Change Log

Date	Change Description
June 3, 2025	Initial release.

Introduction

This document provides a list of new features and changes, and product integration support information for FortiAppSec Cloud 25.2. Please review all sections of this document before using this service.

FortiAppSec Cloud is an advanced SaaS based, cloud-native Web Application and API Protection (WAAP) platform designed to defend web applications and APIs from modern cyber threats. It delivers a unified security framework that combines cutting-edge threat intelligence, AI-driven detection, and automated response capabilities, ensuring comprehensive protection against evolving attack vectors.

- **Web Application Firewall (WAF)**

Protects web and API applications from OWASP Top 10 threats, zero-day vulnerabilities, and sophisticated Layer 7 attacks with adaptive security policies and real-time threat intelligence.

- **DDoS**

Mitigates network and application layer attacks, featuring real-time customizations, automation, and a 24/7 SOC.

- **Advanced Bot Protection**

Detects and mitigates malicious automated traffic, preventing attacks such as bot-driven scraping, credential stuffing, account takeovers, and API abuse through behavioral analysis and machine learning.

- **Global Server Load Balancer (GSLB)**

Enhances application availability and resilience by distributing traffic across multiple data centers or cloud environments, reducing latency and ensuring business continuity.

- **Threat Analytics**

Leverages AI-powered analytics to correlate security events across your application stack, filtering out false positives and highlighting critical incidents that require immediate attention.

What's new

FortiAppSec Cloud 25.2 offers the following new features:

Contract and License Update

FortiAppSec Cloud has expanded supported contract and license offerings, and restructured license offerings for some products.

Enterprise Plan Support

FortiAppSec Cloud introduces the Enterprise plan, an all-inclusive annual subscription that bundles Advanced WAF features, Advanced Bot Protection, DAST, and GSLB services into one plan. Pricing is simplified to a predictable bandwidth-only model.

For more information, please refer to [License & Contract](#).

AWS, Azure, and GCP Marketplace License Support

You can now purchase and manage FortiAppSec Cloud contracts through AWS, Azure, and GCP marketplaces.

For more information on the new license options, please refer to [Public Cloud Marketplace subscriptions](#).

If you are looking to transfer a legacy FortiWeb Cloud Marketplace License to the FortiAppSec Cloud AWS, Azure, or GCP license, please refer to [Migrating from existing Fortinet services](#).

FortiFlex License Support

FortiAppSec Cloud now supports FortiFlex, a flexible, usage-based security licensing program from Fortinet that allows organizations to provision FortiAppSec Cloud on-demand, paying only for what you consume. It eliminates the need for pre-planning, over-provisioning, or under-provisioning, offering a simplified and flexible licensing model.

For more information on this new license option, please refer to [FortiFlex](#).

If you are looking to transfer a legacy FortiFlex entitlement to the FortiAppSec Cloud Fortiflex entitlement, please refer to [Migrating from existing Fortinet services](#).

Advanced Bot Protection and DAST Contract Model Update

Dynamic Application Security Testing (DAST) and Advanced Bot Protection (ABP) are now included in the Advanced and Enterprise subscription plans respectively. These services are no longer available as standalone contracts. For more information, please refer to [License & Contract](#).

GSLB

DNSSEC Enhancement

The DNSSEC feature in GSLB been enhanced with advanced cryptographic algorithms, providing stronger protection against DNS spoofing and related threats.

For more information on how to enable this feature, please refer to [How to enable DNSSEC on GSLB](#).

Multi-Region Health Check Support

FortiAppSec Cloud GSLB now supports health checks from additional areas: **Europe** and **Asia Pacific**, alongside the existing **North America** option.

When configuring a health check, you can select its **area** of origin. Multiple health checks from different areas can be assigned to the same virtual server. GSLB aggregates results from all selected areas to determine server health, improving the accuracy of global availability monitoring.

For the list of IP addresses to add to your application's allowlist, please refer to [Health check](#).

Enhanced Server Status Descriptions

When a server or virtual server is marked as down, the web portal now displays the specific reason.

Hovering over the **server status** icons on the [Topology](#) and [FQDN](#) pages reveals detailed messages with clear diagnostic information.

AWS Connector Load Balancing Support

GSLB now supports load balancing with AWS connectors using CNAME record types and single-record responses. This enhancement enables AWS-based applications to participate in traffic distribution. Only CNAME records are supported when using AWS connectors.

For more information, please refer to [Fabric connectors with AWS and Azure](#).

Topology Page Filtering

The [Topology](#) page now includes a **filter** option, allowing you to quickly locate specific servers or virtual servers by name or status.

Advanced Bot Protection

FortiWeb Version Requirement Update

Advanced Bot Protection integration with FortiWeb now requires FortiWeb version 7.4.8 or later for continued compatibility.

Product integration and supported web browsers

This section lists the product integrations and web browsers supported by FortiAppSec Cloud 25.2.

Supported products for ABP Integration:

Product	Tested Versions
FortiWeb	FortiWeb 7.4.8 and later versions
FortiADC	FortiADC 7.4.3 and later versions

Supported web browsers:

- Mozilla Firefox 59 and later versions
- Google Chrome 65 and later versions

We strongly recommend you set either of the web browsers as your default web browser when working with FortiAppSec Cloud. You may also use other (versions of the) browsers, but you may encounter certain issues with FortiAppSec Cloud's Web GUI.

Resolved issues

This release has no resolved issues. For inquiries about particular bugs, please contact [Fortinet Customer Service & Support](#).

Known issues

There are no known issues in FortiAppSec Cloud version 25.2. For inquiries on particular bugs, please contact [Fortinet Customer Service & Support](#).
