# Change Log

Date	Change Description
March 8, 2026	Initial release.

# Introduction

This document provides a list of new features and changes, and product integration support information for FortiAppSec Cloud 26.1.a. Please review all sections of this document before using this service.

FortiAppSec Cloud is an advanced SaaS based, cloud-native Web Application and API Protection (WAAP) platform designed to defend web applications and APIs from modern cyber threats. It delivers a unified security framework that combines cutting-edge threat intelligence, AI-driven detection, and automated response capabilities, ensuring comprehensive protection against evolving attack vectors.

- **Web Application Firewall (WAF)**

Protects web and API applications from OWASP Top 10 threats, zero-day vulnerabilities, and sophisticated Layer 7 attacks with adaptive security policies and real-time threat intelligence.

- **DDoS**

Mitigates network and application layer attacks, featuring real-time customizations, automation, and a 24/7 SOC.

- **Advanced Bot Protection**

Detects and mitigates malicious automated traffic, preventing attacks such as bot-driven scraping, credential stuffing, account takeovers, and API abuse through behavioral analysis and machine learning.

- **Global Server Load Balancer (GSLB)**

Enhances application availability and resilience by distributing traffic across multiple data centers or cloud environments, reducing latency and ensuring business continuity.

- **Threat Analytics**

Leverages AI-powered analytics to correlate security events across your application stack, filtering out false positives and highlighting critical incidents that require immediate attention.

- **Vulnerability Scan**

Provides automated, continuous scanning of web applications protected by FortiAppSec to detect known security weaknesses (including OWASP Top 10), misconfigurations, and exposed components.

# What's new

FortiAppSec Cloud 26.1.a offers the following new features:

## Client-Side Protection

### New Service

FortiAppSec Cloud has added a new Client-Side Protection service, providing a unified interface for detecting, preventing, and managing browser-based threats and supporting PCI DSS 4.0 client-side security requirements.

Enable audit log notifications for **Client-Side Protection PCI DSS 4.0** compliance under **General > Notifications**. These alerts track JavaScript and header modifications.

Please note that the Client-Side Protection service is launched in beta mode.

Client-Side Protection is only available for **Enterprise** tier contracts. For more information and license change inquiries, please contact [Fortinet Sales](#).

For more information, refer to [Client-Side Protection](#) and [Notifications](#).

## Threat Analytics

### FortiGuard Insights for Attack Logs

Attack log events of the **IP Reputation** and **GEO IP** threat types now include a direct link to the corresponding FortiGuard page, providing additional context on the reason it is blocked. To view details, copy the IP address from the attack log and paste it into the search bar on the linked page.

For more information, refer to [Attack Logs](#).

## Advanced Bot Protection

### Granular Bot Action Control at Protection Entry Level

Advanced Bot Protection now allows configuring protective actions at the protection entry level, including **alert**, **alert\_deny**, **block\_period**, and **deny\_no\_log**, instead of only at the application level. This provides more granular control over bot mitigation behavior per protected endpoint.

To configure this, go to **Advanced Bot Protection > General > Configurations**.

For more information, refer to [Configurations](#).

# Product integration and supported web browsers

This section lists the product integrations and web browsers supported by FortiAppSec Cloud 26.1.a.

## Supported products for ABP Integration:

Product	Tested Versions
FortiWeb	<ul style="list-style-type: none"><li>• FortiWeb 7.4.12 and later</li><li>• FortiWeb 7.6.6 and later</li><li>• FortiWeb 8.0.3 and later</li></ul>
FortiADC	<ul style="list-style-type: none"><li>• FortiADC 7.4.6 and later</li></ul>

## Supported web browsers:

- Mozilla Firefox 59 and later versions
- Google Chrome 65 and later versions

We strongly recommend you set either of the web browsers as your default web browser when working with FortiAppSec Cloud. You may also use other (versions of the) browsers, but you may encounter certain issues with FortiAppSec Cloud's Web GUI.

# Resolved issues

This release has no resolved issues. For inquiries about particular bugs, please contact [Fortinet Customer Service & Support](#).

# Known issues

There are no known issues in FortiAppSec Cloud version 26.1.a. For inquiries on particular bugs, please contact [Fortinet Customer Service & Support](#).
