FortiRecon 24.2.a release

FortiRecon version 24.2.a is available.

FortiRecon is a Digital Risk Protection (DRP) service that operates alongside existing security solutions to provide you with the visibility that an adversary can have of your infrastructure. This early warning of any malicious activity targeted at your organization enables swift detection and mitigation. Operating purely from outside the organizational boundary, the service maps an organization's digital footprint and monitors it for abnormal activity. The service gives organizations the intelligence to mitigate credible security threats in a controlled manner as part of ongoing security efforts.

FortiRecon scans the organization's attack surface and identifies risks to assets while FortiGuard Threat Intelligence delivers early warning of risks to the organization through targeted, curated intelligence to provide an early warning of any malicious activity targeted to the organization.

The FortiRecon portal includes the following modules:

Overview	The <i>Overview</i> module provides a centralized view of your organization's digital risk posture across <i>Attack Surface Management (ASM)</i> , <i>Brand Protection (BP)</i> , and <i>Adversary Centric Intelligence (ACI)</i> modules. Discovered issues are mapped to relevant MITRE ATT&CK techniques and sub-techniques, providing a valuable framework for understanding attacker motivations and potential attack paths.
Attack Surface Management	<p>The External Attack Surface Management (EASM) module provides an adversary's view of the organization digital attack surface and prioritizes risks and exposures, enabling administrators to mitigate threats in a controlled manner before the threats become a problem.</p> <p>The Internal Attack Surface Management (IASM) module provides visibility into internal network, identifying vulnerabilities within the organization's perimeter. It helps administrators discover internal assets, assess associated risks, and take mitigation steps.</p>
Brand Protection	The Brand Protection (BP) module continually monitors the organization's public-facing visibility for unauthorized changes, including web-based phishing attacks, typo-squatting, rogue applications, credential leaks, and brand impersonation in social media, which may impact brand value, integrity, and trust.
Adversary Centric Intelligence	The Adversary Centric Intelligence (ACI) module leverages FortiGuard Threat Analysts to provide comprehensive coverage of dark web, open source, and technical threat intelligence, including threat actor insights. This information enables administrators to proactively assess risks, respond faster to incidents, better understand their attackers, and protect assets.
Profile Settings	The Profile Settings module allows you to personalize your FortiRecon account and provide information on your organization.

For details, see the [FortiRecon User Guide](#).

What's new

New features and enhancements are included in the FortiRecon 24.2.a release.

New features

The following new capabilities are included:

- The *Adversary Centric Intelligence > Vulnerability Intelligence* page now offers interactive filters on charts and legends.
- The *Adversary Centric Intelligence > Intelligence Collection Lookup* page now displays extracted entities including *CVEs, domains, URLs, and IPs* extracted from raw data in *Detailed Results* section.
