Change log

Date	Change Description
2025-07-03	Initial release.
2025-11-19	Updated Introduction on page 5 and Product integration and support on page 17 .

Introduction

For most security and IT teams, visibility into data is fractured across multiple cloud and on-premise data stores and locations, resulting in fragmented data security coverage and low visibility into the current state of the organization's data security posture.

Leveraging AI machine learning, FortiData provides a centralized view of the sprawl of sensitive data across your Microsoft SharePoint (both on-premise and cloud), AWS, and Samba (SMB) environments by discovering, classifying, and labeling sensitive data using its advanced data recognition and customizable data types. You can also configure scans to access and analyze files in a target location with a proper schedule.

FortiData supports integration with the following Fortinet security fabric products:

- [FortiGate](#) (7.6.4 or later)
- [FortiClient](#) (7.4.4 or later)

FortiData aims to strengthen data security in Fortinet security fabric and ensure that sensitive data is adequately protected at the endpoint, edge, on-premise, and in the cloud, whether the data is in transit or at rest.

The Release Notes cover product support and integration and known issues for FortiData 7.6.1, build 0103.

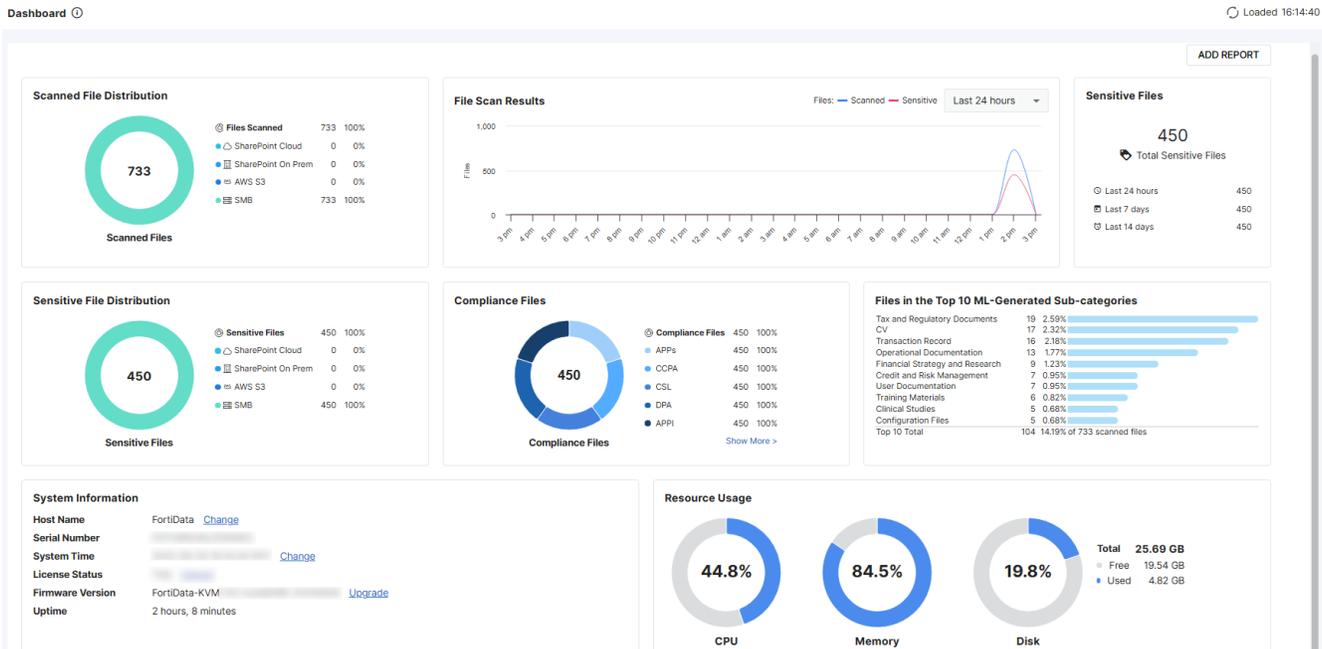

What's new

The following sections describe new features, enhancements, and changes in FortiData 7.6.1:

- [Dashboard](#) on page 6
- [Analytics](#) on page 7
- [Discovery](#) on page 8
- [Data Types](#) on page 10
- [Data Labels](#) on page 12
- [Logs & Reports](#) on page 13
- [System](#) on page 15
- [Cloud](#) on page 16

Dashboard

FortiData 7.6.1 has a brand new dashboard for enhanced usability and experience. New widgets are added for sensitive file distribution, compliance files, and files in the top 10 ML-generated sub-categories.

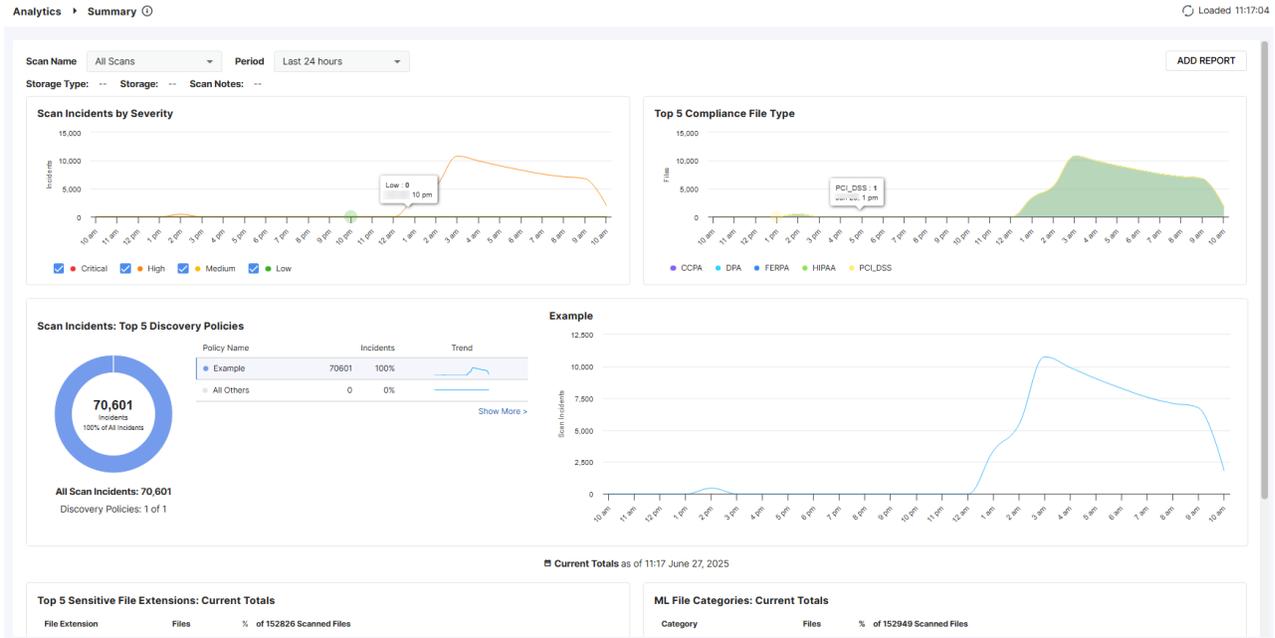

You can also add dashboard reports using the *ADD REPORT* button on the top-right corner. Reports will then be available in the *Logs & Reports > Reports* page.

See [Dashboard](#) in the Administration Guide for more details.

Analytics

FortiData 7.6.1 adds the *Analytics* menu with the following features:

- A summary of scan results with interactive graphs and charts

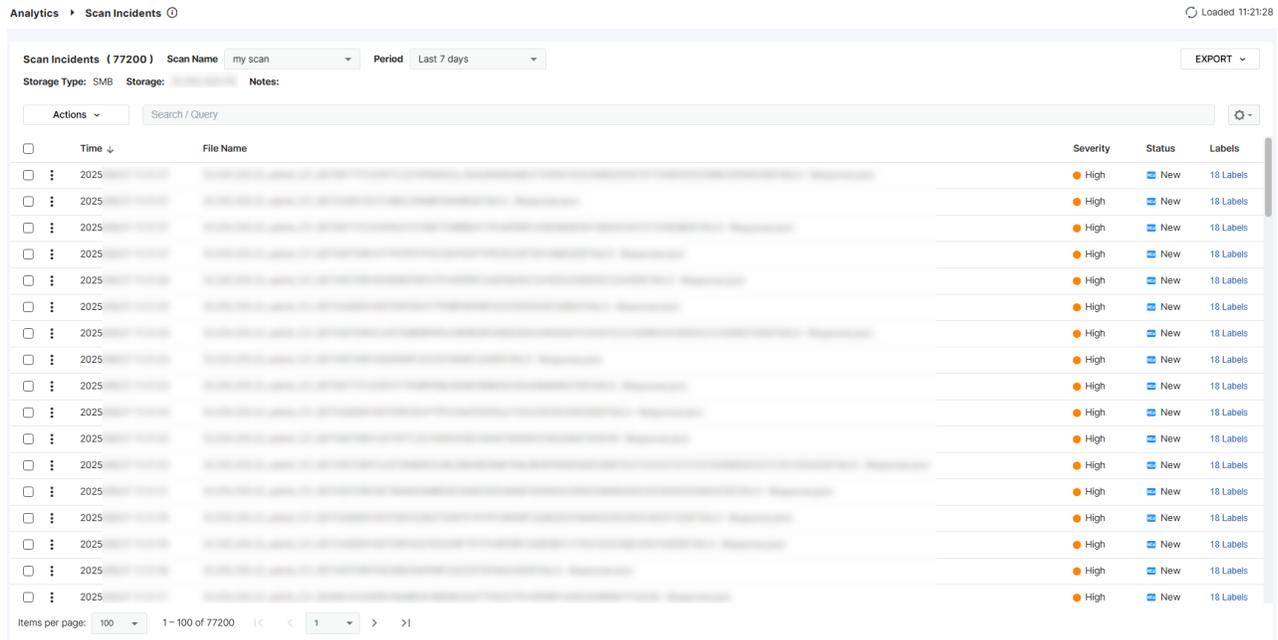

- A list of scanned files with assigned labels

The screenshot shows the 'Analytics > Files' dashboard. It features a 'Scanned Files (733)' header with filters for 'Scan Name' (Example) and 'Period' (Last 7 days). An 'EXPORT' button is present. Below the filters is a search bar and a table of scanned files.

File Name	Standard Data Types	Custom Data Types	ML Category	ML Subcategory	Category Confidence	Labels	Quarantined	Copied	Extension	Size	Storage Type	Storage
...	1	0	Other		60	18 Labels			py	1 KB	SMB	
...	1	0	Other		60	18 Labels			md	1 KB	SMB	
...	1	0	Other		60	18 Labels			tif	293 KB	SMB	
...	1	0	Other		60	18 Labels			php	1 KB	SMB	
...	1	0	Other		60	18 Labels			go	1 KB	SMB	
...	1	0	Other		60	18 Labels			odp	1 KB	SMB	
...	1	0	Other		60	18 Labels			avif	4 KB	SMB	
...	1	0	Other		60	18 Labels			webp	4 KB	SMB	
...	1	0	Other		60	18 Labels			txt	1 KB	SMB	
...	1	0	Other		60	18 Labels			rtf	1 KB	SMB	
...	1	0	Other		60	18 Labels			gif	5 KB	SMB	
...	1	0	Other		60	18 Labels			png	6 KB	SMB	
...	1	0	Other		60	18 Labels			tiff	15 KB	SMB	
...	1	0	Other		60	18 Labels			java	1 KB	SMB	
...	1	0	Other		60	18 Labels			cpp	1 KB	SMB	
...	1	0	Other		60	18 Labels			pdf	1 KB	SMB	
...	1	0	Other		60	18 Labels			inn	7 KB	SMB	

At the bottom, there is a pagination control showing 'Items per page: 100' and '1 - 100 of 733'.

- Detailed log of each scan incidents

Discovery

The *Scans* and *Policies* pages are moved under the new *Discovery* menu with the following features and enhancements:

- [Copying or quarantining files on page 8](#)
- [New scan file type support on page 8](#)
- [Configuring ML classification precision level on page 9](#)

Copying or quarantining files

You can now configure FortiData to copy or move sensitive files to a specific directory for further investigation by creating a copy or quarantine profile and then applying the profile to your scan and enabling the copy/quarantine action in your policy.

See [Profiles](#) in the Administration Guide for more details.

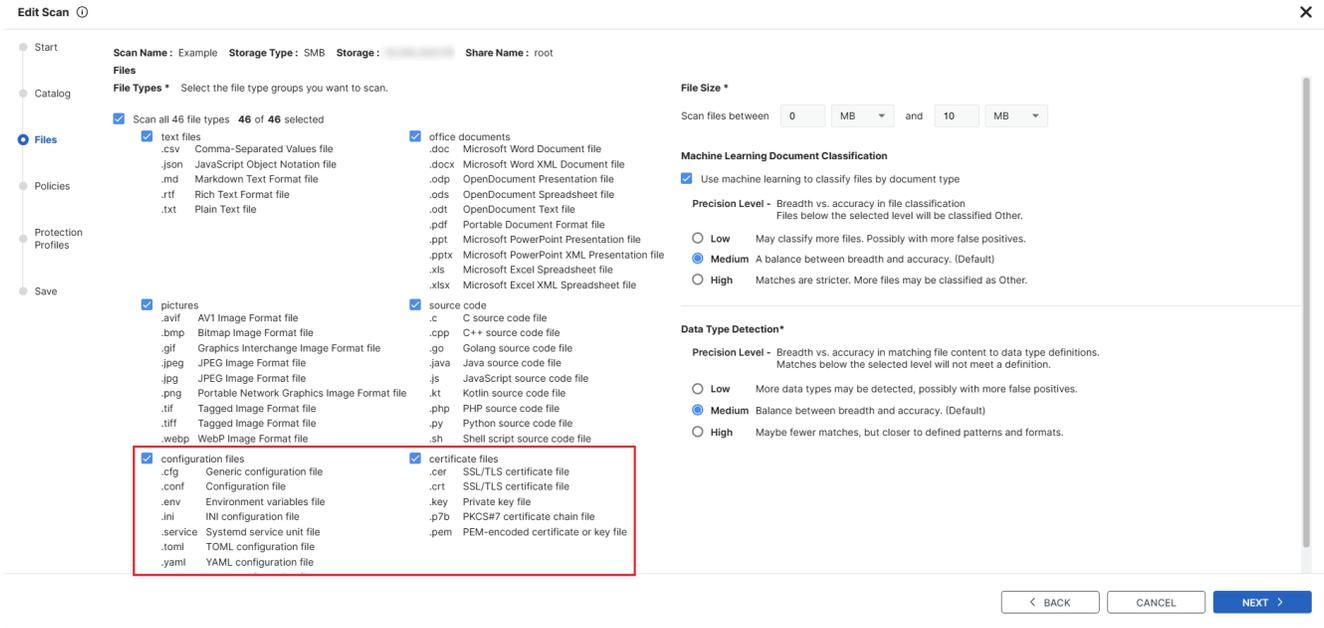

New scan file type support

FortiData 7.6.1 adds support for scanning the following file types:

- **Configuration files**—Includes the following file extensions: `.cfg`, `.conf`, `.env`, `.ini`, `.service`, `.toml`, `.yaml`.

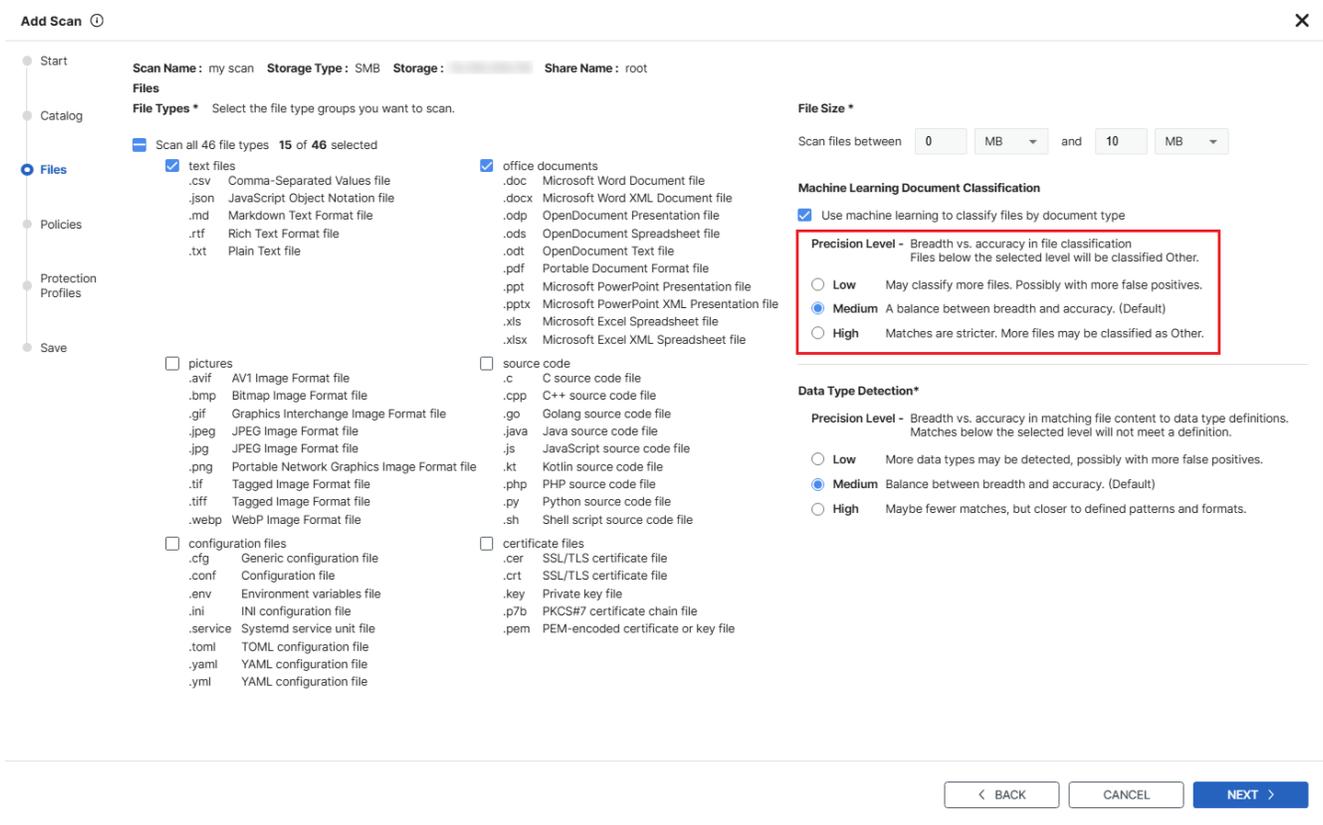

- **Certificate files**—Includes the following file extensions: .cer, .crt, .key, .p7b, .pem.

You can select the file types to scan when configuring a scan. See [Scans](#) in the Administration Guide for more details.

Configuring ML classification precision level

In FortiData 7.6.1, you can configure the precision level for machine learning classification when configuring a scan (see [Scans](#)).

Data Types

FortiData 7.6.1 includes the following enhancements to data types:

- [EDM and IDM support on page 10](#)
- [Changes to machine learning \(ML\) data types on page 11](#)

EDM and IDM support

FortiData 7.6.1 adds support for the following [Data Types](#):

- **EDM (Exact Data Match)**—Identifies particular data values within an indexed data source that require safeguarding.
- **IDM (Indexed Document Matching)**—Creates unique fingerprints for your organization’s crucial documents that hold sensitive information. This process involves analyzing the content of these documents and generating a checksum for each one.

Changes to machine learning (ML) data types

FortiData 7.6.1 includes the following enhancements and changes to ML [Data Types](#):

New ML data types	Main type	Sub- types
	Finance	Tax and Regulatory Documents Expense and Reimbursement Records Loan and Financing Agreements Audit and Assurance Documents
	HR NEW	CV Employee Record Performance Review Recruitment Timesheet
	Information Technology	Log
	Legal NEW	Contracts and Agreements License Agreement NDA Form Patent
	Source Code NEW	C# C Language Golang Java JavaScript Kotlin PHP Python Shell
Changed ML data types	<ul style="list-style-type: none"> • <i>Strategy and Research</i> is renamed <i>Financial Strategy and Research</i> • <i>Legal and Compliance</i> is renamed <i>Compliance and Risk Management</i> • <i>Research</i> is renamed <i>Clinical Studies</i> 	

Removed ML data types	Legal and Compliance
	Research
	Education
	Manufacture

Data Labels

FortiData 7.6.1 includes the following enhancements and changes to [data labels](#):

- Machine learning (ML) labels are integrated into the *Data Classification* category under standard labels with the following additions and changes:

New ML labels	Tax and Regulatory Documents
	Expense and Reimbursement Records
	Loan and Financing Agreements
	Audit and Assurance Documents
	HR
	CV
	Employee Record
	Performance Review
	Recruitment
	Timesheet
	Log
	Legal
	Contracts and Agreements
	License Agreement
	NDA Form
	Patent
	Source Code
	C#
	C Language
	Golang

	Java
	JavaScript
	Kotlin
	PHP
	Python
	Shell
Changed ML labels	<ul style="list-style-type: none"> • <i>Strategy and Research</i> is renamed <i>Financial Strategy and Research</i> • <i>Legal and Compliance</i> is renamed <i>Compliance and Risk Management</i> • <i>Research</i> is renamed <i>Clinical Studies</i>
Removed ML labels	<ul style="list-style-type: none"> Legal and Compliance Research Education Manufacture

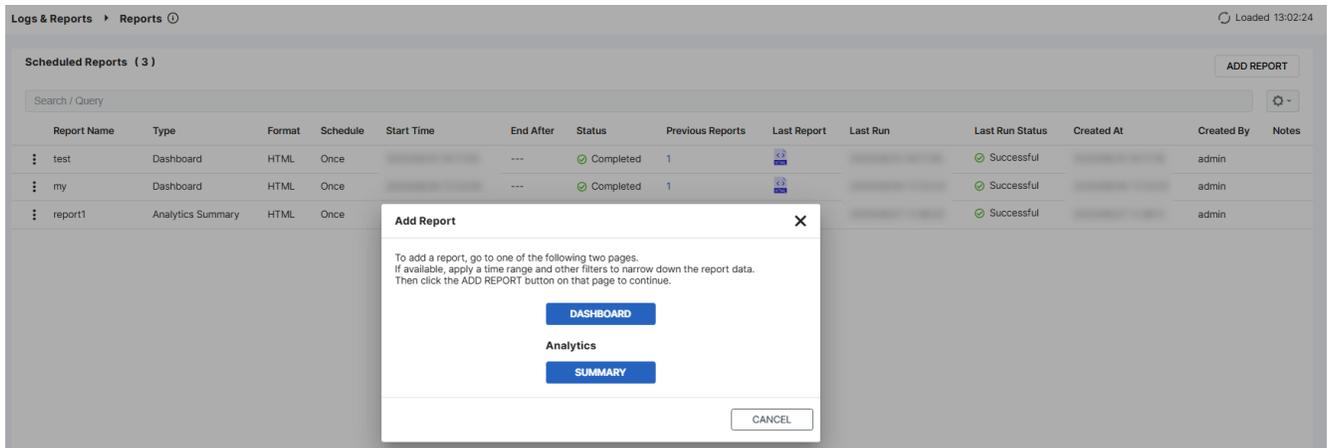

- Standard labels include the following additions and changes:

New standard label	HIPAA
Changed standard labels	<ul style="list-style-type: none"> • <i>Highly Confidential</i> is split into two labels: <i>Highly Confidential</i> and <i>Restricted</i>. • <i>Certificates and Credential</i> is integrated into <i>Credentials and Keys</i>
Removed standard labels	<ul style="list-style-type: none"> PHI PII

Logs & Reports

On the new *Logs & Reports > Reports* page, you can create one-time or recurring dashboard and analytics summary reports (in HTML or PDF format) for a specific time period. You can then download the report by clicking the file icon in the *Last Report* column.

What's new

The screenshot displays the 'Logs & Reports' section, specifically the 'Reports' tab. It shows a table of 'Scheduled Reports (3)' with columns for Report Name, Type, Format, Schedule, Start Time, End After, Status, Previous Reports, Last Report, Last Run, Last Run Status, Created At, Created By, and Notes. Three reports are listed: 'test' (Dashboard, HTML, Once), 'my' (Dashboard, HTML, Once), and 'report1' (Analytics Summary, HTML, Once). All reports have a status of 'Completed' and were created by 'admin'. An 'ADD REPORT' button is visible in the top right corner. A modal dialog box titled 'Add Report' is open in the foreground, providing instructions on how to add a report and offering two options: 'DASHBOARD' and 'SUMMARY' under the 'Analytics' category. A 'CANCEL' button is also present at the bottom of the dialog.

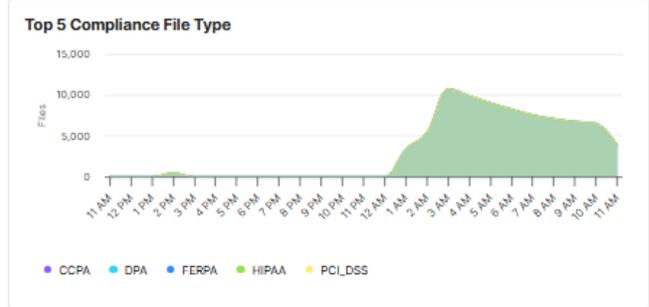

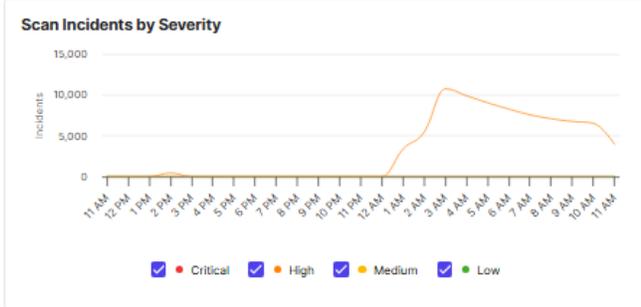

Report Name	Type	Format	Schedule	Start Time	End After	Status	Previous Reports	Last Report	Last Run	Last Run Status	Created At	Created By	Notes
test	Dashboard	HTML	Once		---	Completed	1			Successful		admin	
my	Dashboard	HTML	Once		---	Completed	1			Successful		admin	
report1	Analytics Summary	HTML	Once							Successful		admin	

Below is an example report:

FortiData Report for Analytics Summary

Report Name: report Period: Last 24 hours
 Timestamp: Schedule: Once on 2025- PDT
 Scan Name: All Scans Storage: All
 Created by: admin

Notes:

Top 5 Sensitive File Extensions: Current Totals

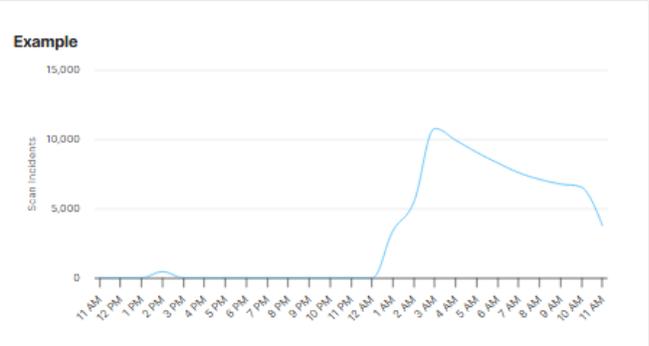

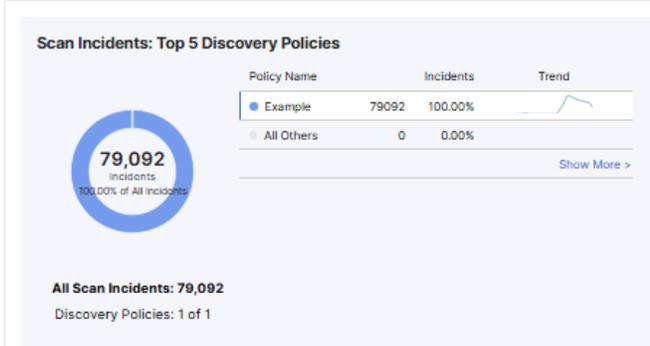

File Extension	Files	% of 170292 Scanned Files
.JSON	76,317	44.82%
.PY	1,379	0.81%
.PDF	805	0.47%
.JPG	117	0.07%
.TXT	107	0.06%
Top 5 Totals	79,097	46.45%

[Show More >](#)

ML File Categories: Current Totals

Category	Files	% of 170352 Scanned Files
Information Technology	66,861	39.25%
Source Code	9,516	5.59%
Finance	100	0.06%
Legal	95	0.06%
HR	94	0.06%
Healthcare	87	0.05%
Other	92,762	54.45%
Total Categorized Files	169,515	99.51%

System

This section includes information about system related new features:

- Integration with FortiGuard on page 16
- Adding static routes on page 16
- Certificate enhancements on page 16

Integration with FortiGuard

FortiData 7.6.1 uses the following FortiGuard packages which you can upgrade with the corresponding license:

- **ML Classification Model**—For machine learning classification of the documents.
- **NLP Model**— For recognizing data types from the target files.
- **Data Type Database**—For data type definition, including keyword, regex patterns, predefined rule templates and other related attributes.

See [FortiGuard](#) in the Administration Guide for more details.

Adding static routes

FortiData 7.6.1 allows you to configure static routes to the system on the top of the existing default static route.

See [Static Route](#) in the Administration Guide for more details.

Certificate enhancements

FortiData 7.6.1 adds the following enhancements to certificates:

- You can now import a customized TLS certificate using an existing certificate .zip file.
- You can now import a custom CA certificate.

See [Certificates](#) in the Administration Guide for more details.

Cloud

FortiData 7.6.1 adds support for AWS. For detailed instructions about deploying FortiData on AWS, refer to the FortiData AWS Deployment Guide.

Product integration and support

The following table lists product integration and support information for FortiData 7.6.1 build 0103:

Type	Product and version
Fortinet products	<ul style="list-style-type: none">• FortiGate 7.6.4 or later• FortiClient 7.4.4 or later
Web browsers	Google Chrome version 130 or later <hr/>  Other web browsers may work correctly, but Fortinet does not support them. <hr/>
Virtualization environments	Fortinet recommends running the FortiData VM with at least 16 GB of memory. Refer to the FortiData Private Cloud Deployment Guides for detailed deployment instructions. KVM Linux kernel 2.6, 3.0, 3.1 or later ESXi 7.0 or later
Cloud platforms	AWS (Amazon Web Services) 

Upgrade information

You can also upgrade an existing FortiData deployment to 7.6.1. Refer to [Product integration and support on page 17](#) for a list of supported platforms.

Downloading the firmware file

1. Go to <https://support.fortinet.com>.
2. Click *Login* and log in to the Fortinet Support website.
3. From the *Support > Downloads* menu, select *Firmware Download*.
4. In the *Select Product* dropdown menu, select *FortiData*.
5. On the *Download* tab, navigate to the FortiData firmware file for your FortiData VM platform in the *Image Folders/Files* section. *.out* files are for upgrade or downgrade. *.zip* and *.gz* files are for new deployments.
6. Click *HTTPS* to download the firmware that meets your needs.

Upgrading the FortiData

To upgrade your FortiData to 7.6.1:

1. In the Dashboard, click *Upgrade* in the *System Information* widget.
2. Click *Browse*.
3. Select the firmware file you just downloaded and click *Open*.
4. Click *Upgrade*.

The system will reboot automatically after the upgrade is complete.

Resolved issues

The following issues have been fixed in FortiData 7.6.1. For inquiries about a particular bug, please contact [Customer Service & Support](#).

Description	Bug ID
1106229	Drive License file is categorized as Manufacture.
1107597	Passports are incorrectly classified as Finance.
1117166	No log records for editing the users.
1118562	Import cert failed with error: A duplicate file name already exists.
1120944	The upgrade will fail if the disk space is less than 10 GB.
1122965	The firmware upgrade will proceed even if the file download fails.

Known issues

FortiData 7.6.1 includes the known issues listed in this section. For inquiries about a particular bug, please contact [Customer Service & Support](#).

Bug ID	Description
1113782	Health problem can be recognized in CSV but not in Excel.
1121871	The power off signal is not effective for the KVM instance.
1122965	Enhancement to show single view of files categorized in multiple locations.
1167084	Cannot scan files in buckets of the directory type on AWS.
1167461	No support for configuring multiple AWS cloud trails.
1169031	No firmware version information in the report file.
1174560	Certificates inherited from 7.6.0 no longer have source value after the upgrade to 7.6.1.
