FortiSIEM 6.7.1 2000F Hardware Configuration Guide

TABLE OF CONTENTS

Change Log	4
Appliance Setup	6
All-in-one Installation	
Step 1: Rack mount the FSM-2000F appliance	
Step 2: Power On the FSM-2000F appliance	7
Step 3: Verify System Information	7
Step 4: Configure FortiSIEM via GUI	7
Step 5: Generate FortiSIEM FSM-2000F License Key file from FortiCare	14
Step 6: Register FortiSIEM License	14
Step 7: Accessing FortiSIEM UI	14
Step 8: Choose an Event Database	14
Cluster Installation	15
Installing the Supervisor	
Installing Workers	17
Registering Workers	17
Installing Collectors	
Registering Collectors	
Factory Reset	23
Step 1: Uninstall FortiSIEM Application	23
Step 2: Reinstall FortiSIEM Application	

Change Log

03/30/2018 Initial release of this guide. 06/13/2019 Updated instructions for "Using FortiSIEM". 09/11/2019 Changed the location where you obtain images to https://support.fortinet.com. 08/15/2020 Added new sections for "Configuring FortiSIEM via a GUI", "Choose an Event Database", and "Cluster Installation". 10/09/2020 Added migration instructions. 11/11/2020 Release for 6.1.2. 12/08/2020 Small addition to Register Collectors. 03/23/2021 Release for 6.2.0. 04/20/2021 Updated Step 8: Choose an Event Database for 6.2.0. 05/06/2021 Release for 6.2.1. 05/19/2021 Updated Factory Reset section for 6.2.x. 06/07/2021 Updated Elasticsearch screenshot for 6.2.x guides. 07/06/2021 Release for 6.3.0. 07/09/2021 Updated step 5 in Step 2: Reinstall FortiSIEM application 08/26/2021 Release for 6.3.1. 10/15/2021 Release for 6.3.2. 11/17/2021 Updated Register Collectors instructions for 6.x guides. 12/22/2021 Release for 6.4.0. 05/09/2022 Release for 6.5.0. 07/26/2022 Release for 6.6.1. <th>Date</th> <th>Description</th>	Date	Description

05/22/2023	Release for 6.7.5.
06/16/2023	Release for 6.7.6.
07/13/2023	Release for 6.7.7.
09/12/2023	Release for 6.7.8.

Appliance Setup

Follow the steps below to setup FSM-2000F appliance.

- · All-in-one Installation
- · Cluster Installation

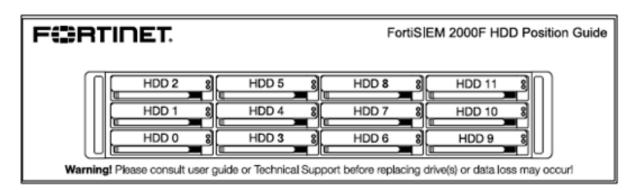

All-in-one Installation

Follow these steps to install all of the FortiSIEM components at one time.

- Step 1: Rack mount the FSM-2000F appliance
- Step 2: Power On the FSM-2000F appliance
- Step 3: Verify System Information
- Step 4: Configure FortiSIEM via GUI
- Step 5: Generate the FortiSIEM FSM-2000F License Key file
- Step 6: Register the FortiSIEM License
- Step 7: Accessing FortiSIEM UI
- Step 8: Choose an Event Database

Step 1: Rack mount the FSM-2000F appliance

- 1. Follow FortiSIEM 2000F QuickStart Guide here to mount FSM-2000F into the rack.
- 2. Insert Hard Disks positions as shown below:

3. Connect FSM-2000F to the network by connecting an Ethernet cable to Port0.

Before proceeding to the next step, connecting Ethernet cable to Port0 is required for Network configuration.

Step 2: Power On the FSM-2000F appliance

- 1. Make sure the FSM-2000F device is connected to a Power outlet and an Ethernet cable is connected to Port0.
- 2. Power On the FSM-2000F device.

FSM-2000F appliance does not have a default IP address. To connect to the GUI, an IP address must be configured using the GUI (Step 4).

Step 3: Verify System Information

- 1. Connect to the FSM-2000F appliance using VGA port or Console port.
- 2. Login as 'root' user with password ProspectHills. You will be required to change the password. Remember this password for future use. Once you change the password, you will be logged out. Login again with your new password.
- 3. Run get to check the available FortiSIEM commands.
- **4.** Use these commands to check the hardware information. After running each command, ensure that there are no errors in the displayed output.

Command	Description
get system status	Displays system name, version and serial number.
diagnose hardware info	Displays system hardware information like CPUs, Memory and RAID information.
diagnose interface detail port0	Displays interface status.

Step 4: Configure FortiSIEM via GUI

Follow these steps to configure FortiSIEM by using a simple GUI.

- 1. Log in as user root with the password you set in Step 3 above.
- 2. At the command prompt, go to /usr/local/bin and enter configFSM.sh, for example: # configFSM.sh
- 3. In the console, select 1 Set Timezone and then press Next.

4. Select your Region, and press Next.

5. Select your Country, and press Next.

6. Select the **Country** and **City** for your timezone, and press **Next**.

7. If installing Supervisor, select 1 Supervisor, and press Next.

If installing a Worker, select 2 Worker, and press Next.

If installing a Collector, select ${f 3}$ Collector, and press ${f Next}$.

If Installing FortiSIEM Supervisor Follower, select ${\bf 5}$ Supervisor Follower and press ${\bf Next}$.

Notes:

- The FortiSIEM Manager option is NOT valid for hardware appliances.
- The appliance type cannot be changed once it is deployed, so ensure you have selected the correct option.

Regardless of whether you select **Supervisor**, **Supervisor Follower**, or **Worker**, you will see the same series of screens with only the header changed to reflect your target installation, unless noted otherwise.

8. If you want to enable FIPS, then choose 2. Otherwise, choose 1. You have the option of enabling FIPS (option 3) or disabling FIPS (option 4) later. **Note**: After Installation, a 5th option to change your network configuration (5 **change_network_config**) is available. This allows you to change your network settings and/or host name.

```
Select Operation

install_without_fips
    install_with_fips
    install_with_fips
    a enable_fips
    disable_fips

< BACK > < Exit >
```

9. Determine whether your network supports IPv4-only, IPv6-only, or both IPv4 and IPv6 (Dual Stack). Choose **1** for IPv4-only, choose **2** for IPv6-only, or choose **3** for both IPv4 and IPv6.

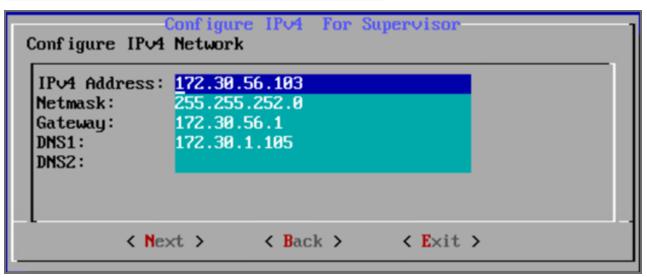

```
Select Operation

IPv4
2 IPv6
3 Both IPv4 and IPv6

Next > < BACK > < Exit >
```

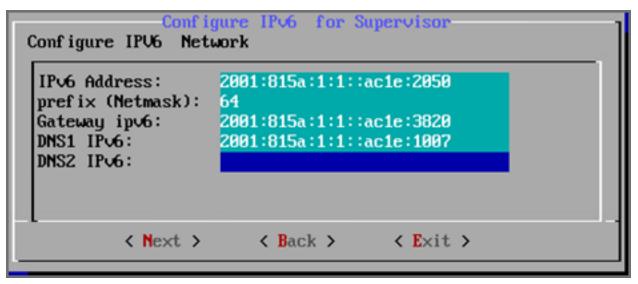

- **10.** If you choose **1** (IPv4) or choose **3** (Both IPv4 and IPv6), and press **Next**, then you will move to step 11. If you choose **2** (IPv6), and press **Next**, then skip to step 12.
- Configure the network by entering the following fields. Note the IP Address--you will need it in a later step. Press Next.

Option	Description
IPv4 Address	The Supervisor/Worker IPv4 address
NetMask	The Supervisor/Worker subnet
Gateway	Network gateway address
DNS1, DNS2	Addresses of the DNS servers

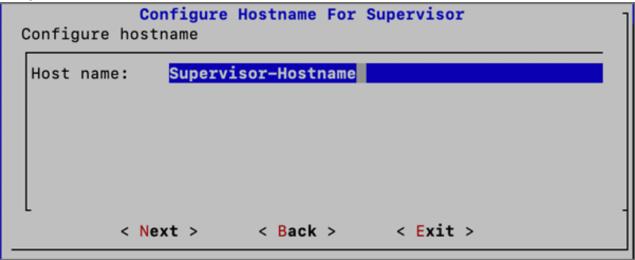

12. If you chose **1** in step 9, then you will need to skip to step 13. If you chose **2** or **3** in step 9, then you will configure the IPv6 network by entering the following fields, then press **Next**.

Option	Description
IPv6 Address	The Supervisor/Worker IPv6 address
prefix (Netmask)	The Supervisor/Worker IPv6 prefix
Gateway ipv6	IPv6 Network gateway address
DNS1 IPv6, DNS2 IPv6	Addresses of the IPv6 DNS server 1 and DNS server2

Note: If you chose option **3** in step 9 for both IPv4 and IPv6, then even if you configure 2 DNS servers for IPv4 and IPv6, the system will only use the first DNS server from IPv4 and the first DNS server from the IPv6 configuration. **Note**: In many dual stack networks, IPv4 DNS server(s) can resolve names to both IPv4 and IPv6. In such environments, if you do not have an IPv6 DNS server, then you can use public IPv6 DNS servers or use IPv4-mapped IPv6 address.

13. Configure Hostname for Supervisor/Worker. Press **Next**.

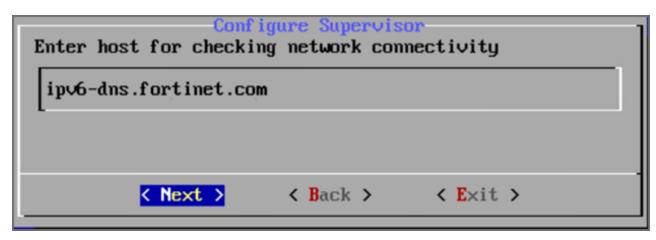

Note: FQDN is no longer needed.

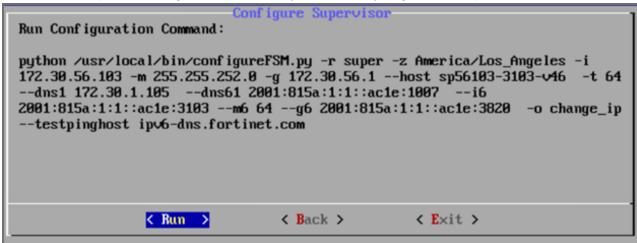

14. Test network connectivity by entering a host name that can be resolved by your DNS Server (entered in the previous step) and responds to ping. The host can either be an internal host or a public domain host like google.com. For the migration to complete, the system still needs https connectivity to FortiSIEM OS update servers: os-pkgs-cdn.fortisiem.fortinet.com and os-pkgs-c8.fortisiem.fortinet.com. Press Next.

Note: By default, "google.com" is shown for the connectivity test, but if configuring IPv6, you must enter an accessible internally approved IPv6 DNS server, for example: "ipv6-dns.fortinet.com"

Note: When configuring both IPv4 and IPv6, only testing connectivity for the IPv6 DNS is required because the IPv6 takes higher precedence. So update the host field with an approved IPv6 DNS server.

15. The final configuration confirmation is displayed. Verify that the parameters are correct. If they are not, then press **Back** to return to previous dialog boxes to correct any errors. If everything is OK, then press **Run**.

The options are described in the following table.

Option	Description
-r	The FortiSIEM component being configured
-Z	The time zone being configured
-i	IPv4-formatted address
-m	Address of the subnet mask
-g	Address of the gateway server used
host	Host name
-f	FQDN address: fully-qualified domain name
-t	The IP type. The values can be either 4 (for ipv4) or 6 (for v6) or 64 (for both ipv4 and ipv6).
dns1,dns2	Addresses of the DNS servers
i6	IPv6-formatted address

Option	Description
m6	IPv6 prefix
g6	IPv6 gateway
-0	Installation option (install_without_fips, install_with_fips, enable_fips, disable_fips, change_network_config*) *Option only available after installation.
-Z	Time zone. Possible values are US/Pacific , Asia/Shanghai , Europe/London , or Africa/Tunis
testpinghost	The host used to test connectivity

16. It will take some time to complete the FortiSIEM installation. If the installation is successful, then the appliance will reboot automatically. Otherwise, the appliance will stop at the failed task.

You can inspect the ansible.log file located at /usr/local/fresh-install/logs if you encounter any issues during FortiSIEM installation.

After installation completes, ensure that the phMonitor is up and running, for example:

phstatus

For the Supervisor, Supervisor Follower, Worker and Collector, the response should be similar to the following.

phParser	DOWN			
phQueryMaster	DOWN			
phRuleMaster	DOWN			
phRuleWorker	DOWN			
phQueryWorker	DOWN			
phDataManager	DOWN			
phDiscover	DOWN			
phReportWorker	DOWN			
phReportMaster	DOWN			
phIpIdentityWorker	DOWN			
phIpIdentityMaster	DOWN			
phAgentManager	DOWN			
phCheckpoint	DOWN			
phPerfMonitor	DOWN			
phDataPurger	DOWN			
phEventForwarder	DOWN			
phMonitor	32:18	0	1263m	568m
Apache	32:49	0	314m	17m
Rsyslogd	32:42	0	192m	4216k

Redis	32:21	0	204m	82m

Step 5: Generate FortiSIEM FSM-2000F License Key file from FortiCare

- 1. Obtain the Hardware Serial Number from FSM-2000F appliance from FortiCare Support Services.
- Follow FortiSIEM Licensing Guide here to generate the license key file remember to use 'Hardware Serial Number' for Hardware ID.

Step 6: Register FortiSIEM License

- 1. Note the IP Address assigned to FortiSIEM in Step 4.
- 2. Access FortiSIEM from browser (https://<FortiSIEM-IP>).
- **3.** Upload the license file obtained from Step 5 and select the **License Type** based on your deployment (note this choice can only be made once and is not reversible):

License Type

- · Enterprise for single organizations
- · Service Provider for multiple organizations
- 4. Click Upload to complete the license registration.

Step 7: Accessing FortiSIEM UI

- 1. Note the IP Address assigned to FortiSIEM in Step 5.
- 2. Access FortiSIEM from browser (https://<FortiSIEM-IP>). Please note that if you are logging into FortiSIEM with an IPv6 address, you should input https://[IPv6 address] on the browser tab.
- 3. Login to FortiSIEM using the default user name, password, and organization:
 - UserID: admin
 Password: admin*1
 - Cust/OrgID: super (if shown)

Step 8: Choose an Event Database

For a fresh installation, you will be taken to the Event Database Storage page.

Option	Description
EventDB on Local Disk	Select to use the inbuilt storage and FortiSIEM event database.
Event DB on NFS	For more details, see Configuring Storage. Using NFS will not utilize the hardware appliance storage.
ClickHouse	For more details, see Configuring Storage. Using ClickHouse will not utilize the hardware appliance storage.
Elasticsearch	For more details, see Configuring Storage. Using Elasticsearch will not utilize the hardware appliance storage.

Cluster Installation

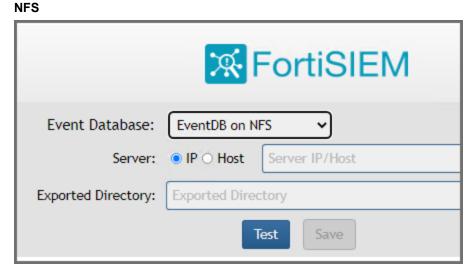

For larger installations, you can choose Worker nodes and external storage (NFS, ClickHouse, or Elasticsearch).

- · Installing the Supervisor
- Installing Workers
- · Registering Workers
- Installing Collectors
- Registering Collectors

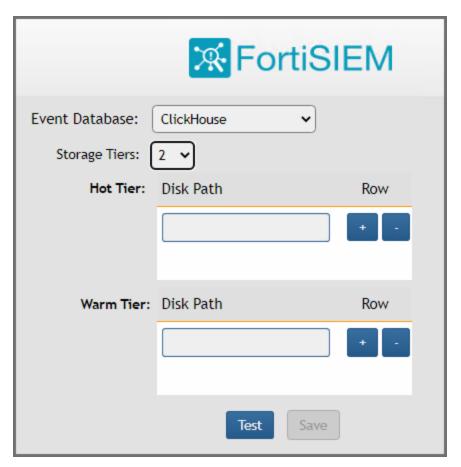

Installing the Supervisor

Follow the steps in All-in-one Installation with two differences:

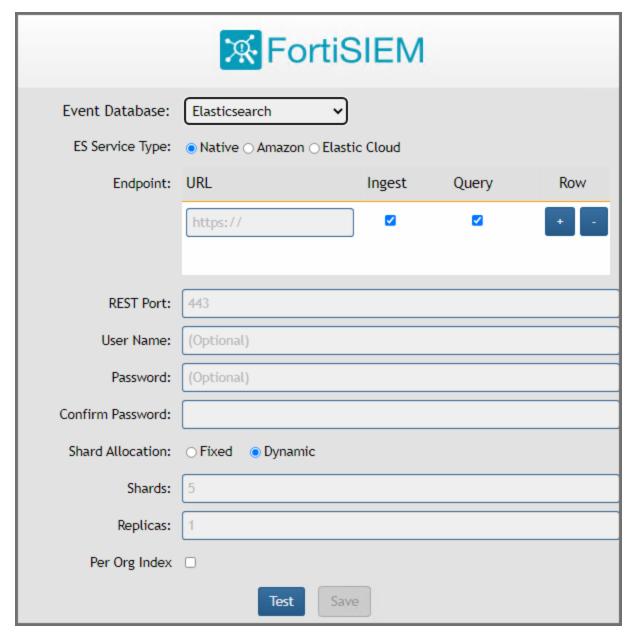

- Setting up hardware you do not need an event database.
- Setting up an Event database Configure the cluster for NFS, ClickHouse, or Elasticsearch.

ClickHouse

Elasticsearch

You must choose external storage listed in Step 8: Choose an Event Database.

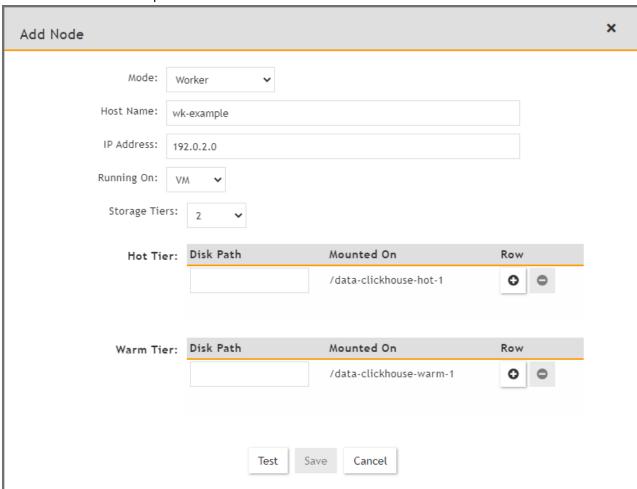

Installing Workers

Once the Supervisor is installed, follow the same steps in All-in-one Installation to install a Worker except that you choose **2 Worker** during Step 4: Configure FortiSIEM via GUI substep 7.

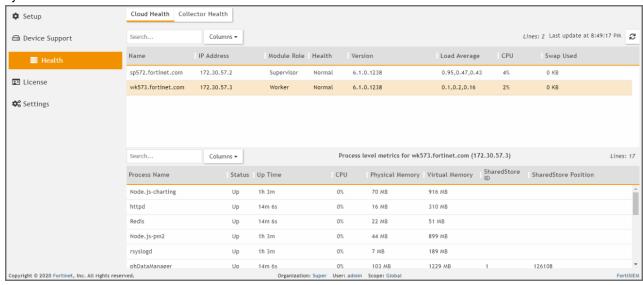

Registering Workers

Once the Worker is up and running, add the Worker to the Supervisor node.

- 1. Go to ADMIN > License > Nodes.
- 2. Select Worker from the drop-down list and enter the Worker's IP address and host name. Click Add.

3. See ADMIN > Health > Cloud Health to ensure that the Workers are up, healthy, and properly added to the system.

Installing Collectors

Once Supervisor and Workers are installed, follow the same steps in All-in-one Install to install a Collector except only choose OS and OPT disks. The recommended settings for Collector node are:

- CPU = 4
- Memory = 8GB
- · Two hard disks:
 - OS 25GB
 - OPT 100GB

For OPT - 100GB, the 100GB disk for /opt will consist of a single disk that will split into 2 partitions, /OPT and swap. The partitions will be created and managed by FortiSIEM when configFSM.sh runs.

Registering Collectors

Collectors can be deployed in Enterprise or Service Provider environments.

- Enterprise Deployments
- Service Provider Deployments

Enterprise Deployments

For Enterprise deployments, follow these steps.

- **1.** Log in to Supervisor with 'Admin' privileges.
- 2. Go to ADMIN > Settings > System > Cluster Config.
 - a. Enter the IP of the Worker node in the Event Upload Workers column. If a Supervisor node is only used, then enter the IP of the Supervisor node. Multiple IP addresses can be entered on separate lines. In this case, the Collectors will load balance the upload of events to the listed Event Workers.

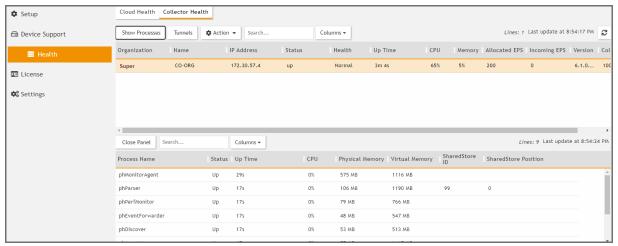

Note: Rather than using IP addresses, a DNS name is recommended. The reasoning is, should the IP addressing change, it becomes a matter of updating the DNS rather than modifying the Event Worker IP addresses in FortiSIEM.

- b. Click Save.
- c. In the **Supervisors** column, enter the IP of the Supervisor node and click **Save**.
- 3. Go to ADMIN > Setup > Collector and add a Collector by entering:
 - a. Name Collector Name
 - **b. Guaranteed EPS** this is the EPS that Collector will always be able to send. It could send more if there is excess EPS available.
 - c. Start Time and End Time set to Unlimited.
- 4. SSH to the Collector and run following script to register Collectors:

 - a. Set user and password using the admin user name and password for the Supervisor.
 - b. Set Super IP or Host as the Supervisor's IP address.
 - c. Set Organization. For Enterprise deployments, the default name is Super.
 - d. Set CollectorName from Step 2a.

The Collector will reboot during the Registration.

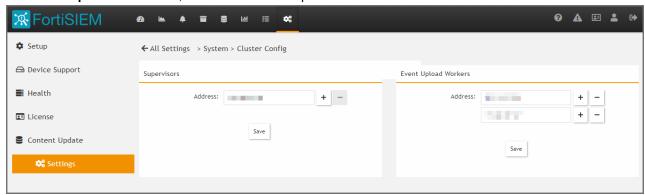

Service Provider Deployments

For Service Provider deployments, follow these steps.

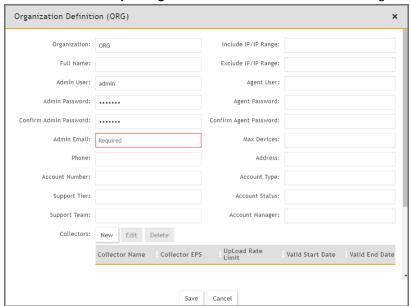

- 1. Log in to Supervisor with 'Admin' privileges.
- 2. Go to ADMIN > Settings > System > Cluster Config.
 - **a.** Enter the IP of the Worker node in the **Event Upload Workers** column. If a Supervisor node is only used, then enter the IP of the Supervisor node. Multiple IP addresses can be entered on separate lines. In this case, the Collectors will load balance the upload of events to the listed Event Workers.

Note: Rather than using IP addresses, a DNS name is recommended. The reasoning is, should the IP addressing change, it becomes a matter of updating the DNS rather than modifying the Event Worker IP addresses in FortiSIEM.

- b. Click Save.
- c. In the Supervisors column, enter the IP of the Supervisor node and click Save.

3. Go to ADMIN > Setup > Organizations and click New to add an Organization.

- 4. Enter the Organization Name, Admin User, Admin Password, and Admin Email.
- 5. Under Collectors, click New.
- Enter the Collector Name, Guaranteed EPS, Start Time, and End Time.
 The last two values could be set as Unlimited. Guaranteed EPS is the EPS that the Collector will always be able to

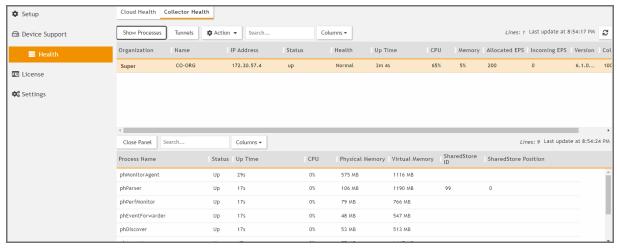

- 7. SSH to the Collector and run following script to register Collectors:

 - **a.** Set user and password using the admin user name and password for the Organization that the Collector is going to be registered to.
 - b. Set Super IP or Host as the Supervisor's IP address.
 - **c.** Set Organization as the name of an organization created on the Supervisor.
 - d. Set CollectorName from Step 6.

The Collector will reboot during the Registration.

Factory Reset

Follow the steps below to perform factory reset on FortiSIEM FSM-2000F.

- Step 1: Uninstall FortiSIEM Application
- · Step 2: Reinstall FortiSIEM Application

Step 1: Uninstall FortiSIEM Application

- 1. Connect FortiSIEM device using VGA or Console port.
- 2. Login as root user with the new password you set in Step 3: Verify System Information.
- 3. To check the available FortiSIEM commands, run sudo get.
- **4.** To uninstall FortiSIEM, run sudo execute fsm-clean. This script will uninstall FortiSIEM application.
- 5. Reboot the system.

Step 2: Reinstall FortiSIEM Application

- 1. Login as root with password ProspectHills. You will immediately be asked to change your password.
- 2. To configure RAID, run execute format disk.
- **3.** To check Hardware status and RAID information, run diagnose hardware info.
- **4.** To install FortiSIEM, run execute factoryreset --force. The command fails after partial steps. Run the same command again to complete factory reset.

 This script takes a few minutes to complete FortiSIEM installation.
- **5.** Reboot and run /user/local/bin/configFSM.sh to install FortiSIEM.

Follow the steps under Appliance Setup to configure FSM-2000F.
