# Change Log

Date	Change Description
03/22/2021	Initial version of the 6.2.0 Upgrade Guide.
03/29/2021	Added Upgrade via Proxy and Post Upgrade Health Check.
03/31/2021	Added Reference section with additional DNS information.
04/05/2021	Updated Pre-Upgrade Checklist.
04/22/2021	Added Upgrade and Migrate Log sections.
05/06/2021	Initial version of the 6.2.1 Upgrade Guide.
05/12/2021	Updated Upgrade via Proxy section.
05/17/2021	Updated existing heading, added Sizing Guide link, removed DNS check for 6.2.1 Upgrade Guide.
05/19/2021	Added "Fix After Upgrading 2000F or 3500F From 5.3.x or 5.4.0 to 6.1.2" section for 6.2.x Upgrade Guides.
05/21/2021	Update to "After Upgrading 2000F or 3500F From 5.3.x or 5.4.0 to 6.1.2" section for 6.2.x Upgrade Guides.
05/24/2021	Update to "Upgrade Collectors" sections for 6.2.x Upgrade Guides.
06/03/2021	Known Issue after 6.2.1 Upgrade added to 6.2.1 Upgrade Guide.
06/07/2021	Update to "Upgrade Collectors" sections for 6.2.1 Upgrade Guide.
07/08/2021	Initial version of the 6.3.0 Upgrade Guide.
07/21/2021	Updated Pre-Upgrade Checklist section.
07/22/2021	Updated Upgrade via Proxy section.
07/30/2021	Updated Upgrade 6.x Deployment section.
08/26/2021	Initial version of the 6.3.1 Upgrade Guide.
10/15/2021	Initial version of the 6.3.2 Upgrade Guide.
12/01/2021	Updated Pre-Upgrade Checklist section.
12/22/2021	Initial version of the 6.3.3 Upgrade Guide.
09/15/2022	Updated Upgrade Supervisor and Upgrade Workers sections.

# Upgrade Paths

Please follow the proceeding upgrade paths to upgrade existing FortiSIEM installs to the latest 6.3.0 release.

## Upgrade for VM Installs

Starting release

# Upgrade for 3500G, 3500F, 2000F, 500F

Starting release

# Important Notes

## Pre-Upgrade Checklist

To perform an upgrade, the following prerequisites must be met.

1. Carefully consider the known issues, if any, in the Release Notes.
2. Make sure the Supervisor processes are all up.
3. Make sure you can login to the FortiSIEM GUI and successfully discover your devices.
4. Take a snapshot of the running FortiSIEM instance.
5. If you running FortiSIEM versions 6.2.0 or earlier and using Elasticsearch, then navigate to **ADMIN > Setup > Storage > Online >** and perform a **Test** and **Save** after the upgrade. This step is not required while upgrading from versions 6.2.1 or later.
6. Make sure the FortiSIEM license is not expired.
7. Make sure the Supervisor, Workers and Collectors can connect to the Internet on port 443 to the CentOS OS repositories (`os-pkgs-cdn.fortisiem.fortinet.com` and `os-pkgs.fortisiem.fortinet.com`) hosted by Fortinet, to get the latest OS packages. Connectivity can be either directly or via a proxy. For proxy based upgrades, see [Upgrade via Proxy](#). If Internet connectivity is not available, then follow the [Offline Upgrade Guide](#).

## 6.2.0 to 6.3.0 Upgrade Notes

This note applies only if you are upgrading from 6.2.0.

Before upgrading Collectors to 6.3.0, you will need to copy the `phcollectorimageinstaller.py` file from the Supervisor to the Collectors. See steps 1-3 in [Upgrade Collectors](#).

## 6.1.x to 6.3.0 Upgrade Notes

These notes apply only if you are upgrading from 6.1.x to 6.3.0.

1. The 6.3.0 upgrade will attempt to migrate existing SVN files (stored in `/svn`) from the old svn format to the new svn-lite format. During this process, it will first export `/svn` to `/opt` and then import them back to `/svn` in the new svn-lite format. If your `/svn` uses a large amount of disk space, and `/opt` does not have enough disk space left, then migration will fail. Fortinet recommends doing the following steps before upgrading:
  - Check `/svn` usage
  - Check if there is enough disk space left in `/opt` to accommodate `/svn`
  - Expand `/opt` by the size of `/svn`
  - Begin upgradeSee [Steps for Expanding /opt Disk](#) for more information.
2. If you are using AWS Elasticsearch, then after upgrading to 6.3.0, take the following steps:

- a. Go to **ADMIN > Setup > Storage > Online**.
- b. Select "ES-type" and re-enter the credential.

## General Upgrade Notes

These notes apply to all upgrades in general.

1. For the Supervisor and Worker, do not use the upgrade menu item in configFSM.sh to upgrade from 6.2.0 to 6.3.0. This is deprecated, so it will not work. Use the new method as instructed in this guide (See **Upgrade Supervisor** for the appropriate deployment under [Upgrade Single Node Deployment](#) or [Upgrade Cluster Deployment](#)).
2. In 6.1.x releases, new 5.x collectors could not register to the Supervisor. This restriction has been removed in 6.2.x so long as the Supervisor is running in non-FIPS mode. However, 5.x collectors are not recommended since CentOS 6 has been declared End of Life.
3. If you have more than 5 Workers, Fortinet recommends using at least 16 vCPU for the Supervisor and to increase the number of notification threads for RuleMaster (See the sizing guide for more information). To do this, SSH to the Supervisor and take the following steps:
  - a. Modify the `phoenix_config.txt` file, located at `/opt/phoenix/config/` with
 

```
#notification will open threads to accept connections
#FSM upgrade preserves customer changes to the parameter value notification_
server_thread_num=50
```

**Note:** The default `notification_server_thread_num` is 20.
  - b. Restart `phRuleMaster` using the following commands:
 

```
#phtools --stop phRuleMaster
#phtools --start phRuleMaster
```
4. Remember to remove the browser cache after logging on to the 6.3.0 GUI and before doing any operations.
5. Make sure to follow the listed upgrade order.
  - a. Upgrade the Supervisor first. It must be upgraded prior to upgrading any Workers or Collectors.
  - b. Upgrade all existing Workers next, after upgrading the Supervisor. The Supervisor and Workers must be on the same version.
  - c. Older Collectors will work with the upgraded Supervisor and Workers. You can decide to upgrade Collectors to get the full feature set in 6.3.0 after you have upgraded all Workers.
6. If you are running FortiSIEM versions 6.2.0 or earlier and using Elasticsearch, then you must redo your Elasticsearch configuration after your upgrade by taking the following steps:
  - a. Navigate to **ADMIN > Setup > Storage > Online**.
  - b. Redo your configuration.
  - c. Click **Test** to verify.
  - d. Click **Save**.

**Note:** These steps (6a-d) are not required while upgrading from versions 6.2.1 or later.

## Upgrade Pre-5.3.0 Deployment

# Upgrade for 3500G, 3500F, 2000F, 500F

Starting release

If you are running FortiSIEM that is pre-5.3.0, take the following steps:

1. Upgrade to 5.4.0 by using the 5.4.0 Upgrade Guide: [Single Node Deployment](#) / [Cluster Deployment](#).
2. Perform a health check to make sure the system has upgraded to 5.4.0 successfully.
3. If you are running a Software Virtual Appliance, you must migrate to 6.1.1. Since the base OS changed from CentOS 6 to CentOS 8, the steps are platform specific. Use the appropriate 6.1.1 guide and follow the migration instructions.
  - [AWS Installation and Migration Guide](#)
  - [ESX Installation and Migration Guide](#)
  - [KVM Installation and Migration Guide](#)
  - [HyperV Installation and Migration Guide](#)
  - [Azure Installation and Migration Guide](#)

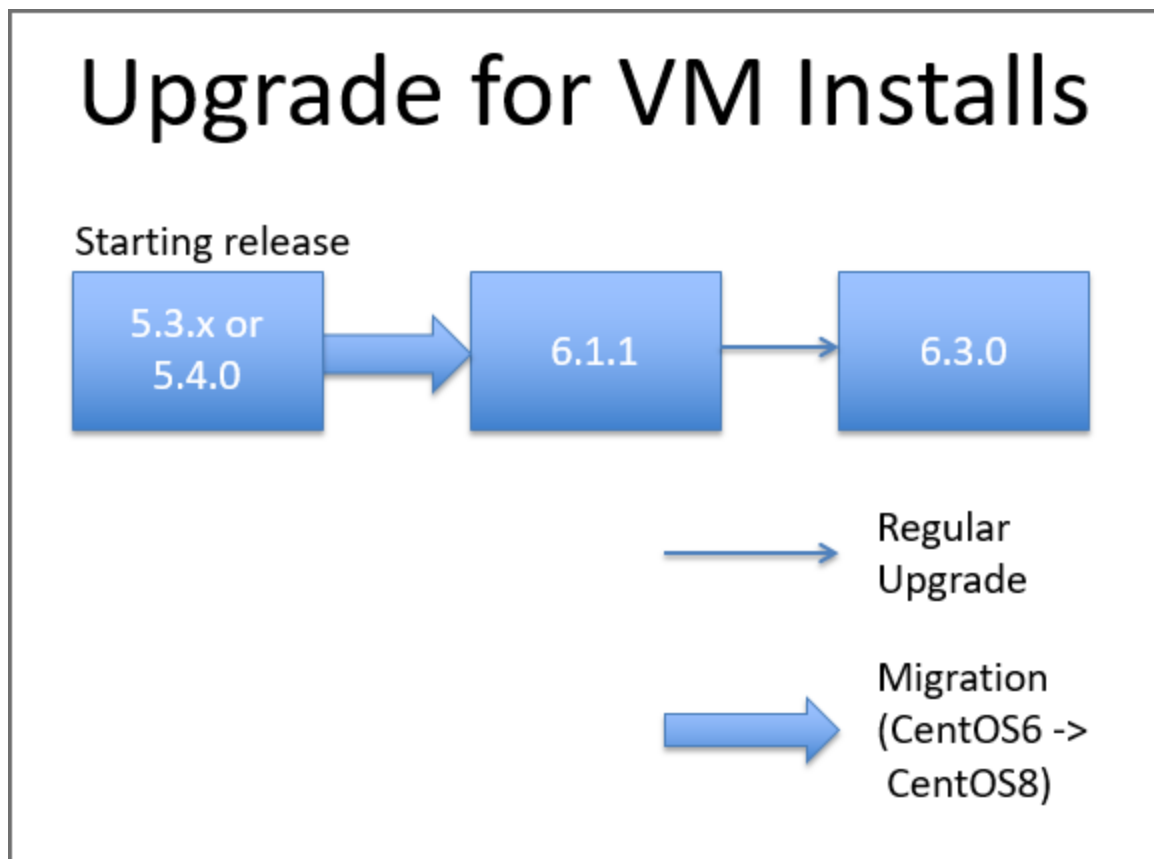

If you are running a hardware appliance (3500G, 3500F, 2000F, 500F), you must migrate to 6.1.2. Since the base OS changed from CentOS 6 to CentOS 8, the steps are platform specific. Follow the "Migrating from 5.3.x or 5.4.x to 6.1.2" instructions from the appropriate appliance specific documents listed here.

**Note:** If you are upgrading from a 2000F, 3500F, or 3500G appliance, make sure to follow the instructions at [Fix After Upgrading 2000F, 3500F, or 3500G From 5.3.x or 5.4.0 to 6.1.2](#) after migrating to 6.1.2.

- [3500G Hardware Configuration Guide](#)
- [3500F Hardware Configuration Guide](#)
- [2000F Hardware Configuration Guide](#)
- [500F Hardware Configuration Guide](#)

4. Perform a health check to make sure the system is upgraded to 6.1.1 or 6.1.2 successfully.
5. Upgrade to 6.3.x by following the steps in [Upgrading From 6.x](#).

## Upgrade 5.3.x or 5.4.0 Deployment

# Upgrade for 3500G, 3500F, 2000F, 500F

Starting release

→ Regular Upgrade

→ Migration (CentOS6 -> CentOS8)

Start at [step 3](#) from [Upgrade Pre-5.3.0 Deployment](#), and follow the progressive steps.

**Note:** If you are upgrading from a 2000F, 3500F, 3500G appliance, make sure to follow the instructions at [Fix After Upgrading 2000F, 3500F, or 3500G From 5.3.x or 5.4.0 to 6.1.2](#) after migrating to 6.1.2.

# Upgrade 6.x Deployment

**Note:** Prior to the 6.x Deployment 6.3.0 upgrade, ensure that the Supervisor, and all Workers are running on 6.x versions.

If a proxy is needed for the FortiSIEM Supervisor, Worker or Hardware appliances (FSM-2000F, 3500F, and 3500G) to access the Internet, please refer to [Upgrade via Proxy](#) before starting.

After completion of the upgrade, follow the appropriate steps in [Post Upgrade Health Check](#).

Follow the steps for your appropriate FortiSIEM setup for [single node deployment](#) or [cluster deployment](#).

- [Upgrade Single Node Deployment](#)
- [Upgrade Cluster Deployment](#)

# Upgrade 6.x Single Node Deployment

Upgrading a single node deployment requires upgrading the Supervisor. If you have any Collectors, the Supervisor is a required upgrade before the Collectors.

- [Upgrade Supervisor](#)
- [Upgrade Collectors](#)

## Upgrade Supervisor

To upgrade the Supervisor, take the following steps.

1. Make sure Workers are shut down. Collectors can remain up and running.
2. Login to the Supervisor via SSH as the root user directly, or SSH as admin user and then sudo to root.  
For example:  

```
ssh root@<IP of Supervisor>
or
ssh admin@<IP of Supervisor>
sudo su -
```
3. Create the path /opt/upgrade.  

```
mkdir -p /opt/upgrade
```
4. Download the upgrade zip package `FSM_Upgrade_All_6.3.0_build0331.zip`, then upload it to the Supervisor node under the /opt/upgrade/ folder.  
Example (From Linux CLI):  

```
scp FSM_Upgrade_All_6.3.0_build0331.zip root@10.10.10.15:/opt/upgrade/
```
5. Go to /opt/upgrade.  

```
cd /opt/upgrade
```
6. Unzip the upgrade zip package.  

```
unzip FSM_Upgrade_All_6.3.0_build0331.zip
```
7. Go to the `FSM_Upgrade_All_6.3.0_build0331` directory.  

```
cd FSM_Upgrade_All_6.3.0_build0331
```

  - a. Run a screen.  

```
screen -S upgrade
```

**Note:** This is intended for situations where network connectivity is less than favorable. If there is any connection loss, log back into the SSH console and return to the virtual screen by using the following command.  

```
screen -r
```
8. Start the upgrade process by entering the following.  

```
sh upgrade.sh
```
9. After the process is completed, perform a basic health check. All processes should be up and running.  

```
phstatus
```

Example output:

```
System uptime: 13:31:19 up 1 day, 2:44, 1 user, load average: 0.95, 1.00, 1.20
Tasks: 29 total, 0 running, 29 sleeping, 0 stopped, 0 zombie
Cpu(s): 8 cores, 15.4%us, 0.5%sy, 0.0%ni, 83.6%id, 0.0%wa, 0.4%hi, 0.1%si, 0.0%st
```

Mem: 24468880k total, 12074704k used, 10214416k free, 5248k buffers  
 Swap: 26058744k total, 0k used, 26058744k free, 2931812k cached

## Upgrade Collectors

To upgrade Collectors, take the following steps.

### Extra Upgrade Steps from 6.2.0 to 6.3.0

From version 6.2.0 to 6.3.0, take the following steps before initiating the upgrade. Otherwise, go to [Main Upgrade Steps](#).

1. Login to the Collector via SSH as root.
2. Copy `/opt/phoenix/phscripts/bin/phcollectorimageinstaller.py` from the Supervisor by running the following command. (**Note:** This is copied from the 6.2.1 or 6.3.0 Supervisor.)

```
scp root@<SupervisorIP>:/opt/phoenix/phscripts/bin/phcollectorimageinstaller.py
/opt/phoenix/phscripts/bin/
```

3. Change permission by running the following command.

```
chmod 755 /opt/phoenix/phscripts/bin/phcollectorimageinstaller.py
```

## Main Upgrade Steps

1. Login to the Supervisor via SSH as root.
2. Prepare the Collector upgrade image by running the following command on the Supervisor.

```
phSetupCollectorUpgrade.sh /opt/upgrade/FSM_Upgrade_All_6.3.0_build0331.zip  
<SupervisorFQDN>
```

**Note:** Replace <SupervisorFQDN> with the fully qualified domain name of the Supervisor.

Example:

```
# phSetupCollectorUpgrade.sh /opt/upgrade/FSM_Upgrade_All_6.3.0_build0331.zip  
supervisor.fortinet.com
```

or

```
# phSetupCollectorUpgrade.sh /opt/upgrade/FSM_Upgrade_All_6.3.0_build0331.zip  
10.10.10.15
```

3. Login to the FortiSIEM Supervisor GUI and navigate to **ADMIN > Health > Collector Health**.
4. Select a Collector.
  - a. Download the image by selecting the **Action** drop-down list and clicking **Download Image**.
  - b. Upgrade the image by selecting the **Action** drop-down list and clicking **Install Image**.
5. Make sure the Collector and all its processes are up by taking the following steps:
  - a. Go to the Task panel by clicking "Jobs and Errors" on the top right corner.
  - b. Check the collector upgrade task status.  
The status should be **Done**, and progress should be **100%**.
6. Repeat steps 3 through 5 for all Collectors.

# Upgrade 6.x Cluster Deployment

It is critical to review [Overview](#) prior to taking the detailed steps to upgrade your FortiSIEM cluster.

- [Overview](#)
- [Detailed Steps](#)
- [Upgrade Supervisor](#)
- [Upgrade Workers](#)
- [Upgrade Collectors](#)

## Overview

1. Shut down all Workers.
  - Collectors can be up and running.
2. Upgrade the Supervisor first, while all Workers are shut down.
3. After the Supervisor upgrade is complete, verify the Supervisor's health.
4. Upgrade each Worker individually, then verify the Worker's health.
5. If your online storage is Elasticsearch, take the following steps:
  - a. Navigate to **ADMIN > Setup > Storage > Online**.
  - b. Click **Test** to verify the space.
  - c. Click **Save** to save.
6. Upgrade each Collector individually.

### Notes:

- Step 1 prevents the accumulation of Report files when the Supervisor is not available during its upgrade. If these steps are not followed, the Supervisor may not come up after the upgrade because of excessive unprocessed report file accumulation.
- Both the Supervisor and Workers must be on the same FortiSIEM version, otherwise various software modules may not work properly. However, Collectors can be in an older version, one version older to be exact. These Collectors will work, however they may not have the latest discovery and performance monitoring features offered in the latest Supervisor/Worker versions. FortiSIEM recommends that you upgrade the Collectors as soon as possible. If you have Collectors in your deployment, make sure you have configured an image server to use as a repository for them.

## Detailed Steps

Take the following steps to upgrade your FortiSIEM cluster.

1. Shutdown all Worker nodes.  
`# shutdown now`
2. Upgrade the Supervisor using the steps in [Upgrade Supervisor](#). Make sure the Supervisor is running the version you have upgraded to and that all processes are up and running.

```
# phshowVersion.sh
# phstatus
```

3. If you are running Elasticsearch, and upgrading from 6.1.x to 6.3.0, then take the following steps, else skip this step and proceed to Step 4.
  - a. Navigate to **ADMIN > Storage > Online > Elasticsearch**.
  - b. Verify that the Elasticsearch cluster has enough nodes (each type node  $\geq$  replica + 1).
  - c. Go to **ADMIN > Setup > Storage > Online**.
  - d. Select "ES-type" and re-enter the credential of the Elasticsearch cluster.
  - e. Click **Test and Save**. This important step pushes the latest event attribute definitions to Elasticsearch.
4. Upgrade each Worker one by one, using the procedure in [Upgrade Workers](#).
5. Login to the Supervisor and go to **ADMIN > Health > Cloud Health** to ensure that all Workers and Supervisor have been upgraded to the intended version.  
**Note:** The Supervisor and Workers must be on the same version.
6. Upgrade Collectors using the steps in [Upgrade Collectors](#).

## Upgrade Supervisor

To upgrade the Supervisor, take the following steps.

1. Make sure Workers are shut down. Collectors can remain up and running.
2. Login to the Supervisor via SSH as the root user directly, or SSH as admin user and then sudo to root.  
For example:  

```
ssh root@<IP of Supervisor>
or
ssh admin@<IP of Supervisor>
sudo su -
```
3. Create the path /opt/upgrade.  

```
mkdir -p /opt/upgrade
```
4. Download the upgrade zip package `FSM_Upgrade_All_6.3.0_build0331.zip`, then upload it to the Supervisor node under the /opt/upgrade/ folder.  
Example (From Linux CLI):  

```
scp FSM_Upgrade_All_6.3.0_build0331.zip root@10.10.10.15:/opt/upgrade/
```
5. Go to /opt/upgrade.  

```
cd /opt/upgrade
```
6. Unzip the upgrade zip package.  

```
unzip FSM_Upgrade_All_6.3.0_build0331.zip
```
7. Go to the `FSM_Upgrade_All_6.3.0_build0331` directory.  

```
cd FSM_Upgrade_All_6.3.0_build0331
```

  - a. Run a screen.  

```
screen -S upgrade
```

  
**Note:** This is intended for situations where network connectivity is less than favorable. If there is any connection loss, log back into the SSH console and return to the virtual screen by using the following command.  

```
screen -r
```
8. Start the upgrade process by entering the following.  

```
sh upgrade.sh
```
9. After the process is completed, perform a basic health check. All processes should be up and running.  

```
phstatus
```

**Example output:**

```
System uptime: 13:31:19 up 1 day, 2:44, 1 user, load average: 0.95, 1.00, 1.20
Tasks: 29 total, 0 running, 29 sleeping, 0 stopped, 0 zombie
Cpu(s): 8 cores, 15.4%us, 0.5%sy, 0.0%ni, 83.6%id, 0.0%wa, 0.4%hi, 0.1%si, 0.0%st
Mem: 24468880k total, 12074704k used, 10214416k free, 5248k buffers
Swap: 26058744k total, 0k used, 26058744k free, 2931812k cached
```

## Upgrade Workers

To upgrade Workers, take the following steps for each Worker.

1. Login to a worker via SSH as the root user directly, or SSH as admin user and then sudo to root.

For example:

```
ssh root@<IP of Worker>
or
ssh admin@<IP of Worker>
sudo su -
```

2. Create the path /opt/upgrade.

```
mkdir -p /opt/upgrade
```

3. Download the upgrade zip package `FSM_Upgrade_All_6.3.0_build0331.zip` to `/opt/upgrade`.
4. Go to `/opt/upgrade`.  
`cd /opt/upgrade`
5. Unzip the upgrade zip package.  
`unzip FSM_Upgrade_All_6.3.0_build0331.zip`
6. Go to the `FSM_Upgrade_All_6.3.0_build0331` directory.  
`cd FSM_Upgrade_All_6.3.0_build0331`
  - a. Run a screen.  
`screen -S upgrade`

**Note:** This is intended for situations where network connectivity is less than favorable. If there is any connection loss, log back into the SSH console and return to the virtual screen by using the following command.  
`screen -r`
7. Start the upgrade process by entering the following.  
`sh upgrade.sh`
8. After the process is completed, perform a basic health check. All processes should be up and running.
9. After all Workers are upgraded, perform this extra set of steps if you were running FortiSIEM versions 6.2.0 or earlier and using Elasticsearch after the upgrade.
  - a. Navigate to **ADMIN > Setup > Storage > Online**.
  - b. Redo your configuration.
  - c. Perform a **Test** to verify it is working.
  - d. Click **Save**.

**Note:** These steps (9a-d) is not required while upgrading from versions 6.2.1 or later.

## Upgrade Collectors

### Extra Upgrade Steps from 6.2.0 to 6.3.0

From version 6.2.0 to 6.3.0, take the following steps before initiating the upgrade. Otherwise, go to [Main Upgrade Steps](#).

1. Login to the Collector via SSH as root.
2. Copy `/opt/phoenix/phscripts/bin/phcollectorimageinstaller.py` from the Supervisor by running the following command. (**Note:** This is copied from the 6.2.1 or 6.3.0 Supervisor.)  
`scp root@<SupervisorIP>:/opt/phoenix/phscripts/bin/phcollectorimageinstaller.py /opt/phoenix/phscripts/bin/`
3. Change permission by running the following command.  
`chmod 755 /opt/phoenix/phscripts/bin/phcollectorimageinstaller.py`

### Main Upgrade Steps

To upgrade Collectors, take the following steps.

1. Login to the Supervisor via SSH as root.
2. Prepare the Collector upgrade image by running the following command on the Supervisor.

```
phSetupCollectorUpgrade.sh /opt/upgrade/FSM_Upgrade_All_6.3.0_build0331.zip  
<SupervisorFQDN>
```

**Note:** Replace *<SupervisorFQDN>* with the fully qualified domain name of the Supervisor.

**Example:**

```
# phSetupCollectorUpgrade.sh /opt/upgrade/FSM_Upgrade_All_6.3.0_build0331.zip  
supervisor.fortinet.com
```

or

```
# phSetupCollectorUpgrade.sh /opt/upgrade/FSM_Upgrade_All_6.3.0_build0331.zip  
10.10.10.15
```

3. Login to the FortiSIEM Supervisor GUI and navigate to **ADMIN > Health > Collector Health**.
4. Select a Collector.
  - a. Download the image by selecting the **Action** drop-down list and clicking **Download Image**.
  - b. Upgrade the image by selecting the **Action** drop-down list and clicking **Install Image**.
5. Make sure the Collector and all its processes are up by taking the following steps:
  - a. Go to the Task panel by clicking "Jobs and Errors" on the top right corner.
  - b. Check the collector upgrade task status.  
The status should be **Done**, and progress should be **100%**.
6. Repeat steps 3 through 5 for all Collectors.

# Post Upgrade Health Check

**Note:** If any of the checks fail, then the upgrade might have failed. In this case, contact Fortinet Support.

1. Check Cloud health and Collector health from the FortiSIEM GUI:

- Versions display correctly.
- All processes are up and running.
- Resource usage is within limits.

The first screenshot shows the 'Cloud Health' tab in the FortiSIEM GUI. It displays a table with columns: Name, IP Address, Module Role, Health, Version, Load Average, CPU, Swap Used, Memory Size, and Memory Used. The table lists two entries: 'super' and 'worker', both with a health status of 'Normal' and version '6.3.0.0330'. Below this, a 'Process level metrics for offlineuser (172.30.57.230)' table shows various processes like 'glassfish', 'phMonitorSupervisor', 'phParser', etc., all with a status of 'Up' and within resource limits.

The second screenshot shows the 'Collector Health' tab. It displays a table with columns: Organization, Name, IP Address, Status, Collector Type, Health, Uptime, CPU, Memory, Allocated EPS, Incoming EPS, Version, and Collector ID. The table lists one entry: 'org1' with a health status of 'Normal' and version '6.3.0...'. Below this, a 'Process Panel' table shows various processes like 'phMonitorAgent', 'phParser', 'phPerfMonitor', etc., all with a status of 'Up' and within resource limits.

## 2. Check that the Redis passwords match on the Supervisor and Workers:

- Supervisor: run the command `phLicenseTool --showRedisPassword`
- Worker: run the command `grep -i auth /opt/node-rest-service/ecosystem.config.js`

```
[root@offlinesuper ~]# grep -i auth /opt/node-rest-service/ecosystem.config.js
REDIS_AUTH: '4CivtA9n1Fh2KPlkDWCjsLTzJCwiwg7F3Yok@5WhVYAnGjSB66pR1v743v5zGNJYXy8KZB5ScQFk6ihx8L^Dzhj^YONtWQff554ERhEXU1jBtBZ%chxCLYqcvqvzswQ9',
REDIS_AUTH: '4CivtA9n1Fh2KPlkDWCjsLTzJCwiwg7F3Yok@5WhVYAnGjSB66pR1v743v5zGNJYXy8KZB5ScQFk6ihx8L^Dzhj^YONtWQff554ERhEXU1jBtBZ%chxCLYqcvqvzswQ9',
[root@offlinesuper ~]# ssh root@172.30.57.231
root@172.30.57.231's password:
Last login: Thu Jul 1 13:17:46 2021 from 172.30.57.230
[root@offlineworker ~]# grep -i auth /opt/node-rest-service/ecosystem.config.js
REDIS_AUTH: '4CivtA9n1Fh2KPlkDWCjsLTzJCwiwg7F3Yok@5WhVYAnGjSB66pR1v743v5zGNJYXy8KZB5ScQFk6ihx8L^Dzhj^YONtWQff554ERhEXU1jBtBZ%chxCLYqcvqvzswQ9',
REDIS_AUTH: '4CivtA9n1Fh2KPlkDWCjsLTzJCwiwg7F3Yok@5WhVYAnGjSB66pR1v743v5zGNJYXy8KZB5ScQFk6ihx8L^Dzhj^YONtWQff554ERhEXU1jBtBZ%chxCLYqcvqvzswQ9',
```

## 3. Check that the database passwords match on the Supervisor and Workers:

- Supervisor: run the command `phLicenseTool --showDatabasePassword`
- Worker: run the command `grep Auth_PQ_dbpass /etc/httpd/conf/httpd.conf`

```
[root@offlineworker ~]# grep Auth_PQ_dbpass /etc/httpd/conf/httpd.conf
Auth_PQ_dbpass Mhp0YzN^riB6
Auth_PQ_dbpass Mhp0YzN^riB6
```

## 4. Elasticsearch case: check the Elasticsearch health

The screenshot shows the FortiSIEM dashboard with the 'Elasticsearch Health' section active. The dashboard includes a sidebar with navigation options: Setup, Device Support, Health, License, and Settings. The main content area displays the 'Elasticsearch Health' section, which shows a table of cluster status and a detailed table of node information.

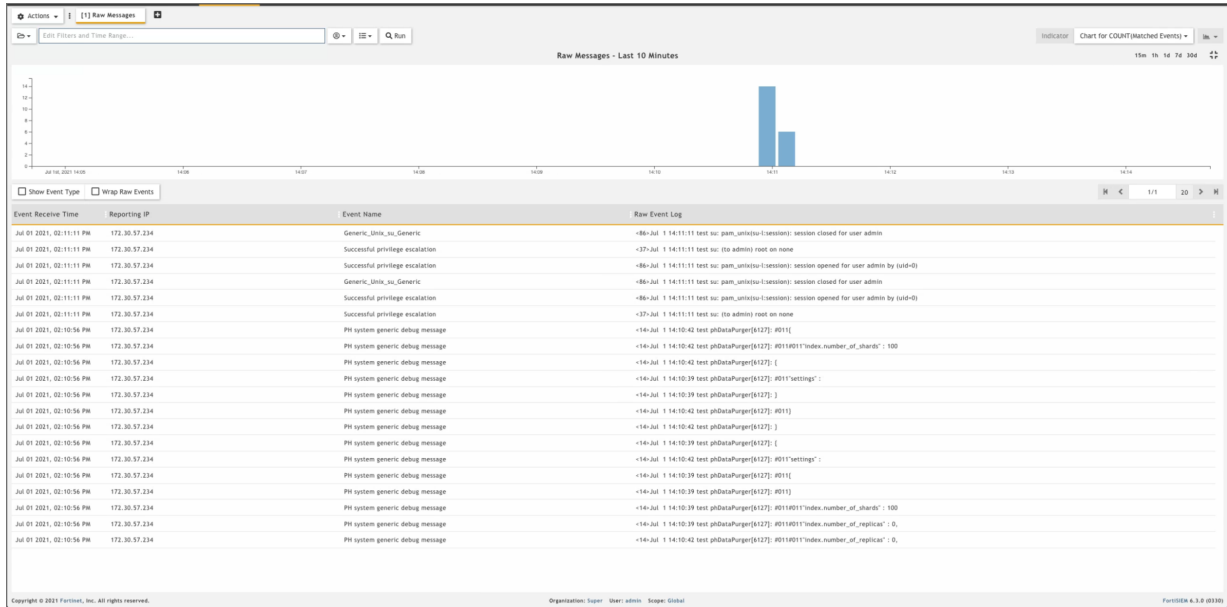

Cluster	IP Address	Status	Nodes	Data Nodes	Active Shards
FSM_CLSTR	172.30.57.181 172.30.57.190 172.30.57.189 172.30.57.193	Normal	4	4	3496

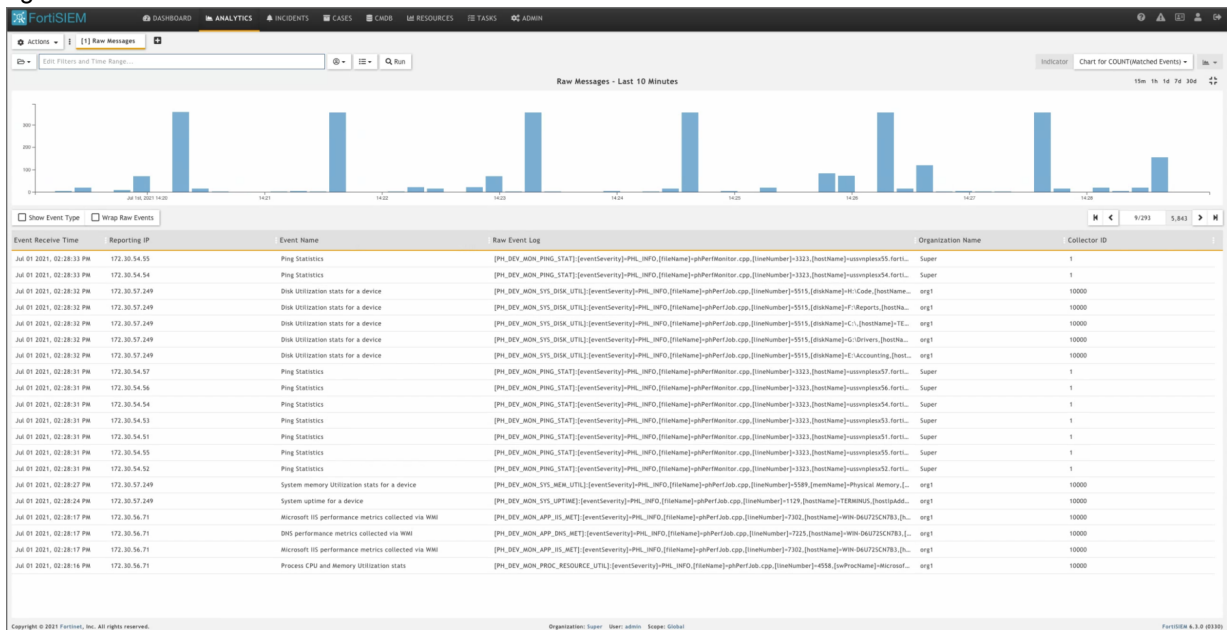

Name	IP Address	Role	Version	Load	OS	Total Memory	Used Memory	Used Swap
FSM_CLSTR0	172.30.57.181	data,ingest	6.8.13	0.1/0.06/0.02	Linux	15 GB	8 GB	0B
FSM_CLSTR1	172.30.57.190	data,ingest	6.8.13	0.43/0.21/0.07	Linux	15 GB	5 GB	0B
FSM_CLSTR2	172.30.57.189	data,ingest	6.8.13	0.2/0.07/0.02	Linux	15 GB	5 GB	0B
FSM_CLSTR_MSTR	172.30.57.193	master,data,ingest	6.8.13	0.27/0.08/0.03	Linux	15 GB	5 GB	0B

5. Check that events are received correctly:
  - a. Search All Events in last 10 minutes and make sure there is data.

- b. Search for events from Collector and Agents and make sure there is data. Both old and new collectors and agents must work.

- c.** Search for events using CMDB Groups (Windows, Linux, Firewalls, etc.) and make sure there is data.

<input type="checkbox"/> 172.30.53.128	Network IO stats for a Virtual Machine	Super	1	10

## 6. Make sure there are no SVN authentication errors in CMDb when you click any device name.

The screenshot shows the FortiSIEM CMDb interface. The top navigation bar includes counts for various device types: Routers (0), Firewalls (0), Windows (2), Unix (1), ESX (0), AWS (0), and Azure (0). The left sidebar shows a tree view of device categories, with 'Server' selected under 'Windows'. The main panel displays a table of devices with columns: Name, IP, Device Type, Status, Discovered, Method, Organization, Agent Policy, Agent Status, Monitor Status, Event Status, Agent Type, AWS Account, AWS Instance, Parser Name, and Agent V.

Name	IP	Device Type	Status	Discovered	Method	Organization	Agent Policy	Agent Status	Monitor Status	Event Status	Agent Type	AWS Account	AWS Instance	Parser Name	Agent V
co57214-resna	172.30.57.214	Generic Unix	Pending	Jun 29 2021, 02:04:20 PM	LOG	org1				Critical					
TERMINUS	172.30.57.249	Windows Server 2016	Pending	Jul 01 2021, 02:24:30 PM	WMI, PING	org1			Normal	Normal					
WIN-D6U72CN7B3	172.30.56.71	Windows Server 2008 R2	Pending	Jun 30 2021, 02:40:24 PM	WMI, PING	org1			Normal	Normal					

Below the device list, there is a detailed view of the 'TERMINUS' server. It shows various system processes and their status. The 'Software - Running Applications' tab is active, displaying a table of running processes.

Critical	Monitor	Name	Process Name	Process Params	Path	Port/Protocol	Status	Uptime	Last Updated

## 7. Make sure recent Incidents and their triggering events are displayed.

The screenshot shows the FortiSIEM Incident Overview interface. The top navigation bar includes tabs for Actions, Overview, List by Time, Edit Risk, M Explorer, and UBA. The main panel displays a table of active incidents with columns: Severity Category, Last Occurred, Incident, Tactics, Technique, Source, Target, Detail, Incident Status, and Resolution.

Severity Category	Last Occurred	Incident	Tactics	Technique	Source	Target	Detail	Incident Status	Resolution

## 8. Check Worker for Collector Credentials by running the following command:

```
cat /etc/httpd/accounts/passwd
```

This validates that all workers contain collector credentials to log in and upload logs.

## 9. Run the following script on the Supervisor.

```
get-fsm-health.py --local
```

Your output should appear similar to the example output in [Post Upgrade Health Check get-fsm-health.py --local Example Output](#).

## Upgrade via Proxy

During upgrade, the FortiSIEM Supervisor, Worker, or Hardware appliances (FSM-2000F, 3500F, or 3500G) must be able to communicate with CentOS OS repositories (`os-pkgs-cdn.fortisiem.fortinet.com` and `os-pkgs.fortisiem.fortinet.com`) hosted by Fortinet, to get the latest OS packages. Follow these steps to set up this communication via proxy, before initiating the upgrade.

1. SSH to the node.
2. Create this file `etc/profile.d/proxy.sh` with the following content and then save the file.

```
PROXY_URL="<proxy-ip-or-hostname>:<proxy-port>"
export http_proxy="$PROXY_URL"
export https_proxy="$PROXY_URL"
export ftp_proxy="$PROXY_URL"
export no_proxy="127.0.0.1,localhost"
```

3. Run `source /etc/profile.d/proxy.sh`.
4. Test that you can use the proxy to successfully communicate with the two sites here:  
`os-pkgs-cdn.fortisiem.fortinet.com`  
`os-pkgs.fortisiem.fortinet.com`.
5. Begin the upgrade.

## Upgrade Log

The 6.3.0.0331 Upgrade ansible log file is located here: `/usr/local/upgrade/logs/ansible.log`.

Errors can be found at the end of the file.

## Migrate Log

The 5.3.x/5.4.x to 6.1.x Migrate ansible log file is located here: `/usr/local/migrate/logs/ansible.log`.

Errors can be found at the end of the file.

# Reference

## Steps for Expanding /opt Disk

1. Go to the Hypervisor and increase the size of /opt disk or the size of /svn disk
2. # ssh into the supervisor as root
3. # lsblk

```
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
...
sdb                  8:16   0 100G  0 disk                << old size
└─sdb1               8:17   0 22.4G  0 part [SWAP]
└─sdb2               8:18   0 68.9G  0 part /opt
...
```

4. # yum -y install cloud-utils-growpart gdisk
5. # growpart /dev/sdb 2  
CHANGED: partition=2 start=50782208 old: size=144529408 end=195311616 new:  
size=473505759 end=524287967
6. # lsblk

```
Changed the size to 250GB for example:
#lsblk
NAME                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
...
sdb                  8:16   0 250G  0 disk                <<< NOTE the new size for the disk in
/opt
└─sdb1               8:17   0 22.4G  0 part [SWAP]
└─sdb2               8:18   0 68.9G  0 part /opt
...
```

7. # xfs\_growfs /dev/sdb2

```
meta-data=/dev/sdb2          isize=512    agcount=4, agsize=4516544 blks
      =                       sectsz=512    attr=2, projid32bit=1
      =                       crc=1        finobt=1, sparse=1, rmapbt=0
      =                       reflink=1
data      =                   bsize=4096    blocks=18066176, imaxpct=25
      =                       sunit=0      swidth=0 blks
naming    =version 2          bsize=4096    ascii-ci=0, ftype=1
log       =internal log      bsize=4096    blocks=8821, version=2
      =                       sectsz=512    sunit=0 blks, lazy-count=1
realtime  =none              extsz=4096    blocks=0, rtextents=0
data blocks changed from 18066176 to 59188219
```

8. # df -hz

```
Filesystem            Size  Used Avail Use% Mounted on
...
/dev/sdb2              226G  6.1G  220G   3% / << NOTE the new disk size
```

## Fix After Upgrading 2000F, 3500F, 3500G from 5.3.x or 5.4.0 to 6.1.2

After upgrading hardware appliances 2000F, 3500F, or 3500G from 5.3.x or 5.4.0 to 6.1.2, the swap is reduced from 24GB to 2GB. Note that the upgrade from 6.1.2 to 6.2.x does not have this problem. This will impact performance. To fix this issue, take the following steps.

1. First, run the following command based on your hardware appliance model.

For 2000F

```
swapon -s /dev/mapper/FSIEM2000F-phx_swap
```

For 3500F

```
swapon -s /dev/mapper/FSIEM3500F-phx_swap
```

For 3500G

```
swapon -s /dev/mapper/FSIEM3500G-phx_swap
```

2. Add the following line to `/etc/fstab` for the above swap partition based on your hardware appliance model.

For 2000F

```
/dev/FSIEM2000F/phx_swap /swapfile swap defaults 0 0
```

For 3500F

```
/dev/FSIEM3500F/phx_swap /swapfile swap defaults 0 0
```

For 3500G

```
/dev/FSIEM3500G/phx_swap /swapfile swap defaults 0 0
```

3. Reboot the hardware appliance.

4. Run the following command

```
swapon --show
```

and make sure there are 2 swap partitions mounted instead of just 1, as shown here.

```
[root@sp5753 ~]# swapon --show
```

```
NAME      TYPE      SIZE USED  PRIO
/dev/dm-5 partition 30G   0B    -3
/dev/dm-0 partition 2.5G   0B    -2
```

## Post Upgrade Health Check get-fsm-health.py --local Example Output

Here is an example of a successful output when running `get-fsm-health.py --local`.
