Change Log

Date	Change Description
2026-01-27	Initial release.

Introduction

This document provides information about all the log messages applicable to the FortiGate devices running FortiOS version 7.4.11 or higher. The logs are intended for administrators to use as reference for more information about a specific log entry and message generated by FortiOS.

This document also provides information about log fields when FortiOS sends log messages to remote syslog servers in Common Event Format (CEF). See CEF support on page 69. It also describes how to enable extended logging. See UTM extended logging on page 80.

> Performance statistics are not logged to disk. Performance statistics can be received by a syslog server or by FortiAnalyzer.

Before you begin

Before you begin using this reference, read the following notes:

- Information in this document applies to all FortiGate units that are currently running FortiOS 7.4.11 or higher.
- Ensure that you have enabled logging for the FortiOS unit.
- Each log message is displayed in the *Log & Report* pane of the GUI. You can also download the RAW format from the *Log & Report* pane.
- Each log message is documented similar to how it appears in the RAW format.

> This reference contains detailed information for each log type and subtype; however, this reference contains only information gathered at publication and, as a result, not every log message field contains detailed information.

What's new

This section identifies major changes in the Log Reference from version 7.4.0 and later. For more information about new features, please see the FortiOS 7.4 New Features Guide.

FortiOS 7.4.10

Log field values

The following log field values are changed:

event logs:

Field	Change
durationtotal	Field added
endtime	Field added
membytes	Field added
memchange	Field added
rss	Field added
starttime	Field added
task	Field added

FortiOS 7.4.9

Log ID changes

The following log IDs are changed:

event logs:

Log ID	Message	Change
22118	LOG_ID_HW_MONITOR_EMERGENCY	Log ID Added
22119	LOG_ID_HW_MONITOR_WARNING	Log ID Added
22120	LOG_ID_HW_MONITOR_NOTIF	Log ID Added

FortiOS 7.4.8

Log field values

The following log field values are changed:

event logs:

Field	Change
modem	Field removed
simslot	Field removed

FortiOS 7.4.7

There are no major log changes between FortiOS 7.4.6 and 7.4.7.

FortiOS 7.4.6

Log field values

The following log field values are changed:

event logs:

Field	Change
connector	Field Added

Log ID changes

The following log IDs are changed:

event logs:

Log ID	Message	Change
22907	LOG_ID_INPUT_DETECTION	Log ID Added
22908	LOG_ID_OUTPUT_DETECTION	Log ID Added

FortiOS 7.4.5

Log field values

No log field values are changed.

Log ID changes

The following log IDs are changed:

event logs:

Log types and subtypes

This section describes the log types, subtypes, and priority levels. It also describes the log field format.

Type

Each log entry contains a Type (type) or category field that indicates its log type and which log file stores the log entry.

Subtype

Each log entry contains a Sub Type (subtype) or subcategory field within a log type, based on the feature associated with the cause of the log entry.

For example:

- In event logs, some of the subtypes are compliance check, system, and user.
- In traffic logs, the subtypes are forward, local, multicast, and sniffer.

List of log types and subtypes

FortiGate devices can record the following types and subtypes of log entry information:

Type	Description	Subtype
traffic	Records traffic flow information, such as an HTTP/HTTPS request and its response, if any.	- forward - local - multicast - sniffer - ztna
event	Records system and administrative events, such as downloading a backup copy of the configuration, or daemon activities.	- cifs-auth-fail - connector - endpoint - fortiextender - ha

Type	Description	Subtype
		• rest-api • router • sdwan • security-rating • switch-controller • system • user • vpn • wanopt • web-svc • webproxy • wireless
UTM	Records UTM events.	See list of UTM log subtypes below

UTM log subtypes

UTM Log Subtypes	Description	Event Type
virus	Records virus attacks.	• analytics • command-blocked • content-disarm • ems-threat-feed • exempt-hash • filename • filetype-executable • infected • inline-block • malware-list • mimefragmented • outbreak-prevention • oversize • scanerror • unknown • unknown
webfilter	Records web filter events.	• activexfilter • antiphishing • appletfilter • content

UTM Log Subtypes	Description	Event Type
		• cookiefilter • ftgd_allow • ftgd_blk • ftgd_err • ftgd_quota • ftgd_quota_counting • ftgd_quota_expired • http_header_change • scriptfilter • ssl-exempt • urlfilter • urlmonitor • videofilter-category • videofilter-channel • videofilter-description • videofilter-title • webfilter_command_block
ips	Records intrusion prevention events.	• botnet • malicious-url • signature
emailfilter	Records email filter events.	• bannedword • email • ftgd_err • spam • webmail
anomaly	Records intrusion attempts.	• anomaly
voip	Records voice over IP events.	• voip
dlp	Records data loss prevention events.	• dlp • dlp-docsource
app-ctrl	Records intrusion attempts. Application control log is output when a signature matches an application pattern.	• port-violation • protocol-violation • signature
waf	Records web application firewall information for FortiWeb appliances and virtual appliances.	• waf-address-list • waf-custom-signature • waf-http-constraint • waf-http-method • waf-signature

UTM Log Subtypes	Description	Event Type
		• waf-url-access
gtp	Records GTP events.	• gtp-all • pfcp-all
dns	Records domain name server events.	• dns-query • dns-response
ssh	Records Secure Socket Shell events.	• ssh-channel • ssh-command • ssh-hostkey • ssh-unsupport-proto
ssl	Records detected/blocked malicious SSL connections.	• ssl-anomaly • ssl-exempt • ssl-handshake • ssl-negotiation • ssl-server-cert-info
file-filter	Records file filter events.	• file-filter
icap	Records ICAP events.	• icap
forti-switch	Records FortiSwitch events.	• fsw-flow
virtual-patch	Records virtual-patch events.	• localin-vpatch • ot-vpatch
casb	Records CASB events.	• casb

FortiOS priority levels

Each log entry contains a Level (level) field that indicates the estimated severity of the event that caused the log entry, such as `level=warning`, and therefore how high a priority it is likely to be. Level (level) associations with the descriptions below are not always uniform. They also may not correspond with your own definitions of how severe each event is. If you require notification when a specific event occurs, either configure SNMP traps or alert email by administrator-defined Severity Level (severity_level) or ID (logid), not by Level (level).

Level (0 is highest)	Name	Description
0	Emergency	The system is unusable or not responding.
1	Alert	Immediate action required. Used in security logs.
2	Critical	Functionality is affected.

Level (0 is highest)	Name	Description
3	Error	An error exists and functionality could be affected.
4	Warning	Functionality could be affected.
5	Notification	Information about normal events.
6	Information	General information about system operations. Used in event logs to record configuration changes.

For each location where the FortiGate device can store log files (disk, memory, Syslog or FortiAnalyzer), you can define a severity threshold. FortiOS stores all log messages equal to or exceeding the log severity level selected. For example, if you select Error, FortiOS will store log messages whose log severity level is Error, Critical, Alert, and Emergency.

Log field format

The following table describes the standard format in which each log type is described in this document. For documentation purposes, all log types and subtypes follow this generic table format to present the log entry information.

Log Field Name	Description	Data Type	Length
appact	The security action from app control	string	16

Log schema structure

This section describes the schema of the FortiOS log messages.

Log message fields

Each log message consists of several sections of fields. In the FortiOS GUI, you can view the logs in the *Log & Report* pane, which displays the formatted view. If you want to view logs in raw format, you must download the log and view it in a text editor.

Following is an example of a traffic log message in raw format:

```
date=2017-11-15 time=11:44:16 logid="0000000013" type="traffic" subtype="forward" level="notice"

```

The following table provides an example of the log field information in the FortiOS GUI in the detailed view of the *Log & Report* pane and in the downloaded, raw log file.

GUI Field Name (Raw Field Name)	Field Description	Example Field Value in Raw Format
General		
Date (date)	Day, month, and year when the log message was recorded.	`date=2017-11-15`
Direction (direction)	Indicates message/packets direction.	`direction=incoming`
Time (time)	Hour clock when the log message was recorded.	`time=11:44:16`
Duration (seconds)	Duration of the session, in seconds.	`duration=2`
Session ID (sessionid)	ID for the session.	`sessionid=8058`
Virtual Domain (vd)	Name of the virtual domain in which the log message was recorded.	`vd="vdom1"`

GUI Field Name (Raw Field Name)	Field Description	Example Field Value in Raw Format
NAT Translation (transport)	NAT source port.	`transport=40772`
Source		
IP (srcip)	IP address of the traffic's origin. The source varies by the direction: • In HTTP requests, this is the web browser or other client. • In HTTP responses, this is the physical server.	`srcip=10.1.100.155`
NAT IP (transip)	NAT source IP.	`transip=172.16.200.2`
Source Port (srcport)	Port number of the traffic's origin.	`srcport=40772`
Country (srccountry)	Name of the source country.	`srccountry="Reserved"`
Source Interface (srcintf)	Interface name of the traffic's origin.	`srcintf="port12"`
Source Name (srcname)	Name of the source.	`srcname="pc1"`
Source Interface Name (srcintfrole)	Name of the source interface.	`srcintfrole="undefined"`
Device Type (devtype)	Device type of the source.	`devtype="Linux PC"`
OS Name (osname)	OS of the source.	`osname="Linux"`
Master Source MAC (mastersrcmac)	The master MAC address for a host that has multiple network interfaces.	`mastersrcmac="a2:e9:00:ec:40:01"`
Source MAC (srcmac)	MAC address associated with the source IP address.	`srcmac="a2:e9:00:ec:40:01"`
Source Server (srcserver)	Server of the source.	`srcserver=0`
Device ID (devid)	Serial number of the device for the traffic's origin.	`devid="FGVM02Q105060010"`
Destination		
IP (dstip)	Destination IP address for the web.	`dstip=35.197.51.42`
Port (dstport)	Port number of the traffic's destination.	`dstport=443`
Country (dstcountry)	Name of the destination country.	`dstcountry="United States"`

GUI Field Name (Raw Field Name)	Field Description	Example Field Value in Raw Format
Destination Interface (dstintf)	Interface of the traffic's destination.	`dstintf="port11"`
Destination Name (dstname)	Name of the destination.	`dstname="fortiguard.com"`
Destination Interface Name (dstinfrole)	Name of the destination interface.	`dstintfrole="undefined"`
Application		
Application Name (app)	Name of the application.	`app="HTTPS.BROWSER"`
Category (appcat)	Category of the application.	`appcat="Web.Client"`
Service (service)	Name of the service.	`service="HTTPS"`
Application ID (appid)	ID of the application.	`appid=40568`
Application Risk (apprisk)	Risk level of the application.	`apprisk="medium"`
countapp	Number of App Ctrl logs associated with the session.	`countapp=1`
Data		
Received bytes (rcvdbyte)	Number of bytes received.	`rcvdbyte=39898`
Received packets (rcvdpkt)	Number of packets received.	`rcvdpkt=37`
Sent bytes (sentbyte)	Number of bytes sent.	`sentbyte=1850`
Sent packets (sentpkt)	Number of packets sent.	`sentpkt=25`
Action		
Action (action)	Status of the session. Uses following definitions: • Deny: blocked by firewall policy • Start: session start log (special option to enable logging at start of a session). This means firewall allowed. • All Others: allowed by Firewall Policy and the status indicates how it was closed.	`action=close`

GUI Field Name (Raw Field Name)	Field Description	Example Field Value in Raw Format
Policy (policyid)	Name of the firewall policy governing the traffic which caused the log message.	`policyid=1`
Policy UUID (poluuid)	UUID for the firewall policy.	`poluuid="707a0d88-c972-51e7-bbc7-4d421660557b"`
Policy Type (policytype)		`policytype="policy"`
Policy Mode (policymode)	Firewall policy mode.	`policymode="learn"`
Security		
Level (level)	Security level rating.	`level="notice"`
Other		
Event Time (eventtime)	Epoch time the log was triggered by FortiGate. If you convert the epoch time to human readable time, it might not match the Date and Time in the header owing to a small delay between the time the log was triggered and recorded. The Log Time field is the same for the same log among all log devices, but the Date and Time might differ.	`eventtime=1510775056`
Protocol Number (proto)	tcp: The protocol used by web traffic (tcp by default)	`proto=6`
Type (type)	Log type. See Type on page 52	`type="traffic"`
Log ID (logid)	Log ID. See Log ID definitions on page 61	`logid="0000000013"`
Sub Type(subtype)	Subtype of the traffic. See Subtype on page 52.	`subtype="forward"`
trandisp	NAT translation type.	`trandisp="snat"`
UTM Action (utmaction)	Security action performed by UTM.	`utmaction="allow"`
UTM Reference (utmref)	UTM reference number.	`utmref=0-220586`
UTM Reference (utmref)	UTM reference number.	`utmref=0-220586`

Log ID numbers

The ID (logid) is a 10-digit field. It is a unique identifier for that specific log and includes the following information about the log entry.

Log ID number components	Description	Examples
Log Type	Represented by the first two digits of the log ID.	• Traffic log IDs begin with "00". • Event log IDs begin with "01".
Sub Type or Event Type	Represented by the second two digits of the log ID.	• VPN log subtype is represented with "01" which belongs to the Event log type that is represented with "01". Therefore, all VPN related Event log IDs will begin with the 0101 log ID series.
Message ID	The last six digits of the log ID represent the message ID.	• An administrator account always has the log ID 0000003401.

The logid field is a number assigned to all permutations of the same message. It classifies a log entry by the nature of the cause of the log message, such as administrator authentication failures or traffic. Other log messages that share the same cause will share the same logid.

CEF support

You can configure FortiOS 7.4.11 to send logs to remote syslog servers in Common Event Format (CEF) by using the `config log syslogd setting` command.

When CEF is enabled, FortiOS sends logs to syslog servers in CEF. This section describes how FortiOS logs support CEF.

> You can view logs in CEF on remote syslog servers or FortiAnalyzer, but not in the FortiOS GUI.

FortiOS to CEF log field mapping guidelines

The following CEF format:

```
Date/Time host CEF:Version|Device Vendor|Device Product|Device Version|Signature
    ID|Name|Severity|[Extension]
```

Displays as following in FortiOS logs with CEF enabled:

```
"MMM dd HH:mm:ss" "hostname of the fortigate" CEF:0|Fortinet|Fortigate|version|logid|type:subtype
    +[eventtype] +[action] +[status]|reversed level|...
```

The `SignatureId` field in FortiOS logs maps to the `logid` field in CEF and should be last 5 digits of `logid`.

The `Name` field in CEF uses the following formula:

```
type:subtype + [eventtype] + [action] + [status]
```

Following is an example of the header and one key-value pair for extension from the Event VPN log in CEF:

```
#Feb 12 10:31:04 syslog-800c CEF:0|Fortinet|Fortigate|v5.6.0|37127|event:vpn negotiate
    success|3|FTNTFGTlogid=0101037127
```

The `type:subtype` field in FortiOS logs maps to the `cat` field in CEF.

Any fields in FortiOS logs that are unmatched to fields in CEF include the `FTNTFGT` prefix.

Quotes ("") are removed from FortiOS logs to support CEF.

Forward slashes (//) in string values as well as the equal sign (=) and backward slashes (\) are escaped in FortiOS logs to support CEF.

CEF priority levels

Following are the CEF priority levels. They are opposite of FortiOS priority levels. See also FortiOS priority levels on page 55.

Level (8 is highest)	Name	Description
8	Emergency	The system is unusable or not responding.
7	Alert	Immediate action required. Used in security logs.
6	Critical	Functionality is affected.
5	Error	An error exists and functionality could be affected.
4	Warning	Functionality could be affected.
3	Notification	Information about normal events.
2	Information	General information about system operations. Used in event logs to record configuration changes.
1	Debug	Debug information.

Examples of CEF support

This section includes examples of how the different types of log message support CEF.

Traffic log support for CEF

The following is an example of a traffic log on the FortiGate disk:

```
date=2018-12-27 time=11:07:55 logid="0000000013" type="traffic" subtype="forward" level="notice"

Custom fields

To configure the traffic log with custom fields, enter the following CLI commands:

```
config log custom-field
    edit 1
        set name "custom_name1"
        set value "HN123456"
    next
    edit 2
        set name "custom_name2"
        set value "accounting_dpt"
    next
```

```
        end
    config firewall policy
        edit 1
            set name "A-v4-out"
            set srcintf "port12"
            set dstintf "port11"
            set srcaddr "all"
            set dstaddr "all"
            set action accept
            set schedule "always"
            set service "ALL"
            set utm-status enable
            set logtraffic all
            set custom-log-fields "1" "2"
            set application-list "g-default"
            set ssl-ssh-profile "certificate-inspection"
            set nat enable
        next
    end
```

The following is an example of a traffic log with custom fields on the FortiGate disk:

SSH log support for CEF

The following is an example of an SSH log on the FortiGate disk:

```
date=2018-12-27 time=14:36:15 logid="1600061002" type="utm" subtype="ssh" eventtype="ssh-command"
       level="notice" vd="vdom1" eventtime=1545950175 policyid=1 sessionid=12921 user="bob"
       profile="test-ssh" srcip=10.1.100.11 srcport=56698 dstip=172.16.200.55 dstport=22
       srcintf="port12" srcintfrole="lan" dstintf="port11" dstintfrole="wan" proto=6
       action="passthrough" direction="outgoing" login="root" command="ls" severity="low"
```

The following is an example of an SSH sent in CEF format to a syslog server:

```
Dec 27 14:36:15 FGT-A-LOG CEF: 0|Fortinet|Fortigate|v6.0.3|61002|utm:ssh ssh-command

UTM extended logging

FortiOS 6.0.0 and later supports extended logging for UTM log types to reliable Syslog servers over TCP. Extended logging adds HTTP header information to the `rawdata` field in UTM log types. You must enable extended logging before you can use the feature.

When extended logging is enabled, the following HTTP header information can be added to the *rawdata* field in UTM logs:

- Method
- X-Forwarded-For
- Request-Content-Type | Response-Content-Type
- Referer
- User-Agent

The full *rawdata* field of 20KB is only sent to reliable Syslog servers. Other logging devices, such as disk, FortiAnalyzer, and UDP Syslog servers, receive the information, but only keep a maximum of 2KB total log length, including the *rawdata* field, and discard the rest of the extended log information.

Enabling extended logging

You can enable extended logging for the following UTM profiles:

- antivirus
- application
- dlp
- ips
- waf
- webfilter

When you enable the `extended-log` option for UTM profiles, all HTTP header information for HTTP-deny traffic is logged.

When you enable the `web-extended-all-action-log-enable` option for webfilter profile, all HTTP header information for HTTP-allow traffic is logged.

Extended logging option in UTM profiles

The `extended-log` option has been added to all UTM profiles, for example:

```
config webfilter profile
    edit "test-webfilter"
        set extended-log enable
```

```
            set web-extended-all-action-log enable
    next
end
config antivirus profile
    edit "av-proxy-test"
        set extended-log enable
    next
end
config waf profile
    edit "test-waf"
        set extended-log enable
    next
end
```

Syslog server mode

The Syslog server mode changed to `udp`, `reliable`, and `legacy-reliable`. You must set the mode to `reliable` to support extended logging, for example:

```
config log syslogd setting
    set status enable
    set server "<ip address>"
    set mode reliable
    set facility local6
end
```

Example 1: Extended log

Following is an example extended log for a `utm` log type with a *webfilter* subtype for a reliable Syslog server. The `rawdata` field contains the extended log data.

```
2: date=2022-03-07 time=14:15:27 eventtime=1646691327786322587 tz="-0800" logid="0316013056"

```

Example 2: Extended log for explicit proxy logging

The `rawdata` field with the `[REQ]` and `[RESP]` fields corresponds to the HTTP header monitor feature which monitors and logs headers in HTTP Request and Response. The request was sent through a FortiGate running transparent or explicit proxy.

```
1: date=2023-04-19 time=19:01:19 eventtime=1681956079146481995 tz="-0700" logid="0314012288"

Example 3: Extended log for DLP inspection

The following example shows DLP inspection being applied in a policy when `extended-log` is enabled in the DLP profile and DLP blocks the file.

```
config dlp profile
    edit "851560"
        set feature-set proxy
        config rule
            edit 1
                set name "851560"
                set proto http-get http-post
                set file-type 3
                set action block
            next
        end
        set extended-log enable
    next
end
```

locip	Local IP	ip	39
duration	Duration of the session. Ex: 180 (in seconds)	uint32	10
status	Status. Ex: status="blocked" , status= "start"	string	23
action	Action. Eg. block , allow	string	15
kind	Kind of service. Typically it will have value "call"	string	10
voip_proto	SIP/SCCP/MGCP/h323	string	4
profile	Name or number of associated VOIP profile	string	64
policy_id	Name of the firewall policy governing the traffic which caused the log message.	uint32	10
dst_int	Destination Interface	string	16
src_int	Name of the source interface. Ex: src_int="port1"	string	16
proto	Protocol number. Ex: for SIP it will be proto=17	uint8	3
dst_port	Destination port	uint16	5
dstip	Destination IP	ip	39
src_port	Port number of the traffic's origin. Ex: srcport=40772	uint16	5
srcip	IP address of the traffic's origin. Ex: srcip=10.1.100.155	ip	39
event_id	Unique event ID	uint32	10
epoch	Epoch	uint32	10
session_id	Session ID. Ex: session_id=232	uint32	10
tz	Time zone	string	5
eventtime	Time when event occured	uint64	20
vd	Name of the virtual domain in which the log message was recorded.	string	32

Log Field Name	Description	Data Type	Length
devid	Serial number of the device for the traffic's origin.	string	16
level	Log Level	string	11
subtype	Subtype	string	20
type	Type of log. Ex: type="utm"	string	16
logid	Unique Log ID	string	10
time	Hour clock when the log message was recorded.	string	8
date	Day, month, and year when the log message was recorded.	string	10
