

Feature Matrix for FortiSwitchOS 7.6.2

The following table lists the FortiSwitch features in Release 7.6.2 that are supported on each series of FortiSwitch models. All features are available in Release 7.6.2, unless otherwise stated. Features marked with ✓ are supported by FortiSwitch units in standalone mode; features marked with  are supported in both standalone and in managed mode. Security Fabric features are available exclusively in managed mode when supported by the FortiOS version.

Feature	GUI Supported	FSR-108F	FSR-112F-POE	FSR-216F-POE	FSR-424F-POE	1xxE, 1xxF	110G-FPOE, 124G, 124G-FPOE	200 Series	4xxE	500 Series	6xxF	1024E, 1048E, T1024E, T1024F-FPOE	2048F	3032E
Security Fabric (exclusively in managed mode)														
Centralized configuration														
Centralized firmware management														
Automated detection and recommendations														
Syslog collection	—													
Device detection														
Network device detection	—	—	—	—		—	—							
Block intra-VLAN traffic (See note 7.)														
Host quarantine														
Automation stitches (zero-touch provisioning automation)	—													
Integrated FortiGate network access control (NAC) function														
NAC LAN segments (See note 12.)														
FortiGuard IoT identification														
Support of matching FortiClient EMS tags in NAC policies														
Support of matching IoT/OT vulnerabilities in NAC policies														
Support of matching FortiVoice tags in NAC policies														
NAC: control of how long matched devices are kept	—													
Dynamic port policies														
DPP: control of how long matched devices are kept	—													
FortiSwitch VLANs over VXLAN	—	—	—	—	—	—	—	—	—	—	—

Notes

- PoE features are applicable only to the model numbers with a POE or FPOE suffix.
- The 24-port LAG is applicable to FS-524D and FS-524-FPOE models. The 48-port LAG is applicable to FS-548D and FS-548-FPOE models.
- The per-VLAN MAC learning limit is not supported on the FS-108F, FS-108F-POE, FS-108F-FPOE, FS-110G-FPOE, FS-124E, FS-124E-POE, FS-124E-FPOE, FS-124F, FS-124F-POE, FS-124F-FPOE, FS-124G, FS-124G-FPOE, FS-248E-POE, FS-248E-FPOE, and FS-248D models. The per-trunk MAC learning limit is not supported on the FS-248E-POE, FS-248E-FPOE, and FS-248D models.
- Supported for 25-Gbps and 100-Gbps ports.
- On the FS-3032E, you can split one port at the full base speed, split one port into four sub-ports of 25-Gbps each (100G QSFP only), or split one port into four sub-ports of 10-Gbps each (40G or 100G QSFP).
- Supported on the 10G ports on the FS-5xxD models, the 10G and 100G ports on the FS-1024E model, the 100G ports on the FS-T1024E model, all ports on the FS-624F and FS-624F-FPOE models, and all ports except ports 53 to 56 on the FS-648F and FS-648F-FPOE models. In FortiLink mode, MACsec can be enabled on the inter-switch link (ISL) by the FortiLink secure fabric.
- The maximum number of access VLANs on the FS-1xxE, FS-108F, and FS-124F models is 16; the maximum number of access VLANs on the FS-148F and FS-1xxG models is 32; the maximum number of access VLANs on the FSR-1xxF, FSR-216F-POE, and FS-6xxF models is 50. For all other models, the maximum number of access VLANs is 4,095, but VLAN 4094 cannot be used.
- The FSR-424F-POE model supports PTP transparent clock with IPv4 addresses only. The FSR-424F-POE, FS-424E-Fiber, FS-448E, FS-448E-POE, and FS-448E-FPOE models support layer-2 PTP transparent clock using the peer-to-peer mode, as well as layer-2 and layer-3 PTP transparent clock using the end-to-end mode. The FSR-424F-POE, FS-424E-Fiber, FS-448E, FS-448E-POE, and FS-448E-FPOE models support the layer-2 PTP boundary clock. The FS-224D and FS-224E models support layer-2 PTP transparent clock using the end-to-end mode.
- In managed mode, static routing is supported exclusively for system management and connectivity to Security Fabric connectors.
- This feature is not supported by the FS-108F, FS-108F-POE, FS-108F-FPOE, FS-124E, FS-124F, and FS-224E models.
- The FS-110G-FPOE, FS-124G, FS-124G-FPOE, FS-148F, FS-148F-POE, and FS-148F-FPOE models report the drop rate as 0 or +VE for a positive rate.
- There are some limitations on LAN segments on the FSR-216F-POE, FS-108F, FS-108F-POE, FS-108F-FPOE, FSR-108F, FSR-112F-POE, FS-124E, FS-124E-POE, FS-124E-FPOE, FS-148E, and FS-148E-POE models. See the *FortiLink Guide (FortiOS 7.6.2)* for details.
- Partial VLAN mapping is supported by the FSR-108F, FS-110G-FPOE, FSR-112F-POE, FS-124F, FS-124F-POE, FS-124F-FPOE, FS-124G, FS-124G-FPOE, FS-148F, FS-148F-POE, FS-148F-FPOE, and FSR-216F-POE models. See the *FortiSwitchOS Administration Guide* for details.
- When the FortiSwitch unit is using `poe-port-power perpetual-fast`, the following BIOS versions are required: 4000014 or higher for FS-124E-POE, and FS-124E-FPOE; 4000011 or higher for FS-148E-POE; 4000006 or higher for FS-108F-FPOE; and 4000007 or higher for FS-108F-POE.
- The FS-1xxE, FS-1xxF, FS-1xxG, FSR-1xxF, and FSR-216F-POE models allow you to enable DHCP snooping on a maximum of 25 VLANs. The FS-6xxF series models allow you to enable DHCP snooping on a maximum of 16 VLANs. All other models allow you to enable DHCP snooping on a maximum of 4,096 VLANs.
- Only the ACL ingress policy is supported in FortiLink mode. The following FortiSwitch models do not support ACL in FortiLink mode: FS-108F, FS-108F-POE, FS-108F-FPOE, FS-110G-FPOE, FS-124E, FS-124E-POE, FS-124E-FPOE, FS-124F, FS-124F-POE, FS-124F-FPOE, FS-124G, FS-124G-FPOE, FS-148E, FS-148E-POE, FS-148F, FS-148F-POE, FS-148F-FPOE, FS-624F, FS-624F-FPOE, FS-648F, FS-648F-FPOE, FSR-108F, FSR-112F-POE, and FSR-216F-POE.
- OS image signature verification is not supported on the FS-224D-FPOE and FS-248D models.
- The FS-1xxE, FS-1xxF, FS-110G-FPOE, FS-124G, and FS-124G-FPOE models support a single QoS map. If there is more than one QoS map, the first configured map is used.
- Inter-VLAN routing offload requires an advanced features license.
- HSR and PRP can also be used with FortiLink. For more details, see the [FortiLink Guide](#).
- The FS-1xxE, FS-1xxF, FS-110G-FPOE, FS-124G, and FS-124G-FPOE models do not support the `set storm-control-high-rate` or `storm-control-rate-filter` commands.
- A maximum of 60 W is available only on the FS-6xxF Series, FS-T1024F-FPOE, and FS-110G-FPOE models.
- On FSR-108F and the FS-1xxE/F/G series, IGMP snooping can be enabled on a maximum of 6 VLANs.
- This feature requires a special firmware image. Refer to the *FortiSwitch Stacking Deployment Guide* for switching features available in the stacking operation.
