Known Issues	11

Change Log

Date	Change Description
2021-05-27	Initial release.
2021-06-30	Added a note to Upgrade Path.

Introduction and Supported Models

This document provides a list of new and changed features, upgrade instructions and caveats, resolved issues, and known issues in FortiMail 6.2.7 release, build 286.

Supported models

FortiMail	60D, 200E, 200F, 400E, 400F, 900F, 1000D, 2000E, 3000E, 3200E
FortiMail VM	<ul style="list-style-type: none">• VMware vSphere Hypervisor ESX/ESXi 5.0 and higher• Microsoft Hyper-V Server 2008 R2, 2012 and 2012 R2, 2016, 2019• KVM qemu 0.12.1 and higher• Citrix XenServer v5.6sp2, 6.0 and higher; Open Source XenServer 7.4 and higher• AWS BYOL and On-Demand• Azure BYOL and On-Demand

Special Notices

This section highlights the special notices that should be taken into consideration before upgrading your platform.

TFTP firmware install

Using TFTP via the serial console to install firmware during system boot time will erase all current FortiMail configurations and replace them with factory default settings.

Monitor settings for the web UI

To view all objects in the web UI properly, Fortinet recommends setting your monitor to a screen resolution of at least 1280x1024.

SSH connection

For security reasons, starting from 5.4.2 release, FortiMail stopped supporting SSH connections with plain-text password authentication. Instead, challenge/response should be used.

Product Integration and Support

FortiSandbox Support

- FortiSandbox 2.3 and above

AV Engine

- Version 6.2.162

Recommended browsers

For desktop computers:

- Microsoft Edge 88
- Firefox 88
- Safari 14
- Chrome 90

For mobile devices:

- Official Safari browser for iOS 14
- Official Google Chrome browser for Android 10, 11

Firmware Upgrade and Downgrade

Before any firmware upgrade or downgrade, save a copy of your FortiMail configuration by going to **Dashboard** > **Status** and click **Restore** in the **System Information** widget.

After any firmware upgrade or downgrade, if you are using the web UI, clear the browser cache prior to login on the FortiMail unit to ensure proper display of the web UI screens. Also go to verify that the build number and version number match the image loaded.

The antivirus signatures included with an image upgrade may be older than those currently available from the Fortinet FortiGuard Distribution Network (FDN). Fortinet recommends performing an immediate AV signature update as soon as possible.

Firmware downgrading is not recommended and not supported in general. Before downgrading, consult [Fortinet Technical Support](#) first.

Upgrade path

Any 4.x release older than **4.3.6** > **4.3.6** (build 540) > **5.2.3** (build 436) > **5.2.8** (build 467) > **5.3.10** (build 643) > **5.4.4** (build 714) (required for VMware install only) > **5.4.6** (build 725) > **6.0.5** (build 148) > **6.2.7** (build 286)

When upgrading from 6.2.7 to 6.4 release, you must upgrade to 6.4.5 and newer releases, not other older 6.4 releases.

Firmware downgrade

Firmware downgrading is not recommended and not supported in general. If you need to perform a firmware downgrade, follow the procedure below.

1. Back up the 6.2.7 configuration.
2. Install the older image.
3. In the CLI, enter `execute factoryreset` to reset the FortiMail unit to factory defaults.
4. Configure the device IP address and other network settings.
5. Reload the backup configuration if needed.

Resolved Issues

The resolved issues listed below do not list every bug that has been corrected with this release. For inquiries about a particular bug, please contact [Fortinet Customer Service & Support](#).

Antispam/Antivirus

Bug ID	Description
700919	Issues when scanning PDF files.
684937	URL click protection does not work properly with links ending with a dot.
707494	For some email, FortiMail may get NoResult response from FortiSandbox.
660873	Impersonation Analysis false positives.
709825	Fail to detect files with .js extension included in BZIP2 archives.
713397	DLP attachment metadata detection doesn't work for docx and xlsx files.

System

Bug ID	Description
679151	Gmail using a "+" plus symbol for an alias causes issues with IBE account creation.
691523	Unexpected quotation marks appear in the block lists when exporting the configuration.
672299	The dnscached process may cache incorrect query results under heavy traffic.
700244	For Diffie-Hellman key exchange, FortiMail uses self-generated parameters, which are different from the predefined finite field groups in RFC 7919 .
683893	Oversized meta data is sent to FortiSandbox.
608247	LDAP authentication does not work for newly created domains.
707925	RADIUS 2FA users are locked out after the first unsuccessful login attempt.
688015	Cloning a used mail routing profile, when the max entries are reached, deletes the original profile.
693981	Fail to connect to the SMB/CIFS server under Data Loss Prevention > Sensitive Data > FingerPrint Source.
712577	High CPU usage when scanning PDF files.
681597	

Bug ID	Description
705376	After upgrading, the customized IBE language is lost.
692164	Possible to create identical greylist exempt entries.
720374	When importing mail users from .csv files, the users cannot log in.
719654	No system event logs for changes (add/delete) in user secondary accounts.

Log and Report

Bug ID	Description
681775	Incorrect email subject encoding modifies the cross search log lines.
682102	Both accept and system quarantine actions appears in the same log.
718183	Many logs state "Cannot resolve remoter server. Unknown server error".

Common vulnerabilities and exposures

Visit <https://fortiguard.com/psirt> for more information.

Bug ID	Description
691547 690894 692463 692221	CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection').
692223 697251	CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal').
693465	CWE-36: Absolute Path Traversal.
694366	CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection').
694751	CWE-310: Cryptographic Issues.
695037 694752	CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow').
695039	CWE-131: Incorrect Calculation of Buffer Size.
681403	CWE-284: Improper Access Control.
700991	CWE-401: Missing Release of Memory after Effective Lifetime.

Known Issues

The following table lists some minor known issues.

Bug ID	Description
594547	<p>Due to more confining security restrictions imposed by the iOS system, email attachments included in IBE PUSH notification messages can no longer be opened properly on iOS devices running version 10 and up. Therefore, users cannot view the encrypted email messages on these iOS devices. Users should download and open the attachments on their PCs as a workaround.</p> <p>This issue has been resolved in FortiMail v7.0.0 release.</p>
