FortiRecon 23.2.0 release

FortiRecon version 23.2.0 is available.

FortiRecon is a Digital Risk Protection (DRP) service that operates alongside existing security solutions to provide you with the visibility that an adversary can have of your infrastructure. This early warning of any malicious activity targeted at your organization enables swift detection and mitigation. Operating purely from outside the organizational boundary, the service maps an organization's digital footprint and monitors it for abnormal activity. The service gives organizations the intelligence to mitigate credible security threats in a controlled manner as part of ongoing security efforts.

FortiRecon scans the organization's attack surface and identifies risks to assets while FortiGuard Threat Intelligence delivers early warning of risks to the organization through targeted, curated intelligence to provide an early warning of any malicious activity targeted to the organization.

The FortiRecon portal includes the following modules:

EASM	The <i>External Attack Surface Management</i> (EASM) module provides an adversary's view of the organization digital attack surface and prioritizes risks and exposures, enabling administrators to mitigate threats in a controlled manner before the threats become a problem.
Brand Protection	The <i>Brand Protection</i> module continually monitors the organization's public-facing visibility for unauthorized changes, including web-based phishing attacks, typo-squatting, rogue applications, credential leaks, and brand impersonation in social media, which may impact brand value, integrity, and trust.
ACI	The <i>Adversary Centric Intelligence</i> (ACI) module leverages FortiGuard Threat Analysts to provide comprehensive coverage of dark web, open source, and technical threat intelligence, including threat actor insights. This information enables administrators to proactively assess risks, respond faster to incidents, better understand their attackers, and protect assets.
Profile Settings	The <i>Profile Settings</i> module allows you to personalize your FortiRecon account and provide information on your organization.

For details, see the [FortiRecon User Guide](#).

What's new

New features and enhancements are included in the FortiRecon 23.2.0 release.

New features

The following new capabilities are included:

- A new *Brand Protection > Social Media Threats* page allows you to monitor profiles impersonating your organization's social media profiles. See [Social Media Threats](#).
 - Supported social media platforms include *Facebook, Twitter, LinkedIn* and *Instagram*.

Enhancements

The following enhancements are included:

- The *Brand Protection > Rogue Mobile Apps* page has been updated. See [Rogue Mobile Apps](#).
