Change Log

Date	Change Description
2016-01-19	Updated for version 5.2.5

Introduction

This document provides information about the various types of FortiAnalyzer datasets which are created based on the FortiGate log SQL tables and messages. These datasets are used to create charts and reports.

It describes the procedure for creating custom datasets, and also lists the types of log tables used to assist in writing SQL queries to create the datasets.

Overview

FortiAnalyzer uses the PostgreSQL and remote MySQL databases to store the log data generated by the FortiGate.

To create a chart based on the FortiGate logs in a local or remote database, you can use either the predefined datasets, or create your own custom datasets by querying the logs in the SQL database in FortiAnalyzer.

Understanding Datasets and Macros 7

Understanding Datasets and Macros

FortiAnalyzer datasets are collections of log messages from monitored devices.

If the FortiAnalyzer unit is not receiving data from a device, or logging is not enabled under *System > Config > SQL Database*, it does not create log tables for that device.

Charts in FortiAnalyzer are generated based on the datasets. To create a chart, you can use either the predefined datasets, or create your own custom datasets by querying the log messages in the SQL database on the FortiAnalyzer unit. Both predefined and custom datasets can be cloned, but only custom datasets can be deleted. You can also view the SQL query for a dataset, and test the query against specific devices or log arrays.

You can create custom reports that contain macros created based on predefined and custom datasets. Macros are used to dynamically display the device log data as text in a report. They can be embedded within a text field of a paragraph in a report layout in XML format. Macros display a single value, such as a user name, highest session count, or highest bandwidth etc.

To view and configure datasets, go to **Reports > Advanced > Dataset** in the left navigation pane of the web-based manager. For more information, refer to the *Dataset* section in the FortiAnalyzer *Administration Guide*.

To view and configure macros, go to **Reports > Macro Library** in the left navigation pane of the web-based manager. For more information, refer to the *Macro Library* section in the FortiAnalyzer *Administration Guide*.

NOTE: FortiAnalyzer v5.0 Patch Release 5 introduced new datasets for SIP and SCCP. FortiAnalyzer v5.0 Patch Release 6 introduced new datasets for Botnet (Botnet-Activity-By-Sources, Botnet-Infected-Hosts, Botnet-Sources, Botnet-Timeline, and Detected-Botnet).

Creating Custom Datasets

This section describes the procedure to create datasets in the FortiAnalyzer web-based manager.

To create a custom dataset in the web-based manager

1. Go to **Reports > Advanced > Dataset**.
2. Click **Create New**.
3. Configure the following, then click **OK**.

The following table describes the GUI fields of the **New Dataset** dialog box.

Field	Description
Name	Name of the data set.
Log Type	Log Type to be used for the data set. \$log is used in the SQL query to represent the log type you select, and it is run against all tables of this type.
Devices	Select All Devices to create datasets on all of FortiAnalyzer managed devices or select Specify to choose a device on which you want to create the dataset.

Field	Description
Query	Enter the SQL query syntax to retrieve the log data you want from the SQL database.
Time Period	Select to use logs from a time frame. Select Other to define a custom time frame by selecting the Start Time and End Time . \$filter is used in the SQL query "where" clause to limit the results to the period you select.
Test	Click to test whether or not the SQL query is successful.

Testing SQL Query

You can verify the SQL query that you used to create the custom dataset before saving the dataset configuration by testing and viewing the query results.

To test a SQL query:

1. Click **Test** after entering the SQL query in the **New Dataset** dialog box.

The query results are displayed. If the query is not successful, an error message appears in the results pane.

Examples of SQL Query Errors

Here are some example error messages and possible causes:

Syntax Errors

You have an error in your SQL syntax (remote/MySQL) or **ERROR: syntax error at or near...** (local/PostgreSQL)

- Check that SQL keywords are spelled correctly, and that the query is well-formed.
- Table and column names are demarked by grave accent (`) characters. Single (') and double (") quotation marks will cause an error.

No data is covered.

- The query is correctly formed, but no data has been logged for the log type. Check that you have configured the FortiAnalyzer unit to save that log type. Under **System >**

Config > SQL Database, ensure that the log type is checked.

Connection Errors

If well formed queries do not produce results, and logging is turned on for the log type, there may be a database configuration problem with the remote database.

Ensure that:

- MySQL is running and using the default port3306.
- You have created an empty database and a user with create permissions for the database.

Here is an example of creating a new MySQL database named fazlogs, and adding a user for the database:

```
#Mysql -u root -p
mysql> Create database fazlogs;
mysql> Grant all privileges on fazlogs.* to 'fazlogger'@'*'
identified by 'fazpassword';
mysql> Grant all privileges on fazlogs.* to
'fazlogger'@'localhost' identified by 'fazpassword';
```

For more information about using SQL queries for creating datasets, refer to the

FortiAnalyzer™ and FortiGate™ Version 4.0 MR2 SQL Log Database Query Technical Note on the Fortinet Documentation Library at docs.fortinet.com.

Examples of Custom Datasets

The following examples illustrate how to create custom datasets using the web-based manager GUI. Once created, you can use the datasets to configure chart templates under **Reports > Chart Library**.

New Chart

Name

Description

Dataset

Graph Type

Resolve Hostname

Data Bindings

Only Show First Items

Data Type raw ranked [+ Add Column](#)

Column 1	Column 2
Header <input type="text" value="appcat"/>	Header <input type="text" value="bandwidth"/>
Data Binding <input type="text" value="appcat"/>	Data Binding <input type="text" value="bandwidth"/>
Display <input type="text" value="Text"/>	Display <input type="text" value="Text"/>
Merge Columns <input type="text" value="1"/>	Merge Columns <input type="text" value="1"/>

Example 1: Distribution of applications by type in the last 24 hours

GUI Procedure

1. Go to **Reports > Advanced > Dataset**.
2. Click **Create New**.
3. Select **Application Control** under **Log Type**.
4. Enter a name, such as "**apps_type_24hrs**".
5. Select **Last N Hours** under **Time Period**.
6. Enter the query:

```

SELECT app_type, COUNT( * ) AS totalnum
FROM $log
WHERE $filter
AND app_type IS NOT NULL
GROUP BY app_type
ORDER BY totalnum DESC

```

Notes:

- \$filter restricts the query result to the time period specified; in this case, it's the past 24 hours.
- \$log queries all application control logs
- The application control module classifies each firewall session in app_type. One firewall session may be classified to multiple app_types. For example, an HTTPsession can be classified to: HTTP, Facebook, etc.
- Some app/app_types may not be able to detected, then the 'app_type' field may be null or 'N/A'. These will be ignored by this query.

The result is ordered by the total session number of the same app_type. The most frequent app_types will appear first.

Example 2: Top 100 applications by bandwidth in the last 24 hours

1. GUI Procedure
2. Go to **Reports > Advanced > Dataset**.
3. Click **Create New**.
4. Select **Application Control** under **Log Type**.
5. Enter a name, such as "**top_100_aps_24hrs**".
6. Select **Last N Hours** under **Time Period**.
7. Enter the query:

```
SELECT (
  TIMESTAMP - TIMESTAMP %3600
) AS hourstamp, app, service, SUM( sent + rcvd ) AS volume
FROM $log
WHERE $filter and app IS NOT NULL
GROUP BY app
ORDER BY volume DESC
LIMIT 100
```

NOTE:

- (timestamp-timestamp%3600) as hourstamp - this calculates an "hourstamp" to indicate bandwidth per hour.
- SUM(sent + rcvd) AS volume - this calculates the total sent and received bytes.
- ORDER BY volume DESC - this orders the results by descending volume (largest volume first).
- LIMIT 100 - this lists only the top 100 applications.

Log Database Tables

The FortiAnalyzer and FortiGate units create SQL database tables to record log data. These tables are generated for high log rate and low log rate devices.

The naming convention for the log SQL tables is:

High log rate:

```
<devtype>]-ADOM[<admon_oid><log-type>-timestamp]
```

and

Low log rate:

```
<devtype>ADOM<adom_oid>-ALLELSE-<log-type>--<timestamp>--<delta-timestamp>
```

where the device type can be any one of the following:

Example:

```
FGTADOM141-tlog-0, FGTADOM141-ALLELSE-tlog-0-0
```

```
<devtype> : "FGT/FMG/FML/FCT/FWB/FCH/FAZ/SYS/..."
{"FGT", "FortiGate"},
{"FMG", "FortiManager"},
{"SYS", "Syslog"},
{"FCT", "FortiClient"},
{"FML", "FortiMail"},
{"FWB", "FortiWeb"},
{"FCH", "FortiCache"},
{"FAZ", "FortiAnalyzer"},
{"FSA", "FortiSandbox"},
```

Log Type	SQL Table Type	Description
Traffic	tlog	The traffic log records all traffic to and through the FortiGate interface.
Event	elog	The event log records management and activity events. For example, when an administrator logs in or logs out of the web-based manager.

Log Type	SQL Table Type	Description
Antivirus	vlog	The antivirus log records virus incidents in Web, FTP, and email traffic.
Webfilter	wlog	The web filter log records HTTP FortiGate log rating errors including web content blocking actions that the FortiGate unit performs.
Attack	attack_log	The attack log records attacks that are detected and prevented by the FortiGate unit.
Data Leak Prevention	dlog	The Data Leak Prevention log records log data that is considered sensitive and that should not be made public. This log also records data that a company does not want entering their network.
Application Control	rlog	The application control log records data detected by the FortiGate unit and the action taken against the network traffic depending on the application that is generating the traffic, for example, instant messaging software, such as MSN Messenger.
Spamfilter	spamfilter_log	The spam filter log records blocking of email address patterns and content in SMTP, IMAP, and POP3 traffic.
Content	clog	The content log records all network content that is transmitted through the network.
Netscan	nlog	The netscan log records data related to network security and scan.
Sniffer	xlog	The sniffer log records each packet raw data for traffic bottlenecks.
VOIP	plog	The VOIP log records detailed protocol specific logs for VOIP traffic.

To view all the tables created in a database, use the following commands:

- local (PostgreSQL) database: `SELECT * FROM pg_tables`
- remote (MySQL): `SHOW TABLES`

FortiAnalyzer and FortiGate logs also include log sub-types, which are types of log messages that are within the main log type. For example, in the event log type there are the subtype admin log messages.

For more information on FortiGate Log Types and Messages, refer to the FortiOS/FortiGate *Log Message Reference Guide* on the Fortinet Documentation Library at: docs.fortinet.com.

Log Type	Sub Type
traffic (Traffic Log)	<ul style="list-style-type: none"> • allowed – Policy allowed traffic • violation - Policy violation traffic • other
event (Event Log)	<p>For FortiGate devices:</p> <ul style="list-style-type: none"> • system – System activity event • ipsec – IPSec negotiation event • dhcp – DHCP service event • ppp – L2TP/PPTP/PPPoE service event • admin – admin event • ha – HA activity event • auth – Firewall authentication event • pattern – Pattern update event • alertemail – Alert email notifications • chassis – FortiGate-4000 and FortiGate-5000 series chassis event • sslvpn-user – SSL VPN user event • sslvpn-admin – SSL VPN administration event • sslvpn-session – SSL VPN session event • his-performance – performance statistics • vipssl – VIP SSL events • ldb-monitor – LDB monitor events
dlp (Data Leak Prevention)	<ul style="list-style-type: none"> • dlp – Data Leak Prevention
app-crtl (Application Control Log)	<ul style="list-style-type: none"> • app-crtl-all – All application control
virus (Antivirus Log)	<ul style="list-style-type: none"> • infected – Virus infected • filename – Filename blocked • oversize – File oversized
webfilter (Web Filter Log)	<ul style="list-style-type: none"> • content – content block • urlfilter – URL filter • FortiGuard block • FortiGuard allowed • FortiGuard error • ActiveX script filter • Cookie script filter • Applet script filter
ips (Attack Log)	<ul style="list-style-type: none"> • signature – Attack signature • anomaly – Attack anomaly

Log Type	Sub Type
email filter (Spam Filter Log)	<ul style="list-style-type: none">• SMTP• POP3• IMAP

Dataset Reference List

The following table lists the available predefined data sets reported by FortiAnalyzer. For documentation and technical support reference purposes, this table contains the dataset names, SQL query syntax for each dataset, and the log category of the dataset.

Dataset Name	Description	Log Category
Traffic-Bandwidth-Summary-Day-Of-Month	Traffic bandwidth timeline	traffic

Macro Reference List

The following table lists the available predefined macros that can be used in a report layout to display the log data as text (XML format) dynamically.

Macro Name	Description	Dataset Used	Log Category
Application Category with Highest Session Count	Application category with the highest session count	App-Sessions-By-Category	Traffic
Application with Highest Bandwidth	Application with the highest bandwidth usage	Top-App-By-Bandwidth	Traffic
Application with Highest Session Count	Applications with the highest session count	Top-App-By-Sessions	Traffic
Attack with Highest Session Count	Attack with highest session count	Utm-Top-Attack-Source	Attack
Botnet with Highest Session Count	Botnet with the highest session count	Detected-Botnet	Traffic
Destination with Highest Bandwidth	Destination with the highest bandwidth usage	Top-Destinations-By-Bandwidth	Traffic
Destination with Highest Session Count	Destination with the highest session count	Top-Destinations-By-Sessions	Traffic
Highest Bandwidth Consumed (Application) Category	Highest bandwidth consumed by application category	App-Risk-App-Usage-By-Category	Traffic
Highest Bandwidth Consumed (Application)	Highest bandwidth consumed by application	Top-App-By-Bandwidth	Traffic
Highest Bandwidth Consumed (Destination)	Highest bandwidth consumed by destination	Top-Destinations-By-Bandwidth	Traffic
Highest Bandwidth Consumed (P2P Application)	Highest bandwidth consumed by P2P application	Top-P2P-App-By-Bandwidth	Traffic
Highest Bandwidth Consumed (Source)	Highest bandwidth consumed by source	Top-Users-By-Bandwidth	Traffic
Highest Bandwidth Consumed () Web Category)	Highest bandwidth consumed by website category	Top-Web-Category-by-Bandwidth	Web Filter
Highest Bandwidth Consumed (Website)	Highest bandwidth consumed by website	Top-Web-Sites-by-Bandwidth	Web Filter

Macro Name	Description	Dataset Used	Log Category
Highest Risk Application with Highest Bandwidth	Highest risk application with the highest bandwidth usage	High-Risk-Application-By-Bandwidth	Traffic
Highest Risk Application with Highest Session Count	Highest risk application with the highest session count	High-Risk-Application-By-Sessions	Traffic
Highest Session Count by Application Category	Highest session count by application category	App-Sessions-By-Category	Traffic
Highest Session Count by Application	Highest session count by application	Top-App-By-Sessions	Traffic
Highest Session Count by Attack	Highest session count by attack	Utm-Top-Attack-Source	Attack
Highest Session Count by Botnet	Highest session count by botnet	Detected-Botnet	Traffic
Highest Session Count by Destination	Highest session count by destination	Top-Destinations-By-Sessions	Traffic
Highest Session Count by Highest Severity Attack	Highest session count by highest severity attack	Threat-Attacks-By-Severity	Attack
Highest Session Count by P2P Application	Highest session count by P2P application	Top-P2P-App-By-Sessions	Traffic
Highest Session Count by Source	Highest session count by source	Top-User-Source-By-Sessions	Traffic
Highest Session Count by Virus	Highest session count by virus	Utm-Top-Virus	Traffic
Highest Session Count by Web Category	Highest session count by website category	Top-Web-Category-by-Sessions	Web Filter
Highest Session Count by Website	Highest session count by website	Top-Web-Sites-by-Sessions	Web Filter
Highest Severity Attack with Highest Session Count	Highest severity attack with the highest session count	Threat-Attacks-By-Severity	Attack
P2P Application with Highest Bandwidth	P2P applications with the highest bandwidth usage	Top-P2P-App-By-Bandwidth	Traffic
P2P Application with Highest Session Count	P2P applications with the highest session count	Top-P2P-App-By-Sessions	Traffic
Source with Highest Bandwidth	Source with the highest bandwidth usage	Top-Users-By-Bandwidth	Traffic

Macro Name	Description	Dataset Used	Log Category
Source with Highest Session Count	Source with the highest session count	Top-User-Source-By-Sessions	Traffic
Total Number of Attacks	Total number of attacks detected	Total-Attack-Source	Attack
Total Number of Botnet Events	Total number of botnet events	Total-Number-of-Botnet-Events	Traffic
Total Number of Viruses	Total number of viruses detected	Total-Number-of-Viruses	Traffic
User Details	User details of traffic	Traffic-User-Detail	Traffic
Virus with Highest Session Count	Virus with the highest session count	Utm-Top-Virus	Traffic
Web Category with Highest Bandwidth	Web filtering category with the highest bandwidth usage	Top-Web-Category-by-Bandwidth	Web Filter
Web Category with Highest Session Count	Web filtering category with the highest session count	Top-Web-Category-by-Sessions	Web Filter
Website with Highest Bandwidth	Website with the highest bandwidth usage	Top-Web-Sites-by-Bandwidth	Web Filter
Website with Highest Session Count	Website with the highest session count	Top-Web-Sites-by-Sessions	Web Filter
