Change Log

Date	Change Description
2025-12-19	Initial release version 25.4.0.

Introduction

FortiDeceptor DaaS Cloud is a cloud-based platform providing cyber Deception-as-a-Service.

Cyber deception has emerged as an effective and offensive threat detection technology that offers protection for IT/IoT/OT networks and infrastructure. Deception technology can be used across enterprise networks by placing decoys, deception tokens (breadcrumbs), and lures.

FortiDeceptor DaaS provides early detection and isolation of sophisticated human and automated attacks by deceiving attackers into revealing themselves.

Key features:

- FortiDeceptor DaaS provides an intuitive method to configure and monitor deception assets with Wizard-based deployment. FortiDeceptor creates Decoys based on default templates. These Decoys span several OS types, including Windows Desktop/Server, Linux, VPN, IoT, and OT. Once deployed, it automatically performs asset (active/passive) discovery, creates asset inventory, and recommends optimized decoy placement.
- Deployment deception decoys and lures from the cloud platform communicate directly to on-premise or cloud networks.
- FortiDeceptor DaaS Captures and analyzes malware that is detected by the Deception decoys and provides detailed forensics, collects IOCs and TTPs.
- Infected endpoints that are detected by the Deception decoys can be quarantined away from the production network.
- Integration with Fortinet Security Fabric and third-party security controls like FW, SIEM, SOAR, EDR, NAC, and SANDBOX.

FortiDeceptor DaaS Version 25.4.0

This document provides information about FortiDeceptor DaaS version 25.4.0 build 80.

What's new

FortiDeceptor DaaS 25.4.0 includes the following new features and enhancements:

Upgrade firmware for multiple clients

FortiDeceptor DaaS supports bulk firmware upgrades for multiple Edge clients directly from the cloud web GUI. Users can select multiple devices and initiate the upgrade with the *Upgrade* button, eliminating the need for manual, individual updates on the client side.

FortiFlex

Fortinet *FortiFlex* is a flexible consumption and licensing program that lets organizations dynamically allocate Fortinet security services across devices and environments. It enables pay-as-you-use deployment for firewalls, cloud security, and network protection, scaling security resources as business needs change. FortiDeceptor DaaS now supports FortiFlex for MSSP customers and will be based on the current network VLAN license model.

Honeydoc activity tracking

Previously, activity related to honeydoc files, used as deception tokens, was only captured when those files were opened within the same customer network as the network decoy. Starting with version 25.4.0, the system can now track and record attacker interactions with honeydoc files even when they occur outside the customer network, such as over the internet.

Multiple region selection

FortiDeceptor DaaS now supports multi-region selection when applying licenses. Customers can choose to deploy the DaaS platform in either a US or EU data center.

Product integration and support

Supported models	FortiDeceptor Edge FDC100G, FortiDeceptor Edge virtual appliance (FDCVME)
Virtualization Environment	<ul style="list-style-type: none">• AWS• Azure• GCP• Hyper-V• KVM• Nutanix Acropolis• VMware ESXi 5.1, 5.5, 6.0, 6.5, 6.7 and 7.0.
Browser support	<ul style="list-style-type: none">• Microsoft Edge version 42 and later• Mozilla Firefox version 61 and later• Google Chrome version 59 and later• Opera version 54 and later• Other web browsers may function correctly but are not supported by Fortinet.
Supported languages	English
