|------------|--------------------|
| 2026-02-13 | Initial release. |

Introduction

FortiBranchSASE is a member of the FortiExtender product family. While FortiExtender and FortiBranchSASE share many features, this guide provides information specific to FortiBranchSASE

This *Reference Guide* introduces the syntax of commonly used CLI commands to configure and manage a FortiBranchSASE unit.

CLI commands in this *Reference Guide* are based on FortiBranchSASE-20G-WiFi.

Connect to the CLI

You can connect to the CLI through the FortiBranchSASE or FortiCloud GUI.

To access the FortiBranchSASE CLI via FortiCloud GUI, go to the device page of a deployed FortiBranchSASE device and click the `>_Console` section to open a new instance of the FortiBranchSASE console.

To access the FortiBranchSASE CLI via the FortiBranchSASE GUI, click the `>_` tab on the left side of the GUI.

You can open only one console per GUI access.

You can also access the FortiBranchSASE CLI outside of the GUI using:

- Console connection — connect your computer directly to the console port of your FortiBranchSASE.
- SSH or Telnet access — connect your computer through any network interface attached to one of the network ports of your FortiBranchSASE.

Console connection

You can directly connect to the CLI by connecting your management computer or console to the FortiBranchSASE through its RJ-45 console port.

Direct console access to a FortiBranchSASE device may be necessary if:

- You are installing the device for the first time, and it is not configured to connect to your network.
- You are restoring the firmware using a boot interruption. Network access to the CLI will not be available until after the boot process has completed, making direct console access the only option.

To connect to the FortiBranchSASE console, you need a console cable to connect the console port on the FortiBranchSASE to the communications port on a computer. Depending on your device, this may require:

- A USB to RJ-45 cable
- A DB-9 to RJ-45 cable (a DB-9-to-USB adapter may be used)
- A computer with an available communications port
- A terminal emulation software app

To connect to the CLI through a direct console connection:

1. Using the console cable, connect the FortiBranchSASE console port to the serial communications (COM) port on your management computer.
2. Start a terminal emulation program on your management computer, select the COM port, and set the Baud speed to 115200 Bits per second.
3. Press Enter on the keyboard to connect to the CLI.
4. Log into the CLI using your username and password ("admin" by default; you will be prompted to create a new password upon your first login).

You can now enter CLI commands, including configuring access to the CLI via SSH.

SSH access

You can establish SSH access to the CLI by connecting your computer to the FortiBranchSASE using one of its network ports, either directly using a peer connection between the two or through any intermediary network.

SSH must be enabled on the network interface that is associated with the physical network port that is being used.

If your computer is not connected either directly or through a switch to the FortiBranchSASE, you must also configure the FortiBranchSASE using a static route that can forward packets from the FortiBranchSASE to the computer. This can be done using a local console connection or in the GUI.

To connect to the FortiBranchSASE using SSH, you need:

- A computer with an available serial communications (COM) port and an RJ-45 port
- An appropriate console cable
- A network cable
- Terminal emulation software
- Prior configuration of the operating mode, network interface, and static route.

Enable SSH access to the CLI using a local console connection:

1. Using the network cable, connect the FortiBranchSASE network port either directly to the network port on your computer or to a network through which your computer can reach the FortiBranchSASE.
2. Note down the port number of the physical network port.
3. Using the direct console connection, connect and log into the CLI.
4. Enter the following command:

```
config system interface
  edit <interface_str>
    set allowaccess ssh
  next
end
```

where <interface_str> is the name of the network interface associated with the physical network port, such as port4.

5. Confirm the configuration using the following commands to show the interface settings, for example:

```
config system interface
edit port4
  set type physical
  set status up
  set mode static
  set ip
  set gateway
  set mtu-override disable
  set distance 51
  set vrrp-virtual-mac enable
  config vrrp
    set status disable
  end
  set allowaccess ssh
next
```

Access the FortiBranchSASE CLI using SSH

Once the FortiBranchSASE is configured to accept SSH connections, use an SSH client on your management computer to connect to the CLI.

The following instructions use PuTTY. The steps may vary in other terminal emulators.

To connect to the CLI using SSH:

1. On your management computer, start PuTTY.
2. In the Host Name (or IP address) field, enter the IP address of the FortiBranchSASE network interface that you are connected to and has SSH access enabled.

3. Set the port number to 22, if it is not automatically set.
4. Set the connection type to SSH.
5. Click *Open*.

The SSH client starts to connect to the FortiBranchSASE.

The SSH client may display a warning if this is the first time that you are connecting to the FortiBranchSASE and its SSH key is not yet recognized by the SSH client, or if you previously connected to the FortiBranchSASE using a different IP address or SSH key. This is normal if the management computer is directly connected to the FortiBranchSASE with no network hosts in between.

6. Click *Yes* to accept the FortiBranchSASE's SSH key.
The CLI will display the login prompt.
7. Enter the administrator account name, such as *admin*, and press *Enter*.
8. Enter the administrator account password and press *Enter*.
The CLI console shows the command prompt (the FortiBranchSASE hostname followed by #). You can now enter CLI commands.

Header

This section shows the syntax of the following command:

- [config version on page 11](#)

config version

Description: Configure header version settings.

```
config version
  set config {integer}
  set carrier {string}
unset
show
end
```

Sample command:

```
config header
  config version
    set config 10517384
    set certificate 3876258
  end
end
```

| Parameter | Description | Type | Size | Default |
|-------------|-------------------------------|---------|------|---------|
| config | Device configuration version. | integer | - | none |
| certificate | VPN certificate version. | integer | - | none |

Firewall

This section shows the syntax of the following commands:

- [config policy on page 12](#)
- [config traffic-shaper on page 16](#)
- [config shaping-policy on page 16](#)
- [config vip on page 18](#)

config policy

Description: Configure firewall policies.

```
config policy
  edit <name>
    set *srcintf <name1>, <name2>, ...
    set *dstintf <name1>, <name2>, ...
    set *srcaddr <name1>, <name2>, ...
    set dnat [enable | disable]
    set *dstaddr <name1>, <name2>, ...
    set action [accept | deny]
    set status [enable | disable]
    set *service <name1>, <name2>, ...
    set nat [enable | disable]
  next
  delete <name>
  move <name1> [after | before] <name2>
end
purge
show
```

Sample command:

```
config firewall policy
  edit test1
    set srcintf lo
    set dstintf any
    set srcaddr all
    set dnat disable
    set dstaddr all
    set action accept
    set status enable
    set service AH
    set nat enable
  next
```

```

edit test2
  set srcintf any
  set dstintf lan
  set srcaddr all
  set dnat disable
  set dstaddr all
  set action accept
  set status disable
  set service ALL
  set nat enable
next
edit all-pass
  set srcintf any
  set dstintf any
  set srcaddr all
  set dnat disable
  set dstaddr all
  set action accept
  set status enable
  set service ALL
  set nat enable
next
end

```

| Parameter | Description | Type | Size | Default | | | | | | | | | | |
|-----------|---|--------|-------------|---------|--------------------------------|----|-------------------------------------|-------|-----------------------------------|-----|-------------------------------------|--|--|--|
| srcintf | Incoming (ingress) interface. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN as the incoming interface.</td> </tr> <tr> <td>lo</td> <td>Loopback as the incoming interface.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the incoming interface.</td> </tr> <tr> <td>any</td> <td>Any port as the incoming interface.</td> </tr> </tbody> </table> | Option | Description | lan | LAN as the incoming interface. | lo | Loopback as the incoming interface. | port4 | Port 4 as the incoming interface. | any | Any port as the incoming interface. | | | |
| Option | Description | | | | | | | | | | | | | |
| lan | LAN as the incoming interface. | | | | | | | | | | | | | |
| lo | Loopback as the incoming interface. | | | | | | | | | | | | | |
| port4 | Port 4 as the incoming interface. | | | | | | | | | | | | | |
| any | Any port as the incoming interface. | | | | | | | | | | | | | |
| dstintf | Outgoing (egress) interface. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN as the outgoing interface.</td> </tr> <tr> <td>lo</td> <td>Loopback as the outgoing interface.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the outgoing interface.</td> </tr> <tr> <td>any</td> <td>Any port as the outgoing interface.</td> </tr> </tbody> </table> | Option | Description | lan | LAN as the outgoing interface. | lo | Loopback as the outgoing interface. | port4 | Port 4 as the outgoing interface. | any | Any port as the outgoing interface. | | | |
| Option | Description | | | | | | | | | | | | | |
| lan | LAN as the outgoing interface. | | | | | | | | | | | | | |
| lo | Loopback as the outgoing interface. | | | | | | | | | | | | | |
| port4 | Port 4 as the outgoing interface. | | | | | | | | | | | | | |
| any | Any port as the outgoing interface. | | | | | | | | | | | | | |
| srcaddr | Source address. | option | - | none | | | | | | | | | | |

| Parameter | Description | Type | Size | Default | | | | | | | | | | |
|-----------|--|--------|-------------|---------|-------------------------|---------|--------------------------------|---------|---------------------------------------|---------|----------------------|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>all</td> <td>All network addresses.</td> </tr> <tr> <td>none</td> <td>None of the network addresses.</td> </tr> <tr> <td>lan-src</td> <td>LAN network address.</td> </tr> <tr> <td>wan-src</td> <td>WAN network address.</td> </tr> </tbody> </table> | Option | Description | all | All network addresses. | none | None of the network addresses. | lan-src | LAN network address. | wan-src | WAN network address. | | | |
| Option | Description | | | | | | | | | | | | | |
| all | All network addresses. | | | | | | | | | | | | | |
| none | None of the network addresses. | | | | | | | | | | | | | |
| lan-src | LAN network address. | | | | | | | | | | | | | |
| wan-src | WAN network address. | | | | | | | | | | | | | |
| dnat | Destination NAT. | option | - | disable | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable destination NAT.</td> </tr> <tr> <td>disable</td> <td>Disable destination NAT.</td> </tr> </tbody> </table> | Option | Description | enable | Enable destination NAT. | disable | Disable destination NAT. | | | | | | | |
| Option | Description | | | | | | | | | | | | | |
| enable | Enable destination NAT. | | | | | | | | | | | | | |
| disable | Disable destination NAT. | | | | | | | | | | | | | |
| dstaddr | Destination address. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>all</td> <td>All network addresses.</td> </tr> <tr> <td>none</td> <td>None of the network addresses.</td> </tr> <tr> <td>lan-src</td> <td>LAN network address.</td> </tr> <tr> <td>wan-src</td> <td>WAN network address.</td> </tr> </tbody> </table> | Option | Description | all | All network addresses. | none | None of the network addresses. | lan-src | LAN network address. | wan-src | WAN network address. | | | |
| Option | Description | | | | | | | | | | | | | |
| all | All network addresses. | | | | | | | | | | | | | |
| none | None of the network addresses. | | | | | | | | | | | | | |
| lan-src | LAN network address. | | | | | | | | | | | | | |
| wan-src | WAN network address. | | | | | | | | | | | | | |
| action | Policy action. | option | - | accept | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>accept</td> <td>Accept policy.</td> </tr> <tr> <td>deny</td> <td>Deny policy.</td> </tr> </tbody> </table> | Option | Description | accept | Accept policy. | deny | Deny policy. | | | | | | | |
| Option | Description | | | | | | | | | | | | | |
| accept | Accept policy. | | | | | | | | | | | | | |
| deny | Deny policy. | | | | | | | | | | | | | |
| status | Status of the policy. | option | - | enable | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable this policy.</td> </tr> <tr> <td>disable</td> <td>Disable this policy.</td> </tr> </tbody> </table> | Option | Description | enable | Enable this policy. | disable | Disable this policy. | | | | | | | |
| Option | Description | | | | | | | | | | | | | |
| enable | Enable this policy. | | | | | | | | | | | | | |
| disable | Disable this policy. | | | | | | | | | | | | | |
| service | Service/service group name. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>ALL</td> <td>All services.</td> </tr> <tr> <td>HTTP</td> <td>HTTP service.</td> </tr> <tr> <td>etc</td> <td>Refer to config network service list.</td> </tr> </tbody> </table> | Option | Description | ALL | All services. | HTTP | HTTP service. | etc | Refer to config network service list. | | | | | |
| Option | Description | | | | | | | | | | | | | |
| ALL | All services. | | | | | | | | | | | | | |
| HTTP | HTTP service. | | | | | | | | | | | | | |
| etc | Refer to config network service list. | | | | | | | | | | | | | |

| Parameter | Description | Type | Size | Default |
|-----------|---------------|---------------------|------|---------|
| nat | Source NAT. | option | - | disable |
| | Option | Description | | |
| | enable | Enable source NAT. | | |
| | disable | Disable source NAT. | | |

```
(policy) # move test2 after all-pass
(policy) <M> # show
config firewall policy
  edit test1
    set srcintf lo
    set dstintf any
    set srcaddr all
    set dnat disable
    set dstaddr all
    set action accept
    set status enable
    set service AH
    set nat enable
  next
  edit all-pass
    set srcintf any
    set dstintf any
    set srcaddr all
    set dnat disable
    set dstaddr all
    set action accept
    set status enable
    set service ALL
    set nat enable
  next
  edit test2
    set srcintf any
    set dstintf lan
    set srcaddr all
    set dnat disable
    set dstaddr all
    set action accept
    set status disable
    set service ALL
    set nat enable
  next
end
```

config traffic-shaper

Description: Configure firewall shapers.

```
config firewall shaper
  config traffic-shaper
    edit <name>
      set max-bandwidth (1 - 16776000)
      set *bandwidth-unit [kbps | mbps | gbps]
    delete <name>
  purge
  show
end
```

Sample command:

```
config firewall shaper traffic-shaper
  edit 1
    set max-bandwidth 34
    set bandwidth-unit kbps
  next
end
```

| Parameter | Description | Type | Size | Default |
|----------------|--|----------------------|--------------|---------|
| max-bandwidth | Upper bandwidth limit enforced by the shaper. | integer | 1 - 16776000 | 100 |
| bandwidth-unit | Unit of measurement for guaranteed and maximum bandwidth for the shaper. | option | - | none |
| | Option | Description | | |
| | kbps | Kilobits per second. | | |
| | mbps | Megabits per second. | | |
| | gbps | Gigabits per second. | | |

config shaping-policy

Description: Configure firewall shaping policies.

```
config shaping-policy
  edit <name>
    set status [enable | disable]
```

```

        set *dstintf <name1>, <name2>, ...
        set *traffic-shaper <name1>, <name2>, ...
    delete <name>
    purge
    show
end

```

Sample command:

```

config firewall shaping-policy
edit 1_policy
set status enable
set dstintf port1
set traffic-shaper 1
next
end

```

| Parameter | Description | Type | Size | Default |
|----------------|--|---|------|---------|
| status | Status of the traffic shaping policy. | option | - | enable |
| | Option | Description | | |
| | enable | Enable the policy. | | |
| | disable | Disable the policy. | | |
| dstintf | Outgoing (egress) interface. | option | - | none |
| | Option | Description | | |
| | lan | LAN as the outgoing interface. | | |
| | lo | Loopback as the outgoing interface. | | |
| | port4 | Port 4 as the outgoing interface. | | |
| | any | Any port as the outgoing interface. | | |
| traffic-shaper | Traffic shaper to apply to traffic forwarded by the firewall policy. | option | - | none |
| | Option | Description | | |
| | 1 | Refer to config traffic-shaper on page 16 . | | |

config vip

Description: Configure firewall virtual IPs.

```

config vip
  edit <name>
    set comment [255]
    set *extip <name1>
    set *mappedip <name1>
    set *extintf <name1>, <name2>, ...
    set portforward [enable | disable]
    set *protocol <name1>, <name2>, ... *only accessible when portforward is enabled
    set *extport (1 - 65535) *only accessible when portforward is enabled
    set *mappedport (1 - 65535) *only accessible when portforward is enabled
    unset
    next
    show
    abort
  end
delete <name >
purge
show
end

```

Sample command:

```

config firewall vip
  edit 1
    set comment this is a test vip
    set extip 10.153.24.44
    set mappedip 10.153.24.36
    set extintf any
    set portforward enable
    set protocol tcp
    set extport 25
    set mappedport 33
  next
end

```

| Parameter | Description | Type | Size | Default |
|-----------|---|--------------|--------------------------------|---------|
| comment | Optional comments. | string | Up to 255 characters in length | none |
| extip | IP address on the external interface to be mapped to an address on the destination network. | IPv4 address | - | none |
| mappedip | IP address on the destination | IPv4 address | - | none |

| Parameter | Description | Type | Size | Default | | | | | | | | | | |
|-------------|---|--------|-------------|---------|--------------------------------|---------|-------------------------------------|-------|-----------------------------------|-----|-------------------------------------|--|--|--|
| extintf | network to which the external IP address is mapped. Interface connected to the source network that receives packets to be forwarded to the destination network. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN as the outgoing interface.</td> </tr> <tr> <td>lo</td> <td>Loopback as the outgoing interface.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the outgoing interface.</td> </tr> <tr> <td>any</td> <td>Any port as the outgoing interface.</td> </tr> </tbody> </table> | Option | Description | lan | LAN as the outgoing interface. | lo | Loopback as the outgoing interface. | port4 | Port 4 as the outgoing interface. | any | Any port as the outgoing interface. | | | |
| Option | Description | | | | | | | | | | | | | |
| lan | LAN as the outgoing interface. | | | | | | | | | | | | | |
| lo | Loopback as the outgoing interface. | | | | | | | | | | | | | |
| port4 | Port 4 as the outgoing interface. | | | | | | | | | | | | | |
| any | Any port as the outgoing interface. | | | | | | | | | | | | | |
| portforward | Port forwarding. | option | - | disable | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable port forwarding.</td> </tr> <tr> <td>disable</td> <td>Disable port forwarding.</td> </tr> </tbody> </table> | Option | Description | enable | Enable port forwarding. | disable | Disable port forwarding. | | | | | | | |
| Option | Description | | | | | | | | | | | | | |
| enable | Enable port forwarding. | | | | | | | | | | | | | |
| disable | Disable port forwarding. | | | | | | | | | | | | | |
| protocol | Protocol to use when forwarding packets. | option | - | tcp | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>tcp</td> <td>TCP protocol.</td> </tr> <tr> <td>udp</td> <td>UDP Protocol.</td> </tr> <tr> <td>icmp</td> <td>ICMP protocol.</td> </tr> </tbody> </table> | Option | Description | tcp | TCP protocol. | udp | UDP Protocol. | icmp | ICMP protocol. | | | | | |
| Option | Description | | | | | | | | | | | | | |
| tcp | TCP protocol. | | | | | | | | | | | | | |
| udp | UDP Protocol. | | | | | | | | | | | | | |
| icmp | ICMP protocol. | | | | | | | | | | | | | |
| extport | Incoming port number to be mapped to a port number on the destination network. | number | 1 - 65535 | 0 | | | | | | | | | | |
| mappedport | Port number on the destination network to which the external port number is mapped. | number | 1 - 65535 | 0 | | | | | | | | | | |

Router

This section shows the syntax of the following commands:

- [config router policy on page 20](#)
- [config static on page 22](#)
- [config target on page 23](#)
- [config multicast on page 24](#)
- [config OSPF on page 26](#)
- [config prefix-list on page 31](#)
- [config route-map on page 32](#)

config router policy

Description: Configure router policies.

```
config router policy
  edit <name>
    set input-device <name1>
    set srcaddr <name1>
    set dstaddr <name1>
    set service <name1>, <name2>, ...
    set *target <name1>
    set status [enable | disable]
    set comment {string}
    unset
    next
    show
    abort
    end
  delete <name>
  purge
  move <name1> [before | after] <name2>
  show
  end
```

Sample command:

```
config router policy
  edit 1
    set input-device lan
    set srcaddr all
    set dstaddr all
    set service ALL
```

```

set target target.port1
set status enable
set comment this is a test policy
next
end

```

| Parameter | Description | Type | Size | Default | | | | | | | | | | |
|--------------|---|--------|-------------|----------|--------------------------|-----|-------------------------------|-------|--|-------|-----------------------------|--|--|--|
| input-device | Incoming interface name. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN as the input device.</td> </tr> <tr> <td>lo</td> <td>Loopback as the input device.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the input device.</td> </tr> <tr> <td>port1</td> <td>Port 1 as the input device.</td> </tr> </tbody> </table> | Option | Description | lan | LAN as the input device. | lo | Loopback as the input device. | port4 | Port 4 as the input device. | port1 | Port 1 as the input device. | | | |
| Option | Description | | | | | | | | | | | | | |
| lan | LAN as the input device. | | | | | | | | | | | | | |
| lo | Loopback as the input device. | | | | | | | | | | | | | |
| port4 | Port 4 as the input device. | | | | | | | | | | | | | |
| port1 | Port 1 as the input device. | | | | | | | | | | | | | |
| srcaddr | Source address. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN network address.</td> </tr> <tr> <td>all</td> <td>All the network addresses.</td> </tr> <tr> <td>none</td> <td>None of the network addresses.</td> </tr> </tbody> </table> | Option | Description | lan | LAN network address. | all | All the network addresses. | none | None of the network addresses. | | | | | |
| Option | Description | | | | | | | | | | | | | |
| lan | LAN network address. | | | | | | | | | | | | | |
| all | All the network addresses. | | | | | | | | | | | | | |
| none | None of the network addresses. | | | | | | | | | | | | | |
| dstaddr | destination address. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN network address.</td> </tr> <tr> <td>all</td> <td>All the network addresses.</td> </tr> <tr> <td>none</td> <td>None of the network addresses.</td> </tr> </tbody> </table> | Option | Description | lan | LAN network address. | all | All the network addresses. | none | None of the network addresses. | | | | | |
| Option | Description | | | | | | | | | | | | | |
| lan | LAN network address. | | | | | | | | | | | | | |
| all | All the network addresses. | | | | | | | | | | | | | |
| none | None of the network addresses. | | | | | | | | | | | | | |
| service | Service/service group names. | option | - | none | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>ALL_ICMP</td> <td>ICMP.</td> </tr> <tr> <td>ALL</td> <td>All.</td> </tr> <tr> <td>etc</td> <td>Refer to the different services in this command.</td> </tr> </tbody> </table> | Option | Description | ALL_ICMP | ICMP. | ALL | All. | etc | Refer to the different services in this command. | | | | | |
| Option | Description | | | | | | | | | | | | | |
| ALL_ICMP | ICMP. | | | | | | | | | | | | | |
| ALL | All. | | | | | | | | | | | | | |
| etc | Refer to the different services in this command. | | | | | | | | | | | | | |
| target | The PBR's out-going interface and next-hop. | option | - | none | | | | | | | | | | |

| Parameter | Description | Type | Size | Default | | | | | | | | | | |
|--------------|---|--------|------------------------------|------------|--------------------|-----------|-------------------------|--------------|-----------------------|--------------|-----------------------|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>target.lan</td> <td>LAN as the target.</td> </tr> <tr> <td>target.lo</td> <td>Loopback as the target.</td> </tr> <tr> <td>target.port4</td> <td>Port 4 as the target.</td> </tr> <tr> <td>target.Port1</td> <td>Port 1 as the target.</td> </tr> </tbody> </table> | Option | Description | target.lan | LAN as the target. | target.lo | Loopback as the target. | target.port4 | Port 4 as the target. | target.Port1 | Port 1 as the target. | | | |
| Option | Description | | | | | | | | | | | | | |
| target.lan | LAN as the target. | | | | | | | | | | | | | |
| target.lo | Loopback as the target. | | | | | | | | | | | | | |
| target.port4 | Port 4 as the target. | | | | | | | | | | | | | |
| target.Port1 | Port 1 as the target. | | | | | | | | | | | | | |
| status | Status of the policy based the routing rule. | option | - | enable | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable the policy.</td> </tr> <tr> <td>disable</td> <td>Disable the policy.</td> </tr> </tbody> </table> | Option | Description | enable | Enable the policy. | disable | Disable the policy. | | | | | | | |
| Option | Description | | | | | | | | | | | | | |
| enable | Enable the policy. | | | | | | | | | | | | | |
| disable | Disable the policy. | | | | | | | | | | | | | |
| comment | Comment on the policy. | string | 1 - 255 characters in length | none | | | | | | | | | | |

config static

Description: Configure static routes.

```

config static
  edit <name>
    set status [enable | disable]
    set dst {ipv4-address}
    set gateway {ipv4-address}
    set distance [1 - 255]
    set *device <name1>
    set comment {string}
    unset
    next
    show
    abort
  end
delete <name>
purge
show

```

Sample command:

```

config router static
  edit 1
    set status enable

```

```

set dst 10.124.23.0/24
set gateway 192.168.200.99
set distance 1
set device port1
set comment this is a sample static route
next
end

```

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------|---|---------------------------|--------------------------------|---------|--------|-------------|--------|----------------------|---------|-----------------------|
| status | Status of the static route. | option | - | enable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable static route.</td> </tr> <tr> <td>disable</td> <td>Disable static route.</td> </tr> </tbody> </table> | | | | Option | Description | enable | Enable static route. | disable | Disable static route. |
| Option | Description | | | | | | | | | |
| enable | Enable static route. | | | | | | | | | |
| disable | Disable static route. | | | | | | | | | |
| dst | Destination IP and mask for the route. | ipv4_ address/netmask- | - | none | | | | | | |
| gateway | Gateway IP for the route. | ipv4_address | - | none | | | | | | |
| distance | Administrative distance. (This field is the metric of the route item. Set the value carefully and ensure that this route item matches your application scenario without affecting other route items.) | integer | 1 - 255 | 1 | | | | | | |
| device | Gateway outgoing interface or tunnel. | option | - | none | | | | | | |
| comment | Comment on the route. (Optional) | string | Up to 255 characters in length | none | | | | | | |

config target

Description: Configure router targets.

```

config target
  edit <name>
    set *target <name1>
    set next-hop <name1>
    unset
    next
    show
    abort
  end
  delete <name>
  purge

```

```
show
end
```

Sample command:

```
config router target
  edit target.lo
    set interface lo
    set next-hop
  next
```

| Parameter | Description | Type | Size | Default |
|-----------|--|-----------------------------------|------|---------|
| interface | Target interface. | option | | none |
| | Option | Description | | |
| | lan | LAN as the target interface. | | |
| | lo | Loopback as the target interface. | | |
| | port4 | Port 4 as the target interface. | | |
| | port1 | Port 1 as the target interface. | | |
| next-hop | Next-hop IP address in x.x.x.x format. | IPv4 address | - | none |

config multicast

Description: Configure multicast router.

```
set join-prune-interval [1 - 65535]
set hello-interval [30 - 18724]
unset
```

- [config pim-sm-global on page 24](#)
- [config rp-address on page 24](#)
- [config interface on page 25](#)

config pim-sm-global

Description: Configure PIM sparse-mode interfaces.

config rp-address

Description: Configure static RP addresses.

```

config rp-address
  edit <rpaddressip>
    set *address <name1>
    set group <name1> *specified IPv4 subnet should be within 224.0.0.0/4 but not within
      232.0.0.0/8
    unset
    next
    show
    abort
    end
  delete <rpaddressip>
  purge
  show
  end
show
end

```

config interface

Description: Configure Protocol Independent Multicast (PIM) interfaces.

Although "set" is an available option, there's no entry for the "set" command.

```

config interface
  edit <name> *must be valid interface id in system interface list
    next
    show
    abort
    end
  delete <name>
  purge
  show
  end
show
end

```

Sample command:

```

config router multicast
  config pim-sm-global
    set join-prune-interval 60
    set hello-interval 30
  config rp-address
    edit 1
      set address 192.168.200.23
      set group 224.0.0.0/4
    next
  end
end
end

```

```

config interface
end
end

```

| Parameter | Description | Type | Size | Default |
|---------------------|--|----------------------|------------|-------------|
| join-prune-interval | Interval (in seconds) between sending PIM join/prune messages. | integer | 1 - 65535 | 60 |
| hello-interval | Interval (in seconds) between sending PIM hello messages. | integer | 30 - 18724 | 30 |
| address | RP router address. | IPv4 address | - | none |
| group | Groups to use this RP. (Note: The specified IPv4 subnet should be within 224.0.0.0/4, but not within 232.0.0.0/8.) | IPv4 address/netmask | - | 224.0.0.0/4 |
| interface | PIM interfaces. | string | - | none |

config OSPF

Description: Configure OSPF settings.

```

config ospf
  set status [enable | disable]
  set router-id <name1>
unset

```

Sample command:

```

config router ospf
  set status enable
  set router-id 192.168.100.127

```

| Parameter | Description | Type | Size | Default |
|-----------|-----------------------------|--------------------|------|---------|
| status | Set the status of the OSPF: | option | - | disable |
| | Option | Description | | |
| | enable | Enable OSPF | | |
| | disable | Disable OSPF | | |

| Parameter | Description | Type | Size | Default |
|---------------|--|--------------|------|---------|
| set router-id | The router-id is a unique identity to the OSPF router. If no router-id is specified, the system will automatically choose the highest IP address as the router-id. | IPv4 address | - | 0.0.0.0 |

- [config area on page 27](#)
- [config network on page 28](#)
- [config ospf-interface on page 29](#)
- [config redistribute on page 30](#)

config area

Description: Configure OSPF area settings.

```

config area
  edit {ipv4-address}
    set
    unset
    next
    show
    abort
    end
  delete {ipv4-address}
  purge
  show
  end

```

Sample command:

```

config router ospf
  config area
    edit 0.0.0.0

```

| Parameter | Description | Type | Size | Default |
|-------------|---|--------------|------|---------|
| config area | OSPF area configuration. An area is a logical grouping of contiguous networks and routers in the same area with the same link-state database and topology. Note: The current release only supports Area 0 called the backbone area, and does not support multiple areas. All routers inside an area must have the same area ID to become OSPF neighbors. You can add Area 0 by editing Area 0.0.0.0 | IPv4 address | - | none |

config network

Description: Configure OSPF network settings.

```
config network
  edit <name>
    set *prefix {integer}
    set *area <name1>
    unset
    next
    show
    abort
    end
  delete <name>
  purge
  show
  end
```

Sample command:

```
config router ospf
  config network
    edit 1
      set prefix 192.168.100.127/32
      set area 0.0.0.0
    next
    edit 2
      set prefix 192.168.100.0/30
      set area 0.0.0.0
    next
  end
```

| Parameter | Description | Type | Size | Default |
|----------------|-----------------------------|--|------|---------|
| config network | OSPF network configuration. | option | - | none |
| | Option | Description | | |
| | prefix | Prefix used to identify network/subnet address for advertising to the OSPF domain. | | |
| | area | Attach the network to area. | | |

| CLI Command | Description |
|---|--|
| config network edit [id] set prefix [X.X.X.X/Y] set area 0.0.0. Prefix | <ul style="list-style-type: none"> id—string X.X.X.X—Network prefix Y—Netmask |

config ospf-interface

Description: Configure OSPF interface settings.

```

config ospf-interface
  edit <name>
    set status [enable | disable]
    set *interface <name1>
    set mtu-ignore [enable | disable]
    set cost [0 - 65535]
    unset
    next
    show
    abort
  end
delete <name>
purge
show
end

```

Sample command:

```

config ospf-interface
  edit 1
    set status enable
    set interface opaq
    set mtu-ignore enable
    set cost 5
  end

```

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------------------|---|--------|-------------|---------|---|---------|--|--|--|--|
| config ospf-interface | OSPF interface configuration. | option | - | none | | | | | | |
| status | Enable/Disable OSPF processing on the said interface. | option | | - | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable OSPF processing on the said interface.</td> </tr> <tr> <td>disable</td> <td>Disable OSPF processing on the said interface.</td> </tr> </tbody> </table> | Option | Description | enable | Enable OSPF processing on the said interface. | disable | Disable OSPF processing on the said interface. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable OSPF processing on the said interface. | | | | | | | | | |
| disable | Disable OSPF processing on the said interface. | | | | | | | | | |
| set interface | Must be the VPN tunnel interface as OSPF is built over IPSEC VPN. | | | | | | | | | |
| set mtu-ignore | Prevents OSPF neighbor adjacency failure caused by mismatched MTUs. | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>OSPF will stop detecting mismatched MTUs before</td> </tr> </tbody> </table> | Option | Description | enable | OSPF will stop detecting mismatched MTUs before | | | | | |
| Option | Description | | | | | | | | | |
| enable | OSPF will stop detecting mismatched MTUs before | | | | | | | | | |

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------|---|---------|-------------|---------|------------------------|---------|---|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td></td> <td>forming OSPF adjacency</td> </tr> <tr> <td>disable</td> <td>OSPF will detect mismatched MTUs, and OSPF adjacency is not established if MTU is mismatched.</td> </tr> </tbody> </table> | Option | Description | | forming OSPF adjacency | disable | OSPF will detect mismatched MTUs, and OSPF adjacency is not established if MTU is mismatched. | | | |
| Option | Description | | | | | | | | | |
| | forming OSPF adjacency | | | | | | | | | |
| disable | OSPF will detect mismatched MTUs, and OSPF adjacency is not established if MTU is mismatched. | | | | | | | | | |
| set cost | Interface cost used to calculate the best path to reach other routers in the same area. 0 means auto-cost. | integer | 0—65535 | | | | | | | |

config redistribute

Description: Configure redistribute settings.

```
config router ospf
  config redistribute
    config [connected | static]
      set status [enable | disable]
      set metric-type [1 | 2]
      set metric <value>
      set route-map <route-map name>
```

Sample command:

```
config router ospf
  config redistribute
    config connected
      set status enable
      set metric-type 2
      set metric 10
      set routemap redist-local-connected
    end
    config static
      set status enable
      set metric-type 2
      set metric 10
      set routemap redist-static
    end
```

| Parameter | Description | Type | Size | Default |
|-----------------|--|------|------|---------|
| status | Enable/disable redistributing routes. | | | |
| set metric-type | Specify the external link type to be used for the redistributed routes. The options are E1 and E2 (default). | | | E2 |

| Parameter | Description | Type | Size | Default |
|--------------|------------------------------------|---------|--------------|---------|
| set metric | Used for the redistributed routes. | integer | 1 - 16777214 | 10 |
| set routemap | Route map name. | | | |

config prefix-list

Description: Configure IPv4 prefix lists.

```
edit <name>
  set
  unset
```

The "set" command is available, but there are no settings to "set" or "unset".

- [config rule on page 31](#)

config rule

Description: Configure IPv4 prefix list rule.

```
config prefix-list
  config rule
    edit <name>
      set action [permit | deny]
      set *prefix {ipv4-subnet}
      set ge (0 - 32)
      set le (0 - 32)
      unset
      next
      show
      abort
      end
    delete <name>
    purge
    show
    end
  next
  show
  abort
  end
delete <name>
purge
show
end
```

Sample command:

```

config router prefix-list
  edit 1
    config rule
      edit 1
        set action permit
        set prefix 192.168.200.0/24
        set ge 25
        set le 25
      next
    end
  next
end

```

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------|--|----------------------|--------|---------|--------|-------------|--------|-------------------------------------|------|------------------------------------|
| action | Action of the rule. | option | - | permit | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>permit</td> <td>Allow packets that match this rule.</td> </tr> <tr> <td>deny</td> <td>Deny packets that match this rule.</td> </tr> </tbody> </table> | | | | Option | Description | permit | Allow packets that match this rule. | deny | Deny packets that match this rule. |
| Option | Description | | | | | | | | | |
| permit | Allow packets that match this rule. | | | | | | | | | |
| deny | Deny packets that match this rule. | | | | | | | | | |
| prefix | IPv4 prefix to define the regular filter criteria. | IPv4 address/netmask | - | none | | | | | | |
| ge | Minimum prefix length to be matched. | integer | 0 - 32 | none | | | | | | |
| le | Maximum prefix length to be matched. | integer | 0 - 32 | none | | | | | | |

config route-map

Description: Configure route maps.

```

edit <name>
  set
  unset

```

- [config rule on page 32](#)

config rule

Description: Configure route map rule.

```

config rule
  edit <name>

```

```

        set action [permit | deny]
        set match-ip-address {ipv4-address}
        unset
        next
        show
        abort
        end
    delete <name>
    purge
    show
    end
delete <name>
purge
show
end
show
end

```

Sample command:

```

config router route-map
  edit 1
    config rule
      edit 1
        set action permit
        set match-ip-address 1
      next
    end
  next
end

```

| Parameter | Description | Type | Size | Default |
|------------------|--|-------------------------------------|------|---------|
| action | Action of the rule. | option | - | permit |
| | Option | Description | | |
| | permit | Allow packets that match this rule. | | |
| | deny | Deny packets that match this rule. | | |
| match-ip-address | Match IP address permitted by the prefix-list. | string | - | none |

System

This section shows the syntax of the following commands:

- [config system global on page 34](#)
- [config system accprofile on page 35](#)
- [config admin on page 38](#)
- [config system bluetooth on page 41](#)
- [config management on page 42](#)

config system global

Description: Configure FortiBranchSASE global settings.

```
config system global
  set hostname {string}
  set timezone [0 - 87]
  set auto-install-image [enable | disable]
  set default-image-file {string} *available when auto-install-image is enabled
  set mdm-fw-server {string}
  set os-fw-server {string}
  set admin-server-cert {string}
end
```

```

set header [read-write | read | no-access]
set firewall [read-write | read | no-access]
set router [read-write | read | no-access]
set system [read-write | read | no-access]
set snmp [read-write | read | no-access]
set hmon [read-write | read | no-access]
set vpn [read-write | read | no-access]
set network [read-write | read | no-access]
set wifi [read-write | read | no-access]
set user [read-write | read | no-access]
unset
next
show
abort
end
delete <name>
purge
show
end

```

Sample command:

```

config system accprofile
  edit some_access
    set header read-write
    set firewall read
    set router no-access
    set system read-write
    set snmp read
    set hmon read
    set vpn no-access
    set network read
    set wifi read
    set user read-write
  next

```

| Parameter | Description | Type | Size | Default | | | | | | | | |

| no-access | No access. | | | | | | | | | | | |

config admin

Description: Configure user access.

```
config admin
edit <name>
  set *accprofile <name1>
  set remote-auth {enable | disable}
  set wildcard {enable | disable}
  set *password {string}
  set remote-group {group name}
  set trusthost1 {ipv4-address}
  set trusthost2 {ipv4-address}
  set trusthost3 {ipv4-address}
```

```

set trusthost4 {ipv4-address}
set trusthost5 {ipv4-address}
set trusthost6 {ipv4-address}
set trusthost7 {ipv4-address}
set trusthost8 {ipv4-address}
set trusthost9 {ipv4-address}
set trusthost10 {ipv4-address}
next
end

```

Sample command:

```

config system admin
edit remote1
set accprofile super_admin
set remote-auth enable
set wildcard enable
set password ENC *
set remote-group group1
set trusthost1 192.168.200.110/24
set trusthost2
set trusthost3
set trusthost4
set trusthost5
set trusthost6
set trusthost7
set trusthost8
set trusthost9
set trusthost10
next
end

```

| Parameter | Description | Typy | Size | Default |
|-------------|--|--------|------|---------|
| accprofile | Access profile. | string | - | none |
| remote-auth | Enable/disable authentication using a remote RADIUS server | option | - | disable |
| wildcard | Enable/disable wildcard RADIUS authentication Note: If wildcard is enabled, the remote user can share the account and log in without needing to create multiple user accounts. That means, you can use the user and password pair stored in the remote server without needing to match the table name. | option | - | disable |

| Parameter | Description | Typy | Size | Default |
|--------------|--|--------------|------|---------|
| | Only one wildcard remote account is allowed to exist under system admin. | | | |
| password | Admin user password Note: If wildcard is enabled, you cannot set a password. | string | - | none |
| remote-group | Enter the FortiBranchSASE user group name you want to use for remote authentication. Note: If remote-auth is enabled, remote-group becomes mandatory. Otherwise remote-group is hidden. If remote-auth is enabled but wildcard is disabled, you must set a local password. If the RADIUS server is unreachable, FortiBranchSASE uses the local password. For other situations, such as if FortiBranchSASE receives a RADIUS reject message, the local password is omitted. | option | - | none |
| trusthost1 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost2 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost3 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost4 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost5 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost6 | Address or subnet address and | IPv4 address | - | none |

| Parameter | Description | Typy | Size | Default |
|-------------|---|--------------|------|---------|
| | netmask from which the administrator can connect to the device. | | | |
| Trusthost7 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost8 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost9 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |
| Trusthost10 | Address or subnet address and netmask from which the administrator can connect to the device. | IPv4 address | - | none |

config system bluetooth

Description: Configure Bluetooth settings on BLE capable models.

```
config system bluetooth
  set status {enable | disable}
end
```

Sample command:

```
config system bluetooth
  set status enable
end
```

| Parameter | Description | Type | Size | Default |
|-----------|--|--------|------|---------|
| status | Enable or disable the Bluetooth button on applicable models. | option | - | enable |

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------|--|--------|-------------|---------|--|---------|--|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable the Bluetooth button. The Bluetooth button can be triggered to provide Bluetooth functionality.</td> </tr> <tr> <td>disable</td> <td>Disable the Bluetooth button. Pressing the Bluetooth button will not trigger anything.</td> </tr> </tbody> </table> | Option | Description | enable | Enable the Bluetooth button. The Bluetooth button can be triggered to provide Bluetooth functionality. | disable | Disable the Bluetooth button. Pressing the Bluetooth button will not trigger anything. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable the Bluetooth button. The Bluetooth button can be triggered to provide Bluetooth functionality. | | | | | | | | | |
| disable | Disable the Bluetooth button. Pressing the Bluetooth button will not trigger anything. | | | | | | | | | |

config management

Description: Configure Extender management settings.

```
config management
  set discovery-type [auto | fortigate | cloud | local]
unset
```

Sample command

```
set discovery-type fortigate
```

| Parameter | Description | Type | Size | Default | | | | | | | | | | |
|----------------|--|--------|-------------|---------|------------|-----------|------------|-------|------------------|-------|--------|--|--|--|
| discovery-type | AC discovery type. | option | - | auto | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>auto</td> <td>Automatic.</td> </tr> <tr> <td>fortigate</td> <td>FortiGate.</td> </tr> <tr> <td>cloud</td> <td>FortiEdge Cloud.</td> </tr> <tr> <td>local</td> <td>Local.</td> </tr> </tbody> </table> | Option | Description | auto | Automatic. | fortigate | FortiGate. | cloud | FortiEdge Cloud. | local | Local. | | | |
| Option | Description | | | | | | | | | | | | | |
| auto | Automatic. | | | | | | | | | | | | | |
| fortigate | FortiGate. | | | | | | | | | | | | | |
| cloud | FortiEdge Cloud. | | | | | | | | | | | | | |
| local | Local. | | | | | | | | | | | | | |

- [config fortigate on page 42](#)
- [config cloud on page 43](#)
- [config system management local on page 44](#)
- [config local-access on page 45](#)
- [config fortigate-backup on page 45](#)

config fortigate

Description: Configure FortiGate settings.

```

set ac-discovery-type [static | broadcast]
  config static-ac-addr *only accessible when ac-discovery-type is static
    edit <name>
      set server <name>
    next
  end
set ac-ctl-port [1024 - 49150]
set ac-data-port [1024 - 49150]
set discovery-intf <name1>
set ingress-intf <name1>
unset
show
end

```

| Parameter | Description | Type | Size | Default | | | | | | | | |
|-------------------|--|---------|--------------|-----------|---------------------------------|--------|------------------------------------|-------|------------------------------------|--|--|--|
| ac-discovery-type | The method that the device uses to discover the AC, i.e., FortiGate. | option | - | broadcast | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>broadcast</td> <td>Broadcast.</td> </tr> <tr> <td>static</td> <td>Static IP address.</td> </tr> </tbody> </table> | Option | Description | broadcast | Broadcast. | static | Static IP address. | | | | | |
| Option | Description | | | | | | | | | | | |
| broadcast | Broadcast. | | | | | | | | | | | |
| static | Static IP address. | | | | | | | | | | | |
| server | IP address or hostname of the AC server. | string | - | none | | | | | | | | |
| ac-ctl-port | CAPWAP control port of the AC server. | integer | 1024 - 49150 | 5246 | | | | | | | | |
| ac-data-port | CAPWAP data port of the AC server. | integer | 1024 - 49150 | 5246 | | | | | | | | |
| discovery-intf | The physical port from which FortiBranchSASE sends broadcast packets in search for FortiGate. | option | - | none | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN as the discovery interface.</td> </tr> <tr> <td>Port1</td> <td>Port 1 as the discovery interface.</td> </tr> <tr> <td>port2</td> <td>Port 2 as the discovery interface.</td> </tr> </tbody> </table> | Option | Description | lan | LAN as the discovery interface. | Port1 | Port 1 as the discovery interface. | port2 | Port 2 as the discovery interface. | | | |
| Option | Description | | | | | | | | | | | |
| lan | LAN as the discovery interface. | | | | | | | | | | | |
| Port1 | Port 1 as the discovery interface. | | | | | | | | | | | |
| port2 | Port 2 as the discovery interface. | | | | | | | | | | | |

config cloud

Description: Configure Cloud settings.

```

config cloud
  set dispatcher {string}
  set dispatcher-port {integer}
  set mode [ip-passthrough | nat]
  set proxy [enable | disable]

```

```

set proxy-server {ipv4-address} *available when proxy is enabled
set proxy-port [1 - 65535] *available when proxy is enabled
unset
show
end

```

| Parameter | Description | Type | Size | Default |
|-----------------|-----------------------------|--------------------|-------------------------|---------------------------------------|
| dispatcher | Cloud dispatch URL. | string | - | Fortiextender-dispatch.forticloud.com |
| dispatcher-port | Cloud dispatch port. | integer | 0 - 9223372036854775807 | 443 |
| mode | Networking mode. | option | - | nat |
| | Option | Description | | |
| | nat | NAT. | | |
| | ip-passthrough | IP-passthrough. | | |
| proxy | Status of proxy connection. | option | - | disable |
| | Option | Description | | |
| | enable | Enable proxy. | | |
| | disable | Disable proxy. | | |
| proxy-server | Proxy server IP address. | IPv4 address | - | none |
| proxy-port | Socks5 proxy port. | integer | 1 - 65535 | 1080 |

config system management local

Description: Configure local settings.

```

config system management local
set mode [ip-passthrough | nat]
set modem-offload [disable | enable]
unset
show
end

```

| Parameter | Description | Type | Size | Default |
|-----------|------------------|--------|------|---------|
| mode | Networking mode. | option | - | nat |

| Parameter | Description | Type | Size | Default | | | | | | |
|----------------|---|--------|-------------|---------|--------------------------------|----------------|---------------------------------|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>nat</td> <td>NAT.</td> </tr> <tr> <td>ip-passthrough</td> <td>IP-passthrough.</td> </tr> </tbody> </table> | Option | Description | nat | NAT. | ip-passthrough | IP-passthrough. | | | |
| Option | Description | | | | | | | | | |
| nat | NAT. | | | | | | | | | |
| ip-passthrough | IP-passthrough. | | | | | | | | | |
| modem-offload | Enable/disable LTE/5G traffic offload This feature takes effect when FortiExtender is working in local mode with NAT enabled. | option | - | enable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable LTE/5G traffic offload.</td> </tr> <tr> <td>disable</td> <td>Disable LTE/5G traffic offload.</td> </tr> </tbody> </table> | Option | Description | enable | Enable LTE/5G traffic offload. | disable | Disable LTE/5G traffic offload. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable LTE/5G traffic offload. | | | | | | | | | |
| disable | Disable LTE/5G traffic offload. | | | | | | | | | |

config local-access

Description: Configure administrative access settings.

```
config local-access
  set http [1 - 65535]
  set https [1 - 65535]
  set ssh [1 - 65535]
  set telnet [1 - 65535]
  set idle-timeout [1 - 480]
unset
show
end
```

| Parameter | Description | Type | Size | Default |
|--------------|---|---------|-----------|---------|
| http | HTTP port number. | integer | 1 - 65535 | 80 |
| https | HTTPS port number. | integer | 1 - 65535 | 443 |
| ssh | SSH port number. | integer | 1 - 65535 | 22 |
| telnet | Telnet port number. | integer | 1 - 65535 | 23 |
| idle-timeout | The number of minutes before an idle administrator session times out. | integer | 1 - 480 | 5 |

config fortigate-backup

Description: Configure backup feature.

```

config fortigate-backup
  set vrrp-interface <name1>
  set status [enable | disable]
  unset
  show
end
show
end

```

| Parameter | Description | Type | Size | Default |
|----------------|-------------------------------|-----------------------------|------|---------|
| vrrp-interface | VRRP interface. | option | - | none |
| | Option | Description | | |
| | lan | LAN as vrrp-interface. | | |
| | lo | Loopback as vrrp-interface. | | |
| | Port1 | Port 1 as vrrp-interface. | | |
| status | Status of the VRRP interface. | option | - | disable |
| | Option | Description | | |
| | enable | Enable the VRRP interface. | | |
| | disable | Disable the VRRP interface. | | |

Sample command:

```

config system management
  set discovery-type auto
  config fortigate
    set ac-discovery-type static
    edit 1
      set server 10.107.41.66
    next
    set ac-ctl-port 5246
    set ac-data-port 25246
    set discovery-intf lan
    set ingress-intf
  end

config cloud
  set dispatcher fortiextender-dispatch.forticloud.com
  set dispatcher-port 443
  set mode nat
  set proxy enable
  set proxy-server 10.107.34.22
  set proxy-port 3453
end

```

```
config local
  set mode nat
end

config local-access
  set http 80
  set https 443
  set ssh 22
  set telnet 23
  set idle-timeout 5
end

config fortigate-backup
  set vrrp-interface port1
  set status enable
end
end
```

config system interface

Description: Configure system interface settings.

```
config system interface
  edit <name>
    set *type [loopback | virtual-wan | vlan | capwap | dummy]
    set status [up| down]
    set mode [static | dhcp]
    set ip {ipv4-address}
    set gateway {ipv4-address}
    set mtu-override [enable | disable]
    set mtu [512-1500] *available when mtu-override is set to enable
    set distance [1 - 512]
    set vrrp-virtual-mac [enable | disable]
    set allowaccess {option1}, {option2}, ...
    set security-mode [none|captive-portal]
    set security-external-web {string}
    set security-groups <name1>, <name2>, ...
    set security-exempt-list {string}
    set security-exempt-list6 {string}
    set security-redirect-url {string}
    set defaultgw [enable | disable] *available when mode is set to dhcp
    set dns-server-override [enable | disable] *available when mode is set to dhcp
    set redundant-by [priority | cost] *available when type is set to virtual-wan
    set algorithm [redundant | WRR] *available when type is set to virtual-wan
    set FEC [source_ip | dest_ip | source_dest_ip_pair | connection] *available when type is set
to virtual-wan
    set session-timeout [0 - 86400] *available when type is set to virtual-wan
    set grace-period [0 - 10000000] *available when type is set to virtual-wan
```

```

| dhcp | DHCP mode. | | | | | | | | | | | | | | | |
| ip | Interface IP address and subnet mask (in x.x.x.x/24 format). | IPv4 address | - | none | | | | | | | | | | | | |
| gateway | Interface's connected gateway. | string | - | none | | | | | | | | | | | | |
| mtu-override | Status of MTU override. | option | - | disable | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable MTU override.</td> </tr> <tr> <td>disable</td> <td>Disable MTU override.</td> </tr> </tbody> </table> | Option | Description | enable | Enable MTU override. | disable | Disable MTU override. | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | |
| enable | Enable MTU override. | | | | | | | | | | | | | | | |
| disable | Disable MTU override. | | | | | | | | | | | | | | | |
| mtu | MTU value for the interface. | integer | 512 - 1500 | 1500 | | | | | | | | | | | | |
| distance | Route metric of the interface gateway. | integer | 1 - 512 | 5 | | | | | | | | | | | | |
| vrrp-virtual-mac | Use of virtual MAC for VRRP. | option | - | disable | | | | | | | | | | | | |

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------------------|---|--------|---------------------|----------|---|----------------|--|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable VRRP virtual MAC.</td> </tr> <tr> <td>disable</td> <td>Disable VRRP virtual MAC.</td> </tr> </tbody> </table> | Option | Description | enable | Enable VRRP virtual MAC. | disable | Disable VRRP virtual MAC. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable VRRP virtual MAC. | | | | | | | | | |
| disable | Disable VRRP virtual MAC. | | | | | | | | | |
| allowaccess | Types of management access allowed to this interface. | option | - | none | | | | | | |
| security-mode | Turn on captive portal authentication for this interface. | option | - | none | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>none</td> <td>No security option.</td> </tr> <tr> <td>captive-portal</td> <td>Captive portal authentication.</td> </tr> </tbody> </table> | Option | Description | none | No security option. | captive-portal | Captive portal authentication. | | | |
| Option | Description | | | | | | | | | |
| none | No security option. | | | | | | | | | |
| captive-portal | Captive portal authentication. | | | | | | | | | |
| security-external-web | URL of external authentication web server. | string | Maximum length: 255 | - | | | | | | |
| security-groups | Names of user groups that can authenticate with the captive portal. | option | - | - | | | | | | |
| security-exempt-list | Name of security-exempt-list. | option | - | - | | | | | | |
| security-exempt-list6 | Name of security-exempt-list6. | option | - | - | | | | | | |
| security-redirect-url | URL redirection after disclaimer/authentication. | string | Maximum length: 255 | - | | | | | | |
| defaultgw | Ability to get the gateway IP from the DHCP server. | option | - | enable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable getting the gateway IP from the DHCP server.</td> </tr> <tr> <td>disable</td> <td>Disable getting the gateway IP from the DHCP server.</td> </tr> </tbody> </table> | Option | Description | enable | Enable getting the gateway IP from the DHCP server. | disable | Disable getting the gateway IP from the DHCP server. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable getting the gateway IP from the DHCP server. | | | | | | | | | |
| disable | Disable getting the gateway IP from the DHCP server. | | | | | | | | | |
| dns-server-override | Use DNS acquired by DHCP. | option | - | enable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable DNS server override.</td> </tr> <tr> <td>disable</td> <td>Disable DNS server override.</td> </tr> </tbody> </table> | Option | Description | enable | Enable DNS server override. | disable | Disable DNS server override. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable DNS server override. | | | | | | | | | |
| disable | Disable DNS server override. | | | | | | | | | |
| redundant-by | Use of the benchmark for redundant algorithm. | option | - | priority | | | | | | |

| Parameter | Description | Type | Size | Default | | | | | | | | | | | | |
|---------------------|---|---------|--------------|-----------|---|---------|--|---------------------|--|------------|--|-------|----------------------------------|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>priority</td> <td>Redundant by priority.</td> </tr> <tr> <td>cost</td> <td>Redundant by cost.</td> </tr> </tbody> </table> | Option | Description | priority | Redundant by priority. | cost | Redundant by cost. | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | |
| priority | Redundant by priority. | | | | | | | | | | | | | | | |
| cost | Redundant by cost. | | | | | | | | | | | | | | | |
| algorithm | LLB algorithm. | option | - | redundant | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>redundant</td> <td>Redundant as algorithm.</td> </tr> <tr> <td>WRR</td> <td>WRR as algorithm.</td> </tr> </tbody> </table> | Option | Description | redundant | Redundant as algorithm. | WRR | WRR as algorithm. | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | |
| redundant | Redundant as algorithm. | | | | | | | | | | | | | | | |
| WRR | WRR as algorithm. | | | | | | | | | | | | | | | |
| FEC | Forward equivalence class. | option | - | source_ip | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>source_ip</td> <td>Forward equivalence class by source IP.</td> </tr> <tr> <td>dest_ip</td> <td>Forward equivalence class by destination IP.</td> </tr> <tr> <td>source_dest_ip_pair</td> <td>Forward equivalence class by source and destination IP pair.</td> </tr> <tr> <td>connection</td> <td>Forward equivalence class by connection.</td> </tr> </tbody> </table> | Option | Description | source_ip | Forward equivalence class by source IP. | dest_ip | Forward equivalence class by destination IP. | source_dest_ip_pair | Forward equivalence class by source and destination IP pair. | connection | Forward equivalence class by connection. | | | | | |
| Option | Description | | | | | | | | | | | | | | | |
| source_ip | Forward equivalence class by source IP. | | | | | | | | | | | | | | | |
| dest_ip | Forward equivalence class by destination IP. | | | | | | | | | | | | | | | |
| source_dest_ip_pair | Forward equivalence class by source and destination IP pair. | | | | | | | | | | | | | | | |
| connection | Forward equivalence class by connection. | | | | | | | | | | | | | | | |
| session-timeout | FEC session timeout in seconds. | integer | 0 - 86400 | 60 | | | | | | | | | | | | |
| grace-period | Grace period measured in seconds before failback. | integer | 0 - 10000000 | 0 | | | | | | | | | | | | |
| members | Link members of virtual WAN. | option | - | none | | | | | | | | | | | | |
| rid | CAPWAP virtual interface ID. | integer | 1, 2 | 1 | | | | | | | | | | | | |
| vid | VLAN ID. | integer | 1 - 4089 | 0 | | | | | | | | | | | | |
| ingress-intf | CAPWAP or VLAN interface's parent interface. | option | - | none | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN as the ingress interface.</td> </tr> <tr> <td>lo</td> <td>Loopback as the ingress interface.</td> </tr> <tr> <td>lte1</td> <td>LTE 1 as the ingress interface.</td> </tr> <tr> <td>wan</td> <td>WAN as the ingress interface.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the ingress interface.</td> </tr> </tbody> </table> | Option | Description | lan | LAN as the ingress interface. | lo | Loopback as the ingress interface. | lte1 | LTE 1 as the ingress interface. | wan | WAN as the ingress interface. | port4 | Port 4 as the ingress interface. | | | |
| Option | Description | | | | | | | | | | | | | | | |
| lan | LAN as the ingress interface. | | | | | | | | | | | | | | | |

| Option | Description | | | | | | | | | |
| enable | Enable sfp-dsl. | | | | | | | | | |
| disable | Disable sfp-dsl. | | | | | | | | | |
| Autodect | Enable/disable sfp-dsl auto-detect. | option | - | enable | | | | | | |
| Phy-mode | DSL physical mode. | option | - | vdsl | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Vdsl</td> <td></td> </tr> <tr> <td>Adsl</td> <td></td> </tr> </tbody> </table> | Option | Description | Vdsl | | Adsl | | | | |
| Option | Description | | | | | | | | | |
| Vdsl | | | | | | | | | | |
| Adsl | | | | | | | | | | |

- [config VRRP on page 51](#)
- [config ipv6 on page 53](#)

config VRRP

Description: Configure the VRRP settings.

```

config vrrp
    set status [enable | disable]
    set version [2]
    set *ip {ipv4-address}
    set *id [1 - 255]
    set priority [1 - 255]
    set adv-interval [1 - 255]
    set start-time [1 - 255]
    set preempt [enable | disable]
unset
show
end
next
show
abort
end
delete <name>
purge
show
end

```

Sample command:

```

config system interface
    edit lan
        set type physical
        set status up

```

```

set mode dhcp
set mtu-override enable
set mtu 1500
set distance 5
set vrrp-virtual-mac disable
config vrrp
    set status enable
    set version 2
    set ip 192.168.100.25
    set id 5
    set priority 1
    set adv-interval 23
    set start-time 33
    set preempt enable
end
set allowaccess http https ping snmp ssh telnet
set defaultgw enable
set dns-server-override enable
next
end

```

| Parameter | Description | Type | Size | Default |
|--------------|-----------------------------------|--------------------------------|---------|---------|
| status | Status of the VRRP configuration. | option | - | disable |
| | Option | Description | | |
| | enable | Enable the VRRP configuration. | | |
| | disable | Disable VRRP configuration. | | |
| version | VRRP version. | integer | 2 | 2 |
| ip | IP address of the virtual router. | IPv4 address | - | none |
| id | ID of the virtual router. | integer | 1 - 255 | 0 |
| priority | Priority of the virtual router. | integer | 1 - 255 | 100 |
| adv-interval | Advertisement interval. | integer | 1 - 255 | 1 |
| start-time | Start-up time. | integer | 1 - 255 | 1 |
| preempt | Preempt mode. | option | - | disable |
| | Option | Description | | |
| | enable | Enable preempt mode. | | |
| | disable | Disable preempt mode. | | |

config ipv6

Description: Configure the IPv6 interface settings.

```
config system interface
  edit <name>
    config ipv6
      set status [enable | disable]
      set ip6-mode [static | dhcp | pppoe | delegated]
      set autoconf [enable | disable]
      set ip6-send-adv [enable | disable]
      set ip6-manage-flag [enable | disable]
      set ip6-other-flag [enable | disable]
      set ip6-max-interval <4-1800>
      set ip6-min-interval <3-1350>
      set ip6-address {ipv6-address}
      set ip6-adv-rio [enable | disable]
      set ip6-route-pref [low | medium | high]
      set ip6-gw {ipv6-address}
      set ip6-upstream-interface [option1 | ...]
      set ip6-allowaccess [http | https | ping | snmp | ssh]
      set distance {number}
      config ip6-prefix-list
        edit <name>
          set ip6-prefix {ipv6-address}
        next
      end
      config ip6-rdnss-list
        edit <name>
          set ip6-rdnss {ipv6-address}
        next
      end
    end
  next
end
```

Sample command:

```
config system interface
  edit lan
    config ipv6
      set status enable
      set ip6-mode static
      set autoconf disable
      set ip6-send-adv enable
      set ip6-manage-flag disable
      set ip6-other-flag disable
      set ip6-max-interval 600
      set ip6-min-interval 198
      set ip6-adv-rio disable
```

```

set ip6-address 2001:3:6:7::/64
set ip6-gw ::
set ip6-allowaccess http https ping snmp ssh
set distance 10
config ip6-prefix-list
  edit 1
    set ip6-prefix 2001:2:3::/64
  next
end
config ip6-rdnss-list
  edit 1
    set ip6-rdnss 3:5a:78::
  next
end
end
next
end

```

| Parameter | Description | Type | Size | Default | | | | | | | | | | |
|--------------|---|--------|-------------|---------|----------------------------|---------|-----------------------------|-------|-----------------------|-----------|-------------------------------------|--|--|--|

| enable | Enable the O-flag. | | | | | | | | | | | |
| disable | Disable the O-flag. | | | | | | | | | | | |
| ip6-max-interval | Specify maximum RA sending interval. | integer | 4-1800 | 600 | | | | | | | | |
| ip6-min-interval | Specify minimum RA sending interval. | integer | 3-1350 | 600 | | | | | | | | |
| ip6-address | Primary IPv6 address prefix. | IPv6-prefix | - | ::/0 | | | | | | | | |
| ip6-adv-rio | Specify whether to enable router information option | option | - | disable | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable router information option.</td> </tr> <tr> <td>disable</td> <td>Disable router information option.</td> </tr> </tbody> </table> | Option | Description | enable | Enable router information option. | disable | Disable router information option. | | | | | |
| Option | Description | | | | | | | | | | | |
| enable | Enable router information option. | | | | | | | | | | | |
| disable | Disable router information option. | | | | | | | | | | | |
| ip6-route-pref | Specify router preference level. This option is hidden when ip6-adv-rio disabled. | option | - | medium | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>low</td> <td>Set the router preference level to low.</td> </tr> <tr> <td>medium</td> <td>Set the router preference level to medium.</td> </tr> <tr> <td>high</td> <td>Set the router preference level to high.</td> </tr> </tbody> </table> | Option | Description | low | Set the router preference level to low. | medium | Set the router preference level to medium. | high | Set the router preference level to high. | | | |
| Option | Description | | | | | | | | | | | |
| low | Set the router preference level to low. | | | | | | | | | | | |
| medium | Set the router preference level to medium. | | | | | | | | | | | |
| high | Set the router preference level to high. | | | | | | | | | | | |
| ip6-upstream-interface | Specify the IPv6 interface name providing delegated information. | option | - | - | | | | | | | | |

| Parameter | Description | Type | Size | Default | | | | | | | | | | | | |
|------------------------------|---|--------|--------------|-------------------|--------------|--------------------|---------------|-------------------|--------------|-------------------|--------------|------------------|-------------|--|--|--|
| | This option is available when <code>ip6-mode</code> is set to <code>delegate</code> . | | | | | | | | | | | | | | | |
| <code>ip6-gw</code> | IPv6 Gateway. Syntax: <code>xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx</code> . | string | ipv6-address | :: | | | | | | | | | | | | |
| <code>ip6-allowaccess</code> | Allow management access to the interface. | option | - | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><code>http</code></td> <td>HTTP access.</td> </tr> <tr> <td><code>https</code></td> <td>HTTPS access.</td> </tr> <tr> <td><code>ping</code></td> <td>PING access.</td> </tr> <tr> <td><code>snmp</code></td> <td>SNMP access.</td> </tr> <tr> <td><code>ssh</code></td> <td>SSH access.</td> </tr> </tbody> </table> | Option | Description | <code>http</code> | HTTP access. | <code>https</code> | HTTPS access. | <code>ping</code> | PING access. | <code>snmp</code> | SNMP access. | <code>ssh</code> | SSH access. | | | |
| Option | Description | | | | | | | | | | | | | | | |
| <code>http</code> | HTTP access. | | | | | | | | | | | | | | | |
| <code>https</code> | HTTPS access. | | | | | | | | | | | | | | | |
| <code>ping</code> | PING access. | | | | | | | | | | | | | | | |
| <code>snmp</code> | SNMP access. | | | | | | | | | | | | | | | |
| <code>ssh</code> | SSH access. | | | | | | | | | | | | | | | |
| <code>distance</code> | Route metric of the interface gateway. | number | 1-255 | 10 | | | | | | | | | | | | |
| <code>ip6-prefix-list</code> | Specify the RA prefix info. You can create multiple prefixes. | table | - | null | | | | | | | | | | | | |
| <code>ip6-rdnss-list</code> | Specify the RA DNS service info. You can create multiple DNS entries. | table | - | null | | | | | | | | | | | | |

config system vxlan

Description: Configure VXLAN devices

```

config system vxlan
  edit <name>
    set *vni [1 - 16777215]
    set *remote-ip {ipv4-address}
    set *local-ip {ipv4-address}
    set dstport [1 - 65535]
  unset
  next
  show
  abort
  end
  delete <name>
  purge
  show
  end

```

Sample command:

```

config system vxlan
  edit 1
    set vni 500
    set remote-ip 192.168.201.1
    set local-ip 192.168.200.1
    set dstport 4789
  next
end

```

| Parameter | Description | Type | Size | Default |
|-----------|---|--------------|-------------|---------|
| vni | VXLAN network ID. | integer | 1 - 1677721 | 0 |
| remote-ip | IPv4 address of the VXLAN interface on the device at the remote end of the VXLAN. | IPv4 address | - | none |
| local-ip | IPv4 address of the VXLAN interface on the device at the local end of the VXLAN. | IPv4 address | - | none |
| dstport | VXLAN destination port. | integer | 1 - 65535 | 4789 |

config system aggregate-interface

Description: Configure the aggregate interface. Each table entry indicates an aggregate interface to be created and one or more interfaces can be aggregated under this aggregate interface.

```

config system aggregate-interface
  edit <name>
    set mode [activebackup | loadbalance]
    config members
  next
  set mapping-timeout [0 - 86400] *available when mode is set to load balance
unset

```

Sample command:

```

config system aggregate-interface
  edit agg1
    set mode loadbalance
    set mapping-timeout 60
    config members

```

```
end
next
```

- [config members on page 58](#)

config members

Description: Configure interfaces to be aggregated.

```
config system aggregate-interface
  edit <name>
    config members
      edit <name>
        set *interface <name1>
        set weight [1 - 256]
        set health-check-event
        set health-check-fail-cnt [1 - 10]
        set health-check-recovery-cnt [1 - 10]
      unset
    next
  show
  abort
end
delete <name>
purge
show
end
next
show
abort
end
delete <name>
purge
show
end
```

Sample command:

```
config system aggregate-interface
  edit agg1
    set mode loadbalance
    set mapping-timeout 244
    config members
      edit 23
        set interface port4
        set weight 1
        set health-check-event
        set health-check-fail-cnt 5
        set health-check-recovery-cnt 5
```

```

    next
  end
  next
end

```

| Parameter | Description | Type | Size | Default | | | | | | |
|---------------------------|---|---------|-------------|--------------|----------------|-------------|---------------|--|--|--|
| mode | Aggregate interface mode. | option | - | activebackup | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>activebackup</td> <td>Active backup.</td> </tr> <tr> <td>loadbalance</td> <td>Load balance.</td> </tr> </tbody> </table> | Option | Description | activebackup | Active backup. | loadbalance | Load balance. | | | |
| Option | Description | | | | | | | | | |
| activebackup | Active backup. | | | | | | | | | |
| loadbalance | Load balance. | | | | | | | | | |
| mapping-timeout | source-mac-to-member mapping timeout in seconds. | integer | 0 - 86400 | 60 | | | | | | |
| interface | Member interface. | option | - | none | | | | | | |
| weight | Member weight in load balancing. | integer | 1 - 256 | 1 | | | | | | |
| health-check-event | Member monitor. | option | - | none | | | | | | |
| health-check-fail-cnt | Number of failures before the member is considered dead. | integer | 1 - 10 | 5 | | | | | | |
| health-check-recovery-cnt | Number of successes before the member is considered alive. | integer | 1 - 10 | 5 | | | | | | |

config pppoe-interface

Description: Configure the aggregate interface.

```

config pppoe-interface
  edit <name>
    set status [up | down]
    set device <name1>
    set username {string}
    set password {string}
  unset

```

Sample command:

```

config system pppoe-interface
edit pppoe1
set status up
set device port1
set username test
set password *****
next
end

```

| Parameter | Description | Type | Size | Default |
|-----------|---|----------------------------|------|---------|
| status | Bring the PPPoE up or down | option | - | up |
| | Option | Description | | |
| | up | Set interface status up. | | |
| | down | Set interface status down. | | |
| device | Name of the physical interface | option | - | none |
| username | The ISP provided username of the PPPoE account. | string | - | none |
| password | The PPPoE account's password. | string | - | none |

config dhcpserver

Description: Configure DHCP servers.

```

config dhcpserver
edit <name>
set status [enable | disable]
set lease-time [300 - 8640000]
set dns-service [default | specify | wan-dns]
set dns-server1 {ipv4-address} *available when dns-service is set to specify
set dns-server2 {ipv4-address} *available when dns-service is set to specify
set dns-server3 {ipv4-address} *available when dns-service is set to specify
set ntp-service [specify]
set ntp-server1 {ipv4-address}
set ntp-server2 {ipv4-address}
set ntp-server3 {ipv4-address}
set *default-gateway {ipv4-address}
set *netmask {netmask}
set *interface <name1>
set *start-ip {ipv4-address}

```

```
set *end-ip {ipv4-address}
set mtu [512 - 9000]
set reserved-address [enable | disable]
unset
```

config reserved-addresses

Description: Configure options for the DHCP server to assign IP settings to specific MAC addresses.

```
Config reserved-addresses
    edit <name>
        set *ip {ipv4-address}
        set *mac {mac-address}
        set *action [block | reserved]
        unset
        next
        show
        abort
        end
    delete <name>
    purge
    show
    end
next
show
end
delete <name>
purge
show
end
```

Sample command:

```
config system dhcpserver
    edit 1
        set status enable
        set lease-time 86400
        set dns-service default
        set ntp-service specify
        set ntp-server1
        set ntp-server2
        set ntp-server3
        set default-gateway 192.168.200.99
        set netmask 255.255.255.0
        set interface port4
        set start-ip 192.168.200.110
        set end-ip 192.168.200.210
        set mtu 1500
        set reserved-address disable
    next
end
```

| Parameter | Description | Type | Size | Default |
|-----------------|--|--|---------------|---------|
| status | Status of the DHCP configuration. | option | - | enable |
| | Option | Description | | |
| | enable | Enable the DHCP server. | | |
| | disable | Disable the DHCP server. | | |
| lease-time | Lease time in seconds. 0 means unlimited. | integer | 300 - 8640000 | 86400 |
| dns-service | Options for assigning DNS servers to DHCP clients. | Option | - | default |
| | Option | Description | | |
| | default | Use the default DNS server. | | |
| | specify | Specify the DNS server to be used. | | |
| | wan-dns | Use the WAN port DNS server. | | |
| dns-server1 | DNS server 1. | IPv4 address | - | none |
| dns-server2 | DNS server 2. | IPv4 address | - | none |
| dns-server3 | DNS server 3. | IPv4 address | - | none |
| ntp-service | Options for assigning Network Time Protocol (NTP) servers to DHCP clients. | option | - | specify |
| ntp-server1 | NTP server 1. | string | - | none |
| ntp-server2 | NTP server 2. | string | - | none |
| ntp-server3 | NTP server 3. | string | - | none |
| default-gateway | Default gateway IP address assigned by the DHCP server. | IPv4 address | - | none |
| netmask | Network mask assigned by the DHCP server. | string | - | none |
| interface | DHCP server can assign IP configurations to clients connected to this interface. | option | - | none |
| | Option | Description | | |
| | lan | LAN as the DHCP server interface. | | |
| | lo | Loopback as the DHCP server interface. | | |

| Parameter | Description | Type | Size | Default | | | | | | |
|------------------|---|--------------|------------|----------|--------|-------------|--------|--------------------------------------|----------|--------------------------------------|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>port1</td> <td>Port 1 as the DHCP server interface.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the DHCP server interface.</td> </tr> </tbody> </table> | | | | Option | Description | port1 | Port 1 as the DHCP server interface. | port4 | Port 4 as the DHCP server interface. |
| Option | Description | | | | | | | | | |
| port1 | Port 1 as the DHCP server interface. | | | | | | | | | |
| port4 | Port 4 as the DHCP server interface. | | | | | | | | | |
| start-ip | The first IP address in the IP range. | IPv4 address | - | none | | | | | | |
| end-ip | The last IP address in the IP range. | IPv4 address | - | none | | | | | | |
| mtu | Client's MTU. | integer | 512 - 9000 | 1500 | | | | | | |
| reserved-address | Status of reserved address and MAC mapping. | Option | - | disable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable reserved-address.</td> </tr> <tr> <td>disable</td> <td>Disable reserved-address.</td> </tr> </tbody> </table> | | | | Option | Description | enable | Enable reserved-address. | disable | Disable reserved-address. |
| Option | Description | | | | | | | | | |
| enable | Enable reserved-address. | | | | | | | | | |
| disable | Disable reserved-address. | | | | | | | | | |
| ip | IP address to be reserved for the MAC address. | IPv4 address | - | none | | | | | | |
| mac | MAC address of the client that will get the reserved IP address. | string | - | none | | | | | | |
| action | Options for the DHCP server to configure the client with the reserved MAC address. | option | - | reserved | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>block</td> <td>Block the address.</td> </tr> <tr> <td>reserved</td> <td>Reserve the address.</td> </tr> </tbody> </table> | | | | Option | Description | block | Block the address. | reserved | Reserve the address. |
| Option | Description | | | | | | | | | |
| block | Block the address. | | | | | | | | | |
| reserved | Reserve the address. | | | | | | | | | |

config system dhcp6server

Description: Configure DHCP6 servers.

```

config system dhcp6server
  edit <name>
    set status [enable | disable]
    set lease-time [300 - 8640000]
    set dns-service [default | specify]

| port4 | Port 4 as client interfaces. | | | | | | | | | | | | | |
| server-ip | IP address of the DHCP server. | IPv4 address | - | none | | | | | | | | | | |

config dns

Description: Configure DNS settings used to resolve domain names to IP addresses.

```
config dns
  set primary {ipv4-address}
  set secondary {ipv4-address}
  set timeout [1 - 10]
  set retry [0 - 5]
  set dns-cache-limit [0 - 4294967295]
  set dns-cache-ttl [60 - 86400]
  set cache-notfound-response [enable | disable]
  set source-ip {ipv4-address}
  set server-select-method [least-rtt | failover]
  unset
  show
end
```

Sample command:

```
config system dns
  set primary 208.91.112.53
  set secondary 208.91.112.52
  set timeout 5
  set retry 3
  set dns-cache-limit 5000
  set dns-cache-ttl 1800
  set cache-notfound-responses disable
  set source-ip 0.0.0.0
  set server-select-method least-rtt
end
```

| Parameter | Description | Type | Size | Default |
|-----------------|--|--------------|----------------|---------------|
| primary | Primary DNS server IP address. The default is the FortiGuard primary DNS server IP. | IPv4 address | - | 208.91.112.53 |
| secondary | Secondary DNS server IP address. The default is the FortiGuard secondary DNS server. | IPv4 address | - | 208.91.112.52 |
| timeout | DNS query timeout interval in seconds. | integer | 1 - 10 | 5 |
| retry | Number of times to retry. | integer | 0 - 5 | 3 |
| dns-cache-limit | Maximum number of records in DNS cache. | integer | 0 - 4294967295 | 5000 |
| dns-cache-ttl | Duration in seconds that DNS | integer | 60 - 86400 | 1800 |

| Parameter | Description | Type | Size | Default |
|------------|--|--------|--------------------------------------|---------|
| | Option | | Description | |
| | recursive | | Shadow the DNS database and forward. | |
| | non-recursive | | Public DNS database only. | |
| | forward-only | | Forward only. | |
| dns-filter | Enter a previously created DNS filter profile. | string | - | none |

config dns-database

Description: Configure DNS databases.

```

config dns-database
  edit <name>
    set status [enable | disable]
    set *domain {string}
    set type [primary]
    set view [shadow | public]
    set primary-name {string}
    set contact {string}
    set ttl [1 - 2147483647]
    set authoritative [enable | disable]
    set forwarder {ipv4-address}, {ipv4-address}, ...
    set source-ip {ipv4-address}
    config dns-entry {{{ see next for more info }}}
  unset

```

| Parameter | Description | Type | Size | Default |
|-----------|--|--------|-----------------------|---------|
| name | Name of the DNS database. | string | - | none |
| status | Status of the DNS zone. | option | - | enable |
| | Option | | Description | |
| | enable | | Enable the DNS zone. | |
| | disable | | Disable the DNS zone. | |
| domain | Domain zone name. | string | - | none |
| type | Zone type. | option | - | primary |
| view | Zone view to serve internal or public DNS clients. | option | - | shadow |

| Parameter | Description | Type | Size | Default | | | | | | |
|---------------|---|--------------|----------------|---------|--|---------|--|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>shadow</td> <td>Shadow the DNS zone to serve internal clients.</td> </tr> <tr> <td>public</td> <td>Public DNS zone to serve public clients.</td> </tr> </tbody> </table> | Option | Description | shadow | Shadow the DNS zone to serve internal clients. | public | Public DNS zone to serve public clients. | | | |
| Option | Description | | | | | | | | | |
| shadow | Shadow the DNS zone to serve internal clients. | | | | | | | | | |
| public | Public DNS zone to serve public clients. | | | | | | | | | |
| primary-name | Domain name of the default DNS server for the zone. | string | - | none | | | | | | |
| contact | Email address of the administrator of the zone. It could be a simple username or full email address. | string | - | host | | | | | | |
| ttl | Default time-to-live value (in seconds) for the entries of the DNS zone. | integer | 1 - 2147483647 | 86400 | | | | | | |
| authoritative | Status of the authoritative zone. | option | - | disable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable authoritative zone.</td> </tr> <tr> <td>disable</td> <td>Disable authoritative zone.</td> </tr> </tbody> </table> | Option | Description | enable | Enable authoritative zone. | disable | Disable authoritative zone. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable authoritative zone. | | | | | | | | | |
| disable | Disable authoritative zone. | | | | | | | | | |
| forwarder | The list of DNS zone forwarder IP addresses, separate by white space. | IPv4 address | - | none | | | | | | |
| source-ip | Source IP for forwarding to the DNS server. | IPv4 address | - | none | | | | | | |

config dns-entry

Description: Configure DNS entries.

```

config dns-entry
    edit <name>
        set status [enable | disable]
        set type [A | NS | CNAME | MX | PTR]
        set *hostname {string}
        set *ip {ipv4-address} *available when type is set to A or PTR
        set *canonical-name {string} *available when type is set to CNAME
        set preference [0 - 65535] *available when type is set to MX
        unset
        next
        show
        abort
        end
    delete <name>
    purge

```

```

show
end
next

```

Sample command:

```

config system dns-database
  edit 1
    set status enable
    set domain example.com
    set type primary
    set view public
    set primary-name dns
    set contact host
    set ttl 86400
    set authoritative enable
    set forwarder 1.2.4.8 8.8.4.4
    set source-ip
    config dns-entry
      edit 1
        set status enable
        set type A
        set ttl 0
        set hostname host1
        set ip 172.30.145.225
      next
    end
  next
end

```

| Parameter | Description | Type | Size | Default | | | | | | | | | | | | |
|-----------|--|---------|----------------|---------|-------------------------|---------|--------------------------|-------|------------------------|----|-----------------------|-----|----------------------|--|--|--|
| name | The DNS entry ID number. | integer | 1 - 4294967295 | none | | | | | | | | | | | | |
| status | The resource record status. | option | - | enable | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable resource record.</td> </tr> <tr> <td>disable</td> <td>Disable resource record.</td> </tr> </tbody> </table> | Option | Description | enable | Enable resource record. | disable | Disable resource record. | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | |

| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>Address record.</td> </tr> <tr> <td>NS</td> <td>Name server record.</td> </tr> <tr> <td>CNAME</td> <td>Canonical name record.</td> </tr> <tr> <td>MX</td> <td>Mail exchange record.</td> </tr> <tr> <td>PTR</td> <td>PTR resource record.</td> </tr> </tbody> </table> | Option | Description | A | Address record. | NS | Name server record. | CNAME | Canonical name record. | MX | Mail exchange record. | PTR | PTR resource record. | | | |
| Option | Description | | | | | | | | | | | | | | | |
| A | Address record. | | | | | | | | | | | | | | | |
| NS | Name server record. | | | | | | | | | | | | | | | |
| CNAME | Canonical name record. | | | | | | | | | | | | | | | |
| MX | Mail exchange record. | | | | | | | | | | | | | | | |
| PTR | PTR resource record. | | | | | | | | | | | | | | | |

| Parameter | Description | Type | Size | Default |
|-----------|--|--------------|----------------|---------|
| ttl | The time-to-live value (in seconds) for the entry. | integer | 0 - 2147483647 | 0 |
| hostname | Name of the host. | string | - | none |
| ip | IP address of the host. | IPv4 address | - | none |

config vwan-member

Description: Configure virtual VWAN interface members.

```

config vwan-member
  edit <name>
    set target <name1>
    set priority [1 - 7]
    set weight [1 - 256]
    set in-bandwidth-threshold [0 - 2147483647]
    set out-bandwidth-threshold [0 - 2147483647]
    set total-bandwidth-threshold [0 - 2147483647]
    set health-check <name1>
    set health-check-fail-threshold [1 - 10]
    set health-check-success-threshold [1 - 10]
    set link-cost-factor [latency | jitter | packet-loss]
    set latency-threshold [0 - 10000000, default = 5]
    set jitter-threshold [0 - 10000000, default = 5]
    set packetloss--threshold [0 - 100, default = 100]
    unset
    next
    show
    abort
  end
  delete <name>
  purge
  show
end

```

Sample command:

```

config system vwan-member
  edit mb1
    set target target.port1
    set priority 1
    set weight 1
    set in-bandwidth-threshold 0
    set out-bandwidth-threshold 0
    set total-bandwidth-threshold 0
    set health-check vw_mb1_hc
    set health-check-fail-threshold 5
    set health-check-success-threshold 5
    set link-cost-factor packet-loss latency jitter
    set latency-threshold 5

```

```

    set jitter-threshold 5
    set packetloss-threshold 100
next
edit mb2
    set target target.port2
    set priority 10
    set weight 1
    set in-bandwidth-threshold 0
    set out-bandwidth-threshold 0
    set total-bandwidth-threshold 0
    set health-check vw_mb2_hc
    set health-check-fail-threshold 5
    set link-cost-factor packet-loss latency jitter
    set latency-threshold 5
    set jitter-threshold 5
    set packetloss-threshold 100

```

| Parameter | Description | Type | Size | Default |
|-----------------------------|---|---------|----------------|---------|
| target | Forwarding target. | string | - | none |
| priority | Priority of the member. The lower the value, the higher the priority. | integer | 1 - 7 | 1 |
| weight | Weight of the member. | integer | 1 - 256 | 1 |
| in-bandwidth-threshold | Bandwidth threshold in MB for input traffic. 0 indicates infinity. | integer | 0 - 2147483647 | 0 |
| out-bandwidth-threshold | Bandwidth threshold in MB for output traffic. 0 indicates infinity. | integer | 0 - 2147483647 | 0 |
| health-check | Link health check of the virtual-wan member. | string | - | none |
| health-check-fail-threshold | The number of consecutive failed probes | integer | 1 - 10 | 5 |

```

config remote-servers {string}
edit <name>
    set ip* {ipv4-address}
    set port [1 - 65535]
unset
delete <name>
purge
show
end
config statistic-report
    set status [disable | enable]
    set interval [1 - 3600]
    config cpu-usage
        set threshold [0 - 100]
        thrset variance [0 - 100]
    end
    config memory-usage
        set threshold [0 - 100]
        set variance [0 - 100]
    end
    config cpu-temperature
        set threshold [0 - 120]
        set variance [0 - 120]
    end
end
show
end

```

config remote-servers

Description: Configure syslog remote servers settings.

```

config remote-servers
    edit <name>
        set ip* {ipv4-address}
        set port [1 - 65535]
        unset
        end
        next
        show
        abort
    delete
    purge
    end
    show

```

| Parameter | Description | Type | Size | Default |
|-----------|--------------------------------------|--------------|-----------|---------|
| ip | The IP address of the remote server. | IPv4 address | - | none |
| port | The remote syslog server port. | integer | 1 - 65535 | 514 |

config statistic-report

Description: Configure syslog statistic report settings.

```
config statistic-report
  set status [enable | disable]
  set interval [1 - 3600]
  unset
```

| Parameter | Description | Type | Size | Default |
|-----------|--|---|----------|---------|
| status | Status syslog statistic report. | option | - | disable |
| | Option | Description | | |
| | enable | Enable syslog statistic report. | | |
| | disable | Disable Enable syslog statistic report. | | |
| interval | The time interval (in seconds) of system status reports. | integer | 1 - 3600 | 30 |

config cpu-usage

Description: Configures CPU usage rate statistic report settings.

```
config cpu-usage
  set threshold [0 - 100]
  set variance [0 - 100]
  unset
  show
  end
```

| Parameter | Description | Type | Size | Default |
|-----------|--|---------|---------|---------|
| threshold | The percentage of CPU usage threshold for system abnormal event report. 0 means disabled. | integer | 0 - 100 | 70 |
| variance | The variance of the CPU usage report when it exceeds the threshold. 0 means report all the time. | integer | 0 - 100 | 5 |

config memory-usage

Description: Configures memory usage statistic report settings.

```
config memory-usage
  set threshold [0 - 100]
  set variance [0 - 100]
  unset
  show
```

end

| Parameter | Size | Type | Size | Default |
|-----------|---|---------|---------|---------|
| threshold | The percentage of memory usage threshold for system abnormal event report. 0 means disabled. | integer | 0 - 100 | 50 |
| variance | The variance of the memory usage report when it exceeds the threshold. 0 means report all the time. | integer | 0 - 100 | 5 |

config cpu-temperature

Description: Configures CPU temperature statistic report settings.

```

config cpu-temperature
  set threshold [0 - 120]
  set variance [0 - 120]
unset
show
end

```

| Parameter | Description | Type | Size | Default |
|-----------|--|---------|---------|---------|
| threshold | The CPU temperature threshold for system abnormal event report. 0 means disabled. | integer | 0 - 120 | 80 |
| variance | The variance of the CPU temperature report when it exceeds the threshold. 0 means report all the time. | integer | 0 - 120 | 5 |

Sample command:

```

config system syslog
  config remote-servers
    edit serv1
      set ip 192.148.200.193
      set port 514
    next
  end
  config statistic-report
    set status enable
    set interval 30
    config cpu-usage
      set threshold 70
      set variance 5

```

```
end
config memory-usage
    set threshold 50
    set variance 5
end
config cpu-temperature
    set threshold 80
    set variance 5
end
end
end
```

config api-user

Description: Configure API user settings.

```
config api-user
    edit <name>
        set comment {string}
        unset
        next
        show
        abort
        end
    delete <name>
    purge
    show
    end
```

Sample command:

```
config system api-user
    edit 1
        set comment this is a test api user
    next
end
```

| Parameter | Descripton | Type | Size | Default |
|-----------|----------------------------------|--------|------|---------|
| name | The name of the API user. | string | - | none |
| comment | A brief comment of the API user. | string | - | none |

config ntp

Description: Configure NTP synchronization in local management mode.

```
config ntp
  set type [fortiguard | custom]
  unset
  config ntpserver
    edit <name>
      set *server {ipv4-address} OR {string}
      unset
      next
      show
      abort
      end
    delete <name>
  purge
  show
  end
show
end
```

| Parameter | Description | Type | Size | Default |
|-----------|---------------------|----------------------------|------|------------|
| type | Type of NTP server. | option | - | fortiguard |
| | Option | Description | | |
| | fortiguard | The FortiGuard NTP server. | | |
| | custom | A custom NTP server. | | |

- [config ntpserver on page 80](#)

config ntpserver

Description: Configure available third-party NTP servers (up to 4 servers).

```
config ntpserver
  edit <name>
    set *server {ipv4-address} OR {string}
    unset
    next
    show
    abort
    end
  delete <name>
  purge
  show
  end
show
end
```

| Parameter | Description | Type | Size | Default |
|-----------|---|--------|------|---------|
| server | IP address or hostname of the NTP server. | string | - | none |

Sample command:

```
config system ntp
  set type custom
  config ntpserver
    edit 1
      set server 10.139.20.54
    next
  end
end
```

config settings

Description: Configure system settings.

```
config settings
  set ike-port [1024 - 65535]
  unset
  show
end
```

Sample command:

```
config system settings
  set ike-port 500
end
```

| Parameter | Description | Type | Size | Default |
|-----------|--------------------------|---------|--------------|---------|
| ike-port | IKE phase 1 port number. | integer | 1024 - 65535 | 500 |

config system switch-interface

Description: View LAN extension settings synced from the FortiGate. You cannot configure these settings directly on the FortiBranchSASE; you must make them through the FortiGate LAN extension profile first.

```

config system switch-interface
edit <name>
set vlan-support [enable | disable]
config member
edit <name1>
set type [ aggregate | physical | vap]
set port
set vids {1-4089}
set pvid {1-4089}
set security-8021x-member-mode [enable | disable]
next
end
set stp [enable | disable]
set td-mode [disable | include]
set wired-security-mode [802.1X]
set wired-security-group <security group ID>
next
end

```

Sample syntax:

```

config system switch-interface
edit lan
set vlan-support disable
config member
edit port4
set type physical
set port port4
set vids
set pvid 1
set security-8021x-member-mode enable
next
end
set stp disable
set ts-mode disable
set wired-security-mode 802.1X
set wired-security-group test
next
end

```

| Parameter | Description | Type | Size | Default |
|--------------|------------------------------|---------------------------------|------|---------|
| vlan-support | Enable/disable VLAN support. | option | - | |
| stp | Spanning Tree Protocol. | option | - | disable |
| | Option | Description | | |
| | enable | Enable Spanning Tree Protocol. | | |
| | disable | Disable Spanning Tree Protocol. | | |

| Parameter | Description | Type | Size | Default | | | | | | |
|----------------------|---|---------|-------------|---------|--------------------------|---------|----------------------------|--|--|--|
| ts-mode | Read-only: Split tunnel mode. | option | - | disable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>include</td> <td>Enable Split tunnel mode</td> </tr> <tr> <td>disable</td> <td>Disable Split tunnel mode.</td> </tr> </tbody> </table> | Option | Description | include | Enable Split tunnel mode | disable | Disable Split tunnel mode. | | | |
| Option | Description | | | | | | | | | |
| include | Enable Split tunnel mode | | | | | | | | | |
| disable | Disable Split tunnel mode. | | | | | | | | | |
| wired-security-mode | Turn on 802.1x authentication for this interface. | option | - | | | | | | | |
| wired-security-group | Names of user groups that can authenticate with the 802.1X. | option | - | | | | | | | |
| dst-mac | Read-only: MAC address of the remote gateway pushed from FortiOS. | string | - | none | | | | | | |
| dst-addr | Read-only: Destination IP addresses | string | - | none | | | | | | |
| services | Read-only: Internet services. | options | - | none | | | | | | |

config members

| Parameter | Description | Type | Size | Default |
|----------------------------|---|---------|-----------|---------|
| config member | Interfaces within the virtual switch. | option | - | none |
| name | The LAN port ID. | string | - | none |
| type | Interface type. | option | - | |
| port | Interface within the virtual switch. | option | - | |
| vap | Virtual Access Point, which must NOT be configured as a WLAN bridge, will be added as a member of the switch-interface. | option | - | |
| vids | VLAN ID list. | integer | 1 to 4089 | |
| pvid | Port VLAN ID. | integer | 1 to 4089 | |
| security-8021x-member-mode | Enable/disable 802.1x authentication on a port. | option | - | |

config ssh-crypto

Description: Configure system SSH crypto.

```
config system ssh-crypto
  set strong-crypto [enable | disable]
end
```

Sample command:

```
config system ssh-crypto
  set strong-crypto enable
  set ssh-enc-algo aes256-ctr aes256-gcm@openssh.com
  set ssh-hsk-algo ecdsa-sha2-nistp256 ecdsa-sha2-nistp384 ecdsa-sha2-nistp521 rsa-sha2-256 rsa-
sha2-512 ssh-ed25519
  set ssh-kex-algo curve25519-sha256@libssh.org diffie-hellman-group-exchange-sha256 diffie-
hellman-group14-sha256 diffie-hellman-group16-sha512 diffie-hellman-group18-sha512
  set ssh-mac-algo hmac-sha2-256 hmac-sha2-256-etm@openssh.com hmac-sha2-512 hmac-sha2-512-
etm@openssh.com
end
```

| Parameter | Description | Type | Size | Default |
|------------------|--|-----------------------------------|------|---|
| strong-crypto | Enable/disable strong encryption for SSH | option | - | disable |
| | Option | Description | | |
| | <i>enable</i> | Enable strong encryption for SSH | | |
| | <i>disable</i> | Disable strong encryption for SSH | | |
| set ssh-enc-algo | Set supported ciphers for ssh-enc-algo. | option | - | aes256-ctr aes256-gcm@openssh.com |
| | Option | Description | | |
| | <i>aes256-ctr</i> | aes256-ctr | | |
| | <i>aes256-gcm@openssh.com</i> | aes256-gcm@openssh.com | | |
| set ssh-hsk-algo | Set supported ciphers for ssh-hsk-algo. | option | - | ecdsa-sha2-nistp521 ecdsa-sha2-nistp384 ecdsa-sha2-nistp256 rsa-sha2-256 rsa-sha2-512 ssh-ed25519 |
| | Option | Description | | |
| | <i>ecdsa-sha2-nistp256</i> | ecdsa-sha2-nistp256 | | |

| Parameter | Description | Type | Size | Default | | | | | | | | | | | | |
|---|---|--------|-------------|---|------------------------------|---|--------------------------------------|--------------------------------------|-------------------------------|--------------------------------------|-------------------------------|--------------------------------------|-------------------------------|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><i>ecdsa-sha2-nistp384</i></td> <td>ecdsa-sha2-nistp384</td> </tr> <tr> <td><i>ecdsa-sha2-nistp521</i></td> <td>ecdsa-sha2-nistp521</td> </tr> <tr> <td><i>rsa-sha2-256</i></td> <td>rsa-sha2-256</td> </tr> <tr> <td><i>rsa-sha2-512</i></td> <td>rsa-sha2-512</td> </tr> <tr> <td><i>ssh-ed25519</i></td> <td>ssh-ed25519</td> </tr> </tbody> </table> | Option | Description | <i>ecdsa-sha2-nistp384</i> | ecdsa-sha2-nistp384 | <i>ecdsa-sha2-nistp521</i> | ecdsa-sha2-nistp521 | <i>rsa-sha2-256</i> | rsa-sha2-256 | <i>rsa-sha2-512</i> | rsa-sha2-512 | <i>ssh-ed25519</i> | ssh-ed25519 | | | |
| Option | Description | | | | | | | | | | | | | | | |
| <i>ecdsa-sha2-nistp384</i> | ecdsa-sha2-nistp384 | | | | | | | | | | | | | | | |

config system 802-1X-settings

Description: Configure global 802.1X settings.

Any change to the 802.1X setting may cause the supplicant to reauthenticate if wired security with 802.1x is enabled.

```
config system 802-1X-settings
  set reauth-period {integer}
  set retry-primary-interval {integer}
  set radius-client-failover-wait {integer}
end
```

| Parameter | Description | Type | Size | Default |
|-----------------------------|---|---------|----------|---------|
| reauth-period | Period of time to allow for reauthentication in seconds (0 = disable reauthentication). | integer | 1 - 1440 | 60 |
| retry-primary-interval | Retry interval for attempting to switch back to the primary RADIUS server, specified in seconds. The default value is 0, which disables switching back to the primary server. | integer | - | 0 |
| radius-client-failover-wait | RADIUS force failover timeout (seconds). Time to wait for a response before triggering failover (15, 30, and 45 seconds, default 45 seconds). | integer | - | 45 |

config system obm-console

Description: Redirect the out-of-band management (OBM) console output to a local USB, FTP, SFTP, SMB, or NFS server.

```

config system obm-console
  config log-storage
    edit <name>
      set protocol [local_usb | ftp | sftp | smb | nfs]
      set folder <string>
      set server <IP address>
      set port <integer>
      set username <string>
      set password <string>
      set share video
      set export <string>
    next
  end
end

```

| Parameter | Description | Type | Size | Default | | | | | | | | | | | | |
|-----------|--|--------|-------------|-----------|-----------|-----|-----|------|------|-----|-----|-----|-----|--|--|--|
| protocol | Select which protocol to use to transfer the OOB console output. | option | - | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>local_usb</td> <td>Local USB</td> </tr> <tr> <td>ftp</td> <td>FTP</td> </tr> <tr> <td>sftp</td> <td>SFTP</td> </tr> <tr> <td>smb</td> <td>SMB</td> </tr> <tr> <td>nfs</td> <td>NFS</td> </tr> </tbody> </table> | Option | Description | local_usb | Local USB | ftp | FTP | sftp | SFTP | smb | SMB | nfs | NFS | | | |
| Option | Description | | | | | | | | | | | | | | | |
| local_usb | Local USB | | | | | | | | | | | | | | | |
| ftp | FTP | | | | | | | | | | | | | | | |
| sftp | SFTP | | | | | | | | | | | | | | | |
| smb | SMB | | | | | | | | | | | | | | | |
| nfs | NFS | | | | | | | | | | | | | | | |
| folder | Enter the folder where the log file should be saved on the server. | string | - | | | | | | | | | | | | | |
| server | Enter the IP address of the server. | string | - | | | | | | | | | | | | | |
| share | If protocol is set to smb, enter which folder to share the output to. | string | - | | | | | | | | | | | | | |
| port | Enter the remote server listening port. When the port is set to 0, FortiExtender uses the default port for each protocol. | option | - | | | | | | | | | | | | | |
| username | Enter the username of the server. | string | - | | | | | | | | | | | | | |
| password | Enter the password of the server. | string | - | | | | | | | | | | | | | |

| Parameter | Description | Type | Size | Default |
|-----------|--|--------|------|---------|
| export | If protocol is set to nfs, enter which folder to export the output to. | string | - | |

SNMP

This section shows the syntax of the following commands:

- [config sysinfo on page 89](#)
- [config community on page 89](#)
- [config user on page 92](#)
- [config hosts on page 93](#)

config sysinfo

Description: Configure SNMP system info settings.

```
config sysinfo
  set status [enable | disable]
  set description {string}
  set contact-info {string}
  set location {string}
  unset
  show
  end
```

| Parameter | Description | Type | Size | Default | | | | | | |
|--------------|--|--------|------------------------------|---------|-----------------------------------|---------|------------------------------------|--|--|--|
| status | The status of sysinfo configuration. | option | - | disable | | | | | | |
| | <table border="1"><thead><tr><th>Option</th><th>Description</th></tr></thead><tbody><tr><td>enable</td><td>Enable the sysinfo configuration.</td></tr><tr><td>disable</td><td>Disable the sysinfo configuration.</td></tr></tbody></table> | Option | Description | enable | Enable the sysinfo configuration. | disable | Disable the sysinfo configuration. | | | |

| location | System location. | string | 1 - 127 characters in length | none | | | | | | |

config community

Description: Configure SNMP v1/v2 community settings.

```

config community
  edit <name>
    set *name {string}
    set status [enable | disable]
    set hosts <name1>, <name2>, ...
    set query-v1-status [enable | disable]
    set query-v1-port [1 - 65535]
    set query-v2-status [enable | disable]
    set query-v2-port [1 - 65535]
    set trap-v1-status [enable | disable]
    set trap-v1-lport [1 - 65535]
    set trap-v1-rport [1 - 65535]
    set trap-v2c-status [enable | disable]
    set trap-v2c-lport [1 - 65535]
    set trap-v2c-rport [1 - 65535]
    set events <name1>, <name2>, ...
    unset
    next
    show
  end
delete <name>
purge
show
end

```

| Parameter | Description | Type | Size | Default |
|-----------------|---|---|-----------|---------|
| name | Name of the SNMP community. | string | - | none |
| status | The status of the SNMP community configuration. | option | - | disable |
| | Option | Description | | |
| | enable | Enable the SNMP community configuration. | | |
| | disable | Disable the SNMP community configuration. | | |
| hosts | SNMP community host names. | option | - | none |
| query-v1-status | Status of SNMP v1 queries. | option | - | disable |
| | Option | Description | | |
| | enable | Enable SNMP v1 queries. | | |
| | disable | Disable SNMP v1 queries. | | |
| query-v1-port | SNMP v1 query port number. | integer | 1 - 65535 | 161 |
| query-v2-status | Status of SNMP v2 queries. | option | - | disable |

| Parameter | Description | Type | Size | Default |
|----------------|----------------------------|--|-----------|---------|
| | Option | Description | | |
| | enable | Enable SNMP v2 queries. | | |
| | disable | Disable SNMP v2 queries. | | |
| query-v2-port | SNMP v2 query port number. | integer | 1 - 65535 | 161 |
| trap-v1-status | Status of SNMP v1 traps. | option | - | disable |
| | Option | Description | | |
| | enable | Enable SNMP v1 traps. | | |
| | disable | Disable SNMP v1 traps. | | |
| trap-v1-lport | SNMP v1 trap local port. | integer | 1 - 65535 | 162 |
| trap-v1-rport | SNMP v1 trap remote port. | integer | 1 - 65535 | 162 |
| trap-v2-status | Status of SNMP v2 traps. | option | - | disable |
| | Option | Description | | |
| | enable | Enable SNMP v2 traps. | | |
| | disable | Disable SNMP v2 traps. | | |
| trap-v2-lport | SNMP v2 trap local port. | integer | 1 - 65535 | 162 |
| trap-v2-rport | SNMP v2 trap remote port. | integer | 1 - 65535 | 162 |
| events | SNMP trap events. | option | - | none |
| | Option | Description | | |
| | system-reboot | System reboot events. | | |
| | data-exhausted | Data usage exhaustion events. | | |
| | session-disconnect | Modem data session disconnect events. | | |
| | low-signal-strength | Modem low signal strength events. | | |
| | os-image-fallback | System OS image fallback events. | | |
| | mode-switch | System mode switch events. | | |
| | fgt-backup-mode-switch | System FGT VRRP backup mode switch events. | | |

config user

Description: Configure SNMP v3 user settings.

```

config user
  edit <name>
    set *name {string}
    set status [enable | disable]
    set notify-hosts <name1>, <name2>, ...
    set trap-status [enable | disable]
    set trap-lport [1 - 65535]
    set trap-rport [1 - 65535]
    set queries [enable | disable]
    set query-port [1 - 65535]
    set events <name1>, <name2>, ...
    set security-level [no-auth-no-priv | auth-no-priv | auth-priv]
    set auth-proto [md5 | sha1] *available when security level includes auth
    set *auth-pwd {string} *available when security level includes auth
    set priv-proto [aes | des] *available when security level includes priv
    set *priv-pwd {string}*available when security level includes priv
  unset
  next
  show
  abort
  end
delete <name>
purge
show
end

```

| Parameter | Description | Type | Size | Default | | | | | | |
|--------------|---|--------|-------------|---------|-------------------------------------|---------|--------------------------------------|--|--|--|
| name | Username of the SNMP user. | string | - | none | | | | | | |
| status | Status of the SNMP user configuration. | option | - | disable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable the SNMP user.</td> </tr> <tr> <td>disable</td> <td>Disable the SNMP user.</td> </tr> </tbody> </table> | Option | Description | enable | Enable the SNMP user. | disable | Disable the SNMP user. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable the SNMP user. | | | | | | | | | |
| disable | Disable the SNMP user. | | | | | | | | | |
| notify-hosts | SNMP managers to which notifications (traps) are sent. | option | - | none | | | | | | |
| trap-status | Status of the traps for the SNMP user. | option | - | disable | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable the traps for the SNMP user.</td> </tr> <tr> <td>disable</td> <td>Disable the traps for the SNMP user.</td> </tr> </tbody> </table> | Option | Description | enable | Enable the traps for the SNMP user. | disable | Disable the traps for the SNMP user. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable the traps for the SNMP user. | | | | | | | | | |
| disable | Disable the traps for the SNMP user. | | | | | | | | | |

| Parameter | Description | Type | Size | Default |
|----------------|---|--|-----------|-----------------|
| trap-lport | SNMPv3 trap local port. | integer | 1 - 65535 | 162 |
| trap-rport | SNMPv3 trap remote port. | integer | 1 - 65535 | 162 |
| queries | Status of SNMP queries for the user. | option | - | disable |
| query-port | SNMPv3 query port. | integer | 1 - 65535 | 161 |
| events | SNMP trap events. | option | - | none |
| | Option | Description | | |
| | system-reboot | System reboot events. | | |
| | data-exhausted | Data usage is exhaustion events. | | |
| | session-disconnect | Modem data session disconnect events. | | |
| | low-signal-strength | Modem low signal strength events. | | |
| | os-image-fallback | System OS image fall back events. | | |
| | mode-switch | System mode switch events. | | |
| | fgt-backup-mode-switch | System FGT VRRP backup mode switch events. | | |
| Security-level | Security level for message authentication and encryption. | option | - | no-auth-no-priv |
| | Option | Description | | |
| | no-auth-no-priv | No authentication and no encryption. | | |
| | auth-no-priv | Authentication and no encryption. | | |
| | auth-priv | Authentication and encryption. | | |

config hosts

Description: Configure SNMP hosts settings.

```
config hosts
  edit <name>
    set *host-ip {ipv4 or ipv6 address}
    set host-type [any | query | trap]
    unset
    next
    show
    abort
    end
    delete <name>
    purge
```

```

show
end
show
end

```

| Parameter | Description | Type | Size | Default |
|-----------|--|----------------------|------|---------|
| host-ip | IPv4 or IPv6 address of the SNMP manager (host), syntax: X.X.X.X/prefix or h:h:h:h:h:h:h/prefix. | IPv4 or IPv6 address | - | none |
| host-type | Whether the SNMP manager sends SNMP queries, or receives SNMP traps, or both. | option | - | none |

| Option | Description |
|--------|--------------------|
| any | Any type. |
| query | SNMP queries only. |
| trap | SNMP traps only. |

HMON

This section shows the syntax of the following commands:

- [config interface-monitoring on page 95](#)
- [config hchk on page 95](#)

config interface-monitoring

Description: Configure monitoring interfaces.

```
config interface-monitoring
  edit <name>
    set interval [1 - 3600]
    set *interface <name1>, <name2>, ...
    set filter <name1>, <name2>, ...
    unset
    next
    show
    abort
    end
  delete <name>
  purge
  show
  end
```

config hchk

Description: Configure measuring latency/loss/jitter.

```
config hchk
```

```
edit <name>
  set protocol [ping | http | dns]
  set interval [1 - 3600]
  set probe-cnt [1 - 10]
  set probe-tm [1 - 10]
  set *probe-target {ipv4-address}
  set port [1 - 65535] *available when protocol is set to http
  set http-get {string} *available when protocol is set to http
  set interface <name1>
  set src-type [none | interface | ip]
  set *stc-iface <name1> *available when src-type is set to interval
```

```

        set *src-ip {ipv4-address} *available when src-type is set to ip
        set filter <name1>, <name2>, ...
        unset
        next
        show
        abort
        end
delete <name>
purge
show
end
show
end

```

Sample command:

```

config hmon
  config interface-monitoring
    edit 1
      set interval 30
      set interface port1
      set filter rx-bps rx-bytes rx-dropped rx-packets
    next
  end
  config hchk
    edit 1
      set protocol ping
      set interval 5
      set probe-cnt 1
      set probe-tm 2
      set probe-target 8.8.8.8
      set interface port1
      set src-type interface
      set src-iface port1
      set filter rtt loss
    next
  end
end

```

| Parameter | Description | Type | Size | Default |
|-----------|---------------------------------|-------------------------------------|----------|---------|
| interval | Monitoring interval in seconds. | integer | 1 - 3600 | 30 |
| interface | Interface to be monitored. | option | - | none |
| | Option | Description | | |
| | lan | LAN as the outgoing interface. | | |
| | lo | Loopback as the outgoing interface. | | |

| Parameter | Description | Type | Size | Default | | | | | | | | | | | | | | | | | | | | | | |
|------------|--|---------|-------------|----------|--|----------|--|------------|---|------------|-------------------|------------|----------------------------|------------|-------------------------|--------|-------------------------------|--------|----------------------------|--------|---------------------------------|--------|------------------------------|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>port1</td> <td>Port 1 as the outgoing interface.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the outgoing interface.</td> </tr> </tbody> </table> | Option | Description | port1 | Port 1 as the outgoing interface. | port4 | Port 4 as the outgoing interface. | | | | | | | | | | | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | | | | | | | | | | | |
| port1 | Port 1 as the outgoing interface. | | | | | | | | | | | | | | | | | | | | | | | | | |
| port4 | Port 4 as the outgoing interface. | | | | | | | | | | | | | | | | | | | | | | | | | |
| filter | Filter types. | option | - | none | | | | | | | | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>tx-bytes</td> <td>Transmitter bytes.</td> </tr> <tr> <td>rx-bytes</td> <td>Receiver bytes.</td> </tr> <tr> <td>tx-packets</td> <td>Transmitter packets.</td> </tr> <tr> <td>rx-packets</td> <td>Receiver packets.</td> </tr> <tr> <td>tx-dropped</td> <td>Transmitter dropped bytes.</td> </tr> <tr> <td>rx-dropped</td> <td>Receiver dropped bytes.</td> </tr> <tr> <td>tx-bps</td> <td>Transmitter bytes per second.</td> </tr> <tr> <td>rx-bps</td> <td>Receiver bytes per second.</td> </tr> <tr> <td>tx-pps</td> <td>Transmitter packets per second.</td> </tr> <tr> <td>rx-pps</td> <td>Receiver packets per second.</td> </tr> </tbody> </table> | Option | Description | tx-bytes | Transmitter bytes. | rx-bytes | Receiver bytes. | tx-packets | Transmitter packets. | rx-packets | Receiver packets. | tx-dropped | Transmitter dropped bytes. | rx-dropped | Receiver dropped bytes. | tx-bps | Transmitter bytes per second. | rx-bps | Receiver bytes per second. | tx-pps | Transmitter packets per second. | rx-pps | Receiver packets per second. | | | |
| Option | Description | | | | | | | | | | | | | | | | | | | | | | | | | |
| tx-bytes | Transmitter bytes. | | | | | | | | | | | | | | | | | | | | | | | | | |
| rx-bytes | Receiver bytes. | | | | | | | | | | | | | | | | | | | | | | | | | |
| tx-packets | Transmitter packets. | | | | | | | | | | | | | | | | | | | | | | | | | |
| rx-packets | Receiver packets. | | | | | | | | | | | | | | | | | | | | | | | | | |
| tx-dropped | Transmitter dropped bytes. | | | | | | | | | | | | | | | | | | | | | | | | | |
| rx-dropped | Receiver dropped bytes. | | | | | | | | | | | | | | | | | | | | | | | | | |
| tx-bps | Transmitter bytes per second. | | | | | | | | | | | | | | | | | | | | | | | | | |
| rx-bps | Receiver bytes per second. | | | | | | | | | | | | | | | | | | | | | | | | | |
| tx-pps | Transmitter packets per second. | | | | | | | | | | | | | | | | | | | | | | | | | |
| rx-pps | Receiver packets per second. | | | | | | | | | | | | | | | | | | | | | | | | | |
| protocol | The protocol to use for status checks. | option | - | ping | | | | | | | | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>ping</td> <td>Use PING to test the link with the probe-target.</td> </tr> <tr> <td>http</td> <td>Use HTTP-GET to test the link with the probe-target.</td> </tr> <tr> <td>dns</td> <td>Use DNS-Query to test the link with the probe-target.</td> </tr> </tbody> </table> | Option | Description | ping | Use PING to test the link with the probe-target. | http | Use HTTP-GET to test the link with the probe-target. | dns | Use DNS-Query to test the link with the probe-target. | | | | | | | | | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | | | | | | | | | | | |
| ping | Use PING to test the link with the probe-target. | | | | | | | | | | | | | | | | | | | | | | | | | |
| http | Use HTTP-GET to test the link with the probe-target. | | | | | | | | | | | | | | | | | | | | | | | | | |
| dns | Use DNS-Query to test the link with the probe-target. | | | | | | | | | | | | | | | | | | | | | | | | | |
| interval | Monitoring Interval in seconds. | integer | 1 - 3600 | 5 | | | | | | | | | | | | | | | | | | | | | | |
| probe-cnt | Number of probes sent within an interval. | integer | 1 - 10 | 1 | | | | | | | | | | | | | | | | | | | | | | |
| probe-tm | Timeout for a probe in seconds. | integer | 1 - 10 | 2 | | | | | | | | | | | | | | | | | | | | | | |
| interface | The outbound interface of probe packets. | option | - | none | | | | | | | | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lan</td> <td>LAN as the outgoing interface.</td> </tr> </tbody> </table> | Option | Description | lan | LAN as the outgoing interface. | | | | | | | | | | | | | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | | | | | | | | | | | |
| lan | LAN as the outgoing interface. | | | | | | | | | | | | | | | | | | | | | | | | | |

| Parameter | Description | Type | Size | Default | | | | | | | | |
|-----------|---|--------|--------|-------------|------|-------------------------------------|-----------|--|-------|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>lo</td> <td>Loopback as the outgoing interface.</td> </tr> <tr> <td>port1</td> <td>Port 1 as the outgoing interface.</td> </tr> <tr> <td>port4</td> <td>Port 4 as the outgoing interface.</td> </tr> </tbody> </table> | | Option | Description | lo | Loopback as the outgoing interface. | port1 | Port 1 as the outgoing interface. | port4 | Port 4 as the outgoing interface. | | |
| Option | Description | | | | | | | | | | | |
| lo | Loopback as the outgoing interface. | | | | | | | | | | | |
| port1 | Port 1 as the outgoing interface. | | | | | | | | | | | |
| port4 | Port 4 as the outgoing interface. | | | | | | | | | | | |
| src-type | The way to set the source address for probes. | option | - | none | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>none</td> <td>Do not set the source address.</td> </tr> <tr> <td>interface</td> <td>Set the source address as the address derived from a specific interface.</td> </tr> <tr> <td>ip</td> <td>Set the source address as a specific IP.</td> </tr> </tbody> </table> | | Option | Description | none | Do not set the source address. | interface | Set the source address as the address derived from a specific interface. | ip | Set the source address as a specific IP. | | |
| Option | Description | | | | | | | | | | | |
| none | Do not set the source address. | | | | | | | | | | | |
| interface | Set the source address as the address derived from a specific interface. | | | | | | | | | | | |
| ip | Set the source address as a specific IP. | | | | | | | | | | | |
| filter | Filter type. | option | - | rtt loss | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>rtt</td> <td>Round trip time.</td> </tr> <tr> <td>loss</td> <td>Packet loss.</td> </tr> </tbody> </table> | | Option | Description | rtt | Round trip time. | loss | Packet loss. | | | | |
| Option | Description | | | | | | | | | | | |
| rtt | Round trip time. | | | | | | | | | | | |
| loss | Packet loss. | | | | | | | | | | | |

VPN

This section shows the syntax of the following commands:

- [config ipsec on page 99](#)
- [config vpn certificate on page 109](#)

config ipsec

Description: Configure IPsec VPN settings.

- [config phase1-interface on page 99](#)
- [config phase2-interface on page 104](#)

config phase1-interface

Description: Configure the VPN remote gateway.

```
config vpn ipsec phase1-interface
edit <name>
  set ip-version [4 | 6]
  set ike-version [1 | 2]
  set keylife [120 - 172800]
  set proposal [des-md5 | des-sha1 | des-sha256 | 3des-md5 | 3des-sha1 | 3dessha256 | aes128-md5
| aes128-sha1 | aes128-sha256 | aes256-md5 | aes256-sha1 | aes256-sha256]
  set dhgrp [1 | 2 | 5 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 27 | 28 | 29 | 30 | 31 | 32 ]
  set *interface <name1>
  set type [static | ddns]
  set *remote-gw {ipv4-address}
  set *remote-gw6 {ipv6-address}
  set *remotegw-ddns {string} *available when type is set to ddns
  set authmethod [psk | signature]
  set *psksecret {string}
  set *certificate <local-cert-name>
  set *peer <ca-cert-name>
  set localid {string}
  set peerid {string}
  set add-gw-route [enable | disable]
  set dev-id-notification [enable | disable]
  set dev-id <name1> *available when dev-id-notification is enabled
  set monitor <name>
next
end
```

Sample command:

```

config vpn ipsec phase1-interface
edit phase1_1
  set ike-version 2
  set keylife 86400
  set proposal aes128-sha256 aes256-sha256 3des-sha256 aes128-sha1 aes256-sha1 3dessha1
  set dhgrp 14 5 31 20
  set interface port1
  set type static
  set remote-gw 207.102.148.196
  set authmethod psk
  set psksecret *****
  set localid 92
  set peerid 22
  set add-gw-route disable
  set dev-id-notification disable
  set monitor pri
next
end

```

| Parameter | Description | Type | Size | Default | | | | | | |
|-------------|---|---------|--------------|--|-----------|---|-----------|--|--|--|
| ip-version | Specify the IP version for the VPN interface. | option | - | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>4</td> <td>IPv4</td> </tr> <tr> <td>6</td> <td>IPv6</td> </tr> </tbody> </table> | Option | Description | 4 | IPv4 | 6 | IPv6 | | | |
| Option | Description | | | | | | | | | |
| 4 | IPv4 | | | | | | | | | |
| 6 | IPv6 | | | | | | | | | |
| ike-version | Specify the IKE protocol version. | option | - | 2 | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Version 1</td> </tr> <tr> <td>2</td> <td>Version 2</td> </tr> </tbody> </table> | Option | Description | 1 | Version 1 | 2 | Version 2 | | | |
| Option | Description | | | | | | | | | |
| 1 | Version 1 | | | | | | | | | |
| 2 | Version 2 | | | | | | | | | |
| keylife | Time to wait in seconds before the phase 1 encryption key expires. | integer | 120 - 172800 | 86400 | | | | | | |
| proposal | Specify Phase-1 proposal. | option | - | aes128-sha256 aes256-sha256 3des-sha256 aes128-sha1 aes256-sha1 3des-sha1 | | | | | | |

| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable device ID notification.</td> </tr> <tr> <td>disable</td> <td>Disable device ID notification.</td> </tr> </tbody> </table> | Option | Description | enable | Enable device ID notification. | disable | Disable device ID notification. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable device ID notification. | | | | | | | | | |
| disable | Disable device ID notification. | | | | | | | | | |
| dev-id | The Device ID carried by the device ID notification. Available when dev-id-notification is enabled. | string | - | none | | | | | | |
| monitor | Specify the IPsec phase1 interface as primary. | string | - | none | | | | | | |

config phase2-interface

Description: Configure VPN autokey tunnel.

```

config phase2-interface
  edit <name>
    set *phase1name
    set proposal {option1}, {option2}, ...
    set pfs [enable | disable]
    set dhgrp [1 | 2 | 5 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 27 | 28 | 29 | 30 | 31 | 32 ]
    set keylife-type [seconds | kbs]
    set keylifeseconds [120 - 172800]
    set keylifekbs [5120 - 4294967295]
    set encapsulation [tunnel-mode | transport-mode]
    set protocol [0 - 255]
    set src-addr-type [subnet | range | ip | name | subnet6 | range6 | ip6 | name6]
    set src-subnet {ipv4-subnet}
    set *src-start-ip {ipv4-address} *available when src-addr-type is range and ip
    set *src-end-ip {ipv4-address} *available when src-addr-type is range
    set *src-name {string} *available when src-addr-type is name
    set src-subnet6 {ipv6-subnet}
    set *src-start-ip6 {ipv6-address} *available when src-addr-type is range6 and ip6
    set *src-end-ip6 {ipv6-address} *available when src-addr-type is range6
    set *src-name6 {string} *available when src-addr-type is name6
    set src-port [0 - 65535]
    set dst-addr-type [subnet | range | ip | name | subnet6 | range6 | ip6 | name6]
    set dst-subnet {ipv4-subnet}
    set *dst-start-ip {ipv4-address} *available when dst-addr-type is range and ip
    set *dst-end-ip {ipv4-address} *available when dst-addr-type is range
    set *dst-name {string} *available when dst-addr-type is name
    set dst-subnet6 {ipv6-subnet}
    set *dst-start-ip6 {ipv6-address} *available when dst-addr-type is range6 and ip6
    set *dst-end-ip6 {ipv6-address} *available when dst-addr-type is range6
    set *dst-name6 {string} *available when dst-addr-type is name6
  
```

```

    set dst-port [0 - 65535]
unset
next
show
abort
end
delete <name>
purge
show
end
show
end

```

Sample command:

```

config vpn ipsec phase2-interface
edit phase2_1
set phase1name phase1_1
set proposal aes128-sha1 aes256-sha1 3des-sha1 aes128-sha256 aes256-sha256 3dessha256
set pfs enable
set dhgrp 14 5 31 20
set keylife-type seconds
set keylifeseconds 43200
set encapsulation tunnel-mode
set protocol 0
set src-addr-type subnet
set src-subnet 0.0.0.0/0
set src-port 0
set dst-addr-type subnet
set dst-subnet 107.204.148.0/24
set dst-port 234
next
end

```

| Parameter | Description | Type | Size | Default |

| Parameter | Description | Type | Size | Default |
|---------------|--|--------------|-------------------------|-----------|
| dst-subnet | Remote proxy ID subnet. | IPv4 address | - | 0.0.0.0/0 |
| dst-port | Quick mode source port. | integer | 1 - 65535, or 0 for all | 0 |
| dst-start-ip | Remote proxy ID start when dst-addr-type is range and ip. | IPv4 address | - | none |
| dst-end-ip | Remote proxy ID end when dst-addr-type is range. | IPv4 address | - | none |
| dst-name | Remote proxy ID name when dst-addr-type is name. | string | - | none |
| dst-subnet6 | Remote proxy ID IPv6 subnet when dst-addr-type is subnet6. | IPv6 address | - | 0::0/0 |
| dst-start-ip6 | Remote proxy ID IPv6 start when dst-addr-type is range6 and ip6. | IPv6 address | - | none |
| dst-end-ip6 | Remote proxy ID IPv6 end when dst-addr-type is range6. | IPv6 address | - | none |
| dst-name6 | Remote proxy ID IPv6 name when dst-addr-type is name6. | string | - | none |

config vpn certificate

Description: Configure VPN certificates.

- [config vpn certificate ca on page 109](#)
- [config vpn certificate local on page 110](#)

config vpn certificate ca

Description: Configure CA certificates.

```

config ca
  edit <name>
    set comment {string}
    set *source [factory | user]
    unset
    next
    abort
    show
    end
  delete <name>
  purge
  show

```

```
end
```

Sample command:

```
config vpn certificate ca
  edit Fortinet_CA
    set comment
    set source factory
  next
end
```

config vpn certificate local

Description: Configure local keys and certificates.

```
config vpn certificate local
  edit <name>
    set comment {string}
    set source [factory | user]
    set enroll-protocol [none | scep]
    unset
    next
    show
    abort
  end
  delete <name>
  purge
  show
end
```

Sample command:

```
config vpn certificate local
  edit Fortinet_Factory
    set comment
    set source factory
    set enroll-protocol scep
  next
end
```

| Parameter | Description | Type | Size | Default |
|-----------|---------------------------|--------|---------------------------------|---------|
| comment | Optional comments. | string | Up to 255 characters in length. | none |
| source | Source of CA certificate. | option | - | factory |

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------------|---|--------|-------------|---------|------------------------|------|----------------|--|--|--|
| | <table border="1"><thead><tr><th>Option</th><th>Description</th></tr></thead><tbody><tr><td>factory</td><td>From the manufacturer.</td></tr><tr><td>user</td><td>From the user.</td></tr></tbody></table> | Option | Description | factory | From the manufacturer. | user | From the user. | | | |
| Option | Description | | | | | | | | | |
| factory | From the manufacturer. | | | | | | | | | |
| user | From the user. | | | | | | | | | |
| enroll-protocol | Certificate enrollment protocol. | option | - | | | | | | | |
| | <table border="1"><thead><tr><th>Option</th><th>Description</th></tr></thead><tbody><tr><td>None</td><td>None.</td></tr><tr><td>scep</td><td>Use SCEP.</td></tr></tbody></table> | Option | Description | None | None. | scep | Use SCEP. | | | |
| Option | Description | | | | | | | | | |
| None | None. | | | | | | | | | |
| scep | Use SCEP. | | | | | | | | | |

Network

This section shows the syntax of the following commands:

- [config address on page 112](#)
- [config service-custom on page 113](#)

config address

Description: Configure IPv4 addresses.

```
config address
  edit <name>
    set type [ipmask | iprange]
    set subnet {ipv4-address}
    set start-ip {ipv4-address} *available when type is set to iprange
    set end-ip {ipv4-address} *available when type is set to iprange
    unset
    next
    show
    abort
  end
delete <name>
purge
show
end
```

Sample command:

```
config network address
  edit lan
    set type ipmask
    set subnet 192.168.200.0/24
  next
```

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------|---|--------|-------------|---------|-----------------------------|---------|-----------|--|--|--|
| type | Type of address. | option | - | ipmask | | | | | | |
| | <table border="1"><thead><tr><th>Option</th><th>Description</th></tr></thead><tbody><tr><td>ipmask</td><td>IP address and subnet mask.</td></tr><tr><td>iprange</td><td>IP range.</td></tr></tbody></table> | Option | Description | ipmask | IP address and subnet mask. | iprange | IP range. | | | |
| Option | Description | | | | | | | | | |
| ipmask | IP address and subnet mask. | | | | | | | | | |
| iprange | IP range. | | | | | | | | | |

| Parameter | Description | Type | Size | Default |
|-----------|--|--------------|------|---------|
| subnet | IP address and subnet mask. | IPv4 address | - | none |
| start-ip | The first IP address (inclusive) in the range of IP addresses. | IPv4 address | - | none |
| end-ip | The last IP address (inclusive) in the range of IP addresses. | IPv4 address | - | none |

config service

Description: Configure firewall service.

config service-custom

Description: Configure custom services.

```

config service-custom
  edit <name>
    set protocol [TCP | UDP | ICMP | IP]
    set protocol number (0 - 254)
    set tcp-portrange <dstport_low>[-<dstport_high>:<srcport_low>-<srcport_high>] *available
      when protocol is set to TCP
    set udp-portrange <dstport_low>[-<dstport_high>:<srcport_low>-<srcport_high>] *available
      when protocol is set to UDP
    unset
    next
    show
    abort
  end
  delete <name>
  purge
  show
end
show
end

```

Sample command:

```

config network service
  config service-custom
    edit ALL
      set protocol IP
      set protocol-number 0
    next

```

| Parameter | Size | Type | Size | Default | | | | | | | | | | |
|-----------------|---|---------|-------------|---------|---------------|-----|---------------|------|----------------|----|--------------|--|--|--|
| protocol | Protocol type based on IANA numbers. | option | - | ip | | | | | | | | | | |
| | <table><thead><tr><th>Option</th><th>Description</th></tr></thead><tbody><tr><td>tcp</td><td>TCP protocol.</td></tr><tr><td>udp</td><td>UDP protocol.</td></tr><tr><td>icmp</td><td>ICMP protocol.</td></tr><tr><td>ip</td><td>IP protocol.</td></tr></tbody></table> | Option | Description | tcp | TCP protocol. | udp | UDP protocol. | icmp | ICMP protocol. | ip | IP protocol. | | | |
| Option | Description | | | | | | | | | | | | | |
| tcp | TCP protocol. | | | | | | | | | | | | | |
| udp | UDP protocol. | | | | | | | | | | | | | |
| icmp | ICMP protocol. | | | | | | | | | | | | | |
| ip | IP protocol. | | | | | | | | | | | | | |
| protocol-number | IP protocol number. | integer | 0 - 254 | 0 | | | | | | | | | | |

Execute

This section shows the syntax of the following command:

- [execute SSH username serverip on page 115](#)
- [execute vpn certificate local generate rsa on page 115](#)

execute SSH username serverip

Description: Configure SSH client log into other devices from FortiBranchSASE.

```
#execute ssh username serverip
```

Sample command:

```
execute ssh admin 192.168.1.115
```

execute vpn certificate local generate rsa

Description: Generate a Certificate Signing Request.

```
# execute vpn certificate local generate rsa <cert_name> <key_size> <subject> <country name>  
<state> <city> <org> <Units> <email> <subject_alter_name> <URL> <challenge>
```

Sample command:

```
# execute vpn certificate local generate rsa test1 1024 cert US CA Sunnyvale Fortinet  
102,203,303 test@fortinet.com null http://192.168.100.99/app/cert/scep/ fortinet
```

| Field | Description | Mandatory | Type | Value Range |
|-----------|-------------------------------|-----------|--------|------------------------|
| cert_name | Specify the certificate name. | Yes | String | |
| key_size | Specify the key size. | Yes | Number | 1024, 1536, 2048, 4096 |

| Field | Description | Mandatory | Type | Value Range |
|--------------------|---|-----------|--------|-------------|
| subject | Specify the subject(Host-IP/Domain Name/E-Mail). | Yes | String | |
| country name | Specify the country name. | No | String | |
| state | Specify the state name. | No | String | |
| city | Specify the city name. | No | String | |
| org | Specify the organization name. | No | String | |
| Units | Specify the unit name. If there are multiple units, use ';' as a delimiter. | No | String | |
| email | Specify the email address. | No | String | |
| subject_alter_name | Specify the subject alternative name. | No | String | |
| URL | Specify the URL. | Yes | String | |
| challenge | Specify the challenge password. | No | String | |

WiFi

This section presents the CLI commands for configuring Wi-Fi network settings on Wi-Fi enabled platforms.

- [config vap on page 117](#)
- [config ap-security on page 120](#)
- [config wifi-networks on page 122](#)
- [config radio-profile on page 123](#)
- [config wifi-general on page 124](#)

config vap

Description: Configure WiFi virtual access point.

```
config wifi
  config vap
    edit <WiFi Access Point Name>
      set ssid <string>
      set broadcast-ssid [enable | disable]
      set dtim {integer}
      set rts-threshold {integer}
      set max-clients {integer}
      set target-wake-time [enable | disable]
      set bss-color-partial [enable | disable]
      set mu-mimo [enable | disable]
      set wlan-bridge [yes |no ]
      set wlan-members
      config ap-security
        set security-mode <encryption mode>
      end
    end
  next
end
end
```

Sample command:

```
config wifi
  config vap
    edit fbs-home-2g-1
      set ssid fbs-home-2g-1
      set broadcast-ssid enable
      set dtim 1
      set rts-threshold 2347
      set max-clients 9
```

```

set target-wake-time enable
set bss-color-partial enable
set mu-mimo enable
set wlan-bridge no
set wlan-members
config ap-security
  set security-mode WPA2-Enterprise
  set auth-server-addr 192.168.11.99
  set auth-server-port 1812
  set auth-server-secret *****
  set pmf optional
end
next
edit fbs-home-5g-1
  set ssid fbs-home-5g-1
  set broadcast-ssid enable
  set dtim 1
  set rts-threshold 2347
  set max-clients 9
  set target-wake-time enable
  set bss-color-partial enable
  set mu-mimo enable
  set wlan-bridge yes
  set wlan-members
  config ap-security
    set security-mode WPA2-Personal
    set pmf required
    set passphrase *****
  end
next
end
end

```

| Parameter | Description | Type | Size | Default | | | | | | |
|----------------|---|---------|-------------|---------|-------------------------------|---------|--------------------------------|--|--|--|
| ssid | IEEE 802.11 service set identifier (SSID) for the wireless interface. Users who wish to use the wireless network must configure their computers to access this SSID name. | string | - | | | | | | | |
| broadcast-ssid | Enable/disable broadcasting the SSID | option | - | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable broadcasting the SSID.</td> </tr> <tr> <td>disable</td> <td>Disable broadcasting the SSID.</td> </tr> </tbody> </table> | Option | Description | enable | Enable broadcasting the SSID. | disable | Disable broadcasting the SSID. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable broadcasting the SSID. | | | | | | | | | |
| disable | Disable broadcasting the SSID. | | | | | | | | | |
| dtim | Wi-Fi Delivery Traffic Indication | integer | 1-255 | | | | | | | |

| Parameter | Description | Type | Size | Default |
|-------------------|---|--|----------|---------|
| | Map (DTIM) | | | |
| rts-threshold | Maximum packet size for RTS transmissions. | integer | 256-2347 | |
| max-clients | Maximum number of clients that can connect simultaneously to the VAP. | integer | 0-512 | |
| target-wake-time | Enable/disable 802.11ax target wake time. | option | | |
| | Option | Description | | |
| | enable | Enable 802.11ax target wake time. | | |
| | disable | Disable 802.11ax target wake time. | | |
| bss-color-partial | Enable/disable 802.11ax partial BSS color. | option | | |
| | Option | Description | | |
| | enable | Enable 802.11ax partial BSS color. | | |
| | disable | Disable 802.11ax partial BSS color. | | |
| mu-mimo | Enable/disable Multi-user MIMO. | option | | |
| | Option | Description | | |
| | enable | Enable Multi-user MIMO. | | |
| | disable | Disable Multi-user MIMO. | | |
| wlan-bridge | Select if you want the SSID to act as a bridge between wireless and wired networks, integrating wireless devices into the same network. | option | | |
| | Option | Description | | |
| | yes | Allow the SSID to act as a WLAN bridge. | | |
| | no | Do not allow the SSID to act as a WLAN bridge. | | |
| wlan-members | When WLAN Bridge is enabled, you can add WLAN members to the SSID configuration. | | | |

- [config ap-security on page 120](#)

config ap-security

Description: Configure security mode for WiFi access point.

```
config wifi
  config vap
    edit <WiFi Access Point Name>
      config ap-security
        set security-mode <encryption mode>
        set pmf <option>
        set source-ip <ipv4 or ipv6 address>
        set passphrase <password>
        set auth-server-addr <ipv4 or ipv6 address>
        set auth-server-port <port number>
        set auth-server-secret <password>
      end
    next
  end
end
```

Sample command

```
config wifi vap
  edit fbs-home-2g-1
    set ssid fbs-home-2g-1
    set broadcast-ssid enable
    set wlan-members
    config ap-security
      set security-mode WPA2-Enterprise
      set auth-server-addr 192.168.11.99
      set auth-server-port 1812
      set auth-server-secret *****
      set pmf optional
    end
  next
  edit fbs-home-5g-1
    set ssid fbs-home-5g-1
    set broadcast-ssid enable
    set wlan-members
    config ap-security
      set security-mode WPA2-Personal
      set pmf disabled
      set passphrase *****
    end
  next
end
```

| Parameter | Description | Type | Size | Default |
|-----------|------------------------------------|--------|------|---------|
| security- | Select which security mode to use. | option | - | |

| Parameter | Description | Type | Size | Default | | | | | | | | | | | | | | | | | | | | |
|----------------------------|---|----------|-------------|----------|-------------------------|---------------|--|-------------------|---|----------|-------------------------|---------------------|------------------------------------|-----------------|--------------------------------|----------------------|-------------------------------------|----------------------------|---|-------------------------|--|--|--|--|
| mode | | | | | | | | | | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>OPEN</td> <td>Wi-Fi security OPEN</td> </tr> <tr> <td>WPA2-Personal</td> <td>Wi-Fi security WPA2 Personal</td> </tr> <tr> <td>WPA-WPA2-Personal</td> <td>Wi-Fi security WPA-WPA2 Personal</td> </tr> <tr> <td>WPA3-SAE</td> <td>Wi-Fi security WPA3 SAE</td> </tr> <tr> <td>WPA3-SAE-Transition</td> <td>Wi-Fi security WPA3 SAE Transition</td> </tr> <tr> <td>WPA2-Enterprise</td> <td>Wi-Fi security WPA2 Enterprise</td> </tr> <tr> <td>WPA3-Enterprise-Only</td> <td>Wi-Fi security WPA3 Enterprise only</td> </tr> <tr> <td>WPA3-Enterprise-Transition</td> <td>Wi-Fi security WPA3 Enterprise Transition</td> </tr> <tr> <td>WPA3-Enterprise-192-bit</td> <td>Wi-Fi security WPA3 Enterprise 192-bit</td> </tr> </tbody> </table> | Option | Description | OPEN | Wi-Fi security OPEN | WPA2-Personal | Wi-Fi security WPA2 Personal | WPA-WPA2-Personal | Wi-Fi security WPA-WPA2 Personal | WPA3-SAE | Wi-Fi security WPA3 SAE | WPA3-SAE-Transition | Wi-Fi security WPA3 SAE Transition | WPA2-Enterprise | Wi-Fi security WPA2 Enterprise | WPA3-Enterprise-Only | Wi-Fi security WPA3 Enterprise only | WPA3-Enterprise-Transition | Wi-Fi security WPA3 Enterprise Transition | WPA3-Enterprise-192-bit | Wi-Fi security WPA3 Enterprise 192-bit | | | |
| Option | Description | | | | | | | | | | | | | | | | | | | | | | | |
| OPEN | Wi-Fi security OPEN | | | | | | | | | | | | | | | | | | | | | | | |
| WPA2-Personal | Wi-Fi security WPA2 Personal | | | | | | | | | | | | | | | | | | | | | | | |
| WPA-WPA2-Personal | Wi-Fi security WPA-WPA2 Personal | | | | | | | | | | | | | | | | | | | | | | | |
| WPA3-SAE | Wi-Fi security WPA3 SAE | | | | | | | | | | | | | | | | | | | | | | | |
| WPA3-SAE-Transition | Wi-Fi security WPA3 SAE Transition | | | | | | | | | | | | | | | | | | | | | | | |
| WPA2-Enterprise | Wi-Fi security WPA2 Enterprise | | | | | | | | | | | | | | | | | | | | | | | |
| WPA3-Enterprise-Only | Wi-Fi security WPA3 Enterprise only | | | | | | | | | | | | | | | | | | | | | | | |
| WPA3-Enterprise-Transition | Wi-Fi security WPA3 Enterprise Transition | | | | | | | | | | | | | | | | | | | | | | | |
| WPA3-Enterprise-192-bit | Wi-Fi security WPA3 Enterprise 192-bit | | | | | | | | | | | | | | | | | | | | | | | |
| pmf | <p>Protected Management Frames (PMF) support.</p> <p>This option is available if <code>security-mode</code> is set to OPEN, WPA2-Personal, WPA-WPA2-Personal, WPA3-SAE, or WPA3-SAE-Transition.</p> | option | - | | | | | | | | | | | | | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>disabled</td> <td>Disable PMF completely.</td> </tr> <tr> <td>required</td> <td>Enable PMF and deny clients without PMF.</td> </tr> <tr> <td>optional</td> <td>Enable PMF and allow clients without PMF.</td> </tr> </tbody> </table> | Option | Description | disabled | Disable PMF completely. | required | Enable PMF and deny clients without PMF. | optional | Enable PMF and allow clients without PMF. | | | | | | | | | | | | | | | |
| Option | Description | | | | | | | | | | | | | | | | | | | | | | | |
| disabled | Disable PMF completely. | | | | | | | | | | | | | | | | | | | | | | | |
| required | Enable PMF and deny clients without PMF. | | | | | | | | | | | | | | | | | | | | | | | |
| optional | Enable PMF and allow clients without PMF. | | | | | | | | | | | | | | | | | | | | | | | |
| passphrase | <p>WPA pre-shared key (PSK) to be used to authenticate WiFi users.</p> <p>This option is available if <code>security-mode</code> is set to WPA2-Personal, WPA-WPA2-Personal, WPA3-SAE, or WPA3-SAE-Transition.</p> | password | | | | | | | | | | | | | | | | | | | | | | |
| source-ip | Source IP address for communications to the RADIUS server (IPv4 and IPv6 format). | string | | | | | | | | | | | | | | | | | | | | | | |
| auth-server-addr | RADIUS authentication server (IPv4 and IPv6 format). | string | | | | | | | | | | | | | | | | | | | | | | |

| Parameter | Description | Type | Size | Default |
|--------------------|---|---------|------|---------|
| | This option is available if security-mode is set to WPA2-Enterprise, WPA3-Enterprise-Only, WPA3-Enterprise-Transition, or WPA3-Enterprise-192-bit. | | | |
| auth-server-port | Wi-Fi Authentication Server Port. This option is available if security-mode is set to WPA2-Enterprise, WPA3-Enterprise-Only, WPA3-Enterprise-Transition, or WPA3-Enterprise-192-bit. | integer | | 1812 |
| auth-server-secret | Wi-Fi Authentication Server Secret. This option is available if security-mode is set to WPA2-Enterprise, WPA3-Enterprise-Only, WPA3-Enterprise-Transition, or WPA3-Enterprise-192-bit. | string | | |

config wifi-networks

Description: Configure WiFi networks for Station Mode.

```
edit <name>
  set ssid <id>
  set security-mode <encryption mode>
  # the security mode has the following options:
  OPEN
  WPA-Personal
  WPA2-Personal
  WPA-WPA2-Personal
  WPA3-SAE
  WPA3-SAE-Transition
  WPA-Enterprise
  WPA2-Enterprise
  WPA-WPA2-Enterprise
  WPA3-Enterprise-Only
  WPA3-Enterprise-Transition
  set pmf <option>
  # pmf option includes the options:
  disabled
  optional
  required
```

Sample command:

```
config wifi wifi-networks
  edit 2g-ArloNetwork
    set ssid ArloNetwork
```

```
    set security-mode WPA3-Enterprise-Only
    set pmf required
    set identity *****
    set password *****
next
edit 5g-Dream
    set ssid Dream
    set security-mode WPA3-SAE
    set pmf
    set sae-password *****
next
edit 5g-Hope
    set ssid Hope
    set security-mode WPA2-Enterprise
    set pmf
    set identity *****
    set password *****
next
end
```

config radio-profile

Description: Configure WiFi Radio profile.

```
config wifi radio-profile
edit <radio profile name>
set band <2GHz/5GHz>
set status <enable/disable>
set role <lan/wan> # two options for role, as lan and wan
If role is set as lan, configure the following parameters for the WiFi lan interface:
set operating-standards auto
set beacon-interval {100-3500}
set 80211d [ enable | disable]
set max-clients {0-512}
set power-mode auto
    set channel
set bandwidth auto
set extension-channel auto
set guard-interval auto
set vap <ap names> #maximum 4 APs for the vap configure
```

Sample command:

```
config wifi radio-profile
edit 2g-profile
    set band 2GHz
    set enable enable
    set role lan
```

```
set operating-standards auto
set power-mode auto
set channel
set bandwidth auto
set extension-channel auto
set guard-interval auto
set vap fbs-home-2g-1 fbs-home-2g-3 fbs-home-2g-4
next

edit 5g-profile
set band 5GHz
set enable enable
set role wan
set wifi-networks 5g-Dream
next
end
```

config wifi-general

Description: Configure general WiFi settings.

```
set country-code
AS    AMERICAN SAMOA
AR    ARGENTINA

CA    CANADA
```

The list of county codes varies with the region code of the devices in use. The list of country codes shown above applies to devices with the region code "A" only.

User

This section shows the syntax of the following commands:

- [config user radius on page 125](#)
- [config user group on page 126](#)
- [config user security-exempt-list on page 127](#)
- [config user security-exempt-list6 on page 128](#)

config user radius

Configure the FortiBranchSASE to access a RADIUS server.

```
config user radius
  edit <name>
    set server {string}
    set secret {password}
    set auth-type [auto|ms_chap_v2|...]
    set timeout {integer}
    set transport-protocol [udp]
    set nas-ip {string}
    set nas-identifier {string}
    set port {integer}
    set source-ip {ipv4-address}
  next
end
```

Sample command:

```
config user radius
  edit example_radius
    set server fortinet.com
    set secret *****
    set auth-type auto
    set timeout 5
    set transport-protocol udp
    set nas-ip 0.0.0.0
    set nas-identifier
    set port 1812
    set source-ip 1.1.1.4
  next
end
```

| Parameter | Description | Type | Size | Default |
|--------------------|--|--------------|-------|---------|
| name | Name of the RADIUS server table. | string | - | none |
| server | Primary RADIUS FQDN or IP address. | string | - | none |
| secret | Pre-shared secret key used to access the primary RADIUS server. | password | 1-128 | none |
| auth-type | <p>Authentication protocols permitted for this RADIUS server. You can select the following options:</p> <ul style="list-style-type: none"> • auto • ms_chap_v2 • ms_chap • chap • pap <p>If the authentication type is set to auto, FortiBranchSASE uses the following protocols in sequence: PAP → MSCHAP_v2 → CHAP FortiBranchSASE will only try the next protocol once it receives a RADIUS-reject message</p> | option | - | auto |
| timeout | Time in seconds to retry connecting to the RADIUS server. | integer | - | 5 |
| transport-protocol | <p>Transport protocol to be used.</p> <ul style="list-style-type: none"> • udp | option | - | udp |
| nas-ip | IPv4 address used for the FortiBranchSASE to communicate with the RADIUS server. It is also used as the NAS-IP-Address and Called-Station-ID attributes. | string | - | none |
| nas-identifier | Optional NAS-Identifier string for RADIUS messages | string | - | none |
| port | Primary RADIUS server port number | integer | - | none |
| source-ip | Source IP address for communications to the RADIUS server. | IPv4 address | - | 0.0.0.0 |

config user group

Apply a RADIUS server table to a user group.

```
config user group
  edit group1
    set member [RADIUS server name1] [RADIUS server name2]
  next
end
```

| Parameter | Description |
|-----------|---|
| name | Name of the FortiBranchSASE user group. |
| member | Names of users and RADIUS server tables you want to add to the user group. You can apply multiple RADIUS server tables to a user group. |

config user security-exempt-list

Configure security exemption list.

```
config user security-exempt-list
  edit <name>
    set description {string}
    config rule
      edit <id>
        set dstaddr <name1>, <name2>, ...
        set service <name1>, <name2>, ...
        set srcaddr <name1>, <name2>, ...
      next
    end
  next
end
```

| Parameter | Description | Type | Size | Default |
|-------------|--------------------------|--------|---------------------|---------|
| name | Name of the exempt list. | string | Maximum length: 30 | none |
| description | Description. | string | Maximum length: 127 | none |

config rule

| Parameter | Description | Type | Size | Default |
|-----------|--|--------|--------------------|---------|
| id | Security exempt rule name. | string | Maximum length: 30 | none |
| dstaddr | The network address IDs of the exempt destination. | string | - | none |
| service | The IDs of the exempt destination service. | string | - | none |
| srcaddr | The network address IDs of the exempt source. | string | - | none |

config user security-exempt-list6

Configure IPv6 security exemption list.

```
config user security-exempt-list6
  edit <name>
    set description {string}
  config rule
    edit <id>
      set srcaddr6 <name1>, <name2>, ...
      set dstaddr6 <name1>, <name2>, ...
      set service <name1>, <name2>, ...
    next
  end
next
end
```

| Parameter | Description | Type | Size | Default |
|-------------|--------------------------|--------|---------------------|---------|
| name | Name of the exempt list. | string | Maximum length: 30 | none |
| description | Description. | string | Maximum length: 127 | none |

config rule

| Parameter | Description | Type | Size | Default |
|-----------|---|--------|--------------------|---------|
| id | Security exempt rule name. | string | Maximum length: 30 | none |
| srcaddr6 | The IPv6 network address IDs of the exempt source. | string | - | none |
| dstaddr6 | The IPv6 network address IDs of the exempt destination. | string | - | none |
| service | The IDs of the exempt destination service. | string | - | none |

| Parameter | Description | Type | Size | Default | | | | | | |
|-----------|---|--------|-------------|----------|--|---------|---|--|--|--|
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>wildcard</td> <td>Matches using regex rules for advanced pattern matching. Note: If the domain string contains the character ?, it can only be configured through the GUI.</td> </tr> <tr> <td>regex</td> <td>Matches patterns using wildcards (e.g., *.example.com). Note: Only the * wildcard is supported.</td> </tr> </tbody> </table> | Option | Description | wildcard | Matches using regex rules for advanced pattern matching. Note: If the domain string contains the character ?, it can only be configured through the GUI. | regex | Matches patterns using wildcards (e.g., *.example.com). Note: Only the * wildcard is supported. | | | |
| Option | Description | | | | | | | | | |
| wildcard | Matches using regex rules for advanced pattern matching. Note: If the domain string contains the character ?, it can only be configured through the GUI. | | | | | | | | | |
| regex | Matches patterns using wildcards (e.g., *.example.com). Note: Only the * wildcard is supported. | | | | | | | | | |
| action | Select if you want to Block or Allow this entry. | option | - | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>block</td> <td>If the local domain filter action is set to block and an entry matches, then that DNS query is blocked or redirected.</td> </tr> <tr> <td>allow</td> <td>If the local domain filter action is set to allow and an entry matches, it will directly return to the client DNS resolver.</td> </tr> </tbody> </table> | Option | Description | block | If the local domain filter action is set to block and an entry matches, then that DNS query is blocked or redirected. | allow | If the local domain filter action is set to allow and an entry matches, it will directly return to the client DNS resolver. | | | |
| Option | Description | | | | | | | | | |
| block | If the local domain filter action is set to block and an entry matches, then that DNS query is blocked or redirected. | | | | | | | | | |
| allow | If the local domain filter action is set to allow and an entry matches, it will directly return to the client DNS resolver. | | | | | | | | | |
| status | Enable/Disable this domain filter entry. | option | - | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>enable</td> <td>Enable this domain filter to take effect.</td> </tr> <tr> <td>disable</td> <td>Disable this domain filter.</td> </tr> </tbody> </table> | Option | Description | enable | Enable this domain filter to take effect. | disable | Disable this domain filter. | | | |
| Option | Description | | | | | | | | | |
| enable | Enable this domain filter to take effect. | | | | | | | | | |
| disable | Disable this domain filter. | | | | | | | | | |

config dnsfilter profile

Description: Configure the DNS filter profile.

```

config dnsfilter profile
  edit <name>
    config domain-filter
      set domain-filter-table <name>
    end
    set block-action [block| redirect | block-servfail]
    set block-botnet [enable | disable]
    set safe-search [enable | disable]
    set youtube-restrict [strict | moderate]
    set redirect-portal {ipv4-address}
    set redirect-portal6 {ipv6-address}
  
```

```
next
end
```

| Parameter | Description | Type | Size | Default | | | | | | | | |
|------------------|--|--------------|-------------|----------|---|----------|---|----------------|---|--|--|--|
| block-action | Action to take for blocked domains. | option | - | | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>block</td> <td>The DNS request is blocked and a DNS response with NXDOMAIN is returned.</td> </tr> <tr> <td>redirect</td> <td>A DNS response containing the portal IP address is returned, redirecting blocked domains to the SDNS portal.</td> </tr> <tr> <td>block-sevrfail</td> <td>The DNS request is blocked, and a DNS response with SERVFAIL is returned.</td> </tr> </tbody> </table> | Option | Description | block | The DNS request is blocked and a DNS response with NXDOMAIN is returned. | redirect | A DNS response containing the portal IP address is returned, redirecting blocked domains to the SDNS portal. | block-sevrfail | The DNS request is blocked, and a DNS response with SERVFAIL is returned. | | | |
| Option | Description | | | | | | | | | | | |
| block | The DNS request is blocked and a DNS response with NXDOMAIN is returned. | | | | | | | | | | | |
| redirect | A DNS response containing the portal IP address is returned, redirecting blocked domains to the SDNS portal. | | | | | | | | | | | |
| block-sevrfail | The DNS request is blocked, and a DNS response with SERVFAIL is returned. | | | | | | | | | | | |
| block-botnet | Enable/disable blocking botnet C&C DNS lookups. | option | | disabled | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>disable</td> <td>Disable blocking botnet C&C DNS lookups.</td> </tr> <tr> <td>enable</td> <td>Enable blocking botnet C&C DNS lookups.</td> </tr> </tbody> </table> | Option | Description | disable | Disable blocking botnet C&C DNS lookups. | enable | Enable blocking botnet C&C DNS lookups. | | | | | |
| Option | Description | | | | | | | | | | | |
| disable | Disable blocking botnet C&C DNS lookups. | | | | | | | | | | | |
| enable | Enable blocking botnet C&C DNS lookups. | | | | | | | | | | | |
| safe-search | Enable/disable Google, Bing, YouTube, Qwant, DuckDuckGo safe search. | option | | disabled | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>disable</td> <td>Disable Google, Bing, YouTube, Qwant, DuckDuckGo safe search.</td> </tr> <tr> <td>enable</td> <td>Enable to avoid explicit and inappropriate results in the Google, Bing, and YouTube search engines.</td> </tr> </tbody> </table> | Option | Description | disable | Disable Google, Bing, YouTube, Qwant, DuckDuckGo safe search. | enable | Enable to avoid explicit and inappropriate results in the Google, Bing, and YouTube search engines. | | | | | |
| Option | Description | | | | | | | | | | | |
| disable | Disable Google, Bing, YouTube, Qwant, DuckDuckGo safe search. | | | | | | | | | | | |
| enable | Enable to avoid explicit and inappropriate results in the Google, Bing, and YouTube search engines. | | | | | | | | | | | |
| youtube-restrict | When safe-search is enabled, you can set safe search for YouTube restriction level. | option | | disabled | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Option</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>strict</td> <td>Enable strict safe search for YouTube. This restricts YouTube access by responding to DNS resolutions with CNAME restrict.youtube.com.</td> </tr> <tr> <td>moderate</td> <td>Enable moderate safe search for YouTube. This restricts YouTube access by responding to DNS resolutions with CNAME restrictmoderate.youtube.com.</td> </tr> </tbody> </table> | Option | Description | strict | Enable strict safe search for YouTube. This restricts YouTube access by responding to DNS resolutions with CNAME restrict.youtube.com. | moderate | Enable moderate safe search for YouTube. This restricts YouTube access by responding to DNS resolutions with CNAME restrictmoderate.youtube.com. | | | | | |
| Option | Description | | | | | | | | | | | |
| strict | Enable strict safe search for YouTube. This restricts YouTube access by responding to DNS resolutions with CNAME restrict.youtube.com. | | | | | | | | | | | |
| moderate | Enable moderate safe search for YouTube. This restricts YouTube access by responding to DNS resolutions with CNAME restrictmoderate.youtube.com. | | | | | | | | | | | |
| redirect-portal | Enter the IPv4 address of the SDNS redirect portal | IPv4 address | | 0.0.0.0 | | | | | | | | |
| redirect-portal6 | Enter the IPv6 address of the SDNS redirect portal | IPv6 address | | :: | | | | | | | | |

config domain filter

| Parameter | Description | Type | Size | Default |
|---------------------|--|--------|------|---------|
| domain-filter | Configure the domain-filter-table parameter to apply a previously created domain filter to this profile. | table | - | |
| domain-filter-table | Enter the domain filter name. | string | - | |
