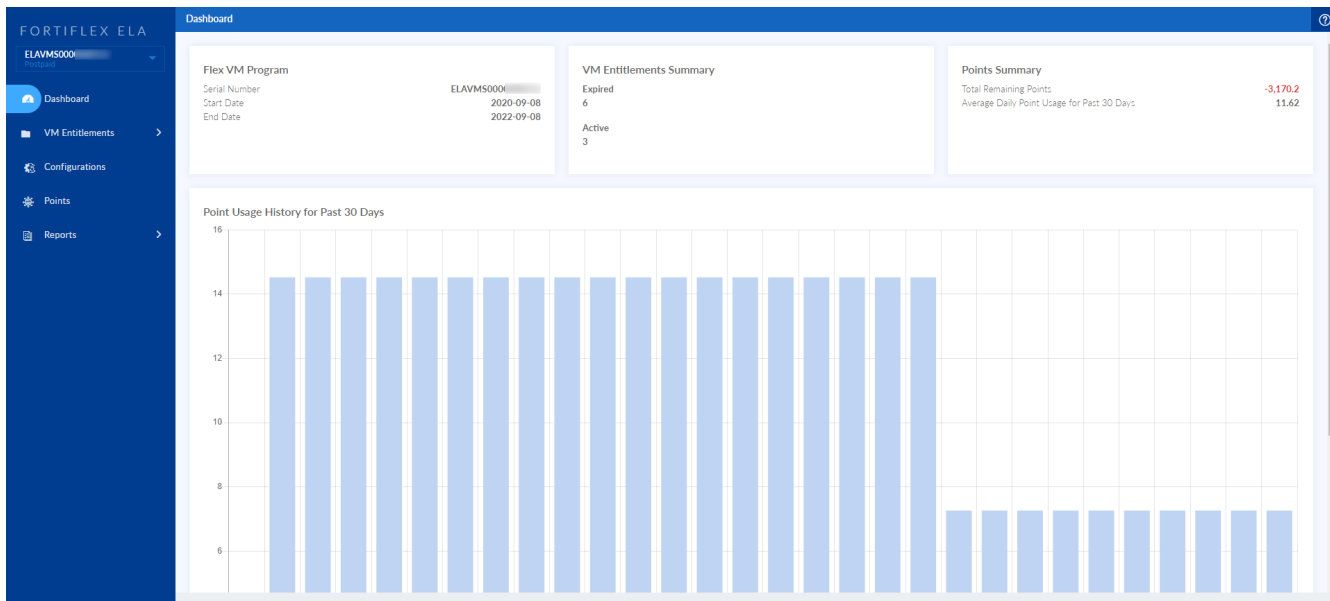

The FortiFlex portal supports the Master account in FortiCloud. To add secondary accounts, create an IAM user. For information, see [Adding IAM users](#).

The FortiFlex portal does not support FortiCloud sub user accounts. To grant access to a FortiCloud sub user, migrate the user in the IAM portal. See [Migrating sub users](#).

Dashboard

The *Dashboard* view provides an overview of activity in your FortiFlex account. Use the dashboard to quickly monitor active and expired virtual machines, as well points consumed.

The *Dashboard* contains the following monitors:

Monitor	Description
Flex VM Program(s)	Displays the program serial number and the program start and end dates.
VM Entitlements Summary	Displays the number of <i>Active</i> , <i>Stopped</i> and <i>Expired</i> virtual machines.
Points Summary	<p>For Prepaid programs, this field displays the <i>Total Remaining Points</i> and <i>Average Daily Point Usage for Past 30 Days</i>.</p> <p>For Postpaid and Evaluation programs, this field displays the <i>Current Period</i> month and a positive value for the <i>Total Consumed Points in the Period</i>.</p>
Point Usage History for Past 30 Days	Displays the daily point usage for the past thirty days as a chart. Hover over a bar in the chart to see the points used for a specific day.

Program guide

The topics in this section provide information about the FortiFlex program.

- [Program renewal on page 12](#)
- [Points on page 13](#)
- [Service offerings on page 14](#)
- [Email notifications on page 21](#)
- [Reports on page 22](#)

Program renewal

When you register a new FortiFlex contract for renewal, you have the option of selecting *Auto-extend VM configuration*.

ASSET MANAGEMENT

Register Product >

Product Model: ELA VM Program Post Pay | Contract Number:

Important Notice:
READ BEFORE COMPLETING THE REGISTRATION.

PRODUCT ENTITLEMENT

SUPPORT TYPE	SUPPORT LEVEL	ACTIVATION DATE	EXPIRATION DATE
ELA VM Program	Web/Online	2022-06-30	2023-06-30

Entitlement calculation is based on any existing warranty or contract services plus the term of your new contract. If you have questions regarding these conditions, please open a ticket for Registration Assistance by clicking [here](#).

☒ Auto-extend VM configuration to new expiration date.

This tells FortiFlex to update the expiration date of all VM entitlements that have the *Termination Mode* set to *Follow Program*, to the expiration date of the new contract that is being registered.

Points

Resource consumption is based upon predefined points that are calculated on a daily basis (PST/PDT time zone). Points can be purchased in advance or billed on a month basis based on the number of CPUs and service package.

Prepaid points

Prepaid points are available for Enterprise customers. Points are purchased in units of 10,000 and 50,000 points and are deducted on a daily basis based on resource consumption. Unused points can be rolled over upon the program registration anniversary date. See [Roll-over points](#).

One account can have only one Prepaid FortiFlex program. Multiple registrations can be performed to extend the existing program period.

FortiFlex Points can also be converted from FortiCloud FortiPoints in the Asset Management portal's *Marketplace*. This is only available for Prepaid programs at the root account level. See [FortiFlex](#) in the FortiCloud Asset Management guide.

Grace Period for negative points

The negative points grace period is applicable only to Prepaid accounts and is activated whenever the points balances becomes negative. Customers have 90 days to bring the balance back to positive otherwise the account may be suspended.

Postpaid points

Points are calculated based on resource consumption and billed on a monthly basis. The detailed payment terms may be specified in your individual purchase agreements.

One account can have only one Postpaid FortiFlex program. Multiple registrations can be performed to extend the existing program period.

A FortiFlex account can only accommodate one prepaid program and one postpaid program at the same time.

Point calculation

Points are calculated daily based on PST/PDT time zones. Calculations are based on the number of CPUs and service package. You can change the per-VM entitlements as many times as you like in a day. The largest CPU size and service package for the day will be charged based on the PST/PDT time zone day count. It may take up to three hours for the change to be updated in FortiCloud.

Points are not calculated during a VM entitlement stoppage, even though the VM may still be running on the customer-managed environment.

Roll-Over points

Pre-paid points can be rolled-over on the service registration anniversary date. Unused points will be rolled over to the next year with the following conditions:

Program	Description
12 months	<ul style="list-style-type: none">Unused points that existed and were added before the 180th day in the year will be rolled over in half to the next year.Unused points that were added on or after the 180th day in the year will be rolled over as the full amount.
36 months	<ul style="list-style-type: none">Unused points will be rolled over as the full amount.
60 months	<ul style="list-style-type: none">Unused points will be rolled over as the full amount.

Roll-over points do not apply to the post-paid program.

Service offerings

The following table provides an overview of the available service packages.

For detailed information, see the [FortiGate™ Virtual Appliances](#).

Email notifications

Email notifications are sent to provide updates on the current status of registered FortiFlex programs and points balances. When certain conditions are triggered, an email is sent by FortiFlex to notify you of the event that triggered the email.

Email notification types include:

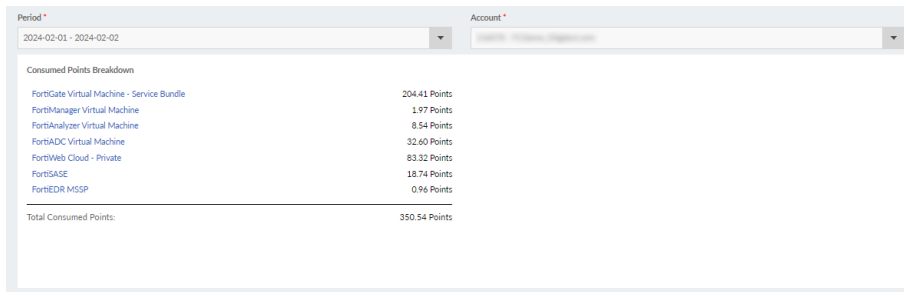

Notification Type	Description
Low Balance	<p>This email is used to notify users that the current point balance is less than the average consumption in the last 30 days multiplied by the number of days until it runs out. The email is triggered if the points balance is not high enough to maintain the current average points consumption for 90, 60, 30, 15, or seven days. This email is part of the Pre-paid program.</p> <p>For example, if the average points consumption in the last 30 days is 1000 points per day, FortiFlex will anticipate that the same average points consumption rate will be maintained for the next 90 days (1000 points per day * 90 days = 90 000 points consumed). However, if the current points balance is less than 90 000, FortiFlex will send an email alert to notify users that the points will run out in 90 days time.</p>
Negative Balance	This email is used to notify users when the point balance becomes negative. This email is part of the Pre-paid program.
Program Anniversary	This email is used to mark how many days are left until the anniversary of program registration. The email is sent when there are 60, 30, 21, 15, seven, and three days left until the anniversary. This email is part of the Pre-paid program.
Program End	This email is used to notify users when the expiry of the program is approaching. The email is sent when there are 90, 60, 30, 21, 15, seven, and three days left until the program expires. This email is part of the Pre-paid and Post-paid programs.
Program Expired	This email is used to notify users about how many days have passed since the program expired. The email is sent when three, seven, 11, 15, 21, 26, and 30 days have passed since the program expired. This email is part of the Pre-paid and Post-paid programs.

Reports

The *Reports* tab contains the *Point Usage Summary*, *Point Usage Detail*, and *Point Pack Summary*. You can run a report for a specified time period, and then export it as a CSV, XLXS, or XML file.

To run the Point Usage Summary:

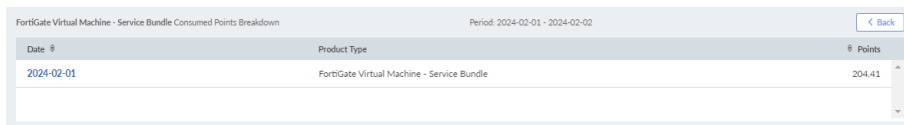

1. Go to *Reports > Point Usage Summary*.
2. Select the *Period* and *Account*. The *Consumed Points Breakdown* is displayed.

The screenshot shows the 'Consumed Points Breakdown' table for the period 2024-02-01 to 2024-02-02. The table lists various service bundles and their corresponding point consumption.

Service Bundle	Points
FortiGate Virtual Machine - Service Bundle	204.41 Points
FortiManager Virtual Machine	1.97 Points
FortiAnalyzer Virtual Machine	8.54 Points
FortiADC Virtual Machine	32.60 Points
FortiWeb Cloud - Private	83.32 Points
FortiSASE	18.74 Points
FortiEDR MSSP	0.96 Points
Total Consumed Points:	350.54 Points

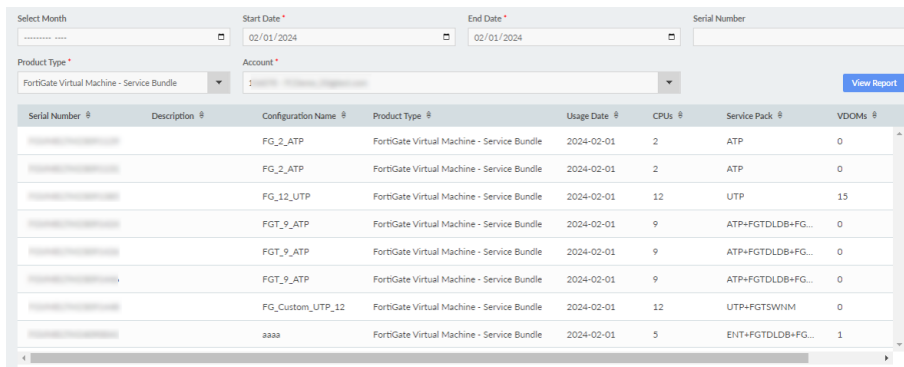

3. Select the product type. The breakdown of point usage for that product time in displayed.

The screenshot shows the 'FortiGate Virtual Machine - Service Bundle Consumed Points Breakdown' table for the period 2024-02-01 to 2024-02-02. The table shows the breakdown of point usage for the selected product type.

Date	Product Type	Points
2024-02-01	FortiGate Virtual Machine - Service Bundle	204.41

4. Select a date. The *Point Usage Detail* for that date is displayed.

The screenshot shows the 'Point Usage Detail' table for the date 02/01/2024. The table displays usage details for various configurations and service packs.

Serial Number	Description	Configuration Name	Product Type	Usage Date	CPU	Service Pack	VDOMs
		FG_2_ATP	FortiGate Virtual Machine - Service Bundle	2024-02-01	2	ATP	0
		FG_2_ATP	FortiGate Virtual Machine - Service Bundle	2024-02-01	2	ATP	0
		FG_12_UTP	FortiGate Virtual Machine - Service Bundle	2024-02-01	12	UTP	15
		FGT_9_ATP	FortiGate Virtual Machine - Service Bundle	2024-02-01	9	ATP+FGTDLDB+FG...	0
		FGT_9_ATP	FortiGate Virtual Machine - Service Bundle	2024-02-01	9	ATP+FGTDLDB+FG...	0
		FGT_9_ATP	FortiGate Virtual Machine - Service Bundle	2024-02-01	9	ATP+FGTDLDB+FG...	0
		FG_Custom_UTP_12	FortiGate Virtual Machine - Service Bundle	2024-02-01	12	UTP+FGTSWNM	0
		aaaa	FortiGate Virtual Machine - Service Bundle	2024-02-01	5	ENT+FGTDLDB+FG...	1

To run the Point Usage Detail Report:

1. Go to *Reports > Point Usage Detail*.
2. Select the desired filters.

The *Start Date* cannot be more than 90 days ago.

If FortiFlex is used in an Organization, the *OU/Account* dropdown menu will show options based on the user's permission scope. When in the root account, all accessible accounts will be displayed. When in a member account, only the current account will be displayed.

3. Click *View Report*. The report results are displayed.

- (Optional) Right-click the report, and click *Export* to download the report as a CSV or XLSX file.

Deploying FortiFlex

To deploy FortiFlex, create a VM configuration and use it to create a new VM entitlement. After the entitlement is created, inject the licensing token into the virtual machine. This will trigger the VM to download the corresponding license file.

To deploy Flex VM:

1. [Create a VM configuration.](#)
2. [Create VM entitlements.](#)
3. [Inject the FortiFlex license.](#)
4. [Monitor the points consumed.](#)
5. [Run reports to manage points and serial numbers.](#)

This section includes the following information:

- [Flex Entitlements on page 24](#)
- [Configurations on page 39](#)
- [Deployment examples and scripts on page 53](#)

Flex Entitlements

Use the *Flex Entitlements* page to create and manage VM license entitlements which are consumed via the license tokens. You can also disable compromised license entitlements or change the configuration of a virtual machine.

A License Token is a one-time code used to activate a VM instance. A new token must be re-generated if the VM needs to be re-activated. See [Managing Flex Entitlements on page 36](#).

FORTIFLEX ELA		VM Entitlements > My Assets					Search ...	?

		FGVMELTM20000...		FortiGate VM01		2021-09-08	EXPIRED	FortiGate-VM

The table displays the following information:

Serial Number	The serial numbers generated when you configure a VM.
License File Token	The available License File Tokens that can be injected into a VM to leverage consumption entitlements.
Configuration	The VM configuration assigned to the serial number.
Description	The description of the entitlement you entered when the VM was created.
Termination Date	The expiry date for the token. The token can be stopped, edited, or reactivated.
Status	<p>The status of the VM entitlement.</p> <ul style="list-style-type: none"> • PENDING: The entitlement is created but not activated. The VM is not being charged for daily consumption. • ACTIVE: The entitlement is activated and the VM is being charged for daily consumption (PST/PDT time zone). • ACTIVE: The entitlement is in use. • STOPPED: When the entitlement is stopped for the entire day, the VM will not be charged for the day. • EXPIRED: The entitlement has exceeded the <i>Termination Date</i>. • GRACE_PERIOD: The entitlement is ACTIVE but has a negative balance or a program expiration that has triggered the activation of the grace period. Once all grace period events have been cleared, it may take a full day for the status to change back from GRACE_PERIOD to ACTIVE.

PENDING, ACTIVE, and STOPPED entitlements can be edited to update the *Configuration* and *Description*. **PENDING** and **ACTIVE** entitlements can also be edited to have a new *Termination Date*.

My Assets

The *My Assets* view shows the Asset Folders assigned to a VM entitlement. You will only see the asset folders you have permission to view. Asset folders are created in the Asset Management portal. FortiFlex only shows VMs inside each folder except for when creating new VMs. For information about creating Asset Folders in Asset Management, see [Asset Management > Creating custom views](#).

Asset folder permissions

Asset folder permissions are assigned in the Identity & Access Management (IAM) portal. For more information about Asset Folder permissions, see [Identity & Access Management \(IAM\) > Asset and portal permissions](#).

You can use an asset folder to request the next available serial number with the API. See [Creating a license pool group on page 39](#).

Decommissioned units

The *Decommissioned Units* view shows the VM serial numbers that were decommissioned in the Asset Management portal. When decommissioning an active VM serial number in the Asset Management portal, you must stop the entitlement before it can be decommissioned. Attempting to decommission the serial number while it is still active will return an error. See [Managing Flex Entitlements on page 36](#) for information on stopping VM entitlements.

For information about decommissioning units in Asset Management, see [Asset Management > Viewing decommissioned units](#).

Serial Number	License File Token	Configuration	Description	Termination Date	Status	Product Type

Creating entitlements

Entitlements can be created for virtual machines (VMs), hardware devices, and cloud services. The program requires a positive point balance to create entitlements.

This section includes:

- [Creating VM entitlements on page 26](#)
- [Creating hardware device entitlements on page 28](#)
- [Creating Cloud service entitlements on page 29](#)

Creating VM entitlements

Create a VM entitlement to be used with various VM products, including FortiGate-VM or FortiWeb-VM.

When you create a VM on FortiFlex the consumption for the VM starts when the entitlement is activated for the first time.

All newly created entitlements will be set to *PENDING* and will be changed to *ACTIVE* when the entitlement is activated by the VM instance, which triggers the start of charges.

You cannot add purchased VMs or pre-existing Trial or Evaluation services to FortiFlex. You must create a new VM entitlement.

To create a VM entitlement:

1. Go to *Flex Entitlements*, and click *New Flex Entitlement*. The *Add Flex Entitlement(s)* page opens.

1. Flex Entitlement Details

Add Flex Entitlement(s)

Product Type: *
Select Product Type

Configuration: *
Select Configuration

Number of Flex Entitlements: *

Description:
Enter Flex Entitlement Description

Termination Mode: *
☒ Follow Program
☐ User Defined

Asset Folder: *
My Assets

Program Expiration Date:
2029-08-15

☐ Skip PENDING status and activate the entitlement(s) immediately

< Cancel Next >

2. Configure the VM Entitlement.

Product Type

Select one of the following service bundles from the dropdown:

- *FortiGate Virtual Machine - Service Bundle*
- *FortiGate Virtual Machine - A La Carte Services*
- *FortiWeb Virtual Machine - Service Bundle*
- *FortiManager Virtual Machine*
- *FortiClient EMS On-Prem*
- *FortiAnalyzer Virtual Machine*
- *FortiPortal Virtual Machine*
- *FortiADC Virtual Machine*

For information about the product types, see [Service offerings on page 14](#).

Configuration

Select a VM configuration from the list. See [Creating a VM configuration on page 40](#).

Number of Flex Entitlements

Enter the number of entitlements. See [Creating a VM configuration on page 40](#).

Description

Enter a description of the VM.

Termination Mode

- Select *Follow Program* to terminate the machine when the program expires.

- Select *User Defined*, and select a date in the calendar to specify the termination date.

Asset Folder

Assign the VM to a folder in *My Assets*.

For more information about Asset Folders, see Asset Management > [Creating custom views](#).

You can use an asset folder to request the next available serial number with the API. See [Creating a license pool group on page 39](#).

Skip PENDING status and activate the entitlement(s) immediately

Select this option to immediately set your VM entitlement to *ACTIVE* instead of *PENDING* upon creation.

3. Click *Next*.
4. Review the *Flex Entitlement Details* and *Program Information*, and click *Submit*.

2. Confirmation

Monthly Points Consumption: 1,755.90	
* Points consumption is calculated based on the Current Pricing.	

Injecting the FortiFlex license

You can inject a FortiFlex license into a VM instance via the CLI or during the VM bootstrapping via Cloud-Init (KVM) or OVF template (ESXi).

The commands `execute vm-license-options count` and `execute vm-license-options interval` allow for the customization of license token activation retry parameters. See [VM license](#) in the FortiOS Administration Guide for more information.

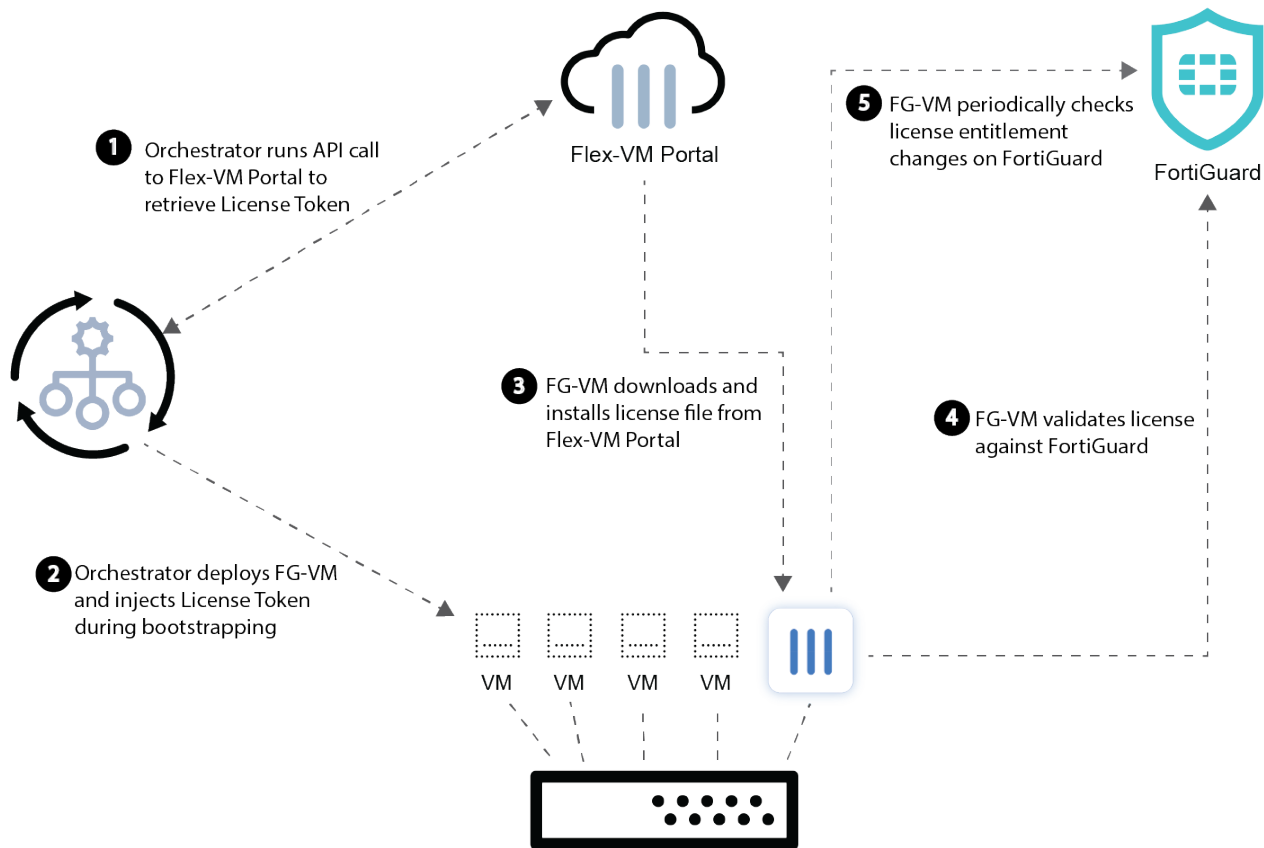

Requisites:

- [Create the VM configuration](#)

Injecting the FortiFlex license consists of the following steps:

1. Ensure that the VM has Internet connectivity properly configured.
2. Inject the FortiFlex License Token into the VM using one of the following methods:
 - [CLI](#)
 - [OVF Template \(FGT-64VM only\)](#)
 - [Cloud-init](#)
 - [FortiOS API](#)
3. [Confirm that the license token is injected](#)
4. [Configuring web proxy tunneling for FDN](#)

FortiFlex License Activation Workflow

Inject a FortiFlex license with the CLI

Use the following commands to inject a FortiFlex license into a VM instance:

To inject a FortiFlex license with the FortiFlex CLI:

To inject a FortiFlex license into a VM instance with the CLI:

```
execute vm-license <license_token>
```

Example:

```
exec vm-license 58923569A3FFB7F46879
```

To inject a FortiFlex license via web proxy:

```
execute vm-license <license_token> <proxy>
```

The following are examples of the syntax for <proxy>:

```
http://user:password@proxyip:proxyport
```

```
user:password@proxyip:proxyport
```

The following shows examples for each command:

```
exec vm-license 58923569A3FFB7F46879 http://qa:123456@10.1.100.74:8080
exec vm-license 95D87F50C075C6F20EE7 hazel:123456@10.1.100.74:8080
```

Inject a license token with an OVF template

The custom OVF template contains a *License Token* and *Configuration URL* fields where a bootstrap configuration for the FortiGate is stored.

This option is only available for VMware vCenter.

To inject a license token with a custom OVF template:

1. Create a new FGT-VM64 from the vCenter web UI with the extracted files in *FGT_VM64-v7-buildxxxx-FORTINET.out.ovf.zip*.
2. Deploy an OVF Template.
3. In the *Customize template* step:
 - a. Enter the License Token in the *License Token* field.
 - b. Enter the Configuration URL in the *Configuration URL* field.

Deploy OVF Template

- 1 Select an OVF template
- 2 Select a name and folder
- 3 Select a compute resource
- 4 Review details
- 5 License agreements
- 6 Configuration
- 7 Select storage
- 8 Select networks
- 9 Customize template**
- 10 Ready to complete

Customize template

Fortigate 6 settings	
License Token	182C8C8143C841028572
Configuration URL	http://172.18.64.219/fgt-174
Hostname	FortiGate-VM
Primary DNS	208.91.112.53
Secondary DNS	208.91.112.52
FortiManager	FQDN or IP address of FortiManager
Interface 01 4 settings	
Interface 1: Mode	IP/Netmask will be ignored if DHCP is chosen. Static
IP	10.6.30.66
Netmask	255.255.255.0

CANCEL
BACK
NEXT

4. Restart the VM instance.

After the FGT-VM64 is started, it will activate VM license and load the configuration automatically

Inject a FortiFlex license via cloud-init

The following are the MIME files that you can use to inject a FortiFlex license into a FortiGate-VM instance using cloud-init. See [cloud-init Documentation](#) for details.

Configuration information for the FortiGate-VM

```
Content-Type: multipart/mixed; boundary="====0740947994048919689=="
MIME-Version: 1.0
-----0740947994048919689==
Content-Type: text/plain; charset="us-ascii"
MIME-Version: 1.0
Content-Transfer-Encoding: 7bit
Content-Disposition: attachment; filename="config"
config sys glo
set hostname FGT-MSSP-MIME
set admintimeout 480
end
.....
```

License token information

```
-----0740947994048919689==
Content-Type: text/plain; charset="us-ascii"
MIME-Version: 1.0
Content-Transfer-Encoding: 7bit
Content-Disposition: attachment; filename="license"
LICENSE-TOKEN:FF69500C90C1604F71EE
-----0740947994048919689---
```

Injecting with the FortiOS API

The FortiOS API method is useful for automating the migration of existing FortiGate-VM instances into FortiFlex. The FortiFlex API and documentation are available on the [Fortinet Developer Network](#) website.

Example: Inject a license via HTTP method:

```
<user_email>:~# curl -k --request POST 'http://<IP_
address>/api/v2/monitor/system/vmlicense/download?token=<token_ID>&access_token=<access_
token>'
{
  "http_method":"POST",
  "status":"success",
  "http_status":200,
  "vdom":"root",
  "path":"system",
  "name":"vmlicense",
  "action":"download",
  "serial":"<serial_number>",
  "version":"v7.2.0",
  "build":1157
}
```

Example: Inject a license via proxy URL:

```
<user_email>:~# curl -k --request POST 'https://<IP_
address>/api/v2/monitor/system/vmlicense/download?token=<token_ID>&proxy_url=<proxy_
URL>&access_token=<token>'
{
  "http_method":"POST",
  "status":"success",
  "http_status":200,
  "vdom":"root",
  "path":"system",
  "name":"vmlicense",
  "action":"download",
  "serial":"<serial_number>",
  "version":"v7.2.0",
  "build":1157
}<user_email>:~#
```

Confirming the license token is injected

To confirm that the license token is injected:

```
diagnose debug cloudinit show
>> Checking metadata source ovf
>> Found metadata source: ovf
>> Trying to install vmlicense ...
>> License-token:95D87F50C075C6F20EE7 http://qa:123456@10.1.100.74:8080
>> Config script is not available

get system status
Version: FortiGate-VM64 v7.0.4,build0292,220115 (interim)
Serial-Number: FGVMMLTM111111
```

Configuring web proxy tunneling for FDN

After the FortiFlex license has been installed, the FortiGate-VM must validate the license on FDN servers. You can also configure a proxy to accomplish this.

To configure web proxy tunneling for FDN:

```
config system autoupdate tunneling
  set status enable
  set address "<web proxy IP address or FQDN>"
  set port <web proxy port>
  set username "<username>"
  set password <password>
end
```

It may take a while for FortiGate-VM to be able to validate the VM license and update UTM signatures from FortiGuard.

The following shows the output from `get system status` when the FortiGate-VM has completed the validation and update:

```
Version: FortiGate-VM64 v7.0.4,build0292,220115 (interim)
Virus-DB: 89.08825(2022-01-18 21:26)

FortiOS x86-64: Yes
System time: Tue Jan 18 21:46:36 2022
Last reboot reason: warm reboot
```

Managing Flex Entitlements

You can stop and regenerate a license token if it is stolen or compromised. After the token is regenerated, it must be re-injected into your VM to revoke the old token. You can also export a list of tokens to parse them in scripts.

Modifying FortiGate-VM configurations

We recommend rebooting the FortiGate-VM after you change the configuration. To verify the configuration is in effect, run the following CLI command:

```
get system status
```

- A reboot is required if you are lowering the vCPU size.
- A reboot is recommended when adding more vCPU.

If you do not want to reboot the VM, run the following CLI command:

```
exec cpu add X
```

Where *X* is the number of vCPU to be hot-added on top of the existing number.

Example:

A reboot is not required if the FortiGate-VM currently consumes 4 vCPUs out of the entitled 16 vCPUs which can be seen as `VM Resources: 4 CPU/16 Allowed` in the `get system status` output, and you run `exec cpu add 12` to consume 12 more vCPUs.

Starting in FortiOS 7.2.4, vCPU changes in the FortiFlex licenses are automatically handled by the FortiGate-VM instances. Running `exec cpu add X` is no longer required if you are running FortiOS v7.2.4.

To stop a VM Entitlement:

1. Go to *Flex Entitlements*, and click the serial number you want to stop.
2. Click *Stop*. The *Stop VM Entitlement* dialog opens.

Manage VM Entitlement > [Serial Number]

Details **Points**

< BACK EDIT STOP

VM Entitlement Details

Configuration: FortiGate 2CPUs

Status: ACTIVE

Description:

Start Date: 2021-11-15

Termination Date: 2022-09-08

Token Details

License File Token: [Redacted]

REGENERATE

3. Click *Confirm*. The VM status changes to *STOPPED*. Point consumption will stop from the next day even while your

managed VM may be still running.

The screenshot shows the 'Manage VM Entitlement' page. At the top, there's a blue header with 'Manage VM Entitlement' and a breadcrumb. Below the header, there are two tabs: 'Details' (active) and 'Points'. A green success message banner reads 'SUCCESS! Virtual Machine stopped successfully.' with a close button. Below the banner, there are two sections: 'VM Entitlement Details' and 'Token Details'. The 'VM Entitlement Details' section shows: Configuration: FortiGate, Status: STOPPED, Description: (empty), Start Date: 2021-11-10, and Termination Date: 2021-11-16. The 'Token Details' section shows: License File Token: (redacted). At the top right of the main content area, there are '< BACK' and 'REACTIVATE' buttons.

To reactivate a VM Entitlement:

1. Go to *Flex Entitlements* and click a serial number with a status of *STOPPED*.
2. Click *Reactivate*. The *Virtual Machine Details* page opens.

This screenshot is similar to the previous one, showing the 'Manage VM Entitlement' page. The 'VM Entitlement Details' section shows: Configuration: FortiGate 2CPUs, Status: STOPPED, Description: (empty), Start Date: 2021-11-15, and Termination Date: 2021-11-16. The 'Token Details' section shows: License File Token: (redacted). The '< BACK' and 'REACTIVATE' buttons are still present at the top right.

3. (Optional) Modify the VM Entitlement details.

The screenshot shows the 'Modify VM Entitlement' dialog box. It has a blue header with 'Manage VM Entitlement' and a breadcrumb. Below the header, there's a section titled 'VM Entitlement Details' with a '< CANCEL' button and a 'SUBMIT' button. The main content area is titled 'Modify VM Entitlement'. It contains two sections: 'Termination Mode' with radio buttons for 'Follow Program' (unselected) and 'User Defined' (selected), and 'Expiration Date' with a date picker showing '11 / 16 / 2021'.

4. Click *Submit*. The serial number *Status* changes to *Active*. Point consumption will restart from the day you make this change even though you may still have not rerun your managed VM.

To export a list of serial numbers and tokens:

1. Go to *Flex Entitlements*.
2. Right-click the table, and click *Export*.
3. Select *CSV Export*, *Excel Export (xlsx)*, or *Excel Export (.xml)*. The file is saved to your computer.

The screenshot shows the 'VM Entitlements > FortiGate' page. A table with 7 records is displayed. A right-click context menu is open over the table, showing options: Copy, Copy with Headers, Paste, and Export. The 'Export' option is highlighted, and a sub-menu is visible with options: CSV Export, Excel Export (.xlsx), and Excel Export (.xml).

Serial Number	License File Token	Configuration	Description	Termination Date	Status

[REDACTED]	[REDACTED]	FortiGate 2CPUs			ACTIVE
[REDACTED]	[REDACTED]	FortiGate 2CPUs		2021-11-16	STOPPED

Creating a license pool group

A licence pool group allows you to request the next available serial number in the pool. When a VM is decommissioned, the license is returned to the pool.

Requirements:

- Access to Asset Management
- Fortinet Developer Network membership

To create a license pool group:

1. In Asset Management, create an Asset Folder for the asset pool group. See [Creating custom views](#).
2. Create a VM Entitlement and select a folder for the group. See, [Creating entitlements on page 26](#).
3. Use the [Virtual Machines API](#) to create and add a `folderpath` to the asset folder in *My Assets*.
4. Create a new endpoint to return the group information.
5. Create a new endpoint to return the next available token.

Configurations

The *Configurations* tab is used to create and manage configurations. You can set the number of vCPUs in a virtual machine, and select a service package. After the configuration is created, it can be assigned to an entitlement. See [Creating configurations on page 40](#).

When you disable a configuration, the entitlements that are using the configuration are no longer entitled to consume points. Use caution when disabling configurations or stopping entitlements, as this will impact the performance of the virtual machines, devices, or services. Disabled configurations can be re-enabled.

Configurations			Search ...	?
Total Records: 3			+ New Configuration	
Configuration	Product Type	Status		
FortiGate VM01	FortiGate-VM	ACTIVE		
FortiGate VM02	FortiGate-VM	ACTIVE		
VM 03	FortiGate-VM	ACTIVE		

Creating configurations

Create configurations to be used in VM, hardware device, and cloud service entitlements.

This section includes:

- [Creating a VM configuration on page 40](#)

Configuration details

This topic includes configuration details of the following:

- [Virtual Machines on page 45](#)
- [Hardware Appliances on page 48](#)
- [Cloud Services on page 52](#)

Virtual Machines

FortiGate Virtual Machine - Service Bundle

Number of CPUs	Enter the number of CPUs.
Service Package	Select one of the following options: <ul style="list-style-type: none"> • <i>FortiCare Premium</i> • <i>UTM</i> • <i>Enterprise</i> • <i>ATP</i>

Virtual Domains	Enter the number of virtual domains.
FortiGuard Services	Select from the following options: <ul style="list-style-type: none"> • <i>Advanced Malware Protection</i> • <i>AI-Based In-line Sandbox</i> • <i>FortiGuard OT Security Service</i> • <i>FortiGuard DLP</i> • <i>FortiGuard Attack Surface Security Service</i> • <i>FortiConverter Service</i>
Cloud Services	Select from the following options: <ul style="list-style-type: none"> • <i>FortiGate Cloud Management</i> • <i>SD-WAN Underlay</i> • <i>SOCaaS</i> • <i>FortiAnalyzer Cloud</i> • <i>Cloud-based Overlay-as-a-Service</i> • <i>SD-WAN Connector for FortiSASE</i>
Support Services	Select one of the following options: <ul style="list-style-type: none"> • <i>FC Elite Upgrade</i>
Number of Flex Entitlements	Enter the number of FortiFlex entitlements.

FortiGate Virtual Machine - A La Carte Services

Number of CPUs	Enter the number of CPUs.
FortiGuard Services	Select from the following options: <ul style="list-style-type: none"> • <i>Intrusion Prevention</i> • <i>Advanced Malware Protection</i> • <i>FortiGuard Attack Surface Security Service</i> • <i>FortiGuard OT Security Service</i> • <i>DLP</i> • <i>AI-Based InLine Sandbox</i> • <i>Web, DNS & Video Filtering</i> • <i>FortiConverter Service</i>
Cloud Services	Select from the following options: <ul style="list-style-type: none"> • <i>FortiGate Cloud</i> • <i>SD-WAN Underlay</i> • <i>FortiAnalyzer Cloud with SOCaaS</i> • <i>FortiAnalyzer Cloud</i> • <i>SD-WAN Connector for FortiSASE</i> • <i>Cloud-based Overlay-as-a-Service</i>
Support Services	Select one of the following options: <ul style="list-style-type: none"> • <i>FortiCare Premium</i> • <i>FortiCare Elite</i>
Virtual Domains	Enter the number of Virtual Domains.

The FortiGate VM will report two Virtual Domains (VDOMs) due to its native ability to create an admin VDOM. The number of VDOMs added in FortiFlex is in addition to these two VDOMs. For example, if you add one VDOM in FortiFlex, the VM will report three VDOMs.

Number of Flex Entitlements Enter the number of FortiFlex entitlements.

FortiWeb Virtual Machine - Service Bundle

Number of CPUs Select the number of CPUs from the dropdown.

Service Package Select *Standard* or *Advanced*.

Number of Flex Entitlements Enter the number of FortiFlex entitlements.

FortiManager Virtual Machine

Number of managed devices Enter the number of managed devices.

Number of ADOMs Enter the number of ADOMs.

FortiManager comes with a base of five ADOMs, per a normal subscription. Therefore, the number of ADOMs is additional to this base. For example, if you add one ADOM in FortiFlex, the FortiManager VM is capable of six.

Number of Flex Entitlements Enter the number of FortiFlex entitlements.

After creating an entitlement which contains any of the Cloud Services, you can refer to the following on-boarding guides for further instructions:

- [FortiGate Cloud](#)
- [FortiManager Cloud](#)
- [FortiAnalyzer Cloud](#)

FortiClient EMS On-Prem

ZTNA/VPN Enter the number of endpoints.

EPP/ATP + ZTNA/VPN Enter the number of endpoints.

Chromebook Enter the number of endpoints.

Support Services Select a support service:

- *FortiCare Premium*

Addons Select an add on:

- *FortiCare Best Practice*

Number of Flex Entitlements Enter the number of FortiFlex entitlements.

FortiAnalyzer Virtual Machine

Daily Storage (GB)	Use the toggle to set the select the number of GB of daily storage.
Number of ADOMs	Use the toggle to set the select the number of ADOMS.
	 <p>FortiAnalyzer comes with a base of five ADOMs, per a normal subscription. Therefore, the number of ADOMs is additional to this base. For example, if you add one ADOM in FortiFlex, the FortiAnalyzer VM is capable of six.</p>
Support Services	Select a support service: <ul style="list-style-type: none"> • <i>FortiCare Premium</i>
Number of Flex Entitlements	Enter the number of FortiFlex entitlements.

FortiAnalyzer comes with IOC, the Security Automation Service, and the FortiGuard Outbreak Detection Service. These additional services cannot be detached or purchased a-la-carte.

FortiPortal Virtual Machine

Number of managed devices	Use the toggle to set the select the number of managed devices.
Number of Flex Entitlements	Enter the number of FortiFlex entitlements.

FortiADC Virtual Machine

Number of CPUs	Select the number of CPUs from the dropdown.
Service Package	Select the service package from the dropdown: <ul style="list-style-type: none"> • <i>Standard</i> • <i>Advanced</i> • <i>FortiCare Premium</i>
Number of Flex Entitlements	Enter the number of FortiFlex entitlements.

Hardware Appliances

Service Package

Select one of the following options:

- *FortiCare Premium*
- *FortiCare Elite*
- *ATP*
- *UTP*
- *Enterprise*

Addons

Select an add on:

- *FortiCare Elite Upgrade*
- *FortiGate Cloud Management*
- *AI-Based In-line Sandbox*
- *SD-WAN Underlay*
- *FortiGuard DLP*
- *FortiAnalyzer Cloud*
- *SOCaaS*
- *Managed FortiGate*
- *SD-WAN Connector for FortiSASE*
- *FortiConverter Service*
- *FortiGuard OT Security Service*
- *SD-WAN Overlay-as-a-Service*

Number of Flex Entitlements

Enter the number of FortiFlex entitlements.

Hardware entitlements cannot be applied to a hardware FortiGate with an active license. You must either:

- Wait for the FortiGate to expire and then apply the FortiFlex license. There is a 48-hour grace period after the license expires where security subscriptions and FortiGuard will continue to work.
- Request Customer Service to de-register the device. This option does not grant the 48-hour grace period. Once it is de-registered, the FortiGate will be unable to receive security updates or utilize FortiGuard services.

Cloud Services

FortiWeb Cloud - Private

Average Throughput	Select average throughput measured by the 95th percentile from the dropdown, between 10 Mbps to 10 Gbps.
Web Applications	Enter the number of web applications, between 1 and 2000.

FortiWeb Cloud - Public

Average Throughput	Select average throughput measured by the 95th percentile from the dropdown, between 10 Mbps to 10 Gbps.
Web Applications	Enter the number of web applications, between 1 and 2000.

FortiClient EMS Cloud

ZTNA/VPN	Enter the number of endpoints.
ZTNA/VPN + FortiGuard Forensics	Enter the number of endpoints.
EPP/ATP + ZTNA/VPN	Enter the number of endpoints.
EPP/ATP + ZTNA/VPN + FortiGuard Forensics	Enter the number of endpoints.
Chromebook	Enter the number of endpoints.
Addons	Select an add on: <ul style="list-style-type: none"> • <i>FortiCare Best Practice</i>
Number of Flex Entitlements	Enter the number of FortiFlex entitlements.

FortiSASE

Number of users	Enter the number of users.
Service Package	Select a service package: <ul style="list-style-type: none"> • <i>Standard</i>

- *Advanced*

Bandwidth (Mbps)

Enter amount of bandwidth required.

Dedicated IPs

Enter the number of dedicated IP addresses.

FortiEDR MSSP**Service Package**

Select a service package:

- *Discover/Protect/Respond*

Addons

Select an add on:

- *XDR*

The number of EDR and XDR endpoints will be the same when creating a configuration.

Deployment examples and scripts

The following section provides an example of a manual deployment for KVM as well as links to sample scripts to automate deployments for KVM.

- [Manual deployment on KVM on page 53](#)
- [Automatic deployments on page 60](#)

Manual deployment on KVM

Activate a FortiGate VM using a FortiFlex license. FortiFlex allows for adhoc license via its portal.

Step 1. Create the FortiFlex configuration.

To create a FortiFlex configuration:

1. Open the FortiFlex portal.
2. Go to *Configurations* and click *New configuration*.

3. In the *Configuration Details* page, enter a name for the configuration and the product type and click *Next*.

1. Configuration Details

Automatic deployments

Customers with access to Orchestrator tools can use the FortiFlex API to automate the FortiGate deployment and activation.

Automatic deployment on KVM

Automate the FortiGate deployment and activation on HyperVisor using a python script and the KVM cloud-init capabilities.

A Python script with examples of the basic calls for the FortiFlex API is available in the [Fortinet Developer Network \(FNDN\)](#). To view the script, log in to FNDN and search for the following article: *Sample Python Script for Flex-VM API*.

Automation

The topics in this section provide information about automation and the FortiFlex API:

- [FortiFlex API on page 61](#)
- [FortiFlexVM Terraform provider on page 63](#)
- [Ansible Collection on page 63](#)

FortiFlex API

Instead of making changes to your FortiFlex objects in the FortiCloud portal, you can automate tasks, such as creating VMs and entitlements, with an API when integrating with cloud orchestration platforms.

FortiFlex API information can also be found on the [Fortinet Developer Network](#) along with [sample Python script](#).

When implementing the FortiFlex API, you can follow this general process:

1. Create an API user.
 2. Acquire the API token.
 3. Run API calls against the FortiFlex portal to view, create, or modify objects.
-

Before you begin, ensure that you have a FortiCloud account and have FortiFlex activated.

To create an API user:

1. Go to <https://support.fortinet.com>.
 2. Go to *Services > IAM*.
 3. Create an active permission profile that includes the FortiFlex portal. See [Creating a permission profile](#) in the Identity & Access Management (IAM) guide.
-

Actions that involve changing or creating data, such as creating a new configuration or updating a VM, will require read and write permissions or above.

4. Create an API user with the permission profile from the previous step applied. See [Adding an API user](#) in the Identity & Access Management (IAM) guide.
5. Click *Download Credentials* and set a password. A CSV file with the API user's credentials is downloaded that can only be opened with the password. See [Adding an API user](#) in the Identity & Access Management (IAM) guide.

Downloading API user credentials will reset the user's security credentials each time you perform this action. Any previous password will become invalid.

To acquire the API token:

1. Open the Postman app.

The Postman API Toolkit can be found at <https://www.postman.com>. FortiFlex Postman collections can also be found on [GitHub](#).

2. Click *Create a request*.
3. Enter the following information:

Method	POST
URL	https://customerapiauth.fortinet.com/api/v1/oauth/token/

4. Click *Body*.
5. Select *raw* and *JSON*.
6. Enter the following content:

```
{
  "username": "<username of your API user>",
  "password": "<password of your API user>",
  "client_id": "flexvm",
  "grant_type": "password"
}
```

7. Click *Send*. If authentication is successful, you should receive a 200 response code with the following information:
 - `access_token`: The API token that will be used to run API calls against the FortiFlex portal.
 - `expires_in`: The token expiration time in seconds. The default value is 1440 seconds.
8. Copy the `access_token` value.

To run API calls:

1. Click on the + to open a new tab in the Postman app.
2. Click *Authorization*.
3. Set *Type* to *Bearer Token*.
4. Paste the `access_token` value in the *Token* field.

The URL for the API calls is <https://support.fortinet.com>.

FortiFlexVM Terraform provider

The FortiFlexVM Terraform provider is used to interact with the resources supported by FortiFlexVM. The provider must be configured with the proper credentials before it can be used. See the [FortiFlexVM Documentation](#) on the Terraform Registry for information on available resources, data sources, and so on.

The FortiFlexVM provider requires:

- A FortiCloud account.
 - FortiFlex registered.
 - An API token. See [FortiFlex API on page 61](#).
-

Ansible Collection

The FortiFlex Ansible Collection can be used to run playbooks to interact with FortiFlex. The FortiFlex Ansible Collection can be found on [GitHub](#) and [Ansible Galaxy](#). See the [Ansible Galaxy FortiFlexVM Collection Documentation](#) for more information on using Ansible Galaxy, running a playbook, available modules, and so on.

You can get support from the Fortinet Inc. [Technical Assistance Center](#) or from the community engineering team by filing an issue in the [GitHub issues page](#). For support with common Ansible issues, you can get support from the [Ansible community](#).

Tools

The topics in this section provide information about the points calculator tool:

- [Points calculator on page 64](#)
- [Daily points on page 65](#)

The points calculator in the FortiFlex portal should be used to calculate points consumption for existing FortiFlex programs only. It should not be used for new deals.

Points calculator

Use the points calculator to calculate how many points will be consumed before you create a new VM configuration.

The points calculator can be found in the *Tools > Points Calculator* page, on the Fortinet Developer Network (<https://fndn.fortinet.net/index.php?/tools/fortiflex/>) or accessed through an API endpoint. Accessing the calculator through an API endpoint provides the current price, latest price, and effective date for the latest price.

To calculate points for a VM configuration:

1. Go to *Tools > Points Calculator*.
2. From the list select on of the following options.
 - *FortiGate Virtual Machine - Service Bundle*
 - *FortiGate Virtual Machine - A La Carte Services*
 - *FortiWeb Virtual Machine - Service Bundle*
 - *FortiManager Virtual Machine*
 - *FortiClient EMS On-Prem*
 - *FortiAnalyzer Virtual Machine*
 - *FortiPortal Virtual Machine*
 - *FortiADC Virtual Machine*
 - *FortiGate Hardware*
 - *FortiWeb Cloud - Private*
 - *FortiClient EMS Cloud*
 - *FortiSASE*
 - *FortiEDR-MSSP*

Product Type*

Select Product Type

- FortiGate Virtual Machine - Service Bundle
- FortiGate Virtual Machine - A La Carte Services
- FortiWeb Virtual Machine - Service Bundle
- FortiManager Virtual Machine
- FortiClient EMS On-Prem
- FortiAnalyzer Virtual Machine
- FortiPortal Virtual Machine
- FortiADC Virtual Machine
- FortiGate Hardware
- FortiWeb Cloud - Private
- FortiClient EMS Cloud
- FortiSASE
- FortiEDR MSSP

3. Configure the VM based on the service you selected. The configuration settings will vary depending on the service. For more information, see [Service offerings on page 14](#)

Daily Points
4.27

Calculate

The *Daily Points* may display both current and latest pricing. See [Daily points on page 65](#) for more information.

Daily points

When the daily rates of a product are updated, the *Daily Points* will display both the *Current Pricing* and *Latest Pricing* for the points calculator:

- **Current Pricing:** Displays the daily point cost for the total entitlements configured. This is calculated using the fixed ratings from when the program was registered. This fixed rating is valid for up to one year and is not subject to fluctuations in program ratings.
- **Latest Pricing (as of YYYY-MM-DD):** Displays the cost based on the latest pricing as of the date that the points calculator tool is used. This rate is the new rate that will be applied to the configured entitlements after the next anniversary date, beginning on the date displayed. This rate is an estimate based on current rates and is subject to fluctuations.

The screenshot shows the 'Points Calculator' interface. It features a blue header bar with the title 'Points Calculator' and a help icon. The main area is divided into several sections for configuration:

- Product Type***: A dropdown menu showing 'FortiGate Virtual Machine - Service Bundle'.
- Number of Flex Entitlements***: A text input field containing the value '1'.
- Number of CPUs ***: A text input field containing the value '1'.
- Service Package ***: A dropdown menu showing 'UTP'.
- Virtual Domains**: A text input field containing the value '0'.
- FortiGuard Services**: A list of checkboxes including 'Advanced Malware Protection', 'AI-Based In-line Sandbox', 'FortiGuard OT Security Service' (checked), 'FortiGuard DLP', 'FortiGuard Attack Surface Security Service', and 'FortiConverter Service'.
- Cloud Services**: A list of checkboxes including 'FortiGate Cloud Management', 'SD-WAN Underlay' (checked), 'SOCaaS', 'FortiAnalyzer Cloud', 'Cloud-based Overlay-as-a-Service', and 'SD-WAN Connector for FortiSASE'.
- Support Services**: A list of checkboxes including 'FC Elite Upgrade'.

At the bottom left, there are two links: 'Daily Points - Current Pricing' and 'Daily Points - Latest Pricing (as of 2024-03-20)'. On the bottom right, the calculated values are displayed: '4.68' for current pricing and '3.60' for latest pricing. A blue 'Calculate' button is located at the bottom right corner.
