## Change Log

Date	Change description
2025-03-28	FortiDevSec version 25.1.0 release document.

## Introduction

FortiDevSec is a cloud-based automated application security tool that performs intensive and comprehensive scans for an accurate vulnerability assessment of your application. It integrates continuous application security testing into major DevOps Continuous Integration (CI) Continuous Deployment (CD) environments, embedding itself into the process of developing and deploying applications to evaluate and detect security gaps that you can mitigate/remediate in the course of the Software Development LifeCycle (SDLC). The automated scanning process resides in your CI/CD pipeline and allows you to scan your applications without manual intervention and is completely non-intrusive with no disruptions to your setup. The easy-to-understand application security assessment approach of FortiDevSec allows you to build secure applications and involves a simple 3-step procedure that facilitates application scanning with minimal know-how of the application security domain. For detailed product overview, configuration, and usage procedures see the *FortiDevSec User Guide*.

## What's New

This release of FortiDevSec includes the following new features.

**Note:** Scanner docker images must be updated using `docker pull <image>` command to the latest version to use the new features.

Feature	Description
Analytics Reports	The following new features are added. <ul style="list-style-type: none"><li>You can now export application level PDF reports.</li><li>Revamped organization level PDF reports now offer enhanced readability and detail.</li></ul>

Stay on the *Analytics > Application Level* page during report generation to ensure accurate and complete reports.

---

## Product Integration and Support

The following table lists the latest supported/tested web browsers for FortiDevSec version 25.1.0:

Item	Supported version
Web browser	<ul style="list-style-type: none"><li>• Microsoft Edge version 122.0.2365.92 (Official build) (64-bit)</li><li>• Mozilla Firefox version 124.0 (64-bit)</li><li>• Google Chrome version 122.0.6261.129 (Official Build) (64-bit)</li><li>• Apple Safari version 17.4</li></ul> <p>Other web browsers may work correctly but Fortinet does not support them.</p>

## Resolved Issues

The following issues have been resolved in FortiDevSec version 25.1.0.

Issue ID	Description
1095898	The <i>Accept</i> and <i>Decline</i> links in the request email do not redirect to the <i>Group Request</i> page.
1120867	The scan freezes when the <i>update app</i> API is used during a scan.
1117747	<i>False Positive / Risk Accepted</i> vulnerabilities are included in Risk Rating calculations, causing pipeline failures when <i>fail_pipeline</i> is enabled with a threshold.
891704	Scans initiated from the master user account on sub user's account fails if the sub user has not logged in to FortiDevSec GUI at least once.

## Known Issues

The following are known issues in FortiDevSec version 25.1.0.

Issue ID	Description
1083257	The <i>Vulnerability Catalog</i> page may experience slow loading times when displaying vulnerabilities.
1083256	The <i>file path</i> , <i>outbreak alert links</i> , and <i>similar occurrence data</i> are missing in the report exported from <i>Vulnerability Catalog</i> page.
1076581	The <i>consolidated scan results API</i> may generate incomplete data in the <i>result.csv</i> file when the <i>group instances</i> field exceeds 32,760 characters.
1012904	JFrog CI integration with GitHub/GitLab is not populating Branch ID and Commit ID.
1049531	Inconsistent vulnerability count in <i>Analytics &gt; Organization Level &gt; Top Vulnerable Apps</i> section for demo accounts.
1093537	Users with read permission are able to perform SAST and DAST scans.
1099238	<i>Accept</i> and <i>Reject</i> links in the notification email for shared group join request are not redirecting to the <i>Group Requests</i> page.
1083255	<i>Vulnerabilities</i> widget in <i>App Directory &gt; Application</i> page displays incorrect vulnerability counts by severity.
1050034	Vulnerability Compliance chart missing in organization level PDF report for some users.
1139229	The <i>Application Risk Rating</i> and <i>Scan Comparison</i> charts render incorrectly in the downloaded PDF report when zoom level is not 100%.
1139223	PDF reports generated are sent to the master user's email address instead of the logged-in user's email.
1131953	Old Jira API token is used even after token is updated, causing project fetch failures.
1127401	The <i>Average Window of Exposure</i> graph displays incorrect legends until mouse hover.
1136085	Created applications may not appear during application group creation.
