	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>receive</i></td><td>Receive ORF lists.</td></tr><tr><td><i>send</i></td><td>Send ORF list.</td></tr><tr><td><i>both</i></td><td>Send and receive ORF lists.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>receive</i>	Receive ORF lists.	<i>send</i>	Send ORF list.	<i>both</i>	Send and receive ORF lists.			
	Option	Description												
	<i>none</i>	None.												
	<i>receive</i>	Receive ORF lists.												
	<i>send</i>	Send ORF list.												
<i>both</i>	Send and receive ORF lists.													
capability-route-refresh	Enable/disable advertise route refresh capability to this neighbor.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
	Option	Description												
	<i>enable</i>	Enable setting.												
<i>disable</i>	Disable setting.													
connect-timer	Interval (sec) for connect timer.	integer	Minimum value: 1 Maximum value: 65535	4294967295										
default-originate-routemap	Route map to specify criteria to originate IPv4 default.	string	Maximum length: 35											
default-originate-routemap6	Route map to specify criteria to originate IPv6 default.	string	Maximum length: 35											
description	Description.	string	Maximum length: 63											
distribute-list-in	Filter for IPv4 updates from this neighbor.	string	Maximum length: 35											
distribute-list-in-vpnv4	Filter for VPNv4 updates from this neighbor.	string	Maximum length: 35											
distribute-list-in-vpnv6	Filter for VPNv6 updates from this neighbor.	string	Maximum length: 35											

Parameter	Description	Type	Size	Default						
distribute-list-in6	Filter for IPv6 updates from this neighbor.	string	Maximum length: 35							
distribute-list-out	Filter for IPv4 updates to this neighbor.	string	Maximum length: 35							
distribute-list-out-vpnv4	Filter for VPNv4 updates to this neighbor.	string	Maximum length: 35							
distribute-list-out-vpnv6	Filter for VPNv6 updates to this neighbor.	string	Maximum length: 35							
distribute-list-out6	Filter for IPv6 updates to this neighbor.	string	Maximum length: 35							
dont-capability-negotiate	Do not negotiate capabilities with this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
ebgp-enforce-multihop	Enable/disable allow multi-hop EBGp neighbors.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
ebgp-multihop-ttl	EBGP multihop TTL for this peer.	integer	Minimum value: 1 Maximum value: 255	255						
filter-list-in	BGP filter for IPv4 inbound routes.	string	Maximum length: 35							
filter-list-in-vpnv4	BGP filter for VPNv4 inbound routes.	string	Maximum length: 35							
filter-list-in-vpnv6	BGP filter for VPNv6 inbound routes.	string	Maximum length: 35							
filter-list-in6	BGP filter for IPv6 inbound routes.	string	Maximum length: 35							
filter-list-out	BGP filter for IPv4 outbound routes.	string	Maximum length: 35							

Parameter	Description	Type	Size	Default						
filter-list-out-vpnv4	BGP filter for VPNv4 outbound routes.	string	Maximum length: 35							
filter-list-out-vpnv6	BGP filter for VPNv6 outbound routes.	string	Maximum length: 35							
filter-list-out6	BGP filter for IPv6 outbound routes.	string	Maximum length: 35							
holdtime-timer	Interval (sec) before peer considered dead.	integer	Minimum value: 3 Maximum value: 65535	4294967295						
interface	Specify outgoing interface for peer connection. For IPv6 peer, the interface should have link-local address.	string	Maximum length: 15							
ip	IP/IPv6 address of neighbor.	string	Maximum length: 45							
keep-alive-timer	Keep alive timer interval (sec).	integer	Minimum value: 0 Maximum value: 65535	4294967295						
link-down-failover	Enable/disable failover upon link down.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
local-as	Local AS number of neighbor.	user	Not Specified							
local-as-no-prepend	Do not prepend local-as to incoming updates.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
local-as-replace-as	Replace real AS with local-as in outgoing updates.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default
maximum-prefix	Maximum number of IPv4 prefixes to accept from this peer.	integer	Minimum value: 1 Maximum value: 4294967295	0
maximum-prefix-evpn	Maximum number of L2VPN EVPN prefixes to accept from this peer.	integer	Minimum value: 1 Maximum value: 4294967295	0
maximum-prefix-threshold	Maximum IPv4 prefix threshold value (1 - 100 percent).	integer	Minimum value: 1 Maximum value: 100	75
maximum-prefix-threshold-evpn	Maximum L2VPN EVPN prefix threshold value (1 - 100 percent).	integer	Minimum value: 1 Maximum value: 100	75
maximum-prefix-threshold-vpnv4	Maximum VPNv4 prefix threshold value (1 - 100 percent).	integer	Minimum value: 1 Maximum value: 100	75
maximum-prefix-threshold-vpnv6	Maximum VPNv6 prefix threshold value (1 - 100 percent).	integer	Minimum value: 1 Maximum value: 100	75
maximum-prefix-threshold6	Maximum IPv6 prefix threshold value (1 - 100 percent).	integer	Minimum value: 1 Maximum value: 100	75
maximum-prefix-vpnv4	Maximum number of VPNv4 prefixes to accept from this peer.	integer	Minimum value: 1 Maximum value: 4294967295	0
maximum-prefix-vpnv6	Maximum number of VPNv6 prefixes to accept from this peer.	integer	Minimum value: 1 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default						
maximum-prefix-warning-only	Enable/disable IPv4 Only give warning message when limit is exceeded.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
maximum-prefix-warning-only-evpn	Enable/disable only sending warning message when exceeding limit of L2VPN EVPN routes.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
maximum-prefix-warning-only-vpnv4	Enable/disable only giving warning message when limit is exceeded for VPNv4 routes.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
maximum-prefix-warning-only-vpnv6	Enable/disable warning message when limit is exceeded for VPNv6 routes.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
maximum-prefix-warning-only6	Enable/disable IPv6 Only give warning message when limit is exceeded.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default						
maximum-prefix6	Maximum number of IPv6 prefixes to accept from this peer.	integer	Minimum value: 1 Maximum value: 4294967295	0						
next-hop-self	Enable/disable IPv4 next-hop calculation for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
next-hop-self-rr	Enable/disable setting nexthop's address to interface's IPv4 address for route-reflector routes.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
next-hop-self-rr6	Enable/disable setting nexthop's address to interface's IPv6 address for route-reflector routes.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
next-hop-self-vpnv4	Enable/disable setting VPNv4 next-hop to interface's IP address for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
next-hop-self-vpnv6	Enable/disable use of outgoing interface's IP address as VPNv6 next-hop for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default
next-hop-self6	Enable/disable IPv6 next-hop calculation for this neighbor.	option	-	disable
	Option Description			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
override-capability	Enable/disable override result of capability negotiation.	option	-	disable
	Option Description			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
passive	Enable/disable sending of open messages to this neighbor.	option	-	disable
	Option Description			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
password	Password used in MD5 authentication.	password	Not Specified	
prefix-list-in	IPv4 Inbound filter for updates from this neighbor.	string	Maximum length: 35	
prefix-list-in-vpnv4	Inbound filter for VPNv4 updates from this neighbor.	string	Maximum length: 35	
prefix-list-in-vpnv6	Inbound filter for VPNv6 updates from this neighbor.	string	Maximum length: 35	
prefix-list-in6	IPv6 Inbound filter for updates from this neighbor.	string	Maximum length: 35	
prefix-list-out	IPv4 Outbound filter for updates to this neighbor.	string	Maximum length: 35	
prefix-list-out-vpnv4	Outbound filter for VPNv4 updates to this neighbor.	string	Maximum length: 35	
prefix-list-out-vpnv6	Outbound filter for VPNv6 updates to this neighbor.	string	Maximum length: 35	
prefix-list-out6	IPv6 Outbound filter for updates to this neighbor.	string	Maximum length: 35	
remote-as	AS number of neighbor.	user	Not Specified	

Parameter	Description	Type	Size	Default						
remove-private-as	Enable/disable remove private AS number from IPv4 outbound updates.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
remove-private-as-evpn	Enable/disable removing private AS number from L2VPN EVPN outbound updates.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
remove-private-as-vpnv4	Enable/disable remove private AS number from VPNv4 outbound updates.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
remove-private-as-vpnv6	Enable/disable to remove private AS number from VPNv6 outbound updates.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
remove-private-as6	Enable/disable remove private AS number from IPv6 outbound updates.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
restart-time	Graceful restart delay time (sec, 0 = global default).	integer	Minimum value: 0 Maximum value: 3600	0						

Parameter	Description	Type	Size	Default
retain-stale-time	Time to retain stale routes.	integer	Minimum value: 0 Maximum value: 65535	0
route-map-in	IPv4 Inbound route map filter.	string	Maximum length: 35	
route-map-in-evpn	L2VPN EVPN inbound route map filter.	string	Maximum length: 35	
route-map-in-vpnv4	VPNv4 inbound route map filter.	string	Maximum length: 35	
route-map-in-vpnv6	VPNv6 inbound route map filter.	string	Maximum length: 35	
route-map-in6	IPv6 Inbound route map filter.	string	Maximum length: 35	
route-map-out	IPv4 outbound route map filter.	string	Maximum length: 35	
route-map-out-evpn	L2VPN EVPN outbound route map filter.	string	Maximum length: 35	
route-map-out-preferable	IPv4 outbound route map filter if the peer is preferred.	string	Maximum length: 35	
route-map-out-vpnv4	VPNv4 outbound route map filter.	string	Maximum length: 35	
route-map-out-vpnv4-preferable	VPNv4 outbound route map filter if the peer is preferred.	string	Maximum length: 35	
route-map-out-vpnv6	VPNv6 outbound route map filter.	string	Maximum length: 35	
route-map-out-vpnv6-preferable	VPNv6 outbound route map filter if this neighbor is preferred.	string	Maximum length: 35	
route-map-out6	IPv6 Outbound route map filter.	string	Maximum length: 35	
route-map-out6-preferable	IPv6 outbound route map filter if the peer is preferred.	string	Maximum length: 35	
route-reflector-client	Enable/disable IPv4 AS route reflector client.	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		

Parameter	Description	Type	Size	Default						
route-reflector-client-evpn	Enable/disable L2VPN EVPN AS route reflector client for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
route-reflector-client-vpnv4	Enable/disable VPNv4 AS route reflector client for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
route-reflector-client-vpnv6	Enable/disable VPNv6 AS route reflector client for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
route-reflector-client6	Enable/disable IPv6 AS route reflector client.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
route-server-client	Enable/disable IPv4 AS route server client.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
route-server-client-evpn	Enable/disable L2VPN EVPN AS route server client for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default						
route-server-client-vpnv4	Enable/disable VPNv4 AS route server client for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
route-server-client-vpnv6	Enable/disable VPNv6 AS route server client for this neighbor.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
route-server-client6	Enable/disable IPv6 AS route server client.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
rr-attr-allow-change	Enable/disable allowing change of route attributes when advertising to IPv4 route reflector clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
rr-attr-allow-change-evpn	Enable/disable allowing change of route attributes when advertising to L2VPN EVPN route reflector clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
rr-attr-allow-change-vpnv4	Enable/disable allowing change of route attributes when advertising to VPNv4 route reflector clients.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
rr-attr-allow-change-vpnv6	Enable/disable allowing change of route attributes when advertising to VPNv6 route reflector clients.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
rr-attr-allow-change6	Enable/disable allowing change of route attributes when advertising to IPv6 route reflector clients.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
send-community	IPv4 Send community attribute to neighbor.	option	-	both
	Option	Description		
	<i>standard</i>	Standard.		
	<i>extended</i>	Extended.		
	<i>both</i>	Both.		
	<i>disable</i>	Disable		
send-community-evpn	Enable/disable sending community attribute to neighbor for L2VPN EVPN address family.	option	-	both
	Option	Description		
	<i>standard</i>	Standard.		
	<i>extended</i>	Extended.		
	<i>both</i>	Both.		
	<i>disable</i>	Disable		
send-community-vpnv4	Send community attribute to neighbor for VPNv4 address family.	option	-	both

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>standard</i>	Standard.		
	<i>extended</i>	Extended.		
	<i>both</i>	Both.		
	<i>disable</i>	Disable		
send-community-vpnv6	Enable/disable sending community attribute to this neighbor for VPNv6 address family.	option	-	both
	Option	Description		
	<i>standard</i>	Standard.		
	<i>extended</i>	Extended.		
	<i>both</i>	Both.		
	<i>disable</i>	Disable		
send-community6	IPv6 Send community attribute to neighbor.	option	-	both
	Option	Description		
	<i>standard</i>	Standard.		
	<i>extended</i>	Extended.		
	<i>both</i>	Both.		
	<i>disable</i>	Disable		
shutdown	Enable/disable shutdown this neighbor.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
soft-reconfiguration	Enable/disable allow IPv4 inbound soft reconfiguration.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

Parameter	Description	Type	Size	Default						
soft-reconfiguration-evpn	Enable/disable L2VPN EVPN inbound soft reconfiguration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
soft-reconfiguration-vpnv4	Enable/disable allow VPNv4 inbound soft reconfiguration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
soft-reconfiguration-vpnv6	Enable/disable VPNv6 inbound soft reconfiguration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
soft-reconfiguration6	Enable/disable allow IPv6 inbound soft reconfiguration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
stale-route	Enable/disable stale route after neighbor down.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
strict-capability-match	Enable/disable strict capability matching.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
unsuppress-map	IPv4 Route map to selectively unsuppress suppressed routes.	string	Maximum length: 35	
unsuppress-map6	IPv6 Route map to selectively unsuppress suppressed routes.	string	Maximum length: 35	
update-source	Interface to use as source IP/IPv6 address of TCP connections.	string	Maximum length: 15	
weight	Neighbor weight.	integer	Minimum value: 0 Maximum value: 65535	4294967295

config conditional-advertise

Parameter	Description	Type	Size	Default
advertise-routemap	Name of advertising route map.	string	Maximum length: 35	
condition-routemap <name>	List of conditional route maps. Route map.	string	Maximum length: 79	
condition-type	Type of condition.	option	-	exist
	Option Description			
	<i>exist</i>	True if condition route map is matched.		
	<i>non-exist</i>	True if condition route map is not matched.		

config network

Parameter	Description	Type	Size	Default
backdoor	Enable/disable route as backdoor.	option	-	disable
	Option Description			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
network-import-check	Configure insurance of BGP network route existence in IGP.	option	-	global
	Option	Description		
	global	Use global network sync value.		
	enable	Enable network sync per prefix.		
	disable	Disable network sync per prefix.		
prefix	Network prefix.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
prefix-name	Name of firewall address or address group.	string	Maximum length: 79	
route-map	Route map to modify generated route.	string	Maximum length: 35	

config redistribute

Parameter	Description	Type	Size	Default						
name	Distribute list entry name.	string	Maximum length: 35							
route-map	Route map name.	string	Maximum length: 35							
status	Status.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

config vrf

Parameter	Description	Type	Size	Default
export-rt <route-target>	List of export route target. Attribute: AA:NN A.B.C.D:NN.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default								
import-route-map	Import route map.	string	Maximum length: 35									
import-rt <route-target>	List of import route target. Attribute: AA:NN A.B.C.D:NN	string	Maximum length: 79									
rd	Route Distinguisher: AA:NN A.B.C.D:NN.	string	Maximum length: 79									
role	VRF role.	option	-	standalone								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>standalone</td><td>Stand-alone VRF.</td></tr><tr><td>ce</td><td>CE VRF.</td></tr><tr><td>pe</td><td>PE VRF.</td></tr></table>		Option	Description	standalone	Stand-alone VRF.	ce	CE VRF.	pe	PE VRF.		
Option	Description											
standalone	Stand-alone VRF.											
ce	CE VRF.											
pe	PE VRF.											
vrf	Origin VRF ID <0-511>.	string	Maximum length: 7									

config leak-target

Parameter	Description	Type	Size	Default
interface	Interface which is used to leak routes to target VRF.	string	Maximum length: 15	
route-map	Route map of VRF leaking.	string	Maximum length: 35	
vrf	Target VRF ID <0-511>.	string	Maximum length: 7	

config leak-target

Parameter	Description	Type	Size	Default
interface	Interface which is used to leak routes to target VRF.	string	Maximum length: 15	
route-map	Route map of VRF leaking.	string	Maximum length: 35	
vrf	Target VRF ID <0-511>.	string	Maximum length: 7	

config router community-list

Configure community lists.

```

config router community-list
  Description: Configure community lists.
  edit <name>
    config rule
      Description: Community list rule.
      edit <id>
        set action [deny|permit]
        set match {string}
        set regexp {string}
      next
    end
    set type [standard|expanded]
  next
end

```

config router community-list

Parameter	Description	Type	Size	Default						
name	Community list name.	string	Maximum length: 35							
type	Community list type (standard or expanded).	option	-	standard						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>standard</i></td><td>Standard community list type.</td></tr><tr><td><i>expanded</i></td><td>Expanded community list type.</td></tr></table>				Option	Description	<i>standard</i>	Standard community list type.	<i>expanded</i>	Expanded community list type.
	Option	Description								
	<i>standard</i>	Standard community list type.								
<i>expanded</i>	Expanded community list type.									

config rule

Parameter	Description	Type	Size	Default
action	Permit or deny route-based operations, based on the route's COMMUNITY attribute.	option	-	
	Option	Description		
	<i>deny</i>	Deny route-based operations.		
	<i>permit</i>	Permit or allow route-based operations.		
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
match	Community specifications for matching a reserved community.	string	Maximum length: 255	
regexp	Ordered list of COMMUNITY attributes as a regular expression.	string	Maximum length: 255	

config router extcommunity-list

Configure extended community lists.

```
config router extcommunity-list
  Description: Configure extended community lists.
  edit <name>
    config rule
      Description: Extended community list rule.
      edit <id>
        set action [deny|permit]
        set match {string}
        set regexp {string}
        set type [rt|soo]
      next
    end
  set type [standard|expanded]
next
end
```

config router extcommunity-list

Parameter	Description	Type	Size	Default						
name	Extended community list name.	string	Maximum length: 35							
type	Extended community list type (standard or expanded).	option	-	standard						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>standard</i></td><td>Standard extended community list type.</td></tr><tr><td><i>expanded</i></td><td>Expanded extended community list type.</td></tr></table>				Option	Description	<i>standard</i>	Standard extended community list type.	<i>expanded</i>	Expanded extended community list type.
Option	Description									
<i>standard</i>	Standard extended community list type.									
<i>expanded</i>	Expanded extended community list type.									

config rule

Parameter	Description	Type	Size	Default						
action	Permit or deny route-based operations, based on the route's EXTENDED COMMUNITY attribute.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>deny</i></td><td>Deny route-based operations.</td></tr><tr><td><i>permit</i></td><td>Permit or allow route-based operations.</td></tr></table>	Option	Description	<i>deny</i>	Deny route-based operations.	<i>permit</i>	Permit or allow route-based operations.			
Option	Description									
<i>deny</i>	Deny route-based operations.									
<i>permit</i>	Permit or allow route-based operations.									

Parameter	Description	Type	Size	Default						
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
match	Extended community specifications for matching a reserved extended community.	string	Maximum length: 255							
regexp	Ordered list of EXTENDED COMMUNITY attributes as a regular expression.	string	Maximum length: 255							
type	Type of extended community.	option	-	rt						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>rt</td><td>Route Target.</td></tr><tr><td>soo</td><td>Site of Origin.</td></tr></table>				Option	Description	rt	Route Target.	soo	Site of Origin.
	Option	Description								
	rt	Route Target.								
soo	Site of Origin.

config router multicast

Parameter	Description	Type	Size	Default
multicast-routing	Enable/disable IP multicast routing.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable IP multicast routing.		
	<i>disable</i>	Disable IP multicast routing.		
route-limit	Maximum number of multicast routes.	integer	Minimum value: 1 Maximum value: 2147483647	2147483647

Parameter	Description	Type	Size	Default
route-threshold	Generate warnings when the number of multicast routes exceeds this number, must not be greater than route-limit.	integer	Minimum value: 1 Maximum value: 2147483647	

config interface

Parameter	Description	Type	Size	Default						
bfd	Enable/disable Protocol Independent Multicast (PIM) Bidirectional Forwarding Detection (BFD).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Protocol Independent Multicast (PIM) Bidirectional Forwarding Detection (BFD).</td></tr><tr><td><i>disable</i></td><td>Disable Protocol Independent Multicast (PIM) Bidirectional Forwarding Detection (BFD).</td></tr></table>	Option	Description	<i>enable</i>	Enable Protocol Independent Multicast (PIM) Bidirectional Forwarding Detection (BFD).	<i>disable</i>	Disable Protocol Independent Multicast (PIM) Bidirectional Forwarding Detection (BFD).			
Option	Description									
<i>enable</i>	Enable Protocol Independent Multicast (PIM) Bidirectional Forwarding Detection (BFD).									
<i>disable</i>	Disable Protocol Independent Multicast (PIM) Bidirectional Forwarding Detection (BFD).									
cisco-exclude-genid	Exclude GenID from hello packets (compatibility with old Cisco IOS).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Do not send GenID.</td></tr><tr><td><i>disable</i></td><td>Send GenID according to standard.</td></tr></table>	Option	Description	<i>enable</i>	Do not send GenID.	<i>disable</i>	Send GenID according to standard.			
Option	Description									
<i>enable</i>	Do not send GenID.									
<i>disable</i>	Send GenID according to standard.									
dr-priority	DR election priority.	integer	Minimum value: 1 Maximum value: 4294967295	1						
hello-holdtime	Time before old neighbor information expires (0 - 65535 sec, default = 105).	integer	Minimum value: 1 Maximum value: 65535	105						
hello-interval	Interval between sending PIM hello messages (0 - 65535 sec, default = 30).	integer	Minimum value: 1 Maximum value: 65535	30						
multicast-flow	Acceptable source for multicast group.	string	Maximum length: 35							
name	Interface name.	string	Maximum length: 15							

Parameter	Description	Type	Size	Default
neighbour-filter	Routers acknowledged as neighbor routers.	string	Maximum length: 35	
passive	Enable/disable listening to IGMP but not participating in PIM.	option	-	disable
	Option	Description		
	enable	Listen only.		
	disable	Participate in PIM.		
pim-mode	PIM operation mode.	option	-	sparse-mode
	Option	Description		
	sparse-mode	sparse-mode		
	dense-mode	dense-mode		
propagation-delay	Delay flooding packets on this interface (100 - 5000 msec, default = 500).	integer	Minimum value: 100 Maximum value: 5000	500
rp-candidate	Enable/disable compete to become RP in elections.	option	-	disable
	Option	Description		
	enable	Compete for RP elections.		
	disable	Do not compete for RP elections.		
rp-candidate-group	Multicast groups managed by this RP.	string	Maximum length: 35	
rp-candidate-interval	RP candidate advertisement interval (1 - 16383 sec, default = 60).	integer	Minimum value: 1 Maximum value: 16383	60
rp-candidate-priority	Router's priority as RP.	integer	Minimum value: 0 Maximum value: 255	192
rpf-nbr-fail-back	Enable/disable fail back for RPF neighbor query.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable fail back for RPF neighbor query.		
	<i>disable</i>	Disable fail back for RPF neighbor query.		
rpf-nbr-fail-back-filter	Filter for fail back RPF neighbors.	string	Maximum length: 35	
state-refresh-interval	Interval between sending state-refresh packets (1 - 100 sec, default = 60).	integer	Minimum value: 1 Maximum value: 100	60
static-group	Statically set multicast groups to forward out.	string	Maximum length: 35	
ttl-threshold	Minimum TTL of multicast packets that will be forwarded (applied only to new multicast routes) (1 - 255, default = 1).	integer	Minimum value: 1 Maximum value: 255	1

config igmp

Parameter	Description	Type	Size	Default
access-group	Groups IGMP hosts are allowed to join.	string	Maximum length: 35	
immediate-leave-group	Groups to drop membership for immediately after receiving IGMPv2 leave.	string	Maximum length: 35	
last-member-query-count	Number of group specific queries before removing group (2 - 7, default = 2).	integer	Minimum value: 2 Maximum value: 7	2
last-member-query-interval	Timeout between IGMPv2 leave and removing group (1 - 65535 msec, default = 1000).	integer	Minimum value: 1 Maximum value: 65535	1000
query-interval	Interval between queries to IGMP hosts (1 - 65535 sec, default = 125).	integer	Minimum value: 1 Maximum value: 65535	125

Parameter	Description	Type	Size	Default								
query-max-response-time	Maximum time to wait for a IGMP query response (1 - 25 sec, default = 10).	integer	Minimum value: 1 Maximum value: 25	10								
query-timeout	Timeout between queries before becoming querying unit for network (60 - 900, default = 255).	integer	Minimum value: 60 Maximum value: 900	255								
router-alert-check	Enable/disable require IGMP packets contain router alert option.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Require Router Alert option in IGMP packets.</td></tr><tr><td><i>disable</i></td><td>don't require Router Alert option in IGMP packets</td></tr></table>				Option	Description	<i>enable</i>	Require Router Alert option in IGMP packets.	<i>disable</i>	don't require Router Alert option in IGMP packets		
Option	Description											
<i>enable</i>	Require Router Alert option in IGMP packets.											
<i>disable</i>	don't require Router Alert option in IGMP packets											
version	Maximum version of IGMP to support.	option	-	3								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>3</td><td>Version 3 and lower.</td></tr><tr><td>2</td><td>Version 2 and lower.</td></tr><tr><td>1</td><td>Version 1.</td></tr></table>				Option	Description	3	Version 3 and lower.	2	Version 2 and lower.	1	Version 1.
Option	Description											
3	Version 3 and lower.											
2	Version 2 and lower.											
1	Version 1.											

config join-group

Parameter	Description	Type	Size	Default
address	Multicast group IP address.	ipv4-address-any	Not Specified	0.0.0.0

config pim-sm-global

Parameter	Description	Type	Size	Default
accept-register-list	Sources allowed to register packets with this Rendezvous Point (RP).	string	Maximum length: 35	
accept-source-list	Sources allowed to send multicast traffic.	string	Maximum length: 35	
bsr-allow-quick-refresh	Enable/disable accept BSR quick refresh packets from neighbors.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Allow quick refresh packets.		
	<i>disable</i>	Do not allow quick refresh packets.		
bsr-candidate	Enable/disable allowing this router to become a bootstrap router (BSR).	option	-	disable
	Option	Description		
	<i>enable</i>	Allow this router to function as a BSR.		
	<i>disable</i>	Do not allow this router to function as a BSR.		
bsr-hash	BSR hash length (0 - 32, default = 10).	integer	Minimum value: 0 Maximum value: 32	10
bsr-interface	Interface to advertise as candidate BSR.	string	Maximum length: 15	
bsr-priority	BSR priority (0 - 255, default = 0).	integer	Minimum value: 0 Maximum value: 255	0
cisco-crp-prefix	Enable/disable making candidate RP compatible with old Cisco IOS.	option	-	disable
	Option	Description		
	<i>enable</i>	Do not allow sending group prefix of zero.		
	<i>disable</i>	Allow sending group prefix of zero.		
cisco-ignore-rp-set-priority	Use only hash for RP selection (compatibility with old Cisco IOS).	option	-	disable
	Option	Description		
	<i>enable</i>	Ignore RP-SET priority value.		
	<i>disable</i>	Do not ignore RP-SET priority value.		
cisco-register-checksum	Checksum entire register packet(for old Cisco IOS compatibility).	option	-	disable
	Option	Description		
	<i>enable</i>	register checksum entire packet.		

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not register checksum entire packet.</td></tr></table>	Option	Description	<i>disable</i>	Do not register checksum entire packet.					
Option	Description									
<i>disable</i>	Do not register checksum entire packet.									
cisco-register-checksum-group	Cisco register checksum only these groups.	string	Maximum length: 35							
join-prune-holdtime	Join/prune holdtime (1 - 65535, default = 210).	integer	Minimum value: 1 Maximum value: 65535	210						
message-interval	Period of time between sending periodic PIM join/prune messages in seconds (1 - 65535, default = 60).	integer	Minimum value: 1 Maximum value: 65535	60						
null-register-retries	Maximum retries of null register (1 - 20, default = 1).	integer	Minimum value: 1 Maximum value: 20	1						
pim-use-sdwan	Enable/disable use of SDWAN when checking RPF neighbor and sending of REG packet.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of SDWAN when checking RPF neighbor and sending of REG packet.</td></tr><tr><td><i>disable</i></td><td>Disable use of SDWAN when checking RPF neighbor and sending of REG packet.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of SDWAN when checking RPF neighbor and sending of REG packet.	<i>disable</i>	Disable use of SDWAN when checking RPF neighbor and sending of REG packet.			
Option	Description									
<i>enable</i>	Enable use of SDWAN when checking RPF neighbor and sending of REG packet.									
<i>disable</i>	Disable use of SDWAN when checking RPF neighbor and sending of REG packet.									
register-rate-limit	Limit of packets/sec per source registered through this RP (0 - 65535, default = 0 which means unlimited).	integer	Minimum value: 0 Maximum value: 65535	0						
register-rp-reachability	Enable/disable check RP is reachable before registering packets.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Check target RP is unicast reachable before registering.</td></tr><tr><td><i>disable</i></td><td>Do not check RP unicast reachability.</td></tr></table>	Option	Description	<i>enable</i>	Check target RP is unicast reachable before registering.	<i>disable</i>	Do not check RP unicast reachability.			
Option	Description									
<i>enable</i>	Check target RP is unicast reachable before registering.									
<i>disable</i>	Do not check RP unicast reachability.									

Parameter	Description	Type	Size	Default								
register-source	Override source address in register packets.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Use source address of RPF interface.</td></tr><tr><td><i>interface</i></td><td>Use primary IP of an interface.</td></tr><tr><td><i>ip-address</i></td><td>Use a local IP address.</td></tr></table>	Option	Description	<i>disable</i>	Use source address of RPF interface.	<i>interface</i>	Use primary IP of an interface.	<i>ip-address</i>	Use a local IP address.			
Option	Description											
<i>disable</i>	Use source address of RPF interface.											
<i>interface</i>	Use primary IP of an interface.											
<i>ip-address</i>	Use a local IP address.											
register-source-interface	Override with primary interface address.	string	Maximum length: 15									
register-source-ip	Override with local IP address.	ipv4-address	Not Specified	0.0.0.0								
register-supression	Period of time to honor register-stop message (1 - 65535 sec, default = 60).	integer	Minimum value: 1 Maximum value: 65535	60								
rp-register-keepalive	Timeout for RP receiving data on (S,G) tree (1 - 65535 sec, default = 185).	integer	Minimum value: 1 Maximum value: 65535	185								
spt-threshold	Enable/disable switching to source specific trees.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Switch to Source tree when available.</td></tr><tr><td><i>disable</i></td><td>Do not switch to Source tree when available.</td></tr></table>	Option	Description	<i>enable</i>	Switch to Source tree when available.	<i>disable</i>	Do not switch to Source tree when available.					
Option	Description											
<i>enable</i>	Switch to Source tree when available.											
<i>disable</i>	Do not switch to Source tree when available.											
spt-threshold-group	Groups allowed to switch to source tree.	string	Maximum length: 35									
ssm	Enable/disable source specific multicast.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow source specific multicast.</td></tr><tr><td><i>disable</i></td><td>Do not allow source specific multicast.</td></tr></table>	Option	Description	<i>enable</i>	Allow source specific multicast.	<i>disable</i>	Do not allow source specific multicast.					
Option	Description											
<i>enable</i>	Allow source specific multicast.											
<i>disable</i>	Do not allow source specific multicast.											
ssm-range	Groups allowed to source specific multicast.	string	Maximum length: 35

config interface

Parameter	Description	Type	Size	Default
flags	Flags. Read-only.	integer	Minimum value: 0 Maximum value: 255	8
name	Interface name.	string	Maximum length: 35	
split-horizon	Enable/disable split horizon.	option	-	poisoned
	Option	Description		
	<i>poisoned</i>	Poisoned.		
	<i>regular</i>	Regular.		
split-horizon-status	Enable/disable split horizon.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

config neighbor

Parameter	Description	Type	Size	Default
id	Neighbor entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface name.	string	Maximum length: 15	
ip6	IPv6 link-local address.	ipv6-address	Not Specified	::

config network

Parameter	Description	Type	Size	Default
id	Network entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
prefix	Network IPv6 link-local prefix.	ipv6-prefix	Not Specified	::/0

config offset-list

Parameter	Description	Type	Size	Default
access-list6	IPv6 access list name.	string	Maximum length: 35	
direction	Offset list direction.	option	-	out
	Option	Description		
	<i>in</i>	Filter incoming packets.		
	<i>out</i>	Filter outgoing packets.		
id	Offset-list ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface name.	string	Maximum length: 15	

Parameter	Description	Type	Size	Default
offset	Offset.	integer	Minimum value: 1 Maximum value: 16	0
status	Status.	option	-	enable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		

config redistribute

Parameter	Description	Type	Size	Default
metric	Redistribute metric setting.	integer	Minimum value: 1 Maximum value: 16	0
name	Redistribute name.	string	Maximum length: 35	
routemap	Route map name.	string	Maximum length: 35	
status	Status.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

config router route-map

Configure route maps.

	Option	Description								
	<i>permit</i>	Permit.								
<i>deny</i>	Deny.									
id	Rule ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
match-as-path	Match BGP AS path list.	string	Maximum length: 35							
match-community	Match BGP community list.	string	Maximum length: 35							
match-community-exact	Enable/disable exact matching of communities.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable exact matching of communities.</td></tr><tr><td><i>disable</i></td><td>Disable exact matching of communities.</td></tr></table>				Option	Description	<i>enable</i>	Enable exact matching of communities.	<i>disable</i>	Disable exact matching of communities.
	Option	Description								
	<i>enable</i>	Enable exact matching of communities.								
<i>disable</i>	Disable exact matching of communities.									
match-extcommunity	Match BGP extended community list.	string	Maximum length: 35							
match-extcommunity-exact	Enable/disable exact matching of extended communities.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable exact matching of extended communities.</td></tr><tr><td><i>disable</i></td><td>Disable exact matching of extended communities.</td></tr></table>				Option	Description	<i>enable</i>	Enable exact matching of extended communities.	<i>disable</i>	Disable exact matching of extended communities.
	Option	Description								
	<i>enable</i>	Enable exact matching of extended communities.								
<i>disable</i>	Disable exact matching of extended communities.									
match-interface	Match interface configuration.	string	Maximum length: 15							

Parameter	Description	Type	Size	Default										
match-ip-address	Match IP address permitted by access-list or prefix-list.	string	Maximum length: 35											
match-ip-nexthop	Match next hop IP address passed by access-list or prefix-list.	string	Maximum length: 35											
match-ip6-address	Match IPv6 address permitted by access-list6 or prefix-list6.	string	Maximum length: 35											
match-ip6-nexthop	Match next hop IPv6 address passed by access-list6 or prefix-list6.	string	Maximum length: 35											
match-metric	Match metric for redistribute routes.	integer	Minimum value: 0 Maximum value: 4294967295											
match-origin	Match BGP origin code.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>egp</i></td><td>Remote EGP.</td></tr><tr><td><i>igp</i></td><td>Local IGP.</td></tr><tr><td><i>incomplete</i></td><td>Unknown heritage.</td></tr></table>				Option	Description	<i>none</i>	None.	<i>egp</i>	Remote EGP.	<i>igp</i>	Local IGP.	<i>incomplete</i>	Unknown heritage.
Option	Description													
<i>none</i>	None.													
<i>egp</i>	Remote EGP.													
<i>igp</i>	Local IGP.													
<i>incomplete</i>	Unknown heritage.													
match-route-type	Match route type.	option	-											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>external-type1</i></td><td>External type 1.</td></tr><tr><td><i>external-type2</i></td><td>External type 2.</td></tr><tr><td><i>none</i></td><td>No type specified.</td></tr></table>				Option	Description	<i>external-type1</i>	External type 1.	<i>external-type2</i>	External type 2.	<i>none</i>	No type specified.		
Option	Description													
<i>external-type1</i>	External type 1.													
<i>external-type2</i>	External type 2.													
<i>none</i>	No type specified.													
match-tag	Match tag.	integer	Minimum value: 0 Maximum value: 4294967295											
match-vrf	Match VRF ID.	integer	Minimum value: 0 Maximum value: 511											

Parameter	Description	Type	Size	Default						
set-aggregator-as	BGP aggregator AS.	integer	Minimum value: 0 Maximum value: 4294967295	0						
set-aggregator-ip	BGP aggregator IP.	ipv4-address-any	Not Specified	0.0.0.0						
set-aspath <as>	Prepend BGP AS path attribute. AS number (0 - 4294967295). Use quotes for repeating numbers, For example, "1 1 2".	string	Maximum length: 79							
set-aspath-action	Specify preferred action of set-aspath.	option	-	prepend						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>prepend</i></td><td>Prepend.</td></tr><tr><td><i>replace</i></td><td>Replace.</td></tr></table>				Option	Description	<i>prepend</i>	Prepend.	<i>replace</i>	Replace.
Option	Description									
<i>prepend</i>	Prepend.									
<i>replace</i>	Replace.									
set-atomic-aggregate	Enable/disable BGP atomic aggregate attribute.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable BGP atomic aggregate attribute.</td></tr><tr><td><i>disable</i></td><td>Disable BGP atomic aggregate attribute.</td></tr></table>				Option	Description	<i>enable</i>	Enable BGP atomic aggregate attribute.	<i>disable</i>	Disable BGP atomic aggregate attribute.
Option	Description									
<i>enable</i>	Enable BGP atomic aggregate attribute.									
<i>disable</i>	Disable BGP atomic aggregate attribute.									
set-community <community>	BGP community attribute. Attribute: AA AA:NN internet local-AS no-advertise no-export (exact match required for well known communities).	string	Maximum length: 79							
set-community-additive	Enable/disable adding set-community to existing community.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable adding set-community to existing community.</td></tr><tr><td><i>disable</i></td><td>Disable adding set-community to existing community.</td></tr></table>				Option	Description	<i>enable</i>	Enable adding set-community to existing community.	<i>disable</i>	Disable adding set-community to existing community.
Option	Description									
<i>enable</i>	Enable adding set-community to existing community.									
<i>disable</i>	Disable adding set-community to existing community.									
set-community-delete	Delete communities matching community list.	string	Maximum length: 35							
set-dampening-max-suppress	Maximum duration to suppress a route (1 - 255 min, 0 = unset).	integer	Minimum value: 0 Maximum value: 255	0						

Parameter	Description	Type	Size	Default
set-dampening-reachability-half-life	Reachability half-life time for the penalty (1 - 45 min, 0 = unset).	integer	Minimum value: 0 Maximum value: 45	0
set-dampening-reuse	Value to start reusing a route (1 - 20000, 0 = unset).	integer	Minimum value: 0 Maximum value: 20000	0
set-dampening-suppress	Value to start suppressing a route (1 - 20000, 0 = unset).	integer	Minimum value: 0 Maximum value: 20000	0
set-dampening-unreachability-half-life	Unreachability Half-life time for the penalty (1 - 45 min, 0 = unset).	integer	Minimum value: 0 Maximum value: 45	0
set-extcommunity-rt <community>	Route Target extended community. AA:NN.	string	Maximum length: 79	
set-extcommunity-soo <community>	Site-of-Origin extended community. Community (format = AA:NN).	string	Maximum length: 79	
set-ip-nexthop	IP address of next hop.	ipv4-address	Not Specified	
set-ip-prefsrc	IP address of preferred source.	ipv4-address	Not Specified	
set-ip6-nexthop	IPv6 global address of next hop.	ipv6-address	Not Specified	
set-ip6-nexthop-local	IPv6 local address of next hop.	ipv6-address	Not Specified	
set-local-preference	BGP local preference path attribute.	integer	Minimum value: 0 Maximum value: 4294967295	

Parameter	Description	Type	Size	Default										
set-metric	Metric value.	integer	Minimum value: 0 Maximum value: 4294967295											
set-metric-type	Metric type.	option	-											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>external-type1</i></td><td>External type 1.</td></tr><tr><td><i>external-type2</i></td><td>External type 2.</td></tr><tr><td><i>none</i></td><td>No type specified.</td></tr></table>	Option	Description	<i>external-type1</i>	External type 1.	<i>external-type2</i>	External type 2.	<i>none</i>	No type specified.					
Option	Description													
<i>external-type1</i>	External type 1.													
<i>external-type2</i>	External type 2.													
<i>none</i>	No type specified.													
set-origin	BGP origin code.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>egp</i></td><td>Remote EGP.</td></tr><tr><td><i>igp</i></td><td>Local IGP.</td></tr><tr><td><i>incomplete</i></td><td>Unknown heritage.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>egp</i>	Remote EGP.	<i>igp</i>	Local IGP.	<i>incomplete</i>	Unknown heritage.			
Option	Description													
<i>none</i>	None.													
<i>egp</i>	Remote EGP.													
<i>igp</i>	Local IGP.													
<i>incomplete</i>	Unknown heritage.													
set-originator-id	BGP originator ID attribute.	ipv4-address-any	Not Specified											
set-priority	Priority for routing table.	integer	Minimum value: 1 Maximum value: 65535											
set-route-tag	Route tag for routing table.	integer	Minimum value: 0 Maximum value: 4294967295											
set-tag	Tag value.	integer	Minimum value: 0 Maximum value: 4294967295											
set-vpnv4-nexthop	IP address of VPNv4 next-hop.	ipv4-address	Not Specified											

Parameter	Description	Type	Size	Default
set-vpn6-nexthop	IPv6 global address of VPNv6 next-hop.	ipv6-address	Not Specified	
set-vpn6-nexthop-local	IPv6 link-local address of VPNv6 next-hop.	ipv6-address	Not Specified	
set-weight	BGP weight for routing table.	integer	Minimum value: 0 Maximum value: 4294967295	

config router setting

Configure router settings.

```
config router setting
    Description: Configure router settings.
    set hostname {string}
    set kernel-route-distance {integer}
    set show-filter {string}
end
```

config router setting

Parameter	Description	Type	Size	Default
hostname	Hostname for this virtual domain router.	string	Maximum length: 14	
kernel-route-distance	Administrative distance for routes learned from kernel (0 - 255).	integer	Minimum value: 0 Maximum value: 255	255
show-filter	Prefix-list as filter for showing routes.	string	Maximum length: 35	

config router static

Configure IPv4 static routing tables.

```
config router static
    Description: Configure IPv4 static routing tables.
    edit <seq-num>
        set bfd [enable|disable]
        set blackhole [enable|disable]
        set comment {var-string}
        set device {string}
```

```

set distance {integer}
set dst {ipv4-classnet}
set dstaddr {string}
set dynamic-gateway [enable|disable]
set gateway {ipv4-address}
set internet-service {integer}
set internet-service-custom {string}
set link-monitor-exempt [enable|disable]
set preferred-source {ipv4-address}
set priority {integer}
set sdwan-zone <name1>, <name2>, ...
set src {ipv4-classnet}
set status [enable|disable]
set tag {integer}
set vrf {integer}
set weight {integer}
next
end

```

config router static

Parameter	Description	Type	Size	Default
bfd	Enable/disable Bidirectional Forwarding Detection (BFD).	option	-	disable
	Option	Description		
	enable	Enable Bidirectional Forwarding Detection (BFD).		
	disable	Disable Bidirectional Forwarding Detection (BFD).		
blackhole	Enable/disable black hole.	option	-	disable
	Option	Description		
	enable	Enable black hole.		
	disable	Disable black hole.		
comment	Optional comments.	var-string	Maximum length: 255	
device	Gateway out interface or tunnel.	string	Maximum length: 35	
distance	Administrative distance (1 - 255).	integer	Minimum value: 1 Maximum value: 255	10
dst	Destination IP and mask for this route.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

Parameter	Description	Type	Size	Default
dstaddr	Name of firewall address or address group.	string	Maximum length: 79	
dynamic-gateway	Enable use of dynamic gateway retrieved from a DHCP or PPP server.	option	-	disable
	Option	Description		
	enable	Enable dynamic gateway.		
	disable	Disable dynamic gateway.		
gateway	Gateway IP for this route.	ipv4-address	Not Specified	0.0.0.0
internet-service	Application ID in the Internet service database.	integer	Minimum value: 0 Maximum value: 4294967295	0
internet-service-custom	Application name in the Internet service custom database.	string	Maximum length: 64	
link-monitor-exempt	Enable/disable withdrawal of this static route when link monitor or health check is down.	option	-	disable
	Option	Description		
	enable	Keep this static route when link monitor or health check is down.		
	disable	Withdraw this static route when link monitor or health check is down. (default)		
preferred-source	Preferred source IP for this route.	ipv4-address	Not Specified	0.0.0.0
priority	Administrative priority (1 - 65535).	integer	Minimum value: 1 Maximum value: 65535	1
sdwan-zone <name>	Choose SD-WAN Zone. SD-WAN zone name.	string	Maximum length: 79	
seq-num	Sequence number.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
src	Source prefix for this route.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
status	Enable/disable this static route.	option	-	enable
	Option	Description		
	enable	Enable static route.		
	disable	Disable static route.		
tag	Route tag.	integer	Minimum value: 0 Maximum value: 4294967295	0
vrf	Virtual Routing Forwarding ID.	integer	Minimum value: 0 Maximum value: 511	unspecified
weight	Administrative weight (0 - 255).	integer	Minimum value: 0 Maximum value: 255	0

This section includes syntax for the following commands:

- [config rule fmlwp on page 1074](#)
- [config rule ottd on page 1076](#)
- [config rule otvp on page 1078](#)

config rule fmlwp

Show FMWP signatures. Read-only.

```
config rule fmlwp
  Description: Show FMWP signatures. Read-only.
  edit <name>
    set action [pass|block]
    set application {user}
    set date {integer}
    set group {string}
    set location {user}
    set log [disable|enable]
    set log-packet [disable|enable]
    config metadata
      Description: Meta data. Read-only.
      edit <id>
        set metaid {integer}
        set valueid {integer}
      next
    end
    set os {user}
    set rev {integer}
    set rule-id {integer}
    set service {user}
    set severity {user}
  next
end
```

config rule fmlwp

Parameter	Description	Type	Size	Default
action	Action. Read-only.	option	-	pass
	Option	Description		
	<i>pass</i>	Pass or allow matching traffic.		
	<i>block</i>	Block or drop matching traffic.		

Parameter	Description	Type	Size	Default						
application	Vulnerable applications. Read-only.	user	Not Specified							
date	Date. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0						
group	Group. Read-only.	string	Maximum length: 63							
location	Vulnerable location. Read-only.	user	Not Specified

command-name	Command name called by the FortiGate switch controller in the execute command.	string	Maximum length: 35	
description	Description.	string	Maximum length: 35	

config switch-controller dsl policy

This command is available for model(s): FortiGate 40F 3G4G, FortiGate 60F, FortiGate 80F Bypass, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F DSL, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R.

DSL policy.

```
config switch-controller dsl policy
  Description: DSL policy.
  edit <name>
    set append_padding [disable|enable]
    set cpe-aele [disable|enable]
    set cpe-aele-mode [ELE_M0|ELE_DS|...]
    set cs {option1}, {option2}, ...
    set ds-bitswap [disable|enable]
    set pause-frame [disable|enable]
    set profile [auto-30a|auto-17a|...]
    set type {option}
    set us-bitswap [disable|enable]
  next
end
```

config switch-controller dsl policy

Parameter	Description	Type	Size	Default
append_padding	Device pause frame configuration.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable.		
	<i>enable</i>	Enable.		
cpe-aele	CPE AELE.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable.		
	<i>enable</i>	Enable.		
cpe-aele-mode	CPE AELE-Mode with given string.	option	-	ELE_MIN
	Option	Description		
	<i>ELE_M0</i>	cpe AELE-Mode with given string.		
	<i>ELE_DS</i>	cpe AELE-Mode with given string.		
	<i>ELE_PB</i>	cpe AELE-Mode with given string.		
	<i>ELE_MIN</i>	cpe AELE-Mode with given string.		
cs	CPE carrier set.	option	-	A43 B43 A43C
	Option	Description		
	<i>A43</i>	CPE carrier set.		
	<i>B43</i>	CPE carrier set.		
	<i>A43C</i>	CPE carrier set.		
	<i>V43</i>	CPE carrier set.		
ds-bitswap	Enable/disable bitswap.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable.		
	<i>enable</i>	Enable.		
name	Policy name.	string	Maximum length: 63	
pause-frame	Device pause frame configuration.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable.		
	<i>enable</i>	Enable.		
profile	VDSL CPE profile.	option	-	auto-30a
	Option	Description		
	<i>auto-30a</i>	vdsl CPE profile.		
	<i>auto-17a</i>	vdsl CPE profile.		
	<i>auto-12ab</i>	vdsl CPE profile.		
type	Type.	option	-	Proscend
	Option	Description		
	<i>Proscend</i>	Proscend.		
us-bitswap	Enable/disable bitswap.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable.		
	<i>enable</i>	Enable.		

config switch-controller dynamic-port-policy

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 5001E1, FortiGate 5001E.

Configure Dynamic port policy to be applied on the managed FortiSwitch ports through DPP device.

```

    next
end
next
end

```

config switch-controller dynamic-port-policy

Parameter	Description	Type	Size	Default
description	Description for the Dynamic port policy.	string	Maximum length: 63	
fortilink	FortiLink interface for which this Dynamic port policy belongs to.	string	Maximum length: 15	
name	Dynamic port policy name.	string	Maximum length: 63	

config policy

Parameter	Description	Type	Size	Default						
802-1x	802.1x security policy to be applied when using this policy.	string	Maximum length: 31							
bounce-port-duration	Bounce duration in seconds of a switch port where this policy is applied.	integer	Minimum value: 1 Maximum value: 30	5						
bounce-port-link	Enable/disable bouncing (administratively bring the link down, up) of a switch port where this policy is applied. Helps to clear and reassign VLAN from lldp-profile.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable bouncing (administratively bring the link down, up) of a switch port where this policy is applied.</td></tr><tr><td><i>enable</i></td><td>Enable bouncing (administratively bring the link down, up) of a switch port where this policy is applied.</td></tr></table>				Option	Description	<i>disable</i>	Disable bouncing (administratively bring the link down, up) of a switch port where this policy is applied.	<i>enable</i>	Enable bouncing (administratively bring the link down, up) of a switch port where this policy is applied.
Option	Description									
<i>disable</i>	Disable bouncing (administratively bring the link down, up) of a switch port where this policy is applied.									
<i>enable</i>	Enable bouncing (administratively bring the link down, up) of a switch port where this policy is applied.									
category	Category of Dynamic port policy.	option	-	device						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>device</i></td><td>Device category.</td></tr><tr><td><i>interface-tag</i></td><td>Interface Tag category.</td></tr></table>				Option	Description	<i>device</i>	Device category.	<i>interface-tag</i>	Interface Tag category.
Option	Description									
<i>device</i>	Device category.									
<i>interface-tag</i>	Interface Tag category.									

Parameter	Description	Type	Size	Default						
description	Description for the policy.	string	Maximum length: 63							
family	Match policy based on family.	string	Maximum length: 31							
host	Match policy based on host.	string	Maximum length: 64							
hw-vendor	Match policy based on hardware vendor.	string	Maximum length: 15							
interface-tags <tag-name>	Match policy based on the FortiSwitch interface object tags. FortiSwitch port tag name.	string	Maximum length: 63							
lldp-profile	LLDP profile to be applied when using this policy.	string	Maximum length: 63							
mac	Match policy based on MAC address.	string	Maximum length: 17							
match-period	Number of days the matched devices will be retained (0 - 120, 0 = always retain).	integer	Minimum value: 0 Maximum value: 120	0						
match-type	Match and retain the devices based on the type.	option	-	dynamic						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>dynamic</td><td>Matched devices will be removed on dynamic events like link-down,device-inactivity,switch-offline.</td></tr><tr><td>override</td><td>Matched devices will be retained until the match-period.</td></tr></table>				Option	Description	dynamic	Matched devices will be removed on dynamic events like link-down,device-inactivity,switch-offline.	override	Matched devices will be retained until the match-period.
Option	Description									
dynamic	Matched devices will be removed on dynamic events like link-down,device-inactivity,switch-offline.									
override	Matched devices will be retained until the match-period.									
name	Policy name.	string	Maximum length: 63							
poe-reset	Enable/disable POE reset of a switch port where this policy is applied.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable POE reset of a switch port where this policy is applied.</td></tr><tr><td>enable</td><td>Enable POE reset of a switch port where this policy is applied.</td></tr></table>				Option	Description	disable	Disable POE reset of a switch port where this policy is applied.	enable	Enable POE reset of a switch port where this policy is applied.
Option	Description									
disable	Disable POE reset of a switch port where this policy is applied.									
enable	Enable POE reset of a switch port where this policy is applied.									
qos-policy	QoS policy to be applied when using this policy.	string	Maximum length: 63							
status	Enable/disable policy.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable policy.		
	<i>disable</i>	Disable policy.		
type	Match policy based on type.	string	Maximum length: 15	
vlan-policy	VLAN policy to be applied when using this policy.	string	Maximum length: 63	

config switch-controller flow-tracking

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 5001E1, FortiGate 5001E.

Configure FortiSwitch flow tracking and export via ipfix/netflow.

```
config switch-controller flow-tracking
    Description: Configure FortiSwitch flow tracking and export via ipfix/netflow.
    config aggregates
        Description: Configure aggregates in which all traffic sessions matching the IP
        Address will be grouped into the same flow.
        edit <id>
            set ip {ipv4-classnet}
        next
    end
```

```

config collectors
    Description: Configure collectors for the flow.
    edit <name>
        set ip {ipv4-address-any}
        set port {integer}
        set transport [udp|tcp|...]
    next
end

config switch-controller flow-tracking

Parameter	Description	Type	Size	Default
format	Configure flow tracking protocol.	option	-	netflow9
	Option	Description		
	netflow1	Netflow version 1 sampling.		
	netflow5	Netflow version 5 sampling.		
	netflow9	Netflow version 9 sampling.		
	ipfix	Ipfix sampling.		
level	Configure flow tracking level.	option	-	ip
	Option	Description		
	vlan	Collects srcip/dstip/srcport/dstport/protocol/tos/vlan from the sample packet.		
	ip	Collects srcip/dstip from the sample packet.		
	port	Collects srcip/dstip/srcport/dstport/protocol from the sample packet.		
	proto	Collects srcip/dstip/protocol from the sample packet.		
	mac	Collects smac/dmac from the sample packet.		

Parameter	Description	Type	Size	Default								
max-export-pkt-size	Configure flow max export packet size (512-9216, default=512 bytes).	integer	Minimum value: 512 Maximum value: 9216	512								
sample-mode	Configure sample mode for the flow tracking.	option	-	perimeter								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>local</i></td><td>Set local mode which samples on the specific switch port.</td></tr><tr><td><i>perimeter</i></td><td>Set perimeter mode which samples on all switch fabric ports and fortilink port at the ingress.</td></tr><tr><td><i>device-ingress</i></td><td>Set device -ingress mode which samples across all switch ports at the ingress.</td></tr></table>				Option	Description	<i>local</i>	Set local mode which samples on the specific switch port.	<i>perimeter</i>	Set perimeter mode which samples on all switch fabric ports and fortilink port at the ingress.	<i>device-ingress</i>	Set device -ingress mode which samples across all switch ports at the ingress.
	Option	Description										
	<i>local</i>	Set local mode which samples on the specific switch port.										
	<i>perimeter</i>	Set perimeter mode which samples on all switch fabric ports and fortilink port at the ingress.										
<i>device-ingress</i>	Set device -ingress mode which samples across all switch ports at the ingress.											
sample-rate	Configure sample rate for the perimeter and device-ingress sampling(0 - 99999).	integer	Minimum value: 0 Maximum value: 99999	512								
template-export-period	Configure template export period (1-60, default=5 minutes).	integer	Minimum value: 1 Maximum value: 60	5								
timeout-general	Configure flow session general timeout (60-604800, default=3600 seconds).	integer	Minimum value: 60 Maximum value: 604800	3600								
timeout-icmp	Configure flow session ICMP timeout (60-604800, default=300 seconds).	integer	Minimum value: 60 Maximum value: 604800	300								
timeout-max	Configure flow session max timeout (60-604800, default=604800 seconds).	integer	Minimum value: 60 Maximum value: 604800	604800								
timeout-tcp	Configure flow session TCP timeout (60-604800, default=3600 seconds).	integer	Minimum value: 60 Maximum value: 604800	3600								
timeout-tcp-fin	Configure flow session TCP FIN timeout (60-604800, default=300 seconds).	integer	Minimum value: 60 Maximum value: 604800	300								
timeout-tcp-rst	Configure flow session TCP RST timeout (60-604800, default=120 seconds).	integer	Minimum value: 60 Maximum value: 604800	120								
timeout-udp	Configure flow session UDP timeout (60-604800, default=300 seconds).	integer	Minimum value: 60 Maximum value: 604800	300								

config aggregates

Parameter	Description	Type	Size	Default
id	Aggregate id.	integer	Minimum value: 0 Maximum value: 4294967295	0
ip	IP address to group all matching traffic sessions to a flow.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

config collectors

Parameter	Description	Type	Size	Default
ip	Collector IP address.	ipv4-address-any	Not Specified	0.0.0.0
name	Collector name.	string	Maximum length: 63	
port	Collector port number(0-65535, default:0, netflow:2055, ipfix:4739).	integer	Minimum value: 0 Maximum value: 65535	0
transport	Collector L4 transport protocol for exporting packets.	option	-	udp
		Option	Description	
		<i>udp</i>	UDP protocol.	
		<i>tcp</i>	TCP protocol.	
		<i>sctp</i>	SCTP protocol.	

config switch-controller fortilink-settings

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 5001E1, FortiGate 5001E.

Configure integrated FortiLink settings for FortiSwitch.

```
config switch-controller fortilink-settings
  Description: Configure integrated FortiLink settings for FortiSwitch.
  edit <name>
    set access-vlan-mode [legacy|fail-open|...]
    set fortilink {string}
    set inactive-timer {integer}
    set link-down-flush [disable|enable]
    config nac-ports
      Description: NAC specific configuration.
      set lan-segment [enabled|disabled]
      set member-change {integer}
      set nac-lan-interface {string}
      set nac-segment-vlans <vlan-name1>, <vlan-name2>, ...
      set onboarding-vlan {string}
      set parent-key {string}
    end
  next
end
```

config switch-controller fortilink-settings

Parameter	Description	Type	Size	Default
access-vlan-mode	Intra VLAN traffic behavior with loss of connection to the FortiGate.	option	-	legacy
	Option	Description		
	legacy	Backward compatible behavior.		
	fail-open	When connection to FortiGate is lost, traffic on the VLAN may continue directly between end points.		
	fail-close	When connection to FortiGate is lost, traffic between endpoints on the VLAN is blocked.		
fortilink	FortiLink interface to which this fortilink-setting belongs.	string	Maximum length: 15	
inactive-timer	Time interval(minutes) to be included in the inactive devices expiry calculation (mac age-out + inactive-time + periodic scan interval).	integer	Minimum value: 1 Maximum value: 1440	15
link-down-flush	Clear NAC and dynamic devices on switch ports on link down event.	option	-	enable
	Option	Description		
	disable	Disable clearing NAC and dynamic devices on a switch port when link down event happens.		
	enable	Enable clearing NAC and dynamic devices on a switch port when link down event happens.		
name	FortiLink settings name.	string	Maximum length: 35	

config nac-ports

Parameter	Description	Type	Size	Default						
lan-segment	Enable/disable LAN segment feature on the FortiLink interface.	option	-	disabled						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enabled</i></td><td>Enable lan-segment on this interface.</td></tr><tr><td><i>disabled</i></td><td>Disable lan-segment on this interface.</td></tr></table>				Option	Description	<i>enabled</i>	Enable lan-segment on this interface.	<i>disabled</i>	Disable lan-segment on this interface.
Option	Description									
<i>enabled</i>	Enable lan-segment on this interface.									
<i>disabled</i>	Disable lan-segment on this interface.									

Parameter	Description	Type	Size	Default
member-change	Member change flag. Read-only.	integer	Minimum value: 0 Maximum value: 255	0
nac-lan-interface	Configure NAC LAN interface.	string	Maximum length: 15	
nac-segment-vlans <vlan-name>	Configure NAC segment VLANs. VLAN interface name.	string	Maximum length: 79	
onboarding-vlan	Default NAC Onboarding VLAN when NAC devices are discovered.	string	Maximum length: 15	
parent-key	Parent key name. Read-only.	string	Maximum length: 35	

config switch-controller global

config switch-controller global

Parameter	Description	Type	Size	Default
bounce-quarantined-link	Enable/disable bouncing (administratively bring the link down, up) of a switch port where a quarantined device was seen last. Helps to re-initiate the DHCP process for a device.	option	-	disable
	Option	Description		
	disable	Disable bouncing (administratively bring the link down, up) of a switch port where a quarantined device was seen last.		
	enable	Enable bouncing (administratively bring the link down, up) of a switch port where a quarantined device was seen last.		
default-virtual-switch-vlan	Default VLAN for ports when added to the virtual-switch.	string	Maximum length: 15	

Parameter	Description	Type	Size	Default												
dhcp-option82-circuit-id	List the parameters to be included to inform about client identification.	option	-	intfname vlan mode												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>intfname</i></td><td>Interface name.</td></tr><tr><td><i>vlan</i></td><td>VLAN name.</td></tr><tr><td><i>hostname</i></td><td>Hostname.</td></tr><tr><td><i>mode</i></td><td>Mode.</td></tr><tr><td><i>description</i></td><td>Description.</td></tr></table>	Option	Description	<i>intfname</i>	Interface name.	<i>vlan</i>	VLAN name.	<i>hostname</i>	Hostname.	<i>mode</i>	Mode.	<i>description</i>	Description.			
Option	Description															
<i>intfname</i>	Interface name.															
<i>vlan</i>	VLAN name.															
<i>hostname</i>	Hostname.															
<i>mode</i>	Mode.															
<i>description</i>	Description.															
dhcp-option82-format	DHCP option-82 format string.	option	-	ascii												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ascii</i></td><td>Allow user to choose values for circuit-id and remote-id. Format: cid=[hostname,interface,mode,vlan,description] rid=[hostname,xx:xx:xx:xx:xx:xx,ip]</td></tr><tr><td><i>legacy</i></td><td>Generate predefined fixed format for circuit-id and remote. Format: cid=hostname- [<vlan:16><mod:8><port:8>].32bit, rid= [mac(0.6)].48bit</td></tr></table>	Option	Description	<i>ascii</i>	Allow user to choose values for circuit-id and remote-id. Format: cid=[hostname,interface,mode,vlan,description] rid=[hostname,xx:xx:xx:xx:xx:xx,ip]	<i>legacy</i>	Generate predefined fixed format for circuit-id and remote. Format: cid=hostname- [<vlan:16><mod:8><port:8>].32bit, rid= [mac(0.6)].48bit									
Option	Description															
<i>ascii</i>	Allow user to choose values for circuit-id and remote-id. Format: cid=[hostname,interface,mode,vlan,description] rid=[hostname,xx:xx:xx:xx:xx:xx,ip]															
<i>legacy</i>	Generate predefined fixed format for circuit-id and remote. Format: cid=hostname- [<vlan:16><mod:8><port:8>].32bit, rid= [mac(0.6)].48bit															
dhcp-option82-remote-id	List the parameters to be included to inform about client identification.	option	-	mac												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>mac</i></td><td>MAC address.</td></tr><tr><td><i>hostname</i></td><td>Hostname.</td></tr><tr><td><i>ip</i></td><td>IP address.</td></tr></table>	Option	Description	<i>mac</i>	MAC address.	<i>hostname</i>	Hostname.	<i>ip</i>	IP address.							
Option	Description															
<i>mac</i>	MAC address.															
<i>hostname</i>	Hostname.															
<i>ip</i>	IP address.															
dhcp-server-access-list	Enable/disable DHCP snooping server access list.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP server access list.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP server access list.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCP server access list.	<i>disable</i>	Disable DHCP server access list.									
Option	Description															
<i>enable</i>	Enable DHCP server access list.															
<i>disable</i>	Disable DHCP server access list.															
dhcp-snoop-client-db-exp	Expiry time for DHCP snooping server database entries (300 - 259200 sec, default = 86400 sec).	integer	Minimum value: 300 Maximum value: 259200	86400												
dhcp-snoop-client-req	Client DHCP packet broadcast mode.	option	-	drop-untrusted												

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>drop-untrusted</i>	Broadcast packets on trusted ports in the VLAN.		
	<i>forward-untrusted</i>	Broadcast packets on all ports in the VLAN.		
dhcp-snoop-db-per-port-learn-limit	Per Interface dhcp-server entries learn limit (0 - 1024, default = 64).	integer	Minimum value: 0 Maximum value: 2048	64
disable-discovery<name>	Prevent this FortiSwitch from discovering. Managed device ID.	string	Maximum length: 79	
fips-enforce	Enable/disable enforcement of FIPS on managed FortiSwitch devices.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable enforcement of FIPS on managed FortiSwitch devices.		
	<i>enable</i>	Enable enforcement of FIPS on managed FortiSwitch devices.		
firmware-provision-on-authorization	Enable/disable automatic provisioning of latest firmware on authorization.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable firmware provision on authorization.		
	<i>disable</i>	Disable firmware provision on authorization.		
https-image-push	Enable/disable image push to FortiSwitch using HTTPS.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable image push to FortiSwitch using HTTPS.		
	<i>disable</i>	Disable image push to FortiSwitch using HTTPS.		
log-mac-limit-violations	Enable/disable logs for Learning Limit Violations.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Learn Limit Violation.		
	<i>disable</i>	Disable Learn Limit Violation.		

Parameter	Description	Type	Size	Default						
mac-aging-interval	Time after which an inactive MAC is aged out (10 - 1000000 sec, default = 300, 0 = disable).	integer	Minimum value: 10 Maximum value: 1000000	300						
mac-event-logging	Enable/disable MAC address event logging.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable MAC address event logging.</td></tr><tr><td><i>disable</i></td><td>Disable MAC address event logging.</td></tr></table>	Option	Description	<i>enable</i>	Enable MAC address event logging.	<i>disable</i>	Disable MAC address event logging.			
Option	Description									
<i>enable</i>	Enable MAC address event logging.									
<i>disable</i>	Disable MAC address event logging.									
mac-retention-period	Time in hours after which an inactive MAC is removed from client DB (0 = aged out based on mac-aging-interval).	integer	Minimum value: 0 Maximum value: 168	24						
mac-violation-timer	Set timeout for Learning Limit Violations (0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0						
quarantine-mode	Quarantine mode.	option	-	by-vlan						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>by-vlan</i></td><td>Quarantined device traffic is sent to FortiGate on a separate quarantine VLAN.</td></tr><tr><td><i>by-redirect</i></td><td>Quarantined device traffic is redirected only to the FortiGate on the received VLAN.</td></tr></table>	Option	Description	<i>by-vlan</i>	Quarantined device traffic is sent to FortiGate on a separate quarantine VLAN.	<i>by-redirect</i>	Quarantined device traffic is redirected only to the FortiGate on the received VLAN.			
Option	Description									
<i>by-vlan</i>	Quarantined device traffic is sent to FortiGate on a separate quarantine VLAN.									
<i>by-redirect</i>	Quarantined device traffic is redirected only to the FortiGate on the received VLAN.									
sn-dns-resolution	Enable/disable DNS resolution of the FortiSwitch unit's IP address with switch name.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DNS resolution of the FortiSwitch unit's IP address with switch name.</td></tr><tr><td><i>disable</i></td><td>Disable DNS resolution of the FortiSwitch unit's IP address with switch name.</td></tr></table>	Option	Description	<i>enable</i>	Enable DNS resolution of the FortiSwitch unit's IP address with switch name.	<i>disable</i>	Disable DNS resolution of the FortiSwitch unit's IP address with switch name.			
Option	Description									
<i>enable</i>	Enable DNS resolution of the FortiSwitch unit's IP address with switch name.									
<i>disable</i>	Disable DNS resolution of the FortiSwitch unit's IP address with switch name.									
switch-on-deauth	No-operation/Factory-reset the managed FortiSwitch on deauthorization.	option	-	no-op						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>no-op</i></td><td>No-operation on the managed FortiSwitch on deauthorization.</td></tr><tr><td><i>factory-reset</i></td><td>Factory-reset the managed FortiSwitch on deauthorization.</td></tr></table>	Option	Description	<i>no-op</i>	No-operation on the managed FortiSwitch on deauthorization.	<i>factory-reset</i>	Factory-reset the managed FortiSwitch on deauthorization.			
Option	Description									
<i>no-op</i>	No-operation on the managed FortiSwitch on deauthorization.									
<i>factory-reset</i>	Factory-reset the managed FortiSwitch on deauthorization.									

Parameter	Description	Type	Size	Default
update-user-device	Control which sources update the device user list.	option	-	mac-cache lldp dhcp-snooping l2-db l3-db
	Option	Description		
	mac-cache	Update MAC address from switch-controller mac-cache.		
	lldp	Update from FortiSwitch LLDP neighbor database.		
	dhcp-snooping	Update from FortiSwitch DHCP snooping client and server databases.		
	l2-db	Update from FortiSwitch Network-monitor Layer 2 tracking database.		
	l3-db	Update from FortiSwitch Network-monitor Layer 3 tracking database.		
vlan-all-mode	VLAN configuration mode, user-defined-vlans or all-possible-vlans.	option	-	defined
	Option	Description		
	all	Include all possible VLANs (1-4093).		
	defined	Include user defined VLANs.		
vlan-identity	Identity of the VLAN. Commonly used for RADIUS Tunnel-Private-Group-Id.	option	-	name
	Option	Description		
	description	Configure the VLAN description to that of the FortiOS interface description if available; otherwise use the interface name.		
	name	Configure the VLAN description to that of the FortiOS interface name.		
vlan-optimization	FortiLink VLAN optimization.	option	-	configured
	Option	Description		
	prune	Enable VLAN optimization (only VLANs necessary on or along path between destinations) on FortiSwitch units for auto-generated trunks.		
	configured	Enable VLAN optimization (only VLANs created on Fortilink interface) on FortiSwitch units for auto-generated trunks.		
	none	Disable VLAN optimization on FortiSwitch units for auto-generated trunks.		

config custom-command

Parameter	Description	Type	Size	Default
command-entry	List of FortiSwitch commands.	string	Maximum length: 35	
command-name	Name of custom command to push to all FortiSwitches in VDOM.	string	Maximum length: 35	

config switch-controller igmp-snooping

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 5001E1, FortiGate 5001E.

Configure FortiSwitch IGMP snooping global settings.

```
config switch-controller igmp-snooping
  Description: Configure FortiSwitch IGMP snooping global settings.
  set aging-time {integer}
  set flood-unknown-multicast [enable|disable]
  set query-interval {integer}
end
```

config switch-controller igmp-snooping

Parameter	Description	Type	Size	Default
aging-time	Maximum number of seconds to retain a multicast snooping entry for which no packets have been seen (15 - 3600 sec, default = 300).	integer	Minimum value: 15 Maximum value: 3600	300
flood-unknown-multicast	Enable/disable unknown multicast flooding.	option	-	disable
	Option	Description		
	enable	Enable unknown multicast flooding.		
	disable	Disable unknown multicast flooding.		
query-interval	Maximum time after which IGMP query will be sent (10 - 1200 sec, default = 125).	integer	Minimum value: 10 Maximum value: 1200	125

config switch-controller initial-config template

<i>disable</i>	Disable firmware-provision.											

Parameter	Description	Type	Size	Default
firmware-provision-latest	Enable/disable one-time automatic provisioning of the latest firmware version.	option	-	disable
	Option	Description		
	<i>disable</i>	Do not automatically provision the latest available firmware.		
	<i>once</i>	Automatically attempt a one-time upgrade to the latest available firmware version.		
firmware-provision-version	Firmware version to provision to this FortiSwitch on bootup (major.minor.build, i.e. 6.2.1234).	string	Maximum length: 35	
flow-identity	Flow-tracking netflow ipfix switch identity in hex format(00000000-FFFFFFFF default=0).	user	Not Specified	00000000
fsw-wan1-admin	FortiSwitch WAN1 admin status; enable to authorize the FortiSwitch as a managed switch.	option	-	discovered
	Option	Description		
	<i>discovered</i>	Link waiting to be authorized.		
	<i>disable</i>	Link unauthorized.		
	<i>enable</i>	Link authorized.		
fsw-wan1-peer	FortiSwitch WAN1 peer port.	string	Maximum length: 35	
l3-discovered	Layer 3 management discovered. Read-only.	integer	Minimum value: 0 Maximum value: 1	0
max-allowed-trunk-members	FortiSwitch maximum allowed trunk members.	integer	Minimum value: 0 Maximum value: 255	0

Parameter	Description	Type	Size	Default
mclag-igmp-snooping-aware	Enable/disable MCLAG IGMP-snooping awareness.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable MCLAG IGMP-snooping awareness.		
	<i>disable</i>	Disable MCLAG IGMP-snooping awareness.		
mgmt-mode	FortiLink management mode.	integer	Minimum value: 0 Maximum value: 255	0
override-snmp-community	Enable/disable overriding the global SNMP communities.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the global SNMP communities.		
	<i>disable</i>	Use the global SNMP communities.		
override-snmp-sysinfo	Enable/disable overriding the global SNMP system information.	option	-	disable
	Option	Description		
	<i>disable</i>	Use the global SNMP system information.		
	<i>enable</i>	Override the global SNMP system information.		
override-snmp-trap-threshold	Enable/disable overriding the global SNMP trap threshold values.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the global SNMP trap threshold values.		
	<i>disable</i>	Use the global SNMP trap threshold values.		
override-snmp-user	Enable/disable overriding the global SNMP users.	option	-	disable

Parameter	Description	Type	Size	Default
	Option Description			
	enable	Override the global SNMPv3 users.		
	disable	Use the global SNMPv3 users.		
owner-vdom	VDOM which owner of port belongs to.	string	Maximum length: 31	
poe-detection-type	PoE detection type for FortiSwitch.	integer	Minimum value: 0 Maximum value: 255	0
poe-pre-standard-detection	Enable/disable PoE pre-standard detection.	option	-	disable
	Option Description			
	enable	Enable PoE pre-standard detection.		
	disable	Disable PoE pre-standard detection.		
pre-provisioned	Pre-provisioned managed switch.	integer	Minimum value: 0 Maximum value: 255	0
ptp-profile	PTP profile configuration.	string	Maximum length: 63	default
ptp-status	Enable/disable PTP profile on this FortiSwitch.	option	-	disable
	Option Description			
	disable	Disable PTP profile.		
	enable	Enable PTP profile.		
purdue-level	Purdue Level of this FortiSwitch.	option	-	3
	Option Description			
	1	Level 1 - Basic Control		
	1.5	Level 1.5		
	2	Level 2 - Area Supervisory Control		

Parameter	Description	Type	Size	Default
	Option Description			
	2.5	Level 2.5		
	3	Level 3 - Operations & Control		
	3.5	Level 3.5		
	4	Level 4 - Business Planning & Logistics		
	5	Level 5 - Enterprise Network		
	5.5	Level 5.5		
qos-drop-policy	Set QoS drop-policy.	option	-	taildrop
	Option Description			
	<i>taildrop</i>	Taildrop policy.		
	<i>random-early-detection</i>	Random early detection drop policy.		
qos-red-probability	Set QoS RED/WRED drop probability.	integer	Minimum value: 0 Maximum value: 100	12
radius-nas-ip	NAS-IP address.	ipv4-address	Not Specified	0.0.0.0
radius-nas-ip-override	Use locally defined NAS-IP.	option	-	disable
	Option Description			
	<i>disable</i>	Disable radius-nas-ip-override.		
	<i>enable</i>	Enable radius-nas-ip-override.		
route-offload	Enable/disable route offload on this FortiSwitch.	option	-	disable
	Option Description			
	<i>disable</i>	Disable route offload.		
	<i>enable</i>	Enable route offload.		

Parameter	Description	Type	Size	Default
route-offload-mclag	Enable/disable route offload MCLAG on this FortiSwitch.	option	-	disable
	Option	Description		
	disable	Disable route offload MCLAG.		
	enable	Enable route offload MCLAG.		
sn	Managed-switch serial number.	string	Maximum length: 16	
staged-image-version	Staged image version for FortiSwitch.	string	Maximum length: 127

<i>active</i>	Activate mirror configuration.									
<i>inactive</i>	Deactivate mirror configuration.									
switching-packet	Enable/disable switching functionality when mirroring.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable switching functionality when mirroring.</td></tr><tr><td><i>disable</i></td><td>Disable switching functionality when mirroring.</td></tr></table>				Option	Description	<i>enable</i>	Enable switching functionality when mirroring.	<i>disable</i>	Disable switching functionality when mirroring.
Option	Description									
<i>enable</i>	Enable switching functionality when mirroring.									
<i>disable</i>	Disable switching functionality when mirroring.									

config ports

Parameter	Description	Type	Size	Default
access-mode	Access mode of the port.	option	-	static

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dynamic</i></td><td>Dynamic mode.</td></tr><tr><td><i>nac</i></td><td>NAC mode.</td></tr><tr><td><i>static</i></td><td>Static mode.</td></tr></table>	Option	Description	<i>dynamic</i>	Dynamic mode.	<i>nac</i>	NAC mode.	<i>static</i>	Static mode.			
	Option	Description										
	<i>dynamic</i>	Dynamic mode.										
	<i>nac</i>	NAC mode.										
<i>static</i>	Static mode.											
acl-group <name>	ACL groups on this port. ACL group name.	string	Maximum length: 79									
aggregator-mode	LACP member select mode.	option	-	bandwidth								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>bandwidth</i></td><td>Member selection based on largest total bandwidth of links of similar speed.</td></tr><tr><td><i>count</i></td><td>Member selection based on largest count of similar link speed.</td></tr></table>	Option	Description	<i>bandwidth</i>	Member selection based on largest total bandwidth of links of similar speed.	<i>count</i>	Member selection based on largest count of similar link speed.					
	Option	Description										
	<i>bandwidth</i>	Member selection based on largest total bandwidth of links of similar speed.										
<i>count</i>	Member selection based on largest count of similar link speed.											
allow-arp-monitor	Enable/Disable allow ARP monitor.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable allow ARP monitor.</td></tr><tr><td><i>enable</i></td><td>Enable allow ARP monitor.</td></tr></table>	Option	Description	<i>disable</i>	Disable allow ARP monitor.	<i>enable</i>	Enable allow ARP monitor.					
	Option	Description										
	<i>disable</i>	Disable allow ARP monitor.										
<i>enable</i>	Enable allow ARP monitor.											
allowed-vlans <vlan-name>	Configure switch port tagged VLANs. VLAN name.	string	Maximum length: 79									
allowed-vlans-all	Enable/disable all defined vlans on this port.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable all defined VLANs on this port.</td></tr><tr><td><i>disable</i></td><td>Disable all defined VLANs on this port.</td></tr></table>	Option	Description	<i>enable</i>	Enable all defined VLANs on this port.	<i>disable</i>	Disable all defined VLANs on this port.					
	Option	Description										
	<i>enable</i>	Enable all defined VLANs on this port.										
<i>disable</i>	Disable all defined VLANs on this port.											
arp-inspection-trust	Trusted or untrusted dynamic ARP inspection.	option	-	untrusted								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>untrusted</i></td><td>Untrusted dynamic ARP inspection.</td></tr><tr><td><i>trusted</i></td><td>Trusted dynamic ARP inspection.</td></tr></table>	Option	Description	<i>untrusted</i>	Untrusted dynamic ARP inspection.	<i>trusted</i>	Trusted dynamic ARP inspection.					
	Option	Description										
	<i>untrusted</i>	Untrusted dynamic ARP inspection.										
<i>trusted</i>	Trusted dynamic ARP inspection.											

Parameter	Description	Type	Size	Default								
authenticated-port	Peer to Peer Authenticated port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0								
bundle	Enable/disable Link Aggregation Group (LAG) bundling for non-FortiLink interfaces.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable bundling.</td></tr><tr><td><i>disable</i></td><td>Disable bundling.</td></tr></table>	Option	Description	<i>enable</i>	Enable bundling.	<i>disable</i>	Disable bundling.					
Option	Description											
<i>enable</i>	Enable bundling.											
<i>disable</i>	Disable bundling.											
description	Description for port.	string	Maximum length: 63									
dhcp-snoop-option82-trust	Enable/disable allowance of DHCP with option-82 on untrusted interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allowance of DHCP with option-82 on untrusted interface.</td></tr><tr><td><i>disable</i></td><td>Disable allowance of DHCP with option-82 on untrusted interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable allowance of DHCP with option-82 on untrusted interface.	<i>disable</i>	Disable allowance of DHCP with option-82 on untrusted interface.					
Option	Description											
<i>enable</i>	Enable allowance of DHCP with option-82 on untrusted interface.											
<i>disable</i>	Disable allowance of DHCP with option-82 on untrusted interface.											
dhcp-snooping	Trusted or untrusted DHCP-snooping interface.	option	-	untrusted								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>untrusted</i></td><td>Untrusted DHCP snooping interface.</td></tr><tr><td><i>trusted</i></td><td>Trusted DHCP snooping interface.</td></tr></table>	Option	Description	<i>untrusted</i>	Untrusted DHCP snooping interface.	<i>trusted</i>	Trusted DHCP snooping interface.					
Option	Description											
<i>untrusted</i>	Untrusted DHCP snooping interface.											
<i>trusted</i>	Trusted DHCP snooping interface.											
discard-mode	Configure discard mode for port.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Discard disabled.</td></tr><tr><td><i>all-untagged</i></td><td>Discard all frames that are untagged.</td></tr><tr><td><i>all-tagged</i></td><td>Discard all frames that are tagged.</td></tr></table>	Option	Description	<i>none</i>	Discard disabled.	<i>all-untagged</i>	Discard all frames that are untagged.	<i>all-tagged</i>	Discard all frames that are tagged.			
Option	Description											
<i>none</i>	Discard disabled.											
<i>all-untagged</i>	Discard all frames that are untagged.											
<i>all-tagged</i>	Discard all frames that are tagged.											
edge-port	Enable/disable this interface as an edge port, bridging connections between workstations and/or computers.	option	-	enable								

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable this interface as an edge port.</td></tr><tr><td><i>disable</i></td><td>Disable this interface as an edge port.</td></tr></table>	Option	Description	<i>enable</i>	Enable this interface as an edge port.	<i>disable</i>	Disable this interface as an edge port.							
	Option	Description												
	<i>enable</i>	Enable this interface as an edge port.												
<i>disable</i>	Disable this interface as an edge port.													
encrypted-port	Peer to Peer Encrypted port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0										
export-to	Export managed-switch port to a tenant VDOM.	string	Maximum length: 31											
export-to-pool	Switch controller export port to pool-list.	string	Maximum length: 35											
fallback-port	LACP fallback port.	string	Maximum length: 79											
fec-capable	FEC capable.	integer	Minimum value: 0 Maximum value: 1	0										
fec-state	State of forward error correction.	option	-	detect-by-module										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disabled</i></td><td>Disable forward error correction.</td></tr><tr><td><i>cl74</i></td><td>Enable Clause 74 FC-FEC, which only applies to 25Gbps.</td></tr><tr><td><i>cl91</i></td><td>Enable Clause 91 RS-FEC, which only applies to 100Gbps.</td></tr><tr><td><i>detect-by-module</i></td><td>FEC supported by module.</td></tr></table>	Option	Description	<i>disabled</i>	Disable forward error correction.	<i>cl74</i>	Enable Clause 74 FC-FEC, which only applies to 25Gbps.	<i>cl91</i>	Enable Clause 91 RS-FEC, which only applies to 100Gbps.	<i>detect-by-module</i>	FEC supported by module.			
	Option	Description												
	<i>disabled</i>	Disable forward error correction.												
	<i>cl74</i>	Enable Clause 74 FC-FEC, which only applies to 25Gbps.												
	<i>cl91</i>	Enable Clause 91 RS-FEC, which only applies to 100Gbps.												
<i>detect-by-module</i>	FEC supported by module.													
fgt-peer-device-name	FGT peer device name. Read-only.	string	Maximum length: 16											
fgt-peer-port-name	FGT peer port name. Read-only.	string	Maximum length: 15											
fiber-port	Fiber-port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0										

Parameter	Description	Type	Size	Default										
flags	Port properties flags. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0										
flap-duration	Period over which flap events are calculated (seconds).	integer	Minimum value: 5 Maximum value: 300	30										
flap-rate	Number of stage change events needed within flap-duration.	integer	Minimum value: 1 Maximum value: 30	5										
flap-timeout	Flap guard disabling protection (min).	integer	Minimum value: 0 Maximum value: 120	0										
flapguard	Enable/disable flap guard.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FlapGuard for this port.</td></tr><tr><td><i>disable</i></td><td>Disable FlapGuard for this port.</td></tr></table>				Option	Description	<i>enable</i>	Enable FlapGuard for this port.	<i>disable</i>	Disable FlapGuard for this port.				
Option	Description													
<i>enable</i>	Enable FlapGuard for this port.													
<i>disable</i>	Disable FlapGuard for this port.													
flow-control	Flow control direction.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable flow control.</td></tr><tr><td><i>tx</i></td><td>Enable flow control for transmission pause control frames.</td></tr><tr><td><i>rx</i></td><td>Enable flow control for receive pause control frames.</td></tr><tr><td><i>both</i></td><td>Enable flow control for both transmission and receive pause control frames.</td></tr></table>				Option	Description	<i>disable</i>	Disable flow control.	<i>tx</i>	Enable flow control for transmission pause control frames.	<i>rx</i>	Enable flow control for receive pause control frames.	<i>both</i>	Enable flow control for both transmission and receive pause control frames.
Option	Description													
<i>disable</i>	Disable flow control.													
<i>tx</i>	Enable flow control for transmission pause control frames.													
<i>rx</i>	Enable flow control for receive pause control frames.													
<i>both</i>	Enable flow control for both transmission and receive pause control frames.													
fortilink-port	FortiLink uplink port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0										
fortiswitch-acls <id>	ACLs on this port. ACL ID.	integer	Minimum value: 0 Maximum value: 4294967295											

Parameter	Description	Type	Size	Default
igmp-snooping-flood-reports	Enable/disable flooding of IGMP reports to this interface when igmp-snooping enabled.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable flooding of IGMP snooping reports to this interface.		
	<i>disable</i>	Disable flooding of IGMP snooping reports to this interface.		
interface-tags <tag-name>	Tag(s) associated with the interface for various features including virtual port pool, dynamic port policy. FortiSwitch port tag name when exported to a virtual port pool or matched to dynamic port policy.	string	Maximum length: 63	
ip-source-guard	Enable/disable IP source guard.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable IP source guard.		
	<i>enable</i>	Enable IP source guard.		
isl-local-trunk-name	ISL local trunk name. Read-only.	string	Maximum length: 15	
isl-peer-device-name	ISL peer device name. Read-only.	string	Maximum length: 16	
isl-peer-device-sn	ISL peer device serial number. Read-only.	string	Maximum length: 16	
isl-peer-port-name	ISL peer port name. Read-only.	string	Maximum length: 15	
lACP-speed	End Link Aggregation Control Protocol (LACP) messages every 30 seconds (slow) or every second (fast).	option	-	slow
	Option	Description		
	<i>slow</i>	Send LACP message every 30 seconds.		
	<i>fast</i>	Send LACP message every second.		
learning-limit	Limit the number of dynamic MAC addresses on this Port (1 - 128, 0 = no limit, default).	integer	Minimum value: 0 Maximum value: 128	0

Parameter	Description	Type	Size	Default										
lldp-profile	LLDP port TLV profile.	string	Maximum length: 63	default-auto-isl										
lldp-status	LLDP transmit and receive status.	option	-	tx-rx										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable LLDP TX and RX.</td></tr><tr><td>rx-only</td><td>Enable LLDP as RX only.</td></tr><tr><td>tx-only</td><td>Enable LLDP as TX only.</td></tr><tr><td>tx-rx</td><td>Enable LLDP TX and RX.</td></tr></table>				Option	Description	disable	Disable LLDP TX and RX.	rx-only	Enable LLDP as RX only.	tx-only	Enable LLDP as TX only.	tx-rx	Enable LLDP TX and RX.
	Option	Description												
	disable	Disable LLDP TX and RX.												
	rx-only	Enable LLDP as RX only.												
	tx-only	Enable LLDP as TX only.												
tx-rx	Enable LLDP TX and RX.													
log-mac-event	Enable/disable logging for dynamic MAC address events.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable log MAC event for this interface.</td></tr><tr><td>enable</td><td>Enable log MAC event for this interface.</td></tr></table>				Option	Description	disable	Disable log MAC event for this interface.	enable	Enable log MAC event for this interface.				
	Option	Description												
	disable	Disable log MAC event for this interface.												
enable	Enable log MAC event for this interface.													
loop-guard	Enable/disable loop-guard on this interface, an STP optimization used to prevent network loops.	option	-	disabled										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enabled</td><td>Enable loop-guard on this interface.</td></tr><tr><td>disabled</td><td>Disable loop-guard on this interface.</td></tr></table>				Option	Description	enabled	Enable loop-guard on this interface.	disabled	Disable loop-guard on this interface.				
	Option	Description												
	enabled	Enable loop-guard on this interface.												
disabled	Disable loop-guard on this interface.													
loop-guard-timeout	Loop-guard timeout (0 - 120 min, default = 45).	integer	Minimum value: 0 Maximum value: 120	45										
mac-addr	Port/Trunk MAC.	mac-address	Not Specified	00:00:00:00:00:00										
matched-dpp-intf-tags	Matched interface tags in the dynamic port policy.	string	Maximum length: 63											
matched-dpp-policy	Matched child policy in the dynamic port policy.	string	Maximum length: 63											
max-bundle	Maximum size of LAG bundle (1 - 24, default = 24).	integer	Minimum value: 1 Maximum value: 24	24										

Parameter	Description	Type	Size	Default
mcast-snooping-flood-traffic	Enable/disable flooding of IGMP snooping traffic to this interface.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable flooding of IGMP snooping traffic to this interface.		
	<i>disable</i>	Disable flooding of IGMP snooping traffic to this interface.		
mclag	Enable/disable multi-chassis link aggregation (MCLAG).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable MCLAG.		
	<i>disable</i>	Disable MCLAG.		
mclag-icl-port	MCLAG-ICL port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0
media-type	Media type. Read-only.	string	Maximum length: 31	
member-withdrawal-behavior	Port behavior after it withdraws because of loss of control packets.	option	-	block
	Option	Description		
	<i>forward</i>	Forward traffic.		
	<i>block</i>	Block traffic.		
members <member-name>	Aggregated LAG bundle interfaces. Interface name from available options.	string	Maximum length: 79	
min-bundle	Minimum size of LAG bundle (1 - 24, default = 1).	integer	Minimum value: 1 Maximum value: 24	1
mode	LACP mode: ignore and do not send control messages, or negotiate 802.3ad aggregation passively or actively.	option	-	static

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Static aggregation, do not send and ignore any control messages.</td></tr><tr><td><i>lacp-passive</i></td><td>Passively use LACP to negotiate 802.3ad aggregation.</td></tr><tr><td><i>lacp-active</i></td><td>Actively use LACP to negotiate 802.3ad aggregation.</td></tr></table>		Option	Description	<i>static</i>	Static aggregation, do not send and ignore any control messages.	<i>lacp-passive</i>	Passively use LACP to negotiate 802.3ad aggregation.	<i>lacp-active</i>	Actively use LACP to negotiate 802.3ad aggregation.		
	Option	Description										
	<i>static</i>	Static aggregation, do not send and ignore any control messages.										
	<i>lacp-passive</i>	Passively use LACP to negotiate 802.3ad aggregation.										
<i>lacp-active</i>	Actively use LACP to negotiate 802.3ad aggregation.											
p2p-port	General peer to peer tunnel port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0								
packet-sample-rate	Packet sampling rate (0 - 99999 p/sec).	integer	Minimum value: 0 Maximum value: 99999	512								
packet-sampler	Enable/disable packet sampling on this interface.	option	-	disabled								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enabled</i></td><td>Enable packet sampling on this interface.</td></tr><tr><td><i>disabled</i></td><td>Disable packet sampling on this interface.</td></tr></table>		Option	Description	<i>enabled</i>	Enable packet sampling on this interface.	<i>disabled</i>	Disable packet sampling on this interface.				
	Option	Description										
	<i>enabled</i>	Enable packet sampling on this interface.										
<i>disabled</i>	Disable packet sampling on this interface.											
pause-meter	Configure ingress pause metering rate, in kbps (default = 0, disabled).	integer	Minimum value: 128 Maximum value: 2147483647	0								
pause-meter-resume	Resume threshold for resuming traffic on ingress port.	option	-	50%								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>75%</td><td>Back pressure state won't be cleared until bucket count falls below 75% of pause threshold.</td></tr><tr><td>50%</td><td>Back pressure state won't be cleared until bucket count falls below 50% of pause threshold.</td></tr><tr><td>25%</td><td>Back pressure state won't be cleared until bucket count falls below 25% of pause threshold.</td></tr></table>		Option	Description	75%	Back pressure state won't be cleared until bucket count falls below 75% of pause threshold.	50%	Back pressure state won't be cleared until bucket count falls below 50% of pause threshold.	25%	Back pressure state won't be cleared until bucket count falls below 25% of pause threshold.		
	Option	Description										
	75%	Back pressure state won't be cleared until bucket count falls below 75% of pause threshold.										
	50%	Back pressure state won't be cleared until bucket count falls below 50% of pause threshold.										
25%	Back pressure state won't be cleared until bucket count falls below 25% of pause threshold.											
pd-capable	Powered device capable.	integer	Minimum value: 0 Maximum value: 1	0								

Parameter	Description	Type	Size	Default										
poe-capable	PoE capable.	integer	Minimum value: 0 Maximum value: 1	0										
poe-max-power	PoE maximum power. Read-only.	string	Maximum length: 35											
poe-mode-bt-capable	PoE mode IEEE 802.3BT capable.	integer	Minimum value: 0 Maximum value: 1	0										
poe-port-mode	Configure PoE port mode.	option	-	ieee802-3at										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ieee802-3af</td><td>IEEE802.3 AF.</td></tr><tr><td>ieee802-3at</td><td>IEEE802.3 AT.</td></tr><tr><td>ieee802-3bt</td><td>IEEE802.3 BT.</td></tr></table>				Option	Description	ieee802-3af	IEEE802.3 AF.	ieee802-3at	IEEE802.3 AT.	ieee802-3bt	IEEE802.3 BT.		
Option	Description													
ieee802-3af	IEEE802.3 AF.													
ieee802-3at	IEEE802.3 AT.													
ieee802-3bt	IEEE802.3 BT.													
poe-port-power	Configure PoE port power.	option	-	normal										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>normal</td><td>Power not delivered during boot.</td></tr><tr><td>perpetual</td><td>Power delivered during soft reboot.</td></tr><tr><td>perpetual-fast</td><td>Early power delivered during cold boot.</td></tr></table>				Option	Description	normal	Power not delivered during boot.	perpetual	Power delivered during soft reboot.	perpetual-fast	Early power delivered during cold boot.		
Option	Description													
normal	Power not delivered during boot.													
perpetual	Power delivered during soft reboot.													
perpetual-fast	Early power delivered during cold boot.													
poe-port-priority	Configure PoE port priority.	option	-	low-priority										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>critical-priority</td><td>Critical Priority.</td></tr><tr><td>high-priority</td><td>High Priority.</td></tr><tr><td>low-priority</td><td>Low Priority.</td></tr><tr><td>medium-priority</td><td>Medium Priority.</td></tr></table>				Option	Description	critical-priority	Critical Priority.	high-priority	High Priority.	low-priority	Low Priority.	medium-priority	Medium Priority.
Option	Description													
critical-priority	Critical Priority.													
high-priority	High Priority.													
low-priority	Low Priority.													
medium-priority	Medium Priority.													
poe-pre-standard-detection	Enable/disable PoE pre-standard detection.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable PoE pre-standard detection.</td></tr><tr><td>disable</td><td>Disable PoE pre-standard detection.</td></tr></table>				Option	Description	enable	Enable PoE pre-standard detection.	disable	Disable PoE pre-standard detection.				
Option	Description													
enable	Enable PoE pre-standard detection.													
disable	Disable PoE pre-standard detection.													

Parameter	Description	Type	Size	Default														
poe-standard	PoE standard supported. Read-only.	string	Maximum length: 63															
poe-status	Enable/disable PoE status.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable PoE status.</td></tr><tr><td><i>disable</i></td><td>Disable PoE status.</td></tr></table>				Option	Description	<i>enable</i>	Enable PoE status.	<i>disable</i>	Disable PoE status.								
Option	Description																	
<i>enable</i>	Enable PoE status.																	
<i>disable</i>	Disable PoE status.																	
port-name	Switch port name.	string	Maximum length: 15															
port-number	Port number. Read-only.	integer	Minimum value: 1 Maximum value: 64	0														
port-owner	Switch port name.	string	Maximum length: 15															
port-policy	Switch controller dynamic port policy from available options.	string	Maximum length: 63															
port-prefix-type	Port prefix type. Read-only.	integer	Minimum value: 0 Maximum value: 1	0														
port-security-policy	Switch controller authentication policy to apply to this managed switch from available options.	string	Maximum length: 31															
port-selection-criteria	Algorithm for aggregate port selection.	option	-	src-dst-ip														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>src-mac</i></td><td>Source MAC address.</td></tr><tr><td><i>dst-mac</i></td><td>Destination MAC address.</td></tr><tr><td><i>src-dst-mac</i></td><td>Source and destination MAC address.</td></tr><tr><td><i>src-ip</i></td><td>Source IP address.</td></tr><tr><td><i>dst-ip</i></td><td>Destination IP address.</td></tr><tr><td><i>src-dst-ip</i></td><td>Source and destination IP address.</td></tr></table>				Option	Description	<i>src-mac</i>	Source MAC address.	<i>dst-mac</i>	Destination MAC address.	<i>src-dst-mac</i>	Source and destination MAC address.	<i>src-ip</i>	Source IP address.	<i>dst-ip</i>	Destination IP address.	<i>src-dst-ip</i>	Source and destination IP address.
Option	Description																	
<i>src-mac</i>	Source MAC address.																	
<i>dst-mac</i>	Destination MAC address.																	
<i>src-dst-mac</i>	Source and destination MAC address.																	
<i>src-ip</i>	Source IP address.																	
<i>dst-ip</i>	Destination IP address.																	
<i>src-dst-ip</i>	Source and destination IP address.																	
ptp-policy	PTP policy configuration.	string	Maximum length: 63	default														

Parameter	Description	Type	Size	Default
ptp-status	Enable/disable PTP policy on this FortiSwitch port.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable PTP policy.		
	<i>enable</i>	Enable PTP policy.		
qnq	802.1AD VLANs in the VDom.	string	Maximum length: 15	
qos-policy	Switch controller QoS policy from available options.	string	Maximum length: 63	default
restricted-auth-port	Peer to Peer Restricted Authenticated port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0
rpvst-port	Enable/disable inter-operability with rapid PVST on this interface.	option	-	disabled
	Option	Description		
	<i>disabled</i>	Disable inter-operability with rapid PVST on this interface.		
	<i>enabled</i>	Enable inter-operability with rapid PVST on this interface.		
sample-direction	Packet sampling direction.	option	-	both
	Option	Description		
	<i>tx</i>	Monitor transmitted traffic.		
	<i>rx</i>	Monitor received traffic.		
	<i>both</i>	Monitor transmitted and received traffic.		
sflow-counter-interval	sFlow sampling counter polling interval in seconds (0 - 255).	integer	Minimum value: 0 Maximum value: 255	0
speed	Switch port speed; default and available settings depend on hardware.	option	-	auto
	Option	Description		
	<i>10half</i>	10M half-duplex.		
	<i>10full</i>	10M full-duplex.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>100half</i>	100M half-duplex.		
	<i>100full</i>	100M full-duplex.		
	<i>1000full</i>	1G full-duplex		
	<i>10000full</i>	10G full-duplex		
	<i>auto</i>	Auto-negotiation.		
	<i>1000auto</i>	Auto-negotiation (1G full-duplex only).		
	<i>1000full-fiber</i>	1G full-duplex (fiber SFPs only)		
	<i>40000full</i>	40G full-duplex		
	<i>auto-module</i>	Auto Module.		
	<i>100FX-half</i>	100Mbps half-duplex. 100Base-FX.		
	<i>100FX-full</i>	100Mbps full-duplex. 100Base-FX.		
	<i>100000full</i>	100Gbps full-duplex.		
	<i>2500auto</i>	Auto-Negotiation (2.5Gbps Only).		
	<i>2500full</i>	2.5Gbps full-duplex.		
	<i>25000full</i>	25Gbps full-duplex.		
	<i>50000full</i>	50Gbps full-duplex.		
	<i>10000cr</i>	10Gbps copper interface.		
	<i>10000sr</i>	10Gbps SFI interface.		
	<i>100000sr4</i>	100Gbps SFI interface.		
	<i>100000cr4</i>	100Gbps copper interface.		
	<i>40000sr4</i>	40Gbps SFI interface.		
	<i>40000cr4</i>	40Gbps copper interface.		
	<i>40000auto</i>	Auto-Negotiation (40Gbps Only).		
	<i>25000cr</i>	25Gbps copper interface.		
	<i>25000sr</i>	25Gbps SFI interface.		
	<i>50000cr</i>	50Gbps copper interface.		
	<i>50000sr</i>	50Gbps SFI interface.		
	<i>5000auto</i>	5Gbps full-duplex.		

Parameter	Description	Type	Size	Default						
stacking-port	Stacking port. Read-only.	integer	Minimum value: 0 Maximum value: 1	0						
status	Switch port admin status: up or down.	option	-	up						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>up</i></td><td>Set admin status up.</td></tr><tr><td><i>down</i></td><td>Set admin status down.</td></tr></table>	Option	Description	<i>up</i>	Set admin status up.	<i>down</i>	Set admin status down.			
Option	Description									
<i>up</i>	Set admin status up.									
<i>down</i>	Set admin status down.									
sticky-mac	Enable or disable sticky-mac on the interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sticky mac on the interface.</td></tr><tr><td><i>disable</i></td><td>Disable sticky mac on the interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable sticky mac on the interface.	<i>disable</i>	Disable sticky mac on the interface.			
Option	Description									
<i>enable</i>	Enable sticky mac on the interface.									
<i>disable</i>	Disable sticky mac on the interface.									
storm-control-policy	Switch controller storm control policy from available options.	string	Maximum length: 63	default						
stp-bpdu-guard	Enable/disable STP BPDU guard on this interface.	option	-	disabled						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enabled</i></td><td>Enable STP BPDU guard on this interface.</td></tr><tr><td><i>disabled</i></td><td>Disable STP BPDU guard on this interface.</td></tr></table>	Option	Description	<i>enabled</i>	Enable STP BPDU guard on this interface.	<i>disabled</i>	Disable STP BPDU guard on this interface.			
Option	Description									
<i>enabled</i>	Enable STP BPDU guard on this interface.									
<i>disabled</i>	Disable STP BPDU guard on this interface.									
stp-bpdu-guard-timeout	BPDU Guard disabling protection (0 - 120 min).	integer	Minimum value: 0 Maximum value: 120	5						
stp-root-guard	Enable/disable STP root guard on this interface.	option	-	disabled						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enabled</i></td><td>Enable STP root-guard on this interface.</td></tr><tr><td><i>disabled</i></td><td>Disable STP root-guard on this interface.</td></tr></table>	Option	Description	<i>enabled</i>	Enable STP root-guard on this interface.	<i>disabled</i>	Disable STP root-guard on this interface.			
Option	Description									
<i>enabled</i>	Enable STP root-guard on this interface.									
<i>disabled</i>	Disable STP root-guard on this interface.									
stp-state	Enable/disable Spanning Tree Protocol (STP) on this interface.	option	-	enabled						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enabled</i></td><td>Enable STP on this interface.</td></tr><tr><td><i>disabled</i></td><td>Disable STP on this interface.</td></tr></table>				Option	Description	<i>enabled</i>	Enable STP on this interface.	<i>disabled</i>	Disable STP on this interface.
	Option	Description								
	<i>enabled</i>	Enable STP on this interface.								
<i>disabled</i>	Disable STP on this interface.									
switch-id	Switch id. Read-only.	string	Maximum length: 16							
type	Interface type: physical or trunk port.	option	-	physical						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>physical</i></td><td>Physical port.</td></tr><tr><td><i>trunk</i></td><td>Trunk port.</td></tr></table>				Option	Description	<i>physical</i>	Physical port.	<i>trunk</i>	Trunk port.
	Option	Description								
	<i>physical</i>	Physical port.								
<i>trunk</i>	Trunk port.									
untagged-vlans <vlan-name>	Configure switch port untagged VLANs. VLAN name.	string	Maximum length: 79							
vlan	Assign switch ports to a VLAN.	string	Maximum length: 15							

config dhcp-snoop-option82-override

Parameter	Description	Type	Size	Default
circuit-id	Circuit ID string.	string	Maximum length: 254	
remote-id	Remote ID string.	string	Maximum length: 254	
vlan-name	DHCP snooping option 82 VLAN.	string	Maximum length: 15	

config remote-log

Parameter	Description	Type	Size	Default
csv	Enable/disable comma-separated value (CSV) strings.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable comma-separated value (CSV) strings.		
	<i>disable</i>	Disable comma-separated value (CSV) strings.		
facility	Facility to log to remote syslog server.	option	-	local7

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>kernel</i>	Kernel messages.		
	<i>user</i>	Random user-level messages.		
	<i>mail</i>	Mail system.		
	<i>daemon</i>	System daemons.		
	<i>auth</i>	Security/authorization messages.		
	<i>syslog</i>	Messages generated internally by syslogd.		
	<i>lpr</i>	Line printer subsystem.		
	<i>news</i>	Network news subsystem.		
	<i>uucp</i>	UUCP server messages.		
	<i>cron</i>	Clock daemon.		
	<i>authpriv</i>	Security/authorization messages (private).		
	<i>ftp</i>	FTP daemon.		
	<i>ntp</i>	NTP daemon.		
	<i>audit</i>	Log audit.		
	<i>alert</i>	Log alert.		
	<i>clock</i>	Clock daemon.		
	<i>local0</i>	Reserved for local use.		
	<i>local1</i>	Reserved for local use.		
	<i>local2</i>	Reserved for local use.		
	<i>local3</i>	Reserved for local use.		
	<i>local4</i>	Reserved for local use.		
	<i>local5</i>	Reserved for local use.		
	<i>local6</i>	Reserved for local use.		
<i>local7</i>	Reserved for local use.			
name	Remote log name.	string	Maximum length: 35	
port	Remote syslog server listening port.	integer	Minimum value: 0 Maximum value: 65535	514

Parameter	Description	Type	Size	Default																		
server	IPv4 address of the remote syslog server.	string	Maximum length: 63

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable automatic inclusion of untagged VLANs.</td></tr><tr><td><i>enable</i></td><td>Enable automatic inclusion of untagged VLANs.</td></tr></table>	Option	Description	<i>disable</i>	Disable automatic inclusion of untagged VLANs.	<i>enable</i>	Enable automatic inclusion of untagged VLANs.			
Option	Description									
<i>disable</i>	Disable automatic inclusion of untagged VLANs.									
<i>enable</i>	Enable automatic inclusion of untagged VLANs.									
eap-passthru	Enable/disable EAP pass-through mode, allowing protocols (such as LLDP) to pass through ports for more flexible authentication.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable EAP pass-through mode on this interface.</td></tr><tr><td><i>enable</i></td><td>Enable EAP pass-through mode on this interface.</td></tr></table>	Option	Description	<i>disable</i>	Disable EAP pass-through mode on this interface.	<i>enable</i>	Enable EAP pass-through mode on this interface.			
Option	Description									
<i>disable</i>	Disable EAP pass-through mode on this interface.									
<i>enable</i>	Enable EAP pass-through mode on this interface.									
framevid-apply	Enable/disable the capability to apply the EAP/MAB frame VLAN to the port native VLAN.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable the capability to apply the EAP/MAB frame VLAN to the port native VLAN.</td></tr></table>	Option	Description	<i>disable</i>	Disable the capability to apply the EAP/MAB frame VLAN to the port native VLAN.					
Option	Description									
<i>disable</i>	Disable the capability to apply the EAP/MAB frame VLAN to the port native VLAN.									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the capability to apply the EAP/MAB frame VLAN to the port native VLAN.</td></tr></table>	Option	Description	<i>enable</i>	Enable the capability to apply the EAP/MAB frame VLAN to the port native VLAN.					
Option	Description									
<i>enable</i>	Enable the capability to apply the EAP/MAB frame VLAN to the port native VLAN.									
guest-auth-delay	Guest authentication delay (1 - 900 sec, default = 30).	integer	Minimum value: 1 Maximum value: 900	30						
guest-vlan	Enable the guest VLAN feature to allow limited access to non-802.1X-compliant clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable guest VLAN on this interface.</td></tr><tr><td><i>enable</i></td><td>Enable guest VLAN on this interface.</td></tr></table>	Option	Description	<i>disable</i>	Disable guest VLAN on this interface.	<i>enable</i>	Enable guest VLAN on this interface.			
Option	Description									
<i>disable</i>	Disable guest VLAN on this interface.									
<i>enable</i>	Enable guest VLAN on this interface.									
guest-vlan-id	Guest VLAN name.	string	Maximum length: 15							
mac-auth-bypass	Enable/disable MAB for this policy.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable MAB.</td></tr><tr><td><i>enable</i></td><td>Enable MAB.</td></tr></table>	Option	Description	<i>disable</i>	Disable MAB.	<i>enable</i>	Enable MAB.			
Option	Description									
<i>disable</i>	Disable MAB.									
<i>enable</i>	Enable MAB.									
name	Policy name.	string	Maximum length: 31							
open-auth	Enable/disable open authentication for this policy.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable open authentication.</td></tr><tr><td><i>enable</i></td><td>Enable open authentication.</td></tr></table>	Option	Description	<i>disable</i>	Disable open authentication.	<i>enable</i>	Enable open authentication.			
Option	Description									
<i>disable</i>	Disable open authentication.									
<i>enable</i>	Enable open authentication.									
policy-type	Policy type.	option	-	802.1X						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>802.1X</i></td><td>802.1X security policy.</td></tr></table>	Option	Description	<i>802.1X</i>	802.1X security policy.					
Option	Description									
<i>802.1X</i>	802.1X security policy.									
radius-timeout-overwrite	Enable to override the global RADIUS session timeout.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Override the global RADIUS session timeout.		
	<i>enable</i>	Use the global RADIUS session timeout.		
security-mode	Port or MAC based 802.1X security mode.	option	-	802.1X
	Option	Description		
	<i>802.1X</i>	802.1X port based authentication.		
	<i>802.1X-mac-based</i>	802.1X MAC based authentication.		
user-group <name>	Name of user-group to assign to this MAC Authentication Bypass (MAB) policy. Group name.	string	Maximum length: 79

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 5001E1, FortiGate 5001E.

Configure FortiSwitch multiple spanning tree protocol (MSTP) instances.

```
config switch-controller stp-instance
    Description: Configure FortiSwitch multiple spanning tree protocol (MSTP) instances.
    edit <id>
        set vlan-range <vlan-name1>, <vlan-name2>, ...
    next
end
```

config switch-controller stp-instance

Parameter	Description	Type	Size	Default
id	Instance ID.	string	Maximum length: 2	
vlan-range <vlan-name>	Configure VLAN range for STP instance. VLAN name.	string	Maximum length: 79	

config switch-controller stp-settings

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 5001E1, FortiGate 5001E.

Configure FortiSwitch spanning tree protocol (STP).

```
config switch-controller stp-settings
    Description: Configure FortiSwitch spanning tree protocol (STP).
    set forward-time {integer}
    set hello-time {integer}
    set max-age {integer}
    set max-hops {integer}
    set name {string}
    set pending-timer {integer}
    set revision {integer}
end
```

config switch-controller stp-settings

Parameter	Description	Type	Size	Default
forward-time	Period of time a port is in listening and learning state (4 - 30 sec, default = 15).	integer	Minimum value: 4 Maximum value: 30	15

Parameter	Description	Type	Size	Default
hello-time	Period of time between successive STP frame Bridge Protocol Data Units (BPDUs) sent on a port (1 - 10 sec, default = 2).	integer	Minimum value: 1 Maximum value: 10	2
max-age	Maximum time before a bridge port expires its configuration BPDU information (6 - 40 sec, default = 20).	integer	Minimum value: 6 Maximum value: 40	20
max-hops	Maximum number of hops between the root bridge and the furthest bridge (1- 40, default = 20).	integer	Minimum value: 1 Maximum value: 40	20
name	Name of global STP settings configuration.	string	Maximum length: 31	
pending-timer	Pending time (1 - 15 sec, default = 4).	integer	Minimum value: 1 Maximum value: 15	4
revision	STP revision number (0 - 65535).	integer	Minimum value: 0 Maximum value: 65535	0

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 5001E1, FortiGate 5001E.

Configure system-wide switch controller settings.

```
config switch-controller system
    Description: Configure system-wide switch controller settings.
    set caputp-echo-interval {integer}
    set caputp-max-retransmit {integer}
    set data-sync-interval {integer}
    set dynamic-periodic-interval {integer}
    set iot-holdoff {integer}
    set iot-mac-idle {integer}
    set iot-scan-interval {integer}
    set iot-weight-threshold {integer}
    set nac-periodic-interval {integer}
    set parallel-process {integer}
    set parallel-process-override [disable|enable]
    set tunnel-mode [compatible|moderate|...]
end
```

config switch-controller system

Parameter	Description	Type	Size	Default
caputp-echo-interval	Echo interval for the caputp echo requests from swtp.	integer	Minimum value: 8 Maximum value: 600	30
caputp-max-retransmit	Maximum retransmission count for the caputp tunnel packets.	integer	Minimum value: 0 Maximum value: 64	5
data-sync-interval	Time interval between collection of switch data (30 - 1800 sec, default = 60, 0 = disable).	integer	Minimum value: 30 Maximum value: 1800	60
dynamic-periodic-interval	Periodic time interval to run Dynamic port policy engine (5 - 180 sec, default = 60).	integer	Minimum value: 5 Maximum value: 180	60
iot-holdoff	MAC entry's creation time. Time must be greater than this value for an entry to be created (0 - 10080 mins, default = 5 mins).	integer	Minimum value: 0 Maximum value: 10080	5
iot-mac-idle	MAC entry's idle time. MAC entry is removed after this value (0 - 10080 mins, default = 1440 mins).	integer	Minimum value: 0 Maximum value: 10080	1440
iot-scan-interval	IoT scan interval (2 - 10080 mins, default = 60 mins, 0 = disable).	integer	Minimum value: 2 Maximum value: 10080	60
iot-weight-threshold	MAC entry's confidence value. Value is re-queried when below this value (default = 1, 0 = disable).	integer	Minimum value: 0 Maximum value: 255	1
nac-periodic-interval	Periodic time interval to run NAC engine (5 - 180 sec, default = 60).	integer	Minimum value: 5 Maximum value: 180	60

Parameter	Description	Type	Size	Default								
parallel-process	Maximum number of parallel processes.	integer	Minimum value: 1 Maximum value: 128 **	1								
parallel-process-override	Enable/disable parallel process override.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable maximum parallel process override.</td></tr><tr><td><i>enable</i></td><td>Enable maximum parallel process override.</td></tr></table>				Option	Description	<i>disable</i>	Disable maximum parallel process override.	<i>enable</i>	Enable maximum parallel process override.		
Option	Description											
<i>disable</i>	Disable maximum parallel process override.											
<i>enable</i>	Enable maximum parallel process override.											
tunnel-mode	Compatible/strict tunnel mode.	option	-	compatible								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>compatible</i></td><td>Least restrictive. Supports the widest variety of hardware and software versions.</td></tr><tr><td><i>moderate</i></td><td>Moderate level of security. Supports recent generations of hardware and latest software versions.</td></tr><tr><td><i>strict</i></td><td>Highest level of security. Supports only the latest generation of hardware and latest software version.</td></tr></table>				Option	Description	<i>compatible</i>	Least restrictive. Supports the widest variety of hardware and software versions.	<i>moderate</i>	Moderate level of security. Supports recent generations of hardware and latest software versions.	<i>strict</i>	Highest level of security. Supports only the latest generation of hardware and latest software version.
Option	Description											
<i>compatible</i>	Least restrictive. Supports the widest variety of hardware and software versions.											
<i>moderate</i>	Moderate level of security. Supports recent generations of hardware and latest software versions.											
<i>strict</i>	Highest level of security. Supports only the latest generation of hardware and latest software version.											

** Values may differ between models.

config system 3g-modem custom

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64.

3G MODEM custom.

```
config system 3g-modem custom
  Description: 3G MODEM custom.
  edit <id>
    set class-id {user}
    set init-string {string}
    set model {string}
    set modeswitch-string {string}
    set product-id {user}
    set vendor {string}
    set vendor-id {user}
  next
end
```

config system 3g-modem custom

Parameter	Description	Type	Size	Default
class-id	USB interface class in hexadecimal format (00-ff).	user	Not Specified	

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
init-string	Init string in hexadecimal format (even length).	string	Maximum length: 127	
model	MODEM model name.	string	Maximum length: 35	
modeswitch-string	USB modeswitch arguments. For example: '-v 1410 -p 9030 -V 1410 -P 9032 -u 3'.	string	Maximum length: 127	
product-id	USB product ID in hexadecimal format (0000-ffff).	user	Not Specified	
vendor	MODEM vendor name.	string	Maximum length: 35	
vendor-id	USB vendor ID in hexadecimal format (0000-ffff).	user	Not Specified	

config system accprofile

Configure access profiles for system administrators.

```

config system accprofile
    Description: Configure access profiles for system administrators.

vpngrp	Administrator access to IPsec, SSL, PPTP, and L2TP VPN.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
wanoptgrp *	Administrator access to WAN Opt & Cache.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
wifi	Administrator access to the WiFi controller and Switch controller.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		

* This parameter may not exist in some models.

config fwgrp-permission

Parameter	Description	Type	Size	Default
address	Address Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
others	Other Firewall Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
policy	Policy Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
schedule	Schedule Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
service	Service Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		

config loggrp-permission

Parameter	Description	Type	Size	Default
config	Log & Report configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
data-access	Log & Report Data Access.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
report-access	Log & Report Report Access.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
threat-weight	Log & Report Threat Weight.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		

config netgrp-permission

Parameter	Description	Type	Size	Default
cfg	Network Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		

Parameter	Description	Type	Size	Default
packet-capture	Packet Capture Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
route-cfg	Router Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		

config sysgrp-permission

Parameter	Description	Type	Size	Default
admin	Administrator Users.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
cfg	System Configuration.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		
mnt	Maintenance.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.		

Parameter	Description	Type	Size	Default
upd	FortiGuard Updates.	option	-	none
	Option	Description		
	<i>none</i>	No access.		
	<i>read</i>	Read access.		
	<i>read-write</i>	Read/write access.

config system admin

Parameter	Description	Type	Size	Default						
accprofile	Access profile for this administrator. Access profiles control administrator access to FortiGate features.	string	Maximum length: 35							
accprofile-override	Enable to use the name of an access profile provided by the remote authentication server to control the FortiGate features that this administrator can access.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable access profile override.</td></tr><tr><td><i>disable</i></td><td>Disable access profile override.</td></tr></table>				Option	Description	<i>enable</i>	Enable access profile override.	<i>disable</i>	Disable access profile override.
Option	Description									
<i>enable</i>	Enable access profile override.									
<i>disable</i>	Disable access profile override.									
allow-remove-admin-session	Enable/disable allow admin session to be removed by privileged admin users.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allow-remove option.</td></tr><tr><td><i>disable</i></td><td>Disable allow-remove option.</td></tr></table>				Option	Description	<i>enable</i>	Enable allow-remove option.	<i>disable</i>	Disable allow-remove option.
Option	Description									
<i>enable</i>	Enable allow-remove option.									
<i>disable</i>	Disable allow-remove option.									

Parameter	Description	Type	Size	Default						
comments	Comment.	var-string	Maximum length: 255							
email-to	This administrator's email address.	string	Maximum length: 63							
force-password-change	Enable/disable force password change on next login.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable force password change on next login.</td></tr><tr><td><i>disable</i></td><td>Disable force password change on next login.</td></tr></table>				Option	Description	<i>enable</i>	Enable force password change on next login.	<i>disable</i>	Disable force password change on next login.
Option	Description									
<i>enable</i>	Enable force password change on next login.									
<i>disable</i>	Disable force password change on next login.									
fortitoken	This administrator's FortiToken serial number.	string	Maximum length: 16							
guest-auth	Enable/disable guest authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable guest authentication.</td></tr><tr><td><i>enable</i></td><td>Enable guest authentication.</td></tr></table>				Option	Description	<i>disable</i>	Disable guest authentication.	<i>enable</i>	Enable guest authentication.
Option	Description									
<i>disable</i>	Disable guest authentication.									
<i>enable</i>	Enable guest authentication.									
guest-lang	Guest management portal language.	string	Maximum length: 35							
guest-usergroups <name>	Select guest user groups. Select guest user groups.	string	Maximum length: 79							
ip6-trusthost1	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost10	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost2	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost3	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost4	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						

Parameter	Description	Type	Size	Default						
ip6-trusthost5	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost6	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost7	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost8	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
ip6-trusthost9	Any IPv6 address from which the administrator can connect to the FortiGate unit. Default allows access from any IPv6 address.	ipv6-prefix	Not Specified	::/0						
name	User name.	string	Maximum length: 64							
password	Admin user password.	password-2	Not Specified							
password-expire	Password expire time.	user	Not Specified							
peer-auth	Set to enable peer certificate authentication (for HTTPS admin access).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable peer.</td></tr><tr><td><i>disable</i></td><td>Disable peer.</td></tr></table>				Option	Description	<i>enable</i>	Enable peer.	<i>disable</i>	Disable peer.
Option	Description									
<i>enable</i>	Enable peer.									
<i>disable</i>	Disable peer.									
peer-group	Name of peer group defined under config user group which has PKI members. Used for peer certificate authentication (for HTTPS admin access).	string	Maximum length: 35							
remote-auth	Enable/disable authentication using a remote RADIUS, LDAP, or TACACS+ server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable remote authentication.</td></tr><tr><td><i>disable</i></td><td>Disable remote authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable remote authentication.	<i>disable</i>	Disable remote authentication.
Option	Description									
<i>enable</i>	Enable remote authentication.									
<i>disable</i>	Disable remote authentication.									
remote-group	User group name used for remote auth.	string	Maximum length: 35							

Parameter	Description	Type	Size	Default						
schedule	Firewall schedule used to restrict when the administrator can log in. No schedule means no restrictions.	string	Maximum length: 35							
sms-custom-server	Custom SMS server to send SMS messages to.	string	Maximum length: 35							
sms-phone	Phone number on which the administrator receives SMS messages.	string	Maximum length: 15							
sms-server	Send SMS messages using the FortiGuard SMS server or a custom server.	option	-	fortiguard						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortiguard</i></td><td>Send SMS by FortiGuard.</td></tr><tr><td><i>custom</i></td><td>Send SMS by custom server.</td></tr></table>				Option	Description	<i>fortiguard</i>	Send SMS by FortiGuard.	<i>custom</i>	Send SMS by custom server.
Option	Description									
<i>fortiguard</i>	Send SMS by FortiGuard.									
<i>custom</i>	Send SMS by custom server.									
ssh-certificate	Select the certificate to be used by the FortiGate for authentication with an SSH client.	string	Maximum length: 35							
ssh-public-key1	Public key of an SSH client. The client is authenticated without being asked for credentials. Create the public-private key pair in the SSH client application.	user	Not Specified							
ssh-public-key2	Public key of an SSH client. The client is authenticated without being asked for credentials. Create the public-private key pair in the SSH client application.	user	Not Specified							
ssh-public-key3	Public key of an SSH client. The client is authenticated without being asked for credentials. Create the public-private key pair in the SSH client application.	user	Not Specified							
trusthost1	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0						
trusthost10	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0						
trusthost2	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0						

Parameter	Description	Type	Size	Default												
trusthost3	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost4	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost5	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost6	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost7	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost8	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
trusthost9	Any IPv4 address or subnet address and netmask from which the administrator can connect to the FortiGate unit. Default allows access from any IPv4 address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0												
two-factor	Enable/disable two-factor authentication.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable two-factor authentication.</td></tr><tr><td>fortitoken</td><td>Use FortiToken or FortiToken mobile two-factor authentication.</td></tr><tr><td>fortitoken-cloud</td><td>FortiToken Cloud Service.</td></tr><tr><td>email</td><td>Send a two-factor authentication code to the configured email-to email address.</td></tr><tr><td>sms</td><td>Send a two-factor authentication code to the configured sms-server and sms-phone.</td></tr></table>				Option	Description	disable	Disable two-factor authentication.	fortitoken	Use FortiToken or FortiToken mobile two-factor authentication.	fortitoken-cloud	FortiToken Cloud Service.	email	Send a two-factor authentication code to the configured email-to email address.	sms	Send a two-factor authentication code to the configured sms-server and sms-phone.
Option	Description															
disable	Disable two-factor authentication.															
fortitoken	Use FortiToken or FortiToken mobile two-factor authentication.															
fortitoken-cloud	FortiToken Cloud Service.															
email	Send a two-factor authentication code to the configured email-to email address.															
sms	Send a two-factor authentication code to the configured sms-server and sms-phone.															

Parameter	Description	Type	Size	Default								
two-factor-authentication	Authentication method by FortiToken Cloud.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortitoken</i></td><td>FortiToken authentication.</td></tr><tr><td><i>email</i></td><td>Email one time password.</td></tr><tr><td><i>sms</i></td><td>SMS one time password.</td></tr></table>	Option	Description	<i>fortitoken</i>	FortiToken authentication.	<i>email</i>	Email one time password.	<i>sms</i>	SMS one time password.			
Option	Description											
<i>fortitoken</i>	FortiToken authentication.											
<i>email</i>	Email one time password.											
<i>sms</i>	SMS one time password.											
two-factor-notification	Notification method for user activation by FortiToken Cloud.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>email</i></td><td>Email notification for activation code.</td></tr><tr><td><i>sms</i></td><td>SMS notification for activation code.</td></tr></table>	Option	Description	<i>email</i>	Email notification for activation code.	<i>sms</i>	SMS notification for activation code.					
Option	Description											
<i>email</i>	Email notification for activation code.											
<i>sms</i>	SMS notification for activation code.											
vdom <name>	Virtual domain(s) that the administrator can access. Virtual domain name.	string	Maximum length: 79									
vdom-override	Enable to use the names of VDOMs provided by the remote authentication server to control the VDOMs that this administrator can access.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VDOM override.</td></tr><tr><td><i>disable</i></td><td>Disable VDOM override.</td></tr></table>	Option	Description	<i>enable</i>	Enable VDOM override.	<i>disable</i>	Disable VDOM override.					
Option	Description											
<i>enable</i>	Enable VDOM override.											
<i>disable</i>	Disable VDOM override.											
wildcard	Enable/disable wildcard RADIUS authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable username wildcard.</td></tr><tr><td><i>disable</i></td><td>Disable username wildcard.</td></tr></table>	Option	Description	<i>enable</i>	Enable username wildcard.	<i>disable</i>	Disable username wildcard.					
Option	Description											
<i>enable</i>	Enable username wildcard.											
<i>disable</i>	Disable username wildcard.											

config system affinity-interrupt

This command is available for model(s): FortiGate 100F, FortiGate 101F, FortiGate 120G, FortiGate 121G, FortiGate 200F, FortiGate 201F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 1100E, FortiGate 1101E, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F.

Configure interrupt affinity.

```
config system affinity-interrupt
  Description: Configure interrupt affinity.
  edit <id>
    set affinity-cpumask {string}
    set default-affinity-cpumask {string}
    set interrupt {string}
  next
end
```

config system affinity-interrupt

Parameter	Description	Type	Size	Default
affinity-cpumask	Affinity setting (64-bit hexadecimal value in the format of 0xxxxxxxxxxxxxxxxx).	string	Maximum length: 127	
default-affinity-cpumask	Default affinity setting (64-bit hexadecimal value in the format of 0xxxxxxxxxxxxxxxxx). Read-only.	string	Maximum length: 127	

Parameter	Description	Type	Size	Default
id	ID of the interrupt affinity setting.	integer	Minimum value: 0 Maximum value: 4294967295	0
interrupt	Interrupt name.	string	Maximum length: 127	

config system affinity-packet-redistribution

This command is available for model(s): FortiGate 100F, FortiGate 101F, FortiGate 120G, FortiGate 121G, FortiGate 200F, FortiGate 201F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 1100E, FortiGate 1101E, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F.

Configure packet redistribution.

```
config system affinity-packet-redistribution
    Description: Configure packet redistribution.
    edit <id>
        set affinity-cpumask {string}
        set interface {string}
        set round-robin [enable|disable]
        set rxqid {integer}
    next
end
```

config system affinity-packet-redistribution

Parameter	Description	Type	Size	Default						
affinity-cpumask	Hexadecimal cpumask, empty value means all CPUs.	string	Maximum length: 127							
id	ID of the packet redistribution setting.	integer	Minimum value: 0 Maximum value: 4294967295	0						
interface	Physical interface name on which to perform packet redistribution.	string	Maximum length: 15							
round-robin	Enable/disable round-robin redistribution to multiple CPUs.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable round-robin redistribution.</td></tr><tr><td><i>disable</i></td><td>Disable round-robin redistribution.</td></tr></table>				Option	Description	<i>enable</i>	Enable round-robin redistribution.	<i>disable</i>	Disable round-robin redistribution.
Option	Description									
<i>enable</i>	Enable round-robin redistribution.									
<i>disable</i>	Disable round-robin redistribution.									
rxqid	ID of the receive queue (when the interface has multiple queues) on which to perform packet redistribution (255 = all queues).	integer	Minimum value: 0 Maximum value: 255	255						

config system alarm

Configure alarm.

```
config system alarm
  Description: Configure alarm.
  set audible [enable|disable]
  config groups
    Description: Alarm groups.
    edit <id>
      set admin-auth-failure-threshold {integer}
      set admin-auth-lockout-threshold {integer}
      set decryption-failure-threshold {integer}
      set encryption-failure-threshold {integer}
      set fw-policy-id {integer}
      set fw-policy-id-threshold {integer}
    config fw-policy-violations
      Description: Firewall policy violations.
      edit <id>
        set dst-ip {ipv4-address}
        set dst-port {integer}
        set src-ip {ipv4-address}
        set src-port {integer}
        set threshold {integer}
```

```

        next
    end
    set log-full-warning-threshold {integer}
    set period {integer}
    set replay-attempt-threshold {integer}
    set self-test-failure-threshold {integer}
    set user-auth-failure-threshold {integer}
    set user-auth-lockout-threshold {integer}
next
end
set status [enable|disable]
end

```

config system alarm

Parameter	Description	Type	Size	Default
audible	Enable/disable audible alarm.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable audible alarm.		
	<i>disable</i>	Disable audible alarm.		
status	Enable/disable alarm.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable alarm.		
	<i>disable</i>	Disable alarm.		

config groups

Parameter	Description	Type	Size	Default
admin-auth-failure-threshold	Admin authentication failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0
admin-auth-lockout-threshold	Admin authentication lockout threshold.	integer	Minimum value: 0 Maximum value: 1024	0
decryption-failure-threshold	Decryption failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0

Parameter	Description	Type	Size	Default
encryption-failure-threshold	Encryption failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0
fw-policy-id	Firewall policy ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
fw-policy-id-threshold	Firewall policy ID threshold.	integer	Minimum value: 0 Maximum value: 1024	0
id	Group ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
log-full-warning-threshold	Log full warning threshold.	integer	Minimum value: 0 Maximum value: 1024	0
period	Time period in seconds (0 = from start up).	integer	Minimum value: 0 Maximum value: 4294967295	0
replay-attempt-threshold	Replay attempt threshold.	integer	Minimum value: 0 Maximum value: 1024	0
self-test-failure-threshold	Self-test failure threshold.	integer	Minimum value: 0 Maximum value: 1	0
user-auth-failure-threshold	User authentication failure threshold.	integer	Minimum value: 0 Maximum value: 1024	0
user-auth-lockout-threshold	User authentication lockout threshold.	integer	Minimum value: 0 Maximum value: 1024	0

config fw-policy-violations

Parameter	Description	Type	Size	Default
dst-ip	Destination IP (0=all).	ipv4-address	Not Specified	0.0.0.0
dst-port	Destination port (0=all).	integer	Minimum value: 0 Maximum value: 65535	0
id	Firewall policy violations ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
src-ip	Source IP (0=all).	ipv4-address	Not Specified	0.0.0.0
src-port	Source port (0=all).	integer	Minimum value: 0 Maximum value: 65535	0
threshold	Firewall policy violation threshold.	integer	Minimum value: 0 Maximum value: 1024	0

config system alias

Configure alias command.

```
config system alias
  Description: Configure alias command.
  edit <name>
    set command {var-string}
  next
end
```

config system alias

Parameter	Description	Type	Size	Default
command	Command list to execute.	var-string	Maximum length: 255	
name	Alias command name.	string	Maximum length: 35	

config system api-user

Configure API users.

```
config system api-user
  Description: Configure API users.
  edit <name>
    set accprofile {string}
    set api-key {password-2}
    set comments {var-string}
    set cors-allow-origin {string}
    set peer-auth [enable|disable]
    set peer-group {string}
    set schedule {string}
    config trusthost
      Description: Trusthost.
      edit <id>
        set ipv4-trusthost {ipv4-classnet}
        set ipv6-trusthost {ipv6-prefix}
        set type [ipv4-trusthost|ipv6-trusthost]
      next
    end
  set vdom <name1>, <name2>, ...
next
end
```

config system api-user

Parameter	Description	Type	Size	Default
accprofile	Admin user access profile.	string	Maximum length: 35	
api-key	Admin user password.	password-2	Not Specified	
comments	Comment.	var-string	Maximum length: 255	
cors-allow-origin	Value for Access-Control-Allow-Origin on API responses. Avoid using '*' if possible.	string	Maximum length: 269	
name	User name.	string	Maximum length: 35	
peer-auth	Enable/disable peer authentication.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable peer.		
	<i>disable</i>	Disable peer.		

Parameter	Description	Type	Size	Default
peer-group	Peer group name.	string	Maximum length: 35	
schedule	Schedule name.	string	Maximum length: 35	
vdom <name>	Virtual domains. Virtual domain name.	string	Maximum length: 79	

config trusthost

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ipv4-trusthost	IPv4 trusted host address.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
ipv6-trusthost	IPv6 trusted host address.	ipv6-prefix	Not Specified	::/0
type	Trusthost type.	option	-	ipv4-trusthost

Option	Description
<i>ipv4-trusthost</i>	IPv4 trusthost.
<i>ipv6-trusthost</i>	IPv6 trusthost.

config system arp-table

Configure ARP table.

```

config system arp-table
    Description: Configure ARP table.
    edit <id>
        set interface {string}
        set ip {ipv4-address}
        set mac {mac-address}
    next
end

```

config system arp-table

Parameter	Description	Type	Size	Default
id	Unique integer ID of the entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface name.	string	Maximum length: 15	
ip	IP address.	ipv4-address	Not Specified	0.0.0.0
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00

config system automation-action

Action for automation stitches.

```
config system automation-action
  Description: Action for automation stitches.
  edit <name>
    set accprofile {string}
    set action-type [email|fortiexplorer-notification|...]

set uri {var-string}
set verify-host-cert [enable|disable]

```

```

next

```

```

end

```

config system automation-action

Parameter	Description	Type	Size	Default
accprofile	Access profile for CLI script action to access FortiGate features.	string	Maximum length: 35	
action-type	Action type.	option	-	alert
	Option	Description		
	email	Send notification email.		
	fortiexplorer-notification	Send push notification to FortiExplorer.		
	alert	Generate FortiOS dashboard alert.		
	disable-ssid	Disable interface.		
	system-actions	Perform immediate system operations on this FortiGate unit.		
	quarantine	Quarantine host.		
	quarantine-forticlient	Quarantine FortiClient by EMS.		
	quarantine-nsx	Quarantine NSX instance.		
	quarantine-fortinac	Quarantine host by FortiNAC.		
	ban-ip	Ban IP address.		
	aws-lambda	Send log data to integrated AWS service.		
	azure-function	Send log data to an Azure function.		
	google-cloud-function	Send log data to a Google Cloud function.		

Parameter	Description	Type	Size	Default																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>alicloud-function</i></td><td>Send log data to an AliCloud function.</td></tr><tr><td><i>webhook</i></td><td>Send an HTTP request.</td></tr><tr><td><i>cli-script</i></td><td>Run CLI script.</td></tr><tr><td><i>diagnose-script</i></td><td>Run diagnose script.</td></tr><tr><td><i>regular-expression</i></td><td>Match pattern on input text.</td></tr><tr><td><i>slack-notification</i></td><td>Send a notification message to a Slack incoming webhook.</td></tr><tr><td><i>microsoft-teams-notification</i></td><td>Send a notification message to a Microsoft Teams incoming webhook.</td></tr></table>	Option	Description	<i>alicloud-function</i>	Send log data to an AliCloud function.	<i>webhook</i>	Send an HTTP request.	<i>cli-script</i>	Run CLI script.	<i>diagnose-script</i>	Run diagnose script.	<i>regular-expression</i>	Match pattern on input text.	<i>slack-notification</i>	Send a notification message to a Slack incoming webhook.	<i>microsoft-teams-notification</i>	Send a notification message to a Microsoft Teams incoming webhook.			
	Option	Description																		
	<i>alicloud-function</i>	Send log data to an AliCloud function.																		
	<i>webhook</i>	Send an HTTP request.																		
	<i>cli-script</i>	Run CLI script.																		
	<i>diagnose-script</i>	Run diagnose script.																		
	<i>regular-expression</i>	Match pattern on input text.																		
	<i>slack-notification</i>	Send a notification message to a Slack incoming webhook.																		
<i>microsoft-teams-notification</i>	Send a notification message to a Microsoft Teams incoming webhook.																			
alicloud-access-key-id	AliCloud AccessKey ID.	string	Maximum length: 35																	
alicloud-access-key-secret	AliCloud AccessKey secret.	password	Not Specified																	
alicloud-function-authorization	AliCloud function authorization type.	option	-	anonymous

	Option	Description																		
	<i>anonymous</i>	Anonymous authorization level (No authorization required).																		
	<i>function</i>	Function authorization level (Function or Host Key required).																		
<i>admin</i>	Admin authorization level (Master Host Key required).																			
description	Description.	var-string	Maximum length: 255																	

Parameter	Description	Type	Size	Default						
duration	Maximum running time for this script in seconds.	integer	Minimum value: 1 Maximum value: 36000	5						
email-from	Email sender name.	var-string	Maximum length: 127							
email-subject	Email subject.	var-string	Maximum length: 511							
email-to <name>	Email addresses. Email address.	string	Maximum length: 255							
execute-security-fabric	Enable/disable execution of CLI script on all or only one FortiGate unit in the Security Fabric.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>CLI script executes on all FortiGate units in the Security Fabric.</td></tr><tr><td>disable</td><td>CLI script executes only on the FortiGate unit that the stitch is triggered.</td></tr></table>				Option	Description	enable	CLI script executes on all FortiGate units in the Security Fabric.	disable	CLI script executes only on the FortiGate unit that the stitch is triggered.
Option	Description									
enable	CLI script executes on all FortiGate units in the Security Fabric.									
disable	CLI script executes only on the FortiGate unit that the stitch is triggered.									
forticare-email	Enable/disable use of your FortiCare email address as the email-to address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of your FortiCare email address as the email-to address.</td></tr><tr><td>disable</td><td>Disable use of your FortiCare email address as the email-to address.</td></tr></table>				Option	Description	enable	Enable use of your FortiCare email address as the email-to address.	disable	Disable use of your FortiCare email address as the email-to address.
Option	Description									
enable	Enable use of your FortiCare email address as the email-to address.									
disable	Disable use of your FortiCare email address as the email-to address.									
http-body	Request body (if necessary). Should be serialized json string.	var-string	Maximum length: 4095							
message	Message content.	string	Maximum length: 4095	%%log%%						
message-type	Message type.	option	-	text						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>text</td><td>Plaintext.</td></tr><tr><td>json</td><td>Custom JSON.</td></tr></table>				Option	Description	text	Plaintext.	json	Custom JSON.
Option	Description									
text	Plaintext.									
json	Custom JSON.									
method	Request method (POST, PUT, GET, PATCH or DELETE).	option	-	post						

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>post</i></td><td>POST.</td></tr><tr><td><i>put</i></td><td>PUT.</td></tr><tr><td><i>get</i></td><td>GET.</td></tr><tr><td><i>patch</i></td><td>PATCH.</td></tr><tr><td><i>delete</i></td><td>DELETE.</td></tr></table>	Option	Description	<i>post</i>	POST.	<i>put</i>	PUT.	<i>get</i>	GET.	<i>patch</i>	PATCH.	<i>delete</i>	DELETE.			
	Option	Description														
	<i>post</i>	POST.														
	<i>put</i>	PUT.														
	<i>get</i>	GET.														
	<i>patch</i>	PATCH.														
<i>delete</i>	DELETE.															
minimum-interval	Limit execution to no more than once in this interval (in seconds).	integer	Minimum value: 0 Maximum value: 2592000	0												
name	Name.	string	Maximum length: 64													
output-size	Number of megabytes to limit script output to (1 - 1024, default = 10).	integer	Minimum value: 1 Maximum value: 1024	10												
port	Protocol port.	integer	Minimum value: 1 Maximum value: 65535	0												
protocol	Request protocol.	option	-	http												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>http</i></td><td>HTTP.</td></tr><tr><td><i>https</i></td><td>HTTPS.</td></tr></table>	Option	Description	<i>http</i>	HTTP.	<i>https</i>	HTTPS.									
	Option	Description														
	<i>http</i>	HTTP.														
<i>https</i>	HTTPS.															
regular-expression	Regular expression string.	var-string	Maximum length: 1023													
replacement-message	Enable/disable replacement message.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable replacement message.</td></tr><tr><td><i>disable</i></td><td>Disable replacement message.</td></tr></table>	Option	Description	<i>enable</i>	Enable replacement message.	<i>disable</i>	Disable replacement message.									
	Option	Description														
	<i>enable</i>	Enable replacement message.														
<i>disable</i>	Disable replacement message.															

Parameter	Description	Type	Size	Default
replacemsg-group	Replacement message group.	string	Maximum length: 35	
script	CLI script.	var-string	Maximum length: 1023	
sdn-connector <name>	NSX SDN connector names. SDN connector name.	string	Maximum length: 79	
security-tag	NSX security tag.	string	Maximum length: 255	
system-action	System action type.	option	-	
	Option Description			
	reboot Reboot this FortiGate unit.			
	shutdown Shutdown this FortiGate unit.			
	backup-config Backup current configuration to the disk revisions.			
timeout	Maximum running time for this script in seconds (0 = no timeout).	integer	Minimum value: 0 Maximum value: 300	0
tls-certificate	Custom TLS certificate for API request.	string	Maximum length: 35	
uri	Request API URI.	var-string	Maximum length: 1023	
verify-host-cert	Enable/disable verification of the remote host certificate.	option	-	enable
	Option Description			
	enable Enable verification of the remote host certificate.			
	disable Disable verification of the remote host certificate.			

config http-headers

id	Entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
key	Request header key.	var-string	Maximum length: 1023	
value	Request header value.	var-string	Maximum length: 4095	

config system automation-condition

Condition for automation stitches.

```

config system automation-condition
    Description: Condition for automation stitches.
    edit <name>
        set condition-type [cpu|memory|...]
        set cpu-usage-percent {integer}
        set description {var-string}
        set input-id {integer}
        set input-state [open|close]
        set mem-usage-percent {integer}
        set vdom {string}
        set vpn-tunnel-name {string}
        set vpn-tunnel-state [tunnel-up|tunnel-down]
    next
end

```

config system automation-condition

Parameter	Description	Type	Size	Default								
condition-type	Condition type.	option	-	cpu								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>cpu</i></td><td>CPU usage condition,</td></tr><tr><td><i>memory</i></td><td>Memory usage condition,</td></tr><tr><td><i>vpn</i></td><td>VPN state condition.</td></tr></table>				Option	Description	<i>cpu</i>	CPU usage condition,	<i>memory</i>	Memory usage condition,	<i>vpn</i>	VPN state condition.
	Option	Description										
	<i>cpu</i>	CPU usage condition,										
	<i>memory</i>	Memory usage condition,										
<i>vpn</i>	VPN state condition.											
cpu-usage-percent	CPU usage reaches specified percentage.	integer	Minimum value: 0 Maximum value: 100	0								
description	Description.	var-string	Maximum length: 255									

Parameter	Description	Type	Size	Default						
input-id *	Input ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
input-state *	Input state.	option	-	close						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>open</i></td><td>Input switch is open.</td></tr><tr><td><i>close</i></td><td>Input switch is closed.</td></tr></table>				Option	Description	<i>open</i>	Input switch is open.	<i>close</i>	Input switch is closed.
	Option	Description								
	<i>open</i>	Input switch is open.								
<i>close</i>	Input switch is closed.									
mem-usage-percent	Memory usage reaches specified percentage.	integer	Minimum value: 0 Maximum value: 100	0						
name	Name.	string	Maximum length: 35							
vdom	Virtual domain which the tunnel belongs to.	string	Maximum length: 31	root						
vpn-tunnel-name	VPN tunnel name.	string	Maximum length: 79							
vpn-tunnel-state	VPN tunnel state.	option	-	tunnel-up						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tunnel-up</i></td><td>VPN tunnel is up.</td></tr><tr><td><i>tunnel-down</i></td><td>VPN tunnel is down.</td></tr></table>				Option	Description	<i>tunnel-up</i>	VPN tunnel is up.	<i>tunnel-down</i>	VPN tunnel is down.
	Option	Description								
	<i>tunnel-up</i>	VPN tunnel is up.								
<i>tunnel-down</i>	VPN tunnel is down.									

* This parameter may not exist in some models.

config system automation-destination

Automation destinations.

```

config system automation-destination
    Description: Automation destinations.
    edit <name>
        set destination <name1>, <name2>, ...
        set ha-group-id {integer}
        set type [fortigate|ha-cluster]
    next
end

```

config system automation-destination

Parameter	Description	Type	Size	Default
destination <name>	Destinations. Destination.	string	Maximum length: 31	
ha-group-id	Cluster group ID set for this destination (default = 0).	integer	Minimum value: 0 Maximum value: 255	0
name	Name.	string	Maximum length: 35	
type	Destination type.	option	-	fortigate
		Option	Description	
		<i>fortigate</i>	FortiGate set as destination.	
		<i>ha-cluster</i>	HA cluster set as destination.	

config system automation-stitch

Automation stitches.

```
config system automation-stitch
  Description: Automation stitches.
  edit <name>
    config actions
      Description: Configure stitch actions.
      edit <id>
        set action {string}
        set delay {integer}
        set required [enable|disable]
      next
    end
    set condition <name1>, <name2>, ...
    set condition-logic [and|or]
    set description {var-string}
    set destination <name1>, <name2>, ...
    set status [enable|disable]
    set trigger {string}
  next
end
```

config system automation-stitch

Parameter	Description	Type	Size	Default						
condition <name>	Automation conditions. Condition name.	string	Maximum length: 79							
condition- logic	Apply AND/OR logic to the specified automation conditions.	option	-	and						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>and</i></td><td>All specified conditions must be met.</td></tr><tr><td><i>or</i></td><td>At least one specified condition needs to be met.</td></tr></table>				Option	Description	<i>and</i>	All specified conditions must be met.	<i>or</i>	At least one specified condition needs to be met.
Option	Description									
<i>and</i>	All specified conditions must be met.									
<i>or</i>	At least one specified condition needs to be met.									
description	Description.	var-string	Maximum length: 255							
destination <name>	Serial number/HA group-name of destination devices. Destination name.	string	Maximum length: 79							
name	Name.	string	Maximum length: 35							
status	Enable/disable this stitch.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable stitch.</td></tr><tr><td><i>disable</i></td><td>Disable stitch.</td></tr></table>				Option	Description	<i>enable</i>	Enable stitch.	<i>disable</i>	Disable stitch.
Option	Description									
<i>enable</i>	Enable stitch.									
<i>disable</i>	Disable stitch.									
trigger	Trigger name.	string	Maximum length: 35							

config actions

Parameter	Description	Type	Size	Default
action	Action name.	string	Maximum length: 64	
delay	Delay before execution (in seconds).	integer	Minimum value: 0 Maximum value: 3600	0
id	Entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
required	Required in action chain.	option	-	disable
	Option	Description		
	<i>enable</i>	Required in action chain.		
	<i>disable</i>	Not required in action chain.		

config system automation-trigger

Trigger for automation stitches.

```

config system automation-trigger
  Description: Trigger for automation stitches.
  edit <name>
    set description {var-string}
    set event-type [ioc|event-log|...]
    set fabric-event-name {var-string}
    set fabric-event-severity {var-string}
    set faz-event-name {var-string}
    set faz-event-severity {var-string}
    set faz-event-tags {var-string}
    config fields
      Description: Customized trigger field settings.
      edit <id>
        set name {string}
        set value {var-string}
      next
    end
    set license-type [forticare-support|fortiguard-webfilter|...]
    set logid <id1>, <id2>, ...
    set report-type [posture|coverage|...]
    set serial {var-string}
    set stitch-name {string}
    set trigger-datetime {datetime}
    set trigger-day {integer}
    set trigger-frequency [hourly|daily|...]
    set trigger-hour {integer}
    set trigger-minute {integer}
    set trigger-type [event-based|scheduled]
    set trigger-weekday [sunday|monday|...]
    set vdom <name1>, <name2>, ...
  next
end

```

config system automation-trigger

Parameter	Description	Type	Size	Default
description	Description.	var-string	Maximum length: 255	
event-type	Event type.	option	-	ioc
	Option	Description		
	<i>ioc</i>	Indicator of compromise detected.		
	<i>event-log</i>	Use log ID as trigger.		
	<i>reboot</i>	Device reboot.		
	<i>low-memory</i>	Conserve mode due to low memory.		
	<i>high-cpu</i>	High CPU usage.		
	<i>license-near-expiry</i>	License near expiration date.		
	<i>local-cert-near-expiry</i>	The local certificate near expiration date.		
	<i>ha-failover</i>	HA failover.		
	<i>config-change</i>	Configuration change.		
	<i>security-rating-summary</i>	Security rating summary.		
	<i>virus-ips-db-updated</i>	Virus and IPS database updated.		
	<i>faz-event</i>	FortiAnalyzer event.		
	<i>incoming-webhook</i>	Incoming webhook call.		
	<i>fabric-event</i>	Fabric connector event.		
	<i>ips-logs</i>	IPS logs.		
	<i>anomaly-logs</i>	Anomaly logs.		
	<i>virus-logs</i>	Virus logs.		
	<i>ssh-logs</i>	SSH logs.		
	<i>webfilter-violation</i>	Webfilter violation.		
	<i>traffic-violation</i>	Traffic violation.		
	<i>stitch</i>	Specified stitch has been triggered.		

Parameter	Description	Type	Size	Default																		
fabric-event-name	Fabric connector event handler name.	var-string	Maximum length: 255																			
fabric-event-severity	Fabric connector event severity.	var-string	Maximum length: 255																			
faz-event-name	FortiAnalyzer event handler name.	var-string	Maximum length: 255																			
faz-event-severity	FortiAnalyzer event severity.	var-string	Maximum length: 255																			
faz-event-tags	FortiAnalyzer event tags.	var-string	Maximum length: 255																			
license-type	License type.	option	-	forticare-support																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>forticare-support</i></td><td>FortiCare support license.</td></tr><tr><td><i>fortiguard-webfilter</i></td><td>FortiGuard web filter license.</td></tr><tr><td><i>fortiguard-antispam</i></td><td>FortiGuard antispam license.</td></tr><tr><td><i>fortiguard-antivirus</i></td><td>FortiGuard AntiVirus license.</td></tr><tr><td><i>fortiguard-ips</i></td><td>FortiGuard IPS license.</td></tr><tr><td><i>fortiguard-management</i></td><td>FortiGuard management service license.</td></tr><tr><td><i>forticloud</i></td><td>FortiCloud license.</td></tr><tr><td><i>any</i></td><td>Any license.</td></tr></table>				Option	Description	<i>forticare-support</i>	FortiCare support license.	<i>fortiguard-webfilter</i>	FortiGuard web filter license.	<i>fortiguard-antispam</i>	FortiGuard antispam license.	<i>fortiguard-antivirus</i>	FortiGuard AntiVirus license.	<i>fortiguard-ips</i>	FortiGuard IPS license.	<i>fortiguard-management</i>	FortiGuard management service license.	<i>forticloud</i>	FortiCloud license.	<i>any</i>	Any license.
Option	Description																					
<i>forticare-support</i>	FortiCare support license.																					
<i>fortiguard-webfilter</i>	FortiGuard web filter license.																					
<i>fortiguard-antispam</i>	FortiGuard antispam license.																					
<i>fortiguard-antivirus</i>	FortiGuard AntiVirus license.																					
<i>fortiguard-ips</i>	FortiGuard IPS license.																					
<i>fortiguard-management</i>	FortiGuard management service license.																					
<i>forticloud</i>	FortiCloud license.																					
<i>any</i>	Any license.																					
logid <id>	Log IDs to trigger event. Log ID.	integer	Minimum value: 1 Maximum value: 65535																			
name	Name.	string	Maximum length: 35																			
report-type	Security Rating report.	option	-	posture																		

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>posture</i></td><td>Posture report.</td></tr><tr><td><i>coverage</i></td><td>Coverage report.</td></tr><tr><td><i>optimization</i></td><td>Optimization report</td></tr><tr><td><i>any</i></td><td>Any report.</td></tr></table>	Option	Description	<i>posture</i>	Posture report.	<i>coverage</i>	Coverage report.	<i>optimization</i>	Optimization report	<i>any</i>	Any report.					
	Option	Description														
	<i>posture</i>	Posture report.														
	<i>coverage</i>	Coverage report.														
	<i>optimization</i>	Optimization report														
<i>any</i>	Any report.															
serial	Fabric connector serial number.	var-string	Maximum length: 255													
stitch-name	Triggering stitch name.	string	Maximum length: 35													
trigger-datetime	Trigger date and time (YYYY-MM-DD HH:MM:SS).	datetime	Not Specified	0000-00-00 00:00:00												
trigger-day	Day within a month to trigger.	integer	Minimum value: 1 Maximum value: 31	1												
trigger-frequency	Scheduled trigger frequency (default = daily).	option	-	daily												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hourly</i></td><td>Run hourly.</td></tr><tr><td><i>daily</i></td><td>Run daily.</td></tr><tr><td><i>weekly</i></td><td>Run weekly.</td></tr><tr><td><i>monthly</i></td><td>Run monthly.</td></tr><tr><td><i>once</i></td><td>Run once at specified date time.</td></tr></table>	Option	Description	<i>hourly</i>	Run hourly.	<i>daily</i>	Run daily.	<i>weekly</i>	Run weekly.	<i>monthly</i>	Run monthly.	<i>once</i>	Run once at specified date time.			
	Option	Description														
	<i>hourly</i>	Run hourly.														
	<i>daily</i>	Run daily.														
	<i>weekly</i>	Run weekly.														
	<i>monthly</i>	Run monthly.														
<i>once</i>	Run once at specified date time.															
trigger-hour	Hour of the day on which to trigger (0 - 23, default = 1).	integer	Minimum value: 0 Maximum value: 23	0												
trigger-minute	Minute of the hour on which to trigger (0 - 59, default = 0).	integer	Minimum value: 0 Maximum value: 59	0												
trigger-type	Trigger type.	option	-	event-based												

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>event-based</i>	Event based trigger.		
	<i>scheduled</i>	Scheduled trigger.		
trigger-weekday	Day of week for trigger.	option	-	
	Option	Description		
	<i>sunday</i>	Sunday.		
	<i>monday</i>	Monday.		
	<i>tuesday</i>	Tuesday.		
	<i>wednesday</i>	Wednesday.		
	<i>thursday</i>	Thursday.		
	<i>friday</i>	Friday.		
	<i>saturday</i>	Saturday.		
vdom <name>	Virtual domain(s) that this trigger is valid for. Virtual domain name.	string	Maximum length: 79	

config fields

Parameter	Description	Type	Size	Default
id	Entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Name.	string	Maximum length: 35	
value	Value.	var-string	Maximum length: 63	

config system autoupdate schedule

Configure update schedule.

```
config system autoupdate schedule
    Description: Configure update schedule.
    set day [Sunday|Monday|...]
    set frequency [every|daily|...]
```

```

set status [enable|disable]
set time {user}
end

```

config system autoupdate schedule

Parameter	Description	Type	Size	Default
day	Update day.	option	-	Monday
	Option	Description		
	<i>Sunday</i>	Update every Sunday.		
	<i>Monday</i>	Update every Monday.		
	<i>Tuesday</i>	Update every Tuesday.		
	<i>Wednesday</i>	Update every Wednesday.		
	<i>Thursday</i>	Update every Thursday.		
	<i>Friday</i>	Update every Friday.		
	<i>Saturday</i>	Update every Saturday.		
frequency	Update frequency.	option	-	automatic
	Option	Description		
	<i>every</i>	Time interval.		
	<i>daily</i>	Every day.		
	<i>weekly</i>	Every week.		
	<i>automatic</i>	Update automatically within every one hour period.		
status	Enable/disable scheduled updates.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
time	Update time.	user	Not Specified	

config system autoupdate tunneling

Configure web proxy tunneling for the FDN.

```

config system autoupdate tunneling
  Description: Configure web proxy tunneling for the FDN.
  set address {string}

```

```

set password {password}
set port {integer}
set status [enable|disable]
set username {string}
end

```

config system autoupdate tunneling

Parameter	Description	Type	Size	Default
address	Web proxy IP address or FQDN.	string	Maximum length: 63	
password	Web proxy password.	password	Not Specified	
port	Web proxy port.	integer	Minimum value: 0 Maximum value: 65535	0
status	Enable/disable web proxy tunneling.	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
username	Web proxy username.	string	Maximum length: 49	

config system auto-install

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC.

Configure USB auto installation.

```
config system auto-install
  Description: Configure USB auto installation.
  set auto-install-config [enable|disable]
  set auto-install-image [enable|disable]
  set default-config-file {string}
  set default-image-file {string}
end
```

config system auto-install

Parameter	Description	Type	Size	Default
auto-install-config	Enable/disable auto install the config in USB disk.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable config.		
	<i>disable</i>	Disable config.		

Parameter	Description	Type	Size	Default						
auto-install-image	Enable/disable auto install the image in USB disk.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable config.</td></tr><tr><td><i>disable</i></td><td>Disable config.</td></tr></table>				Option	Description	<i>enable</i>	Enable config.	<i>disable</i>	Disable config.
	Option	Description								
	<i>enable</i>	Enable config.								
<i>disable</i>	Disable config.									
default-config-file	Default config file name in USB disk.	string	Maximum length: 127	fgt_system.conf						
default-image-file	Default image file name in USB disk.	string	Maximum length: 127	image.out						

config system auto-scale

This command is available for model(s): FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure system auto-scaling.

```
config system auto-scale
  Description: Configure system auto-scaling.
  set callback-url {var-string}
  set cloud-mode {string}
  set hb-interval {integer}
  set primary-ip {ipv4-address-any}
  set psksecret {password-3}
```

```

set role [primary|secondary]
set status [enable|disable]
set sync-interface {string}
end

```

config system auto-scale

Parameter	Description	Type	Size	Default						
callback-url	Callback URL.	var-string	Maximum length: 4095							
cloud-mode	Auto-scaling cloud mode.	string	Maximum length: 31							
hb-interval	Time between sending heartbeat packets (5 - 120 seconds). Increase to reduce false positives.	integer	Minimum value: 5 Maximum value: 120	10						
primary-ip	Primary IP address.	ipv4-address-any	Not Specified	0.0.0.0						
psksecret	Pre-shared secret for auto-scaling authentication (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							
role	Auto-scaling role.	option	-	secondary						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>primary</i></td><td>Primary in auto-scaling.</td></tr><tr><td><i>secondary</i></td><td>Secondary in auto-scaling.</td></tr></table>				Option	Description	<i>primary</i>	Primary in auto-scaling.	<i>secondary</i>	Secondary in auto-scaling.
Option	Description									
<i>primary</i>	Primary in auto-scaling.									
<i>secondary</i>	Secondary in auto-scaling.									
status	Auto-Scaling status.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable system auto-scaling</td></tr><tr><td><i>disable</i></td><td>Disable system auto-scaling.</td></tr></table>				Option	Description	<i>enable</i>	Enable system auto-scaling	<i>disable</i>	Disable system auto-scaling.
Option	Description									
<i>enable</i>	Enable system auto-scaling									
<i>disable</i>	Disable system auto-scaling.									
sync-interface	Interface used for synchronization.	string	Maximum length: 15							

config system auto-script

Configure auto script.

```

config system auto-script
  Description: Configure auto script.
  edit <name>
    set interval {integer}
  end
end

```

```

        set output-size {integer}
        set repeat {integer}
        set script {var-string}
        set start [manual|auto]
        set timeout {integer}
    next
end

```

config system auto-script

Parameter	Description	Type	Size	Default						
interval	Repeat interval in seconds.	integer	Minimum value: 0 Maximum value: 31557600	0						
name	Auto script name.	string	Maximum length: 35							
output-size	Number of megabytes to limit script output to (10 - 1024, default = 10).	integer	Minimum value: 10 Maximum value: 1024	10						
repeat	Number of times to repeat this script (0 = infinite).	integer	Minimum value: 0 Maximum value: 65535	1						
script	List of FortiOS CLI commands to repeat.	var-string	Maximum length: 1023							
start	Script starting mode.	option	-	manual						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>manual</i></td><td>Starting manually.</td></tr><tr><td><i>auto</i></td><td>Starting automatically.</td></tr></table>				Option	Description	<i>manual</i>	Starting manually.	<i>auto</i>	Starting automatically.
	Option	Description								
	<i>manual</i>	Starting manually.								
<i>auto</i>	Starting automatically.									
timeout	Maximum running time for this script in seconds (0 = no timeout).	integer	Minimum value: 0 Maximum value: 300	0						

config system bypass

This command is available for model(s): FortiGate 2500E, FortiGate 400E Bypass, FortiGate 800D, FortiGate 80F Bypass, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure system bypass.

```
config system bypass
  Description: Configure system bypass.
  set auto-recover [enable|disable]
  set bypass-timeout [2|4|...]
  set bypass-watchdog [enable|disable]
  set poweroff-bypass [enable|disable]
end
```

config system bypass

Parameter	Description	Type	Size	Default						
auto-recover *	Automatically recover from bypass mode after system reboot.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Recover interfaces from bypass mode. The actual mode is determined by poweron-bypass setting.</td></tr><tr><td><i>disable</i></td><td>Keep interfaces in bypass mode if bypass was previously triggered.</td></tr></table>				Option	Description	<i>enable</i>	Recover interfaces from bypass mode. The actual mode is determined by poweron-bypass setting.	<i>disable</i>	Keep interfaces in bypass mode if bypass was previously triggered.
Option	Description									
<i>enable</i>	Recover interfaces from bypass mode. The actual mode is determined by poweron-bypass setting.									
<i>disable</i>	Keep interfaces in bypass mode if bypass was previously triggered.									

Parameter	Description	Type	Size	Default																
bypass-timeout *	timeout setting for bypass watchdog	option	-	10																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>2</td><td>2 second</td></tr><tr><td>4</td><td>4 second</td></tr><tr><td>6</td><td>6 second</td></tr><tr><td>8</td><td>8 second</td></tr><tr><td>10</td><td>10 second</td></tr><tr><td>12</td><td>12 second</td></tr><tr><td>14</td><td>14 second</td></tr></table>	Option	Description	2	2 second	4	4 second	6	6 second	8	8 second	10	10 second	12	12 second	14	14 second			
Option	Description																			
2	2 second																			
4	4 second																			
6	6 second																			
8	8 second																			
10	10 second																			
12	12 second																			
14	14 second																			
bypass-watchdog	watchdog to bypass interfaces in case of software/hardware failure	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable watchdog for bypass interfaces.</td></tr><tr><td><i>disable</i></td><td>Disable watchdog for bypass interfaces.</td></tr></table>	Option	Description	<i>enable</i>	Enable watchdog for bypass interfaces.	<i>disable</i>	Disable watchdog for bypass interfaces.													
Option	Description																			
<i>enable</i>	Enable watchdog for bypass interfaces.																			
<i>disable</i>	Disable watchdog for bypass interfaces.																			
poweroff-bypass *	set interface bypass state in power off	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable bypass when power off.</td></tr><tr><td><i>disable</i></td><td>Disable bypass when power off.</td></tr></table>	Option	Description	<i>enable</i>	Enable bypass when power off.	<i>disable</i>	Disable bypass when power off.													
Option	Description																			
<i>enable</i>	Enable bypass when power off.																			
<i>disable</i>	Disable bypass when power off.																			

* This parameter may not exist in some models.

config system central-management

Configure central management.

```
config system central-management
  Description: Configure central management.
  set allow-monitor [enable|disable]
  set allow-push-configuration [enable|disable]
  set allow-push-firmware [enable|disable]
  set allow-remote-firmware-upgrade [enable|disable]
  set allow-remote-lte-firmware-upgrade [enable|disable]
  set ca-cert {user}
  set enc-algorithm [default|high|...]
  set fmg {user}
  set fmg-source-ip {ipv4-address}
```

```

set fmg-source-ip6 {ipv6-address}
set fmg-update-port [8890|443]
set fortigate-cloud-sso-default-profile {string}
set include-default-servers [enable|disable]
set interface {string}
set interface-select-method [auto|sdwan|...]
set local-cert {string}
set ltefw-upgrade-frequency [everyHour|every12hour|...]
set ltefw-upgrade-time {string}
set mode [normal|backup]
set schedule-config-restore [enable|disable]
set schedule-script-restore [enable|disable]
set serial-number {user}
config server-list
    Description: Additional servers that the FortiGate can use for updates (for AV, IPS,
updates) and ratings (for web filter and antispam ratings) servers.
    edit <id>
        set addr-type [ipv4|ipv6|...]
        set fqdn {string}
        set server-address {ipv4-address}
        set server-address6 {ipv6-address}
        set server-type {option1}, {option2}, ...
    next
end
set type [fortimanager|fortiguard|...]
set use-elbc-vdom [enable|disable]
set vdom {string}
set vrf-select {integer}
end

```

config system central-management

Parameter	Description	Type	Size	Default						
allow-monitor	Enable/disable allowing the central management server to remotely monitor this FortiGate unit.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable remote monitoring of device.</td></tr><tr><td><i>disable</i></td><td>Disable remote monitoring of device.</td></tr></table>	Option	Description	<i>enable</i>	Enable remote monitoring of device.	<i>disable</i>	Disable remote monitoring of device.			
Option	Description									
<i>enable</i>	Enable remote monitoring of device.									
<i>disable</i>	Disable remote monitoring of device.									
allow-push-configuration	Enable/disable allowing the central management server to push configuration changes to this FortiGate.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable push configuration.</td></tr><tr><td><i>disable</i></td><td>Disable push configuration.</td></tr></table>	Option	Description	<i>enable</i>	Enable push configuration.	<i>disable</i>	Disable push configuration.			
Option	Description									
<i>enable</i>	Enable push configuration.									
<i>disable</i>	Disable push configuration.									
allow-push-firmware	Enable/disable allowing the central management server to push firmware updates to this FortiGate.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable push firmware.		
	<i>disable</i>	Disable push firmware.		
allow-remote-firmware-upgrade	Enable/disable remotely upgrading the firmware on this FortiGate from the central management server.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable remote firmware upgrade.		
	<i>disable</i>	Disable remote firmware upgrade.		
allow-remote-lte-firmware-upgrade *	Enable/disable remotely upgrading the lte firmware on this FortiGate from the central management server.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable remote lte firmware upgrade.		
	<i>disable</i>	Disable remote lte firmware upgrade.		
ca-cert	CA certificate to be used by FGFM protocol.	user	Not Specified	
enc-algorithm	Encryption strength for communications between the FortiGate and central management.	option	-	high
	Option	Description		
	<i>default</i>	High strength algorithms and medium-strength 128-bit key length algorithms.		
	<i>high</i>	128-bit and larger key length algorithms.		
	<i>low</i>	64-bit or 56-bit key length algorithms without export restrictions.		
fmg	IP address or FQDN of the FortiManager.	user	Not Specified	
fmg-source-ip	IPv4 source address that this FortiGate uses when communicating with FortiManager.	ipv4-address	Not Specified	0.0.0.0
fmg-source-ip6	IPv6 source address that this FortiGate uses when communicating with FortiManager.	ipv6-address	Not Specified	::
fmg-update-port	Port used to communicate with FortiManager that is acting as a FortiGuard update server.	option	-	8890

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>8890</td><td>Use port 8890 to communicate with FortiManager that is acting as a FortiGuard update server.</td></tr><tr><td>443</td><td>Use port 443 to communicate with FortiManager that is acting as a FortiGuard update server.</td></tr></table>	Option	Description	8890	Use port 8890 to communicate with FortiManager that is acting as a FortiGuard update server.	443	Use port 443 to communicate with FortiManager that is acting as a FortiGuard update server.							
	Option	Description												
	8890	Use port 8890 to communicate with FortiManager that is acting as a FortiGuard update server.												
443	Use port 443 to communicate with FortiManager that is acting as a FortiGuard update server.													
fortigate-cloud-sso-default-profile	Override access profile.	string	Maximum length: 35											
include-default-servers	Enable/disable inclusion of public FortiGuard servers in the override server list.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable inclusion of public FortiGuard servers in the override server list.</td></tr><tr><td>disable</td><td>Disable inclusion of public FortiGuard servers in the override server list.</td></tr></table>	Option	Description	enable	Enable inclusion of public FortiGuard servers in the override server list.	disable	Disable inclusion of public FortiGuard servers in the override server list.							
	Option	Description												
	enable	Enable inclusion of public FortiGuard servers in the override server list.												
disable	Disable inclusion of public FortiGuard servers in the override server list.													
interface	Specify outgoing interface to reach server.	string	Maximum length: 15											
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.					
	Option	Description												
	auto	Set outgoing interface automatically.												
	sdwan	Set outgoing interface by SD-WAN or policy routing rules.												
specify	Set outgoing interface manually.													
local-cert	Certificate to be used by FGFM protocol.	string	Maximum length: 35											
ltefw-upgrade-frequency *	Set LTE firmware auto pushdown frequency.	option	-											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>everyHour</td><td>Auto check and pushdown LTE firmware every hour</td></tr><tr><td>every12hour</td><td>Auto check and pushdown LTE firmware every 12 hours</td></tr><tr><td>everyDay</td><td>Auto check and pushdown LTE firmware every day</td></tr><tr><td>everyWeek</td><td>Auto check and pushdown LTE firmware every week</td></tr></table>	Option	Description	everyHour	Auto check and pushdown LTE firmware every hour	every12hour	Auto check and pushdown LTE firmware every 12 hours	everyDay	Auto check and pushdown LTE firmware every day	everyWeek	Auto check and pushdown LTE firmware every week			
	Option	Description												
	everyHour	Auto check and pushdown LTE firmware every hour												
	every12hour	Auto check and pushdown LTE firmware every 12 hours												
	everyDay	Auto check and pushdown LTE firmware every day												
everyWeek	Auto check and pushdown LTE firmware every week													
ltefw-upgrade-time *	Schedule next LTE firmware upgrade time (Local Time). Format: YYYY-MM-DD HH:MM:SS	string	Maximum length: 35											

Parameter	Description	Type	Size	Default								
mode	Central management mode.	option	-	normal								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>normal</i></td><td>Manage and configure this FortiGate from FortiManager.</td></tr><tr><td><i>backup</i></td><td>Manage and configure this FortiGate locally and back up its configuration to FortiManager.</td></tr></table>	Option	Description	<i>normal</i>	Manage and configure this FortiGate from FortiManager.	<i>backup</i>	Manage and configure this FortiGate locally and back up its configuration to FortiManager.					
Option	Description											
<i>normal</i>	Manage and configure this FortiGate from FortiManager.											
<i>backup</i>	Manage and configure this FortiGate locally and back up its configuration to FortiManager.											
schedule-config-restore	Enable/disable allowing the central management server to restore the configuration of this FortiGate.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable scheduled configuration restore.</td></tr><tr><td><i>disable</i></td><td>Disable scheduled configuration restore.</td></tr></table>	Option	Description	<i>enable</i>	Enable scheduled configuration restore.	<i>disable</i>	Disable scheduled configuration restore.					
Option	Description											
<i>enable</i>	Enable scheduled configuration restore.											
<i>disable</i>	Disable scheduled configuration restore.											
schedule-script-restore	Enable/disable allowing the central management server to restore the scripts stored on this FortiGate.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable scheduled script restore.</td></tr><tr><td><i>disable</i></td><td>Disable scheduled script restore.</td></tr></table>	Option	Description	<i>enable</i>	Enable scheduled script restore.	<i>disable</i>	Disable scheduled script restore.					
Option	Description											
<i>enable</i>	Enable scheduled script restore.											
<i>disable</i>	Disable scheduled script restore.											
serial-number	Serial number.	user	Not Specified									
type	Central management type.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortimanager</i></td><td>FortiManager.</td></tr><tr><td><i>fortiguard</i></td><td>Central management of this FortiGate using FortiCloud.</td></tr><tr><td><i>none</i></td><td>No central management.</td></tr></table>	Option	Description	<i>fortimanager</i>	FortiManager.	<i>fortiguard</i>	Central management of this FortiGate using FortiCloud.	<i>none</i>	No central management.			
Option	Description											
<i>fortimanager</i>	FortiManager.											
<i>fortiguard</i>	Central management of this FortiGate using FortiCloud.											
<i>none</i>	No central management.											
use-elbc-vdom *	Enable/disable use of special ELBC config sync VDOM to connect to FortiManager.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>enable</td></tr><tr><td><i>disable</i></td><td>disable</td></tr></table>	Option	Description	<i>enable</i>	enable	<i>disable</i>	disable					
Option	Description											
<i>enable</i>	enable											
<i>disable</i>	disable											
vdom	Virtual domain (VDOM) name to use when communicating with FortiManager.	string	Maximum length: 31	root								

Parameter	Description	Type	Size	Default
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

* This parameter may not exist in some models.

config server-list

Parameter	Description	Type	Size	Default										
addr-type	Indicate whether the FortiGate communicates with the override server using an IPv4 address, an IPv6 address or a FQDN.	option	-	ipv4										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>IPv4 address.</td></tr><tr><td>ipv6</td><td>IPv6 address.</td></tr><tr><td>fqdn</td><td>FQDN.</td></tr></table>				Option	Description	ipv4	IPv4 address.	ipv6	IPv6 address.	fqdn	FQDN.		
	Option	Description												
	ipv4	IPv4 address.												
	ipv6	IPv6 address.												
	fqdn	FQDN.												
fqdn	FQDN address of override server.	string	Maximum length: 255											
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0										
server-address	IPv4 address of override server.	ipv4-address	Not Specified	0.0.0.0										
server-address6	IPv6 address of override server.	ipv6-address	Not Specified	::										
server-type	FortiGuard service type.	option	-											
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>update</td><td>AV, IPS, and AV-query update server.</td></tr><tr><td>rating</td><td>Web filter and anti-spam rating server.</td></tr><tr><td>vpatch-query</td><td>Virtual patch query server.</td></tr><tr><td>iot-collect</td><td>IoT device collection server.</td></tr></table>				Option	Description	update	AV, IPS, and AV-query update server.	rating	Web filter and anti-spam rating server.	vpatch-query	Virtual patch query server.	iot-collect	IoT device collection server.
	Option	Description												
	update	AV, IPS, and AV-query update server.												
	rating	Web filter and anti-spam rating server.												
	vpatch-query	Virtual patch query server.												
iot-collect	IoT device collection server.													

config system console

Configure console.

```
config system console
    Description: Configure console.
    set fortiexplorer [enable|disable]
    set login [enable|disable]
    set output [standard|more]
end
```

config system console

Parameter	Description	Type	Size	Default						
fortiexplorer *	Enable/disable access for FortiExplorer.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiExplorer access.</td></tr><tr><td><i>disable</i></td><td>Disable FortiExplorer access.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiExplorer access.	<i>disable</i>	Disable FortiExplorer access.			
Option	Description									
<i>enable</i>	Enable FortiExplorer access.									
<i>disable</i>	Disable FortiExplorer access.									
login	Enable/disable serial console and FortiExplorer.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Console login enable.</td></tr><tr><td><i>disable</i></td><td>Console login disable.</td></tr></table>	Option	Description	<i>enable</i>	Console login enable.	<i>disable</i>	Console login disable.			
Option	Description									
<i>enable</i>	Console login enable.									
<i>disable</i>	Console login disable.									
output	Console output mode.	option	-	more						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>standard</i></td><td>Standard output.</td></tr><tr><td><i>more</i></td><td>More page output.</td></tr></table>	Option	Description	<i>standard</i>	Standard output.	<i>more</i>	More page output.			
Option	Description									
<i>standard</i>	Standard output.									
<i>more</i>	More page output.									

* This parameter may not exist in some models.

config system csf

Add this FortiGate to a Security Fabric or set up a new Security Fabric on this FortiGate.

```
config system csf
    Description: Add this FortiGate to a Security Fabric or set up a new Security Fabric on
this FortiGate.
    set accept-auth-by-cert [disable|enable]

```

config system csf

Parameter	Description	Type	Size	Default						
accept-auth-by-cert	Accept connections with unknown certificates and ask admin for approval.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not accept SSL connections with unknown certificates.</td></tr><tr><td><i>enable</i></td><td>Accept SSL connections without automatic certificate verification.</td></tr></table>				Option	Description	<i>disable</i>	Do not accept SSL connections with unknown certificates.	<i>enable</i>	Accept SSL connections without automatic certificate verification.
Option	Description									
<i>disable</i>	Do not accept SSL connections with unknown certificates.									
<i>enable</i>	Accept SSL connections without automatic certificate verification.									
authorization-request-type	Authorization request type.	option	-	serial						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>serial</i>	Request verification by serial number.		
	<i>certificate</i>	Request verification by certificate.		
certificate	Certificate.	string	Maximum length: 35	
configuration-sync	Configuration sync mode.	option	-	default
	Option	Description		
	<i>default</i>	Synchronize configuration for IPAM, FortiAnalyzer, FortiSandbox, and Central Management to root node.		
	<i>local</i>	Do not synchronize configuration with root node.		
downstream-access	Enable/disable downstream device access to this device's configuration and data.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable downstream device access to this device's configuration and data.		
	<i>disable</i>	Disable downstream device access to this device's configuration and data.		
downstream-acccprofile	Default access profile for requests from downstream devices.	string	Maximum length: 35	
fabric-object-unification	Fabric CMDB Object Unification.	option	-	default
	Option	Description		
	<i>default</i>	Global CMDB objects will be synchronized in Security Fabric.		
	<i>local</i>	Global CMDB objects will not be synchronized to and from this device.		
fabric-workers	Number of worker processes for Security Fabric daemon.	integer	Minimum value: 1 Maximum value: 4	2
file-mgmt	Enable/disable Security Fabric daemon file management.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable daemon file management.		
	<i>disable</i>	Disable daemon file management.		

Parameter	Description	Type	Size	Default						
file-quota	Maximum amount of memory that can be used by the daemon files (in bytes).	integer	Minimum value: 0 Maximum value: 4294967295	0						
file-quota-warning	Warn when the set percentage of quota has been used.	integer	Minimum value: 1 Maximum value: 99	90						
forticloud-account-enforcement	Fabric FortiCloud account unification.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable FortiCloud account ID matching for Security Fabric.</td></tr><tr><td>disable</td><td>Disable FortiCloud account ID matching for Security Fabric.</td></tr></table>				Option	Description	enable	Enable FortiCloud account ID matching for Security Fabric.	disable	Disable FortiCloud account ID matching for Security Fabric.
	Option	Description								
	enable	Enable FortiCloud account ID matching for Security Fabric.								
disable	Disable FortiCloud account ID matching for Security Fabric.									
group-name	Security Fabric group name. All FortiGates in a Security Fabric must have the same group name.	string	Maximum length: 35							
group-password	Security Fabric group password. For legacy authentication, fabric members must have the same group password.	password	Not Specified							
legacy-authentication	Enable/disable legacy authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not accept legacy authentication requests.</td></tr><tr><td>enable</td><td>Accept legacy authentication requests.</td></tr></table>				Option	Description	disable	Do not accept legacy authentication requests.	enable	Accept legacy authentication requests.
	Option	Description								
	disable	Do not accept legacy authentication requests.								
enable	Accept legacy authentication requests.									
log-unification	Enable/disable broadcast of discovery messages for log unification.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable broadcast of discovery messages for log unification.</td></tr><tr><td>enable</td><td>Enable broadcast of discovery messages for log unification.</td></tr></table>				Option	Description	disable	Disable broadcast of discovery messages for log unification.	enable	Enable broadcast of discovery messages for log unification.
	Option	Description								
	disable	Disable broadcast of discovery messages for log unification.								
enable	Enable broadcast of discovery messages for log unification.									
saml-configuration-sync	SAML setting configuration synchronization.	option	-	default						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>default</i>	SAML setting for fabric members is created by fabric root.		
	<i>local</i>	Do not apply SAML configuration generated by root.		
source-ip	Source IP address for communication with the upstream FortiGate.	ipv4-address	Not Specified	0.0.0.0
status	Enable/disable Security Fabric.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Security Fabric.		
	<i>disable</i>	Disable Security Fabric.		
uid	Unique ID of the current CSF node	string	Maximum length: 35	
upstream	IP/FQDN of the FortiGate upstream from this FortiGate in the Security Fabric.	string	Maximum length: 255	
upstream-interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
upstream-interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
upstream-port	The port number to use to communicate with the FortiGate upstream from this FortiGate in the Security Fabric (default = 8013).	integer	Minimum value: 1 Maximum value: 65535	8013

config fabric-connector

Parameter	Description	Type	Size	Default
accprofile	Override access profile.	string	Maximum length: 35	
configuration-write-access	Enable/disable downstream device write access to configuration.	option	-	disable

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable downstream device write access to configuration.		
	<i>disable</i>	Disable downstream device write access to configuration.		
serial	Serial.	string	Maximum length: 19	
vdom <name>	Virtual domains that the connector has access to. If none are set, the connector will only have access to the VDOM that it joins the Security Fabric through. Virtual domain name.	string	Maximum length: 79	

config trusted-list

Parameter	Description	Type	Size	Default
action	Security fabric authorization action.	option	-	accept
	Option Description			
	<i>accept</i>	Accept authorization request.		
	<i>deny</i>	Deny authorization request.		
authorization-type	Authorization type.	option	-	serial
	Option Description			
	<i>serial</i>	Verify downstream by serial number.		
	<i>certificate</i>	Verify downstream by certificate.		
certificate	Certificate.	var-string	Maximum length: 32767	
downstream-authorization	Trust authorizations by this node's administrator.	option	-	disable
	Option Description			
	<i>enable</i>	Enable downstream authorization.		
	<i>disable</i>	Disable downstream authorization.		
ha-members	HA members.	string	Maximum length: 19	

Parameter	Description	Type	Size	Default
index	Index of the downstream in tree.	integer	Minimum value: 1 Maximum value: 1024	0
name	Name.	string	Maximum length: 35	
serial	Serial.	string	Maximum length: 19	

config system custom-language

Configure custom languages.

```
config system custom-language
    Description: Configure custom languages.
    edit <name>
        set comments {var-string}
        set filename {string}
    next
end
```

config system custom-language

Parameter	Description	Type	Size	Default
comments	Comment.	var-string	Maximum length: 255	
filename	Custom language file path.	string	Maximum length: 63	
name	Name.	string	Maximum length: 35	

config system ddns

Configure DDNS.

```
config system ddns
    Description: Configure DDNS.
    edit <ddnsid>
        set addr-type [ipv4|ipv6]
        set bound-ip {string}
        set clear-text [disable|enable]
        set ddns-auth [disable|tsig]
        set ddns-domain {string}
        set ddns-key {password_aes256}
```

```

set ddns-keyname {string}
set ddns-password {password}
set ddns-server [dyndns.org|dyns.net|...]
set ddns-server-addr <addr1>, <addr2>, ...
set ddns-sn {string}
set ddns-ttl {integer}
set ddns-username {string}
set ddns-zone {string}
set monitor-interface <interface-name1>, <interface-name2>, ...
set server-type [ipv4|ipv6]
set ssl-certificate {string}
set update-interval {integer}
set use-public-ip [disable|enable]
next
end

```

config system ddns

Parameter	Description	Type	Size	Default						
addr-type	Address type of interface address in DDNS update.	option	-	ipv4						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>Use IPv4 address of the interface.</td></tr><tr><td>ipv6</td><td>Use IPv6 address of the interface.</td></tr></table>	Option	Description	ipv4	Use IPv4 address of the interface.	ipv6	Use IPv6 address of the interface.			
Option	Description									
ipv4	Use IPv4 address of the interface.									
ipv6	Use IPv6 address of the interface.									
bound-ip	Bound IP address. Read-only.	string	Maximum length: 46							
clear-text	Enable/disable use of clear text connections.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable use of clear text connections.</td></tr><tr><td>enable</td><td>Enable use of clear text connections.</td></tr></table>	Option	Description	disable	Disable use of clear text connections.	enable	Enable use of clear text connections.			
Option	Description									
disable	Disable use of clear text connections.									
enable	Enable use of clear text connections.									
ddns-auth	Enable/disable TSIG authentication for your DDNS server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable DDNS authentication.</td></tr><tr><td>tsig</td><td>Enable TSIG authentication based on RFC2845.</td></tr></table>	Option	Description	disable	Disable DDNS authentication.	tsig	Enable TSIG authentication based on RFC2845.			
Option	Description									
disable	Disable DDNS authentication.									
tsig	Enable TSIG authentication based on RFC2845.									
ddns-domain	Your fully qualified domain name. For example, yourname.ddns.com.	string	Maximum length: 64							
ddns-key	DDNS update key (base 64 encoding).	password_aes256	Not Specified							

Parameter	Description	Type	Size	Default																								
ddns-keyname	DDNS update key name.	string	Maximum length: 64																									
ddns-password	DDNS password.	password	Not Specified																									
ddns-server	Select a DDNS service provider.	option	-																									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dyndns.org</i></td><td>members.dyndns.org and dnsalias.com</td></tr><tr><td><i>dyns.net</i></td><td>www.dyns.net</td></tr><tr><td><i>tzo.com</i></td><td>rh.tzo.com</td></tr><tr><td><i>vavic.com</i></td><td>Peanut Hull</td></tr><tr><td><i>dipdns.net</i></td><td>dipdnsserver.dipdns.com</td></tr><tr><td><i>now.net.cn</i></td><td>ip.todayisp.com</td></tr><tr><td><i>dhs.org</i></td><td>members.dhs.org</td></tr><tr><td><i>easydns.com</i></td><td>members.easydns.com</td></tr><tr><td><i>genericDDNS</i></td><td>Generic DDNS based on RFC2136.</td></tr><tr><td><i>FortiGuardDDNS</i></td><td>FortiGuard DDNS service.</td></tr><tr><td><i>noip.com</i></td><td>dynupdate.no-ip.com</td></tr></table>	Option	Description	<i>dyndns.org</i>	members.dyndns.org and dnsalias.com	<i>dyns.net</i>	www.dyns.net	<i>tzo.com</i>	rh.tzo.com	<i>vavic.com</i>	Peanut Hull	<i>dipdns.net</i>	dipdnsserver.dipdns.com	<i>now.net.cn</i>	ip.todayisp.com	<i>dhs.org</i>	members.dhs.org	<i>easydns.com</i>	members.easydns.com	<i>genericDDNS</i>	Generic DDNS based on RFC2136.	<i>FortiGuardDDNS</i>	FortiGuard DDNS service.	<i>noip.com</i>	dynupdate.no-ip.com			
	Option	Description																										
	<i>dyndns.org</i>	members.dyndns.org and dnsalias.com																										
	<i>dyns.net</i>	www.dyns.net																										
	<i>tzo.com</i>	rh.tzo.com

	<i>dhs.org</i>	members.dhs.org																										
	<i>easydns.com</i>	members.easydns.com																										
	<i>genericDDNS</i>	Generic DDNS based on RFC2136.																										
<i>FortiGuardDDNS</i>	FortiGuard DDNS service.																											
<i>noip.com</i>	dynupdate.no-ip.com																											
ddns-server-addr <addr>	Generic DDNS server IP/FQDN list. IP address or FQDN of the server.	string	Maximum length: 256																									
ddns-sn	DDNS Serial Number.	string	Maximum length: 64																									
ddns-ttl	Time-to-live for DDNS packets.	integer	Minimum value: 60 Maximum value: 86400	300																								
ddns-username	DDNS user name.	string	Maximum length: 64																									
ddns-zone	Zone of your domain name (for example, DDNS.com).	string	Maximum length: 64																									
ddnsid	DDNS ID.	integer	Minimum value: 0 Maximum value: 4294967295	0																								

Parameter	Description	Type	Size	Default						
monitor-interface <interface-name>	Monitored interface. Interface name.	string	Maximum length: 79							
server-type	Address type of the DDNS server.	option	-	ipv4						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>Use IPv4 addressing.</td></tr><tr><td>ipv6</td><td>Use IPv6 addressing.</td></tr></table>	Option	Description	ipv4	Use IPv4 addressing.	ipv6	Use IPv6 addressing.			
Option	Description									
ipv4	Use IPv4 addressing.									
ipv6	Use IPv6 addressing.									
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_ Factory						
update-interval	DDNS update interval (60 - 2592000 sec, 0 means default).	integer	Minimum value: 60 Maximum value: 2592000	0						
use-public-ip	Enable/disable use of public IP address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable use of public IP address.</td></tr><tr><td>enable</td><td>Enable use of public IP address.</td></tr></table>	Option	Description	disable	Disable use of public IP address.	enable	Enable use of public IP address.			
Option	Description									
disable	Disable use of public IP address.									
enable	Enable use of public IP address.									

config system dedicated-mgmt

Configure dedicated management.

```
config system dedicated-mgmt
    Description: Configure dedicated management.
    set default-gateway {ipv4-address}
    set dhcp-end-ip {ipv4-address}
    set dhcp-netmask {ipv4-netmask}
    set dhcp-server [enable|disable]
    set dhcp-start-ip {ipv4-address}
    set interface {string}
    set status [enable|disable]
end
```

config system dedicated-mgmt

Parameter	Description	Type	Size	Default
default-gateway	Default gateway for dedicated management interface.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default						
dhcp-end-ip	DHCP end IP for dedicated management.	ipv4-address	Not Specified	0.0.0.0						
dhcp-netmask	DHCP netmask.	ipv4-netmask	Not Specified	0.0.0.0						
dhcp-server	Enable/disable DHCP server on management interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCP server on management port.</td></tr><tr><td><i>disable</i></td><td>Disable DHCP server on management port.</td></tr></table>				Option	Description	<i>enable</i>	Enable DHCP server on management port.	<i>disable</i>	Disable DHCP server on management port.
	Option	Description								
	<i>enable</i>	Enable DHCP server on management port.								
<i>disable</i>	Disable DHCP server on management port.									
dhcp-start-ip	DHCP start IP for dedicated management.	ipv4-address	Not Specified	0.0.0.0						
interface	Dedicated management interface.	string	Maximum length: 15							
status	Enable/disable dedicated management.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									

config system device-upgrade

Independent upgrades for managed devices.

```

config system device-upgrade
    Description: Independent upgrades for managed devices.
    edit <serial>
        set device-type [fortigate|fortiswitch|...]
        set failure-reason [none|internal|...]
        set ha-reboot-controller {string}
        set initial-version {user}
        config known-ha-members
            Description: Known members of the HA cluster. If a member is missing at upgrade
time, the upgrade will be cancelled.
            edit <serial>
                next
            end
        set maximum-minutes {integer}
        set next-path-index {integer}
        set setup-time {user}
        set starter-admin {string}
        set status [disabled|initialized|...]
        set time {user}
        set timing [immediate|scheduled]
        set upgrade-path {user}
    
```

```

        set vdom {string}
    next
end

```

config system device-upgrade

Parameter	Description	Type	Size	Default
device-type	Fortinet device type.	option	-	fortigate
	Option	Description		
	<i>fortigate</i>	This device is a FortiGate.		
	<i>fortiswitch</i>	This device is a FortiSwitch.		
	<i>fortiap</i>	This device is a FortiAP.		
	<i>fortiextender</i>	This device is a FortiExtender.		
failure-reason	Upgrade failure reason.	option	-	none
	Option	Description		
	<i>none</i>	No failure.		
	<i>internal</i>	An internal error occurred.		
	<i>timeout</i>	The upgrade timed out.		
	<i>device-type-unsupported</i>	The device type was not supported by the FortiGate.		
	<i>download-failed</i>	The image could not be downloaded.		
	<i>device-missing</i>	The device was disconnected from the FortiGate.		
	<i>version-unavailable</i>	An image matching the device and version could not be found.		
	<i>staging-failed</i>	The image could not be pushed to the device.		
	<i>reboot-failed</i>	The device could not be rebooted.		
	<i>device-not-reconnected</i>	The device did not reconnect after rebooting.		
	<i>node-not-ready</i>	A device in the Security Fabric tree was not ready.		
	<i>no-final-confirmation</i>	The coordinating FortiGate did not confirm the upgrade.		
	<i>no-confirmation-query</i>	A downstream FortiGate did not initiate final confirmation.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>config-error-log-nonempty</i>	Configuration errors encountered during the upgrade.		
	<i>csf-tree-not-supported</i>	The Security Fabric is disabled on the root FortiGate		
	<i>firmware-changed</i>	Firmware changed after the upgrade was set up.		
	<i>node-failed</i>	A device in the Security Fabric tree failed.		
ha-reboot-controller	Serial number of the FortiGate unit that will control the reboot process for the federated upgrade of the HA cluster.	string	Maximum length: 79	
initial-version	Firmware version when the upgrade was set up.	user	Not Specified	
maximum-minutes	Maximum number of minutes to allow for immediate upgrade preparation.	integer	Minimum value: 5 Maximum value: 10080	15
next-path-index	The index of the next image to upgrade to.	integer	Minimum value: 0 Maximum value: 10	0
serial	Serial number of the node to include.	string	Maximum length: 79	
setup-time	Upgrade preparation start time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified	
starter-admin	Admin that started the upgrade.	string	Maximum length: 64	
status	Current status of the upgrade.	option	-	disabled
	Option	Description		
	<i>disabled</i>	No federated upgrade has been configured.		
	<i>initialized</i>	The upgrade has been configured.		
	<i>downloading</i>	The image is downloading in preparation for the upgrade.		
	<i>device-disconnected</i>	The image downloads are complete, but one or more devices have disconnected.		

Parameter	Description	Type	Size	Default																						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ready</i></td><td>The image download finished and the upgrade is pending.</td></tr><tr><td><i>coordinating</i></td><td>The upgrade is coordinating with other running upgrades.</td></tr><tr><td><i>staging</i></td><td>The upgrade is confirmed and images are being staged.</td></tr><tr><td><i>final-check</i></td><td>The upgrade is ready and final checks are in progress.</td></tr><tr><td><i>upgrade-devices</i></td><td>The upgrade is ready and devices are being rebooted.</td></tr><tr><td><i>cancelled</i></td><td>The upgrade was cancelled due to the tree not being ready.</td></tr><tr><td><i>confirmed</i></td><td>The upgrade was confirmed and reboots are running.</td></tr><tr><td><i>done</i></td><td>The upgrade completed successfully.</td></tr><tr><td><i>dry-run-done</i></td><td>The dry run finished.</td></tr><tr><td><i>failed</i></td><td>The upgrade failed due to a local issue.</td></tr></table>	Option	Description	<i>ready</i>	The image download finished and the upgrade is pending.	<i>coordinating</i>	The upgrade is coordinating with other running upgrades.	<i>staging</i>	The upgrade is confirmed and images are being staged.	<i>final-check</i>	The upgrade is ready and final checks are in progress.	<i>upgrade-devices</i>	The upgrade is ready and devices are being rebooted.	<i>cancelled</i>	The upgrade was cancelled due to the tree not being ready.	<i>confirmed</i>	The upgrade was confirmed and reboots are running.	<i>done</i>	The upgrade completed successfully.	<i>dry-run-done</i>	The dry run finished.	<i>failed</i>	The upgrade failed due to a local issue.			
	Option	Description																								
	<i>ready</i>	The image download finished and the upgrade is pending.																								
	<i>coordinating</i>	The upgrade is coordinating with other running upgrades.																								
	<i>staging</i>	The upgrade is confirmed and images are being staged.																								
	<i>final-check</i>	The upgrade is ready and final checks are in progress.																								
	<i>upgrade-devices</i>	The upgrade is ready and devices are being rebooted.																								
	<i>cancelled</i>	The upgrade was cancelled due to the tree not being ready.																								
	<i>confirmed</i>	The upgrade was confirmed and reboots are running.																								
	<i>done</i>	The upgrade completed successfully.																								
<i>dry-run-done</i>	The dry run finished.																									
<i>failed</i>	The upgrade failed due to a local issue.																									
time	Scheduled upgrade execution time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified																							
timing	Run immediately or at a scheduled time.	option	-	immediate																						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>immediate</i></td><td>Begin the upgrade immediately.</td></tr><tr><td><i>scheduled</i></td><td>Begin the upgrade at a configured time.</td></tr></table>	Option	Description	<i>immediate</i>	Begin the upgrade immediately.	<i>scheduled</i>	Begin the upgrade at a configured time.																			
	Option	Description																								
	<i>immediate</i>	Begin the upgrade immediately.																								
<i>scheduled</i>	Begin the upgrade at a configured time.																									
upgrade-path	Fortinet OS image versions to upgrade through in major-minor-patch format, such as 7-0-4.	user	Not Specified																							
vdom	Limit upgrade to this virtual domain (VDOM).	string	Maximum length: 31																							

config known-ha-members

Parameter	Description	Type	Size	Default
serial	Serial number of HA member	string	Maximum length: 79	

config system dhcp server

Configure DHCP servers.

config system dhcp server

Parameter	Description	Type	Size	Default
auto-configuration	Enable/disable auto configuration.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable auto configuration.		
	<i>enable</i>	Enable auto configuration.		
auto-managed-status	Enable/disable use of this DHCP server once this interface has been assigned an IP address from FortiPAM.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable use of this DHCP server once this interface has been assigned an IP address from FortiPAM.		
	<i>enable</i>	Enable use of this DHCP server once this interface has been assigned an IP address from FortiPAM.		
conflicted-ip-timeout	Time in seconds to wait after a conflicted IP address is removed from the DHCP range before it can be reused.	integer	Minimum value: 60 Maximum value: 8640000	1800
ddns-auth	DDNS authentication mode.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable DDNS authentication.		
	<i>tsig</i>	TSIG based on RFC2845.		
ddns-key	DDNS update key (base 64 encoding).	password_aes256	Not Specified	
ddns-keyname	DDNS update key name.	string	Maximum length: 64	
ddns-server-ip	DDNS server IP.	ipv4-address	Not Specified	0.0.0.0
ddns-ttl	TTL.	integer	Minimum value: 60 Maximum value: 86400	300
ddns-update	Enable/disable DDNS update for DHCP.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable DDNS update for DHCP.		
	<i>enable</i>	Enable DDNS update for DHCP.		

Parameter	Description	Type	Size	Default
ddns-update-override	Enable/disable DDNS update override for DHCP.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable DDNS update override for DHCP.		
	<i>enable</i>	Enable DDNS update override for DHCP.		
ddns-zone	Zone of your domain name (ex. DDNS.com).	string	Maximum length: 64	
default-gateway	Default gateway IP address assigned by the DHCP server.	ipv4-address	Not Specified	0.0.0.0
dhcp-settings-from-fortiipam	Enable/disable populating of DHCP server settings from FortiIPAM.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable populating of DHCP server settings from FortiIPAM.		
	<i>enable</i>	Enable populating of DHCP server settings from FortiIPAM.		
dns-server1	DNS server 1.	ipv4-address	Not Specified	0.0.0.0
dns-server2	DNS server 2.	ipv4-address	Not Specified	0.0.0.0
dns-server3	DNS server 3.	ipv4-address	Not Specified	0.0.0.0
dns-server4	DNS server 4.	ipv4-address	Not Specified	0.0.0.0
dns-service	Options for assigning DNS servers to DHCP clients.	option	-	specify
	Option	Description		
	<i>local</i>	IP address of the interface the DHCP server is added to becomes the client's DNS server IP address.		
	<i>default</i>	Clients are assigned the FortiGate's configured DNS servers.		
	<i>specify</i>	Specify up to 3 DNS servers in the DHCP server configuration.		
domain	Domain name suffix for the IP addresses that the DHCP server assigns to clients.	string	Maximum length: 35	
filename	Name of the boot file on the TFTP server.	string	Maximum length: 127	
forticlient-on-net-status	Enable/disable FortiClient-On-Net service for this DHCP server.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable FortiClient On-Net Status.		
	<i>enable</i>	Enable FortiClient On-Net Status.		
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	DHCP server can assign IP configurations to clients connected to this interface.	string	Maximum length: 15	
ip-mode	Method used to assign client IP.	option	-	range
	Option	Description		
	<i>range</i>	Use range defined by start-ip/end-ip to assign client IP.		
	<i>usrgrp</i>	Use user-group defined method to assign client IP.		
ipsec-lease-hold	DHCP over IPsec leases expire this many seconds after tunnel down (0 to disable forced-expiry).	integer	Minimum value: 0 Maximum value: 8640000	60
lease-time	Lease time in seconds, 0 means unlimited.	integer	Minimum value: 300 Maximum value: 8640000	604800
mac-acl-default-action	MAC access control default action (allow or block assigning IP settings).	option	-	assign
	Option	Description		
	<i>assign</i>	Allow the DHCP server to assign IP settings to clients on the MAC access control list.		
	<i>block</i>	Block the DHCP server from assigning IP settings to clients on the MAC access control list.		
netmask	Netmask assigned by the DHCP server.	ipv4-netmask	Not Specified	0.0.0.0
next-server	IP address of a server (for example, a TFTP sever) that DHCP clients can download a boot file from.	ipv4-address	Not Specified	0.0.0.0
ntp-server1	NTP server 1.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default								
ntp-server2	NTP server 2.	ipv4-address	Not Specified	0.0.0.0								
ntp-server3	NTP server 3.	ipv4-address	Not Specified	0.0.0.0								
ntp-service	Options for assigning Network Time Protocol (NTP) servers to DHCP clients.	option	-	specify								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>local</i></td><td>IP address of the interface the DHCP server is added to becomes the client's NTP server IP address.</td></tr><tr><td><i>default</i></td><td>Clients are assigned the FortiGate's configured NTP servers.</td></tr><tr><td><i>specify</i></td><td>Specify up to 3 NTP servers in the DHCP server configuration.</td></tr></table>	Option	Description	<i>local</i>	IP address of the interface the DHCP server is added to becomes the client's NTP server IP address.	<i>default</i>	Clients are assigned the FortiGate's configured NTP servers.	<i>specify</i>	Specify up to 3 NTP servers in the DHCP server configuration.			
Option	Description											
<i>local</i>	IP address of the interface the DHCP server is added to becomes the client's NTP server IP address.											
<i>default</i>	Clients are assigned the FortiGate's configured NTP servers.											
<i>specify</i>	Specify up to 3 NTP servers in the DHCP server configuration.											
relay-agent	Relay agent IP.	ipv4-address	Not Specified	0.0.0.0								
server-type	DHCP server can be a normal DHCP server or an IPsec DHCP server.	option	-	regular								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>regular</i></td><td>Regular DHCP service.</td></tr><tr><td><i>ipsec</i></td><td>DHCP over IPsec service.</td></tr></table>	Option	Description	<i>regular</i>	Regular DHCP service.	<i>ipsec</i>	DHCP over IPsec service.					
Option	Description											
<i>regular</i>	Regular DHCP service.											
<i>ipsec</i>	DHCP over IPsec service.											
shared-subnet	Enable/disable shared subnet.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable shared subnet.</td></tr><tr><td><i>enable</i></td><td>Enable shared subnet.</td></tr></table>	Option	Description	<i>disable</i>	Disable shared subnet.	<i>enable</i>	Enable shared subnet.					
Option	Description											
<i>disable</i>	Disable shared subnet.											
<i>enable</i>	Enable shared subnet.											
status	Enable/disable this DHCP configuration.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not use this DHCP server configuration.</td></tr><tr><td><i>enable</i></td><td>Use this DHCP server configuration.</td></tr></table>	Option	Description	<i>disable</i>	Do not use this DHCP server configuration.	<i>enable</i>	Use this DHCP server configuration.					
Option	Description											
<i>disable</i>	Do not use this DHCP server configuration.											
<i>enable</i>	Use this DHCP server configuration.											
tftp-server <tftp-server>	One or more hostnames or IP addresses of the TFTP servers in quotes separated by spaces. TFTP server.	string	Maximum length: 63									
timezone	Select the time zone to be assigned to DHCP clients.	string	Maximum length: 63									
timezone-option	Options for the DHCP server to set the client's time zone.	option	-	disable								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Do not set the client's time zone.		
	<i>default</i>	Clients are assigned the FortiGate's configured time zone.		
	<i>specify</i>	Specify the time zone to be assigned to DHCP clients.		
vci-match	Enable/disable vendor class identifier (VCI) matching. When enabled only DHCP requests with a matching VCI are served.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable VCI matching.		
	<i>enable</i>	Enable VCI matching.		
vci-string <vci-string>	One or more VCI strings in quotes separated by spaces. VCI strings.	string	Maximum length: 255	
wifi-ac-service	Options for assigning WiFi access controllers to DHCP clients.	option	-	specify
	Option	Description		
	<i>specify</i>	Specify up to 3 WiFi Access Controllers in the DHCP server configuration.		
	<i>local</i>	IP address of the interface the DHCP server is added to becomes the client's WiFi Access Controller IP address.		
wifi-ac1	WiFi Access Controller 1 IP address (DHCP option 138, RFC 5417).	ipv4-address	Not Specified	0.0.0.0
wifi-ac2	WiFi Access Controller 2 IP address (DHCP option 138, RFC 5417).	ipv4-address	Not Specified	0.0.0.0
wifi-ac3	WiFi Access Controller 3 IP address (DHCP option 138, RFC 5417).	ipv4-address	Not Specified	0.0.0.0
wins-server1	WINS server 1.	ipv4-address	Not Specified	0.0.0.0
wins-server2	WINS server 2.	ipv4-address	Not Specified	0.0.0.0

config exclude-range

Parameter	Description	Type	Size	Default

input2-detection-mode	Set input2 to default(open closed) or voltage(low high).	option	-	voltage
	Option	Description		
	<i>default</i>	Detecting open closed.		
	<i>voltage</i>	Detecting low high.		
output-keep-last-state	enable: keep the previous output state default opposite after reboot.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable config.		
	<i>disable</i>	Disable config.		

config system dnp3-proxy

```

config system dns

Parameter	Description	Type	Size	Default						
alt-primary	Alternate primary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0						
alt-secondary	Alternate secondary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0						
cache-notfound-responses	Enable/disable response from the DNS server when a record is not in cache.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable cache NOTFOUND responses from DNS server.</td></tr><tr><td>enable</td><td>Enable cache NOTFOUND responses from DNS server.</td></tr></table>				Option	Description	disable	Disable cache NOTFOUND responses from DNS server.	enable	Enable cache NOTFOUND responses from DNS server.
Option	Description									
disable	Disable cache NOTFOUND responses from DNS server.									
enable	Enable cache NOTFOUND responses from DNS server.									
dns-cache-limit	Maximum number of records in the DNS cache.	integer	Minimum value: 0 Maximum value: 4294967295	5000						
dns-cache-ttl	Duration in seconds that the DNS cache retains information.	integer	Minimum value: 60 Maximum value: 86400	1800						
domain <domain>	Search suffix list for hostname lookup. DNS search domain list separated by space (maximum 8 domains).	string	Maximum length: 127							
fqdn-cache-ttl	FQDN cache time to live in seconds (0 - 86400, default = 0).	integer	Minimum value: 0 Maximum value: 86400	0						
fqdn-max-refresh	FQDN cache maximum refresh time in seconds (3600 - 86400, default = 3600).	integer	Minimum value: 3600 Maximum value: 86400	3600						
fqdn-min-refresh	FQDN cache minimum refresh time in seconds (10 - 3600, default = 60).	integer	Minimum value: 10 Maximum value: 3600	60						

Parameter	Description	Type	Size	Default								
hostname-limit	Limit of the number of hostname table entries (0 - 50000).	integer	Minimum value: 0 Maximum value: 50000	5000								
hostname-ttl	TTL of hostname table entries (60 - 86400).	integer	Minimum value: 60 Maximum value: 86400	86400								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.
Option	Description											
auto	Set outgoing interface automatically.											
sdwan	Set outgoing interface by SD-WAN or policy routing rules.											
specify	Set outgoing interface manually.											
ip6-primary	Primary DNS server IPv6 address.	ipv6-address	Not Specified	::								
ip6-secondary	Secondary DNS server IPv6 address.	ipv6-address	Not Specified	::								
log	Local DNS log setting.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable.</td></tr><tr><td>error</td><td>Enable local DNS error log.</td></tr><tr><td>all</td><td>Enable local DNS log.</td></tr></table>				Option	Description	disable	Disable.	error	Enable local DNS error log.	all	Enable local DNS log.
Option	Description											
disable	Disable.											
error	Enable local DNS error log.											
all	Enable local DNS log.											
primary	Primary DNS server IP address.	ipv4-address	Not Specified	0.0.0.0								
protocol	DNS transport protocols.	option	-	cleartext								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cleartext</td><td>DNS over UDP/53, DNS over TCP/53.</td></tr><tr><td>dot</td><td>DNS over TLS/853.</td></tr><tr><td>doh</td><td>DNS over HTTPS/443.</td></tr></table>				Option	Description	cleartext	DNS over UDP/53, DNS over TCP/53.	dot	DNS over TLS/853.	doh	DNS over HTTPS/443.
Option	Description											
cleartext	DNS over UDP/53, DNS over TCP/53.											
dot	DNS over TLS/853.											
doh	DNS over HTTPS/443.											

Parameter	Description	Type	Size	Default						
retry	Number of times to retry (0 - 5).	integer	Minimum value: 0 Maximum value: 5	2						
root-servers	Configure up to two preferred servers that serve the DNS root zone (default uses all 13 root servers).	user	Not Specified							
secondary	Secondary DNS server IP address.	ipv4-address	Not Specified	0.0.0.0						
server-hostname <hostname>	DNS server host name list. DNS server host name list separated by space (maximum 4 domains).	string	Maximum length: 127							
server-select-method	Specify how configured servers are prioritized.	option	-	least-rtt						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>least-rtt</i></td><td>Select servers based on least round trip time.</td></tr><tr><td><i>failover</i></td><td>Select servers based on the order they are configured.</td></tr></table>				Option	Description	<i>least-rtt</i>	Select servers based on least round trip time.	<i>failover</i>	Select servers based on the order they are configured.
Option	Description									
<i>least-rtt</i>	Select servers based on least round trip time.									
<i>failover</i>	Select servers based on the order they are configured.									
source-ip	IP address used by the DNS server as its source IP.	ipv4-address	Not Specified	0.0.0.0						
source-ip-interface	IP address of the specified interface as the source IP address.	string	Maximum length: 15							
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_Factory						
timeout	DNS query timeout interval in seconds (1 - 10).	integer	Minimum value: 1 Maximum value: 10	5						
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

next
end

```

config system dns-database

Parameter	Description	Type	Size	Default
allow-transfer	DNS zone transfer IP address list.	user	Not Specified	
authoritative	Enable/disable authoritative zone.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable authoritative zone.		
	<i>disable</i>	Disable authoritative zone.		
contact	Email address of the administrator for this zone. You can specify only the username, such as admin or the full email address, such as admin@test.com When using only a username, the domain of the email will be this zone.	string	Maximum length: 255	host
domain	Domain name.	string	Maximum length: 255	
forwarder	DNS zone forwarder IP address list.	user	Not Specified	
forwarder6	Forwarder IPv6 address.	ipv6-address	Not Specified	::
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
ip-primary	IP address of primary DNS server. Entries in this primary DNS server and imported into the DNS zone.	ipv4-address-any	Not Specified	0.0.0.0
name	Zone name.	string	Maximum length: 35	
primary-name	Domain name of the default DNS server for this zone.	string	Maximum length: 255	dns
rr-max	Maximum number of resource records (10 - 65536, 0 means infinite).	integer	Minimum value: 10 Maximum value: 65536	16384
source-ip	Source IP for forwarding to DNS server.	ipv4-address	Not Specified	0.0.0.0
source-ip-interface	IP address of the specified interface as the source IP address.	string	Maximum length: 15	
source-ip6	IPv6 source IP address for forwarding to DNS server.	ipv6-address	Not Specified	::
status	Enable/disable this DNS zone.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
ttl	Default time-to-live value for the entries of this DNS zone (0 - 2147483647 sec, default = 86400).	integer	Minimum value: 0 Maximum value: 2147483647	86400
type	Zone type (primary to manage entries directly, secondary to import entries from other zones).	option	-	primary
	Option	Description		
	<i>primary</i>	Primary DNS zone, to manage entries directly.		
	<i>secondary</i>	Secondary DNS zone, to import entries from other DNS zones.		

Parameter	Description	Type	Size	Default
view	Zone view (public to serve public clients, shadow to serve internal clients).	option	-	shadow
	Option	Description		
	<i>shadow</i>	Shadow DNS zone to serve internal clients.		
	<i>public</i>	Public DNS zone to serve public clients.		
	<i>shadow-ztna</i>	implicit DNS zone for ztna dox tunnel.		
	<i>proxy</i>	Shadow DNS zone for internal proxy.		
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config dns-entry

Parameter	Description	Type	Size	Default						
canonical-name	Canonical name of the host.	string	Maximum length: 255							
hostname	Name of the host.	string	Maximum length: 255							
id	DNS entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
ip	IPv4 address of the host.	ipv4-address-any	Not Specified	0.0.0.0						
ipv6	IPv6 address of the host.	ipv6-address	Not Specified	::						
preference	DNS entry preference (0 - 65535, highest preference = 0, default = 10).	integer	Minimum value: 0 Maximum value: 65535	10						
status	Enable/disable resource record status.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable resource record status.</td></tr><tr><td><i>disable</i></td><td>Disable resource record status.</td></tr></table>				Option	Description	<i>enable</i>	Enable resource record status.	<i>disable</i>	Disable resource record status.
Option	Description									
<i>enable</i>	Enable resource record status.									
<i>disable</i>	Disable resource record status.									

Parameter	Description	Type	Size	Default
ttl	Time-to-live for this entry (0 to 2147483647 sec, default = 0).	integer	Minimum value: 0 Maximum value: 2147483647	0
type	Resource record type.	option	-	A
	Option	Description		
	A	Host type.		
	NS	Name server type.		
	CNAME	Canonical name type.		
	MX	Mail exchange type.		
	AAAA	IPv6 host type.		
	PTR	Pointer type.		
	PTR_V6	IPv6 pointer type.		

config system dns-server

Configure DNS servers.

```
config system dns-server
    Description: Configure DNS servers.
    edit <name>
        set dnsfilter-profile {string}
        set doh [enable|disable]
        set doh3 [enable|disable]
        set doq [enable|disable]
        set mode [recursive|non-recursive|...]
    next
end
```

config system dns-server

Parameter	Description	Type	Size	Default
dnsfilter-profile	DNS filter profile.	string	Maximum length: 47	
doh	Enable/disable DNS over HTTPS/443 (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable DNS over HTTPS.		
	<i>disable</i>	Disable DNS over HTTPS.		
doh3	Enable/disable DNS over QUIC/HTTP3/443 (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable DNS over HTTP3/QUIC.		
	<i>disable</i>	Disable DNS over HTTP3/QUIC.		
doq	Enable/disable DNS over QUIC/853 (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable DNS over QUIC.		
	<i>disable</i>	Disable DNS over QUIC.		
mode	DNS server mode.	option	-	recursive
	Option	Description		
	<i>recursive</i>	Shadow DNS database and forward.		
	<i>non-recursive</i>	Public DNS database only.		
	<i>forward-only</i>	Forward only.		
	<i>resolver</i>	Recursive resolver mode.		
name	DNS server name.	string	Maximum length: 15	

config system dscp-based-priority

Configure DSCP based priority table.

```
config system dscp-based-priority
    Description: Configure DSCP based priority table.
    edit <id>
        set ds {integer}
        set priority [low|medium|...]
    next
end
```

config system dscp-based-priority

Parameter	Description	Type	Size	Default
ds	DSCP(DiffServ) DS value (0 - 63).	integer	Minimum value: 0 Maximum value: 63	0
id	Item ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
priority	DSCP based priority level.	option	-	high
	Option	Description		
	low	Low priority.		
	medium	Medium priority.		
	high	High priority.		

config system elbc

Configure enhanced load balance cluster.

```
config system elbc
    Description: Configure enhanced load balance cluster.
    set graceful-upgrade [enable|disable]
    set hb-device <name1>, <name2>, ...
    set inter-chassis-support [enable|disable]
    set mode [none|forticontroller|...]
end
```

config system elbc

Parameter	Description	Type	Size	Default
graceful-upgrade	enable/disable graceful upgrade	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
hb-device <name>	ELBC heartbeat device. set interface name	string	Maximum length: 79	
inter-chassis-support	Enable/disable content-cluster across multiple chassis.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable content-cluster across multiple chassis.		
	<i>disable</i>	Disable content-cluster across multiple chassis.		
mode	ELBC mode.	option	-	none
	Option	Description		
	<i>none</i>	ELBC mode disabled.		
	<i>forticontroller</i>	FortiController.		
	<i>dual-forticontroller</i>	Dual-FortiController.		

config system email-server

Configure the email server used by the FortiGate various things. For example, for sending email messages to users to support user authentication features.

```
config system email-server
    Description: Configure the email server used by the FortiGate various things. For
example, for sending email messages to users to support user authentication features.
```

```

set authenticate [enable|disable]
set interface {string}
set interface-select-method [auto|sdwan|...]
set password {password}
set port {integer}
set security [none|starttls|...]
set server {string}
set source-ip {ipv4-address}
set source-ip6 {ipv6-address}
set ssl-min-protocol-version [default|SSLv3|...]
set type {option}
set username {string}
set validate-server [enable|disable]
set vrf-select {integer}

```

end

config system email-server

Parameter	Description	Type	Size	Default								
authenticate	Enable/disable authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable authentication.</td></tr><tr><td><i>disable</i></td><td>Disable authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable authentication.	<i>disable</i>	Disable authentication.					
Option	Description											
<i>enable</i>	Enable authentication.											
<i>disable</i>	Disable authentication.											
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.			
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
password	SMTP server user password for authentication.	password	Not Specified									
port	SMTP server port.	integer	Minimum value: 1 Maximum value: 65535	25								
security	Connection security used by the email server.	option	-	none								

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>starttls</i></td><td>STARTTLS.</td></tr><tr><td><i>smtps</i></td><td>SSL/TLS.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>starttls</i>	STARTTLS.	<i>smtps</i>	SSL/TLS.									
	Option	Description																
	<i>none</i>	None.																
	<i>starttls</i>	STARTTLS.																
<i>smtps</i>	SSL/TLS.																	
server	SMTP server IP address or hostname.	string	Maximum length: 63															
source-ip	SMTP server IPv4 source IP.	ipv4-address	Not Specified	0.0.0.0														
source-ip6	SMTP server IPv6 source IP.	ipv6-address	Not Specified	::														
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections (default is to follow system global setting).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>Follow system global setting.</td></tr><tr><td><i>SSLv3</i></td><td>SSLv3.</td></tr><tr><td><i>TLSv1</i></td><td>TLSv1.</td></tr><tr><td><i>TLSv1-1</i></td><td>TLSv1.1.</td></tr><tr><td><i>TLSv1-2</i></td><td>TLSv1.2.</td></tr><tr><td><i>TLSv1-3</i></td><td>TLSv1.3.</td></tr></table>	Option	Description	<i>default</i>	Follow system global setting.	<i>SSLv3</i>	SSLv3.	<i>TLSv1</i>	TLSv1.	<i>TLSv1-1</i>	TLSv1.1.	<i>TLSv1-2</i>	TLSv1.2.	<i>TLSv1-3</i>	TLSv1.3.			
	Option	Description																
	<i>default</i>	Follow system global setting.																
	<i>SSLv3</i>	SSLv3.																
	<i>TLSv1</i>	TLSv1.																
	<i>TLSv1-1</i>	TLSv1.1.																
	<i>TLSv1-2</i>	TLSv1.2.																
<i>TLSv1-3</i>	TLSv1.3.																	
type	Use FortiGuard Message service or custom email server.	option	-	custom														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>custom</i></td><td>Use custom email server.</td></tr></table>	Option	Description	<i>custom</i>	Use custom email server.													
	Option	Description																
<i>custom</i>	Use custom email server.																	
username	SMTP server user name for authentication.	string	Maximum length: 255															
validate-server	Enable/disable validation of server certificate.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable validation of server certificate.</td></tr><tr><td><i>disable</i></td><td>Disable validation of server certificate.</td></tr></table>	Option	Description	<i>enable</i>	Enable validation of server certificate.	<i>disable</i>	Disable validation of server certificate.											
	Option	Description																
	<i>enable</i>	Enable validation of server certificate.																
<i>disable</i>	Disable validation of server certificate.																	

Parameter	Description	Type	Size	Default
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config system evpn

Configure EVPN instance.

```
config system evpn
    Description: Configure EVPN instance.
    edit <id>
        set arp-suppression [enable|disable]
        set export-rt <route-target1>, <route-target2>, ...
        set import-rt <route-target1>, <route-target2>, ...
        set ip-local-learning [enable|disable]
        set rd {string}
    next
end
```

config system evpn

Parameter	Description	Type	Size	Default
arp-suppression	Enable/disable ARP suppression.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable ARP suppression.		
	<i>disable</i>	Disable ARP suppression.		
export-rt <route-target>	List of export route targets. Route target: AA:NN A.B.C.D:NN.	string	Maximum length: 79	
id	ID.	integer	Minimum value: 1 Maximum value: 65535	0
import-rt <route-target>	List of import route targets. Route target: AA:NN A.B.C.D:NN.	string	Maximum length: 79	
ip-local-learning	Enable/disable IP address local learning.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable IP address local learning.		
	<i>disable</i>	Disable IP address local learning.		
rd	Route Distinguisher: AA:NN A.B.C.D:NN.	string	Maximum length: 79	

config system external-resource

Configure external resource.

```

config system external-resource
    Description: Configure external resource.
    edit <name>
        set address-comment-field {string}
        set address-data-field {string}
        set address-name-field {string}
        set category {integer}
        set client-cert {string}
        set client-cert-auth [enable|disable]

        set server-identity-check [none|basic|...]
        set source-ip {ipv4-address}
        set status [enable|disable]
        set type [category|domain|...]
        set update-method [feed|push]
        set user-agent {var-string}
        set username {string}
        set uuid {uuid}
        set vrf-select {integer}
    next
end

```

config system external-resource

Parameter	Description	Type	Size	Default
address-comment-field	JSON Path to address description in generic address entry.	string	Maximum length: 511	\$.description

Parameter	Description	Type	Size	Default								
address-data-field	JSON Path to address data in generic address entry.	string	Maximum length: 511	\$.value								
address-name-field	JSON Path to address name in generic address entry.	string	Maximum length: 511	\$.name								
category	User resource category.	integer	Minimum value: 192 Maximum value: 221	0								
client-cert	Client certificate name.	string	Maximum length: 79									
client-cert-auth	Enable/disable using client certificate for TLS authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable using client certificate for TLS authentication.</td></tr><tr><td><i>disable</i></td><td>Disable using client certificate for TLS authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable using client certificate for TLS authentication.	<i>disable</i>	Disable using client certificate for TLS authentication.		
	Option	Description										
	<i>enable</i>	Enable using client certificate for TLS authentication.										
<i>disable</i>	Disable using client certificate for TLS authentication.											
comments	Comment.	var-string	Maximum length: 255									
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
	Option	Description										
	<i>auto</i>	Set outgoing interface automatically.										
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.										
<i>specify</i>	Set outgoing interface manually.											
name	External resource name.	string	Maximum length: 35									
namespace	Generic external connector address namespace.	string	Maximum length: 15									
object-array-path	JSON Path to array of generic addresses in resource.	string	Maximum length: 511	\$.addresses								
password	HTTP basic authentication password.	password	Not Specified									

Parameter	Description	Type	Size	Default																
refresh-rate	Time interval to refresh external resource (1 - 43200 min, default = 5 min).	integer	Minimum value: 1 Maximum value: 43200	5																
resource	URL of external resource.	string	Maximum length: 511																	
server-identity-check	Certificate verification option.	option	-	none																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No certificate verification.</td></tr><tr><td><i>basic</i></td><td>Check server certificate only.</td></tr><tr><td><i>full</i></td><td>Check server certificate and verify the domain matches in the server certificate.</td></tr></table>				Option	Description	<i>none</i>	No certificate verification.	<i>basic</i>	Check server certificate only.	<i>full</i>	Check server certificate and verify the domain matches in the server certificate.								
Option	Description																			
<i>none</i>	No certificate verification.																			
<i>basic</i>	Check server certificate only.																			
<i>full</i>	Check server certificate and verify the domain matches in the server certificate.																			
source-ip	Source IPv4 address used to communicate with server.	ipv4-address	Not Specified	0.0.0.0																
status	Enable/disable user resource.	option	-	enable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable user resource.</td></tr><tr><td><i>disable</i></td><td>Disable user resource.</td></tr></table>				Option	Description	<i>enable</i>	Enable user resource.	<i>disable</i>	Disable user resource.										
Option	Description																			
<i>enable</i>	Enable user resource.																			
<i>disable</i>	Disable user resource.																			
type	User resource type.	option	-	category																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>category</i></td><td>FortiGuard category.</td></tr><tr><td><i>domain</i></td><td>Domain Name.</td></tr><tr><td><i>malware</i></td><td>Malware hash.</td></tr><tr><td><i>address</i></td><td>Firewall IP address.</td></tr><tr><td><i>mac-address</i></td><td>Firewall MAC address.</td></tr><tr><td><i>data</i></td><td>Data file.</td></tr><tr><td><i>generic-address</i></td><td>Generic addresses.</td></tr></table>				Option	Description	<i>category</i>	FortiGuard category.	<i>domain</i>	Domain Name.	<i>malware</i>	Malware hash.	<i>address</i>	Firewall IP address.	<i>mac-address</i>	Firewall MAC address.	<i>data</i>	Data file.	<i>generic-address</i>	Generic addresses.
Option	Description																			
<i>category</i>	FortiGuard category.																			
<i>domain</i>	Domain Name.																			
<i>malware</i>	Malware hash.																			
<i>address</i>	Firewall IP address.																			
<i>mac-address</i>	Firewall MAC address.																			
<i>data</i>	Data file.																			
<i>generic-address</i>	Generic addresses.																			
update-method	External resource update method.	option	-	feed																

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>feed</i>	FortiGate unit will pull update from the external resource.		
	<i>push</i>	External Resource update is pushed to the FortiGate unit through the FortiGate unit's RESTAPI/CLI.		
user-agent	HTTP User-Agent header (default = 'curl/7.58.0').	var-string	Maximum length: 255	
username	HTTP basic authentication user name.	string	Maximum length: 64	
uuid	Universally Unique Identifier (UUID; automatically assigned but can be manually reset).	uuid	Not Specified	00000000-0000-0000-0000-000000000000
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config system fabric-vpn

Setup for self orchestrated fabric auto discovery VPN.

```

config system fabric-vpn
  Description: Setup for self orchestrated fabric auto discovery VPN.
  config advertised-subnets
    Description: Local advertised subnets.
    edit <id>
      set access [inbound|bidirectional]

set vpn-role [hub|spoke]
end

```

config system fabric-vpn

Parameter	Description	Type	Size	Default								
bgp-as	BGP Router AS number, asplain/asdot/asdot+ format.	user	Not Specified									
branch-name	Branch name.	string	Maximum length: 35									
health-checks	Underlying health checks.	string	Maximum length: 35									
loopback-address-block	IPv4 address and subnet mask for hub's loopback address, syntax: X.X.X.X/24.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0								
loopback-advertised-subnet	Loopback advertised subnet reference.	integer	Minimum value: 0 Maximum value: 4294967295	0								
loopback-interface	Loopback interface.	string	Maximum length: 15									
policy-rule	Policy creation rule.	option	-	health-check								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>health-check</i></td><td>Create health check policy automatically.</td></tr><tr><td><i>manual</i></td><td>All policies will be created manually.</td></tr><tr><td><i>auto</i></td><td>Automatically create allow policies.</td></tr></table>				Option	Description	<i>health-check</i>	Create health check policy automatically.	<i>manual</i>	All policies will be created manually.	<i>auto</i>	Automatically create allow policies.
Option	Description											
<i>health-check</i>	Create health check policy automatically.											
<i>manual</i>	All policies will be created manually.											
<i>auto</i>	Automatically create allow policies.											
psksecret	Pre-shared secret for ADVPN.	password-3	Not Specified									

Parameter	Description	Type	Size	Default
sdwan-zone	Reference to created SD-WAN zone.	string	Maximum length: 35	
status	Enable/disable Fabric VPN.	option	-	disable
	OptionDescription			
	enable	Enable Fabric VPN.		
	disable	Disable Fabric VPN.		
sync-mode	Setting synchronised by fabric or manual.	option	-	enable
	OptionDescription			
	enable	Enable fabric led configuration synchronisation.		
	disable	Disable fabric led configuration synchronisation.		
vpn-role	Fabric VPN role.	option	-	hub
	OptionDescription			
	hub	VPN hub.		
	spoke	VPN spoke.		

config advertised-subnets

Parameter	Description	Type	Size	Default						
access	Access policy direction.	option	-	inbound						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>inbound</i></td><td>Allow inbound traffic to subnet.</td></tr><tr><td><i>bidirectional</i></td><td>Allow inbound and outbound traffic to subnet.</td></tr></table>	Option	Description	<i>inbound</i>	Allow inbound traffic to subnet.	<i>bidirectional</i>	Allow inbound and outbound traffic to subnet.			
	Option	Description								
	<i>inbound</i>	Allow inbound traffic to subnet.								
<i>bidirectional</i>	Allow inbound and outbound traffic to subnet.									
bgp-network	Underlying BGP network.	integer	Minimum value: 0 Maximum value: 4294967295	0						
firewall-address	Underlying firewall address.	string	Maximum length: 79							

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967294	0
policies	Underlying policies.	integer	Minimum value: 0 Maximum value: 4294967295	
prefix	Network prefix.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

config overlays

Parameter	Description	Type	Size	Default
bgp-neighbor	Underlying BGP neighbor entry.	string	Maximum length: 45	
bgp-neighbor-group	Underlying BGP neighbor group entry.	string	Maximum length: 45	
bgp-neighbor-range	Underlying BGP neighbor range entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
bgp-network	Underlying BGP network.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Underlying interface name.	string	Maximum length: 15	
ipsec-phase1	IPsec interface.	string	Maximum length: 35	
name	Overlay name.	string	Maximum length: 79	
overlay-policy	The overlay policy to allow ADVPN thru traffic.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
overlay-tunnel-block	IPv4 address and subnet mask for the overlay tunnel , syntax: X.X.X.X/24.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0
remote-gw	IP address of the hub gateway (Set by hub).	ipv4-address-any	Not Specified	0.0.0.0
route-policy	Underlying router policy.	integer	Minimum value: 0 Maximum value: 4294967295	0
sdwan-member	Reference to SD-WAN member entry.	integer	Minimum value: 0 Maximum value: 4294967295	0

config system federated-upgrade

Coordinate federated upgrades within the Security Fabric.

```

config system federated-upgrade
    Description: Coordinate federated upgrades within the Security Fabric.
    set failure-device {string}
    set failure-reason [none|internal|...]
    set ha-reboot-controller {string}
    set ignore-signing-errors [enable|disable]
    set initial-version {user}
    config known-ha-members
        Description: Known members of the HA cluster. If a member is missing at upgrade
time, the upgrade will be cancelled.
        edit <serial>
            next
        end
    set next-path-index {integer}
    config node-list
        Description: Nodes which will be included in the upgrade.
        edit <serial>
            set coordinating-fortigate {string}
            set device-type [fortigate|fortiswitch|...]
            set maximum-minutes {integer}
            set setup-time {user}
            set time {user}
            set timing [immediate|scheduled]
            set upgrade-path {user}
        next
    end
    set source [user|auto-firmware-upgrade]
    set starter-admin {string}

```

```

set status [disabled|initialized|...]
set upgrade-id {integer}
end

```

config system federated-upgrade

Parameter	Description	Type	Size	Default
failure-device	Serial number of the node to include.	string	Maximum length: 79	
failure-reason	Reason for upgrade failure.	option	-	none

Option	Description
<i>none</i>	No failure.
<i>internal</i>	An internal error occurred.
<i>timeout</i>	The upgrade timed out.
<i>device-type-unsupported</i>	The device type was not supported by the FortiGate.
<i>download-failed</i>	The image could not be downloaded.
<i>device-missing</i>	The device was disconnected from the FortiGate.
<i>version-unavailable</i>	An image matching the device and version could not be found.
<i>staging-failed</i>	The image could not be pushed to the device.
<i>reboot-failed</i>	The device could not be rebooted.
<i>device-not-reconnected</i>	The device did not reconnect after rebooting.
<i>node-not-ready</i>	A device in the Security Fabric tree was not ready.
<i>no-final-confirmation</i>	The coordinating FortiGate did not confirm the upgrade.
<i>no-confirmation-query</i>	A downstream FortiGate did not initiate final confirmation.
<i>config-error-log-nonempty</i>	Configuration errors encountered during the upgrade.
<i>csf-tree-not-supported</i>	The Security Fabric is disabled on the root FortiGate
<i>firmware-changed</i>	Firmware changed after the upgrade was set up.
<i>node-failed</i>	A device in the Security Fabric tree failed.

Parameter	Description	Type	Size	Default																				
ha-reboot-controller	Serial number of the FortiGate unit that will control the reboot process for the federated upgrade of the HA cluster.	string	Maximum length: 79																					
ignore-signing-errors	Allow/reject use of FortiGate firmware images that are unsigned.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow use of FortiGate images that are unsigned.</td></tr><tr><td><i>disable</i></td><td>Reject use of FortiGate images that are unsigned.</td></tr></table>	Option	Description	<i>enable</i>	Allow use of FortiGate images that are unsigned.	<i>disable</i>	Reject use of FortiGate images that are unsigned.																	
Option	Description																							
<i>enable</i>	Allow use of FortiGate images that are unsigned.																							
<i>disable</i>	Reject use of FortiGate images that are unsigned.																							
initial-version	Firmware version when the upgrade was set up.	user	Not Specified																					
next-path-index	The index of the next image to upgrade to.	integer	Minimum value: 0 Maximum value: 10	0																				
source	Source that set up the federated upgrade config.	option	-	user																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>user</i></td><td>Upgrade configured based on user input.</td></tr><tr><td><i>auto-firmware-upgrade</i></td><td>Upgrade configured by the FortiGuard auto-firmware-upgrade feature.</td></tr></table>	Option	Description	<i>user</i>	Upgrade configured based on user input.	<i>auto-firmware-upgrade</i>	Upgrade configured by the FortiGuard auto-firmware-upgrade feature.																	
Option	Description																							
<i>user</i>	Upgrade configured based on user input.																							
<i>auto-firmware-upgrade</i>	Upgrade configured by the FortiGuard auto-firmware-upgrade feature.																							
starter-admin	Admin that started the upgrade.	string	Maximum length: 64																					
status	Current status of the upgrade.	option	-	disabled																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disabled</i></td><td>No federated upgrade has been configured.</td></tr><tr><td><i>initialized</i></td><td>The upgrade has been configured.</td></tr><tr><td><i>downloading</i></td><td>The image is downloading in preparation for the upgrade.</td></tr><tr><td><i>device-disconnected</i></td><td>The image downloads are complete, but one or more devices have disconnected.</td></tr><tr><td><i>ready</i></td><td>The image download finished and the upgrade is pending.</td></tr><tr><td><i>coordinating</i></td><td>The upgrade is coordinating with other running upgrades.</td></tr><tr><td><i>staging</i></td><td>The upgrade is confirmed and images are being staged.</td></tr><tr><td><i>final-check</i></td><td>The upgrade is ready and final checks are in progress.</td></tr><tr><td><i>upgrade-devices</i></td><td>The upgrade is ready and devices are being rebooted.</td></tr></table>	Option	Description	<i>disabled</i>	No federated upgrade has been configured.	<i>initialized</i>	The upgrade has been configured.	<i>downloading</i>	The image is downloading in preparation for the upgrade.	<i>device-disconnected</i>	The image downloads are complete, but one or more devices have disconnected.	<i>ready</i>	The image download finished and the upgrade is pending.	<i>coordinating</i>	The upgrade is coordinating with other running upgrades.	<i>staging</i>	The upgrade is confirmed and images are being staged.	<i>final-check</i>	The upgrade is ready and final checks are in progress.	<i>upgrade-devices</i>	The upgrade is ready and devices are being rebooted.			
Option	Description																							
<i>disabled</i>	No federated upgrade has been configured.																							
<i>initialized</i>	The upgrade has been configured.																							
<i>downloading</i>	The image is downloading in preparation for the upgrade.																							
<i>device-disconnected</i>	The image downloads are complete, but one or more devices have disconnected.																							
<i>ready</i>	The image download finished and the upgrade is pending.																							
<i>coordinating</i>	The upgrade is coordinating with other running upgrades.																							
<i>staging</i>	The upgrade is confirmed and images are being staged.																							
<i>final-check</i>	The upgrade is ready and final checks are in progress.																							
<i>upgrade-devices</i>	The upgrade is ready and devices are being rebooted.																							

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>cancelled</i></td><td>The upgrade was cancelled due to the tree not being ready.</td></tr><tr><td><i>confirmed</i></td><td>The upgrade was confirmed and reboots are running.</td></tr><tr><td><i>done</i></td><td>The upgrade completed successfully.</td></tr><tr><td><i>dry-run-done</i></td><td>The dry run finished.</td></tr><tr><td><i>failed</i></td><td>The upgrade failed due to a local issue.</td></tr></table>	Option	Description	<i>cancelled</i>	The upgrade was cancelled due to the tree not being ready.	<i>confirmed</i>	The upgrade was confirmed and reboots are running.	<i>done</i>	The upgrade completed successfully.	<i>dry-run-done</i>	The dry run finished.	<i>failed</i>	The upgrade failed due to a local issue.			
	Option	Description														
	<i>cancelled</i>	The upgrade was cancelled due to the tree not being ready.														
	<i>confirmed</i>	The upgrade was confirmed and reboots are running.														
	<i>done</i>	The upgrade completed successfully.														
	<i>dry-run-done</i>	The dry run finished.														
<i>failed</i>	The upgrade failed due to a local issue.															
upgrade-id	Unique identifier for this upgrade.	integer	Minimum value: 0 Maximum value: 4294967295	0												

config known-ha-members

	fortiextender	This device is a FortiExtender.		
maximum-minutes	Maximum number of minutes to allow for immediate upgrade preparation.	integer	Minimum value: 5 Maximum value: 10080	15
serial	Serial number of the node to include.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default
setup-time	Upgrade preparation start time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified	
time	Scheduled upgrade execution time in UTC (hh:mm yyyy/mm/dd UTC).	user	Not Specified	
timing	Run immediately or at a scheduled time.	option	-	immediate
	Option	Description		
	immediate	Begin the upgrade immediately.		
	scheduled	Begin the upgrade at a configured time.		
upgrade-path	Fortinet OS image versions to upgrade through in major-minor-patch format, such as 7-0-4.	user	Not Specified	

config system fips-cc

Configure FIPS-CC mode.

```
config system fips-cc
    Description: Configure FIPS-CC mode.
    set key-generation-self-test [enable|disable]
    set self-test-period {integer}
    set status [enable|disable]
end
```

config system fips-cc

Parameter	Description	Type	Size	Default
key-generation-self-test	Enable/disable self tests after key generation.	option	-	disable
	Option	Description		
	enable	Enable self tests after key generation.		
	disable	Disable self tests after key generation.		
self-test-period	Self test period.	integer	Minimum value: 1 Maximum value: 1440	1440
status	Enable/disable ciphers for FIPS mode of operation.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable FIPS-CC mode.		
	<i>disable</i>	Disable FIPS-CC mode.		

config system fortiguard

Configure FortiGuard services.

```
config system fortiguard
    Description: Configure FortiGuard services.

```

end

config system fortiguard

Parameter	Description	Type	Size	Default						
FDS-license-expiring-days	Threshold for number of days before FortiGuard license expiration to generate license expiring event log (1 - 100 days, default = 15).	integer	Minimum value: 1 Maximum value: 100	15						
antispam-cache	Enable/disable FortiGuard antispam request caching. Uses a small amount of memory but improves performance.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiGuard antispam request caching.</td></tr><tr><td><i>disable</i></td><td>Disable FortiGuard antispam request caching.</td></tr></table>				Option	Description	<i>enable</i>	Enable FortiGuard antispam request caching.	<i>disable</i>	Disable FortiGuard antispam request caching.
Option	Description									
<i>enable</i>	Enable FortiGuard antispam request caching.									
<i>disable</i>	Disable FortiGuard antispam request caching.									
antispam-cache-mpermille	Maximum permille of FortiGate memory the antispam cache is allowed to use (1 - 150).	integer	Minimum value: 1 Maximum value: 150	1						
antispam-cache-ttl	Time-to-live for antispam cache entries in seconds (300 - 86400). Lower times reduce the cache size. Higher times may improve performance since the cache will have more entries.	integer	Minimum value: 300 Maximum value: 86400	1800						

Parameter	Description	Type	Size	Default						
antispam-expiration	Expiration date of the FortiGuard antispam contract. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0						
antispam-force-off	Enable/disable turning off the FortiGuard antispam service.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Turn off the FortiGuard antispam service.</td></tr><tr><td><i>disable</i></td><td>Allow the FortiGuard antispam service.</td></tr></table>				Option	Description	<i>enable</i>	Turn off the FortiGuard antispam service.	<i>disable</i>	Allow the FortiGuard antispam service.
Option	Description									
<i>enable</i>	Turn off the FortiGuard antispam service.									
<i>disable</i>	Allow the FortiGuard antispam service.									
antispam-license	Interval of time between license checks for the FortiGuard antispam contract. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	4294967295						
antispam-timeout	Antispam query time out (1 - 30 sec, default = 7).	integer	Minimum value: 1 Maximum value: 30	7						
anycast-sdns-server-ip	IP address of the FortiGuard anycast DNS rating server.	ipv4-address	Not Specified	0.0.0.0						
anycast-sdns-server-port	Port to connect to on the FortiGuard anycast DNS rating server.	integer	Minimum value: 1 Maximum value: 65535	853						
auto-firmware-upgrade	Enable/disable automatic patch-level firmware upgrade from FortiGuard. The FortiGate unit searches for new patches only in the same major and minor version.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic patch-level firmware upgrade to latest version from FortiGuard.</td></tr><tr><td><i>disable</i></td><td>Disable automatic patch-level firmware upgrade to latest version from FortiGuard.</td></tr></table>				Option	Description	<i>enable</i>	Enable automatic patch-level firmware upgrade to latest version from FortiGuard.	<i>disable</i>	Disable automatic patch-level firmware upgrade to latest version from FortiGuard.
Option	Description									
<i>enable</i>	Enable automatic patch-level firmware upgrade to latest version from FortiGuard.									
<i>disable</i>	Disable automatic patch-level firmware upgrade to latest version from FortiGuard.									

Parameter	Description	Type	Size	Default																
auto-firmware-upgrade-day	Allowed day(s) of the week to install an automatic patch-level firmware upgrade from FortiGuard (default is none). Disallow any day of the week to use auto-firmware-upgrade-delay instead, which waits for designated days before installing an automatic patch-level firmware upgrade.	option	-																	
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sunday</i></td><td>Sunday.</td></tr><tr><td><i>monday</i></td><td>Monday.</td></tr><tr><td><i>tuesday</i></td><td>Tuesday.</td></tr><tr><td><i>wednesday</i></td><td>Wednesday.</td></tr><tr><td><i>thursday</i></td><td>Thursday.</td></tr><tr><td><i>friday</i></td><td>Friday.</td></tr><tr><td><i>saturday</i></td><td>Saturday.</td></tr></table>	Option	Description	<i>sunday</i>	Sunday.	<i>monday</i>	Monday.	<i>tuesday</i>	Tuesday.	<i>wednesday</i>	Wednesday.	<i>thursday</i>	Thursday.	<i>friday</i>	Friday.	<i>saturday</i>	Saturday.			
Option	Description																			
<i>sunday</i>	Sunday.																			
<i>monday</i>	Monday.																			
<i>tuesday</i>	Tuesday.																			
<i>wednesday</i>	Wednesday.																			
<i>thursday</i>	Thursday.																			
<i>friday</i>	Friday.																			
<i>saturday</i>	Saturday.																			
auto-firmware-upgrade-delay	Delay of day(s) before installing an automatic patch-level firmware upgrade from FortiGuard (default = 3). Set it 0 to use auto-firmware-upgrade-day instead, which selects allowed day (s) of the week for installing an automatic patch-level firmware upgrade.	integer	Minimum value: 0 Maximum value: 14	3																
auto-firmware-upgrade-end-hour	End time in the designated time window for automatic patch-level firmware upgrade from FortiGuard in 24 hour time (0 ~ 23, default = 4). When the end time is smaller than the start time, the end time is interpreted as the next day. The actual upgrade time is selected randomly within the time window.	integer	Minimum value: 0 Maximum value: 23	4																
auto-firmware-upgrade-start-hour	Start time in the designated time window for automatic patch-level firmware upgrade from FortiGuard in 24 hour time (0 ~ 23, default = 2). The actual upgrade time is selected randomly within the time window.	integer	Minimum value: 0 Maximum value: 23	1																
auto-join-forticloud *	Automatically connect to and login to FortiCloud.	option	-	enable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic connection and login to FortiCloud.</td></tr><tr><td><i>disable</i></td><td>Disable automatic connection and login to FortiCloud.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic connection and login to FortiCloud.	<i>disable</i>	Disable automatic connection and login to FortiCloud.													
Option	Description																			
<i>enable</i>	Enable automatic connection and login to FortiCloud.																			
<i>disable</i>	Disable automatic connection and login to FortiCloud.																			

Parameter	Description	Type	Size	Default								
ddns-server-ip	IP address of the FortiDDNS server.	ipv4-address	Not Specified	0.0.0.0								
ddns-server-ip6	IPv6 address of the FortiDDNS server.	ipv6-address	Not Specified	::								
ddns-server-port	Port used to communicate with FortiDDNS servers.	integer	Minimum value: 1 Maximum value: 65535	443								
fortiguard-anycast	Enable/disable use of FortiGuard's Anycast network.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of FortiGuard's Anycast network.</td></tr><tr><td><i>disable</i></td><td>Disable use of FortiGuard's Anycast network.</td></tr></table>				Option	Description	<i>enable</i>	Enable use of FortiGuard's Anycast network.	<i>disable</i>	Disable use of FortiGuard's Anycast network.		
Option	Description											
<i>enable</i>	Enable use of FortiGuard's Anycast network.											
<i>disable</i>	Disable use of FortiGuard's Anycast network.											
fortiguard-anycast-source	Configure which of Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network. Default is Fortinet.	option	-	fortinet								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortinet</i></td><td>Use Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network.</td></tr><tr><td><i>aws</i></td><td>Use Fortinet's AWS servers to provide FortiGuard services in FortiGuard's anycast network.</td></tr><tr><td><i>debug</i></td><td>Use Fortinet's internal test servers to provide FortiGuard services in FortiGuard's anycast network.</td></tr></table>				Option	Description	<i>fortinet</i>	Use Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network.	<i>aws</i>	Use Fortinet's AWS servers to provide FortiGuard services in FortiGuard's anycast network.	<i>debug</i>	Use Fortinet's internal test servers to provide FortiGuard services in FortiGuard's anycast network.
Option	Description											
<i>fortinet</i>	Use Fortinet's servers to provide FortiGuard services in FortiGuard's anycast network.											
<i>aws</i>	Use Fortinet's AWS servers to provide FortiGuard services in FortiGuard's anycast network.											
<i>debug</i>	Use Fortinet's internal test servers to provide FortiGuard services in FortiGuard's anycast network.											
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
load-balance-servers	Number of servers to alternate between as first FortiGuard option.	integer	Minimum value: 1 Maximum value: 266	1								

Parameter	Description	Type	Size	Default						
outbreak-prevention-cache	Enable/disable FortiGuard Virus Outbreak Prevention cache.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiGuard antivirus caching.</td></tr><tr><td><i>disable</i></td><td>Disable FortiGuard antivirus caching.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiGuard antivirus caching.	<i>disable</i>	Disable FortiGuard antivirus caching.			
	Option	Description								
	<i>enable</i>	Enable FortiGuard antivirus caching.								
<i>disable</i>	Disable FortiGuard antivirus caching.									
outbreak-prevention-cache-mpermille	Maximum permille of memory FortiGuard Virus Outbreak Prevention cache can use (1 - 150 permille, default = 1).	integer	Minimum value: 1 Maximum value: 150	1						
outbreak-prevention-cache-ttl	Time-to-live for FortiGuard Virus Outbreak Prevention cache entries (300 - 86400 sec, default = 300).	integer	Minimum value: 300 Maximum value: 86400	300						
outbreak-prevention-expiration	Expiration date of FortiGuard Virus Outbreak Prevention contract. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0						
outbreak-prevention-force-off	Turn off FortiGuard Virus Outbreak Prevention service.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Turn off FortiGuard antivirus service.</td></tr><tr><td><i>disable</i></td><td>Allow the FortiGuard antivirus service.</td></tr></table>	Option	Description	<i>enable</i>	Turn off FortiGuard antivirus service.	<i>disable</i>	Allow the FortiGuard antivirus service.			
	Option	Description								
	<i>enable</i>	Turn off FortiGuard antivirus service.								
<i>disable</i>	Allow the FortiGuard antivirus service.									
outbreak-prevention-license	Interval of time between license checks for FortiGuard Virus Outbreak Prevention contract. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	4294967295						
outbreak-prevention-timeout	FortiGuard Virus Outbreak Prevention time out (1 - 30 sec, default = 7).	integer	Minimum value: 1 Maximum value: 30	7						
persistent-connection	Enable/disable use of persistent connection to receive update notification from FortiGuard.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable persistent connection to receive update notification from FortiGuard.		
	<i>disable</i>	Disable persistent connection to receive update notification from FortiGuard.		
port	Port used to communicate with the FortiGuard servers.	option	-	443
	Option Description			
	<i>8888</i>	port 8888 for server communication.		
	<i>53</i>	port 53 for server communication.		
	<i>80</i>	port 80 for server communication.		
	<i>443</i>	port 443 for server communication.		
protocol	Protocol used to communicate with the FortiGuard servers.	option	-	https
	Option Description			
	<i>udp</i>	UDP for server communication (for use by FortiGuard or FortiManager).		
	<i>http</i>	HTTP for server communication (for use only by FortiManager).		
	<i>https</i>	HTTPS for server communication (for use by FortiGuard or FortiManager).		
proxy-password	Proxy user password.	password	Not Specified	
proxy-server-ip	Hostname or IPv4 address of the proxy server.	string	Maximum length: 63	
proxy-server-port	Port used to communicate with the proxy server.	integer	Minimum value: 0 Maximum value: 65535	0
proxy-username	Proxy user name.	string	Maximum length: 64	
sandbox-inline-scan *	Enable/disable FortiCloud Sandbox inline-scan.	option	-	disable
	Option Description			
	<i>enable</i>	Enable FortiCloud Sandbox inline scan.		
	<i>disable</i>	Disable FortiCloud Sandbox inline scan.		

Parameter	Description	Type	Size	Default						
sandbox-region	FortiCloud Sandbox region.	string	Maximum length: 63							
sdns-options	Customization options for the FortiGuard DNS service.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>include-question-section</i></td><td>Include DNS question section in the FortiGuard DNS setup message.</td></tr></table>	Option	Description	<i>include-question-section</i>	Include DNS question section in the FortiGuard DNS setup message.					
Option	Description									
<i>include-question-section</i>	Include DNS question section in the FortiGuard DNS setup message.									
sdns-server-ip	IP address of the FortiGuard DNS rating server.	user	Not Specified							
sdns-server-port	Port to connect to on the FortiGuard DNS rating server.	integer	Minimum value: 1 Maximum value: 65535	53						
service-account-id	Service account ID.	string	Maximum length: 50							
source-ip	Source IPv4 address used to communicate with FortiGuard.	ipv4-address	Not Specified	0.0.0.0						
source-ip6	Source IPv6 address used to communicate with FortiGuard.	ipv6-address	Not Specified	::						
update-build-proxy	Enable/disable proxy dictionary rebuild.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable proxy dictionary rebuild.</td></tr><tr><td><i>disable</i></td><td>Disable proxy dictionary rebuild.</td></tr></table>	Option	Description	<i>enable</i>	Enable proxy dictionary rebuild.	<i>disable</i>	Disable proxy dictionary rebuild.			
Option	Description									
<i>enable</i>	Enable proxy dictionary rebuild.									
<i>disable</i>	Disable proxy dictionary rebuild.									
update-dldb	Enable/disable DLP signature update.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DLP signature update.</td></tr><tr><td><i>disable</i></td><td>Disable DLP signature update.</td></tr></table>	Option	Description	<i>enable</i>	Enable DLP signature update.	<i>disable</i>	Disable DLP signature update.			
Option	Description									
<i>enable</i>	Enable DLP signature update.									
<i>disable</i>	Disable DLP signature update.									
update-extdb	Enable/disable external resource update.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable external resource update.</td></tr><tr><td><i>disable</i></td><td>Disable external resource update.</td></tr></table>	Option	Description	<i>enable</i>	Enable external resource update.	<i>disable</i>	Disable external resource update.			
Option	Description									
<i>enable</i>	Enable external resource update.									
<i>disable</i>	Disable external resource update.									

Parameter	Description	Type	Size	Default								
update-ffdb	Enable/disable Internet Service Database update.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Internet Service Database update.</td></tr><tr><td><i>disable</i></td><td>Disable Internet Service Database update.</td></tr></table>				Option	Description	<i>enable</i>	Enable Internet Service Database update.	<i>disable</i>	Disable Internet Service Database update.		
Option	Description											
<i>enable</i>	Enable Internet Service Database update.											
<i>disable</i>	Disable Internet Service Database update.											
update-server-location	Location from which to receive FortiGuard updates.	option	-	automatic								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>automatic</i></td><td>FortiGuard servers chosen based on closest proximity to FortiGate unit.</td></tr><tr><td><i>usa</i></td><td>FortiGuard servers in United States.</td></tr><tr><td><i>eu</i></td><td>FortiGuard servers in the European Union.</td></tr></table>				Option	Description	<i>automatic</i>	FortiGuard servers chosen based on closest proximity to FortiGate unit.	<i>usa</i>	FortiGuard servers in United States.	<i>eu</i>	FortiGuard servers in the European Union.
Option	Description											
<i>automatic</i>	FortiGuard servers chosen based on closest proximity to FortiGate unit.											
<i>usa</i>	FortiGuard servers in United States.											
<i>eu</i>	FortiGuard servers in the European Union.											
update-uwdb	Enable/disable allowlist update.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allowlist update.</td></tr><tr><td><i>disable</i></td><td>Disable allowlist update.</td></tr></table>				Option	Description	<i>enable</i>	Enable allowlist update.	<i>disable</i>	Disable allowlist update.		
Option	Description											
<i>enable</i>	Enable allowlist update.											
<i>disable</i>	Disable allowlist update.											
vdom	FortiGuard Service virtual domain name.	string	Maximum length: 31									
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0								
webfilter-cache	Enable/disable FortiGuard web filter caching.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiGuard web filter caching.</td></tr><tr><td><i>disable</i></td><td>Disable FortiGuard web filter caching.</td></tr></table>				Option	Description	<i>enable</i>	Enable FortiGuard web filter caching.	<i>disable</i>	Disable FortiGuard web filter caching.		
Option	Description											
<i>enable</i>	Enable FortiGuard web filter caching.											
<i>disable</i>	Disable FortiGuard web filter caching.											
webfilter-cache-ttl	Time-to-live for web filter cache entries in seconds (300 - 86400).	integer	Minimum value: 300 Maximum value: 86400	3600								

Parameter	Description	Type	Size	Default
webfilter-expiration	Expiration date of the FortiGuard web filter contract. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0
webfilter-force-off	Enable/disable turning off the FortiGuard web filtering service.	option	-	disable
	Option	Description		
	enable	Turn off the FortiGuard web filtering service.		
	disable	Allow the FortiGuard web filtering service to operate.		
webfilter-license	Interval of time between license checks for the FortiGuard web filter contract. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	4294967295
webfilter-timeout	Web filter query time out (1 - 30 sec, default = 15).	integer	Minimum value: 1 Maximum value: 30	15

* This parameter may not exist in some models.

config system fortindr

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 40F 3G4G, FortiGate 40F, FortiGate 60F, FortiGate 61F, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F.

Configure FortiNDR.

```
config system fortindr
  Description: Configure FortiNDR.
  set interface {string}
  set interface-select-method [auto|sdwan|...]
  set source-ip {string}
  set status [disable|enable]
  set vrf-select {integer}
end
```

config system fortindr

Parameter	Description	Type	Size	Default
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
		Option	Description	
		auto	Set outgoing interface automatically.	

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
source-ip	Source IP address for communications to FortiNDR.	string	Maximum length: 63	
status	Enable/disable FortiNDR.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable FortiNDR.		
	<i>enable</i>	Enable FortiNDR.		
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config system fortisandbox

Configure FortiSandbox.

```

config system fortisandbox
    Description: Configure FortiSandbox.
    set ca {string}

config system fortisandbox

Parameter	Description	Type	Size	Default
ca	The CA that signs remote FortiSandbox certificate, empty for no check.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default								
cn	The CN of remote server certificate, case sensitive, empty for no check.	string	Maximum length: 127									
email	Notifier email address.	string	Maximum length: 63									
enc-algorithm	Configure the level of SSL protection for secure communication with FortiSandbox.	option	-	default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>SSL communication with high and medium encryption algorithms.</td></tr><tr><td><i>high</i></td><td>SSL communication with high encryption algorithms.</td></tr><tr><td><i>low</i></td><td>SSL communication with low encryption algorithms.</td></tr></table>	Option	Description	<i>default</i>	SSL communication with high and medium encryption algorithms.	<i>high</i>	SSL communication with high encryption algorithms.	<i>low</i>	SSL communication with low encryption algorithms.			
Option	Description											
<i>default</i>	SSL communication with high and medium encryption algorithms.											
<i>high</i>	SSL communication with high encryption algorithms.											
<i>low</i>	SSL communication with low encryption algorithms.											
forticloud	Enable/disable FortiSandbox Cloud.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiSandbox Cloud.</td></tr><tr><td><i>disable</i></td><td>Disable FortiSandbox Cloud.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiSandbox Cloud.	<i>disable</i>	Disable FortiSandbox Cloud.					
Option	Description											
<i>enable</i>	Enable FortiSandbox Cloud.											
<i>disable</i>	Disable FortiSandbox Cloud.											
inline-scan *	Enable/disable FortiSandbox inline scan.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiSandbox inline scan.</td></tr><tr><td><i>disable</i></td><td>Disable FortiSandbox inline scan.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiSandbox inline scan.	<i>disable</i>	Disable FortiSandbox inline scan.					
Option	Description											
<i>enable</i>	Enable FortiSandbox inline scan.											
<i>disable</i>	Disable FortiSandbox inline scan.											
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.			
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
server	Server IP address or FQDN of the remote FortiSandbox.	string	Maximum length: 63									
source-ip	Source IP address for communications to FortiSandbox.	string	Maximum length: 63									

Parameter	Description	Type	Size	Default														
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections (default is to follow system global setting).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Follow system global setting.</td></tr><tr><td>SSLv3</td><td>SSLv3.</td></tr><tr><td>TLSv1</td><td>TLSv1.</td></tr><tr><td>TLSv1-1</td><td>TLSv1.1.</td></tr><tr><td>TLSv1-2</td><td>TLSv1.2.</td></tr><tr><td>TLSv1-3</td><td>TLSv1.3.</td></tr></table>	Option	Description	default	Follow system global setting.	SSLv3	SSLv3.	TLSv1	TLSv1.	TLSv1-1	TLSv1.1.	TLSv1-2	TLSv1.2.	TLSv1-3	TLSv1.3.			
	Option	Description																
	default	Follow system global setting.																
	SSLv3	SSLv3.																
	TLSv1	TLSv1.																
	TLSv1-1	TLSv1.1.																
	TLSv1-2	TLSv1.2.																
TLSv1-3	TLSv1.3.																	
status	Enable/disable FortiSandbox.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable FortiSandbox.</td></tr><tr><td>disable</td><td>Disable FortiSandbox.</td></tr></table>	Option	Description	enable	Enable FortiSandbox.	disable	Disable FortiSandbox.											
	Option	Description																
	enable	Enable FortiSandbox.																
disable	Disable FortiSandbox.																	
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0														

* This parameter may not exist in some models.

config system fsso-polling

Configure Fortinet Single Sign On (FSSO) server.

```
config system fsso-polling
    Description: Configure Fortinet Single Sign On (FSSO) server.
    set auth-password {password}
    set authentication [enable|disable]
    set listening-port {integer}
    set status [enable|disable]
end
```

config system fsso-polling

Parameter	Description	Type	Size	Default
auth-password	Password to connect to FSSO Agent.	password	Not Specified	

Parameter	Description	Type	Size	Default
authentication	Enable/disable FSSO Agent Authentication.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable FSSO Agent Authentication.		
	<i>disable</i>	Disable FSSO Agent Authentication.		
listening-port	Listening port to accept clients (1 - 65535).	integer	Minimum value: 1 Maximum value: 65535	8000
status	Enable/disable FSSO Polling Mode.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable FSSO Polling Mode.		
	<i>disable</i>	Disable FSSO Polling Mode.		

config system ftm-push

Configure FortiToken Mobile push services.

```
config system ftm-push
    Description: Configure FortiToken Mobile push services.
    set proxy [enable|disable]
    set server {string}
    set server-cert {string}
    set server-ip {ipv4-address}
    set server-port {integer}
    set status [enable|disable]
end
```

config system ftm-push

Parameter	Description	Type	Size	Default
proxy	Enable/disable communication to the proxy server in FortiGuard configuration.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable communication to the proxy server in FortiGuard configuration.		
	<i>disable</i>	Disable communication to the proxy server in FortiGuard configuration.		
server	IPv4 address or domain name of FortiToken Mobile push services server.	string	Maximum length: 127	

Parameter	Description	Type	Size	Default
server-cert	Name of the server certificate to be used for SSL.	string	Maximum length: 35	Fortinet_GUI_Server
server-ip	IPv4 address of FortiToken Mobile push services server (format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0
server-port	Port to communicate with FortiToken Mobile push services server (1 - 65535, default = 4433).	integer	Minimum value: 1 Maximum value: 65535	4433
status	Enable/disable the use of FortiToken Mobile push services.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable FortiToken Mobile push services.		
	<i>disable</i>	Disable FortiToken Mobile push services.		

config system geneve

Configure GENEVE devices.

```
config system geneve
    Description: Configure GENEVE devices.
    edit <name>
        set dstport {integer}
        set interface {string}
        set ip-version [ipv4-unicast|ipv6-unicast]
        set remote-ip {ipv4-address}
        set remote-ip6 {ipv6-address}
        set type [ethernet|ppp]
        set vni {integer}
    next
end
```

config system geneve

Parameter	Description	Type	Size	Default
dstport	GENEVE destination port (1 - 65535, default = 6081).	integer	Minimum value: 1 Maximum value: 65535	6081

Parameter	Description	Type	Size	Default						
interface	Outgoing interface for GENEVE encapsulated traffic.	string	Maximum length: 15							
ip-version	IP version to use for the GENEVE interface and so for communication over the GENEVE. IPv4 or IPv6 unicast.	option	-	ipv4-unicast						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4-unicast</td><td>Use IPv4 unicast addressing over the GENEVE.</td></tr><tr><td>ipv6-unicast</td><td>Use IPv6 unicast addressing over the GENEVE.</td></tr></table>				Option	Description	ipv4-unicast	Use IPv4 unicast addressing over the GENEVE.	ipv6-unicast	Use IPv6 unicast addressing over the GENEVE.
Option	Description									
ipv4-unicast	Use IPv4 unicast addressing over the GENEVE.									
ipv6-unicast	Use IPv6 unicast addressing over the GENEVE.									
name	GENEVE device or interface name. Must be an unique interface name.	string	Maximum length: 15							
remote-ip	IPv4 address of the GENEVE interface on the device at the remote end of the GENEVE.	ipv4-address	Not Specified	0.0.0.0						
remote-ip6	IPv6 IP address of the GENEVE interface on the device at the remote end of the GENEVE.	ipv6-address	Not Specified	::						
type	GENEVE type.	option	-	ethernet						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ethernet</td><td>Internal packet includes Ethernet header.</td></tr><tr><td>ppp</td><td>Internal packet does not include Ethernet header.</td></tr></table>				Option	Description	ethernet	Internal packet includes Ethernet header.	ppp	Internal packet does not include Ethernet header.
Option	Description									
ethernet	Internal packet includes Ethernet header.									
ppp	Internal packet does not include Ethernet header.									
vni	GENEVE network ID.	integer	Minimum value: 0 Maximum value: 16777215	0						

config system geoip-override

Configure geographical location mapping for IP address(es) to override mappings from FortiGuard.

```

config system geoip-override
    Description: Configure geographical location mapping for IP address(es) to override
mappings from FortiGuard.
    edit <name>
        set country-id {string}
        set description {string}
        config ip-range
            Description: Table of IP ranges assigned to country.
            edit <id>
                set end-ip {ipv4-address}
                set start-ip {ipv4-address}
            next
        end
    end

```

```

config ip6-range
    Description: Table of IPv6 ranges assigned to country.
    edit <id>
        set end-ip {ipv6-address}
        set start-ip {ipv6-address}
    next
end
next
end

```

config system geoip-override

Parameter	Description	Type	Size	Default
country-id	Two character Country ID code.	string	Maximum length: 2	
description	Description.	string	Maximum length: 127	
name	Location name.	string	Maximum length: 63	

config ip-range

Parameter	Description	Type	Size	Default
end-ip	Ending IP address, inclusive, of the address range (format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0
id	ID of individual entry in the IP range table.	integer	Minimum value: 0 Maximum value: 65535	0
start-ip	Starting IP address, inclusive, of the address range (format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0

config ip6-range

Parameter	Description	Type	Size	Default
end-ip	Ending IP address, inclusive, of the address range (format: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx).	ipv6-address	Not Specified	::
id	ID of individual entry in the IPv6 range table.	integer	Minimum value: 0 Maximum value: 65535	0

Parameter	Description	Type	Size	Default
start-ip	Starting IP address, inclusive, of the address range (format: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx).	ipv6-address	Not Specified	::

Option	Description									
<i>enable</i>	Enable FortiCloud admin login via SSO.									
<i>disable</i>	Disable FortiCloud admin login via SSO.									
admin-host	Administrative host for HTTP and HTTPS. When set, will be used in lieu of the client's Host header for any redirection.	string	Maximum length: 255							
admin-hsts-max-age	HTTPS Strict-Transport-Security header max-age in seconds. A value of 0 will reset any HSTS records in the browser.When admin-https-redirect is disabled the header max-age will be 0.	integer	Minimum value: 0 Maximum value: 2147483647	63072000						

Parameter	Description	Type	Size	Default																								
admin-https-pki-required	Enable/disable admin login method. Enable to force administrators to provide a valid certificate to log in if PKI is enabled. Disable to allow administrators to log in with a certificate or password.	option	-	disable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Admin users must provide a valid certificate when PKI is enabled for HTTPS admin access.</td></tr><tr><td><i>disable</i></td><td>Admin users can login by providing a valid certificate or password.</td></tr></table>	Option	Description	<i>enable</i>	Admin users must provide a valid certificate when PKI is enabled for HTTPS admin access.	<i>disable</i>	Admin users can login by providing a valid certificate or password.																					
Option	Description																											
<i>enable</i>	Admin users must provide a valid certificate when PKI is enabled for HTTPS admin access.																											
<i>disable</i>	Admin users can login by providing a valid certificate or password.																											
admin-https-redirect	Enable/disable redirection of HTTP administration access to HTTPS.	option	-	enable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable redirecting HTTP administration access to HTTPS.</td></tr><tr><td><i>disable</i></td><td>Disable redirecting HTTP administration access to HTTPS.</td></tr></table>	Option	Description	<i>enable</i>	Enable redirecting HTTP administration access to HTTPS.	<i>disable</i>	Disable redirecting HTTP administration access to HTTPS.																					
Option	Description																											
<i>enable</i>	Enable redirecting HTTP administration access to HTTPS.																											
<i>disable</i>	Disable redirecting HTTP administration access to HTTPS.																											
admin-https-ssl-banned-ciphers	Select one or more cipher technologies that cannot be used in GUI HTTPS negotiations. Only applies to TLS 1.2 and below.	option	-																									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>RSA</i></td><td>Ban the use of cipher suites using RSA key.</td></tr><tr><td><i>DHE</i></td><td>Ban the use of cipher suites using authenticated ephemeral DH key agreement.</td></tr><tr><td><i>ECDHE</i></td><td>Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.</td></tr><tr><td><i>DSS</i></td><td>Ban the use of cipher suites using DSS authentication.</td></tr><tr><td><i>ECDSA</i></td><td>Ban the use of cipher suites using ECDSA authentication.</td></tr><tr><td><i>AES</i></td><td>Ban the use of cipher suites using either 128 or 256 bit AES.</td></tr><tr><td><i>AESGCM</i></td><td>Ban the use of cipher suites using AES in Galois Counter Mode (GCM).</td></tr><tr><td><i>CAMELLIA</i></td><td>Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.</td></tr><tr><td><i>3DES</i></td><td>Ban the use of cipher suites using triple DES.</td></tr><tr><td><i>SHA1</i></td><td>Ban the use of cipher suites using HMAC-SHA1.</td></tr><tr><td><i>SHA256</i></td><td>Ban the use of cipher suites using HMAC-SHA256.</td></tr></table>	Option	Description	<i>RSA</i>	Ban the use of cipher suites using RSA key.	<i>DHE</i>	Ban the use of cipher suites using authenticated ephemeral DH key agreement.	<i>ECDHE</i>	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.	<i>DSS</i>	Ban the use of cipher suites using DSS authentication.	<i>ECDSA</i>	Ban the use of cipher suites using ECDSA authentication.	<i>AES</i>	Ban the use of cipher suites using either 128 or 256 bit AES.	<i>AESGCM</i>	Ban the use of cipher suites using AES in Galois Counter Mode (GCM).	<i>CAMELLIA</i>	Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.	<i>3DES</i>	Ban the use of cipher suites using triple DES.	<i>SHA1</i>	Ban the use of cipher suites using HMAC-SHA1.	<i>SHA256</i>	Ban the use of cipher suites using HMAC-SHA256.			
Option	Description																											
<i>RSA</i>	Ban the use of cipher suites using RSA key.																											
<i>DHE</i>	Ban the use of cipher suites using authenticated ephemeral DH key agreement.																											
<i>ECDHE</i>	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.																											
<i>DSS</i>	Ban the use of cipher suites using DSS authentication.																											
<i>ECDSA</i>	Ban the use of cipher suites using ECDSA authentication.																											
<i>AES</i>	Ban the use of cipher suites using either 128 or 256 bit AES.																											
<i>AESGCM</i>	Ban the use of cipher suites using AES in Galois Counter Mode (GCM).																											
<i>CAMELLIA</i>	Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.																											
<i>3DES</i>	Ban the use of cipher suites using triple DES.																											
<i>SHA1</i>	Ban the use of cipher suites using HMAC-SHA1.																											
<i>SHA256</i>	Ban the use of cipher suites using HMAC-SHA256.																											

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>SHA384</td><td>Ban the use of cipher suites using HMAC-SHA384.</td></tr><tr><td>STATIC</td><td>Ban the use of cipher suites using static keys.</td></tr><tr><td>CHACHA20</td><td>Ban the use of cipher suites using ChaCha20.</td></tr><tr><td>ARIA</td><td>Ban the use of cipher suites using ARIA.</td></tr><tr><td>AESCCM</td><td>Ban the use of cipher suites using AESCCM.</td></tr></table>	Option	Description	SHA384	Ban the use of cipher suites using HMAC-SHA384.	STATIC	Ban the use of cipher suites using static keys.	CHACHA20	Ban the use of cipher suites using ChaCha20.	ARIA	Ban the use of cipher suites using ARIA.	AESCCM	Ban the use of cipher suites using AESCCM.			
	Option	Description														
	SHA384	Ban the use of cipher suites using HMAC-SHA384.														
	STATIC	Ban the use of cipher suites using static keys.														
	CHACHA20	Ban the use of cipher suites using ChaCha20.														
	ARIA	Ban the use of cipher suites using ARIA.														
AESCCM	Ban the use of cipher suites using AESCCM.															
admin-https-ssl-ciphersuites	Select one or more TLS 1.3 ciphersuites to enable. Does not affect ciphers in TLS 1.2 and below. At least one must be enabled. To disable all, remove TLS1.3 from admin-https-ssl-versions.	option	-	TLS-AES-128-GCM-SHA256 TLS-AES-256-GCM-SHA384 TLS-CHACHA20-POLY1305-SHA256												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>TLS-AES-128-GCM-SHA256</td><td>Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.</td></tr><tr><td>TLS-AES-256-GCM-SHA384</td><td>Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.</td></tr><tr><td>TLS-CHACHA20-POLY1305-SHA256</td><td>Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.</td></tr><tr><td>TLS-AES-128-CCM-SHA256</td><td>Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.</td></tr><tr><td>TLS-AES-128-CCM-8-SHA256</td><td>Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.</td></tr></table>	Option	Description	TLS-AES-128-GCM-SHA256	Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.	TLS-AES-256-GCM-SHA384	Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.	TLS-CHACHA20-POLY1305-SHA256	Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.	TLS-AES-128-CCM-SHA256	Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.	TLS-AES-128-CCM-8-SHA256	Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.			
	Option	Description														
	TLS-AES-128-GCM-SHA256	Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.														
	TLS-AES-256-GCM-SHA384	Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.														
	TLS-CHACHA20-POLY1305-SHA256	Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.														
	TLS-AES-128-CCM-SHA256	Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.														
TLS-AES-128-CCM-8-SHA256	Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.															
admin-https-ssl-versions	Allowed TLS versions for web administration.	option	-	tlsv1-2 tlsv1-3												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tlsv1-1</td><td>TLS 1.1.</td></tr><tr><td>tlsv1-2</td><td>TLS 1.2.</td></tr><tr><td>tlsv1-3</td><td>TLS 1.3.</td></tr></table>	Option	Description	tlsv1-1	TLS 1.1.	tlsv1-2	TLS 1.2.	tlsv1-3	TLS 1.3.							
	Option	Description														
	tlsv1-1	TLS 1.1.														
tlsv1-2	TLS 1.2.															
tlsv1-3	TLS 1.3.															

Parameter	Description	Type	Size	Default								
admin-lockout-duration	Amount of time in seconds that an administrator account is locked out after reaching the admin-lockout-threshold for repeated failed login attempts.	integer	Minimum value: 1 Maximum value: 2147483647	60								
admin-lockout-threshold	Number of failed login attempts before an administrator account is locked out for the admin-lockout-duration.	integer	Minimum value: 1 Maximum value: 10	3								
admin-login-max	Maximum number of administrators who can be logged in at the same time (1 - 100, default = 100).	integer	Minimum value: 1 Maximum value: 100	100								
admin-port	Administrative access port for HTTP. (1 - 65535, default = 80).	integer	Minimum value: 1 Maximum value: 65535	80								
admin-reset-button *	Press the reset button can reset to factory default.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>press the reset button can reset to factory default</td></tr><tr><td><i>disable</i></td><td>press the reset button cannot reset to factory default</td></tr></table>	Option	Description	<i>enable</i>	press the reset button can reset to factory default	<i>disable</i>	press the reset button cannot reset to factory default					
Option	Description											
<i>enable</i>	press the reset button can reset to factory default											
<i>disable</i>	press the reset button cannot reset to factory default											
admin-restrict-local	Enable/disable local admin authentication restriction when remote authenticator is up and running (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>all</i></td><td>Enable local admin authentication restriction including console.</td></tr><tr><td><i>non-console-only</i></td><td>Enable local admin authentication restriction excluding console.</td></tr><tr><td><i>disable</i></td><td>Disable local admin authentication restriction.</td></tr></table>	Option	Description	<i>all</i>	Enable local admin authentication restriction including console.	<i>non-console-only</i>	Enable local admin authentication restriction excluding console.	<i>disable</i>	Disable local admin authentication restriction.			
Option	Description											
<i>all</i>	Enable local admin authentication restriction including console.											
<i>non-console-only</i>	Enable local admin authentication restriction excluding console.											
<i>disable</i>	Disable local admin authentication restriction.											
admin-scp	Enable/disable SCP support for system configuration backup, restore, and firmware file upload.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SCP support for system configuration backup, restore, and firmware file upload.</td></tr></table>	Option	Description	<i>enable</i>	Enable SCP support for system configuration backup, restore, and firmware file upload.							
Option	Description											
<i>enable</i>	Enable SCP support for system configuration backup, restore, and firmware file upload.											

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SCP support for system configuration backup, restore, and firmware file upload.</td></tr></table>	Option	Description	<i>disable</i>	Disable SCP support for system configuration backup, restore, and firmware file upload.					
Option	Description									
<i>disable</i>	Disable SCP support for system configuration backup, restore, and firmware file upload.									
admin-server-cert	Server certificate that the FortiGate uses for HTTPS administrative connections.	string	Maximum length: 35	Fortinet_GUI_Server						
admin-sport	Administrative access port for HTTPS. (1 - 65535, default = 443).	integer	Minimum value: 1 Maximum value: 65535	443						
admin-ssh-grace-time	Maximum time in seconds permitted between making an SSH connection to the FortiGate unit and authenticating (10 - 3600 sec (1 hour), default 120).	integer	Minimum value: 10 Maximum value: 3600	120						
admin-ssh-password	Enable/disable password authentication for SSH admin access.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable password authentication for SSH admin access.</td></tr><tr><td><i>disable</i></td><td>Disable password authentication for SSH admin access.</td></tr></table>	Option	Description	<i>enable</i>	Enable password authentication for SSH admin access.	<i>disable</i>	Disable password authentication for SSH admin access.			
Option	Description									
<i>enable</i>	Enable password authentication for SSH admin access.									
<i>disable</i>	Disable password authentication for SSH admin access.									
admin-ssh-port	Administrative access port for SSH. (1 - 65535, default = 22).	integer	Minimum value: 1 Maximum value: 65535	22						
admin-ssh-v1	Enable/disable SSH v1 compatibility.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSH v1 compatibility.</td></tr><tr><td><i>disable</i></td><td>Disable SSH v1 compatibility.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSH v1 compatibility.	<i>disable</i>	Disable SSH v1 compatibility.			
Option	Description									
<i>enable</i>	Enable SSH v1 compatibility.									
<i>disable</i>	Disable SSH v1 compatibility.									
admin-telnet	Enable/disable TELNET service.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable TELNET service.</td></tr><tr><td><i>disable</i></td><td>Disable TELNET service.</td></tr></table>	Option	Description	<i>enable</i>	Enable TELNET service.	<i>disable</i>	Disable TELNET service.			
Option	Description									
<i>enable</i>	Enable TELNET service.									
<i>disable</i>	Disable TELNET service.									
admin-telnet-port	Administrative access port for TELNET. (1 - 65535, default = 23).	integer	Minimum value: 1 Maximum value: 65535	23						

Parameter	Description	Type	Size	Default								
admintimeout	Number of minutes before an idle administrator session times out (1 - 480 minutes (8 hours), default = 5). A shorter idle timeout is more secure.	integer	Minimum value: 1 Maximum value: 480	5								
airplane-mode *	Enable/disable airplane mode.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Shutdown RF signal of internal MODEM and Bluetooth module.</td></tr><tr><td><i>disable</i></td><td>Enable RF signal of internal MODEM and Bluetooth module.</td></tr></table>	Option	Description	<i>enable</i>	Shutdown RF signal of internal MODEM and Bluetooth module.	<i>disable</i>	Enable RF signal of internal MODEM and Bluetooth module.					
Option	Description											
<i>enable</i>	Shutdown RF signal of internal MODEM and Bluetooth module.											
<i>disable</i>	Enable RF signal of internal MODEM and Bluetooth module.											
alias	Alias for your FortiGate unit.	string	Maximum length: 35									
allow-traffic-redirect	Disable to prevent traffic with same local ingress and egress interface from being forwarded without policy check.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allow traffic redirect.</td></tr><tr><td><i>disable</i></td><td>Disable allow traffic redirect.</td></tr></table>	Option	Description	<i>enable</i>	Enable allow traffic redirect.	<i>disable</i>	Disable allow traffic redirect.					
Option	Description											
<i>enable</i>	Enable allow traffic redirect.											
<i>disable</i>	Disable allow traffic redirect.											
anti-replay	Level of checking for packet replay and TCP sequence checking.	option	-	strict								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable anti-replay check.</td></tr><tr><td><i>loose</i></td><td>Loose anti-replay check.</td></tr><tr><td><i>strict</i></td><td>Strict anti-replay check.</td></tr></table>	Option	Description	<i>disable</i>	Disable anti-replay check.	<i>loose</i>	Loose anti-replay check.	<i>strict</i>	Strict anti-replay check.			
Option	Description											
<i>disable</i>	Disable anti-replay check.											
<i>loose</i>	Loose anti-replay check.											
<i>strict</i>	Strict anti-replay check.											
application-bandwidth-tracking	Enable/disable application bandwidth tracking.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable application bandwidth tracking.</td></tr><tr><td><i>enable</i></td><td>Enable application bandwidth tracking.</td></tr></table>	Option	Description	<i>disable</i>	Disable application bandwidth tracking.	<i>enable</i>	Enable application bandwidth tracking.					
Option	Description											
<i>disable</i>	Disable application bandwidth tracking.											
<i>enable</i>	Enable application bandwidth tracking.											
arp-max-entry	Maximum number of dynamically learned MAC addresses that can be added to the ARP table (131072 - 2147483647, default = 131072).	integer	Minimum value: 131072 Maximum value: 2147483647	131072								

Parameter	Description	Type	Size	Default												
auth-cert	Server certificate that the FortiGate uses for HTTPS firewall authentication connections.	string	Maximum length: 35	Fortinet_Factory												
auth-http-port	User authentication HTTP port. (1 - 65535, default = 1000).	integer	Minimum value: 1 Maximum value: 65535	1000												
auth-https-port	User authentication HTTPS port. (1 - 65535, default = 1003).	integer	Minimum value: 1 Maximum value: 65535	1003												
auth-ike-saml-port	User IKE SAML authentication port (0 - 65535, default = 1001).	integer	Minimum value: 0 Maximum value: 65535	1001												
auth-keepalive	Enable to prevent user authentication sessions from timing out when idle.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of keep alive to extend authentication.</td></tr><tr><td><i>disable</i></td><td>Disable use of keep alive to extend authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable use of keep alive to extend authentication.	<i>disable</i>	Disable use of keep alive to extend authentication.						
Option	Description															
<i>enable</i>	Enable use of keep alive to extend authentication.															
<i>disable</i>	Disable use of keep alive to extend authentication.															
auth-session-auto-backup	Enable/disable automatic and periodic backup of authentication sessions (default = disable). Sessions are restored upon bootup.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable periodic backup of authentication sessions.</td></tr><tr><td><i>disable</i></td><td>Disable periodic backup of authentication sessions.</td></tr></table>				Option	Description	<i>enable</i>	Enable periodic backup of authentication sessions.	<i>disable</i>	Disable periodic backup of authentication sessions.						
Option	Description															
<i>enable</i>	Enable periodic backup of authentication sessions.															
<i>disable</i>	Disable periodic backup of authentication sessions.															
auth-session-auto-backup-interval	Configure automatic authentication session backup interval (default = 15min).	option	-	15min												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>1min</i></td><td>One minute.</td></tr><tr><td><i>5min</i></td><td>Five minutes.</td></tr><tr><td><i>15min</i></td><td>Fifteen minutes.</td></tr><tr><td><i>30min</i></td><td>Thirty minutes.</td></tr><tr><td><i>1hr</i></td><td>One hour.</td></tr></table>				Option	Description	<i>1min</i>	One minute.	<i>5min</i>	Five minutes.	<i>15min</i>	Fifteen minutes.	<i>30min</i>	Thirty minutes.	<i>1hr</i>	One hour.
Option	Description															
<i>1min</i>	One minute.															
<i>5min</i>	Five minutes.															
<i>15min</i>	Fifteen minutes.															
<i>30min</i>	Thirty minutes.															
<i>1hr</i>	One hour.															

Parameter	Description	Type	Size	Default
auth-session-limit	Action to take when the number of allowed user authenticated sessions is reached.	option	-	block-new
	Option Description			
	<i>block-new</i>	Block new user authentication attempts.		
	<i>logout-inactive</i>	Logout the most inactive user authenticated sessions.		
auto-auth-extension-device	Enable/disable automatic authorization of dedicated Fortinet extension devices.	option	-	enable
	Option Description			
	<i>enable</i>	Enable automatic authorization of dedicated Fortinet extension device globally.		
	<i>disable</i>	Disable automatic authorization of dedicated Fortinet extension device globally.		
autorun-log-fsck	Enable/disable automatic log partition check after ungraceful shutdown.	option	-	disable
	Option Description			
	<i>enable</i>	Enable automatic log partition check after ungraceful shutdown.		
	<i>disable</i>	Disable automatic log partition check after ungraceful shutdown.		
av-affinity *	Affinity setting for AV scanning (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	0
av-failopen	Set the action to take if the FortiGate is running low on memory or the proxy connection limit has been reached.	option	-	pass
	Option Description			
	<i>pass</i>	Bypass the antivirus system when memory is low. Antivirus scanning resumes when the low memory condition is resolved.		
	<i>off</i>	Stop accepting new AV sessions when entering conserve mode, but continue to process current active sessions.		
	<i>one-shot</i>	Bypass the antivirus system when memory is low.		
av-failopen-session	When enabled and a proxy for a protocol runs out of room in its session table, that protocol goes into failopen mode and enacts the action specified by av-failopen.	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AV fail open session option.</td></tr><tr><td><i>disable</i></td><td>Disable AV fail open session option.</td></tr></table>	Option	Description	<i>enable</i>	Enable AV fail open session option.	<i>disable</i>	Disable AV fail open session option.			
	Option	Description								
	<i>enable</i>	Enable AV fail open session option.								
<i>disable</i>	Disable AV fail open session option.									
batch-cmdb	Enable/disable batch mode, allowing you to enter a series of CLI commands that will execute as a group once they are loaded.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable batch mode to execute in CMDB server.</td></tr><tr><td><i>disable</i></td><td>Disable batch mode to execute in CMDB server.</td></tr></table>	Option	Description	<i>enable</i>	Enable batch mode to execute in CMDB server.	<i>disable</i>	Disable batch mode to execute in CMDB server.			
	Option	Description								
	<i>enable</i>	Enable batch mode to execute in CMDB server.								
<i>disable</i>	Disable batch mode to execute in CMDB server.									
bfd-affinity	Affinity setting for BFD daemon (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxx).	string	Maximum length: 79	1						
block-session-timer	Duration in seconds for blocked sessions (1 - 300 sec (5 minutes), default = 30).	integer	Minimum value: 1 Maximum value: 300	30						
br-fdb-max-entry	Maximum number of bridge forwarding database (FDB) entries.	integer	Minimum value: 8192 Maximum value: 2147483647	8192						
cert-chain-max	Maximum number of certificates that can be traversed in a certificate chain.	integer	Minimum value: 1 Maximum value: 2147483647	8						
cfg-revert-timeout	Time-out for reverting to the last saved configuration. (10 - 4294967295 seconds, default = 600).	integer	Minimum value: 10 Maximum value: 4294967295	600						
cfg-save	Configuration file save mode for CLI changes.	option	-	automatic						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>automatic</i></td><td>Automatically save config.</td></tr><tr><td><i>manual</i></td><td>Manually save config.</td></tr></table>	Option	Description	<i>automatic</i>	Automatically save config.	<i>manual</i>	Manually save config.			
	Option	Description								
	<i>automatic</i>	Automatically save config.								
<i>manual</i>	Manually save config.									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>revert</i></td><td>Manually save config and revert the config when timeout.</td></tr></table>	Option	Description	<i>revert</i>	Manually save config and revert the config when timeout.					
Option	Description									
<i>revert</i>	Manually save config and revert the config when timeout.									
check-protocol-header	Level of checking performed on protocol headers. Strict checking is more thorough but may affect performance. Loose checking is OK in most cases.	option	-	loose						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>loose</i></td><td>Check protocol header loosely.</td></tr><tr><td><i>strict</i></td><td>Check protocol header strictly.</td></tr></table>	Option	Description	<i>loose</i>	Check protocol header loosely.	<i>strict</i>	Check protocol header strictly.			
Option	Description									
<i>loose</i>	Check protocol header loosely.									
<i>strict</i>	Check protocol header strictly.									
check-reset-range	Configure ICMP error message verification. You can either apply strict RST range checking or disable it.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>strict</i></td><td>Check RST range strictly.</td></tr><tr><td><i>disable</i></td><td>Disable RST range check.</td></tr></table>	Option	Description	<i>strict</i>	Check RST range strictly.	<i>disable</i>	Disable RST range check.			
Option	Description									
<i>strict</i>	Check RST range strictly.									
<i>disable</i>	Disable RST range check.									
cli-audit-log	Enable/disable CLI audit log.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable CLI audit log.</td></tr><tr><td><i>disable</i></td><td>Disable CLI audit log.</td></tr></table>	Option	Description	<i>enable</i>	Enable CLI audit log.	<i>disable</i>	Disable CLI audit log.			
Option	Description									
<i>enable</i>	Enable CLI audit log.									
<i>disable</i>	Disable CLI audit log.									
cloud-communication	Enable/disable all cloud communication.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow cloud communication.</td></tr><tr><td><i>disable</i></td><td>Disable all cloud-related settings.</td></tr></table>	Option	Description	<i>enable</i>	Allow cloud communication.	<i>disable</i>	Disable all cloud-related settings.			
Option	Description									
<i>enable</i>	Allow cloud communication.									
<i>disable</i>	Disable all cloud-related settings.									
clt-cert-req	Enable/disable requiring administrators to have a client certificate to log into the GUI using HTTPS.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable require client certificate for GUI login.</td></tr><tr><td><i>disable</i></td><td>Disable require client certificate for GUI login.</td></tr></table>	Option	Description	<i>enable</i>	Enable require client certificate for GUI login.	<i>disable</i>	Disable require client certificate for GUI login.			
Option	Description									
<i>enable</i>	Enable require client certificate for GUI login.									
<i>disable</i>	Disable require client certificate for GUI login.									

Parameter	Description	Type	Size	Default						
cmdbsvr-affinity	Affinity setting for cmdbsvr (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	1						
cpu-use-threshold	Threshold at which CPU usage is reported (% of total CPU, default = 90).	integer	Minimum value: 50 Maximum value: 99	90						
csr-ca-attribute	Enable/disable the CA attribute in certificates. Some CA servers reject CSRs that have the CA attribute.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable CA attribute in CSR.</td></tr><tr><td>disable</td><td>Disable CA attribute in CSR.</td></tr></table>				Option	Description	enable	Enable CA attribute in CSR.	disable	Disable CA attribute in CSR.
Option	Description									
enable	Enable CA attribute in CSR.									
disable	Disable CA attribute in CSR.									
daily-restart	Enable/disable daily restart of FortiGate unit. Use the restart-time option to set the time of day for the restart.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable daily reboot of the FortiGate.</td></tr><tr><td>disable</td><td>Disable daily reboot of the FortiGate.</td></tr></table>				Option	Description	enable	Enable daily reboot of the FortiGate.	disable	Disable daily reboot of the FortiGate.
Option	Description									
enable	Enable daily reboot of the FortiGate.									
disable	Disable daily reboot of the FortiGate.									
default-service-source-port	Default service source port range (default = 1 - 65535).	user	Not Specified							
delay-tcp-npu-session *	Enable TCP NPU session delay to guarantee packet order of 3-way handshake.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable TCP NPU session delay in order to guarantee packet order of 3-way handshake.</td></tr><tr><td>disable</td><td>Disable TCP NPU session delay in order to guarantee packet order of 3-way handshake.</td></tr></table>				Option	Description	enable	Enable TCP NPU session delay in order to guarantee packet order of 3-way handshake.	disable	Disable TCP NPU session delay in order to guarantee packet order of 3-way handshake.
Option	Description									
enable	Enable TCP NPU session delay in order to guarantee packet order of 3-way handshake.									
disable	Disable TCP NPU session delay in order to guarantee packet order of 3-way handshake.									
device-idle-timeout	Time in seconds that a device must be idle to automatically log the device user out. (30 - 31536000 sec (30 sec to 1 year), default = 300).	integer	Minimum value: 30 Maximum value: 31536000	300						
dh-params	Number of bits to use in the Diffie-Hellman exchange for HTTPS/SSH protocols.	option	-	2048						

Parameter	Description	Type	Size	Default																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>1024</td><td>1024 bits.</td></tr><tr><td>1536</td><td>1536 bits.</td></tr><tr><td>2048</td><td>2048 bits.</td></tr><tr><td>3072</td><td>3072 bits.</td></tr><tr><td>4096</td><td>4096 bits.</td></tr><tr><td>6144</td><td>6144 bits.</td></tr><tr><td>8192</td><td>8192 bits.</td></tr></table>	Option	Description	1024	1024 bits.	1536	1536 bits.	2048	2048 bits.	3072	3072 bits.	4096	4096 bits.	6144	6144 bits.	8192	8192 bits.			
	Option	Description																		
	1024	1024 bits.																		
	1536	1536 bits.																		
	2048	2048 bits.																		
	3072	3072 bits.																		
	4096	4096 bits.																		
	6144	6144 bits.																		
8192	8192 bits.																			
dhcp-lease-backup-interval	DHCP leases backup interval in seconds (10 - 3600, default = 60).	integer	Minimum value: 10 Maximum value: 3600	60																
dnsproxy-worker-count	DNS proxy worker count. For a FortiGate with multiple logical CPUs, you can set the DNS process number from 1 to the number of logical CPUs.	integer	Minimum value: 1 Maximum value: 8 **	1																
early-tcp-npu-session	Enable/disable early TCP NPU session.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable early TCP NPU session in order to guarantee packet order of 3-way handshake.</td></tr><tr><td>disable</td><td>Disable early TCP NPU session in order to guarantee packet order of 3-way handshake.</td></tr></table>	Option	Description	enable	Enable early TCP NPU session in order to guarantee packet order of 3-way handshake.	disable	Disable early TCP NPU session in order to guarantee packet order of 3-way handshake.													
	Option	Description																		
	enable	Enable early TCP NPU session in order to guarantee packet order of 3-way handshake.																		
disable	Disable early TCP NPU session in order to guarantee packet order of 3-way handshake.																			
edit-vdom-prompt *	Enable/disable edit new VDOM prompt.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable edit new VDOM prompt.</td></tr><tr><td>disable</td><td>Disable edit new VDOM prompt.</td></tr></table>	Option	Description	enable	Enable edit new VDOM prompt.	disable	Disable edit new VDOM prompt.													
	Option	Description																		
	enable	Enable edit new VDOM prompt.																		
disable	Disable edit new VDOM prompt.																			
extender-controller-reserved-network	Configure reserved network subnet for managed LAN extension FortiExtender units. This is available when the FortiExtender daemon is running.	ipv4-classnet-host	Not Specified	10.252.0.1 255.255.0.0																

Parameter	Description	Type	Size	Default														
failtime	Fail-time for server lost.	integer	Minimum value: 0 Maximum value: 4294967295	5														
faz-disk-buffer-size	Maximum disk buffer size to temporarily store logs destined for FortiAnalyzer. To be used in the event that FortiAnalyzer is unavailable.	integer	Not Specified	0														
fds-statistics	Enable/disable sending IPS, Application Control, and AntiVirus data to FortiGuard. This data is used to improve FortiGuard services and is not shared with external parties and is protected by Fortinet's privacy policy.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable FortiGuard statistics.</td></tr><tr><td>disable</td><td>Disable FortiGuard statistics.</td></tr></table>	Option	Description	enable	Enable FortiGuard statistics.	disable	Disable FortiGuard statistics.											
Option	Description																	
enable	Enable FortiGuard statistics.																	
disable	Disable FortiGuard statistics.																	
fds-statistics-period	FortiGuard statistics collection period in minutes. (1 - 1440 min (1 min to 24 hours), default = 60).	integer	Minimum value: 1 Maximum value: 1440	60														
fgd-alert-subscription	Type of alert to retrieve from FortiGuard.	option	-															
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>advisory</td><td>Retrieve FortiGuard advisories, report and news alerts.</td></tr><tr><td>latest-threat</td><td>Retrieve latest FortiGuard threats alerts.</td></tr><tr><td>latest-virus</td><td>Retrieve latest FortiGuard virus alerts.</td></tr><tr><td>latest-attack</td><td>Retrieve latest FortiGuard attack alerts.</td></tr><tr><td>new-antivirus-db</td><td>Retrieve FortiGuard AV database release alerts.</td></tr><tr><td>new-attack-db</td><td>Retrieve FortiGuard IPS database release alerts.</td></tr></table>	Option	Description	advisory	Retrieve FortiGuard advisories, report and news alerts.	latest-threat	Retrieve latest FortiGuard threats alerts.	latest-virus	Retrieve latest FortiGuard virus alerts.	latest-attack	Retrieve latest FortiGuard attack alerts.	new-antivirus-db	Retrieve FortiGuard AV database release alerts.	new-attack-db	Retrieve FortiGuard IPS database release alerts.			
Option	Description																	
advisory	Retrieve FortiGuard advisories, report and news alerts.																	
latest-threat	Retrieve latest FortiGuard threats alerts.																	
latest-virus	Retrieve latest FortiGuard virus alerts.																	
latest-attack	Retrieve latest FortiGuard attack alerts.																	
new-antivirus-db	Retrieve FortiGuard AV database release alerts.																	
new-attack-db	Retrieve FortiGuard IPS database release alerts.																	
forticontroller-proxy *	Enable/disable FortiController proxy.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.											
Option	Description																	
enable	Enable setting.																	
disable	Disable setting.																	

Parameter	Description	Type	Size	Default						
forticontroller-proxy-port *	FortiController proxy port (1024 - 49150).	integer	Minimum value: 1024 Maximum value: 49150	11133						
forticonverter-config-upload	Enable/disable config upload to FortiConverter.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>once</td><td>Enable one-time config upload to FortiConverter.</td></tr><tr><td>disable</td><td>Disable config upload to FortiConverter.</td></tr></table>				Option	Description	once	Enable one-time config upload to FortiConverter.	disable	Disable config upload to FortiConverter.
	Option	Description								
	once	Enable one-time config upload to FortiConverter.								
disable	Disable config upload to FortiConverter.									
forticonverter-integration	Enable/disable FortiConverter integration service.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable FortiConverter integration service.</td></tr><tr><td>disable</td><td>Disable FortiConverter integration service.</td></tr></table>				Option	Description	enable	Enable FortiConverter integration service.	disable	Disable FortiConverter integration service.
	Option	Description								
	enable	Enable FortiConverter integration service.								
disable	Disable FortiConverter integration service.									
fortiextender	Enable/disable FortiExtender.	option	-	disable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable FortiExtender controller.</td></tr><tr><td>enable</td><td>Enable FortiExtender controller.</td></tr></table>				Option	Description	disable	Disable FortiExtender controller.	enable	Enable FortiExtender controller.
	Option	Description								
	disable	Disable FortiExtender controller.								
enable	Enable FortiExtender controller.									
fortiextender-data-port	FortiExtender data port (1024 - 49150, default = 25246).	integer	Minimum value: 1024 Maximum value: 49150	25246						
fortiextender-discovery-lockdown	Enable/disable FortiExtender CAPWAP lockdown.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Unlock down new FortiExtender device discovery.</td></tr><tr><td>enable</td><td>Lock down new FortiExtender device discovery.</td></tr></table>				Option	Description	disable	Unlock down new FortiExtender device discovery.	enable	Lock down new FortiExtender device discovery.
	Option	Description								
	disable	Unlock down new FortiExtender device discovery.								
enable	Lock down new FortiExtender device discovery.									
fortiextender-provision-on-authorization	Enable/disable automatic provisioning of latest FortiExtender firmware on authorization.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable FortiExtender firmware provision on authorization.</td></tr></table>				Option	Description	enable	Enable FortiExtender firmware provision on authorization.		
	Option	Description								
enable	Enable FortiExtender firmware provision on authorization.									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable FortiExtender firmware provision on authorization.</td></tr></table>	Option	Description	<i>disable</i>	Disable FortiExtender firmware provision on authorization.					
	Option	Description								
	<i>disable</i>	Disable FortiExtender firmware provision on authorization.								
fortiextender-vlan-mode *	Enable/disable FortiExtender VLAN mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiExtender VLAN mode.</td></tr><tr><td><i>disable</i></td><td>Disable FortiExtender VLAN mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiExtender VLAN mode.	<i>disable</i>	Disable FortiExtender VLAN mode.			
	Option	Description								
	<i>enable</i>	Enable FortiExtender VLAN mode.								
<i>disable</i>	Disable FortiExtender VLAN mode.									
fortigslb-integration	Enable/disable integration with the FortiGSLB cloud service.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable VIP and ZTNA server integration with the FortiGSLB cloud service.</td></tr><tr><td><i>enable</i></td><td>Enable VIP and ZTNA server integration with the FortiGSLB cloud service.</td></tr></table>	Option	Description	<i>disable</i>	Disable VIP and ZTNA server integration with the FortiGSLB cloud service.	<i>enable</i>	Enable VIP and ZTNA server integration with the FortiGSLB cloud service.			
	Option	Description								
	<i>disable</i>	Disable VIP and ZTNA server integration with the FortiGSLB cloud service.								
<i>enable</i>	Enable VIP and ZTNA server integration with the FortiGSLB cloud service.									
fortiservice-port	FortiService port (1 - 65535, default = 8013). Used by FortiClient endpoint compliance. Older versions of FortiClient used a different port.	integer	Minimum value: 1 Maximum value: 65535	8013						
fortitoken-cloud	Enable/disable FortiToken Cloud service.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiToken Cloud service.</td></tr><tr><td><i>disable</i></td><td>Disable FortiToken Cloud service.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiToken Cloud service.	<i>disable</i>	Disable FortiToken Cloud service.			
	Option	Description								
	<i>enable</i>	Enable FortiToken Cloud service.								
<i>disable</i>	Disable FortiToken Cloud service.									
fortitoken-cloud-push-status	Enable/disable FTM push service of FortiToken Cloud.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FTM push service of FortiToken Cloud.</td></tr><tr><td><i>disable</i></td><td>Disable FTM push service of FortiToken Cloud.</td></tr></table>	Option	Description	<i>enable</i>	Enable FTM push service of FortiToken Cloud.	<i>disable</i>	Disable FTM push service of FortiToken Cloud.			
	Option	Description								
	<i>enable</i>	Enable FTM push service of FortiToken Cloud.								
<i>disable</i>	Disable FTM push service of FortiToken Cloud.									
fortitoken-cloud-sync-interval	Interval in which to clean up remote users in FortiToken Cloud (0 - 336 hours (14 days), default = 24, disable = 0).	integer	Minimum value: 0 Maximum value: 336	24						

Parameter	Description	Type	Size	Default						
gtpu-dynamic-source-port *	Enable/disable GTP-U dynamic source port support.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
gui-allow-incompatible-fabric-fgt	Enable/disable Allow FGT with incompatible firmware to be treated as compatible in security fabric on the GUI. May cause unexpected error.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-app-detection-sdwan	Enable/disable Allow app-detection based SD-WAN.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-auto-upgrade-setup-warning	Enable/disable the automatic patch upgrade setup prompt on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-cdn-domain-override	Domain of CDN server.	string	Maximum length: 255							
gui-cdn-usage	Enable/disable Load GUI static files from a CDN.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-certificates	Enable/disable the System > Certificate GUI page, allowing you to add and configure certificates from the GUI.	option	-	enable **						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		
gui-custom-language	Enable/disable custom languages in GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		
gui-date-format	Default date format used throughout GUI.	option	-	yyyy/MM/dd
	Option	Description		
	<i>yyyy/MM/dd</i>	Year/Month/Day.		
	<i>dd/MM/yyyy</i>	Day/Month/Year.		
	<i>MM/dd/yyyy</i>	Month/Day/Year.		
	<i>yyyy-MM-dd</i>	Year-Month-Day.		
	<i>dd-MM-yyyy</i>	Day-Month-Year.		
	<i>MM-dd-yyyy</i>	Month-Day-Year.		
gui-date-time-source	Source from which the FortiGate GUI uses to display date and time entries.	option	-	system
	Option	Description		
	<i>system</i>	Use this FortiGate unit's configured timezone.		
	<i>browser</i>	Use the web browser's timezone.		
gui-device-latitude	Add the latitude of the location of this FortiGate to position it on the Threat Map.	string	Maximum length: 19	
gui-device-longitude	Add the longitude of the location of this FortiGate to position it on the Threat Map.	string	Maximum length: 19	
gui-display-hostname	Enable/disable displaying the FortiGate's hostname on the GUI login page.	option	-	disable
	Option	Description		
	<i>enable</i>	Display the feature in GUI.		
	<i>disable</i>	Do not display the feature in GUI.		

Parameter	Description	Type	Size	Default						
gui-firmware-upgrade-warning	Enable/disable the firmware upgrade warning on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-forticare-registration-setup-warning	Enable/disable the FortiCare registration setup warning on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-fortigate-cloud-sandbox	Enable/disable displaying FortiGate Cloud Sandbox on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-ipv6	Enable/disable IPv6 settings on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-local-out	Enable/disable Local-out traffic on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									
gui-replacement-message-groups	Enable/disable replacement message groups on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.			
Option	Description									
<i>enable</i>	Display the feature in GUI.									
<i>disable</i>	Do not display the feature in GUI.									

Parameter	Description	Type	Size	Default																								
gui-rest-api-cache	Enable/disable REST API result caching on FortiGate.	option	-	enable **																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable REST API result caching on FortiGate.</td></tr><tr><td><i>disable</i></td><td>Disable REST API result caching on FortiGate.</td></tr></table>	Option	Description	<i>enable</i>	Enable REST API result caching on FortiGate.	<i>disable</i>	Disable REST API result caching on FortiGate.																					
Option	Description																											
<i>enable</i>	Enable REST API result caching on FortiGate.																											
<i>disable</i>	Disable REST API result caching on FortiGate.																											
gui-theme	Color scheme for the administration GUI.	option	-	jade																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>jade</i></td><td>Jade theme.</td></tr><tr><td><i>neutrino</i></td><td>Neutrino theme.</td></tr><tr><td><i>mariner</i></td><td>Mariner theme.</td></tr><tr><td><i>graphite</i></td><td>Graphite theme.</td></tr><tr><td><i>melongene</i></td><td>Melongene theme.</td></tr><tr><td><i>jet-stream</i></td><td>Jet Stream theme.</td></tr><tr><td><i>security-fabric</i></td><td>Security Fabric theme.</td></tr><tr><td><i>retro</i></td><td>FortiOS v3 Retro theme.</td></tr><tr><td><i>dark-matter</i></td><td>Dark Matter theme.</td></tr><tr><td><i>onyx</i></td><td>Onyx theme.</td></tr><tr><td><i>eclipse</i></td><td>Eclipse theme.</td></tr></table>	Option	Description	<i>jade</i>	Jade theme.	<i>neutrino</i>	Neutrino theme.	<i>mariner</i>	Mariner theme.	<i>graphite</i>	Graphite theme.	<i>melongene</i>	Melongene theme.	<i>jet-stream</i>	Jet Stream theme.	<i>security-fabric</i>	Security Fabric theme.	<i>retro</i>	FortiOS v3 Retro theme.	<i>dark-matter</i>	Dark Matter theme.	<i>onyx</i>	Onyx theme.	<i>eclipse</i>	Eclipse theme.			
Option	Description																											
<i>jade</i>	Jade theme.																											
<i>neutrino</i>	Neutrino theme.																											
<i>mariner</i>	Mariner theme.																											
<i>graphite</i>	Graphite theme.																											
<i>melongene</i>	Melongene theme.																											
<i>jet-stream</i>	Jet Stream theme.																											
<i>security-fabric</i>	Security Fabric theme.																											
<i>retro</i>	FortiOS v3 Retro theme.																											
<i>dark-matter</i>	Dark Matter theme.																											
<i>onyx</i>	Onyx theme.																											
<i>eclipse</i>	Eclipse theme.																											
gui-wireless-opensecurity	Enable/disable wireless open security option on the GUI.	option	-	disable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.																					
Option	Description																											
<i>enable</i>	Display the feature in GUI.																											
<i>disable</i>	Do not display the feature in GUI.																											
gui-workflow-management	Enable/disable Workflow management features on the GUI.	option	-	disable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display the feature in GUI.</td></tr><tr><td><i>disable</i></td><td>Do not display the feature in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Display the feature in GUI.	<i>disable</i>	Do not display the feature in GUI.																					
Option	Description																											
<i>enable</i>	Display the feature in GUI.																											
<i>disable</i>	Do not display the feature in GUI.																											

Parameter	Description	Type	Size	Default
ha-affinity	Affinity setting for HA daemons (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxx).	string	Maximum length: 79	1
honor-df	Enable/disable honoring of Don't-Fragment (DF) flag.	option	-	enable
	Option	Description		
	enable	Enable honoring of Don't-Fragment flag.		
	disable	Disable honoring of Don't-Fragment flag.		
hostname	FortiGate unit's hostname. Most models will truncate names longer than 24 characters. Some models support hostnames up to 35 characters.	string	Maximum length: 35	
httpd-max-worker-count	Maximum number of simultaneous HTTP requests that will be served. This number may affect GUI and REST API performance (0 - 128, default = 0 means let system decide).	integer	Minimum value: 0 Maximum value: 128	0
hyper-scale-vdom-num *	Number of VDOMs for hyper scale license.	integer	Minimum value: 1 Maximum value: 250	250
igmp-state-limit	Maximum number of IGMP memberships (96 - 64000, default = 3200).	integer	Minimum value: 96 Maximum value: 128000	3200
interface-subnet-usage	Enable/disable allowing use of interface-subnet setting in firewall addresses (default = enable).	option	-	enable
	Option	Description		
	disable	Disallow use of the interface-subnet setting in firewall addresses. Use in conjunction with the FortiGate REST API and when a large number of firewall addresses exist in the configuration.		
	enable	Allow use of the interface-subnet setting in firewall addresses.		
internet-service-database	Configure which Internet Service database size to download from FortiGuard and use.	option	-	full **

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>mini</i></td><td>Small sized Internet Service database with very limited IP addresses.</td></tr><tr><td><i>standard</i></td><td>Medium sized Internet Service database with most IP addresses.</td></tr><tr><td><i>full</i></td><td>Full sized Internet Service database with all IP addresses.</td></tr><tr><td><i>on-demand</i></td><td>Internet Service database with customer selected IP addresses.</td></tr></table>	Option	Description	<i>mini</i>	Small sized Internet Service database with very limited IP addresses.	<i>standard</i>	Medium sized Internet Service database with most IP addresses.	<i>full</i>	Full sized Internet Service database with all IP addresses.	<i>on-demand</i>	Internet Service database with customer selected IP addresses.			
	Option	Description												
	<i>mini</i>	Small sized Internet Service database with very limited IP addresses.												
	<i>standard</i>	Medium sized Internet Service database with most IP addresses.												
	<i>full</i>	Full sized Internet Service database with all IP addresses.												
<i>on-demand</i>	Internet Service database with customer selected IP addresses.													
internet-service-download-list <id>	Configure which on-demand Internet Service IDs are to be downloaded. Internet Service ID.	integer	Minimum value: 0 Maximum value: 4294967295											
interval	Dead gateway detection interval.	integer	Minimum value: 0 Maximum value: 4294967295	5										
ip-conflict-detection	Enable/disable logging of IPv4 address conflict detection.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging of IPv4 address conflict detection.</td></tr><tr><td><i>disable</i></td><td>Disable logging of IPv4 address conflict detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging of IPv4 address conflict detection.	<i>disable</i>	Disable logging of IPv4 address conflict detection.							
	Option	Description												
	<i>enable</i>	Enable logging of IPv4 address conflict detection.												
<i>disable</i>	Disable logging of IPv4 address conflict detection.													
ip-fragment-mem-thresholds	Maximum memory (MB) used to reassemble IPv4/IPv6 fragments.	integer	Minimum value: 32 Maximum value: 2047	32										
ip-fragment-timeout	Timeout value in seconds for any fragment not being reassembled	integer	Minimum value: 3 Maximum value: 30	30										
ip-src-port-range	IP source port range used for traffic originating from the FortiGate unit.	user	Not Specified	1024-25000										
ips-affinity *	Affinity setting for IPS (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxx; allowed CPUs must be less than total number of IPS engine daemons).	string	Maximum length: 79	0										

Parameter	Description	Type	Size	Default						
ipsec-asic-offload *	Enable/disable ASIC offloading (hardware acceleration) for IPsec VPN traffic. Hardware acceleration can offload IPsec VPN sessions and accelerate encryption and decryption.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ASIC offload for IPsec VPN.</td></tr><tr><td><i>disable</i></td><td>Disable ASIC offload for IPsec VPN.</td></tr></table>	Option	Description	<i>enable</i>	Enable ASIC offload for IPsec VPN.	<i>disable</i>	Disable ASIC offload for IPsec VPN.			
Option	Description									
<i>enable</i>	Enable ASIC offload for IPsec VPN.									
<i>disable</i>	Disable ASIC offload for IPsec VPN.									
ipsec-ha-seqjump-rate	ESP jump ahead rate (1G - 10G pps equivalent).	integer	Minimum value: 1 Maximum value: 10	10						
ipsec-hmac-offload *	Enable/disable offloading (hardware acceleration) of HMAC processing for IPsec VPN.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable offload IPsec HMAC processing to hardware if possible.</td></tr><tr><td><i>disable</i></td><td>Disable offload IPsec HMAC processing to hardware.</td></tr></table>	Option	Description	<i>enable</i>	Enable offload IPsec HMAC processing to hardware if possible.	<i>disable</i>	Disable offload IPsec HMAC processing to hardware.			
Option	Description									
<i>enable</i>	Enable offload IPsec HMAC processing to hardware if possible.									
<i>disable</i>	Disable offload IPsec HMAC processing to hardware.									
ipsec-qat-offload *	Enable/disable QAT offloading (Intel QuickAssist) for IPsec VPN traffic. QuickAssist can accelerate IPsec encryption and decryption.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable QAT offload for IPsec VPN.</td></tr><tr><td><i>disable</i></td><td>Disable QAT offload for IPsec VPN.</td></tr></table>	Option	Description	<i>enable</i>	Enable QAT offload for IPsec VPN.	<i>disable</i>	Disable QAT offload for IPsec VPN.			
Option	Description									
<i>enable</i>	Enable QAT offload for IPsec VPN.									
<i>disable</i>	Disable QAT offload for IPsec VPN.									
ipv6-accept-dad	Enable/disable acceptance of IPv6 Duplicate Address Detection (DAD).	integer	Minimum value: 0 Maximum value: 2	1						
ipv6-allow-anycast-probe	Enable/disable IPv6 address probe through Anycast.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable probing of IPv6 address space through Anycast</td></tr><tr><td><i>disable</i></td><td>Disable probing of IPv6 address space through Anycast</td></tr></table>	Option	Description	<i>enable</i>	Enable probing of IPv6 address space through Anycast	<i>disable</i>	Disable probing of IPv6 address space through Anycast			
Option	Description									
<i>enable</i>	Enable probing of IPv6 address space through Anycast									
<i>disable</i>	Disable probing of IPv6 address space through Anycast									

Parameter	Description	Type	Size	Default								
ipv6-allow-local-in-silent-drop	Enable/disable silent drop of IPv6 local-in traffic.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable silent drop of IPv6 local-in traffic.</td></tr><tr><td><i>disable</i></td><td>Disable silent drop of IPv6 local-in traffic.</td></tr></table>	Option	Description	<i>enable</i>	Enable silent drop of IPv6 local-in traffic.	<i>disable</i>	Disable silent drop of IPv6 local-in traffic.					
Option	Description											
<i>enable</i>	Enable silent drop of IPv6 local-in traffic.											
<i>disable</i>	Disable silent drop of IPv6 local-in traffic.											
ipv6-allow-multicast-probe	Enable/disable IPv6 address probe through Multicast.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable probing of IPv6 address space through Multicast.</td></tr><tr><td><i>disable</i></td><td>Disable probing of IPv6 address space through Multicast.</td></tr></table>	Option	Description	<i>enable</i>	Enable probing of IPv6 address space through Multicast.	<i>disable</i>	Disable probing of IPv6 address space through Multicast.					
Option	Description											
<i>enable</i>	Enable probing of IPv6 address space through Multicast.											
<i>disable</i>	Disable probing of IPv6 address space through Multicast.											
ipv6-allow-traffic-redirect	Disable to prevent IPv6 traffic with same local ingress and egress interface from being forwarded without policy check.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allow traffic IPv6 redirect.</td></tr><tr><td><i>disable</i></td><td>Disable allow traffic IPv6 redirect.</td></tr></table>	Option	Description	<i>enable</i>	Enable allow traffic IPv6 redirect.	<i>disable</i>	Disable allow traffic IPv6 redirect.					
Option	Description											
<i>enable</i>	Enable allow traffic IPv6 redirect.											
<i>disable</i>	Disable allow traffic IPv6 redirect.											
ipv6-fragment-timeout	Timeout value in seconds for any IPv6 fragment not being reassembled	integer	Minimum value: 5 Maximum value: 60	60								
irq-time-accounting	Configure CPU IRQ time accounting mode.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically switch CPU accounting mode.</td></tr><tr><td><i>force</i></td><td>Force the use of CPU IRQ time accounting mode.</td></tr></table>	Option	Description	<i>auto</i>	Automatically switch CPU accounting mode.	<i>force</i>	Force the use of CPU IRQ time accounting mode.					
Option	Description											
<i>auto</i>	Automatically switch CPU accounting mode.											
<i>force</i>	Force the use of CPU IRQ time accounting mode.											
language	GUI display language.	option	-	english								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>english</i></td><td>English.</td></tr><tr><td><i>french</i></td><td>French.</td></tr><tr><td><i>spanish</i></td><td>Spanish.</td></tr></table>	Option	Description	<i>english</i>	English.	<i>french</i>	French.	<i>spanish</i>	Spanish.			
Option	Description											
<i>english</i>	English.											
<i>french</i>	French.											
<i>spanish</i>	Spanish.											

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>portuguese</i></td><td>Portuguese.</td></tr><tr><td><i>japanese</i></td><td>Japanese.</td></tr><tr><td><i>trach</i></td><td>Traditional Chinese.</td></tr><tr><td><i>simch</i></td><td>Simplified Chinese.</td></tr><tr><td><i>korean</i></td><td>Korean.</td></tr></table>	Option	Description	<i>portuguese</i>	Portuguese.	<i>japanese</i>	Japanese.	<i>trach</i>	Traditional Chinese.	<i>simch</i>	Simplified Chinese.	<i>korean</i>	Korean.			
	Option	Description														
	<i>portuguese</i>	Portuguese.														
	<i>japanese</i>	Japanese.														
	<i>trach</i>	Traditional Chinese.														
	<i>simch</i>	Simplified Chinese.														
	<i>korean</i>	Korean.														
ldapconntimeout	Global timeout for connections with remote LDAP servers in milliseconds (1 - 300000, default 500).	integer	Minimum value: 1 Maximum value: 300000	500												
legacy-poe-device-support *	Enable/disable legacy POE device support.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable legacy POE device support.</td></tr><tr><td><i>disable</i></td><td>Disable legacy POE device support.</td></tr></table>	Option	Description	<i>enable</i>	Enable legacy POE device support.	<i>disable</i>	Disable legacy POE device support.									
	Option	Description														
	<i>enable</i>	Enable legacy POE device support.														
	<i>disable</i>	Disable legacy POE device support.														
lldp-reception	Enable/disable Link Layer Discovery Protocol (LLDP) reception.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable reception of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>disable</i></td><td>Disable reception of Link Layer Discovery Protocol (LLDP).</td></tr></table>	Option	Description	<i>enable</i>	Enable reception of Link Layer Discovery Protocol (LLDP).	<i>disable</i>	Disable reception of Link Layer Discovery Protocol (LLDP).									
	Option	Description														
	<i>enable</i>	Enable reception of Link Layer Discovery Protocol (LLDP).														
	<i>disable</i>	Disable reception of Link Layer Discovery Protocol (LLDP).														
lldp-transmission	Enable/disable Link Layer Discovery Protocol (LLDP) transmission.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable transmission of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>disable</i></td><td>Disable transmission of Link Layer Discovery Protocol (LLDP).</td></tr></table>	Option	Description	<i>enable</i>	Enable transmission of Link Layer Discovery Protocol (LLDP).	<i>disable</i>	Disable transmission of Link Layer Discovery Protocol (LLDP).									
	Option	Description														
	<i>enable</i>	Enable transmission of Link Layer Discovery Protocol (LLDP).														
	<i>disable</i>	Disable transmission of Link Layer Discovery Protocol (LLDP).														
log-single-cpu-high	Enable/disable logging the event of a single CPU core reaching CPU usage threshold.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging the event of a single CPU core reaching CPU usage threshold.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging the event of a single CPU core reaching CPU usage threshold.											
	Option	Description														
<i>enable</i>	Enable logging the event of a single CPU core reaching CPU usage threshold.															

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable logging the event of a single CPU core reaching CPU usage threshold.</td></tr></table>	Option	Description	<i>disable</i>	Disable logging the event of a single CPU core reaching CPU usage threshold.					
	Option	Description								
	<i>disable</i>	Disable logging the event of a single CPU core reaching CPU usage threshold.								
log-ssl-connection	Enable/disable logging of SSL connection events.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging of SSL connection events.</td></tr><tr><td><i>disable</i></td><td>Disable logging of SSL connection events.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging of SSL connection events.	<i>disable</i>	Disable logging of SSL connection events.			
	Option	Description								
	<i>enable</i>	Enable logging of SSL connection events.								
<i>disable</i>	Disable logging of SSL connection events.									
log-uuid-address	Enable/disable insertion of address UUIDs to traffic logs.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable insertion of address UUID to traffic logs.</td></tr><tr><td><i>disable</i></td><td>Disable insertion of address UUID to traffic logs.</td></tr></table>	Option	Description	<i>enable</i>	Enable insertion of address UUID to traffic logs.	<i>disable</i>	Disable insertion of address UUID to traffic logs.			
	Option	Description								
	<i>enable</i>	Enable insertion of address UUID to traffic logs.								
<i>disable</i>	Disable insertion of address UUID to traffic logs.									
login-timestamp	Enable/disable login time recording.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable login time recording.</td></tr><tr><td><i>disable</i></td><td>Disable login time recording.</td></tr></table>	Option	Description	<i>enable</i>	Enable login time recording.	<i>disable</i>	Disable login time recording.			
	Option	Description								
	<i>enable</i>	Enable login time recording.								
<i>disable</i>	Disable login time recording.									
long-vdom-name *	Enable/disable long VDOM name support.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable long VDOM name support.</td></tr><tr><td><i>disable</i></td><td>Disable long VDOM name support.</td></tr></table>	Option	Description	<i>enable</i>	Enable long VDOM name support.	<i>disable</i>	Disable long VDOM name support.			
	Option	Description								
	<i>enable</i>	Enable long VDOM name support.								
<i>disable</i>	Disable long VDOM name support.									
management-ip	Management IP address of this FortiGate. Used to log into this FortiGate from another FortiGate in the Security Fabric.	string	Maximum length: 255							
management-port	Overriding port for management connection (Overrides admin port).	integer	Minimum value: 1 Maximum value: 65535	443						
management-port-use-admin-port	Enable/disable use of the admin-sport setting for the management port. If disabled, FortiGate will allow user to specify management-port.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable use of the admin-sport setting for the management port.		
	<i>disable</i>	Disable use of the admin-sport setting for the management port.		
management-vdom	Management virtual domain name.	string	Maximum length: 31	root
max-route-cache-size	Maximum number of IP route cache entries (0 - 2147483647).	integer	Minimum value: 0 Maximum value: 2147483647	0
memory-use-threshold-extreme	Threshold at which memory usage is considered extreme (new sessions are dropped) (% of total RAM, default = 95).	integer	Minimum value: 70 Maximum value: 97	95
memory-use-threshold-green	Threshold at which memory usage forces the FortiGate to exit conserve mode (% of total RAM, default = 82).	integer	Minimum value: 70 Maximum value: 97	82
memory-use-threshold-red	Threshold at which memory usage forces the FortiGate to enter conserve mode (% of total RAM, default = 88).	integer	Minimum value: 70 Maximum value: 97	88
miglog-affinity *	Affinity setting for logging (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	0
miglogd-children	Number of logging (miglogd) processes to be allowed to run. Higher number can reduce performance; lower number can slow log processing time.	integer	Minimum value: 0 Maximum value: 15	0
multi-factor-authentication	Enforce all login methods to require an additional authentication factor (default = optional).	option	-	optional
	Option	Description		
	<i>optional</i>	Do not enforce all login methods to require an additional authentication factor (controlled by user settings).		
	<i>mandatory</i>	Enforce all login methods to require an additional authentication factor.		

Parameter	Description	Type	Size	Default						
ndp-max-entry	Maximum number of NDP table entries (set to 65,536 or higher; if set to 0, kernel holds 65,536 entries).	integer	Minimum value: 65536 Maximum value: 2147483647	0						
npu-neighbor-update *	Enable/disable sending of ARP/ICMP6 probing packets to update neighbors for offloaded sessions.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending of ARP/ICMP6 probing packets to update neighbors for offloaded sessions.</td></tr><tr><td><i>disable</i></td><td>Disable sending of ARP/ICMP6 probing packets to update neighbors for offloaded sessions.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending of ARP/ICMP6 probing packets to update neighbors for offloaded sessions.	<i>disable</i>	Disable sending of ARP/ICMP6 probing packets to update neighbors for offloaded sessions.			
Option	Description									
<i>enable</i>	Enable sending of ARP/ICMP6 probing packets to update neighbors for offloaded sessions.									
<i>disable</i>	Disable sending of ARP/ICMP6 probing packets to update neighbors for offloaded sessions.									
per-user-bal *	Enable/disable per-user block/allow list filter.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable per-user block/allow list filter.</td></tr><tr><td><i>disable</i></td><td>Disable per-user block/allow list filter.</td></tr></table>	Option	Description	<i>enable</i>	Enable per-user block/allow list filter.	<i>disable</i>	Disable per-user block/allow list filter.			
Option	Description									
<i>enable</i>	Enable per-user block/allow list filter.									
<i>disable</i>	Disable per-user block/allow list filter.									
pmtu-discovery	Enable/disable path MTU discovery.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable path MTU discovery.</td></tr><tr><td><i>disable</i></td><td>Disable path MTU discovery.</td></tr></table>	Option	Description	<i>enable</i>	Enable path MTU discovery.	<i>disable</i>	Disable path MTU discovery.			
Option	Description									
<i>enable</i>	Enable path MTU discovery.									
<i>disable</i>	Disable path MTU discovery.									
policy-auth-concurrent	Number of concurrent firewall use logins from the same user (1 - 100, default = 0 means no limit).	integer	Minimum value: 0 Maximum value: 100	0						
post-login-banner	Enable/disable displaying the administrator access disclaimer message after an administrator successfully logs in.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable post-login banner.</td></tr><tr><td><i>enable</i></td><td>Enable post-login banner.</td></tr></table>	Option	Description	<i>disable</i>	Disable post-login banner.	<i>enable</i>	Enable post-login banner.			
Option	Description									
<i>disable</i>	Disable post-login banner.									
<i>enable</i>	Enable post-login banner.									

Parameter	Description	Type	Size	Default						
pre-login-banner	Enable/disable displaying the administrator access disclaimer message on the login page before an administrator logs in.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable pre-login banner.</td></tr><tr><td><i>disable</i></td><td>Disable pre-login banner.</td></tr></table>	Option	Description	<i>enable</i>	Enable pre-login banner.	<i>disable</i>	Disable pre-login banner.			
Option	Description									
<i>enable</i>	Enable pre-login banner.									
<i>disable</i>	Disable pre-login banner.									
private-data-encryption	Enable/disable private data encryption using an AES 128-bit key or passphrase.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable private data encryption using an AES 128-bit key.</td></tr><tr><td><i>enable</i></td><td>Enable private data encryption using an AES 128-bit key.</td></tr></table>	Option	Description	<i>disable</i>	Disable private data encryption using an AES 128-bit key.	<i>enable</i>	Enable private data encryption using an AES 128-bit key.			
Option	Description									
<i>disable</i>	Disable private data encryption using an AES 128-bit key.									
<i>enable</i>	Enable private data encryption using an AES 128-bit key.									
proxy-auth-lifetime	Enable/disable authenticated users lifetime control. This is a cap on the total time a proxy user can be authenticated for after which re-authentication will take place.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable authenticated users lifetime control.</td></tr><tr><td><i>disable</i></td><td>Disable authenticated users lifetime control.</td></tr></table>	Option	Description	<i>enable</i>	Enable authenticated users lifetime control.	<i>disable</i>	Disable authenticated users lifetime control.			
Option	Description									
<i>enable</i>	Enable authenticated users lifetime control.									
<i>disable</i>	Disable authenticated users lifetime control.									
proxy-auth-lifetime-timeout	Lifetime timeout in minutes for authenticated users (5 - 65535 min, default=480 (8 hours)).	integer	Minimum value: 5 Maximum value: 65535	480						
proxy-auth-timeout	Authentication timeout in minutes for authenticated users (1 - 300 min, default = 10).	integer	Minimum value: 1 Maximum value: 300	10						
proxy-cert-use-mgmt-vdom	Enable/disable using management VDOM to send requests.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default								
proxy-hardware-acceleration *	Enable/disable email proxy hardware acceleration.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable email proxy hardware acceleration.</td></tr><tr><td><i>enable</i></td><td>Enable email proxy hardware acceleration.</td></tr></table>	Option	Description	<i>disable</i>	Disable email proxy hardware acceleration.	<i>enable</i>	Enable email proxy hardware acceleration.					
Option	Description											
<i>disable</i>	Disable email proxy hardware acceleration.											
<i>enable</i>	Enable email proxy hardware acceleration.											
proxy-keep-alive-mode	Control if users must re-authenticate after a session is closed, traffic has been idle, or from the point at which the user was authenticated.	option	-	session								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>session</i></td><td>Proxy keep-alive timeout begins at the closure of the session.</td></tr><tr><td><i>traffic</i></td><td>Proxy keep-alive timeout begins after traffic has not been received.</td></tr><tr><td><i>re-authentication</i></td><td>Proxy keep-alive timeout begins when the user was authenticated.</td></tr></table>	Option	Description	<i>session</i>	Proxy keep-alive timeout begins at the closure of the session.	<i>traffic</i>	Proxy keep-alive timeout begins after traffic has not been received.	<i>re-authentication</i>	Proxy keep-alive timeout begins when the user was authenticated.			
Option	Description											
<i>session</i>	Proxy keep-alive timeout begins at the closure of the session.											
<i>traffic</i>	Proxy keep-alive timeout begins after traffic has not been received.											
<i>re-authentication</i>	Proxy keep-alive timeout begins when the user was authenticated.											
proxy-re-authentication-time	The time limit that users must re-authenticate if proxy-keep-alive-mode is set to re-authenticate (1 - 86400 sec, default=30s.	integer	Minimum value: 1 Maximum value: 86400	30								
proxy-resource-mode	Enable/disable use of the maximum memory usage on the FortiGate unit's proxy processing of resources, such as block lists, allow lists, and external resources.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of the maximum memory usage.</td></tr><tr><td><i>disable</i></td><td>Disable use of the maximum memory usage.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of the maximum memory usage.	<i>disable</i>	Disable use of the maximum memory usage.					
Option	Description											
<i>enable</i>	Enable use of the maximum memory usage.											
<i>disable</i>	Disable use of the maximum memory usage.											
proxy-worker-count *	Proxy worker count.	integer	Minimum value: 1 Maximum value: 8 **	0								
purdue-level	Purdue Level of this FortiGate.	option	-	3								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>1</i></td><td>Level 1 - Basic Control</td></tr></table>	Option	Description	<i>1</i>	Level 1 - Basic Control							
Option	Description											
<i>1</i>	Level 1 - Basic Control											

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>1.5</td><td>Level 1.5</td></tr><tr><td>2</td><td>Level 2 - Area Supervisory Control</td></tr><tr><td>2.5</td><td>Level 2.5</td></tr><tr><td>3</td><td>Level 3 - Operations & Control</td></tr><tr><td>3.5</td><td>Level 3.5</td></tr><tr><td>4</td><td>Level 4 - Business Planning & Logistics</td></tr><tr><td>5</td><td>Level 5 - Enterprise Network</td></tr><tr><td>5.5</td><td>Level 5.5</td></tr></table>	Option	Description	1.5	Level 1.5	2	Level 2 - Area Supervisory Control	2.5	Level 2.5	3	Level 3 - Operations & Control	3.5	Level 3.5	4	Level 4 - Business Planning & Logistics	5	Level 5 - Enterprise Network	5.5	Level 5.5			
	Option	Description																				
	1.5	Level 1.5																				
	2	Level 2 - Area Supervisory Control																				
	2.5	Level 2.5																				
	3	Level 3 - Operations & Control																				
	3.5	Level 3.5																				
	4	Level 4 - Business Planning & Logistics																				
	5	Level 5 - Enterprise Network																				
5.5	Level 5.5																					
quic-ack-thresold	Maximum number of unacknowledged packets before sending ACK (2 - 5, default = 3).	integer	Minimum value: 2 Maximum value: 5	3																		
quic-congestion-control-algo	QUIC congestion control algorithm (default = cubic).	option	-	cubic																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cubic</td><td>Cubic.</td></tr><tr><td>bbr</td><td>BBR.</td></tr><tr><td>bbr2</td><td>BBR2.</td></tr><tr><td>reno</td><td>Reno.</td></tr></table>	Option	Description	cubic	Cubic.	bbr	BBR.	bbr2	BBR2.	reno	Reno.											
	Option	Description																				
	cubic	Cubic.																				
	bbr	BBR.																				
	bbr2	BBR2.																				
reno	Reno.																					
quic-max-datagram-size	Maximum transmit datagram size (1200 - 1500, default = 1500).	integer	Minimum value: 1200 Maximum value: 1500	1500																		
quic-pmtud	Enable/disable path MTU discovery (default = enable).	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable path MTU discovery.</td></tr><tr><td>disable</td><td>Disable path MTU discovery.</td></tr></table>	Option	Description	enable	Enable path MTU discovery.	disable	Disable path MTU discovery.															
	Option	Description																				
	enable	Enable path MTU discovery.																				
disable	Disable path MTU discovery.																					
quic-tls-handshake-timeout	Time-to-live (TTL) for TLS handshake in seconds (1 - 60, default = 5).	integer	Minimum value: 1 Maximum value: 60	5																		

Parameter	Description	Type	Size	Default						
quic-udp-payload-size-shaping-per-cid	Enable/disable UDP payload size shaping per connection ID (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable UDP payload size shaping per connection ID.</td></tr><tr><td><i>disable</i></td><td>Disable UDP payload size shaping per connection ID.</td></tr></table>	Option	Description	<i>enable</i>	Enable UDP payload size shaping per connection ID.	<i>disable</i>	Disable UDP payload size shaping per connection ID.			
Option	Description									
<i>enable</i>	Enable UDP payload size shaping per connection ID.									
<i>disable</i>	Disable UDP payload size shaping per connection ID.									
radius-port	RADIUS service port number.	integer	Minimum value: 1 Maximum value: 65535	1812						
reboot-upon-config-restore	Enable/disable reboot of system upon restoring configuration.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable reboot of system upon restoring configuration.</td></tr><tr><td><i>disable</i></td><td>Disable reboot of system upon restoring configuration.</td></tr></table>	Option	Description	<i>enable</i>	Enable reboot of system upon restoring configuration.	<i>disable</i>	Disable reboot of system upon restoring configuration.			
Option	Description									
<i>enable</i>	Enable reboot of system upon restoring configuration.									
<i>disable</i>	Disable reboot of system upon restoring configuration.									
refresh	Statistics refresh interval second(s) in GUI.	integer	Minimum value: 0 Maximum value: 4294967295	0						
remoteauthtimeout	Number of seconds that the FortiGate waits for responses from remote RADIUS, LDAP, or TACACS+ authentication servers. (1-300 sec, default = 5).	integer	Minimum value: 1 Maximum value: 300	5						
reset-sessionless-tcp	Action to perform if the FortiGate receives a TCP packet but cannot find a corresponding session in its session table. NAT/Route mode only.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable reset session-less TCP.</td></tr><tr><td><i>disable</i></td><td>Disable reset session-less TCP.</td></tr></table>	Option	Description	<i>enable</i>	Enable reset session-less TCP.	<i>disable</i>	Disable reset session-less TCP.			
Option	Description									
<i>enable</i>	Enable reset session-less TCP.									
<i>disable</i>	Disable reset session-less TCP.									
rest-api-key-url-query	Enable/disable support for passing REST API keys through URL query parameters.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable support for passing REST API keys through URL query parameters.		
	<i>disable</i>	Disable support for passing REST API keys through URL query parameters.		
restart-time	Daily restart time (hh:mm).	user	Not Specified	
revision-backup-on-logout	Enable/disable back-up of the latest configuration revision when an administrator logs out of the CLI or GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable revision config backup automatically when logout.		
	<i>disable</i>	Disable revision config backup automatically when logout.		
revision-image-auto-backup	Enable/disable back-up of the latest image revision after the firmware is upgraded.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable revision image backup automatically when upgrading image.		
	<i>disable</i>	Disable revision image backup automatically when upgrading image.		
scanunit-count	Number of scanunits. The range and the default depend on the number of CPUs. Only available on FortiGate units with multiple CPUs.	integer	Minimum value: 1 Maximum value: 8 **	0
scim-http-port	SCIM http port (0 - 65535, default = 44558).	integer	Minimum value: 0 Maximum value: 65535	44558
scim-https-port	SCIM port (0 - 65535, default = 44559).	integer	Minimum value: 0 Maximum value: 65535	44559
scim-server-cert	Server certificate that the FortiGate uses for SCIM connections.	string	Maximum length: 35	Fortinet_Factory
send-pmtu-icmp	Enable/disable sending of path maximum transmission unit (PMTU) - ICMP destination unreachable packet and to support PMTUD protocol on your network to reduce fragmentation of packets.	option	-	enable

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable sending of PMTU ICMP destination unreachable packet.		
	<i>disable</i>	Disable sending of PMTU ICMP destination unreachable packet.		
sflowd-max-children-num	Maximum number of sflowd child processes allowed to run.	integer	Minimum value: 0 Maximum value: 6 **	6 **
show-backplane-intf *	show/hide backplane interfaces	option	-	disable
	Option Description			
	<i>enable</i>	show backplane interfaces		
	<i>disable</i>	hide backplane interfaces		
single-vdom-npuvlink *	Enable/disable NPU VDOMs links for single VDOM.	option	-	disable
	Option Description			
	<i>enable</i>	Enable NPU VDOM links for single VDOM.		
	<i>disable</i>	Disable NPU VDOM links for single VDOM.		
snat-route-change	Enable/disable the ability to change the source NAT route.	option	-	disable
	Option Description			
	<i>enable</i>	Enable SNAT route change.		
	<i>disable</i>	Disable SNAT route change.		
special-file-23-support	Enable/disable detection of those special format files when using Data Loss Prevention.	option	-	disable
	Option Description			
	<i>disable</i>	Disable detection of those special format files when using Data Loss Prevention.		
	<i>enable</i>	Enable detection of those special format files when using Data Loss Prevention.		
speedtest-server	Enable/disable speed test server.	option	-	disable

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable speed test server service.</td></tr><tr><td><i>disable</i></td><td>Disable speed test server service.</td></tr></table>	Option	Description	<i>enable</i>	Enable speed test server service.	<i>disable</i>	Disable speed test server service.									
	Option	Description														
	<i>enable</i>	Enable speed test server service.														
<i>disable</i>	Disable speed test server service.															
speedtestd-ctrl-port	Speedtest server controller port number.	integer	Minimum value: 1 Maximum value: 65535	5200												
speedtestd-server-port	Speedtest server port number.	integer	Minimum value: 1 Maximum value: 65535	5201												
split-port *	Split port(s) to multiple 10Gbps ports.	string	Maximum length: 15													
ssd-trim-date *	Date within a month to run ssd trim.	integer	Minimum value: 1 Maximum value: 31	1												
ssd-trim-freq *	How often to run SSD Trim (default = weekly). SSD Trim prevents SSD drive data loss by finding and isolating errors.	option	-	weekly												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>never</i></td><td>Never Run SSD Trim.</td></tr><tr><td><i>hourly</i></td><td>Run SSD Trim Hourly.</td></tr><tr><td><i>daily</i></td><td>Run SSD Trim Daily.</td></tr><tr><td><i>weekly</i></td><td>Run SSD Trim Weekly.</td></tr><tr><td><i>monthly</i></td><td>Run SSD Trim Monthly.</td></tr></table>	Option	Description	<i>never</i>	Never Run SSD Trim.	<i>hourly</i>	Run SSD Trim Hourly.	<i>daily</i>	Run SSD Trim Daily.	<i>weekly</i>	Run SSD Trim Weekly.	<i>monthly</i>	Run SSD Trim Monthly.			
	Option	Description														
	<i>never</i>	Never Run SSD Trim.														
	<i>hourly</i>	Run SSD Trim Hourly.														
	<i>daily</i>	Run SSD Trim Daily.														
	<i>weekly</i>	Run SSD Trim Weekly.														
<i>monthly</i>	Run SSD Trim Monthly.															
ssd-trim-hour *	Hour of the day on which to run SSD Trim (0 - 23, default = 1).	integer	Minimum value: 0 Maximum value: 23	1												
ssd-trim-min *	Minute of the hour on which to run SSD Trim (0 - 59, 60 for random).	integer	Minimum value: 0 Maximum value: 60	60												
ssd-trim-weekday *	Day of week to run SSD Trim.	option	-	sunday												

Parameter	Description	Type	Size	Default																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sunday</i></td><td>Sunday</td></tr><tr><td><i>monday</i></td><td>Monday</td></tr><tr><td><i>tuesday</i></td><td>Tuesday</td></tr><tr><td><i>wednesday</i></td><td>Wednesday</td></tr><tr><td><i>thursday</i></td><td>Thursday</td></tr><tr><td><i>friday</i></td><td>Friday</td></tr><tr><td><i>saturday</i></td><td>Saturday</td></tr></table>	Option	Description	<i>sunday</i>	Sunday	<i>monday</i>	Monday	<i>tuesday</i>	Tuesday	<i>wednesday</i>	Wednesday	<i>thursday</i>	Thursday	<i>friday</i>	Friday	<i>saturday</i>	Saturday			
	Option	Description																		
	<i>sunday</i>	Sunday																		
	<i>monday</i>	Monday																		
	<i>tuesday</i>	Tuesday																		
	<i>wednesday</i>	Wednesday																		
	<i>thursday</i>	Thursday																		
	<i>friday</i>	Friday																		
<i>saturday</i>	Saturday																			
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections (default = TLSv1.2).	option	-	TLSv1-2																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>SSLv3</i></td><td>SSLv3.</td></tr><tr><td><i>TLSv1</i></td><td>TLSv1.</td></tr><tr><td><i>TLSv1-1</i></td><td>TLSv1.1.</td></tr><tr><td><i>TLSv1-2</i></td><td>TLSv1.2.</td></tr><tr><td><i>TLSv1-3</i></td><td>TLSv1.3.</td></tr></table>	Option	Description	<i>SSLv3</i>	SSLv3.	<i>TLSv1</i>	TLSv1.	<i>TLSv1-1</i>	TLSv1.1.	<i>TLSv1-2</i>	TLSv1.2.	<i>TLSv1-3</i>	TLSv1.3.							
	Option	Description																		
	<i>SSLv3</i>	SSLv3.																		
	<i>TLSv1</i>	TLSv1.																		
	<i>TLSv1-1</i>	TLSv1.1.																		
	<i>TLSv1-2</i>	TLSv1.2.																		
<i>TLSv1-3</i>	TLSv1.3.																			
ssl-static-key-ciphers	Enable/disable static key ciphers in SSL/TLS connections (e.g. AES128-SHA, AES256-SHA, AES128-SHA256, AES256-SHA256).	option	-	enable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable static key ciphers in SSL/TLS connections.</td></tr><tr><td><i>disable</i></td><td>Disable static key ciphers in SSL/TLS connections.</td></tr></table>	Option	Description	<i>enable</i>	Enable static key ciphers in SSL/TLS connections.	<i>disable</i>	Disable static key ciphers in SSL/TLS connections.													
	Option	Description																		
	<i>enable</i>	Enable static key ciphers in SSL/TLS connections.																		
<i>disable</i>	Disable static key ciphers in SSL/TLS connections.																			
sslvpn-max-worker-count *	Maximum number of SSL-VPN processes. Upper limit for this value is the number of CPUs and depends on the model. Default value of zero means the SSLVPN daemon decides the number of worker processes.	integer	Minimum value: 0 Maximum value: 7 **	0																
sslvpn-web-mode *	Enable/disable SSL-VPN web mode.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-VPN web mode.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-VPN web mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-VPN web mode.	<i>disable</i>	Disable SSL-VPN web mode.													
	Option	Description																		
	<i>enable</i>	Enable SSL-VPN web mode.																		
<i>disable</i>	Disable SSL-VPN web mode.																			

Parameter	Description	Type	Size	Default						
strict-dirty-session-check	Enable to check the session against the original policy when revalidating. This can prevent dropping of redirected sessions when web-filtering and authentication are enabled together. If this option is enabled, the FortiGate unit deletes a session if a routing or policy change causes the session to no longer match the policy that originally allowed the session.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable strict dirty-session check.</td></tr><tr><td><i>disable</i></td><td>Disable strict dirty-session check.</td></tr></table>	Option	Description	<i>enable</i>	Enable strict dirty-session check.	<i>disable</i>	Disable strict dirty-session check.			
Option	Description									
<i>enable</i>	Enable strict dirty-session check.									
<i>disable</i>	Disable strict dirty-session check.									
strong-crypto	Enable to use strong encryption and only allow strong ciphers and digest for HTTPS/SSH/TLS/SSL functions.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable strong crypto for HTTPS/SSH/TLS/SSL.</td></tr><tr><td><i>disable</i></td><td>Disable strong crypto for HTTPS/SSH/TLS/SSL.</td></tr></table>	Option	Description	<i>enable</i>	Enable strong crypto for HTTPS/SSH/TLS/SSL.	<i>disable</i>	Disable strong crypto for HTTPS/SSH/TLS/SSL.			
Option	Description									
<i>enable</i>	Enable strong crypto for HTTPS/SSH/TLS/SSL.									
<i>disable</i>	Disable strong crypto for HTTPS/SSH/TLS/SSL.									
switch-controller *	Enable/disable switch controller feature. Switch controller allows you to manage FortiSwitch from the FortiGate itself.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable switch controller feature.</td></tr><tr><td><i>enable</i></td><td>Enable switch controller feature.</td></tr></table>	Option	Description	<i>disable</i>	Disable switch controller feature.	<i>enable</i>	Enable switch controller feature.			
Option	Description									
<i>disable</i>	Disable switch controller feature.									
<i>enable</i>	Enable switch controller feature.									
switch-controller-reserved-network *	Configure reserved network subnet for managed switches. This is available when the switch controller is enabled.	ipv4-classnet-host	Not Specified	10.255.0.1 255.255.0.0						
sys-perf-log-interval	Time in minutes between updates of performance statistics logging. (1 - 15 min, default = 5, 0 = disabled).	integer	Minimum value: 0 Maximum value: 15	5						
syslog-affinity *	Affinity setting for syslog (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	0						

Parameter	Description	Type	Size	Default
tcp-halfclose-timer	Number of seconds the FortiGate unit should wait to close a session after one peer has sent a FIN packet but the other has not responded (1 - 86400 sec (1 day), default = 120).	integer	Minimum value: 1 Maximum value: 86400	120
tcp-halfopen-timer	Number of seconds the FortiGate unit should wait to close a session after one peer has sent an open session packet but the other has not responded (1 - 86400 sec (1 day), default = 10).	integer	Minimum value: 1 Maximum value: 86400	10
tcp-option	Enable SACK, timestamp and MSS TCP options.	option	-	enable
	Option Description			
	<i>enable</i>	Enable TCP option.		
	<i>disable</i>	Disable TCP option.		
tcp-rst-timer	Length of the TCP CLOSE state in seconds (5 - 300 sec, default = 5).	integer	Minimum value: 5 Maximum value: 300	5
tcp-timewait-timer	Length of the TCP TIME-WAIT state in seconds (1 - 300 sec, default = 1).	integer	Minimum value: 0 Maximum value: 300	1
tftp	Enable/disable TFTP.	option	-	enable
	Option Description			
	<i>enable</i>	Enable TFTP.		
	<i>disable</i>	Disable TFTP.		
timezone	Timezone database name. Enter ? to view the list of timezone.	string	Maximum length: 63	
traffic-priority	Choose Type of Service (ToS) or Differentiated Services Code Point (DSCP) for traffic prioritization in traffic shaping.	option	-	tos
	Option Description			
	<i>tos</i>	IP TOS.		
	<i>dscp</i>	DSCP (DiffServ) DS.		

Parameter	Description	Type	Size	Default								
traffic-priority-level	Default system-wide level of priority for traffic prioritization.	option	-	medium								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>low</i></td><td>Low priority.</td></tr><tr><td><i>medium</i></td><td>Medium priority.</td></tr><tr><td><i>high</i></td><td>High priority.</td></tr></table>	Option	Description	<i>low</i>	Low priority.	<i>medium</i>	Medium priority.	<i>high</i>	High priority.			
	Option	Description										
	<i>low</i>	Low priority.										
	<i>medium</i>	Medium priority.										
<i>high</i>	High priority.											
two-factor-email-expiry	Email-based two-factor authentication session timeout (30 - 300 seconds (5 minutes), default = 60).	integer	Minimum value: 30 Maximum value: 300	60								
two-factor-fac-expiry	FortiAuthenticator token authentication session timeout (10 - 3600 seconds (1 hour), default = 60).	integer	Minimum value: 10 Maximum value: 3600	60								
two-factor-ftk-expiry	FortiToken authentication session timeout (60 - 600 sec (10 minutes), default = 60).	integer	Minimum value: 60 Maximum value: 600	60								
two-factor-ftm-expiry	FortiToken Mobile session timeout (1 - 168 hours (7 days), default = 72).	integer	Minimum value: 1 Maximum value: 168	72								
two-factor-sms-expiry	SMS-based two-factor authentication session timeout (30 - 300 sec, default = 60).	integer	Minimum value: 30 Maximum value: 300	60								
udp-idle-timer	UDP connection session timeout. This command can be useful in managing CPU and memory resources (1 - 86400 seconds (1 day), default = 60).	integer	Minimum value: 1 Maximum value: 86400	180								
upgrade-report	Enable/disable the generation of an upgrade report when upgrading the firmware.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable to automatically generate upgrade report when upgrading the firmware.</td></tr><tr><td><i>disable</i></td><td>Disable upgrade report generation when upgrading the firmware.</td></tr></table>	Option	Description	<i>enable</i>	Enable to automatically generate upgrade report when upgrading the firmware.	<i>disable</i>	Disable upgrade report generation when upgrading the firmware.					
	Option	Description										
	<i>enable</i>	Enable to automatically generate upgrade report when upgrading the firmware.										
<i>disable</i>	Disable upgrade report generation when upgrading the firmware.											

Parameter	Description	Type	Size	Default						
url-filter-affinity *	URL filter CPU affinity.	string	Maximum length: 79	0						
url-filter-count	URL filter daemon count.	integer	Minimum value: 1 Maximum value: 1 **	1						
user-device-store-max-devices	Maximum number of devices allowed in user device store.	integer	Minimum value: 84219 Maximum value: 240626 **	168438 **						
user-device-store-max-unified-mem	Maximum unified memory allowed in user device store.	integer	Minimum value: 168438579 Maximum value: 1684385792 **	842192896 **						
user-device-store-max-users	Maximum number of users allowed in user device store.	integer	Minimum value: 84219 Maximum value: 240626 **	168438 **						
user-history-password-threshold	Maximum number of previous passwords saved per admin/user (3 - 15, default = 3).	integer	Minimum value: 3 Maximum value: 15	3						
vdom-mode *	Enable/disable support for multiple virtual domains (VDOMs).	option	-	no-vdom						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>no-vdom</td><td>Disable multiple VDOMs mode.</td></tr><tr><td>multi-vdom</td><td>Enable multiple VDOMs mode.</td></tr></table>				Option	Description	no-vdom	Disable multiple VDOMs mode.	multi-vdom	Enable multiple VDOMs mode.
Option	Description									
no-vdom	Disable multiple VDOMs mode.									
multi-vdom	Enable multiple VDOMs mode.									
vip-arp-range	Controls the number of ARPs that the FortiGate sends for a Virtual IP (VIP) address range.	option	-	restricted						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>unlimited</td><td>Send ARPs for all addresses in VIP range.</td></tr><tr><td>restricted</td><td>Send ARPs for the first 8192 addresses in VIP range.</td></tr></table>				Option	Description	unlimited	Send ARPs for all addresses in VIP range.	restricted	Send ARPs for the first 8192 addresses in VIP range.
Option	Description									
unlimited	Send ARPs for all addresses in VIP range.									
restricted	Send ARPs for the first 8192 addresses in VIP range.									

Parameter	Description	Type	Size	Default
virtual-switch-vlan *	Enable/disable virtual switch VLAN.	option	-	disable
	OptionDescription			
	enable	Enable virtual switch VLAN.		
	disable	Disable virtual switch VLAN.		
vpn-ems-sn-check *	Enable/disable verification of EMS serial number in SSL-VPN connection.	option	-	disable
	OptionDescription			
	enable	Enable verification of EMS serial number in SSL-VPN connection.		
	disable	Disable verification of EMS serial number in SSL-VPN connection.		
wad-affinity *	Affinity setting for wad (hexadecimal value up to 256 bits in the format of xxxxxxxxxxxxxxxxx).	string	Maximum length: 79	0
wad-csvc-cs-count	Number of concurrent WAD-cache-service object-cache processes.	integer	Minimum value: 1 Maximum value: 1	1
wad-csvc-db-count	Number of concurrent WAD-cache-service byte-cache processes.	integer	Minimum value: 0 Maximum value: 8 **	0
wad-memory-change-granularity	Minimum percentage change in system memory usage detected by the wad daemon prior to adjusting TCP window size for any active connection.	integer	Minimum value: 5 Maximum value: 25	10
wad-restart-end-time	WAD workers daily restart end time (hh:mm).	user	Not Specified	
wad-restart-mode	WAD worker restart mode (default = none).	option	-	none
	OptionDescription			
	none	Disable restart of WAD workers.		
	time	Enable daily restart of WAD workers.		
	memory	Enable restart of WAD workers based on memory usage.		
wad-restart-start-time	WAD workers daily restart time (hh:mm).	user	Not Specified	

Parameter	Description	Type	Size	Default						
wad-source-affinity	Enable/disable dispatching traffic to WAD workers based on source affinity.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable dispatching traffic to WAD workers based on source affinity.</td></tr><tr><td><i>enable</i></td><td>Enable dispatching traffic to WAD workers based on source affinity.</td></tr></table>	Option	Description	<i>disable</i>	Disable dispatching traffic to WAD workers based on source affinity.	<i>enable</i>	Enable dispatching traffic to WAD workers based on source affinity.			
Option	Description									
<i>disable</i>	Disable dispatching traffic to WAD workers based on source affinity.									
<i>enable</i>	Enable dispatching traffic to WAD workers based on source affinity.									
wad-worker-count	Number of explicit proxy WAN optimization daemon (WAD) processes. By default WAN optimization, explicit proxy, and web caching is handled by all of the CPU cores in a FortiGate unit.	integer	Minimum value: 0 Maximum value: 8 **	0						
wifi-ca-certificate	CA certificate that verifies the WiFi certificate.	string	Maximum length: 79	Fortinet_Wifi_CA						
wifi-certificate	Certificate to use for WiFi authentication.	string	Maximum length: 35	Fortinet_Wifi						
wimax-4g-usb	Enable/disable comparability with WiMAX 4G USB devices.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WiMax 4G.</td></tr><tr><td><i>disable</i></td><td>Disable WiMax 4G.</td></tr></table>	Option	Description	<i>enable</i>	Enable WiMax 4G.	<i>disable</i>	Disable WiMax 4G.			
Option	Description									
<i>enable</i>	Enable WiMax 4G.									
<i>disable</i>	Disable WiMax 4G.									
wireless-controller	Enable/disable the wireless controller feature to use the FortiGate unit to manage FortiAPs.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable wireless controller.</td></tr><tr><td><i>disable</i></td><td>Disable wireless controller.</td></tr></table>	Option	Description	<i>enable</i>	Enable wireless controller.	<i>disable</i>	Disable wireless controller.			
Option	Description									
<i>enable</i>	Enable wireless controller.									
<i>disable</i>	Disable wireless controller.									
wireless-controller-port	Port used for the control channel in wireless controller mode (wireless-mode is ac). The data channel port is the control channel port number plus one (1024 - 49150, default = 5246).	integer	Minimum value: 1024 Maximum value: 49150	5246						
wireless-mode *	Wireless mode setting.	option	-	ac						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ac</i></td><td>Wireless controller with local wireless.</td></tr></table>	Option	Description	<i>ac</i>	Wireless controller with local wireless.					
Option	Description									
<i>ac</i>	Wireless controller with local wireless.									

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>client</i>	Wireless client mode.		
	<i>fwfap</i>	Obsolete wireless AP mode.		

* This parameter may not exist in some models.

** Values may differ between models.

config split-port-mode

Parameter	Description	Type	Size	Default
interface	Split port interface.	string	Maximum length: 15	
split-mode	The configuration mode for the split port interface.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable split.		
	<i>4x10G</i>	Split the port into four 10G ports.		
	<i>4x25G</i>	Split the port into four 25G ports.		
	<i>4x50G</i>	Split the port into four 50G ports.		
	<i>8x50G</i>	Split the port into eight 50G ports.		
	<i>4x100G</i>	Split the port into four 100G ports.		
	<i>2x200G</i>	Split the port into two 200G ports.		

config system gre-tunnel

Configure GRE tunnel.

```

config system gre-tunnel
  Description: Configure GRE tunnel.
  edit <name>
    set auto-asic-offload [enable|disable]
    set checksum-reception [disable|enable]
    set checksum-transmission [disable|enable]
    set diffservcode {user}
    set dscp-copying [disable|enable]
    set interface {string}
    set ip-version [4|6]
    set keepalive-failtimes {integer}
    set keepalive-interval {integer}
    set key-inbound {integer}
    set key-outbound {integer}
  
```

```

set local-gw {ipv4-address-any}
set local-gw6 {ipv6-address}
set remote-gw {ipv4-address}
set remote-gw6 {ipv6-address}
set sequence-number-reception [disable|enable]
set sequence-number-transmission [disable|enable]
set use-sdwan [disable|enable]
next
end

```

config system gre-tunnel

Parameter	Description	Type	Size	Default						
auto-asic-offload *	Enable/disable automatic ASIC offloading.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic ASIC offloading.</td></tr><tr><td><i>disable</i></td><td>Disable automatic ASIC offloading.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic ASIC offloading.	<i>disable</i>	Disable automatic ASIC offloading.			
Option	Description									
<i>enable</i>	Enable automatic ASIC offloading.									
<i>disable</i>	Disable automatic ASIC offloading.									
checksum-reception *	Enable/disable validating checksums in received GRE packets.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not validate checksums in received GRE packets.</td></tr><tr><td><i>enable</i></td><td>Validate checksums in received GRE packets.</td></tr></table>	Option	Description	<i>disable</i>	Do not validate checksums in received GRE packets.	<i>enable</i>	Validate checksums in received GRE packets.			
Option	Description									
<i>disable</i>	Do not validate checksums in received GRE packets.									
<i>enable</i>	Validate checksums in received GRE packets.									
checksum-transmission *	Enable/disable including checksums in transmitted GRE packets.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not include checksums in transmitted GRE packets.</td></tr><tr><td><i>enable</i></td><td>Include checksums in transmitted GRE packets.</td></tr></table>	Option	Description	<i>disable</i>	Do not include checksums in transmitted GRE packets.	<i>enable</i>	Include checksums in transmitted GRE packets.			
Option	Description									
<i>disable</i>	Do not include checksums in transmitted GRE packets.									
<i>enable</i>	Include checksums in transmitted GRE packets.									
diffservcode	DiffServ setting to be applied to GRE tunnel outer IP header.	user	Not Specified							
dscp-copying	Enable/disable DSCP copying.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable DSCP copying.</td></tr><tr><td><i>enable</i></td><td>Enable DSCP copying.</td></tr></table>	Option	Description	<i>disable</i>	Disable DSCP copying.	<i>enable</i>	Enable DSCP copying.			
Option	Description									
<i>disable</i>	Disable DSCP copying.									
<i>enable</i>	Enable DSCP copying.									
interface	Interface name.	string	Maximum length: 15							

Parameter	Description	Type	Size	Default						
ip-version	IP version to use for VPN interface.	option	-	4						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>4</td><td>Use IPv4 addressing for gateways.</td></tr><tr><td>6</td><td>Use IPv6 addressing for gateways.</td></tr></table>	Option	Description	4	Use IPv4 addressing for gateways.	6	Use IPv6 addressing for gateways.			
	Option	Description								
	4	Use IPv4 addressing for gateways.								
6	Use IPv6 addressing for gateways.									
keepalive-failtimes	Number of consecutive unreturned keepalive messages before a GRE connection is considered down (1 - 255).	integer	Minimum value: 1 Maximum value: 255	10						
keepalive-interval	Keepalive message interval (0 - 32767, 0 = disabled).	integer	Minimum value: 0 Maximum value: 32767	0						
key-inbound *	Require received GRE packets contain this key (0 - 4294967295).	integer	Minimum value: 0 Maximum value: 4294967295	0						
key-outbound *	Include this key in transmitted GRE packets (0 - 4294967295).	integer	Minimum value: 0 Maximum value: 4294967295	0						
local-gw	IP address of the local gateway.	ipv4-address-any	Not Specified	0.0.0.0						
local-gw6	IPv6 address of the local gateway.	ipv6-address	Not Specified	::						
name	Tunnel name.	string	Maximum length: 15							
remote-gw	IP address of the remote gateway.	ipv4-address	Not Specified	0.0.0.0						
remote-gw6	IPv6 address of the remote gateway.	ipv6-address	Not Specified	::						
sequence-number-reception *	Enable/disable validating sequence numbers in received GRE packets.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Do not validate sequence number in received GRE packets.		
	<i>enable</i>	Validate sequence numbers in received GRE packets.		
sequence-number-transmission *	Enable/disable including of sequence numbers in transmitted GRE packets.	option	-	disable
	Option	Description		
	<i>disable</i>	Include sequence numbers in transmitted GRE packets.		
	<i>enable</i>	Do not include sequence numbers in transmitted GRE packets.		
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable use of SD-WAN to reach remote gateway.		
	<i>enable</i>	Enable use of SD-WAN to reach remote gateway.		

* This parameter may not exist in some models.

config system ha

Configure HA.

```
config system ha
    Description: Configure HA.

config system ha

Parameter	Description	Type	Size	Default
arps	Number of gratuitous ARPs (1 - 60). Lower to reduce traffic. Higher to reduce failover time.	integer	Minimum value: 1 Maximum value: 60	5
arps-interval	Time between gratuitous ARPs (1 - 20 sec). Lower to reduce failover time. Higher to reduce traffic.	integer	Minimum value: 1 Maximum value: 20	8
authentication	Enable/disable heartbeat message authentication.	option	-	disable
		Option	Description	
		<i>enable</i>	Enable heartbeat message authentication.	
		<i>disable</i>	Disable heartbeat message authentication.	

Parameter	Description	Type	Size	Default						
auto-virtual-mac-interface <interface-name>	The physical interface that will be assigned an auto-generated virtual MAC address. Interface name.	string	Maximum length: 15							
backup-hbdev <name>	Backup heartbeat interfaces. Must be the same for all members. Interface name.	string	Maximum length: 79							
check-secondary-dev-health	Enable/disable secondary dev health check for session load-balance in HA A-A mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
cpu-threshold	Dynamic weighted load balancing CPU usage weight and high and low thresholds.	user	Not Specified							
encryption	Enable/disable heartbeat message encryption.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable heartbeat message encryption.</td></tr><tr><td>disable</td><td>Disable heartbeat message encryption.</td></tr></table>				Option	Description	enable	Enable heartbeat message encryption.	disable	Disable heartbeat message encryption.
Option	Description									
enable	Enable heartbeat message encryption.									
disable	Disable heartbeat message encryption.									
evpn-ttl	HA EVPN FDB TTL on primary box (5 - 3600 sec).	integer	Minimum value: 5 Maximum value: 3600	60						
failover-hold-time	Time to wait before failover (0 - 300 sec, default = 0), to avoid flip.	integer	Minimum value: 0 Maximum value: 300	0						
ftp-proxy-threshold	Dynamic weighted load balancing weight and high and low number of FTP proxy sessions.	user	Not Specified							
gratuitous-arps	Enable/disable gratuitous ARPs. Disable if link-failed-signal enabled.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable gratuitous ARPs.</td></tr></table>				Option	Description	enable	Enable gratuitous ARPs.		
Option	Description									
enable	Enable gratuitous ARPs.									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable gratuitous ARPs.</td></tr></table>		Option	Description	<i>disable</i>	Disable gratuitous ARPs.				
	Option	Description								
<i>disable</i>	Disable gratuitous ARPs.									
group-id	HA group ID (0 - 1023; or 0 - 7 when there are more than 2 vclusters). Must be the same for all members.	integer	Minimum value: 0 Maximum value: 1023	0						
group-name	Cluster group name. Must be the same for all members.	string	Maximum length: 32							
ha-direct	Enable/disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.</td></tr><tr><td><i>disable</i></td><td>Disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.</td></tr></table>		Option	Description	<i>enable</i>	Enable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.	<i>disable</i>	Disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.		
	Option	Description								
	<i>enable</i>	Enable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.								
<i>disable</i>	Disable using ha-mgmt interface for syslog, remote authentication (RADIUS), FortiAnalyzer, FortiSandbox, sFlow, and Netflow.									
ha-eth-type	HA heartbeat packet Ethertype (4-digit hex).	string	Maximum length: 4	8890						
ha-mgmt-status	Enable to reserve interfaces to manage individual cluster units.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>		Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.		
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
ha-uptime-diff-margin	Normally you would only reduce this value for failover testing.	integer	Minimum value: 1 Maximum value: 65535	300						
hb-interval	Time between sending heartbeat packets (1 - 20). Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 20	2						
hb-interval-in-milliseconds	Units of heartbeat interval time between sending heartbeat packets. Default is 100ms.	option	-	100ms						

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>100ms</td><td>Each heartbeat interval is 100ms.</td></tr><tr><td>10ms</td><td>Each heartbeat interval is 10ms.</td></tr></table>	Option	Description	100ms	Each heartbeat interval is 100ms.	10ms	Each heartbeat interval is 10ms.															
	Option	Description																				
	100ms	Each heartbeat interval is 100ms.																				
10ms	Each heartbeat interval is 10ms.																					
hb-lost-threshold	Number of lost heartbeats to signal a failure (1 - 60). Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 60	6 **																		
hbdev	Heartbeat interfaces. Must be the same for all members. Enter <interface> <priority> pairs to specify the priority of each heartbeat interface. Higher priority takes precedence.	user	Not Specified																			
hc-eth-type	Transparent mode HA heartbeat packet Ethertype (4-digit hex).	string	Maximum length: 4	8891																		
hello-holddown	Time to wait before changing from hello to work state (5 - 300 sec).	integer	Minimum value: 5 Maximum value: 300	20																		
http-proxy-threshold	Dynamic weighted load balancing weight and high and low number of HTTP proxy sessions.	user	Not Specified																			
imap-proxy-threshold	Dynamic weighted load balancing weight and high and low number of IMAP proxy sessions.	user	Not Specified																			
ipsec-phase2-proposal	IPsec phase2 proposal.	option	-																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>aes128-sha1</td><td>aes128-sha1</td></tr><tr><td>aes128-sha256</td><td>aes128-sha256</td></tr><tr><td>aes128-sha384</td><td>aes128-sha384</td></tr><tr><td>aes128-sha512</td><td>aes128-sha512</td></tr><tr><td>aes192-sha1</td><td>aes192-sha1</td></tr><tr><td>aes192-sha256</td><td>aes192-sha256</td></tr><tr><td>aes192-sha384</td><td>aes192-sha384</td></tr><tr><td>aes192-sha512</td><td>aes192-sha512</td></tr></table>	Option	Description	aes128-sha1	aes128-sha1	aes128-sha256	aes128-sha256	aes128-sha384	aes128-sha384	aes128-sha512	aes128-sha512	aes192-sha1	aes192-sha1	aes192-sha256	aes192-sha256	aes192-sha384	aes192-sha384	aes192-sha512	aes192-sha512			
	Option	Description																				
	aes128-sha1	aes128-sha1																				
	aes128-sha256	aes128-sha256

	aes192-sha384	aes192-sha384																				
aes192-sha512	aes192-sha512																					

Parameter	Description	Type	Size	Default
	Option Description			
	aes256-sha1	aes256-sha1		
	aes256-sha256	aes256-sha256		
	aes256-sha384	aes256-sha384		
	aes256-sha512	aes256-sha512		
	aes128gcm	aes128gcm		
	aes256gcm	aes256gcm		
	chacha20poly1305	chacha20poly1305		
key	Key.	password	Not Specified	
l2ep-eth-type	Telnet session HA heartbeat packet Ethertype (4-digit hex).	string	Maximum length: 4	8893
link-failed-signal	Enable to shut down all interfaces for 1 sec after a failover. Use if gratuitous ARPs do not update network.	option	-	disable
	Option Description			
	enable	Enable setting.		
	disable	Disable setting.		
load-balance-all	Enable to load balance TCP sessions. Disable to load balance proxy sessions only.	option	-	disable
	Option Description			
	enable	Enable load balance.		
	disable	Disable load balance.		
logical-sn *	Enable/disable usage of the logical serial number.	option	-	disable
	Option Description			
	enable	Enable usage of the logical serial number.		
	disable	Disable usage of the logical serial number.		
memory-based-failover	Enable/disable memory based failover.	option	-	disable

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
	Option	Description										
	<i>enable</i>	Enable setting.										
<i>disable</i>	Disable setting.											
memory-compatible-mode	Enable/disable memory compatible mode.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
	Option	Description										
	<i>enable</i>	Enable setting.										
<i>disable</i>	Disable setting.											
memory-failover-flip-timeout	Time to wait between subsequent memory based failovers in minutes (6 - 2147483647, default = 6).	integer	Minimum value: 6 Maximum value: 2147483647	6								
memory-failover-monitor-period	Duration of high memory usage before memory based failover is triggered in seconds (1 - 300, default = 60).	integer	Minimum value: 1 Maximum value: 300	60								
memory-failover-sample-rate	Rate at which memory usage is sampled in order to measure memory usage in seconds (1 - 60, default = 1).	integer	Minimum value: 1 Maximum value: 60	1								
memory-failover-threshold	Memory usage threshold to trigger memory based failover (0 means using conserve mode threshold in system.global).	integer	Minimum value: 0 Maximum value: 95	0								
memory-threshold	Dynamic weighted load balancing memory usage weight and high and low thresholds.	user	Not Specified									
mode	HA mode. Must be the same for all members. FGSP requires standalone.	option	-	standalone								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>standalone</i></td><td>Standalone mode.</td></tr><tr><td><i>a-a</i></td><td>Active-active mode.</td></tr><tr><td><i>a-p</i></td><td>Active-passive mode.</td></tr></table>	Option	Description	<i>standalone</i>	Standalone mode.	<i>a-a</i>	Active-active mode.	<i>a-p</i>	Active-passive mode.			
	Option	Description										
	<i>standalone</i>	Standalone mode.										
	<i>a-a</i>	Active-active mode.										
<i>a-p</i>	Active-passive mode.											
monitor	Interfaces to check for port monitoring (or link failure).	user	Not Specified									

Parameter	Description	Type	Size	Default						
multicast-ttl	HA multicast TTL on primary (5 - 3600 sec).	integer	Minimum value: 5 Maximum value: 3600	600						
nntp-proxy-threshold	Dynamic weighted load balancing weight and high and low number of NNTP proxy sessions.	user	Not Specified							
override	Enable and increase the priority of the unit that should always be primary (master).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
override-wait-time	Delay negotiating if override is enabled (0 - 3600 sec). Reduces how often the cluster negotiates.	integer	Minimum value: 0 Maximum value: 3600	0						
password	Cluster password. Must be the same for all members.	password	Not Specified							
pingserver-failover-threshold	Remote IP monitoring failover threshold (0 - 50).	integer	Minimum value: 0 Maximum value: 50	0						
pingserver-flip-timeout	Time to wait in minutes before renegotiating after a remote IP monitoring failover.	integer	Minimum value: 6 Maximum value: 2147483647	60						
pingserver-monitor-interface	Interfaces to check for remote IP monitoring.	user	Not Specified							
pingserver-secondary-force-reset	Enable to force the cluster to negotiate after a remote IP monitoring failover.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable force reset of secondary member after PING server failure.</td></tr><tr><td><i>disable</i></td><td>Disable force reset of secondary member after PING server failure.</td></tr></table>				Option	Description	<i>enable</i>	Enable force reset of secondary member after PING server failure.	<i>disable</i>	Disable force reset of secondary member after PING server failure.
	Option	Description								
	<i>enable</i>	Enable force reset of secondary member after PING server failure.								
<i>disable</i>	Disable force reset of secondary member after PING server failure.									

Parameter	Description	Type	Size	Default																
pop3-proxy-threshold	Dynamic weighted load balancing weight and high and low number of POP3 proxy sessions.	user	Not Specified																	
priority	Increase the priority to select the primary unit (0 - 255).	integer	Minimum value: 0 Maximum value: 255	128																
route-hold	Time to wait between routing table updates to the cluster (0 - 3600 sec).	integer	Minimum value: 0 Maximum value: 3600	10																
route-ttl	TTL for primary unit routes (5 - 3600 sec). Increase to maintain active routes during failover.	integer	Minimum value: 5 Maximum value: 3600	10																
route-wait	Time to wait before sending new routes to the cluster (0 - 3600 sec).	integer	Minimum value: 0 Maximum value: 3600	0																
schedule	Type of A-A load balancing. Use none if you have external load balancers.	option	-	round-robin																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>leastconnection</i></td><td>Least connection.</td></tr><tr><td><i>round-robin</i></td><td>Round robin.</td></tr><tr><td><i>weight-round-robin</i></td><td>Weight round robin.</td></tr><tr><td><i>random</i></td><td>Random.</td></tr><tr><td><i>ip</i></td><td>IP.</td></tr><tr><td><i>ipport</i></td><td>IP port.</td></tr></table>				Option	Description	<i>none</i>	None.	<i>leastconnection</i>	Least connection.	<i>round-robin</i>	Round robin.	<i>weight-round-robin</i>	Weight round robin.	<i>random</i>	Random.	<i>ip</i>	IP.	<i>ipport</i>	IP port.
Option	Description																			
<i>none</i>	None.																			
<i>leastconnection</i>	Least connection.																			
<i>round-robin</i>	Round robin.																			
<i>weight-round-robin</i>	Weight round robin.																			
<i>random</i>	Random.																			
<i>ip</i>	IP.																			
<i>ipport</i>	IP port.																			
session-pickup	Enable/disable session pickup. Enabling it can reduce session down time when fail over happens.	option	-	disable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable session pickup.</td></tr><tr><td><i>disable</i></td><td>Disable session pickup.</td></tr></table>				Option	Description	<i>enable</i>	Enable session pickup.	<i>disable</i>	Disable session pickup.										
Option	Description																			
<i>enable</i>	Enable session pickup.																			
<i>disable</i>	Disable session pickup.																			

Parameter	Description	Type	Size	Default						
session-pickup-connectionless	Enable/disable UDP and ICMP session sync.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
session-pickup-delay	Enable to sync sessions longer than 30 sec. Only longer lived sessions need to be synced.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
session-pickup-expectation	Enable/disable session helper expectation session sync for FGSP.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
session-pickup-nat	Enable/disable NAT session sync for FGSP.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
session-sync-dev	Offload session-sync process to kernel and sync sessions using connected interface(s) directly.	user	Not Specified							
smtp-proxy-threshold	Dynamic weighted load balancing weight and high and low number of SMTP proxy sessions.	user	Not Specified							
ssd-failover *	Enable/disable automatic HA failover on SSD disk failure.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default						
standalone-config-sync	Enable/disable FGSP configuration synchronization.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
standalone-mgmt-vdom	Enable/disable standalone management VDOM.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
sync-config	Enable/disable configuration synchronization.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable configuration synchronization.</td></tr><tr><td><i>disable</i></td><td>Disable configuration synchronization.</td></tr></table>	Option	Description	<i>enable</i>	Enable configuration synchronization.	<i>disable</i>	Disable configuration synchronization.			
Option	Description									
<i>enable</i>	Enable configuration synchronization.									
<i>disable</i>	Disable configuration synchronization.									
sync-packet-balance	Enable/disable HA packet distribution to multiple CPUs.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable HA packet distribution to multiple CPUs.</td></tr><tr><td><i>disable</i></td><td>Disable HA packet distribution to multiple CPUs.</td></tr></table>	Option	Description	<i>enable</i>	Enable HA packet distribution to multiple CPUs.	<i>disable</i>	Disable HA packet distribution to multiple CPUs.			
Option	Description									
<i>enable</i>	Enable HA packet distribution to multiple CPUs.									
<i>disable</i>	Disable HA packet distribution to multiple CPUs.									
unicast-gateway *	Default route gateway for unicast interface.	ipv4-address	Not Specified	0.0.0.0						
unicast-hb *	Enable/disable unicast heartbeat.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
unicast-hb-netmask *	Unicast heartbeat netmask.	ipv4-netmask	Not Specified	0.0.0.0						
unicast-hb-peerip *	Unicast heartbeat peer IP.	ipv4-address	Not Specified	0.0.0.0						

Parameter	Description	Type	Size	Default										
unicast-status *	Enable/disable unicast connection.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
Option	Description													
<i>enable</i>	Enable setting.													
<i>disable</i>	Disable setting.													
uninterruptible-primary-wait	Number of minutes the primary HA unit waits before the secondary HA unit is considered upgraded and the system is started before starting its own upgrade (15 - 300, default = 30).	integer	Minimum value: 15 Maximum value: 300	30										
upgrade-mode	The mode to upgrade a cluster.	option	-	uninterruptible										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>simultaneous</i></td><td>Upgrade all HA members at the same time.</td></tr><tr><td><i>uninterruptible</i></td><td>Upgrade HA cluster without blocking network traffic.</td></tr><tr><td><i>local-only</i></td><td>Upgrade local member only.</td></tr><tr><td><i>secondary-only</i></td><td>Upgrade secondary member only.</td></tr></table>	Option	Description	<i>simultaneous</i>	Upgrade all HA members at the same time.	<i>uninterruptible</i>	Upgrade HA cluster without blocking network traffic.	<i>local-only</i>	Upgrade local member only.	<i>secondary-only</i>	Upgrade secondary member only.			
Option	Description													
<i>simultaneous</i>	Upgrade all HA members at the same time.													
<i>uninterruptible</i>	Upgrade HA cluster without blocking network traffic.													
<i>local-only</i>	Upgrade local member only.													
<i>secondary-only</i>	Upgrade secondary member only.													
vcluster-status	Enable/disable virtual cluster for virtual clustering.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
Option	Description													
<i>enable</i>	Enable setting.													
<i>disable</i>	Disable setting.													
weight	Weight-round-robin weight for each cluster unit. Syntax <priority> <weight>.	user	Not Specified	0 40										

* This parameter may not exist in some models.

** Values may differ between models.

config ha-mgmt-interfaces

Parameter	Description	Type	Size	Default
dst	Default route destination for reserved HA management interface.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
gateway	Default route gateway for reserved HA management interface.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default
gateway6	Default IPv6 gateway for reserved HA management interface.	ipv6-address	Not Specified	::
id	Table ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface to reserve for HA management.	string	Maximum length: 15	

config unicast-peers

Parameter	Description	Type	Size	Default
id	Table ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
peer-ip	Unicast peer IP.	ipv4-address	Not Specified	0.0.0.0

config vcluster

Parameter	Description	Type	Size	Default
monitor	Interfaces to check for port monitoring (or link failure).	user	Not Specified	
override	Enable and increase the priority of the unit that should always be primary (master).	option	-	disable
	Option	Description		
	enable	Enable setting.		
	disable	Disable setting.		
override-wait-time	Delay negotiating if override is enabled (0 - 3600 sec). Reduces how often the cluster negotiates.	integer	Minimum value: 0 Maximum value: 3600	0
pingserver-failover-threshold	Remote IP monitoring failover threshold (0 - 50).	integer	Minimum value: 0 Maximum value: 50	0

Parameter	Description	Type	Size	Default						
pingserver-flip-timeout	Time to wait in minutes before renegotiating after a remote IP monitoring failover.	integer	Minimum value: 6 Maximum value: 2147483647	60						
pingserver-monitor-interface	Interfaces to check for remote IP monitoring.	user	Not Specified							
pingserver-secondary-force-reset	Enable to force the cluster to negotiate after a remote IP monitoring failover.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable force reset of secondary member after PING server failure.</td></tr><tr><td><i>disable</i></td><td>Disable force reset of secondary member after PING server failure.</td></tr></table>				Option	Description	<i>enable</i>	Enable force reset of secondary member after PING server failure.	<i>disable</i>	Disable force reset of secondary member after PING server failure.
Option	Description									
<i>enable</i>	Enable force reset of secondary member after PING server failure.									
<i>disable</i>	Disable force reset of secondary member after PING server failure.									
priority	Increase the priority to select the primary unit (0 - 255).	integer	Minimum value: 0 Maximum value: 255	128						
vcluster-id	ID.	integer	Minimum value: 1 Maximum value: 30	1						
vdom <name>	Virtual domain(s) in the virtual cluster. Virtual domain name.	string	Maximum length: 79							

config system ha-monitor

Configure HA monitor.

```
config system ha-monitor
    Description: Configure HA monitor.
    set monitor-vlan [enable|disable]
    set vlan-hb-interval {integer}
    set vlan-hb-lost-threshold {integer}
end
```

config system ha-monitor

Parameter	Description	Type	Size	Default
monitor-vlan	Enable/disable monitor VLAN interfaces.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable monitor VLAN interfaces.		
	<i>disable</i>	Disable monitor VLAN interfaces.		
vlan-hb-interval	Configure heartbeat interval (seconds).	integer	Minimum value: 1 Maximum value: 30	5
vlan-hb-lost-threshold	VLAN lost heartbeat threshold (1 - 60).	integer	Minimum value: 1 Maximum value: 60	3

config system health-check-fortiguard

SD-WAN status checking or health checking. Identify a server predefined by FortiGuard and determine how SD-WAN verifies that FGT can communicate with it.

```
config system health-check-fortiguard
    Description: SD-WAN status checking or health checking. Identify a server predefined by
FortiGuard and determine how SD-WAN verifies that FGT can communicate with it.
    edit <name>
        set obsolete {integer}

config system health-check-fortiguard

Parameter	Description	Type	Size	Default
name	Status check or predefined health-check targets name.	string	Maximum length: 35	
obsolete	Indicates whether Health Check service can be used. Read-only.	integer	Minimum value: 0 Maximum value: 255	0
protocol	Protocol name.	option	-	ping
	Option	Description		
	<i>ping</i>	Use PING to test the link with the server.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>tcp-echo</i>	Use TCP echo to test the link with the server.		
	<i>udp-echo</i>	Use UDP echo to test the link with the server.		
	<i>http</i>	Use HTTP-GET to test the link with the server.		
	<i>https</i>	Use HTTPS-GET to test the link with the server.		
	<i>twamp</i>	Use TWAMP to test the link with the server.		
	<i>dns</i>	Use DNS query to test the link with the server.		
	<i>tcp-connect</i>	Use a full TCP connection to test the link with the server.		
	<i>ftp</i>	Use FTP to test the link with the server.		
server	Status check or predefined health-check domain name.	string	Maximum length: 127

Parameter	Description	Type	Size	Default						
iec101-keepalive	Send periodic test frame for probing link status.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable the selected function.</td></tr><tr><td><i>enable</i></td><td>Enable the selected function.</td></tr></table>				Option	Description	<i>disable</i>	Disable the selected function.	<i>enable</i>	Enable the selected function.
	Option	Description								
	<i>disable</i>	Disable the selected function.								
<i>enable</i>	Enable the selected function.									
iec101-laddr-local	Link address of local.	integer	Minimum value: 1 Maximum value: 65534	1						
iec101-laddr-remote	Link address of remote.	integer	Minimum value: 1 Maximum value: 65535	2						

Parameter	Description	Type	Size	Default						
iec101-laddr-size	Link address size.	integer	Minimum value: 0 Maximum value: 2	1						
iec101-mode	Link layer transmission procedure.	option	-	balanced						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>balanced</i></td><td>Set IEC101 transmission mode to balanced.</td></tr><tr><td><i>unbalanced</i></td><td>Set IEC101 transmission mode to unbalanced.</td></tr></table>	Option	Description	<i>balanced</i>	Set IEC101 transmission mode to balanced.	<i>unbalanced</i>	Set IEC101 transmission mode to unbalanced.			
Option	Description									
<i>balanced</i>	Set IEC101 transmission mode to balanced.									
<i>unbalanced</i>	Set IEC101 transmission mode to unbalanced.									
iec101-t0	Time out for repetition of frames in milliseconds (1 - 30000, default = 500).	integer	Minimum value: 1 Maximum value: 30000	500						
iec101-trp	Time interval during which repetitions are permitted in milliseconds (1 - 300000, default = 2500).	integer	Minimum value: 1 Maximum value: 300000	2500						
iec101-use-ack-char	Use single character for ACK.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable the selected function.</td></tr><tr><td><i>enable</i></td><td>Enable the selected function.</td></tr></table>	Option	Description	<i>disable</i>	Disable the selected function.	<i>enable</i>	Enable the selected function.			
Option	Description									
<i>disable</i>	Disable the selected function.									
<i>enable</i>	Enable the selected function.									
iec104-k	Maximum number of outstanding I formate APDUs (1 - 32767, default = 12).	integer	Minimum value: 1 Maximum value: 32767	12						
iec104-t1	Time-out of send or test APDUs in seconds (1 - 255, default = 15).	integer	Minimum value: 1 Maximum value: 255	15						
iec104-t2	Time-out for acknowledges in case no data messages in seconds (1 - 255, default = 10).	integer	Minimum value: 1 Maximum value: 255	10						

Parameter	Description	Type	Size	Default						
iec104-t3	Time-out for sending test frames in case of a long idle state in seconds (1 - 172800, default = 20).	integer	Minimum value: 1 Maximum value: 172800	20						
iec104-w	Maximum number of latest acknowledge APDUs (1 - 32767, default = 8).	integer	Minimum value: 1 Maximum value: 32767	8						
modbus-serial-addr	Serial remote station address.	integer	Minimum value: 1 Maximum value: 247	1						
modbus-serial-mode	Serial transmission mode.	option	-	RTU						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>RTU</td><td>Set Modbus transmission mode to RTU.</td></tr><tr><td>ASCII</td><td>Set Modbus transmission mode to ASCII.</td></tr></table>				Option	Description	RTU	Set Modbus transmission mode to RTU.	ASCII	Set Modbus transmission mode to ASCII.
Option	Description									
RTU	Set Modbus transmission mode to RTU.									
ASCII	Set Modbus transmission mode to ASCII.									
modbus-serial-timeout-resp	Time out for serial remote station response in milliseconds (10 - 30000, default = 500).	integer	Minimum value: 10 Maximum value: 30000	500						
modbus-tcp-unit-id	TCP MBAP unit identifier.	integer	Minimum value: 0 Maximum value: 255	255						
port	Listening socket port.	integer	Minimum value: 1 Maximum value: 65535	0						
status	Enable/disable this connection.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable the selected function.</td></tr><tr><td>enable</td><td>Enable the selected function.</td></tr></table>				Option	Description	disable	Disable the selected function.	enable	Enable the selected function.
Option	Description									
disable	Disable the selected function.									
enable	Enable the selected function.

Option	Description																									
200	Set TTY baudrate to 200.																									
300	Set TTY baudrate to 300.																									
600	Set TTY baudrate to 600.																									
1200	Set TTY baudrate to 1200.																									
2400	Set TTY baudrate to 2400.																									
4800	Set TTY baudrate to 4800.																									
9600	Set TTY baudrate to 9600.																									
19200	Set TTY baudrate to 19200.																									
38400	Set TTY baudrate to 38400.																									
115200	Set TTY baudrate to 115200.																									
tty-databits	TTY databits.	integer	Minimum value: 5 Maximum value: 8	8																						
tty-device	TTY device.	string	Maximum length: 35	serial0																						
tty-flowcontrol	TTY flowcontrol.	option	-	none																						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>Set TTY flow control to none.</td></tr><tr><td>xon-xoff</td><td>Set TTY flow control to xon/xoff.</td></tr><tr><td>hw</td><td>Set TTY flow control to hardware.</td></tr></table>	Option	Description	none	Set TTY flow control to none.	xon-xoff	Set TTY flow control to xon/xoff.	hw	Set TTY flow control to hardware.																	
Option	Description																									
none	Set TTY flow control to none.																									
xon-xoff	Set TTY flow control to xon/xoff.																									
hw	Set TTY flow control to hardware.																									
tty-parity	TTY parity.	option	-	even																						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>Set TTY parity to none.</td></tr><tr><td>odd</td><td>Set TTY parity to odd.</td></tr><tr><td>even</td><td>Set TTY parity to even.</td></tr></table>	Option	Description	none	Set TTY parity to none.	odd	Set TTY parity to odd.	even	Set TTY parity to even.																	
Option	Description																									
none	Set TTY parity to none.																									
odd	Set TTY parity to odd.																									
even	Set TTY parity to even.																									

Parameter	Description	Type	Size	Default								
tty-stopbits	TTY stopbits.	integer	Minimum value: 1 Maximum value: 2	1								
type	Connection type.	option	-	iec101-104								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>iec101-104</i></td><td>Convert between IEC60870-5-101 and IEC60870-5-104.</td></tr><tr><td><i>modbus-serial-tcp</i></td><td>Convert between Modbus Serial and Modbus TCP.</td></tr><tr><td><i>raw</i></td><td>Re-direct traffic from TTY to socket without conversion.</td></tr></table>				Option	Description	<i>iec101-104</i>	Convert between IEC60870-5-101 and IEC60870-5-104.	<i>modbus-serial-tcp</i>	Convert between Modbus Serial and Modbus TCP.	<i>raw</i>	Re-direct traffic from TTY to socket without conversion.
Option	Description											
<i>iec101-104</i>	Convert between IEC60870-5-101 and IEC60870-5-104.											
<i>modbus-serial-tcp</i>	Convert between Modbus Serial and Modbus TCP.											
<i>raw</i>	Re-direct traffic from TTY to socket without conversion.

Parameter	Description	Type	Size	Default																												
algorithm	Frame distribution algorithm.	option	-	L4																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>L2</td><td>Use layer 2 address for distribution.</td></tr><tr><td>L3</td><td>Use layer 3 address for distribution.</td></tr><tr><td>L4</td><td>Use layer 4 information for distribution.</td></tr><tr><td>Source-MAC</td><td>Use source MAC address for distribution.</td></tr></table>	Option	Description	L2	Use layer 2 address for distribution.	L3	Use layer 3 address for distribution.	L4	Use layer 4 information for distribution.	Source-MAC	Use source MAC address for distribution.																					
	Option	Description																														
	L2	Use layer 2 address for distribution.																														
	L3	Use layer 3 address for distribution.																														
	L4	Use layer 4 information for distribution.																														
Source-MAC	Use source MAC address for distribution.																															
alias	Alias will be displayed with the interface name to make it easier to distinguish.	string	Maximum length: 25																													
allowaccess	Permitted types of management access to this interface.	option	-																													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ping</td><td>PING access.</td></tr><tr><td>https</td><td>HTTPS access.</td></tr><tr><td>ssh</td><td>SSH access.</td></tr><tr><td>snmp</td><td>SNMP access.</td></tr><tr><td>http</td><td>HTTP access.</td></tr><tr><td>telnet</td><td>TELNET access.</td></tr><tr><td>fgfm</td><td>FortiManager access.</td></tr><tr><td>radius-acct</td><td>RADIUS accounting access.</td></tr><tr><td>probe-response</td><td>Probe access.</td></tr><tr><td>fabric</td><td>Security Fabric access.</td></tr><tr><td>ftm</td><td>FTM access.</td></tr><tr><td>speed-test</td><td>Speed test access.</td></tr><tr><td>scim</td><td>System for Cross-domain Identity Management (SCIM) access.</td></tr></table>	Option	Description	ping	PING access.	https	HTTPS access.	ssh	SSH access.	snmp	SNMP access.	http	HTTP access.	telnet	TELNET access.	fgfm	FortiManager access.	radius-acct	RADIUS accounting access.	probe-response	Probe access.	fabric	Security Fabric access.	ftm	FTM access.	speed-test	Speed test access.	scim	System for Cross-domain Identity Management (SCIM) access.			
	Option	Description																														
	ping	PING access.																														
	https	HTTPS access.																														
	ssh	SSH access.																														
	snmp	SNMP access.																														
	http	HTTP access.																														
	telnet	TELNET access.																														
	fgfm	FortiManager access.																														
	radius-acct	RADIUS accounting access.																														
	probe-response	Probe access.																														
	fabric	Security Fabric access.																														
	ftm	FTM access.																														
speed-test	Speed test access.																															
scim	System for Cross-domain Identity Management (SCIM) access.																															
annex *	Configure xDSL annex type.	option	-	a																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>a</td><td>xDSL Annex A</td></tr><tr><td>b</td><td>xDSL Annex B</td></tr><tr><td>j</td><td>xDSL Annex J</td></tr></table>	Option	Description	a	xDSL Annex A	b	xDSL Annex B	j	xDSL Annex J																							
	Option	Description																														
	a	xDSL Annex A																														
b	xDSL Annex B																															
j	xDSL Annex J																															

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>bjm</i></td><td>xDSL Annex BJM</td></tr><tr><td><i>i</i></td><td>xDSL Annex I</td></tr><tr><td><i>al</i></td><td>xDSL Annex AL</td></tr><tr><td><i>m</i></td><td>xDSL Annex M</td></tr><tr><td><i>aijlm</i></td><td>xDSL Annex AIJLM</td></tr></table>	Option	Description	<i>bjm</i>	xDSL Annex BJM	<i>i</i>	xDSL Annex I	<i>al</i>	xDSL Annex AL	<i>m</i>	xDSL Annex M	<i>aijlm</i>	xDSL Annex AIJLM			
	Option	Description														
	<i>bjm</i>	xDSL Annex BJM														
	<i>i</i>	xDSL Annex I														
	<i>al</i>	xDSL Annex AL														
	<i>m</i>	xDSL Annex M														
	<i>aijlm</i>	xDSL Annex AIJLM														
ap-discover	Enable/disable automatic registration of unknown FortiAP devices.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic registration of unknown FortiAP devices.</td></tr><tr><td><i>disable</i></td><td>Disable automatic registration of unknown FortiAP devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic registration of unknown FortiAP devices.	<i>disable</i>	Disable automatic registration of unknown FortiAP devices.									
	Option	Description														
	<i>enable</i>	Enable automatic registration of unknown FortiAP devices.														
	<i>disable</i>	Disable automatic registration of unknown FortiAP devices.														
arpforward	Enable/disable ARP forwarding.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ARP forwarding.</td></tr><tr><td><i>disable</i></td><td>Disable ARP forwarding.</td></tr></table>	Option	Description	<i>enable</i>	Enable ARP forwarding.	<i>disable</i>	Disable ARP forwarding.									
	Option	Description														
	<i>enable</i>	Enable ARP forwarding.														
<i>disable</i>	Disable ARP forwarding.															
atm-protocol *	ATM protocol.	option	-	none												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Not over ATM.</td></tr><tr><td><i>ipoa</i></td><td>IPoA RFC2684.</td></tr></table>	Option	Description	<i>none</i>	Not over ATM.	<i>ipoa</i>	IPoA RFC2684.									
	Option	Description														
	<i>none</i>	Not over ATM.														
<i>ipoa</i>	IPoA RFC2684.															
auth-cert	HTTPS server certificate.	string	Maximum length: 35													
auth-portal-addr	Address of captive portal.	string	Maximum length: 63													
auth-type	PPP authentication type to use.	option	-	auto												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically choose authentication.</td></tr><tr><td><i>pap</i></td><td>PAP authentication.</td></tr><tr><td><i>chap</i></td><td>CHAP authentication.</td></tr><tr><td><i>mschapv1</i></td><td>MS-CHAPv1 authentication.</td></tr></table>	Option	Description	<i>auto</i>	Automatically choose authentication.	<i>pap</i>	PAP authentication.	<i>chap</i>	CHAP authentication.	<i>mschapv1</i>	MS-CHAPv1 authentication.					
	Option	Description														
	<i>auto</i>	Automatically choose authentication.														
	<i>pap</i>	PAP authentication.														
	<i>chap</i>	CHAP authentication.														
<i>mschapv1</i>	MS-CHAPv1 authentication.															

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>mschapv2</i></td><td>MS-CHAPv2 authentication.</td></tr></table>				Option	Description	<i>mschapv2</i>	MS-CHAPv2 authentication.				
	Option	Description										
<i>mschapv2</i>	MS-CHAPv2 authentication.											
auto-auth-extension-device	Enable/disable automatic authorization of dedicated Fortinet extension device on this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic authorization of dedicated Fortinet extension device on this interface.</td></tr><tr><td><i>disable</i></td><td>Disable automatic authorization of dedicated Fortinet extension device on this interface.</td></tr></table>				Option	Description	<i>enable</i>	Enable automatic authorization of dedicated Fortinet extension device on this interface.	<i>disable</i>	Disable automatic authorization of dedicated Fortinet extension device on this interface.		
	Option	Description										
	<i>enable</i>	Enable automatic authorization of dedicated Fortinet extension device on this interface.										
<i>disable</i>	Disable automatic authorization of dedicated Fortinet extension device on this interface.											
bandwidth-measure-time	Bandwidth measure time.	integer	Minimum value: 0 Maximum value: 4294967295	0								
bfd	Bidirectional Forwarding Detection (BFD) settings.	option	-	global								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>global</i></td><td>BFD behavior of this interface will be based on global configuration.</td></tr><tr><td><i>enable</i></td><td>Enable BFD on this interface and ignore global configuration.</td></tr><tr><td><i>disable</i></td><td>Disable BFD on this interface and ignore global configuration.</td></tr></table>				Option	Description	<i>global</i>	BFD behavior of this interface will be based on global configuration.	<i>enable</i>	Enable BFD on this interface and ignore global configuration.	<i>disable</i>	Disable BFD on this interface and ignore global configuration.
	Option	Description										
	<i>global</i>	BFD behavior of this interface will be based on global configuration.										
	<i>enable</i>	Enable BFD on this interface and ignore global configuration.										
<i>disable</i>	Disable BFD on this interface and ignore global configuration.											
bfd-desired-min-tx	BFD desired minimal transmit interval.	integer	Minimum value: 1 Maximum value: 100000	250								
bfd-detect-mult	BFD detection multiplier.	integer	Minimum value: 1 Maximum value: 50	3								
bfd-required-min-rx	BFD required minimal receive interval.	integer	Minimum value: 1 Maximum value: 100000	250								
broadcast-forward	Enable/disable broadcast forwarding.	option	-	disable								

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable broadcast forwarding.		
	<i>disable</i>	Disable broadcast forwarding.		
cli-conn-status	CLI connection status. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0
color	Color of icon on the GUI.	integer	Minimum value: 0 Maximum value: 32	0
dedicated-to	Configure interface for single purpose.	option	-	none
	Option Description			
	<i>none</i>	Interface not dedicated for any purpose.		
	<i>management</i>	Dedicate this interface for management purposes only.		
default-purdue-level	default purdue level of device detected on this interface.	option	-	3
	Option Description			
	1	Level 1 - Basic Control		
	1.5	Level 1.5		
	2	Level 2 - Area Supervisory Control		
	2.5	Level 2.5		
	3	Level 3 - Operations & Control		
	3.5	Level 3.5		
	4	Level 4 - Business Planning & Logistics		
	5	Level 5 - Enterprise Network		
	5.5	Level 5.5		
defaultgw	Enable to get the gateway IP from the DHCP or PPPoE server.	option	-	enable

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable default gateway.</td></tr><tr><td><i>disable</i></td><td>Disable default gateway.</td></tr></table>	Option	Description	<i>enable</i>	Enable default gateway.	<i>disable</i>	Disable default gateway.					
	Option	Description										
	<i>enable</i>	Enable default gateway.										
<i>disable</i>	Disable default gateway.											
description	Description.	var-string	Maximum length: 255									
detected-peer-mtu	MTU of detected peer (0 - 4294967295). Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0								
detectprotocol	Protocols used to detect the server.	option	-	ping								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING.</td></tr><tr><td><i>tcp-echo</i></td><td>TCP echo.</td></tr><tr><td><i>udp-echo</i></td><td>UDP echo.</td></tr></table>	Option	Description	<i>ping</i>	PING.	<i>tcp-echo</i>	TCP echo.	<i>udp-echo</i>	UDP echo.			
	Option	Description										
	<i>ping</i>	PING.										
	<i>tcp-echo</i>	TCP echo.										
<i>udp-echo</i>	UDP echo.											
detectserver	Gateway's ping server for this IP.	user	Not Specified									
device-identification	Enable/disable passively gathering of device identity information about the devices on the network connected to this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable passive gathering of identity information about hosts.</td></tr><tr><td><i>disable</i></td><td>Disable passive gathering of identity information about hosts.</td></tr></table>	Option	Description	<i>enable</i>	Enable passive gathering of identity information about hosts.	<i>disable</i>	Disable passive gathering of identity information about hosts.					
	Option	Description										
	<i>enable</i>	Enable passive gathering of identity information about hosts.										
<i>disable</i>	Disable passive gathering of identity information about hosts.											
device-user-identification	Enable/disable passive gathering of user identity information about users on this interface.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable passive gathering of user identity information about users.</td></tr><tr><td><i>disable</i></td><td>Disable passive gathering of user identity information about users.</td></tr></table>	Option	Description	<i>enable</i>	Enable passive gathering of user identity information about users.	<i>disable</i>	Disable passive gathering of user identity information about users.					
	Option	Description										
	<i>enable</i>	Enable passive gathering of user identity information about users.										
<i>disable</i>	Disable passive gathering of user identity information about users.											

Parameter	Description	Type	Size	Default
devindex	Device Index. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0
dhcp-broadcast-flag	Enable/disable setting of the broadcast flag in messages sent by the DHCP client (default = enable).	option	-	enable
	Option		Description	
	<i>disable</i>		Disable broadcast flag.	
	<i>enable</i>		Enable broadcast flag.	
dhcp-classless-route-addition	Enable/disable addition of classless static routes retrieved from DHCP server.	option	-	disable **
	Option		Description	
	<i>enable</i>		Enable addition of classless static routes retrieved from DHCP server.	
	<i>disable</i>		Disable addition of classless static routes retrieved from DHCP server.	
dhcp-client-identifier	DHCP client identifier.	string	Maximum length: 48	
dhcp-relay-agent-option	Enable/disable DHCP relay agent option.	option	-	enable
	Option		Description	
	<i>enable</i>		Enable DHCP relay agent option.	
	<i>disable</i>		Disable DHCP relay agent option.	
dhcp-relay-allow-no-end-option	Enable/disable relaying DHCP messages with no end option.	option	-	disable
	Option		Description	
	<i>disable</i>		Disable relaying DHCP messages with no end option.	
	<i>enable</i>		Enable relaying DHCP messages with no end option.	
dhcp-relay-circuit-id	DHCP relay circuit ID.	string	Maximum length: 64	
dhcp-relay-interface	Specify outgoing interface to reach server.	string	Maximum length: 15	

Parameter	Description	Type	Size	Default								
dhcp-relay-interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.			
Option	Description											
auto	Set outgoing interface automatically.											
sdwan	Set outgoing interface by SD-WAN or policy routing rules.											
specify	Set outgoing interface manually.											
dhcp-relay-ip	DHCP relay IP address.	user	Not Specified									
dhcp-relay-link-selection	DHCP relay link selection.	ipv4-address	Not Specified	0.0.0.0								
dhcp-relay-request-all-server	Enable/disable sending of DHCP requests to all servers.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Send DHCP requests only to a matching server.</td></tr><tr><td>enable</td><td>Send DHCP requests to all servers.</td></tr></table>	Option	Description	disable	Send DHCP requests only to a matching server.	enable	Send DHCP requests to all servers.					
Option	Description											
disable	Send DHCP requests only to a matching server.											
enable	Send DHCP requests to all servers.											
dhcp-relay-service	Enable/disable allowing this interface to act as a DHCP relay.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>None.</td></tr><tr><td>enable</td><td>DHCP relay agent.</td></tr></table>	Option	Description	disable	None.	enable	DHCP relay agent.					
Option	Description											
disable	None.											
enable	DHCP relay agent.											
dhcp-relay-source-ip	IP address used by the DHCP relay as its source IP.	ipv4-address	Not Specified	0.0.0.0								
dhcp-relay-type	DHCP relay type (regular or IPsec).	option	-	regular								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>regular</td><td>Regular DHCP relay.</td></tr><tr><td>ipsec</td><td>DHCP relay for IPsec.</td></tr></table>	Option	Description	regular	Regular DHCP relay.	ipsec	DHCP relay for IPsec.					
Option	Description											
regular	Regular DHCP relay.											
ipsec	DHCP relay for IPsec.											
dhcp-relay-vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	4294967295								

Parameter	Description	Type	Size	Default								
dhcp-renew-time	DHCP renew time in seconds (300-604800), 0 means use the renew time provided by the server.	integer	Minimum value: 300 Maximum value: 604800	0								
dhcp-smart-relay	Enable/disable DHCP smart relay.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable DHCP smart relay.</td></tr><tr><td><i>enable</i></td><td>Enable DHCP smart relay.</td></tr></table>	Option	Description	<i>disable</i>	Disable DHCP smart relay.	<i>enable</i>	Enable DHCP smart relay.					
Option	Description											
<i>disable</i>	Disable DHCP smart relay.											
<i>enable</i>	Enable DHCP smart relay.											
disc-retry-timeout	Time in seconds to wait before retrying to start a PPPoE discovery, 0 means no timeout.	integer	Minimum value: 0 Maximum value: 4294967295	1								
distance	Distance for routes learned through PPPoE or DHCP, lower distance indicates preferred route.	integer	Minimum value: 1 Maximum value: 255	5								
dns-server-override	Enable/disable use DNS acquired by DHCP or PPPoE.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Use DNS acquired by DHCP or PPPoE.</td></tr><tr><td><i>disable</i></td><td>No not use DNS acquired by DHCP or PPPoE.</td></tr></table>	Option	Description	<i>enable</i>	Use DNS acquired by DHCP or PPPoE.	<i>disable</i>	No not use DNS acquired by DHCP or PPPoE.					
Option	Description											
<i>enable</i>	Use DNS acquired by DHCP or PPPoE.											
<i>disable</i>	No not use DNS acquired by DHCP or PPPoE.											
dns-server-protocol	DNS transport protocols.	option	-	cleartext								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>cleartext</i></td><td>DNS over UDP/53, DNS over TCP/53.</td></tr><tr><td><i>dot</i></td><td>DNS over TLS/853.</td></tr><tr><td><i>doh</i></td><td>DNS over HTTPS/443.</td></tr></table>	Option	Description	<i>cleartext</i>	DNS over UDP/53, DNS over TCP/53.	<i>dot</i>	DNS over TLS/853.	<i>doh</i>	DNS over HTTPS/443.			
Option	Description											
<i>cleartext</i>	DNS over UDP/53, DNS over TCP/53.											
<i>dot</i>	DNS over TLS/853.											
<i>doh</i>	DNS over HTTPS/443.											
drop-fragment	Enable/disable drop fragment packets.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable/disable drop fragment packets.</td></tr><tr><td><i>disable</i></td><td>Do not drop fragment packets.</td></tr></table>	Option	Description	<i>enable</i>	Enable/disable drop fragment packets.	<i>disable</i>	Do not drop fragment packets.					
Option	Description											
<i>enable</i>	Enable/disable drop fragment packets.											
<i>disable</i>	Do not drop fragment packets.											

Parameter	Description	Type	Size	Default
drop-overlapped-fragment	Enable/disable drop overlapped fragment packets.	option	-	disable
	Option Description			
	<i>enable</i>	Enable drop of overlapped fragment packets.		
	<i>disable</i>	Disable drop of overlapped fragment packets.		
eap-ca-cert	EAP CA certificate name.	string	Maximum length: 79	
eap-identity	EAP identity.	string	Maximum length: 35	
eap-method	EAP method.	option	-	
	Option Description			
	<i>tls</i>	TLS.		
	<i>peap</i>	PEAP.		
eap-password	EAP password.	password	Not Specified	
eap-supPLICant	Enable/disable EAP-SupPLICant.	option	-	disable
	Option Description			
	<i>enable</i>	Enable EAP SupPLICant.		
	<i>disable</i>	Disable EAP SupPLICant.		
eap-user-cert	EAP user certificate name.	string	Maximum length: 35	
egress-cos *	Override outgoing CoS in user VLAN tag.	option	-	disable
	Option Description			
	<i>disable</i>	Disable.		
	<i>cos0</i>	CoS 0.		
	<i>cos1</i>	CoS 1.		
	<i>cos2</i>	CoS 2.		
	<i>cos3</i>	CoS 3.		
	<i>cos4</i>	CoS 4.		
	<i>cos5</i>	CoS 5.		

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cos6</td><td>CoS 6.</td></tr><tr><td>cos7</td><td>CoS 7.</td></tr></table>				Option	Description	cos6	CoS 6.	cos7	CoS 7.
	Option	Description								
	cos6	CoS 6.								
cos7	CoS 7.									
egress-shaping-profile	Outgoing traffic shaping profile.	string	Maximum length: 35							
eip *	External IP. Read-only.	ipv4-address-any	Not Specified	0.0.0.0						
estimated-downstream-bandwidth	Estimated maximum downstream bandwidth (kbps). Used to estimate link utilization.	integer	Minimum value: 0 Maximum value: 4294967295	0						
estimated-upstream-bandwidth	Estimated maximum upstream bandwidth (kbps). Used to estimate link utilization.	integer	Minimum value: 0 Maximum value: 4294967295	0						
exclude-signatures	Exclude IOT or OT application signatures.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>iot</td><td>Exclude IOT appctrl signatures.</td></tr><tr><td>ot</td><td>Exclude OT appctrl signatures.</td></tr></table>				Option	Description	iot	Exclude IOT appctrl signatures.	ot	Exclude OT appctrl signatures.
	Option	Description								
	iot	Exclude IOT appctrl signatures.								
ot	Exclude OT appctrl signatures.									
explicit-ftp-proxy	Enable/disable the explicit FTP proxy on this interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable explicit FTP proxy on this interface.</td></tr><tr><td>disable</td><td>Disable explicit FTP proxy on this interface.</td></tr></table>				Option	Description	enable	Enable explicit FTP proxy on this interface.	disable	Disable explicit FTP proxy on this interface.
	Option	Description								
	enable	Enable explicit FTP proxy on this interface.								
disable	Disable explicit FTP proxy on this interface.									
explicit-web-proxy	Enable/disable the explicit web proxy on this interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable explicit Web proxy on this interface.</td></tr><tr><td>disable</td><td>Disable explicit Web proxy on this interface.</td></tr></table>				Option	Description	enable	Enable explicit Web proxy on this interface.	disable	Disable explicit Web proxy on this interface.
	Option	Description								
	enable	Enable explicit Web proxy on this interface.								
disable	Disable explicit Web proxy on this interface.									

Parameter	Description	Type	Size	Default								
external	Enable/disable identifying the interface as an external interface (which usually means it's connected to the Internet).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable identifying the interface as an external interface.</td></tr><tr><td><i>disable</i></td><td>Disable identifying the interface as an external interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable identifying the interface as an external interface.	<i>disable</i>	Disable identifying the interface as an external interface.					
Option	Description											
<i>enable</i>	Enable identifying the interface as an external interface.											
<i>disable</i>	Disable identifying the interface as an external interface.											
fail-action-on-extender	Action on FortiExtender when interface fail.	option	-	soft-restart								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>soft-restart</i></td><td>Soft-restart-on-extender.</td></tr><tr><td><i>hard-restart</i></td><td>Hard-restart-on-extender.</td></tr><tr><td><i>reboot</i></td><td>Reboot-on-extender.</td></tr></table>	Option	Description	<i>soft-restart</i>	Soft-restart-on-extender.	<i>hard-restart</i>	Hard-restart-on-extender.	<i>reboot</i>	Reboot-on-extender.			
Option	Description											
<i>soft-restart</i>	Soft-restart-on-extender.											
<i>hard-restart</i>	Hard-restart-on-extender.											
<i>reboot</i>	Reboot-on-extender.											
fail-alert-interfaces <name>	Names of the FortiGate interfaces to which the link failure alert is sent. Names of the non-virtual interface.	string	Maximum length: 15									
fail-alert-method	Select link-failed-signal or link-down method to alert about a failed link.	option	-	link-down								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>link-failed-signal</i></td><td>Link-failed-signal.</td></tr><tr><td><i>link-down</i></td><td>Link-down.</td></tr></table>	Option	Description	<i>link-failed-signal</i>	Link-failed-signal.	<i>link-down</i>	Link-down.					
Option	Description											
<i>link-failed-signal</i>	Link-failed-signal.											
<i>link-down</i>	Link-down.											
fail-detect	Enable/disable fail detection features for this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable interface failed option status.</td></tr><tr><td><i>disable</i></td><td>Disable interface failed option status.</td></tr></table>	Option	Description	<i>enable</i>	Enable interface failed option status.	<i>disable</i>	Disable interface failed option status.					
Option	Description											
<i>enable</i>	Enable interface failed option status.											
<i>disable</i>	Disable interface failed option status.											
fail-detect-option	Options for detecting that this interface has failed.	option	-	link-down								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>detectserver</i></td><td>Use a ping server to determine if the interface has failed.</td></tr><tr><td><i>link-down</i></td><td>Use port detection to determine if the interface has failed.</td></tr></table>	Option	Description	<i>detectserver</i>	Use a ping server to determine if the interface has failed.	<i>link-down</i>	Use port detection to determine if the interface has failed.					
Option	Description											
<i>detectserver</i>	Use a ping server to determine if the interface has failed.											
<i>link-down</i>	Use port detection to determine if the interface has failed.											

Parameter	Description	Type	Size	Default						
fortilink *	Enable FortiLink to dedicate this interface to manage other Fortinet devices.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiLink to dedicated interface for managing FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable FortiLink to dedicated interface for managing FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiLink to dedicated interface for managing FortiSwitch devices.	<i>disable</i>	Disable FortiLink to dedicated interface for managing FortiSwitch devices.			
Option	Description									
<i>enable</i>	Enable FortiLink to dedicated interface for managing FortiSwitch devices.									
<i>disable</i>	Disable FortiLink to dedicated interface for managing FortiSwitch devices.									
fortilink-backup-link	FortiLink split interface backup link. Read-only.	integer	Minimum value: 0 Maximum value: 255	0						
fortilink-neighbor-detect	Protocol for FortiGate neighbor discovery.	option	-	lldp						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>lldp</i></td><td>Detect FortiLink neighbors using LLDP protocol.</td></tr><tr><td><i>fortilink</i></td><td>Detect FortiLink neighbors using FortiLink protocol.</td></tr></table>	Option	Description	<i>lldp</i>	Detect FortiLink neighbors using LLDP protocol.	<i>fortilink</i>	Detect FortiLink neighbors using FortiLink protocol.			
Option	Description									
<i>lldp</i>	Detect FortiLink neighbors using LLDP protocol.									
<i>fortilink</i>	Detect FortiLink neighbors using FortiLink protocol.									
fortilink-split-interface	Enable/disable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.</td></tr><tr><td><i>disable</i></td><td>Disable FortiLink split interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.	<i>disable</i>	Disable FortiLink split interface.			
Option	Description									
<i>enable</i>	Enable FortiLink split interface to connect member link to different FortiSwitch in stack for uplink redundancy.									
<i>disable</i>	Disable FortiLink split interface.									
forward-domain	Transparent mode forward domain.	integer	Minimum value: 0 Maximum value: 2147483647	0						
forward-error-correction *	Enable/disable forward error correction (FEC).	option	-	none						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>none</td></tr><tr><td><i>disable</i></td><td>Disable forward error correction (FEC).</td></tr></table>	Option	Description	<i>none</i>	none	<i>disable</i>	Disable forward error correction (FEC).			
Option	Description									
<i>none</i>	none									
<i>disable</i>	Disable forward error correction (FEC).									

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>cl91-rs-fec</i>	Reed-Solomon (FEC CL91).		
	<i>cl74-fc-fec</i>	Fire-Code (FEC CL74).		
	<i>auto</i>	Negotaite forward error correction (FEC).		
gateway-address *	Gateway address.	ipv4-address	Not Specified	0.0.0.0
gwaddr *	Gateway address.	ipv4-address	Not Specified	0.0.0.0
gwdetect	Enable/disable detect gateway alive for first.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable detect gateway alive for first.		
	<i>disable</i>	Disable detect gateway alive for first.		
ha-priority	HA election priority for the PING server.	integer	Minimum value: 1 Maximum value: 50	1
icmp-accept-redirect	Enable/disable ICMP accept redirect.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable ICMP accept redirect.		
	<i>disable</i>	Disable ICMP accept redirect.		
icmp-send-redirect	Enable/disable sending of ICMP redirects.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable sending of ICMP redirects.		
	<i>disable</i>	Disable sending of ICMP redirects.		
ident-accept	Enable/disable authentication for this interface.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable determining a user's identity from packet identification.		
	<i>disable</i>	Disable determining a user's identity from packet identification.		

Parameter	Description	Type	Size	Default																				
idle-timeout	PPPoE auto disconnect after idle timeout seconds, 0 means no timeout.	integer	Minimum value: 0 Maximum value: 32767	0																				
ike-saml-server	Configure IKE authentication SAML server.	string	Maximum length: 35																					
inbandwidth	Bandwidth limit for incoming traffic (0 - 80000000 kbps), 0 means unlimited.	integer	Minimum value: 0 Maximum value: 80000000 **	0																				
ingress-cos *	Override incoming CoS in user VLAN tag on VLAN interface or assign a priority VLAN tag on physical interface.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable.</td></tr><tr><td>cos0</td><td>CoS 0.</td></tr><tr><td>cos1</td><td>CoS 1.</td></tr><tr><td>cos2</td><td>CoS 2.</td></tr><tr><td>cos3</td><td>CoS 3.</td></tr><tr><td>cos4</td><td>CoS 4.</td></tr><tr><td>cos5</td><td>CoS 5.</td></tr><tr><td>cos6</td><td>CoS 6.</td></tr><tr><td>cos7</td><td>CoS 7.</td></tr></table>				Option	Description	disable	Disable.	cos0	CoS 0.	cos1	CoS 1.	cos2	CoS 2.	cos3	CoS 3.	cos4	CoS 4.	cos5	CoS 5.	cos6	CoS 6.	cos7	CoS 7.
Option	Description																							
disable	Disable.																							
cos0	CoS 0.																							
cos1	CoS 1.																							
cos2	CoS 2.																							
cos3	CoS 3.																							
cos4	CoS 4.																							
cos5	CoS 5.																							
cos6	CoS 6.																							
cos7	CoS 7.																							
ingress-shaping-profile	Incoming traffic shaping profile.	string	Maximum length: 35																					
ingress-spillover-threshold	Ingress Spillover threshold (0 - 16776000 kbps), 0 means unlimited.	integer	Minimum value: 0 Maximum value: 16776000	0																				
interconnect-profile *	Set interconnect profile.	option	-	default																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>default interconnect profile</td></tr></table>				Option	Description	default	default interconnect profile																
Option	Description																							
default	default interconnect profile																							

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>profile1</i></td><td>interconnect profile1 [(10G & IC > 7m/20db-loss) or (25G/27G & IC < 1m)]</td></tr><tr><td><i>profile2</i></td><td>interconnect profile2 [(27G in AP (106G) Auto Profile)]</td></tr></table>	Option	Description	<i>profile1</i>	interconnect profile1 [(10G & IC > 7m/20db-loss) or (25G/27G & IC < 1m)]	<i>profile2</i>	interconnect profile2 [(27G in AP (106G) Auto Profile)]					
	Option	Description										
	<i>profile1</i>	interconnect profile1 [(10G & IC > 7m/20db-loss) or (25G/27G & IC < 1m)]										
<i>profile2</i>	interconnect profile2 [(27G in AP (106G) Auto Profile)]											
interface	Interface name.	string	Maximum length: 15									
internal	Implicitly created.	integer	Minimum value: 0 Maximum value: 255	0								
ip	Interface IPv4 address and subnet mask, syntax: X.X.X.X/24.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0								
ip-managed-by-fortiipam	Enable/disable automatic IP address assignment of this interface by FortiIPAM.	option	-	inherit-global								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>inherit-global</i></td><td>Control automatic IP address assignment status using the central FortiIPAM config.</td></tr><tr><td><i>enable</i></td><td>Enable automatic IP address assignment of this interface by FortiIPAM.</td></tr><tr><td><i>disable</i></td><td>Disable automatic IP address assignment of this interface by FortiIPAM.</td></tr></table>	Option	Description	<i>inherit-global</i>	Control automatic IP address assignment status using the central FortiIPAM config.	<i>enable</i>	Enable automatic IP address assignment of this interface by FortiIPAM.	<i>disable</i>	Disable automatic IP address assignment of this interface by FortiIPAM.			
	Option	Description										
	<i>inherit-global</i>	Control automatic IP address assignment status using the central FortiIPAM config.										
	<i>enable</i>	Enable automatic IP address assignment of this interface by FortiIPAM.										
<i>disable</i>	Disable automatic IP address assignment of this interface by FortiIPAM.											
ipmac	Enable/disable IP/MAC binding.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IP/MAC binding.</td></tr><tr><td><i>disable</i></td><td>Disable IP/MAC binding.</td></tr></table>	Option	Description	<i>enable</i>	Enable IP/MAC binding.	<i>disable</i>	Disable IP/MAC binding.					
	Option	Description										
	<i>enable</i>	Enable IP/MAC binding.										
<i>disable</i>	Disable IP/MAC binding.											
ips-sniffer-mode	Enable/disable the use of this interface as a one-armed sniffer.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPS sniffer mode.</td></tr><tr><td><i>disable</i></td><td>Disable IPS sniffer mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPS sniffer mode.	<i>disable</i>	Disable IPS sniffer mode.					
	Option	Description										
	<i>enable</i>	Enable IPS sniffer mode.										
<i>disable</i>	Disable IPS sniffer mode.											
ipunnumbered	Unnumbered IP used for PPPoE interfaces for which no unique local address is provided.	ipv4-address	Not Specified	0.0.0.0								
l2forward	Enable/disable l2 forwarding.	option	-	disable								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable L2 forwarding.		
	<i>disable</i>	Disable L2 forwarding.		
l2tp-client *	Enable/disable this interface as a Layer 2 Tunnelling Protocol (L2TP) client.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable L2TP client.		
	<i>disable</i>	Disable L2TP client.		
l2tp-ha-secondary	LACP HA secondary member.	option	-	enable
	Option	Description		
	<i>enable</i>	Allow HA secondary member to send/receive LACP messages.		
	<i>disable</i>	Block HA secondary member from sending/receiving LACP messages.		
l2tp-mode	LACP mode.	option	-	active
	Option	Description		
	<i>static</i>	Use static aggregation, do not send and ignore any LACP messages.		
	<i>passive</i>	Passively use LACP to negotiate 802.3ad aggregation.		
	<i>active</i>	Actively use LACP to negotiate 802.3ad aggregation.		
l2tp-speed	How often the interface sends LACP messages.	option	-	slow
	Option	Description		
	<i>slow</i>	Send LACP message every 30 seconds.		
	<i>fast</i>	Send LACP message every second.		
lcp-echo-interval	Time in seconds between PPPoE Link Control Protocol (LCP) echo requests.	integer	Minimum value: 0 Maximum value: 32767	5
lcp-max-echo-fails	Maximum missed LCP echo messages before disconnect.	integer	Minimum value: 0 Maximum value: 32767	3

Parameter	Description	Type	Size	Default														
link-up-delay	Number of milliseconds to wait before considering a link is up.	integer	Minimum value: 50 Maximum value: 3600000	50														
lldp-network-policy	LLDP-MED network policy profile.	string	Maximum length: 35															
lldp-reception	Enable/disable Link Layer Discovery Protocol (LLDP) reception.	option	-	vdom														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable reception of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>disable</i></td><td>Disable reception of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>vdom</i></td><td>Use VDOM Link Layer Discovery Protocol (LLDP) reception configuration setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable reception of Link Layer Discovery Protocol (LLDP).	<i>disable</i>	Disable reception of Link Layer Discovery Protocol (LLDP).	<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) reception configuration setting.									
Option	Description																	
<i>enable</i>	Enable reception of Link Layer Discovery Protocol (LLDP).																	
<i>disable</i>	Disable reception of Link Layer Discovery Protocol (LLDP).																	
<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) reception configuration setting.																	
lldp-transmission	Enable/disable Link Layer Discovery Protocol (LLDP) transmission.	option	-	vdom														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable transmission of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>disable</i></td><td>Disable transmission of Link Layer Discovery Protocol (LLDP).</td></tr><tr><td><i>vdom</i></td><td>Use VDOM Link Layer Discovery Protocol (LLDP) transmission configuration setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable transmission of Link Layer Discovery Protocol (LLDP).	<i>disable</i>	Disable transmission of Link Layer Discovery Protocol (LLDP).	<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) transmission configuration setting.									
Option	Description																	
<i>enable</i>	Enable transmission of Link Layer Discovery Protocol (LLDP).																	
<i>disable</i>	Disable transmission of Link Layer Discovery Protocol (LLDP).																	
<i>vdom</i>	Use VDOM Link Layer Discovery Protocol (LLDP) transmission configuration setting.																	
macaddr	Change the interface's MAC address.	mac-address	Not Specified	00:00:00:00:00:00														
managed-subnetwork-size	Number of IP addresses to be allocated by FortiPAM and used by this FortiGate unit's DHCP server settings.	option	-	256														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>32</td><td>Allocate a subnet with 32 IP addresses.</td></tr><tr><td>64</td><td>Allocate a subnet with 64 IP addresses.</td></tr><tr><td>128</td><td>Allocate a subnet with 128 IP addresses.</td></tr><tr><td>256</td><td>Allocate a subnet with 256 IP addresses.</td></tr><tr><td>512</td><td>Allocate a subnet with 512 IP addresses.</td></tr><tr><td>1024</td><td>Allocate a subnet with 1024 IP addresses.</td></tr></table>	Option	Description	32	Allocate a subnet with 32 IP addresses.	64	Allocate a subnet with 64 IP addresses.	128	Allocate a subnet with 128 IP addresses.	256	Allocate a subnet with 256 IP addresses.	512	Allocate a subnet with 512 IP addresses.	1024	Allocate a subnet with 1024 IP addresses.			
Option	Description																	
32	Allocate a subnet with 32 IP addresses.																	
64	Allocate a subnet with 64 IP addresses.																	
128	Allocate a subnet with 128 IP addresses.																	
256	Allocate a subnet with 256 IP addresses.																	
512	Allocate a subnet with 512 IP addresses.																	
1024	Allocate a subnet with 1024 IP addresses.																	

Parameter	Description	Type	Size	Default															
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>2048</td><td>Allocate a subnet with 2048 IP addresses.</td></tr><tr><td>4096</td><td>Allocate a subnet with 4096 IP addresses.</td></tr><tr><td>8192</td><td>Allocate a subnet with 8192 IP addresses.</td></tr><tr><td>16384</td><td>Allocate a subnet with 16384 IP addresses.</td></tr><tr><td>32768</td><td>Allocate a subnet with 32768 IP addresses.</td></tr><tr><td>65536</td><td>Allocate a subnet with 65536 IP addresses.</td></tr></table>		Option	Description	2048	Allocate a subnet with 2048 IP addresses.	4096	Allocate a subnet with 4096 IP addresses.	8192	Allocate a subnet with 8192 IP addresses.	16384	Allocate a subnet with 16384 IP addresses.	32768	Allocate a subnet with 32768 IP addresses.	65536	Allocate a subnet with 65536 IP addresses.			
	Option	Description																	
	2048	Allocate a subnet with 2048 IP addresses.																	
	4096	Allocate a subnet with 4096 IP addresses.																	
	8192	Allocate a subnet with 8192 IP addresses.																	
	16384	Allocate a subnet with 16384 IP addresses.																	
	32768	Allocate a subnet with 32768 IP addresses.																	
65536	Allocate a subnet with 65536 IP addresses.																		
management-ip	High Availability in-band management IP address of this interface.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0															
measured-downstream-bandwidth	Measured downstream bandwidth (kbps).	integer	Minimum value: 0 Maximum value: 4294967295	0															
measured-upstream-bandwidth	Measured upstream bandwidth (kbps).	integer	Minimum value: 0 Maximum value: 4294967295	0															
mediatype *	Select SFP media interface type	option	-	serdes-sfp **															
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>serdes-sfp</td><td>SFP using SerDes Media Interface</td></tr><tr><td>sgmii-sfp</td><td>SFP using SGMII Media Interface</td></tr><tr><td>serdes-copper-sfp</td><td>Copper SFP using SerDes media Interface.</td></tr></table>		Option	Description	serdes-sfp	SFP using SerDes Media Interface	sgmii-sfp	SFP using SGMII Media Interface	serdes-copper-sfp	Copper SFP using SerDes media Interface.									
	Option	Description																	
	serdes-sfp	SFP using SerDes Media Interface																	
	sgmii-sfp	SFP using SGMII Media Interface																	
serdes-copper-sfp	Copper SFP using SerDes media Interface.																		
member <interface-name>	Physical interfaces that belong to the aggregate or redundant interface. Physical interface name.	string	Maximum length: 79																
min-links	Minimum number of aggregated ports that must be up.	integer	Minimum value: 1 Maximum value: 32	1															
min-links-down	Action to take when less than the configured minimum number of links are active.	option	-	operational															

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>operational</i></td><td>Set the aggregate operationally down.</td></tr><tr><td><i>administrative</i></td><td>Set the aggregate administratively down.</td></tr></table>				Option	Description	<i>operational</i>	Set the aggregate operationally down.	<i>administrative</i>	Set the aggregate administratively down.		
	Option	Description										
	<i>operational</i>	Set the aggregate operationally down.										
<i>administrative</i>	Set the aggregate administratively down.											
mirroring-direction *	Port mirroring direction.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rx</i></td><td>Port mirroring receive direction only.</td></tr><tr><td><i>tx</i></td><td>Port mirroring transmit direction only.</td></tr><tr><td><i>both</i></td><td>Port mirroring both directions.</td></tr></table>				Option	Description	<i>rx</i>	Port mirroring receive direction only.	<i>tx</i>	Port mirroring transmit direction only.	<i>both</i>	Port mirroring both directions.
	Option	Description										
	<i>rx</i>	Port mirroring receive direction only.										
	<i>tx</i>	Port mirroring transmit direction only.										
<i>both</i>	Port mirroring both directions.											
mirroring-port *	Mirroring port.	string	Maximum length: 15									
mode	Addressing mode (static, DHCP, PPPoE).	option	-	static								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Static setting.</td></tr><tr><td><i>dhcp</i></td><td>External DHCP client mode.</td></tr><tr><td><i>pppoe</i></td><td>External PPPoE mode.</td></tr></table>				Option	Description	<i>static</i>	Static setting.	<i>dhcp</i>	External DHCP client mode.	<i>pppoe</i>	External PPPoE mode.
	Option	Description										
	<i>static</i>	Static setting.										
	<i>dhcp</i>	External DHCP client mode.										
<i>pppoe</i>	External PPPoE mode.											
monitor-bandwidth	Enable monitoring bandwidth on this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable monitoring bandwidth on this interface.</td></tr><tr><td><i>disable</i></td><td>Disable monitoring bandwidth on this interface.</td></tr></table>				Option	Description	<i>enable</i>	Enable monitoring bandwidth on this interface.	<i>disable</i>	Disable monitoring bandwidth on this interface.		
	Option	Description										
	<i>enable</i>	Enable monitoring bandwidth on this interface.										
<i>disable</i>	Disable monitoring bandwidth on this interface.											
mtu	MTU value for this interface.	integer	Minimum value: 0 Maximum value: 4294967295	1500								
mtu-override	Enable to set a custom MTU for this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Override default MTU.</td></tr><tr><td><i>disable</i></td><td>Use default MTU.</td></tr></table>				Option	Description	<i>enable</i>	Override default MTU.	<i>disable</i>	Use default MTU.		
	Option	Description										
	<i>enable</i>	Override default MTU.										
<i>disable</i>	Use default MTU.											

Parameter	Description	Type	Size	Default										
mux-type *	Multiplexer type.	option	-	llc-encaps										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>llc-encaps</td><td>LLC encapsulation.</td></tr><tr><td>vc-encaps</td><td>VC encapsulation.</td></tr></table>	Option	Description	llc-encaps	LLC encapsulation.	vc-encaps	VC encapsulation.							
Option	Description													
llc-encaps	LLC encapsulation.													
vc-encaps	VC encapsulation.													
name	Name.	string	Maximum length: 15											
ndiscforward	Enable/disable NDISC forwarding.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable NDISC forwarding.</td></tr><tr><td>disable</td><td>Disable NDISC forwarding.</td></tr></table>	Option	Description	enable	Enable NDISC forwarding.	disable	Disable NDISC forwarding.							
Option	Description													
enable	Enable NDISC forwarding.													
disable	Disable NDISC forwarding.													
netbios-forward	Enable/disable NETBIOS forwarding.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable NETBIOS forwarding.</td></tr><tr><td>enable</td><td>Enable NETBIOS forwarding.</td></tr></table>	Option	Description	disable	Disable NETBIOS forwarding.	enable	Enable NETBIOS forwarding.							
Option	Description													
disable	Disable NETBIOS forwarding.													
enable	Enable NETBIOS forwarding.													
netflow-sample-rate	NetFlow sample rate. Sample one packet every configured number of packets (1 - 65535, default = 1, which means standard NetFlow where all packets are sampled).	integer	Minimum value: 1 Maximum value: 65535	1										
netflow-sampler	Enable/disable NetFlow on this interface and set the data that NetFlow collects (rx, tx, or both).	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable NetFlow protocol on this interface.</td></tr><tr><td>tx</td><td>Monitor transmitted traffic on this interface.</td></tr><tr><td>rx</td><td>Monitor received traffic on this interface.</td></tr><tr><td>both</td><td>Monitor transmitted/received traffic on this interface.</td></tr></table>	Option	Description	disable	Disable NetFlow protocol on this interface.	tx	Monitor transmitted traffic on this interface.	rx	Monitor received traffic on this interface.	both	Monitor transmitted/received traffic on this interface.			
Option	Description													
disable	Disable NetFlow protocol on this interface.													
tx	Monitor transmitted traffic on this interface.													
rx	Monitor received traffic on this interface.													
both	Monitor transmitted/received traffic on this interface.													
netflow-sampler-id	Netflow sampler ID.	integer	Minimum value: 1 Maximum value: 254	0										

Parameter	Description	Type	Size	Default						
np-qos-profile *	NP QoS profile ID.	integer	Minimum value: 0 Maximum value: 15	0						
outbandwidth	Bandwidth limit for outgoing traffic (0 - 80000000 kbps).	integer	Minimum value: 0 Maximum value: 80000000 **	0						
padt-retry-timeout	PPPoE Active Discovery Terminate (PADT) used to terminate sessions after an idle time.	integer	Minimum value: 0 Maximum value: 4294967295	1						
password	PPPoE account's password.	password	Not Specified							
phy-mode *	DSL physical mode.	option	-	vdsl						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>vdsl</td><td>VDSL.</td></tr></table>				Option	Description	vdsl	VDSL.		
Option	Description									
vdsl	VDSL.									
ping-serv-status	PING server status. Read-only.	integer	Minimum value: 0 Maximum value: 255	0						
poe *	Enable/disable PoE status.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable PoE status.</td></tr><tr><td>disable</td><td>Disable PoE status.</td></tr></table>				Option	Description	enable	Enable PoE status.	disable	Disable PoE status.
Option	Description									
enable	Enable PoE status.									
disable	Disable PoE status.									
polling-interval	sFlow polling interval in seconds (1 - 255).	integer	Minimum value: 1 Maximum value: 255	20						
port-mirroring *	Enable/disable NP port mirroring.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable NP port mirroring.</td></tr><tr><td>enable</td><td>Enable NP port mirroring.</td></tr></table>				Option	Description	disable	Disable NP port mirroring.	enable	Enable NP port mirroring.
Option	Description									
disable	Disable NP port mirroring.									
enable	Enable NP port mirroring.									

Parameter	Description	Type	Size	Default																		
pppoe-egress-cos	CoS in VLAN tag for outgoing PPPoE/PPP packets.	option	-	cos0																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cos0</td><td>CoS 0.</td></tr><tr><td>cos1</td><td>CoS 1.</td></tr><tr><td>cos2</td><td>CoS 2.</td></tr><tr><td>cos3</td><td>CoS 3.</td></tr><tr><td>cos4</td><td>CoS 4.</td></tr><tr><td>cos5</td><td>CoS 5.</td></tr><tr><td>cos6</td><td>CoS 6.</td></tr><tr><td>cos7</td><td>CoS 7.</td></tr></table>	Option	Description	cos0	CoS 0.	cos1	CoS 1.	cos2	CoS 2.	cos3	CoS 3.	cos4	CoS 4.	cos5	CoS 5.	cos6	CoS 6.	cos7	CoS 7.			
	Option	Description																				
	cos0	CoS 0.																				
	cos1	CoS 1.																				
	cos2	CoS 2.																				
	cos3	CoS 3.																				
	cos4	CoS 4.																				
	cos5	CoS 5.																				
	cos6	CoS 6.																				
cos7	CoS 7.																					
pppoe-unnumbered-negotiate	Enable/disable PPPoE unnumbered negotiation.	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IP address negotiating for unnumbered.</td></tr><tr><td>disable</td><td>Disable IP address negotiating for unnumbered.</td></tr></table>	Option	Description	enable	Enable IP address negotiating for unnumbered.	disable	Disable IP address negotiating for unnumbered.															
	Option	Description																				
	enable	Enable IP address negotiating for unnumbered.																				
disable	Disable IP address negotiating for unnumbered.																					
pptp-auth-type	PPTP authentication type.	option	-	auto																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Automatically choose authentication.</td></tr><tr><td>pap</td><td>PAP authentication.</td></tr><tr><td>chap</td><td>CHAP authentication.</td></tr><tr><td>mschapv1</td><td>MS-CHAPv1 authentication.</td></tr><tr><td>mschapv2</td><td>MS-CHAPv2 authentication.</td></tr></table>	Option	Description	auto	Automatically choose authentication.	pap	PAP authentication.	chap	CHAP authentication.	mschapv1	MS-CHAPv1 authentication.	mschapv2	MS-CHAPv2 authentication.									
	Option	Description																				
	auto	Automatically choose authentication.																				
	pap	PAP authentication.																				
	chap	CHAP authentication.																				
	mschapv1	MS-CHAPv1 authentication.																				
mschapv2	MS-CHAPv2 authentication.																					
pptp-client	Enable/disable PPTP client.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable PPTP client.</td></tr><tr><td>disable</td><td>Disable PPTP client.</td></tr></table>	Option	Description	enable	Enable PPTP client.	disable	Disable PPTP client.															
	Option	Description																				
	enable	Enable PPTP client.																				
disable	Disable PPTP client.																					
pptp-password	PPTP password.	password	Not Specified																			

Parameter	Description	Type	Size	Default
pptp-server-ip	PPTP server IP address.	ipv4-address	Not Specified	0.0.0.0
pptp-timeout	Idle timer in minutes (0 for disabled).	integer	Minimum value: 0 Maximum value: 65535	0
pptp-user	PPTP user name.	string	Maximum length: 64	
preserve-session-route	Enable/disable preservation of session route when dirty.	option	-	disable
	Option	Description		
	enable	Enable preservation of session route when dirty.		
	disable	Disable preservation of session route when dirty.		
priority	Priority of learned routes.	integer	Minimum value: 1 Maximum value: 65535	1
priority-override	Enable/disable fail back to higher priority port once recovered.	option	-	enable
	Option	Description		
	enable	Enable fail back to higher priority port once recovered.		
	disable	Disable fail back to higher priority port once recovered.		
proxy-captive-portal	Enable/disable proxy captive portal on this interface.	option	-	disable
	Option	Description		
	enable	Enable proxy captive portal on this interface.		
	disable	Disable proxy captive portal on this interface.		
pvc-atm-qos *	SFP-DSL ADSL Fallback PVC ATM QoS.	option	-	ubr
	Option	Description		
	cbr	ATM QoS CBR.		
	rt-vbr	ATM QoS rt-VBR.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>nrt-vbr</i></td><td>ATM QoS nrt-VBR.</td></tr><tr><td><i>ubr</i></td><td>ATM QoS CCBR.</td></tr></table>	Option	Description	<i>nrt-vbr</i>	ATM QoS nrt-VBR.	<i>ubr</i>	ATM QoS CCBR.					
	Option	Description										
	<i>nrt-vbr</i>	ATM QoS nrt-VBR.										
<i>ubr</i>	ATM QoS CCBR.											
pvc-chan *	SFP-DSL ADSL Fallback PVC Channel.	integer	Minimum value: 0 Maximum value: 7	0								
pvc-crc *	SFP-DSL ADSL Fallback PVC CRC Option: bit0: sar LLC preserve, bit1: ream LLC preserve, bit2: ream VC-MUX has crc.	integer	Minimum value: 0 Maximum value: 7	2								
pvc-pcr *	SFP-DSL ADSL Fallback PVC Packet Cell Rate in cells (0 - 5500).	integer	Minimum value: 0 Maximum value: 5500	0								
pvc-scr *	SFP-DSL ADSL Fallback PVC Sustainable Cell Rate in cells (0 - 5500).	integer	Minimum value: 0 Maximum value: 5500	0								
pvc-vlan-id *	SFP-DSL ADSL Fallback PVC VLAN ID.	integer	Minimum value: 1 Maximum value: 4094	7								
pvc-vlan-rx-id *	SFP-DSL ADSL Fallback PVC VLANID RX.	integer	Minimum value: 1 Maximum value: 4094	7								
pvc-vlan-rx-op *	SFP-DSL ADSL Fallback PVC VLAN RX op.	option	-	pass-through								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass-through</i></td><td>PVC VLAN Tag Passthrough.</td></tr><tr><td><i>replace</i></td><td>PVC VLAN Tag Replace.</td></tr><tr><td><i>remove</i></td><td>PVC VLAN Tag Remove.</td></tr></table>	Option	Description	<i>pass-through</i>	PVC VLAN Tag Passthrough.	<i>replace</i>	PVC VLAN Tag Replace.	<i>remove</i>	PVC VLAN Tag Remove.			
	Option	Description										
	<i>pass-through</i>	PVC VLAN Tag Passthrough.										
	<i>replace</i>	PVC VLAN Tag Replace.										
<i>remove</i>	PVC VLAN Tag Remove.											
pvc-vlan-tx-id *	SFP-DSL ADSL Fallback PVC VLAN ID TX.	integer	Minimum value: 1 Maximum value: 4094	7								

Parameter	Description	Type	Size	Default
pvc-vlan-tx-op *	SFP-DSL ADSL Fallback PVC VLAN TX op.	option	-	remove
	Option	Description		
	<i>pass-through</i>	PVC VLAN Tag Passthrough.		
	<i>replace</i>	PVC VLAN Tag Replace.		
	<i>remove</i>	PVC VLAN Tag Remove.		
reachable-time	IPv4 reachable time in milliseconds (30000 - 3600000, default = 30000).	integer	Minimum value: 30000 Maximum value: 3600000	30000
redundant-interface	Redundant interface. Read-only.	string	Maximum length: 15	
remote-ip	Remote IP address of tunnel.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0
replacemsg-override-group	Replacement message override group.	string	Maximum length: 35	
retransmission *	Enable/disable DSL retransmission.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable retransmission.		
	<i>enable</i>	Enable retransmission.		
ring-rx *	RX ring size.	integer	Minimum value: 0 Maximum value: 4294967295	0
ring-tx *	TX ring size.	integer	Minimum value: 0 Maximum value: 4294967295	0
role	Interface role.	option	-	undefined
	Option	Description		
	<i>lan</i>	Connected to local network of endpoints.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>wan</td><td>Connected to Internet.</td></tr><tr><td>dmz</td><td>Connected to server zone.</td></tr><tr><td>undefined</td><td>Interface has no specific role.</td></tr></table>	Option	Description	wan	Connected to Internet.	dmz	Connected to server zone.	undefined	Interface has no specific role.			
	Option	Description										
	wan	Connected to Internet.										
	dmz	Connected to server zone.										
undefined	Interface has no specific role.											
sample-direction	Data that NetFlow collects (rx, tx, or both).	option	-	both								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tx</td><td>Monitor transmitted traffic on this interface.</td></tr><tr><td>rx</td><td>Monitor received traffic on this interface.</td></tr><tr><td>both</td><td>Monitor transmitted/received traffic on this interface.</td></tr></table>	Option	Description	tx	Monitor transmitted traffic on this interface.	rx	Monitor received traffic on this interface.	both	Monitor transmitted/received traffic on this interface.			
	Option	Description										
	tx	Monitor transmitted traffic on this interface.										
	rx	Monitor received traffic on this interface.										
both	Monitor transmitted/received traffic on this interface.											
sample-rate	sFlow sample rate (10 - 99999).	integer	Minimum value: 10 Maximum value: 99999	2000								
secondary-IP	Enable/disable adding a secondary IP to this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable secondary IP.</td></tr><tr><td>disable</td><td>Disable secondary IP.</td></tr></table>	Option	Description	enable	Enable secondary IP.	disable	Disable secondary IP.					
	Option	Description										
	enable	Enable secondary IP.										
disable	Disable secondary IP.											
security-8021x-dynamic-vlan-id *	VLAN ID for virtual switch.	integer	Minimum value: 0 Maximum value: 4094	0								
security-8021x-master *	802.1X master virtual-switch.	string	Maximum length: 15									
security-8021x-member-mode *	802.1X member mode.	option	-	switch								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>switch</td><td>This member will use switch 802.1X configuration.</td></tr><tr><td>disable</td><td>This member will disable 802.1X configuration.</td></tr></table>	Option	Description	switch	This member will use switch 802.1X configuration.	disable	This member will disable 802.1X configuration.					
	Option	Description										
	switch	This member will use switch 802.1X configuration.										
disable	This member will disable 802.1X configuration.											
security-8021x-mode *	802.1X mode.	option	-	default								

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>802.1X default mode.</td></tr><tr><td><i>dynamic-vlan</i></td><td>802.1X dynamic VLAN (master) mode.</td></tr><tr><td><i>fallback</i></td><td>802.1X fallback (master) mode.</td></tr><tr><td><i>slave</i></td><td>802.1X slave mode.</td></tr></table>	Option	Description	<i>default</i>	802.1X default mode.	<i>dynamic-vlan</i>	802.1X dynamic VLAN (master) mode.	<i>fallback</i>	802.1X fallback (master) mode.	<i>slave</i>	802.1X slave mode.			
	Option	Description												
	<i>default</i>	802.1X default mode.												
	<i>dynamic-vlan</i>	802.1X dynamic VLAN (master) mode.												
	<i>fallback</i>	802.1X fallback (master) mode.												
<i>slave</i>	802.1X slave mode.													
security-exempt-list	Name of security-exempt-list.	string	Maximum length: 35											
security-external-logout	URL of external authentication logout server.	string	Maximum length: 127											
security-external-web	URL of external authentication web server.	var-string	Maximum length: 1023											
security-groups <name>	User groups that can authenticate with the captive portal. Names of user groups that can authenticate with the captive portal.	string	Maximum length: 79											
security-ip-auth-bypass	Enable/disable IP authentication bypass.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IP authentication bypass.</td></tr><tr><td><i>disable</i></td><td>Disable IP authentication bypass.</td></tr></table>	Option	Description	<i>enable</i>	Enable IP authentication bypass.	<i>disable</i>	Disable IP authentication bypass.							
	Option	Description												
	<i>enable</i>	Enable IP authentication bypass.												
<i>disable</i>	Disable IP authentication bypass.													
security-mac-auth-bypass	Enable/disable MAC authentication bypass.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>mac-auth-only</i></td><td>Enable MAC authentication bypass without EAP.</td></tr><tr><td><i>enable</i></td><td>Enable MAC authentication bypass.</td></tr><tr><td><i>disable</i></td><td>Disable MAC authentication bypass.</td></tr></table>	Option	Description	<i>mac-auth-only</i>	Enable MAC authentication bypass without EAP.	<i>enable</i>	Enable MAC authentication bypass.	<i>disable</i>	Disable MAC authentication bypass.					
	Option	Description												
	<i>mac-auth-only</i>	Enable MAC authentication bypass without EAP.												
	<i>enable</i>	Enable MAC authentication bypass.												
<i>disable</i>	Disable MAC authentication bypass.													
security-mode	Turn on captive portal authentication for this interface.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No security option.</td></tr><tr><td><i>captive-portal</i></td><td>Captive portal authentication.</td></tr><tr><td><i>802.1X</i></td><td>802.1X port-based authentication.</td></tr></table>	Option	Description	<i>none</i>	No security option.	<i>captive-portal</i>	Captive portal authentication.	<i>802.1X</i>	802.1X port-based authentication.					
	Option	Description												
	<i>none</i>	No security option.												
	<i>captive-portal</i>	Captive portal authentication.												
<i>802.1X</i>	802.1X port-based authentication.													

Parameter	Description	Type	Size	Default
security-redirect-url	URL redirection after disclaimer/authentication.	var-string	Maximum length: 1023	
select-profile-30a-35b *	Select VDSL Profile 30a or 35b.	option	-	35B
	Option	Description		
	30A	Enable VDSL Profile 30A.		
	35B	Enable VDSL Profile 35B.		
service-name	PPPoE service name.	string	Maximum length: 63	
sflow-sampler	Enable/disable sFlow on this interface.	option	-	disable
	Option	Description		
	enable	Enable sFlow protocol on this interface.		
	disable	Disable sFlow protocol on this interface.		
sfp-dsl *	Enable/disable SFP DSL.	option	-	disable
	Option	Description		
	disable	Disable SFP DSL.		
	enable	Enable SFP DSL.		
sfp-dsl-adsl-fallback *	Enable/disable SFP DSL ADSL fallback.	option	-	disable
	Option	Description		
	disable	Disable SFP DSL ADSL fallback.		
	enable	Enable SFP DSL ADSL fallback.		
sfp-dsl-autodetect *	Enable/disable SFP DSL MAC address autodetect.	option	-	enable
	Option	Description		
	disable	Disable SFP DSL MAC address autodetect.		
	enable	Enable SFP DSL MAC address autodetect.		
sfp-dsl-mac *	SFP DSL MAC address.	mac-address	Not Specified	00:00:00:00:00:00

Parameter	Description	Type	Size	Default																				
snmp-index	Permanent SNMP Index of the interface.	integer	Minimum value: 0 Maximum value: 2147483647	0																				
speed	Interface speed. The default setting and the options available depend on the interface hardware.	option	-	auto																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Automatically adjust speed.</td></tr><tr><td>10full</td><td>10M full-duplex.</td></tr><tr><td>10half</td><td>10M half-duplex.</td></tr><tr><td>100full</td><td>100M full-duplex.</td></tr><tr><td>100half</td><td>100M half-duplex.</td></tr><tr><td>1000full</td><td>1000M full-duplex.</td></tr><tr><td>1000auto</td><td>1000M auto adjust.</td></tr><tr><td>10000full</td><td>10G full-duplex.</td></tr><tr><td>10000auto</td><td>10G auto.</td></tr></table>	Option	Description	auto	Automatically adjust speed.	10full	10M full-duplex.	10half	10M half-duplex.	100full	100M full-duplex.	100half	100M half-duplex.	1000full	1000M full-duplex.	1000auto	1000M auto adjust.	10000full	10G full-duplex.	10000auto	10G auto.			
Option	Description																							
auto	Automatically adjust speed.																							
10full	10M full-duplex.																							
10half	10M half-duplex.																							
100full	100M full-duplex.																							
100half	100M half-duplex.																							
1000full	1000M full-duplex.																							
1000auto	1000M auto adjust.																							
10000full	10G full-duplex.																							
10000auto	10G auto.																							
spillover-threshold	Egress Spillover threshold (0 - 16776000 kbps), 0 means unlimited.	integer	Minimum value: 0 Maximum value: 16776000	0																				
src-check	Enable/disable source IP check.	option	-	enable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable source IP check.</td></tr><tr><td>disable</td><td>Disable source IP check.</td></tr></table>	Option	Description	enable	Enable source IP check.	disable	Disable source IP check.																	
Option	Description																							
enable	Enable source IP check.																							
disable	Disable source IP check.																							
status	Bring the interface up or shut the interface down.	option	-	up																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>up</td><td>Bring the interface up.</td></tr><tr><td>down</td><td>Shut the interface down.</td></tr></table>	Option	Description	up	Bring the interface up.	down	Shut the interface down.																	
Option	Description																							
up	Bring the interface up.																							
down	Shut the interface down.																							
stp *	Enable/disable STP.	option	-	disable																				

Parameter	Description	Type	Size	Default
	Option Description			
	<i>disable</i>	Disable STP.		
	<i>enable</i>	Enable STP.		
stp-edge *	Enable/disable as STP edge port.	option	-	disable
	Option Description			
	<i>disable</i>	Disable STP edge port.		
	<i>enable</i>	Enable STP edge port.		
stp-ha-secondary *	Control STP behavior on HA secondary.	option	-	priority-adjust
	Option Description			
	<i>disable</i>	Disable STP negotiation on HA secondary.		
	<i>enable</i>	Enable STP negotiation on HA secondary.		
	<i>priority-adjust</i>	Enable STP negotiation on HA secondary and make priority lower than HA primary.		
stpforward	Enable/disable STP forwarding.	option	-	disable
	Option Description			
	<i>enable</i>	Enable STP forwarding.		
	<i>disable</i>	Disable STP forwarding.		
stpforward-mode	Configure STP forwarding mode.	option	-	rpl-all-ext-id
	Option Description			
	<i>rpl-all-ext-id</i>	Replace all extension IDs (root, bridge).		
	<i>rpl-bridge-ext-id</i>	Replace the bridge extension ID only.		
	<i>rpl-nothing</i>	Replace nothing.		
subst	Enable to always send packets from this interface to a destination MAC address.	option	-	disable
	Option Description			
	<i>enable</i>	Send packets from this interface.		
	<i>disable</i>	Do not send packets from this interface.		

Parameter	Description	Type	Size	Default										
substitute-dst-mac	Destination MAC address that all packets are sent to from this interface.	mac-address	Not Specified	00:00:00:00:00:00										
sw-algorithm *	Frame distribution algorithm for switch.	option	-	default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>l2</i></td><td>Use layer 2 address for distribution.</td></tr><tr><td><i>l3</i></td><td>Use layer 3 address for distribution.</td></tr><tr><td><i>eh</i></td><td>Use enhanced hashing for distribution.</td></tr><tr><td><i>default</i></td><td>Use the hashing that the driver selects during initialization for distribution.</td></tr></table>	Option	Description	<i>l2</i>	Use layer 2 address for distribution.	<i>l3</i>	Use layer 3 address for distribution.	<i>eh</i>	Use enhanced hashing for distribution.	<i>default</i>	Use the hashing that the driver selects during initialization for distribution.			
Option	Description													
<i>l2</i>	Use layer 2 address for distribution.													
<i>l3</i>	Use layer 3 address for distribution.													
<i>eh</i>	Use enhanced hashing for distribution.													
<i>default</i>	Use the hashing that the driver selects during initialization for distribution.													
swc-first-create *	Initial create for switch-controller VLANs. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0										
swc-vlan *	Creation status for switch-controller VLANs. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0										
switch	Contained in switch. Read-only.	string	Maximum length: 15											
switch-controller-access-vlan *	Block FortiSwitch port-to-port traffic.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Block FortiSwitch port-to-port traffic on the VLAN, only permitting traffic to and from the FortiGate.</td></tr><tr><td><i>disable</i></td><td>Allow normal VLAN traffic.</td></tr></table>	Option	Description	<i>enable</i>	Block FortiSwitch port-to-port traffic on the VLAN, only permitting traffic to and from the FortiGate.	<i>disable</i>	Allow normal VLAN traffic.							
Option	Description													
<i>enable</i>	Block FortiSwitch port-to-port traffic on the VLAN, only permitting traffic to and from the FortiGate.													
<i>disable</i>	Allow normal VLAN traffic.													
switch-controller-arp-inspection *	Enable/disable/Monitor FortiSwitch ARP inspection.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ARP inspection for FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable ARP inspection for FortiSwitch devices.</td></tr><tr><td><i>monitor</i></td><td>Monitor ARP traffic and update DHCP client database with MAC-VLAN-IP.</td></tr></table>	Option	Description	<i>enable</i>	Enable ARP inspection for FortiSwitch devices.	<i>disable</i>	Disable ARP inspection for FortiSwitch devices.	<i>monitor</i>	Monitor ARP traffic and update DHCP client database with MAC-VLAN-IP.					
Option	Description													
<i>enable</i>	Enable ARP inspection for FortiSwitch devices.													
<i>disable</i>	Disable ARP inspection for FortiSwitch devices.													
<i>monitor</i>	Monitor ARP traffic and update DHCP client database with MAC-VLAN-IP.													
switch-controller-dhcp-snooping *	Switch controller DHCP snooping.	option	-	disable										

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable DHCP snooping for FortiSwitch devices.		
	<i>disable</i>	Disable DHCP snooping for FortiSwitch devices.		
switch-controller-dhcp-snooping-option82 *	Switch controller DHCP snooping option82.	option	-	disable
	Option Description			
	<i>enable</i>	Enable DHCP snooping insert option82 for FortiSwitch devices.		
	<i>disable</i>	Disable DHCP snooping insert option82 for FortiSwitch devices.		
switch-controller-dhcp-snooping-verify-mac *	Switch controller DHCP snooping verify MAC.	option	-	disable
	Option Description			
	<i>enable</i>	Enable DHCP snooping verify source MAC for FortiSwitch devices.		
	<i>disable</i>	Disable DHCP snooping verify source MAC for FortiSwitch devices.		
switch-controller-dynamic *	Integrated FortiLink settings for managed FortiSwitch.	string	Maximum length: 35	
switch-controller-feature *	Interface's purpose when assigning traffic (read only).	option	-	none
	Option Description			
	<i>none</i>	VLAN for generic purpose.		
	<i>default-vlan</i>	Default VLAN (native) assigned to all switch ports upon discovery.		
	<i>quarantine</i>	VLAN for quarantined traffic.		
	<i>rspan</i>	VLAN for RSPAN/ERSPAN mirrored traffic.		
	<i>voice</i>	VLAN dedicated for voice devices.		
	<i>video</i>	VLAN dedicated for camera devices.		
	<i>nac</i>	VLAN dedicated for NAC onboarding devices.		
	<i>nac-segment</i>	VLAN dedicated for NAC segment devices.		
switch-controller-igmp-snooping *	Switch controller IGMP snooping.	option	-	disable

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable IGMP snooping.		
	<i>disable</i>	Disable IGMP snooping.		
switch-controller-igmp-snooping-fast-leave *	Switch controller IGMP snooping fast-leave.	option	-	disable
	Option Description			
	<i>enable</i>	Enable IGMP snooping fast-leave.		
	<i>disable</i>	Disable IGMP snooping fast-leave.		
switch-controller-igmp-snooping-proxy *	Switch controller IGMP snooping proxy.	option	-	disable
	Option Description			
	<i>enable</i>	Enable IGMP snooping proxy.		
	<i>disable</i>	Disable IGMP snooping proxy.		
switch-controller-iot-scanning *	Enable/disable managed FortiSwitch IoT scanning.	option	-	disable
	Option Description			
	<i>enable</i>	Enable IoT scanning for managed FortiSwitch devices.		
	<i>disable</i>	Disable IoT scanning for managed FortiSwitch devices.		
switch-controller-learning-limit *	Limit the number of dynamic MAC addresses on this VLAN (1 - 128, 0 = no limit, default).	integer	Minimum value: 0 Maximum value: 128	0
switch-controller-mgmt-vlan *	VLAN to use for FortiLink management purposes.	integer	Minimum value: 1 Maximum value: 4094	4094
switch-controller-nac *	Integrated FortiLink settings for managed FortiSwitch.	string	Maximum length: 35	
switch-controller-netflow-collect *	NetFlow collection and processing.	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable NetFlow collection.</td></tr><tr><td><i>enable</i></td><td>Enable NetFlow collection.</td></tr></table>	Option	Description	<i>disable</i>	Disable NetFlow collection.	<i>enable</i>	Enable NetFlow collection.			
	Option	Description								
	<i>disable</i>	Disable NetFlow collection.								
<i>enable</i>	Enable NetFlow collection.									
switch-controller-offload *	Enable/disable managed FortiSwitch routing offload.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable routing offload to managed FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable routing offload to managed FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable routing offload to managed FortiSwitch devices.	<i>disable</i>	Disable routing offload to managed FortiSwitch devices.			
	Option	Description								
	<i>enable</i>	Enable routing offload to managed FortiSwitch devices.								
<i>disable</i>	Disable routing offload to managed FortiSwitch devices.									
switch-controller-offload-gw *	Enable/disable managed FortiSwitch routing offload gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable routing offload gateway to managed FortiSwitch devices.</td></tr><tr><td><i>disable</i></td><td>Disable routing offload gateway to managed FortiSwitch devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable routing offload gateway to managed FortiSwitch devices.	<i>disable</i>	Disable routing offload gateway to managed FortiSwitch devices.			
	Option	Description								
	<i>enable</i>	Enable routing offload gateway to managed FortiSwitch devices.								
<i>disable</i>	Disable routing offload gateway to managed FortiSwitch devices.									
switch-controller-offload-ip *	IP for routing offload on FortiSwitch.	ipv4-address	Not Specified	0.0.0.0						
switch-controller-rspan-mode *	Stop Layer2 MAC learning and interception of BPDUs and other packets on this interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable RSPAN passthrough mode on this VLAN interface.</td></tr><tr><td><i>enable</i></td><td>Enable RSPAN passthrough mode on this VLAN interface.</td></tr></table>	Option	Description	<i>disable</i>	Disable RSPAN passthrough mode on this VLAN interface.	<i>enable</i>	Enable RSPAN passthrough mode on this VLAN interface.			
	Option	Description								
	<i>disable</i>	Disable RSPAN passthrough mode on this VLAN interface.								
<i>enable</i>	Enable RSPAN passthrough mode on this VLAN interface.									
switch-controller-source-ip *	Source IP address used in FortiLink over L3 connections.	option	-	outbound						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>outbound</i></td><td>Source IP address is that of the outbound interface.</td></tr><tr><td><i>fixed</i></td><td>Source IP address is that of the FortiLink interface.</td></tr></table>	Option	Description	<i>outbound</i>	Source IP address is that of the outbound interface.	<i>fixed</i>	Source IP address is that of the FortiLink interface.			
	Option	Description								
	<i>outbound</i>	Source IP address is that of the outbound interface.								
<i>fixed</i>	Source IP address is that of the FortiLink interface.									
switch-controller-traffic-policy *	Switch controller traffic policy for the VLAN.	string	Maximum length: 63							
system-id	Define a system ID for the aggregate interface.	mac-address	Not Specified	00:00:00:00:00:00						
system-id-type	Method in which system ID is generated.	option	-	auto						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Use the MAC address of the first member.</td></tr><tr><td><i>user</i></td><td>User-defined system ID.</td></tr></table>	Option	Description	<i>auto</i>	Use the MAC address of the first member.	<i>user</i>	User-defined system ID.			
Option	Description									
<i>auto</i>	Use the MAC address of the first member.									
<i>user</i>	User-defined system ID.									
tc-mode *	DSL transfer mode.	option	-	ptm						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ptm</i></td><td>Packet transfer mode.</td></tr></table>	Option	Description	<i>ptm</i>	Packet transfer mode.					
Option	Description									
<i>ptm</i>	Packet transfer mode.									
tcp-mss	TCP maximum segment size. 0 means do not change segment size.	integer	Minimum value: 48 Maximum value: 65535	0						
trunk *	Enable/disable VLAN trunk.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VLAN trunk on this interface.</td></tr><tr><td><i>disable</i></td><td>Disable VLAN trunk on this interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable VLAN trunk on this interface.	<i>disable</i>	Disable VLAN trunk on this interface.			
Option	Description									
<i>enable</i>	Enable VLAN trunk on this interface.									
<i>disable</i>	Disable VLAN trunk on this interface.									
trust-ip-1	Trusted host for dedicated management traffic (0.0.0.0/24 for all hosts).	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0						
trust-ip-2	Trusted host for dedicated management traffic (0.0.0.0/24 for all hosts).	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0						
trust-ip-3	Trusted host for dedicated management traffic (0.0.0.0/24 for all hosts).	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0						
trust-ip6-1	Trusted IPv6 host for dedicated management traffic (::/0 for all hosts).	ipv6-prefix	Not Specified	::/0						
trust-ip6-2	Trusted IPv6 host for dedicated management traffic (::/0 for all hosts).	ipv6-prefix	Not Specified	::/0						
trust-ip6-3	Trusted IPv6 host for dedicated management traffic (::/0 for all hosts).	ipv6-prefix	Not Specified	::/0						
type	Interface type.	option	-	vlan						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>physical</i></td><td>Physical interface.</td></tr></table>	Option	Description	<i>physical</i>	Physical interface.					
Option	Description									
<i>physical</i>	Physical interface.									

Parameter	Description	Type	Size	Default																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>vlan</i></td><td>VLAN interface.</td></tr><tr><td><i>aggregate</i></td><td>Aggregate interface.</td></tr><tr><td><i>redundant</i></td><td>Redundant interface.</td></tr><tr><td><i>tunnel</i></td><td>Tunnel interface.</td></tr><tr><td><i>vdom-link</i></td><td>VDOM link interface.</td></tr><tr><td><i>loopback</i></td><td>Loopback interface.</td></tr><tr><td><i>switch</i></td><td>Software switch interface.</td></tr><tr><td><i>vap-switch</i></td><td>VAP interface.</td></tr><tr><td><i>wl-mesh</i></td><td>WLAN mesh interface.</td></tr><tr><td><i>fext-wan</i></td><td>FortiExtender interface.</td></tr><tr><td><i>vxlan</i></td><td>VXLAN interface.</td></tr><tr><td><i>geneve</i></td><td>GENEVE interface.</td></tr><tr><td><i>hdlc</i></td><td>T1/E1 interface.</td></tr><tr><td><i>switch-vlan</i></td><td>Switch VLAN interface.</td></tr><tr><td><i>emac-vlan</i></td><td>EMAC VLAN interface.</td></tr><tr><td><i>ssl</i></td><td>SSL VPN client interface.</td></tr><tr><td><i>lan-extension</i></td><td>LAN extension interface.</td></tr></table>	Option	Description	<i>vlan</i>	VLAN interface.	<i>aggregate</i>	Aggregate interface.	<i>redundant</i>	Redundant interface.	<i>tunnel</i>	Tunnel interface.	<i>vdom-link</i>	VDOM link interface.	<i>loopback</i>	Loopback interface.	<i>switch</i>	Software switch interface.	<i>vap-switch</i>	VAP interface.	<i>wl-mesh</i>	WLAN mesh interface.	<i>fext-wan</i>	FortiExtender interface.	<i>vxlan</i>	VXLAN interface.	<i>geneve</i>	GENEVE interface.	<i>hdlc</i>	T1/E1 interface.	<i>switch-vlan</i>	Switch VLAN interface.	<i>emac-vlan</i>	EMAC VLAN interface.	<i>ssl</i>	SSL VPN client interface.	<i>lan-extension</i>	LAN extension interface.			
	Option	Description																																						
	<i>vlan</i>	VLAN interface.																																						
	<i>aggregate</i>	Aggregate interface.																																						
	<i>redundant</i>	Redundant interface.																																						
	<i>tunnel</i>	Tunnel interface.																																						
	<i>vdom-link</i>	VDOM link interface.																																						
	<i>loopback</i>	Loopback interface.																																						
	<i>switch</i>	Software switch interface.																																						
	<i>vap-switch</i>	VAP interface.																																						
	<i>wl-mesh</i>	WLAN mesh interface.																																						
	<i>fext-wan</i>	FortiExtender interface.																																						
	<i>vxlan</i>	VXLAN interface.																																						
	<i>geneve</i>	GENEVE interface.																																						
	<i>hdlc</i>	T1/E1 interface.																																						
	<i>switch-vlan</i>	Switch VLAN interface.																																						
	<i>emac-vlan</i>	EMAC VLAN interface.																																						
	<i>ssl</i>	SSL VPN client interface.																																						
<i>lan-extension</i>	LAN extension interface.																																							
username	Username of the PPPoE account, provided by your ISP.	string	Maximum length: 64																																					
vci *	Virtual Channel ID.	integer	Minimum value: 0 Maximum value: 65535	35																																				
vdom	Interface is in this virtual domain (VDOM).	string	Maximum length: 31																																					
vectoring *	Enable/disable DSL vectoring.	option	-	enable																																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable vectoring.</td></tr><tr><td><i>enable</i></td><td>Enable vectoring.</td></tr></table>	Option	Description	<i>disable</i>	Disable vectoring.	<i>enable</i>	Enable vectoring.																																	
	Option	Description																																						
	<i>disable</i>	Disable vectoring.																																						
<i>enable</i>	Enable vectoring.																																							

Parameter	Description	Type	Size	Default								
vindex *	Switch control interface VLAN ID. Read-only.	integer	Minimum value: 0 Maximum value: 65535	0								
virtual-mac	Change the interface's virtual MAC address.	mac-address	Not Specified	00:00:00:00:00:00								
vlan-id *	Vlan ID.	integer	Minimum value: 0 Maximum value: 4095	1								
vlan-op-mode *	Configure DSL 802.1q mode.	option	-	passthrough								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tag</td><td>802.1q Tagged.</td></tr><tr><td>untag</td><td>802.1q Un-Tagged.</td></tr><tr><td>passthrough</td><td>802.1q Passthrough.</td></tr></table>	Option	Description	tag	802.1q Tagged.	untag	802.1q Un-Tagged.	passthrough	802.1q Passthrough.			
Option	Description											
tag	802.1q Tagged.											
untag	802.1q Un-Tagged.											
passthrough	802.1q Passthrough.											
vlan-protocol	Ethernet protocol of VLAN.	option	-	8021q								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>8021q</td><td>IEEE 802.1Q.</td></tr><tr><td>8021ad</td><td>IEEE 802.1AD.</td></tr></table>	Option	Description	8021q	IEEE 802.1Q.	8021ad	IEEE 802.1AD.					
Option	Description											
8021q	IEEE 802.1Q.											
8021ad	IEEE 802.1AD.											
vlanforward	Enable/disable traffic forwarding between VLANs on this interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable traffic forwarding.</td></tr><tr><td>disable</td><td>Disable traffic forwarding.</td></tr></table>	Option	Description	enable	Enable traffic forwarding.	disable	Disable traffic forwarding.					
Option	Description											
enable	Enable traffic forwarding.											
disable	Disable traffic forwarding.											
vlanid	VLAN ID (1 - 4094).	integer	Minimum value: 1 Maximum value: 4094	0								
vpi *	Virtual Path ID.	integer	Minimum value: 0 Maximum value: 255	0								

Parameter	Description	Type	Size	Default								
vrf	Virtual Routing Forwarding ID.	integer	Minimum value: 0 Maximum value: 511	0								
vrrp-virtual-mac	Enable/disable use of virtual MAC for VRRP.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of virtual MAC for VRRP.</td></tr><tr><td>disable</td><td>Disable use of virtual MAC for VRRP.</td></tr></table>	Option	Description	enable	Enable use of virtual MAC for VRRP.	disable	Disable use of virtual MAC for VRRP.					
Option	Description											
enable	Enable use of virtual MAC for VRRP.											
disable	Disable use of virtual MAC for VRRP.											
wccp	Enable/disable WCCP on this interface. Used for encapsulated WCCP communication between WCCP clients and servers.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WCCP protocol on this interface.</td></tr><tr><td>disable</td><td>Disable WCCP protocol on this interface.</td></tr></table>	Option	Description	enable	Enable WCCP protocol on this interface.	disable	Disable WCCP protocol on this interface.					
Option	Description											
enable	Enable WCCP protocol on this interface.											
disable	Disable WCCP protocol on this interface.											
weight	Default weight for static routes (if route has no weight configured).	integer	Minimum value: 0 Maximum value: 255	0								
wifi-5g-threshold *	Minimal signal strength to be considered as a good 5G AP.	string	Maximum length: 7	-78								
wifi-acl *	Access control for MAC addresses in the MAC list.	option	-	deny								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow.</td></tr><tr><td>deny</td><td>Deny.</td></tr></table>	Option	Description	allow	Allow.	deny	Deny.					
Option	Description											
allow	Allow.											
deny	Deny.											
wifi-ap-band *	How to select the AP to connect.	option	-	any								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>any</td><td>Connect to the best 2G or 5G AP.</td></tr><tr><td>5g-preferred</td><td>Connect to the 5G AP if a good 5G AP exists.</td></tr><tr><td>5g-only</td><td>Only connect to the 5G AP.</td></tr></table>	Option	Description	any	Connect to the best 2G or 5G AP.	5g-preferred	Connect to the 5G AP if a good 5G AP exists.	5g-only	Only connect to the 5G AP.			
Option	Description											
any	Connect to the best 2G or 5G AP.											
5g-preferred	Connect to the 5G AP if a good 5G AP exists.											
5g-only	Only connect to the 5G AP.											
wifi-auth *	WiFi authentication.	option	-	PSK								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>PSK</i>	PSK.		
	<i>radius</i>	RADIUS.		
	<i>usergroup</i>	User group.		
wifi-auto-connect *	Enable/disable WiFi network auto connect.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable WiFi network auto connect.		
	<i>disable</i>	Disable WiFi network auto connect.		
wifi-auto-save *	Enable/disable WiFi network automatic save.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable WiFi network automatic save.		
	<i>disable</i>	Disable WiFi network automatic save.		
wifi-broadcast-ssid *	Enable/disable SSID broadcast in the beacon.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable SSID broadcast in the beacon.		
	<i>disable</i>	Disable SSID broadcast in the beacon.		
wifi-dns-server1 *	DNS server 1.	ipv4-address	Not Specified	0.0.0.0
wifi-dns-server2 *	DNS server 2.	ipv4-address	Not Specified	0.0.0.0
wifi-encrypt *	Data encryption.	option	-	AES
	Option	Description		
	<i>TKIP</i>	TKIP.		
	<i>AES</i>	AES.		
wifi-fragment-threshold *	WiFi fragment threshold (800 - 2346).	integer	Minimum value: 800 Maximum value: 2346	2346

Parameter	Description	Type	Size	Default																				
wifi-gateway *	IPv4 default gateway IP address.	ipv4-address	Not Specified	0.0.0.0																				
wifi-key *	WiFi WEP Key.	password	Not Specified																					
wifi-keyindex *	WEP key index (1 - 4).	integer	Minimum value: 1 Maximum value: 4	1																				
wifi-mac-filter *	Enable/disable MAC filter status.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable MAC filter.</td></tr><tr><td><i>disable</i></td><td>Disable MAC filter.</td></tr></table>				Option	Description	<i>enable</i>	Enable MAC filter.	<i>disable</i>	Disable MAC filter.														
Option	Description																							
<i>enable</i>	Enable MAC filter.																							
<i>disable</i>	Disable MAC filter.																							
wifi-passphrase *	WiFi pre-shared key for WPA.	password	Not Specified																					
wifi-radius-server *	WiFi RADIUS server for WPA.	string	Maximum length: 35																					
wifi-rts-threshold *	WiFi RTS threshold (256 - 2346).	integer	Minimum value: 256 Maximum value: 2346	2346																				
wifi-security *	Wireless access security of SSID.	option	-	wpa-personal																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>open</i></td><td>Open.</td></tr><tr><td><i>wep64</i></td><td>WEP64.</td></tr><tr><td><i>wep128</i></td><td>WEP128.</td></tr><tr><td><i>wpa-personal</i></td><td>WPA personal.</td></tr><tr><td><i>wpa-enterprise</i></td><td>WPA enterprise.</td></tr><tr><td><i>wpa-only-personal</i></td><td>WPA personal only.</td></tr><tr><td><i>wpa-only-enterprise</i></td><td>WPA enterprise only.</td></tr><tr><td><i>wpa2-only-personal</i></td><td>WPA2 personal only.</td></tr><tr><td><i>wpa2-only-enterprise</i></td><td>WPA2 enterprise only.</td></tr></table>				Option	Description	<i>open</i>	Open.	<i>wep64</i>	WEP64.	<i>wep128</i>	WEP128.	<i>wpa-personal</i>	WPA personal.	<i>wpa-enterprise</i>	WPA enterprise.	<i>wpa-only-personal</i>	WPA personal only.	<i>wpa-only-enterprise</i>	WPA enterprise only.	<i>wpa2-only-personal</i>	WPA2 personal only.	<i>wpa2-only-enterprise</i>	WPA2 enterprise only.
Option	Description																							
<i>open</i>	Open.																							
<i>wep64</i>	WEP64.																							
<i>wep128</i>	WEP128.																							
<i>wpa-personal</i>	WPA personal.																							
<i>wpa-enterprise</i>	WPA enterprise.																							
<i>wpa-only-personal</i>	WPA personal only.																							
<i>wpa-only-enterprise</i>	WPA enterprise only.																							
<i>wpa2-only-personal</i>	WPA2 personal only.																							
<i>wpa2-only-enterprise</i>	WPA2 enterprise only.																							

Parameter	Description	Type	Size	Default
wifi-ssid *	IEEE 802.11 Service Set Identifier.	string	Maximum length: 32	fortinet
wifi-usergroup *	WiFi user group for WPA.	string	Maximum length: 35	
wins-ip	WINS server IP.	ipv4-address	Not Specified	0.0.0.0

* This parameter may not exist in some models.

** Values may differ between models.

config client-options

Parameter	Description	Type	Size	Default
code	DHCP client option code.	integer	Minimum value: 0 Maximum value: 255	0
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ip	DHCP option IPs.	user	Not Specified	
type	DHCP client option type.	option	-	hex
	Option	Description		
	<i>hex</i>	DHCP option in hex.		
	<i>string</i>	DHCP option in string.		
	<i>ip</i>	DHCP option in IP.		
	<i>fqdn</i>	DHCP option in domain search option format.		
value	DHCP client option value.	string	Maximum length: 312	

config dhcp-snooping-server-list

Parameter	Description	Type	Size	Default
name	DHCP server name.	string	Maximum length: 35	default
server-ip	IP address for DHCP server.	ipv4-address	Not Specified	0.0.0.0

config egress-queues

Parameter	Description	Type	Size	Default
cos0	CoS profile name for CoS 0.	string	Maximum length: 35	
cos1	CoS profile name for CoS 1.	string	Maximum length: 35	
cos2	CoS profile name for CoS 2.	string	Maximum length: 35	
cos3	CoS profile name for CoS 3.	string	Maximum length: 35	
cos4	CoS profile name for CoS 4.	string	Maximum length: 35	
cos5	CoS profile name for CoS 5.	string	Maximum length: 35	
cos6	CoS profile name for CoS 6.	string	Maximum length: 35	
cos7	CoS profile name for CoS 7.	string	Maximum length: 35	

config ipv6

Parameter	Description	Type	Size	Default						
autoconf	Enable/disable address auto config.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auto-configuration.</td></tr><tr><td><i>disable</i></td><td>Disable auto-configuration.</td></tr></table>	Option	Description	<i>enable</i>	Enable auto-configuration.	<i>disable</i>	Disable auto-configuration.			
	Option	Description								
	<i>enable</i>	Enable auto-configuration.								
<i>disable</i>	Disable auto-configuration.									
cli-conn6-status	CLI IPv6 connection status. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0						
dhcp6-client-options	DHCPv6 client options. Read-only.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rapid</i></td><td>Send rapid commit option.</td></tr><tr><td><i>iapd</i></td><td>Send including IA-PD option.</td></tr></table>	Option	Description	<i>rapid</i>	Send rapid commit option.	<i>iapd</i>	Send including IA-PD option.			
	Option	Description								
	<i>rapid</i>	Send rapid commit option.								
<i>iapd</i>	Send including IA-PD option.									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>iana</i></td><td>Send including IA-NA option.</td></tr></table>	Option	Description	<i>iana</i>	Send including IA-NA option.					
	Option	Description								
	<i>iana</i>	Send including IA-NA option.								
dhcp6-information-request	Enable/disable DHCPv6 information request.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCPv6 information request.</td></tr><tr><td><i>disable</i></td><td>Disable DHCPv6 information request.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCPv6 information request.	<i>disable</i>	Disable DHCPv6 information request.			
	Option	Description								
	<i>enable</i>	Enable DHCPv6 information request.								
<i>disable</i>	Disable DHCPv6 information request.									
dhcp6-prefix-delegation	Enable/disable DHCPv6 prefix delegation.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DHCPv6 prefix delegation.</td></tr><tr><td><i>disable</i></td><td>Disable DHCPv6 prefix delegation.</td></tr></table>	Option	Description	<i>enable</i>	Enable DHCPv6 prefix delegation.	<i>disable</i>	Disable DHCPv6 prefix delegation.			
	Option	Description								
	<i>enable</i>	Enable DHCPv6 prefix delegation.								
<i>disable</i>	Disable DHCPv6 prefix delegation.									
dhcp6-relay-interface-id	DHCP6 relay interface ID.	string	Maximum length: 64							
dhcp6-relay-ip	DHCPv6 relay IP address.	user	Not Specified							
dhcp6-relay-service	Enable/disable DHCPv6 relay.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable DHCPv6 relay</td></tr><tr><td><i>enable</i></td><td>Enable DHCPv6 relay.</td></tr></table>	Option	Description	<i>disable</i>	Disable DHCPv6 relay	<i>enable</i>	Enable DHCPv6 relay.			
	Option	Description								
	<i>disable</i>	Disable DHCPv6 relay								
<i>enable</i>	Enable DHCPv6 relay.									
dhcp6-relay-source-interface	Enable/disable use of address on this interface as the source address of the relay message.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Use address of the egress interface as source address of the relay message.</td></tr><tr><td><i>enable</i></td><td>Use address of this interface as source address of the relay message.</td></tr></table>	Option	Description	<i>disable</i>	Use address of the egress interface as source address of the relay message.	<i>enable</i>	Use address of this interface as source address of the relay message.			
	Option	Description								
	<i>disable</i>	Use address of the egress interface as source address of the relay message.								
<i>enable</i>	Use address of this interface as source address of the relay message.									
dhcp6-relay-source-ip	IPv6 address used by the DHCP6 relay as its source IP.	ipv6-address	Not Specified	::						
dhcp6-relay-type	DHCPv6 relay type.	option	-	regular						

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>regular</i></td><td>Regular DHCP relay.</td></tr></table>				Option	Description	<i>regular</i>	Regular DHCP relay.														
	Option	Description																				
	<i>regular</i>	Regular DHCP relay.																				
icmp6-send-redirect	Enable/disable sending of ICMPv6 redirects.	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending of ICMPv6 redirects.</td></tr><tr><td><i>disable</i></td><td>Disable sending of ICMPv6 redirects.</td></tr></table>				Option	Description	<i>enable</i>	Enable sending of ICMPv6 redirects.	<i>disable</i>	Disable sending of ICMPv6 redirects.												
	Option	Description																				
	<i>enable</i>	Enable sending of ICMPv6 redirects.																				
<i>disable</i>	Disable sending of ICMPv6 redirects.																					
interface-identifier	IPv6 interface identifier.	ipv6-address	Not Specified	::																		
ip6-address	Primary IPv6 address prefix. Syntax: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx.	ipv6-prefix	Not Specified	::/0																		
ip6-adv-rio	Enable/disable sending advertisements with route information option.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending advertisements with route information option.</td></tr><tr><td><i>disable</i></td><td>Disable sending advertisements with route information option.</td></tr></table>				Option	Description	<i>enable</i>	Enable sending advertisements with route information option.	<i>disable</i>	Disable sending advertisements with route information option.												
	Option	Description																				
	<i>enable</i>	Enable sending advertisements with route information option.																				
<i>disable</i>	Disable sending advertisements with route information option.																					
ip6-allowaccess	Allow management access to the interface.	option	-																			
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>PING access.</td></tr><tr><td><i>https</i></td><td>HTTPS access.</td></tr><tr><td><i>ssh</i></td><td>SSH access.</td></tr><tr><td><i>snmp</i></td><td>SNMP access.</td></tr><tr><td><i>http</i></td><td>HTTP access.</td></tr><tr><td><i>telnet</i></td><td>TELNET access.</td></tr><tr><td><i>fgfm</i></td><td>FortiManager access.</td></tr><tr><td><i>fabric</i></td><td>Fabric access.</td></tr></table>				Option	Description	<i>ping</i>	PING access.	<i>https</i>	HTTPS access.	<i>ssh</i>	SSH access.	<i>snmp</i>	SNMP access.	<i>http</i>	HTTP access.	<i>telnet</i>	TELNET access.	<i>fgfm</i>	FortiManager access.	<i>fabric</i>	Fabric access.
	Option	Description																				
	<i>ping</i>	PING access.																				
	<i>https</i>	HTTPS access.																				
	<i>ssh</i>	SSH access.																				
	<i>snmp</i>	SNMP access.																				
	<i>http</i>	HTTP access.																				
	<i>telnet</i>	TELNET access.																				
	<i>fgfm</i>	FortiManager access.																				
<i>fabric</i>	Fabric access.																					
ip6-default-life	Default life (sec).	integer	Minimum value: 0 Maximum value: 9000	1800																		

Parameter	Description	Type	Size	Default						
ip6-delegated-prefix-iaid	IAID of obtained delegated-prefix from the upstream interface.	integer	Minimum value: 0 Maximum value: 4294967295	0						
ip6-dns-server-override	Enable/disable using the DNS server acquired by DHCP.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable using the DNS server acquired by DHCP.</td></tr><tr><td>disable</td><td>Disable using the DNS server acquired by DHCP.</td></tr></table>	Option	Description	enable	Enable using the DNS server acquired by DHCP.	disable	Disable using the DNS server acquired by DHCP.			
Option	Description									
enable	Enable using the DNS server acquired by DHCP.									
disable	Disable using the DNS server acquired by DHCP.									
ip6-hop-limit	Hop limit (0 means unspecified).	integer	Minimum value: 0 Maximum value: 255	0						
ip6-link-mtu	IPv6 link MTU.	integer	Minimum value: 1280 Maximum value: 16000	0						
ip6-manage-flag	Enable/disable the managed flag.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable the managed IPv6 flag.</td></tr><tr><td>disable</td><td>Disable the managed IPv6 flag.</td></tr></table>	Option	Description	enable	Enable the managed IPv6 flag.	disable	Disable the managed IPv6 flag.			
Option	Description									
enable	Enable the managed IPv6 flag.									
disable	Disable the managed IPv6 flag.									
ip6-max-interval	IPv6 maximum interval (4 to 1800 sec).	integer	Minimum value: 4 Maximum value: 1800	600						
ip6-min-interval	IPv6 minimum interval (3 to 1350 sec).	integer	Minimum value: 3 Maximum value: 1350	198						
ip6-mode	Addressing mode (static, DHCP, delegated).	option	-	static						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>static</td><td>Static setting.</td></tr></table>	Option	Description	static	Static setting.					
Option	Description									
static	Static setting.									

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dhcp</i></td><td>DHCPv6 client mode.</td></tr><tr><td><i>pppoe</i></td><td>IPv6 over PPPoE mode.</td></tr><tr><td><i>delegated</i></td><td>IPv6 address with delegated prefix.</td></tr></table>	Option	Description	<i>dhcp</i>	DHCPv6 client mode.	<i>pppoe</i>	IPv6 over PPPoE mode.	<i>delegated</i>	IPv6 address with delegated prefix.			
	Option	Description										
	<i>dhcp</i>	DHCPv6 client mode.										
	<i>pppoe</i>	IPv6 over PPPoE mode.										
<i>delegated</i>	IPv6 address with delegated prefix.											
ip6-other-flag	Enable/disable the other IPv6 flag.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the other IPv6 flag.</td></tr><tr><td><i>disable</i></td><td>Disable the other IPv6 flag.</td></tr></table>	Option	Description	<i>enable</i>	Enable the other IPv6 flag.	<i>disable</i>	Disable the other IPv6 flag.					
	Option	Description										
	<i>enable</i>	Enable the other IPv6 flag.										
<i>disable</i>	Disable the other IPv6 flag.											
ip6-prefix-mode	Assigning a prefix from DHCP or RA.	option	-	dhcp6								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dhcp6</i></td><td>Use delegated prefix from a DHCPv6 client to form a delegated IPv6 address.</td></tr><tr><td><i>ra</i></td><td>Use prefix from RA to form a delegated IPv6 address.</td></tr></table>	Option	Description	<i>dhcp6</i>	Use delegated prefix from a DHCPv6 client to form a delegated IPv6 address.	<i>ra</i>	Use prefix from RA to form a delegated IPv6 address.					
	Option	Description										
	<i>dhcp6</i>	Use delegated prefix from a DHCPv6 client to form a delegated IPv6 address.										
<i>ra</i>	Use prefix from RA to form a delegated IPv6 address.											
ip6-reachable-time	IPv6 reachable time (milliseconds; 0 means unspecified).	integer	Minimum value: 0 Maximum value: 3600000	0								
ip6-retrans-time	IPv6 retransmit time (milliseconds; 0 means unspecified).	integer	Minimum value: 0 Maximum value: 4294967295	0								
ip6-route-pref	Set route preference to the interface (default = medium).	option	-	medium								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>medium</i></td><td>Medium route preferences in RA packet.</td></tr><tr><td><i>high</i></td><td>High route preferences in RA packet.</td></tr><tr><td><i>low</i></td><td>Low route preferences in RA packet.</td></tr></table>	Option	Description	<i>medium</i>	Medium route preferences in RA packet.	<i>high</i>	High route preferences in RA packet.	<i>low</i>	Low route preferences in RA packet.			
	Option	Description										
	<i>medium</i>	Medium route preferences in RA packet.										
	<i>high</i>	High route preferences in RA packet.										
<i>low</i>	Low route preferences in RA packet.											
ip6-send-adv	Enable/disable sending advertisements about the interface.	option	-	disable								

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending advertisements about this interface.</td></tr><tr><td><i>disable</i></td><td>Disable sending advertisements about this interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending advertisements about this interface.	<i>disable</i>	Disable sending advertisements about this interface.			
	Option	Description								
	<i>enable</i>	Enable sending advertisements about this interface.								
<i>disable</i>	Disable sending advertisements about this interface.									
ip6-subnet	Subnet to routing prefix. Syntax: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx.	ipv6-prefix	Not Specified	::/0						
ip6-upstream-interface	Interface name providing delegated information.	string	Maximum length: 15							
nd-cert	Neighbor discovery certificate.	string	Maximum length: 35							
nd-cga-modifier	Neighbor discovery CGA modifier.	user	Not Specified							
nd-mode	Neighbor discovery mode.	option	-	basic						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>basic</i></td><td>Do not support SEND.</td></tr><tr><td><i>SEND-compatible</i></td><td>Support SEND.</td></tr></table>	Option	Description	<i>basic</i>	Do not support SEND.	<i>SEND-compatible</i>	Support SEND.			
	Option	Description								
	<i>basic</i>	Do not support SEND.								
<i>SEND-compatible</i>	Support SEND.									
nd-security-level	Neighbor discovery security level (0 - 7; 0 = least secure, default = 0).	integer	Minimum value: 0 Maximum value: 7	0						
nd-timestamp-delta	Neighbor discovery timestamp delta value (1 - 3600 sec; default = 300).	integer	Minimum value: 1 Maximum value: 3600	300						
nd-timestamp-fuzz	Neighbor discovery timestamp fuzz factor (1 - 60 sec; default = 1).	integer	Minimum value: 1 Maximum value: 60	1						
ra-send-mtu	Enable/disable sending link MTU in RA packet.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending link MTU in RA packet.</td></tr><tr><td><i>disable</i></td><td>Disable sending link MTU in RA packet.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending link MTU in RA packet.	<i>disable</i>	Disable sending link MTU in RA packet.			
	Option	Description								
	<i>enable</i>	Enable sending link MTU in RA packet.								
<i>disable</i>	Disable sending link MTU in RA packet.									
unique-autoconf-addr	Enable/disable unique auto config address.	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable unique auto-configuration address.</td></tr><tr><td><i>disable</i></td><td>Disable unique auto-configuration address.</td></tr></table>				Option	Description	<i>enable</i>	Enable unique auto-configuration address.	<i>disable</i>	Disable unique auto-configuration address.
	Option	Description								
	<i>enable</i>	Enable unique auto-configuration address.								
<i>disable</i>	Disable unique auto-configuration address.									
vrrip6_link_local	Link-local IPv6 address of virtual router.	ipv6-address	Not Specified	::						
vrrp-virtual-mac6	Enable/disable virtual MAC for VRRP.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable virtual MAC for VRRP.</td></tr><tr><td><i>disable</i></td><td>Disable virtual MAC for VRRP.</td></tr></table>				Option	Description	<i>enable</i>	Enable virtual MAC for VRRP.	<i>disable</i>	Disable virtual MAC for VRRP.
	Option	Description								
	<i>enable</i>	Enable virtual MAC for VRRP.								
<i>disable</i>	Disable virtual MAC for VRRP.									

config client-options

Parameter	Description	Type	Size	Default										
code	DHCPv6 option code.	integer	Minimum value: 0 Maximum value: 255	0										
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0										
ip6	DHCP option IP6s.	user	Not Specified											
type	DHCPv6 option type.	option	-	hex										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hex</i></td><td>DHCPv6 option in hex.</td></tr><tr><td><i>string</i></td><td>DHCPv6 option in string.</td></tr><tr><td><i>ip6</i></td><td>DHCPv6 option in IP6.</td></tr><tr><td><i>fqdn</i></td><td>DHCPv6 option in domain search option format.</td></tr></table>				Option	Description	<i>hex</i>	DHCPv6 option in hex.	<i>string</i>	DHCPv6 option in string.	<i>ip6</i>	DHCPv6 option in IP6.	<i>fqdn</i>	DHCPv6 option in domain search option format.
	Option	Description												
	<i>hex</i>	DHCPv6 option in hex.												
	<i>string</i>	DHCPv6 option in string.												
	<i>ip6</i>	DHCPv6 option in IP6.												
<i>fqdn</i>	DHCPv6 option in domain search option format.													
value	DHCPv6 option value (hexadecimal value must be even).	string	Maximum length: 312											

config dhcp6-iapd-list

config system ipip-tunnel

Parameter	Description	Type	Size	Default						
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auto ASIC offloading.</td></tr><tr><td><i>disable</i></td><td>Disable ASIC offloading.</td></tr></table>	Option	Description	<i>enable</i>	Enable auto ASIC offloading.	<i>disable</i>	Disable ASIC offloading.			
Option	Description									
<i>enable</i>	Enable auto ASIC offloading.									
<i>disable</i>	Disable ASIC offloading.									
interface	Interface name that is associated with the incoming traffic from available options.	string	Maximum length: 15							
local-gw	IPv4 address for the local gateway.	ipv4-address-any	Not Specified	0.0.0.0						
name	IPIP Tunnel name.	string	Maximum length: 15							
remote-gw	IPv4 address for the remote gateway.	ipv4-address	Not Specified	0.0.0.0						
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of SD-WAN to reach remote gateway.</td></tr><tr><td><i>enable</i></td><td>Enable use of SD-WAN to reach remote gateway.</td></tr></table>	Option	Description	<i>disable</i>	Disable use of SD-WAN to reach remote gateway.	<i>enable</i>	Enable use of SD-WAN to reach remote gateway.			
Option	Description									
<i>disable</i>	Disable use of SD-WAN to reach remote gateway.									
<i>enable</i>	Enable use of SD-WAN to reach remote gateway.									

* This parameter may not exist in some models.

config system ips

Configure IPS system settings.

```
config system ips
  Description: Configure IPS system settings.
  set override-signature-hold-by-id [enable|disable]
  set signature-hold-time {user}
end
```

config system ips

Parameter	Description	Type	Size	Default
override-signature-hold-by-id	Enable/disable override of hold of triggering signatures that are specified by IDs regardless of hold.	option	-	enable
	Option	Description		
	<i>enable</i>	Allow the signatures specified by IDs to be triggered even if they are on hold.		
	<i>disable</i>	Do not trigger the signatures that are on hold.		
signature-hold-time	Time to hold and monitor IPS signatures. Format <#d##h> (day range: 0 - 7, hour range: 0 - 23, max hold time: 7d0h, default hold time: 0d0h).	user	Not Specified	0h

config system ipsec-aggregate

Configure an aggregate of IPsec tunnels.

```
config system ipsec-aggregate
  Description: Configure an aggregate of IPsec tunnels.
  edit <name>
    set algorithm [L3|L4|...]
    set member <tunnel-name1>, <tunnel-name2>, ...
  next
end
```

config system ipsec-aggregate

Parameter	Description	Type	Size	Default
algorithm	Frame distribution algorithm.	option	-	round-robin
	Option	Description		
	<i>L3</i>	Use layer 3 address for distribution.		
	<i>L4</i>	Use layer 4 information for distribution.		
	<i>round-robin</i>	Per-packet round-robin distribution.		
	<i>redundant</i>	Use first tunnel that is up for all traffic.		
	<i>weighted-round-robin</i>	Weighted round-robin distribution.		
member <tunnel-name>	Member tunnels of the aggregate. Tunnel name.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default
name	IPsec aggregate name.	string	Maximum length: 15	

config system ips-urlfilter-dns

Configure IPS URL filter DNS servers.

```
config system ips-urlfilter-dns
    Description: Configure IPS URL filter DNS servers.
    edit <address>
        set ipv6-capability [enable|disable]
        set status [enable|disable]
    next
end
```

config system ips-urlfilter-dns

Parameter	Description	Type	Size	Default
address	DNS server IP address.	ipv4-address	Not Specified	0.0.0.0
ipv6-capability	Enable/disable this server for IPv6 queries.	option	-	disable
	Option		Description	
	<i>enable</i>		Enable setting.	
	<i>disable</i>		Disable setting.	
status	Enable/disable using this DNS server for IPS URL filter DNS queries.	option	-	enable
	Option		Description	
	<i>enable</i>		Enable this DNS server for IPS URL filter DNS queries.	
	<i>disable</i>		Disable this DNS server for IPS URL filter DNS queries.	

config system ips-urlfilter-dns6

Configure IPS URL filter IPv6 DNS servers.

```
config system ips-urlfilter-dns6
    Description: Configure IPS URL filter IPv6 DNS servers.
    edit <address6>
        set status [enable|disable]
```

```
next
end
```

config system ips-urlfilter-dns6

Parameter	Description	Type	Size	Default
address6	IPv6 address of DNS server.	ipv6-address	Not Specified	::
status	Enable/disable this server for IPv6 DNS queries.	option	-	enable
		Option	Description	
		enable	Enable setting.	
		disable	Disable setting.	

config system ipv6-neighbor-cache

Configure IPv6 neighbor cache table.

```
config system ipv6-neighbor-cache
  Description: Configure IPv6 neighbor cache table.
  edit <id>
    set interface {string}
    set ipv6 {ipv6-address}
    set mac {mac-address}
  next
end
```

config system ipv6-neighbor-cache

Parameter	Description	Type	Size	Default
id	Unique integer ID of the entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Select the associated interface name from available options.	string	Maximum length: 15	
ipv6	IPv6 address (format: xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx).	ipv6-address	Not Specified	::
mac	MAC address (format: xx:xx:xx:xx:xx:xx).	mac-address	Not Specified	00:00:00:00:00:00

config system ipv6-tunnel

Configure IPv6/IPv4 in IPv6 tunnel.

```
config system ipv6-tunnel
  Description: Configure IPv6/IPv4 in IPv6 tunnel.
  edit <name>
    set auto-asic-offload [enable|disable]
    set destination {ipv6-address}
    set interface {string}
    set source {ipv6-address}
    set use-sdwan [disable|enable]
  next
end
```

config system ipv6-tunnel

Parameter	Description	Type	Size	Default						
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auto ASIC offloading.</td></tr><tr><td><i>disable</i></td><td>Disable ASIC offloading.</td></tr></table>				Option	Description	<i>enable</i>	Enable auto ASIC offloading.	<i>disable</i>	Disable ASIC offloading.
	Option	Description								
	<i>enable</i>	Enable auto ASIC offloading.								
<i>disable</i>	Disable ASIC offloading.									
destination	Remote IPv6 address of the tunnel.	ipv6-address	Not Specified	::						
interface	Interface name.	string	Maximum length: 15							
name	IPv6 tunnel name.	string	Maximum length: 15							
source	Local IPv6 address of the tunnel.	ipv6-address	Not Specified	::						
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of SD-WAN to reach remote gateway.</td></tr><tr><td><i>enable</i></td><td>Enable use of SD-WAN to reach remote gateway.</td></tr></table>				Option	Description	<i>disable</i>	Disable use of SD-WAN to reach remote gateway.	<i>enable</i>	Enable use of SD-WAN to reach remote gateway.
	Option	Description								
	<i>disable</i>	Disable use of SD-WAN to reach remote gateway.								
<i>enable</i>	Enable use of SD-WAN to reach remote gateway.									

* This parameter may not exist in some models.

config system link-monitor

Parameter	Description	Type	Size	Default						
addr-mode	Address mode (IPv4 or IPv6).	option	-	ipv4						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>IPv4 mode.</td></tr><tr><td>ipv6</td><td>IPv6 mode.</td></tr></table>				Option	Description	ipv4	IPv4 mode.	ipv6	IPv6 mode.
	Option	Description								
	ipv4	IPv4 mode.								
ipv6	IPv6 mode.									
class-id	Traffic class ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
diffservcode	Differentiated services code point (DSCP) in the IP header of the probe packet.	user	Not Specified							
fail-weight	Threshold weight to trigger link failure alert.	integer	Minimum value: 0 Maximum value: 255	0						
failtime	Number of retry attempts before the server is considered down (1 - 3600, default = 5).	integer	Minimum value: 1 Maximum value: 3600	5						
gateway-ip	Gateway IP address used to probe the server.	ipv4-address-any	Not Specified	0.0.0.0						
gateway-ip6	Gateway IPv6 address used to probe the server.	ipv6-address	Not Specified	::						

Parameter	Description	Type	Size	Default
ha-priority	HA election priority (1 - 50).	integer	Minimum value: 1 Maximum value: 50	1
http-agent	String in the http-agent field in the HTTP header.	string	Maximum length: 1024	Chrome/ Safari/
http-get	If you are monitoring an HTML server you can send an HTTP-GET request with a custom string. Use this option to define the string.	string	Maximum length: 1024	/
http-match	String that you expect to see in the HTTP-GET requests of the traffic to be monitored.	string	Maximum length: 1024	
interval	Detection interval in milliseconds (20 - 3600 * 1000 msec, default = 500).	integer	Minimum value: 20 Maximum value: 3600000	500
name	Link monitor name.	string	Maximum length: 35	
packet-size	Packet size of a TWAMP test session (124/158 - 1024).	integer	Minimum value: 0 Maximum value: 65535	124
password	TWAMP controller password in authentication mode.	password	Not Specified	
port	Port number of the traffic to be used to monitor the server.	integer	Minimum value: 1 Maximum value: 65535	0
probe-count	Number of most recent probes that should be used to calculate latency and jitter (5 - 30, default = 30).	integer	Minimum value: 5 Maximum value: 30	30
probe-timeout	Time to wait before a probe packet is considered lost (20 - 5000 msec, default = 500).	integer	Minimum value: 20 Maximum value: 5000	500
protocol	Protocols used to monitor the server.	option	-	ping

	<i>static</i>	Static servers.																
<i>dynamic</i>	Dynamic servers.																	
service-detection	Only use monitor to read quality values. If enabled, static routes and cascade interfaces will not be updated.	option	-	disable														

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Only use monitor for service-detection.		
	<i>disable</i>	Monitor will update routes/interfaces on link failure.		
source-ip	Source IP address used in packet to the server.	ipv4-address-any	Not Specified	0.0.0.0
source-ip6	Source IPv6 address used in packet to the server.	ipv6-address	Not Specified	::
srcintf	Interface that receives the traffic to be monitored.	string	Maximum length: 15	
status	Enable/disable this link monitor.	option	-	enable
	Option Description			
	<i>enable</i>	Enable this link monitor.		
	<i>disable</i>	Disable this link monitor.		
update-cascade-interface	Enable/disable update cascade interface.	option	-	enable
	Option Description			
	<i>enable</i>	Enable update cascade interface.		
	<i>disable</i>	Disable update cascade interface.		
update-policy-route	Enable/disable updating the policy route.	option	-	enable
	Option Description			
	<i>enable</i>	Enable updating the policy route.		
	<i>disable</i>	Disable updating the policy route.		
update-static-route	Enable/disable updating the static route.	option	-	enable
	Option Description			
	<i>enable</i>	Enable updating the static route.		
	<i>disable</i>	Disable updating the static route.		

config server-list

Parameter	Description	Type	Size	Default
dst	IP address of the server to be monitored.	string	Maximum length: 64	
id	Server ID.	integer	Minimum value: 1 Maximum value: 32	0
port	Port number of the traffic to be used to monitor the server.	integer	Minimum value: 1 Maximum value: 65535	0
protocol	Protocols used to monitor the server.	option	-	ping
	Option		Description	
	ping		PING link monitor.	
	tcp-echo		TCP echo link monitor.	
	udp-echo		UDP echo link monitor.	
	http		HTTP-GET link monitor.	
	https		HTTPS-GET link monitor.	
	twamp		TWAMP link monitor.	
weight	Weight of the monitor to this dst (0 - 255).	integer	Minimum value: 0 Maximum value: 255	0

config system lte-modem

Parameter	Description	Type	Size	Default						
allow-modify-mtu-size *	Allow FortiGate to modify the wireless WAN interface MTU size.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow LTE daemon to modify wireless profile table.</td></tr><tr><td><i>disable</i></td><td>Do not allow LTE daemon to modify wireless profile table.</td></tr></table>	Option	Description	<i>enable</i>	Allow LTE daemon to modify wireless profile table.	<i>disable</i>	Do not allow LTE daemon to modify wireless profile table.			
Option	Description									
<i>enable</i>	Allow LTE daemon to modify wireless profile table.									
<i>disable</i>	Do not allow LTE daemon to modify wireless profile table.									
allow-modify-wireless-profile-table *	Allow FortiGate to modify the wireless profile table if the internal LTE modem is running the GENERIC modem firmware.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow LTE daemon to modify wireless profile table.</td></tr><tr><td><i>disable</i></td><td>Do not allow LTE daemon to modify wireless profile table.</td></tr></table>	Option	Description	<i>enable</i>	Allow LTE daemon to modify wireless profile table.	<i>disable</i>	Do not allow LTE daemon to modify wireless profile table.			
Option	Description									
<i>enable</i>	Allow LTE daemon to modify wireless profile table.									
<i>disable</i>	Do not allow LTE daemon to modify wireless profile table.									

Parameter	Description	Type	Size	Default
apn	Login APN string for PDP-IP packet data calls.	string	Maximum length: 127	
authtype	Authentication type for PDP-IP packet data calls.	option	-	none
	Option	Description		
	<i>none</i>	Username and password not required.		
	<i>pap</i>	Use PAP authentication.		
	<i>chap</i>	Use CHAP authentication.		
auto-connect *	Enable/disable modem auto connect.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable modem auto connect.		
	<i>disable</i>	Disable modem auto connect.		
band-restrictions *	Bitmaps for the allowed 3G and LTE bands.Ex: 0000000000000000-0000000000001008 (3G Mask-LTE Mask)	string	Maximum length: 35	
data-usage-tracking *	Enable/disable data usage tracking.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable data usage tracking.		
	<i>disable</i>	Disable data usage tracking.		
dhcp-relay *	Enable/disable DHCP relay over modem.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable DHCP relay.		
	<i>disable</i>	Disable DHCP relay.		
extra-init	Extra initialization string for USB LTE/WIMAX devices.	string	Maximum length: 127	
force-wireless-profile *	Force to use wireless profile index (1 - 16), 0 if don't force.	integer	Minimum value: 0 Maximum value: 16	0

Parameter	Description	Type	Size	Default																				
gps-port *	Modem GPS port index (0 - 20).	integer	Minimum value: 0 Maximum value: 20	255

Option	Description																							
<i>generic</i>	Generic Firmware.																							
<i>att</i>	AT&T Firmware.																							
<i>verizon</i>	Verizon Firmware.																							
<i>telus</i>	Telus Firmware.																							
<i>docomo</i>	DOCOMO Firmware.																							
<i>softbank</i>	Softbank Firmware.																							
<i>sprint</i>	Sprint Firmware.																							
<i>auto-sim</i>	Auto Select Firmware.																							
<i>no-change</i>	Do not change.																							
interface	The interface that the modem is acting as a redundant interface for.	string	Maximum length: 63																					
manual-handover *	Enable/Disable manual handover from 3G to LTE network.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 3G to LTE manual handover.</td></tr><tr><td><i>disable</i></td><td>Disable 3G to LTE manual handover.</td></tr></table>	Option	Description	<i>enable</i>	Enable 3G to LTE manual handover.	<i>disable</i>	Disable 3G to LTE manual handover.																	
Option	Description																							
<i>enable</i>	Enable 3G to LTE manual handover.																							
<i>disable</i>	Disable 3G to LTE manual handover.																							
mode	Modem operation mode.	option	-	standalone																				

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>standalone</i>	Standalone modem operation mode.		
	<i>redundant</i>	Redundant modem operation mode where the modem is used as a backup interface.		
modem-port	Modem port index (0 - 20).	integer	Minimum value: 0 Maximum value: 20	255
network-type *	Wireless network type.	option	-	auto
	Option	Description		
	<i>auto</i>	Automatic detection		
	<i>umts-3g</i>	UMTS 3G -- For networks use GSM technology		
	<i>lte</i>	LTE		
override-gateway *	Enable/disable LTE gateway override (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Override gateway to 0.0.0.0		
	<i>disable</i>	Use gateway as assigned by ISP DHCP server.		
passwd	Authentication password for PDP-IP packet data calls.	password	Not Specified	
pdptype	Packet Data Protocol (PDP) context type.	option	-	**
	Option	Description		
	<i>IPv4</i>	Only IPv4.		
sim1-pin *	PIN code for SIM #1 (if applicable).	password	Not Specified	
sim2-pin *	PIN code for SIM #2 (if applicable).	password	Not Specified	
status	Enable/disable USB LTE/WIMAX device.	option	-	disable **
	Option	Description		
	<i>enable</i>	Enable USB LTE/WIMA device.		
	<i>disable</i>	Disable USB LTE/WIMA device.		

Parameter	Description	Type	Size	Default
username	Authentication username for PDP-IP packet data calls.	string	Maximum length: 63	

* This parameter may not exist in some models.

** Values may differ between models.

data-limit	LTE MODEM data limit in megabytes (0 - 100000, use zero for unlimited data).	integer	Minimum value: 0 Maximum value: 100000	4294967295						
data-limit-alert	LTE MODEM data usage percentage at which to trigger log. (1 - 99 percent, default = 75).	integer	Minimum value: 1 Maximum value: 99	75						
delay-switch-time	Instead of SIM switching shortly after data limit is reached, schedule a delay switch time in format hh:mm.	string	Maximum length: 35	NA						
iccid	Dedicated data plan to specific ICCID.	string	Maximum length: 35							
name	Data plan name.	string	Maximum length: 35							
overage	Enable/disable allowance of data overage as configured by data-limit (default = enable). If disabled, perform sim-swap/stop-network as configured by by-data-plan.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Allow data overage data-limit. This won't perform sim-swap/stop-network.</td></tr><tr><td>disable</td><td>Disable data overage data-limit. This will perform sim-swap/stop-network as configured by by-data-plan.</td></tr></table>				Option	Description	enable	Allow data overage data-limit. This won't perform sim-swap/stop-network.	disable	Disable data overage data-limit. This will perform sim-swap/stop-network as configured by by-data-plan.
Option	Description									
enable	Allow data overage data-limit. This won't perform sim-swap/stop-network.									
disable	Disable data overage data-limit. This will perform sim-swap/stop-network as configured by by-data-plan.									
target-sim-slot	Target sim slot <1 or 2>	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>SIM-slot-1</td><td>SIM slot 1</td></tr><tr><td>SIM-slot-2</td><td>SIM slot 2</td></tr></table>				Option	Description	SIM-slot-1	SIM slot 1	SIM-slot-2	SIM slot 2
Option	Description									
SIM-slot-1	SIM slot 1									
SIM-slot-2	SIM slot 2									

config sim-switch

Parameter	Description	Type	Size	Default
by-connection-state	Enable/disable automatic switch of SIM by MODEM connection state (mobile data usage charges not incurred).	option	-	enable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SIM auto switch by modem connection state.</td></tr><tr><td><i>enable</i></td><td>Enable SIM auto switch by modem connection state.</td></tr></table>	Option	Description	<i>disable</i>	Disable SIM auto switch by modem connection state.	<i>enable</i>	Enable SIM auto switch by modem connection state.			
	Option	Description								
	<i>disable</i>	Disable SIM auto switch by modem connection state.								
<i>enable</i>	Enable SIM auto switch by modem connection state.									
by-data-plan	Enable/disable SIM auto switch by data-plan config.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic switch of SIM by data-plan configuration.</td></tr><tr><td><i>disable</i></td><td>Disable automatic switch of SIM by data-plan configuration.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic switch of SIM by data-plan configuration.	<i>disable</i>	Disable automatic switch of SIM by data-plan configuration.			
	Option	Description								
	<i>enable</i>	Enable automatic switch of SIM by data-plan configuration.								
<i>disable</i>	Disable automatic switch of SIM by data-plan configuration.									
by-link-monitor	Enable/disable automatic switch of SIM by link monitor (mobile data usage charges incurred).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SIM auto switch by link monitor.</td></tr><tr><td><i>enable</i></td><td>Enable SIM auto switch by link monitor.</td></tr></table>	Option	Description	<i>disable</i>	Disable SIM auto switch by link monitor.	<i>enable</i>	Enable SIM auto switch by link monitor.			
	Option	Description								
	<i>disable</i>	Disable SIM auto switch by link monitor.								
<i>enable</i>	Enable SIM auto switch by link monitor.									
by-sim-state	Enable/disable automatic switch of SIM when MODEM SIM state is empty or in error.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SIM auto switch when SIM state is empty or in error.</td></tr><tr><td><i>enable</i></td><td>Enable SIM auto switch when SIM state is empty or in error.</td></tr></table>	Option	Description	<i>disable</i>	Disable SIM auto switch when SIM state is empty or in error.	<i>enable</i>	Enable SIM auto switch when SIM state is empty or in error.			
	Option	Description								
	<i>disable</i>	Disable SIM auto switch when SIM state is empty or in error.								
<i>enable</i>	Enable SIM auto switch when SIM state is empty or in error.									
link-monitor	Set link monitor name.	string	Maximum length: 35							
modem-disconnection-time	Configure connection-based automatic switch of SIM time interval in seconds (30 - 86400).	integer	Minimum value: 30 Maximum value: 86400	300						
sim-slot	SIM card slot (1 - 2). 1: SIM-slot 1. 2: SIM-slot 2.	integer	Minimum value: 1 Maximum value: 2	1						
sim-switch-log-alert-interval	When sim-switch > X threshold within Y interval, trigger log event (Y:1 - 99999 min, default = 15).	integer	Minimum value: 1 Maximum value: 99999	15						

Parameter	Description	Type	Size	Default
sim-switch-log-alert-threshold	When sim-switch > X threshold within Y interval, trigger log event (X:1 - 1000 times, default = 5).	integer	Minimum value: 1 Maximum value: 1000	5

config system mac-address-table

Configure MAC address tables.

```
config system mac-address-table
    Description: Configure MAC address tables.
    edit <mac>
        set interface {string}
        set reply-substitute {mac-address}
    next
end
```

config system mac-address-table

Parameter	Description	Type	Size	Default
interface	Interface name.	string	Maximum length: 35	
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00
reply-substitute	New MAC for reply traffic.	mac-address	Not Specified	00:00:00:00:00:00

config system management-tunnel

Management tunnel configuration.

```
config system management-tunnel
    Description: Management tunnel configuration.
    set allow-collect-statistics [enable|disable]
    set allow-config-restore [enable|disable]
    set allow-push-configuration [enable|disable]
    set allow-push-firmware [enable|disable]
    set authorized-manager-only [enable|disable]
    set serial-number {user}
    set status [enable|disable]
end
```

config system management-tunnel

Parameter	Description	Type	Size	Default						
allow-collect-statistics	Enable/disable collection of run time statistics.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable collection of run time statistics.</td></tr><tr><td><i>disable</i></td><td>Disable collection of run time statistics.</td></tr></table>	Option	Description	<i>enable</i>	Enable collection of run time statistics.	<i>disable</i>	Disable collection of run time statistics.			
Option	Description									
<i>enable</i>	Enable collection of run time statistics.									
<i>disable</i>	Disable collection of run time statistics.									
allow-config-restore	Enable/disable allow config restore.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allow config restore.</td></tr><tr><td><i>disable</i></td><td>Disable allow config restore.</td></tr></table>	Option	Description	<i>enable</i>	Enable allow config restore.	<i>disable</i>	Disable allow config restore.			
Option	Description									
<i>enable</i>	Enable allow config restore.									
<i>disable</i>	Disable allow config restore.									
allow-push-configuration	Enable/disable push configuration.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable push configuration.</td></tr><tr><td><i>disable</i></td><td>Disable push configuration.</td></tr></table>	Option	Description	<i>enable</i>	Enable push configuration.	<i>disable</i>	Disable push configuration.			
Option	Description									
<i>enable</i>	Enable push configuration.									
<i>disable</i>	Disable push configuration.									
allow-push-firmware	Enable/disable push firmware.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable push firmware.</td></tr><tr><td><i>disable</i></td><td>Disable push firmware.</td></tr></table>	Option	Description	<i>enable</i>	Enable push firmware.	<i>disable</i>	Disable push firmware.			
Option	Description									
<i>enable</i>	Enable push firmware.									
<i>disable</i>	Disable push firmware.									
authorized-manager-only	Enable/disable restriction of authorized manager only.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable restriction of authorized manager only.</td></tr><tr><td><i>disable</i></td><td>Disable restriction of authorized manager only.</td></tr></table>	Option	Description	<i>enable</i>	Enable restriction of authorized manager only.	<i>disable</i>	Disable restriction of authorized manager only.			
Option	Description									
<i>enable</i>	Enable restriction of authorized manager only.									
<i>disable</i>	Disable restriction of authorized manager only.									
serial-number	Serial number.	user	Not Specified							
status	Enable/disable FGFM tunnel.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable management tunnel.		
	<i>disable</i>	Disable management tunnel.		

config system mobile-tunnel

Configure Mobile tunnels, an implementation of Network Mobility (NEMO) extensions for Mobile IPv4 RFC5177.

```
config system mobile-tunnel
```

Description: Configure Mobile tunnels, an implementation of Network Mobility (NEMO) extensions for Mobile IPv4 RFC5177.

```
edit <name>
    set hash-algorithm {option}
    set home-address {ipv4-address}
    set home-agent {ipv4-address}
    set lifetime {integer}
    set n-mhae-key {password_aes256}
    set n-mhae-key-type [ascii|base64]
    set n-mhae-spi {integer}
    config network
        Description: NEMO network configuration.
        edit <id>
            set interface {string}
            set prefix {ipv4-classnet}
        next
    end
    set reg-interval {integer}
    set reg-retry {integer}
    set renew-interval {integer}
    set roaming-interface {string}
    set status [disable|enable]
    set tunnel-mode {option}
next
end
```

config system mobile-tunnel

Parameter	Description	Type	Size	Default
hash-algorithm	Hash Algorithm (Keyed MD5).	option	-	hmac-md5
	Option	Description		
	<i>hmac-md5</i>	Keyed MD5.		

Parameter	Description	Type	Size	Default						
home-address	Home IP address (Format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0						
home-agent	IPv4 address of the NEMO HA (Format: xxx.xxx.xxx.xxx).	ipv4-address	Not Specified	0.0.0.0						
lifetime	NMMO HA registration request lifetime (180 - 65535 sec, default = 65535).	integer	Minimum value: 180 Maximum value: 65535	65535						
n-mhae-key	NEMO authentication key.	password_aes256	Not Specified							
n-mhae-key-type	NEMO authentication key type (ASCII or base64).	option	-	ascii						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ascii</td><td>The authentication key is an ASCII string.</td></tr><tr><td>base64</td><td>The authentication key is Base64 encoded.</td></tr></table>				Option	Description	ascii	The authentication key is an ASCII string.	base64	The authentication key is Base64 encoded.
Option	Description									
ascii	The authentication key is an ASCII string.									
base64	The authentication key is Base64 encoded.									
n-mhae-spi	NEMO authentication SPI (default: 256).	integer	Minimum value: 0 Maximum value: 4294967295	256						
name	Tunnel name.	string	Maximum length: 15							
reg-interval	NMMO HA registration interval (5 - 300, default = 5).	integer	Minimum value: 5 Maximum value: 300	5						
reg-retry	Maximum number of NMMO HA registration retries (1 to 30, default = 3).	integer	Minimum value: 1 Maximum value: 30	3						
renew-interval	Time before lifetime expiration to send NMMO HA re-registration (5 - 60, default = 60).	integer	Minimum value: 5 Maximum value: 60	60						
roaming-interface	Select the associated interface name from available options.	string	Maximum length: 15							
status	Enable/disable this mobile tunnel.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable this mobile tunnel.		
	<i>enable</i>	Enable this mobile tunnel.		
tunnel-mode	NEMO tunnel mode (GRE tunnel).	option	-	gre
	Option	Description		
	<i>gre</i>	GRE tunnel.		

config network

Parameter	Description	Type	Size	Default
id	Network entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Select the associated interface name from available options.	string	Maximum length: 15	
prefix	Class IP and Netmask with correction (Format:xxx.xxx.xxx.xxx xxx.xxx.xxx.xxx or xxx.xxx.xxx.xxx/x).	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0

config system modem

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64.

```

end

config system modem

Parameter	Description	Type	Size	Default								
action	Dial up/stop MODEM.	option	-	stop								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>dial</td><td>Dial up number.</td></tr><tr><td>stop</td><td>Stop dialup.</td></tr><tr><td>none</td><td>No action.</td></tr></table>	Option	Description	dial	Dial up number.	stop	Stop dialup.	none	No action.			
	Option	Description										
	dial	Dial up number.										
	stop	Stop dialup.										
none	No action.											
altmode	Enable/disable altmode for installations using PPP in China.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.					
	Option	Description										
	enable	Enable setting.										
disable	Disable setting.											
authtype1	Allowed authentication types for ISP 1.	option	-	pap chap mschap mschapv2								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>pap</i>	PAP		
	<i>chap</i>	CHAP		
	<i>mschap</i>	MSCHAP		
	<i>mschapv2</i>	MSCHAPv2		
authtype2	Allowed authentication types for ISP 2.	option	-	pap chap mschap mschapv2
	Option	Description		
	<i>pap</i>	PAP		
	<i>chap</i>	CHAP		
	<i>mschap</i>	MSCHAP		
	<i>mschapv2</i>	MSCHAPv2		
authtype3	Allowed authentication types for ISP 3.	option	-	pap chap mschap mschapv2
	Option	Description		
	<i>pap</i>	PAP		
	<i>chap</i>	CHAP		
	<i>mschap</i>	MSCHAP		
	<i>mschapv2</i>	MSCHAPv2		
auto-dial	Enable/disable auto-dial after a reboot or disconnection.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
connect-timeout	Connection completion timeout (30 - 255 sec, default = 90).	integer	Minimum value: 30 Maximum value: 255	90
dial-cmd1	Dial command (this is often an ATD or ATDT command).	string	Maximum length: 63	

Parameter	Description	Type	Size	Default						
dial-cmd2	Dial command (this is often an ATD or ATDT command).	string	Maximum length: 63							
dial-cmd3	Dial command (this is often an ATD or ATDT command).	string	Maximum length: 63							
dial-on-demand	Enable/disable to dial the modem when packets are routed to the modem interface.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
distance	Distance of learned routes (1 - 255, default = 1).	integer	Minimum value: 1 Maximum value: 255	1						
dont-send-CR1	Do not send CR when connected (ISP1).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
dont-send-CR2	Do not send CR when connected (ISP2).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
dont-send-CR3	Do not send CR when connected (ISP3).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
extra-init1	Extra initialization string to ISP 1.	string	Maximum length: 127							
extra-init2	Extra initialization string to ISP 2.	string	Maximum length: 127							

Parameter	Description	Type	Size	Default								
extra-init3	Extra initialization string to ISP 3.	string	Maximum length: 127									
holddown-timer	Hold down timer in seconds (1 - 60 sec).	integer	Minimum value: 1 Maximum value: 60	60								
idle-timer	MODEM connection idle time (1 - 9999 min, default = 5).	integer	Minimum value: 1 Maximum value: 9999	5								
interface	Name of redundant interface.	string	Maximum length: 63									
lockdown-lac	Allow connection only to the specified Location Area Code (LAC).	string	Maximum length: 127									
mode	Set MODEM operation mode to redundant or standalone.	option	-	standalone								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>standalone</i></td><td>Standalone.</td></tr><tr><td><i>redundant</i></td><td>Redundant for an interface.</td></tr></table>				Option	Description	<i>standalone</i>	Standalone.	<i>redundant</i>	Redundant for an interface.		
Option	Description											
<i>standalone</i>	Standalone.											
<i>redundant</i>	Redundant for an interface.											
network-init	AT command to set the Network name/type (AT+COPS=<mode>,[<format>,<oper>[,<AcT>]]).	string	Maximum length: 127									
passwd1	Password to access the specified dialup account.	password	Not Specified									
passwd2	Password to access the specified dialup account.	password	Not Specified									
passwd3	Password to access the specified dialup account.	password	Not Specified									
peer-modem1	Specify peer MODEM type for phone1.	option	-	generic								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>generic</i></td><td>All other modem type.</td></tr><tr><td><i>actiontec</i></td><td>ActionTec modem.</td></tr><tr><td><i>ascend_TNT</i></td><td>Ascend TNT modem.</td></tr></table>				Option	Description	<i>generic</i>	All other modem type.	<i>actiontec</i>	ActionTec modem.	<i>ascend_TNT</i>	Ascend TNT modem.
Option	Description											
<i>generic</i>	All other modem type.											
<i>actiontec</i>	ActionTec modem.											
<i>ascend_TNT</i>	Ascend TNT modem.											
peer-modem2	Specify peer MODEM type for phone2.	option	-	generic								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>generic</i></td><td>All other modem type.</td></tr></table>				Option	Description	<i>generic</i>	All other modem type.				
Option	Description											
<i>generic</i>	All other modem type.											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>actiontec</i>	ActionTec modem.		
	<i>ascend_TNT</i>	Ascend TNT modem.		
peer-modem3	Specify peer MODEM type for phone3.	option	-	generic
	Option	Description		
	<i>generic</i>	All other modem type.		
	<i>actiontec</i>	ActionTec modem.		
	<i>ascend_TNT</i>	Ascend TNT modem.		
phone1	Phone number to connect to the dialup account (must not contain spaces, and should include standard special characters).	string	Maximum length: 63	
phone2	Phone number to connect to the dialup account (must not contain spaces, and should include standard special characters).	string	Maximum length: 63	
phone3	Phone number to connect to the dialup account (must not contain spaces, and should include standard special characters).	string	Maximum length: 63	
pin-init	AT command to set the PIN (AT+PIN=<pin>).	string	Maximum length: 127	
ppp-echo-request1	Enable/disable PPP echo-request to ISP 1.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
ppp-echo-request2	Enable/disable PPP echo-request to ISP 2.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
ppp-echo-request3	Enable/disable PPP echo-request to ISP 3.	option	-	enable

	Option	Description																										
	<i>none</i>	Forever.																										
	<i>1</i>	One attempt.																										
	<i>2</i>	Two attempts.																										
	<i>3</i>	Three attempts.																										
	<i>4</i>	Four attempts.																										
	<i>5</i>	Five attempts.																										
	<i>6</i>	Six attempts.																										
	<i>7</i>	Seven attempts.																										
	<i>8</i>	Eight attempts.																										
<i>9</i>	Nine attempts.																											
<i>10</i>	Ten attempts.																											
reset	Number of dial attempts before resetting modem (0 = never reset).	integer	Minimum value: 0 Maximum value: 10	0																								
status	Enable/disable Modem support (equivalent to bringing an interface up or down).	option	-	disable																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.																					
	Option	Description																										
	<i>enable</i>	Enable setting.																										
<i>disable</i>	Disable setting.																											
traffic-check	Enable/disable traffic-check.	option	-	disable																								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
username1	User name to access the specified dialup account.	string	Maximum length: 63	
username2	User name to access the specified dialup account.	string	Maximum length: 63	
username3	User name to access the specified dialup account.	string	Maximum length: 63	
wireless-port	Enter wireless port number: 0 for default, 1 for first port, and so on (0 - 4294967295).	integer	Minimum value: 0 Maximum value: 4294967295	0

config system nd-proxy

Configure IPv6 neighbor discovery proxy (RFC4389).

```
config system nd-proxy
    Description: Configure IPv6 neighbor discovery proxy (RFC4389).
    set member <interface-name1>, <interface-name2>, ...
    set status [enable|disable]
end
```

config system nd-proxy

Parameter	Description	Type	Size	Default
member <interface-name>	Interfaces using the neighbor discovery proxy. Interface name.	string	Maximum length: 79	
status	Enable/disable neighbor discovery proxy.	option	-	disable
	Option	Description		
	enable	Enable neighbor discovery proxy.		
	disable	Disable neighbor discovery proxy.		

config system netflow

Configure NetFlow.

```
config system netflow
  Description: Configure NetFlow.
  set active-flow-timeout {integer}
  config collectors
    Description: Netflow collectors.
    edit <id>
      set collector-ip {string}
      set collector-port {integer}
      set interface {string}
      set interface-select-method [auto|sdwan|...]
      set source-ip {string}
      set source-ip-interface {string}
      set vrf-select {integer}
    next
  end
  config exclusion-filters
    Description: Exclusion filters
    edit <id>
      set destination-ip {user}
      set destination-port {user}
      set protocol {integer}
      set source-ip {user}
      set source-port {user}
    next
  end
  set inactive-flow-timeout {integer}
  set template-tx-counter {integer}
  set template-tx-timeout {integer}
end
```

config system netflow

Parameter	Description	Type	Size	Default
active-flow-timeout	Timeout to report active flows (60 - 3600 sec, default = 1800).	integer	Minimum value: 60 Maximum value: 3600	1800
inactive-flow-timeout	Timeout for periodic report of finished flows (10 - 600 sec, default = 15).	integer	Minimum value: 10 Maximum value: 600	15
template-tx-counter	Counter of flowset records before resending a template flowset record.	integer	Minimum value: 10 Maximum value: 6000	20

Parameter	Description	Type	Size	Default
template-tx-timeout	Timeout for periodic template flowset transmission (60 - 86400 sec, default = 1800).	integer	Minimum value: 60 Maximum value: 86400	1800

config collectors

Parameter	Description	Type	Size	Default								
collector-ip	Collector IP.	string	Maximum length: 63									
collector-port	NetFlow collector port number.	integer	Minimum value: 0 Maximum value: 65535	2055								
id	ID.	integer	Minimum value: 1 Maximum value: 6	0								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
source-ip	Source IP address for communication with the NetFlow agent.	string	Maximum length: 63									
source-ip-interface	Name of the interface used to determine the source IP for exporting packets.	string	Maximum length: 15									
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0								

config exclusion-filters

Parameter	Description	Type	Size	Default
destination-ip	Session destination address.	user	Not Specified	
destination-port	Session destination port number or range.	user	Not Specified	
id	Filter ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
protocol	Session IP protocol (0 - 255, default = 255, meaning any).	integer	Minimum value: 0 Maximum value: 255	255
source-ip	Session source address.	user	Not Specified	
source-port	Session source port number or range.	user	Not Specified	

config system network-visibility

Configure network visibility settings.

```
config system network-visibility
  Description: Configure network visibility settings.
  set destination-hostname-visibility [disable|enable]
  set destination-location [disable|enable]
  set destination-visibility [disable|enable]
  set source-location [disable|enable]
end
```

config system network-visibility

Parameter	Description	Type	Size	Default
destination-hostname-visibility	Enable/disable logging of destination hostname visibility.	option	-	enable
		Option	Description	
		<i>disable</i>	Disable logging of destination hostname visibility.	
		<i>enable</i>	Enable logging of destination hostname visibility.	
destination-location	Enable/disable logging of destination geographical location visibility.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable logging of destination geographical location visibility.		
	<i>enable</i>	Enable logging of destination geographical location visibility.		
destination-visibility	Enable/disable logging of destination visibility.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable logging of destination visibility.		
	<i>enable</i>	Enable logging of destination visibility.		
source-location	Enable/disable logging of source geographical location visibility.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable logging of source geographical location visibility.		
	<i>enable</i>	Enable logging of source geographical location visibility.		

config system ngfw-settings

Configure IPS NGFW policy-mode VDOM settings.

```
config system ngfw-settings
    Description: Configure IPS NGFW policy-mode VDOM settings.
    set match-timeout {integer}
    set tcp-halfopen-match-timeout {integer}
    set tcp-match-timeout {integer}
end
```

config system ngfw-settings

Parameter	Description	Type	Size	Default
match-timeout	Number of seconds to wait before a security policy match for an idle non-TCP session (0 - 1800, default = 300, 0 means unlimited).	integer	Minimum value: 0 Maximum value: 1800	300
tcp-halfopen-match-timeout	Number of seconds to wait before a security policy match for a session after one peer has sent an open session packet but the other has not responded (0 - 300, default = 8, 0 means unlimited).	integer	Minimum value: 0 Maximum value: 300	8

Parameter	Description	Type	Size	Default
tcp-match-timeout	Number of seconds to wait before a security policy match for an idle TCP session (0 - 1800, default = 300, 0 means unlimited).	integer	Minimum value: 0 Maximum value: 1800	300

config system np6

Parameter	Description	Type	Size	Default
fastpath	Enable/disable NP6 offloading (also called fast path).	option	-	enable
	Option	Description		
	<i>disable</i>	Disable NP6 offloading (fast path).		
	<i>enable</i>	Enable NP6 offloading (fast path).		
garbage-session-collector	Enable/disable garbage session collector.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable garbage session collector.		
	<i>enable</i>	Enable garbage session collector.		
ipsec-ob-hash-function *	Set hash function for IPSec outbound.	option	-	switch-group-hash
	Option	Description		
	<i>switch-group-hash</i>	Hash outbound SA traffic within NPs connected to same switch.		
	<i>global-hash</i>	Hash outbound SA traffic among all NPs.		
	<i>global-hash-weighted</i>	Hash outbound SA traffic among all NPs with more weights on NPs connected to switch 0. It's applicable to the case that ingress traffic is from switch 1.		
	<i>round-robin-switch-group</i>	Round-robin outbound SA traffic within NPs connected to same switch.		
	<i>round-robin-global</i>	Round-robin outbound SA traffic among all NPs.		
ipsec-outbound-hash *	Enable/disable hash function for IPSec outbound traffic.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable hash function for IPSec outbound traffic.		
	<i>enable</i>	Enable hash function for IPSec outbound traffic.		
low-latency-mode	Enable/disable low latency mode.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable low latency mode.		
	<i>enable</i>	Enable low latency mode.		
name	Device Name.	string	Maximum length: 31	
per-session-accounting	Enable/disable per-session accounting.	option	-	traffic-log-only
	Option	Description		
	<i>disable</i>	Disable per-session accounting.		
	<i>traffic-log-only</i>	Per-session accounting only for sessions with traffic logging enabled in firewall policy.		
	<i>enable</i>	Per-session accounting for all sessions.		
session-collector-interval	Set garbage session collection cleanup interval (1 - 100 sec, default 64).	integer	Minimum value: 1 Maximum value: 100	64
session-timeout-fixed	{disable enable} Toggle between using fixed or random timeouts for refreshing NP6 sessions.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable Refresh NP6 sessions at the configured fixed interval.		
	<i>enable</i>	Enable Refresh NP6 sessions randomly where the time between refreshes is within the random range.		
session-timeout-interval	Set the fixed timeout for refreshing NP6 sessions (0 - 1000 sec, default 40 sec).	integer	Minimum value: 0 Maximum value: 1000	40
session-timeout-random-range	Set the random timeout range for refreshing NP6 sessions (0 - 1000 sec, default 8 sec).	integer	Minimum value: 0 Maximum value: 1000	8

	Option	Description										
	<i>allow</i>	Allow IPv6 with end point identification option to pass.										
	<i>drop</i>	Drop IPv6 with end point identification option.										
<i>trap-to-host</i>	Forward IPv6 with end point identification option to FortiOS.											
ipv6-opthomeaddr	Home address option anomalies.	option	-	trap-to-host								

Parameter	Description	Type	Size	Default
	Option Description			
	<i>allow</i>	Allow IPv6 with home address option to pass.		
	<i>drop</i>	Drop IPv6 with home address option.		
	<i>trap-to-host</i>	Forward IPv6 with home address option to FortiOS.		
ipv6-optinvld	Invalid option anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with invalid option to pass.		
	<i>drop</i>	Drop IPv6 with invalid option.		
	<i>trap-to-host</i>	Forward IPv6 with invalid option to FortiOS.		
ipv6-optjumbo	Jumbo options anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with jumbo option to pass.		
	<i>drop</i>	Drop IPv6 with jumbo option.		
	<i>trap-to-host</i>	Forward IPv6 with jumbo option to FortiOS.		
ipv6-optnsap	Network service access point address option anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with network service access point address option to pass.		
	<i>drop</i>	Drop IPv6 with network service access point address option.		
	<i>trap-to-host</i>	Forward IPv6 with network service access point address option to FortiOS.		
ipv6-optralert	Router alert option anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with router alert option to pass.		
	<i>drop</i>	Drop IPv6 with router alert option.		
	<i>trap-to-host</i>	Forward IPv6 with router alert option to FortiOS.		
ipv6-opttunnel	Tunnel encapsulation limit option anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with tunnel encapsulation limit to pass.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>drop</td><td>Drop IPv6 with tunnel encapsulation limit.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with tunnel encapsulation limit to FortiOS.</td></tr></table>	Option	Description	drop	Drop IPv6 with tunnel encapsulation limit.	trap-to-host	Forward IPv6 with tunnel encapsulation limit to FortiOS.					
	Option	Description										
	drop	Drop IPv6 with tunnel encapsulation limit.										
trap-to-host	Forward IPv6 with tunnel encapsulation limit to FortiOS.											
ipv6-proto-err	Layer 4 invalid protocol anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 L4 invalid protocol to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 L4 invalid protocol.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 L4 invalid protocol to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 L4 invalid protocol to pass.	drop	Drop IPv6 L4 invalid protocol.	trap-to-host	Forward IPv6 L4 invalid protocol to FortiOS.			
	Option	Description										
	allow	Allow IPv6 L4 invalid protocol to pass.										
	drop	Drop IPv6 L4 invalid protocol.										
trap-to-host	Forward IPv6 L4 invalid protocol to FortiOS.											
ipv6-saddr-err	Source address as multicast anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 with source address as multicast to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 with source address as multicast.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with source address as multicast to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 with source address as multicast to pass.	drop	Drop IPv6 with source address as multicast.	trap-to-host	Forward IPv6 with source address as multicast to FortiOS.			
	Option	Description										
	allow	Allow IPv6 with source address as multicast to pass.										
	drop	Drop IPv6 with source address as multicast.										
trap-to-host	Forward IPv6 with source address as multicast to FortiOS.											
ipv6-unknopt	Unknown option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 with unknown options to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 with unknown options.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with unknown options to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 with unknown options to pass.	drop	Drop IPv6 with unknown options.	trap-to-host	Forward IPv6 with unknown options to FortiOS.			
	Option	Description										
	allow	Allow IPv6 with unknown options to pass.										
	drop	Drop IPv6 with unknown options.										
trap-to-host	Forward IPv6 with unknown options to FortiOS.											
tcp-csum-err	Invalid IPv4 TCP checksum anomalies.	option	-	drop								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>drop</td><td>Drop IPv4 invalid TCP checksum.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 invalid TCP checksum to main CPU for processing.</td></tr></table>	Option	Description	drop	Drop IPv4 invalid TCP checksum.	trap-to-host	Forward IPv4 invalid TCP checksum to main CPU for processing.					
	Option	Description										
	drop	Drop IPv4 invalid TCP checksum.										
trap-to-host	Forward IPv4 invalid TCP checksum to main CPU for processing.											
tcp-fin-noack	TCP SYN flood with FIN flag set without ACK setting anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow TCP packets with FIN flag set without ack setting to pass.</td></tr><tr><td>drop</td><td>Drop TCP packets with FIN flag set without ack setting.</td></tr><tr><td>trap-to-host</td><td>Forward TCP packets with FIN flag set without ack setting to FortiOS.</td></tr></table>	Option	Description	allow	Allow TCP packets with FIN flag set without ack setting to pass.	drop	Drop TCP packets with FIN flag set without ack setting.	trap-to-host	Forward TCP packets with FIN flag set without ack setting to FortiOS.			
	Option	Description										
	allow	Allow TCP packets with FIN flag set without ack setting to pass.										
	drop	Drop TCP packets with FIN flag set without ack setting.										
trap-to-host	Forward TCP packets with FIN flag set without ack setting to FortiOS.											

Parameter	Description	Type	Size	Default								
tcp-fin-only	TCP SYN flood with only FIN flag set anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets with FIN flag set only to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets with FIN flag set only.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets with FIN flag set only to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets with FIN flag set only to pass.	<i>drop</i>	Drop TCP packets with FIN flag set only.	<i>trap-to-host</i>	Forward TCP packets with FIN flag set only to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP packets with FIN flag set only to pass.										
	<i>drop</i>	Drop TCP packets with FIN flag set only.										
<i>trap-to-host</i>	Forward TCP packets with FIN flag set only to FortiOS.											
tcp-land	TCP land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP land attack to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP land attack.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP land attack to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP land attack to pass.	<i>drop</i>	Drop TCP land attack.	<i>trap-to-host</i>	Forward TCP land attack to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP land attack to pass.										
	<i>drop</i>	Drop TCP land attack.										
<i>trap-to-host</i>	Forward TCP land attack to FortiOS.											
tcp-no-flag	TCP SYN flood with no flag set anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets without flag set to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets without flag set.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets without flag set to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets without flag set to pass.	<i>drop</i>	Drop TCP packets without flag set.	<i>trap-to-host</i>	Forward TCP packets without flag set to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP packets without flag set to pass.										
	<i>drop</i>	Drop TCP packets without flag set.										
<i>trap-to-host</i>	Forward TCP packets without flag set to FortiOS.											
tcp-syn-data	TCP SYN flood packets with data anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP syn packets with data to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP syn packets with data.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP syn packets with data to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP syn packets with data to pass.	<i>drop</i>	Drop TCP syn packets with data.	<i>trap-to-host</i>	Forward TCP syn packets with data to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP syn packets with data to pass.										
	<i>drop</i>	Drop TCP syn packets with data.										
<i>trap-to-host</i>	Forward TCP syn packets with data to FortiOS.											
tcp-syn-fin	TCP SYN flood SYN/FIN flag set anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets with syn_fin flag set to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets with syn_fin flag set.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets with syn_fin flag set to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets with syn_fin flag set to pass.	<i>drop</i>	Drop TCP packets with syn_fin flag set.	<i>trap-to-host</i>	Forward TCP packets with syn_fin flag set to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP packets with syn_fin flag set to pass.										
	<i>drop</i>	Drop TCP packets with syn_fin flag set.										
<i>trap-to-host</i>	Forward TCP packets with syn_fin flag set to FortiOS.											
tcp-winnuke	TCP WinNuke anomalies.	option	-	trap-to-host								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>allow</i>	Allow TCP packets winnuker attack to pass.		
	<i>drop</i>	Drop TCP packets winnuker attack.		
	<i>trap-to-host</i>	Forward TCP packets winnuker attack to FortiOS.		
udp-csum-err	Invalid IPv4 UDP checksum anomalies.	option	-	drop
	Option	Description		
	<i>drop</i>	Drop IPv4 invalid UDP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid UDP checksum to main CPU for processing.		
udp-land	UDP land anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow UDP land attack to pass.		
	<i>drop</i>	Drop UDP land attack.		
	<i>trap-to-host</i>	Forward UDP land attack to FortiOS.		

config hpe

Parameter	Description	Type	Size	Default
arp-max	Maximum ARP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
enable-shaper	Enable/Disable NPU Host Protection Engine(HPE) for packet type shaper.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable NPU HPE shaping based on packet type.		
	<i>enable</i>	Enable NPU HPE shaping based on packet type.		
esp-max	Maximum ESP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000

Parameter	Description	Type	Size	Default
icmp-max	Maximum ICMP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
ip-frag-max	Maximum fragmented IP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
ip-others-max	Maximum IP packet rate for other packets (packet types that cannot be set with other options) (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
l2-others-max	Maximum L2 packet rate for L2 packets that are not ARP packets (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
pri-type-max	Maximum overflow rate of priority type traffic (1K - 1G pps, default = 200K pps). Includes L2: HA, 802.3ad LACP, heartbeats. L3: OSPF. L4_TCP: BGP. L4_UDP: IKE, SLBC, BFD.	integer	Minimum value: 1000 Maximum value: 1000000000	200000
sctp-max	Maximum SCTP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
tcp-max	Maximum TCP packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	600000
tcpfin-rst-max	Maximum TCP carries FIN or RST flags packet rate (1K - 1G pps, default = 60K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	600000

Parameter	Description	Type	Size	Default
tcpsyn-ack-max	Maximum TCP carries SYN and ACK flags packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 10000000000	600000
tcpsyn-max	Maximum TCP SYN packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 10000000000	600000
udp-max	Maximum UDP packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 10000000000	600000

	4mb	Set NP6Xlite throughput update message frequency to 4MB.																																						
	8mb	Set NP6Xlite throughput update message frequency to 8MB.																																						
	16mb	Set NP6Xlite throughput update message frequency to 16MB.																																						
	32mb	Set NP6Xlite throughput update message frequency to 32MB.																																						
	64mb	Set NP6Xlite throughput update message frequency to 64MB.																																						
	128mb	Set NP6Xlite throughput update message frequency to 128MB.																																						
256mb	Set NP6Xlite throughput update message frequency to 256MB.																																							
512mb	Set NP6Xlite throughput update message frequency to 512MB.																																							
1gb	Set NP6Xlite throughput update message frequency to 1GB.																																							
name	Device Name.	string	Maximum length: 31																																					

Parameter	Description	Type	Size	Default
per-session-accounting	Enable/disable per-session accounting.	option	-	traffic-log-only
	Option Description			
	<i>disable</i>	Disable per-session accounting.		
	<i>traffic-log-only</i>	Per-session accounting only for sessions with traffic logging enabled in firewall policy.		
	<i>enable</i>	Per-session accounting for all sessions.		
session-timeout-interval	Set session timeout interval (0 - 1000 sec, default 40 sec).	integer	Minimum value: 0 Maximum value: 1000	40

* This parameter may not exist in some models.

config fp-anomaly

Parameter	Description	Type	Size	Default
icmp-csum-err	Invalid IPv4 ICMP checksum anomalies.	option	-	drop
	Option Description			
	<i>drop</i>	Drop IPv4 invalid ICMP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid ICMP checksum to main CPU for processing.		
icmp-frag	Layer 3 fragmented packets that could be part of layer 4 ICMP anomalies.	option	-	allow
	Option Description			
	<i>allow</i>	Allow L3 fragment packet with L4 protocol as ICMP attack to pass.		
	<i>drop</i>	Drop L3 fragment packet with L4 protocol as ICMP attack.		
	<i>trap-to-host</i>	Forward L3 fragment packet with L4 protocol as ICMP attack to FortiOS.		
icmp-land	ICMP land anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow ICMP land attack to pass.		
	<i>drop</i>	Drop ICMP land attack.		
	<i>trap-to-host</i>	Forward ICMP land attack to FortiOS.		
ipv4-csum-err	Invalid IPv4 IP checksum anomalies.	option	-	drop

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop</i></td><td>Drop IPv4 invalid IP checksum.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 invalid IP checksum to main CPU for processing.</td></tr></table>	Option	Description	<i>drop</i>	Drop IPv4 invalid IP checksum.	<i>trap-to-host</i>	Forward IPv4 invalid IP checksum to main CPU for processing.					
	Option	Description										
	<i>drop</i>	Drop IPv4 invalid IP checksum.										
<i>trap-to-host</i>	Forward IPv4 invalid IP checksum to main CPU for processing.											
ipv4-land	Land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 land attack to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 land attack.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 land attack to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 land attack to pass.	<i>drop</i>	Drop IPv4 land attack.	<i>trap-to-host</i>	Forward IPv4 land attack to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv4 land attack to pass.										
	<i>drop</i>	Drop IPv4 land attack.										
<i>trap-to-host</i>	Forward IPv4 land attack to FortiOS.											
ipv4-optlrr	Loose source record route option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 with loose source record route option to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 with loose source record route option.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with loose source record route option to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 with loose source record route option to pass.	<i>drop</i>	Drop IPv4 with loose source record route option.	<i>trap-to-host</i>	Forward IPv4 with loose source record route option to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv4 with loose source record route option to pass.										
	<i>drop</i>	Drop IPv4 with loose source record route option.										
<i>trap-to-host</i>	Forward IPv4 with loose source record route option to FortiOS.											
ipv4-optrr	Record route option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 with record route option to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 with record route option.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with record route option to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 with record route option to pass.	<i>drop</i>	Drop IPv4 with record route option.	<i>trap-to-host</i>	Forward IPv4 with record route option to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv4 with record route option to pass.										
	<i>drop</i>	Drop IPv4 with record route option.										
<i>trap-to-host</i>	Forward IPv4 with record route option to FortiOS.											
ipv4-optsecurity	Security option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 with security option to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 with security option.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with security option to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 with security option to pass.	<i>drop</i>	Drop IPv4 with security option.	<i>trap-to-host</i>	Forward IPv4 with security option to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv4 with security option to pass.										
	<i>drop</i>	Drop IPv4 with security option.										
<i>trap-to-host</i>	Forward IPv4 with security option to FortiOS.											
ipv4-optssrr	Strict source record route option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 with strict source record route option to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 with strict source record route option.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with strict source record route option to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 with strict source record route option to pass.	<i>drop</i>	Drop IPv4 with strict source record route option.	<i>trap-to-host</i>	Forward IPv4 with strict source record route option to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow IPv4 with strict source record route option to pass.										
	<i>drop</i>	Drop IPv4 with strict source record route option.										
<i>trap-to-host</i>	Forward IPv4 with strict source record route option to FortiOS.											

Parameter	Description	Type	Size	Default								
ipv4-optstream	Stream option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with stream option to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with stream option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with stream option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with stream option to pass.	drop	Drop IPv4 with stream option.	trap-to-host	Forward IPv4 with stream option to FortiOS.			
Option	Description											
allow	Allow IPv4 with stream option to pass.											
drop	Drop IPv4 with stream option.											
trap-to-host	Forward IPv4 with stream option to FortiOS.											
ipv4-opttimestamp	Timestamp option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with timestamp option to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with timestamp option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with timestamp option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with timestamp option to pass.	drop	Drop IPv4 with timestamp option.	trap-to-host	Forward IPv4 with timestamp option to FortiOS.			
Option	Description											
allow	Allow IPv4 with timestamp option to pass.											
drop	Drop IPv4 with timestamp option.											
trap-to-host	Forward IPv4 with timestamp option to FortiOS.											
ipv4-proto-err	Invalid layer 4 protocol anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 invalid L4 protocol to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 invalid L4 protocol.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 invalid L4 protocol to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 invalid L4 protocol to pass.	drop	Drop IPv4 invalid L4 protocol.	trap-to-host	Forward IPv4 invalid L4 protocol to FortiOS.			
Option	Description											
allow	Allow IPv4 invalid L4 protocol to pass.											
drop	Drop IPv4 invalid L4 protocol.											
trap-to-host	Forward IPv4 invalid L4 protocol to FortiOS.											
ipv4-unknopt	Unknown option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 with unknown options to pass.</td></tr><tr><td>drop</td><td>Drop IPv4 with unknown options.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 with unknown options to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv4 with unknown options to pass.	drop	Drop IPv4 with unknown options.	trap-to-host	Forward IPv4 with unknown options to FortiOS.			
Option	Description											
allow	Allow IPv4 with unknown options to pass.											
drop	Drop IPv4 with unknown options.											
trap-to-host	Forward IPv4 with unknown options to FortiOS.											
ipv6-daddr-err	Destination address as unspecified or loopback address anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 with destination address as unspecified or loopback address to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 with destination address as unspecified or loopback address.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with destination address as unspecified or loopback address to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 with destination address as unspecified or loopback address to pass.	drop	Drop IPv6 with destination address as unspecified or loopback address.	trap-to-host	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.			
Option	Description											
allow	Allow IPv6 with destination address as unspecified or loopback address to pass.											
drop	Drop IPv6 with destination address as unspecified or loopback address.											
trap-to-host	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.											

Parameter	Description	Type	Size	Default
ipv6-land	Land anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 land attack to pass.		
	<i>drop</i>	Drop IPv6 land attack.		
	<i>trap-to-host</i>	Forward IPv6 land attack to FortiOS.		
ipv6-optendpid	End point identification anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with end point identification option to pass.		
	<i>drop</i>	Drop IPv6 with end point identification option.		
	<i>trap-to-host</i>	Forward IPv6 with end point identification option to FortiOS.		
ipv6-opthomeaddr	Home address option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with home address option to pass.		
	<i>drop</i>	Drop IPv6 with home address option.		
	<i>trap-to-host</i>	Forward IPv6 with home address option to FortiOS.		
ipv6-optinvld	Invalid option anomalies.Invalid option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with invalid option to pass.		
	<i>drop</i>	Drop IPv6 with invalid option.		
	<i>trap-to-host</i>	Forward IPv6 with invalid option to FortiOS.		
ipv6-optjumbo	Jumbo options anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with jumbo option to pass.		
	<i>drop</i>	Drop IPv6 with jumbo option.		
	<i>trap-to-host</i>	Forward IPv6 with jumbo option to FortiOS.		
ipv6-optnsap	Network service access point address option anomalies.	option	-	trap-to-host

Parameter	Description	Type	Size	Default
	Option Description			
	<i>allow</i>	Allow IPv6 with network service access point address option to pass.		
	<i>drop</i>	Drop IPv6 with network service access point address option.		
	<i>trap-to-host</i>	Forward IPv6 with network service access point address option to FortiOS.		
ipv6-optralert	Router alert option anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with router alert option to pass.		
	<i>drop</i>	Drop IPv6 with router alert option.		
	<i>trap-to-host</i>	Forward IPv6 with router alert option to FortiOS.		
ipv6-opttunnel	Tunnel encapsulation limit option anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with tunnel encapsulation limit to pass.		
	<i>drop</i>	Drop IPv6 with tunnel encapsulation limit.		
	<i>trap-to-host</i>	Forward IPv6 with tunnel encapsulation limit to FortiOS.		
ipv6-proto-err	Layer 4 invalid protocol anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 L4 invalid protocol to pass.		
	<i>drop</i>	Drop IPv6 L4 invalid protocol.		
	<i>trap-to-host</i>	Forward IPv6 L4 invalid protocol to FortiOS.		
ipv6-saddr-err	Source address as multicast anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with source address as multicast to pass.		
	<i>drop</i>	Drop IPv6 with source address as multicast.		
	<i>trap-to-host</i>	Forward IPv6 with source address as multicast to FortiOS.		
ipv6-unknopt	Unknown option anomalies.	option	-	trap-to-host
	Option Description			
	<i>allow</i>	Allow IPv6 with unknown options to pass.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop</i></td><td>Drop IPv6 with unknown options.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv6 with unknown options to FortiOS.</td></tr></table>	Option	Description	<i>drop</i>	Drop IPv6 with unknown options.	<i>trap-to-host</i>	Forward IPv6 with unknown options to FortiOS.					
	Option	Description										
	<i>drop</i>	Drop IPv6 with unknown options.										
<i>trap-to-host</i>	Forward IPv6 with unknown options to FortiOS.											
tcp-csum-err	Invalid IPv4 TCP checksum anomalies.	option	-	drop								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>drop</i></td><td>Drop IPv4 invalid TCP checksum.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 invalid TCP checksum to main CPU for processing.</td></tr></table>	Option	Description	<i>drop</i>	Drop IPv4 invalid TCP checksum.	<i>trap-to-host</i>	Forward IPv4 invalid TCP checksum to main CPU for processing.					
	Option	Description										
	<i>drop</i>	Drop IPv4 invalid TCP checksum.										
<i>trap-to-host</i>	Forward IPv4 invalid TCP checksum to main CPU for processing.											
tcp-fin-noack	TCP SYN flood with FIN flag set without ACK setting anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets with FIN flag set without ack setting to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets with FIN flag set without ack setting.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets with FIN flag set without ack setting to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets with FIN flag set without ack setting to pass.	<i>drop</i>	Drop TCP packets with FIN flag set without ack setting.	<i>trap-to-host</i>	Forward TCP packets with FIN flag set without ack setting to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP packets with FIN flag set without ack setting to pass.										
	<i>drop</i>	Drop TCP packets with FIN flag set without ack setting.										
<i>trap-to-host</i>	Forward TCP packets with FIN flag set without ack setting to FortiOS.											
tcp-fin-only	TCP SYN flood with only FIN flag set anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets with FIN flag set only to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets with FIN flag set only.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets with FIN flag set only to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets with FIN flag set only to pass.	<i>drop</i>	Drop TCP packets with FIN flag set only.	<i>trap-to-host</i>	Forward TCP packets with FIN flag set only to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP packets with FIN flag set only to pass.										
	<i>drop</i>	Drop TCP packets with FIN flag set only.										
<i>trap-to-host</i>	Forward TCP packets with FIN flag set only to FortiOS.											
tcp-land	TCP land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP land attack to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP land attack.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP land attack to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP land attack to pass.	<i>drop</i>	Drop TCP land attack.	<i>trap-to-host</i>	Forward TCP land attack to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP land attack to pass.										
	<i>drop</i>	Drop TCP land attack.										
<i>trap-to-host</i>	Forward TCP land attack to FortiOS.											
tcp-no-flag	TCP SYN flood with no flag set anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets without flag set to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets without flag set.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets without flag set to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets without flag set to pass.	<i>drop</i>	Drop TCP packets without flag set.	<i>trap-to-host</i>	Forward TCP packets without flag set to FortiOS.			
	Option	Description										
	<i>allow</i>	Allow TCP packets without flag set to pass.										
	<i>drop</i>	Drop TCP packets without flag set.										
<i>trap-to-host</i>	Forward TCP packets without flag set to FortiOS.											

Parameter	Description	Type	Size	Default								
tcp-syn-data	TCP SYN flood packets with data anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow TCP syn packets with data to pass.</td></tr><tr><td>drop</td><td>Drop TCP syn packets with data.</td></tr><tr><td>trap-to-host</td><td>Forward TCP syn packets with data to FortiOS.</td></tr></table>	Option	Description	allow	Allow TCP syn packets with data to pass.	drop	Drop TCP syn packets with data.	trap-to-host	Forward TCP syn packets with data to FortiOS.			
Option	Description											
allow	Allow TCP syn packets with data to pass.											
drop	Drop TCP syn packets with data.											
trap-to-host	Forward TCP syn packets with data to FortiOS.											
tcp-syn-fin	TCP SYN flood SYN/FIN flag set anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow TCP packets with syn_fin flag set to pass.</td></tr><tr><td>drop</td><td>Drop TCP packets with syn_fin flag set.</td></tr><tr><td>trap-to-host</td><td>Forward TCP packets with syn_fin flag set to FortiOS.</td></tr></table>	Option	Description	allow	Allow TCP packets with syn_fin flag set to pass.	drop	Drop TCP packets with syn_fin flag set.	trap-to-host	Forward TCP packets with syn_fin flag set to FortiOS.			
Option	Description											
allow	Allow TCP packets with syn_fin flag set to pass.											
drop	Drop TCP packets with syn_fin flag set.											
trap-to-host	Forward TCP packets with syn_fin flag set to FortiOS.											
tcp-winnuke	TCP WinNuke anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow TCP packets winnuke attack to pass.</td></tr><tr><td>drop</td><td>Drop TCP packets winnuke attack.</td></tr><tr><td>trap-to-host</td><td>Forward TCP packets winnuke attack to FortiOS.</td></tr></table>	Option	Description	allow	Allow TCP packets winnuke attack to pass.	drop	Drop TCP packets winnuke attack.	trap-to-host	Forward TCP packets winnuke attack to FortiOS.			
Option	Description											
allow	Allow TCP packets winnuke attack to pass.											
drop	Drop TCP packets winnuke attack.											
trap-to-host	Forward TCP packets winnuke attack to FortiOS.											
udp-csum-err	Invalid IPv4 UDP checksum anomalies.	option	-	drop								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>drop</td><td>Drop IPv4 invalid UDP checksum.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 invalid UDP checksum to main CPU for processing.</td></tr></table>	Option	Description	drop	Drop IPv4 invalid UDP checksum.	trap-to-host	Forward IPv4 invalid UDP checksum to main CPU for processing.					
Option	Description											
drop	Drop IPv4 invalid UDP checksum.											
trap-to-host	Forward IPv4 invalid UDP checksum to main CPU for processing.											
udp-land	UDP land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow UDP land attack to pass.</td></tr><tr><td>drop</td><td>Drop UDP land attack.</td></tr><tr><td>trap-to-host</td><td>Forward UDP land attack to FortiOS.</td></tr></table>	Option	Description	allow	Allow UDP land attack to pass.	drop	Drop UDP land attack.	trap-to-host	Forward UDP land attack to FortiOS.			
Option	Description											
allow	Allow UDP land attack to pass.											
drop	Drop UDP land attack.											
trap-to-host	Forward UDP land attack to FortiOS.											

config hpe

Parameter	Description	Type	Size	Default
arp-max	Maximum ARP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
enable-shaper	Enable/Disable NPU host protection engine (HPE) shaper.	option	-	disable
	Option	Description		
	disable	Disable NPU HPE shaping based on packet type.		
	enable	Enable NPU HPE shaping based on packet type.		
esp-max	Maximum ESP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
icmp-max	Maximum ICMP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
ip-frag-max	Maximum fragmented IP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
ip-others-max	Maximum IP packet rate for other packets (packet types that cannot be set with other options) (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
l2-others-max	Maximum L2 packet rate for L2 packets that are not ARP packets (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000

Parameter	Description	Type	Size	Default
pri-type-max	Maximum overflow rate of priority type traffic (1K - 1G pps, default = 200K pps). Includes L2: HA, 802.3ad LACP, heartbeats. L3: OSPF. L4_TCP: BGP. L4_UDP: IKE, SLBC, BFD.	integer	Minimum value: 1000 Maximum value: 1000000000	200000
sctp-max	Maximum SCTP packet rate (1K - 1G pps, default = 200K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	200000
tcp-others-max	Maximum TCP packet rate for TCP packets that match none of the 3 types above (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	600000
tcpfin-rst-max	Maximum TCP carries FIN or RST flags packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	600000
tcpsyn-ack-max	Maximum TCP carries SYN and ACK flags packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	600000
tcpsyn-max	Maximum TCP SYN only packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	600000
udp-max	Maximum UDP packet rate (1K - 1G pps, default = 600K pps).	integer	Minimum value: 1000 Maximum value: 1000000000	600000

config system npu

This command is available for model(s): FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64.

	Option	Description										
	512MB	Set NP7Lite throughput update message frequency to 512MB.										
1GB	Set NP7Lite throughput update message frequency to 1GB.											
lag-out-port-select *	Enable/disable LAG outgoing port selection based on incoming traffic port.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable LAG outgoing trunk in switch.</td></tr><tr><td>enable</td><td>Enable LAG outgoing trunk in switch.</td></tr></table>	Option	Description	disable	Disable LAG outgoing trunk in switch.	enable	Enable LAG outgoing trunk in switch.					
	Option	Description										
	disable	Disable LAG outgoing trunk in switch.										
enable	Enable LAG outgoing trunk in switch.											
max-receive-unit *	Set the maximum packet size for receive, larger packets will be silently dropped.	integer	Minimum value: 64 Maximum value: 10000	10000								
max-session-timeout *	Maximum time interval for refreshing NPU-offloaded sessions (10 - 1000 sec, default 40 sec).	integer	Minimum value: 10 Maximum value: 1000	40								
mcast-session-accounting *	Enable/disable traffic accounting for each multicast session through TAE counter.	option	-	tpe-based								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tpe-based</td><td>Enable TPE-based multicast session accounting.</td></tr><tr><td>session-based</td><td>Enable session-based multicast session accounting.</td></tr><tr><td>disable</td><td>Disable multicast session accounting.</td></tr></table>	Option	Description	tpe-based	Enable TPE-based multicast session accounting.	session-based	Enable session-based multicast session accounting.	disable	Disable multicast session accounting.			
	Option	Description										
	tpe-based	Enable TPE-based multicast session accounting.										
	session-based	Enable session-based multicast session accounting.										
disable	Disable multicast session accounting.											
napi-break-interval *	NAPI break interval (default 0).	integer	Minimum value: 0 Maximum value: 65535	0								
np6-cps-optimization-mode *	Enable/disable NP6 connection per second (CPS) optimization mode.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable NP6 connection per second (CPS) optimization mode.</td></tr><tr><td>disable</td><td>Disable NP6 connection per second (CPS) optimization mode.</td></tr></table>	Option	Description	enable	Enable NP6 connection per second (CPS) optimization mode.	disable	Disable NP6 connection per second (CPS) optimization mode.					
	Option	Description										
	enable	Enable NP6 connection per second (CPS) optimization mode.										
disable	Disable NP6 connection per second (CPS) optimization mode.											

Parameter	Description	Type	Size	Default								
per-policy-accounting *	Set per-policy accounting.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable per-policy hit count.</td></tr><tr><td>enable</td><td>Enable per-policy hit count</td></tr></table>	Option	Description	disable	Disable per-policy hit count.	enable	Enable per-policy hit count					
Option	Description											
disable	Disable per-policy hit count.											
enable	Enable per-policy hit count											
per-session-accounting *	Set per-session accounting.	option	-	traffic-log-only								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>traffic-log-only</td><td>Per-session accounting only for sessions with traffic logging</td></tr><tr><td>disable</td><td>Disable per-session accounting.</td></tr><tr><td>enable</td><td>Per-session accounting for all sessions.</td></tr></table>	Option	Description	traffic-log-only	Per-session accounting only for sessions with traffic logging	disable	Disable per-session accounting.	enable	Per-session accounting for all sessions.			
Option	Description											
traffic-log-only	Per-session accounting only for sessions with traffic logging											
disable	Disable per-session accounting.											
enable	Per-session accounting for all sessions.											
qos-mode *	QoS mode on switch and NP.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable QoS on switch and NP.</td></tr><tr><td>priority</td><td>Priority based.</td></tr><tr><td>round-robin</td><td>Round Robin Scheduler.</td></tr></table>	Option	Description	disable	Disable QoS on switch and NP.	priority	Priority based.	round-robin	Round Robin Scheduler.			
Option	Description											
disable	Disable QoS on switch and NP.											
priority	Priority based.											
round-robin	Round Robin Scheduler.											
qtm-buf-mode *	QTM channel configuration for packet buffer.	option	-	6ch								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>6ch</td><td>6 DRAM channels for packet buffer.</td></tr><tr><td>4ch</td><td>4 DRAM channels for packet buffer.</td></tr></table>	Option	Description	6ch	6 DRAM channels for packet buffer.	4ch	4 DRAM channels for packet buffer.					
Option	Description											
6ch	6 DRAM channels for packet buffer.											
4ch	4 DRAM channels for packet buffer.											
rdp-offload *	Enable/disable RDP offload.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable reliable datagram protocol traffic offload.</td></tr><tr><td>disable</td><td>Disable reliable datagram protocol traffic offload.</td></tr></table>	Option	Description	enable	Enable reliable datagram protocol traffic offload.	disable	Disable reliable datagram protocol traffic offload.					
Option	Description											
enable	Enable reliable datagram protocol traffic offload.											
disable	Disable reliable datagram protocol traffic offload.											
session-acct-interval *	Session accounting update interval (1 - 10 sec, default 5 sec).	integer	Minimum value: 1 Maximum value: 10	5								
session-denied-offload *	Enable/disable offloading of denied sessions. Requires ses-denied-traffic to be set.	option	-	disable								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable offloading of denied sessions.		
	<i>enable</i>	Enable offloading of denied sessions.		
shaping-stats *	Enable/disable NP7 traffic shaping statistics (default = disable).	option	-	disable
	Option	Description		
	<i>disable</i>	Disable NP7 traffic shaping statistics.		
	<i>enable</i>	Enable NP7 traffic shaping statistics.		
split-ipsec-engines *	Enable/disable Split IPsec Engines.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable Split IPsec Engines.		
	<i>enable</i>	Enable Split IPsec Engines.		
sse-backpressure *	Enable/disable SSE backpressure.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable SSE backpressure.		
	<i>disable</i>	Disable SSE backpressure.		
strip-clear-text-padding *	Enable/disable stripping clear text padding.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable stripping clear text padding.		
	<i>disable</i>	Disable stripping clear text padding.		
strip-esp-padding *	Enable/disable stripping ESP padding.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable stripping ESP padding.		
	<i>disable</i>	Disable stripping ESP padding.		
sw-np-bandwidth *	Bandwidth from switch to NP.	option	-	0G

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>0G</td><td>Default value. No bandwidth control.</td></tr><tr><td>2G</td><td>2Gbps.</td></tr><tr><td>4G</td><td>4Gbps.</td></tr><tr><td>5G</td><td>5Gbps.</td></tr><tr><td>6G</td><td>6Gbps.</td></tr><tr><td>7G</td><td>7Gbps.</td></tr><tr><td>8G</td><td>8Gbps.</td></tr><tr><td>9G</td><td>9Gbps.</td></tr></table>	Option	Description	0G	Default value. No bandwidth control.	2G	2Gbps.	4G	4Gbps.	5G	5Gbps.	6G	6Gbps.	7G	7Gbps.	8G	8Gbps.	9G	9Gbps.			
	Option	Description																				
	0G	Default value. No bandwidth control.																				
	2G	2Gbps.																				
	4G	4Gbps.																				
	5G	5Gbps.																				
	6G	6Gbps.																				
	7G	7Gbps.																				
	8G	8Gbps.																				
9G	9Gbps.																					
switch-np-hash *	Switch-NP trunk port selection Criteria.	option	-	src-dst-ip																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>src-ip</td><td>Source IP address.</td></tr><tr><td>dst-ip</td><td>Destination IP address.</td></tr><tr><td>src-dst-ip</td><td>Source+dest IP address.</td></tr></table>	Option	Description	src-ip	Source IP address.	dst-ip	Destination IP address.	src-dst-ip	Source+dest IP address.													
	Option	Description																				
	src-ip	Source IP address.																				
	dst-ip	Destination IP address.																				
src-dst-ip	Source+dest IP address.																					
tunnel-over-vlink *	Enable/disable selection of which NP6 chip the tunnel uses (default = enable).	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Use the bundled NP6 chip for tunnels.</td></tr><tr><td>disable</td><td>Use the ingress NP6 chip for tunnels.</td></tr></table>	Option	Description	enable	Use the bundled NP6 chip for tunnels.	disable	Use the ingress NP6 chip for tunnels.															
	Option	Description																				
	enable	Use the bundled NP6 chip for tunnels.																				
disable	Use the ingress NP6 chip for tunnels.																					
uesp-offload *	Enable/disable UDP-encapsulated ESP offload (default = disable).	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable UDP-encapsulated ESP traffic offload.</td></tr><tr><td>disable</td><td>Disable UDP-encapsulated ESP traffic offload.</td></tr></table>	Option	Description	enable	Enable UDP-encapsulated ESP traffic offload.	disable	Disable UDP-encapsulated ESP traffic offload.															
	Option	Description																				
	enable	Enable UDP-encapsulated ESP traffic offload.																				
disable	Disable UDP-encapsulated ESP traffic offload.																					
ull-port-mode *	Set ULL port's speed to 10G/25G (default 10G).	option	-	10G																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>10G</td><td>10G speed setting for ULL ports.</td></tr><tr><td>25G</td><td>25G speed setting for ULL ports.</td></tr></table>	Option	Description	10G	10G speed setting for ULL ports.	25G	25G speed setting for ULL ports.															
	Option	Description																				
	10G	10G speed setting for ULL ports.																				
25G	25G speed setting for ULL ports.																					

Parameter	Description	Type	Size	Default						
vlan-lookup-cache *	Enable/disable vlan lookup cache (default enabled).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VLAN lookup cache.</td></tr><tr><td><i>disable</i></td><td>Disable VLAN lookup cache.</td></tr></table>	Option	Description	<i>enable</i>	Enable VLAN lookup cache.	<i>disable</i>	Disable VLAN lookup cache.			
Option	Description									
<i>enable</i>	Enable VLAN lookup cache.									
<i>disable</i>	Disable VLAN lookup cache.									
vxlan-offload *	Enable/disable offloading vxlan.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Vxlan offload.</td></tr><tr><td><i>disable</i></td><td>Disable Vxlan offload.</td></tr></table>	Option	Description	<i>enable</i>	Enable Vxlan offload.	<i>disable</i>	Disable Vxlan offload.			
Option	Description									
<i>enable</i>	Enable Vxlan offload.									
<i>disable</i>	Disable Vxlan offload.									

* This parameter may not exist in some models.

config dos-options

Parameter	Description	Type	Size	Default						
npu-dos-meter-mode	Set DoS meter NPU offloading mode.	option	-	global						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>global</i></td><td>Install DoS meter to all NPs.</td></tr><tr><td><i>local</i></td><td>Install DoS meter only to the NP assigned to the traffic.</td></tr></table>	Option	Description	<i>global</i>	Install DoS meter to all NPs.	<i>local</i>	Install DoS meter only to the NP assigned to the traffic.			
Option	Description									
<i>global</i>	Install DoS meter to all NPs.									
<i>local</i>	Install DoS meter only to the NP assigned to the traffic.									
npu-dos-tpe-mode	Enable/disable insertion of DoS meter ID to session table.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable insertion of DoS meter ID to session table.</td></tr><tr><td><i>disable</i></td><td>Disable insertion of DoS meter ID to session table.</td></tr></table>	Option	Description	<i>enable</i>	Enable insertion of DoS meter ID to session table.	<i>disable</i>	Disable insertion of DoS meter ID to session table.			
Option	Description									
<i>enable</i>	Enable insertion of DoS meter ID to session table.									
<i>disable</i>	Disable insertion of DoS meter ID to session table.

	<i>allow</i>	Allow IPv4 land attack to pass.		
	<i>drop</i>	Drop IPv4 land attack.		
	<i>trap-to-host</i>	Forward IPv4 land attack to FortiOS.		
ipv4-optlsrr *	Loose source record route option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv4 with loose source record route option to pass.		
	<i>drop</i>	Drop IPv4 with loose source record route option.		
	<i>trap-to-host</i>	Forward IPv4 with loose source record route option to FortiOS.		
ipv4-optrr *	Record route option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv4 with record route option to pass.		
	<i>drop</i>	Drop IPv4 with record route option.		
	<i>trap-to-host</i>	Forward IPv4 with record route option to FortiOS.		
ipv4-optsecurity *	Security option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv4 with security option to pass.		
	<i>drop</i>	Drop IPv4 with security option.		
	<i>trap-to-host</i>	Forward IPv4 with security option to FortiOS.		
ipv4-optssrr *	Strict source record route option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv4 with strict source record route option to pass.		
	<i>drop</i>	Drop IPv4 with strict source record route option.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with strict source record route option to FortiOS.</td></tr></table>	Option	Description	<i>trap-to-host</i>	Forward IPv4 with strict source record route option to FortiOS.							
Option	Description											
<i>trap-to-host</i>	Forward IPv4 with strict source record route option to FortiOS.											
ipv4-optstream *	Stream option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 with stream option to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 with stream option.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with stream option to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 with stream option to pass.	<i>drop</i>	Drop IPv4 with stream option.	<i>trap-to-host</i>	Forward IPv4 with stream option to FortiOS.			
Option	Description											
<i>allow</i>	Allow IPv4 with stream option to pass.											
<i>drop</i>	Drop IPv4 with stream option.											
<i>trap-to-host</i>	Forward IPv4 with stream option to FortiOS.											
ipv4-opttimestamp *	Timestamp option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 with timestamp option to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 with timestamp option.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with timestamp option to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 with timestamp option to pass.	<i>drop</i>	Drop IPv4 with timestamp option.	<i>trap-to-host</i>	Forward IPv4 with timestamp option to FortiOS.			
Option	Description											
<i>allow</i>	Allow IPv4 with timestamp option to pass.											
<i>drop</i>	Drop IPv4 with timestamp option.											
<i>trap-to-host</i>	Forward IPv4 with timestamp option to FortiOS.											
ipv4-proto-err *	Invalid layer 4 protocol anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 invalid L4 protocol to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 invalid L4 protocol.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 invalid L4 protocol to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 invalid L4 protocol to pass.	<i>drop</i>	Drop IPv4 invalid L4 protocol.	<i>trap-to-host</i>	Forward IPv4 invalid L4 protocol to FortiOS.			
Option	Description											
<i>allow</i>	Allow IPv4 invalid L4 protocol to pass.											
<i>drop</i>	Drop IPv4 invalid L4 protocol.											
<i>trap-to-host</i>	Forward IPv4 invalid L4 protocol to FortiOS.											
ipv4-unknopt *	Unknown option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv4 with unknown options to pass.</td></tr><tr><td><i>drop</i></td><td>Drop IPv4 with unknown options.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward IPv4 with unknown options to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv4 with unknown options to pass.	<i>drop</i>	Drop IPv4 with unknown options.	<i>trap-to-host</i>	Forward IPv4 with unknown options to FortiOS.			
Option	Description											
<i>allow</i>	Allow IPv4 with unknown options to pass.											
<i>drop</i>	Drop IPv4 with unknown options.											
<i>trap-to-host</i>	Forward IPv4 with unknown options to FortiOS.											
ipv6-daddr-err *	Destination address as unspecified or loopback address anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow IPv6 with destination address as unspecified or loopback address to pass.</td></tr></table>	Option	Description	<i>allow</i>	Allow IPv6 with destination address as unspecified or loopback address to pass.							
Option	Description											
<i>allow</i>	Allow IPv6 with destination address as unspecified or loopback address to pass.											

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>drop</td><td>Drop IPv6 with destination address as unspecified or loopback address.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with destination address as unspecified or loopback address to FortiOS.</td></tr></table>	Option	Description	drop	Drop IPv6 with destination address as unspecified or loopback address.	trap-to-host	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.					
	Option	Description										
	drop	Drop IPv6 with destination address as unspecified or loopback address.										
trap-to-host	Forward IPv6 with destination address as unspecified or loopback address to FortiOS.											
ipv6-land *	Land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 land attack to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 land attack.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 land attack to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 land attack to pass.	drop	Drop IPv6 land attack.	trap-to-host	Forward IPv6 land attack to FortiOS.			
	Option	Description										
	allow	Allow IPv6 land attack to pass.										
	drop	Drop IPv6 land attack.										
trap-to-host	Forward IPv6 land attack to FortiOS.											
ipv6-optendpid *	End point identification anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 with end point identification option to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 with end point identification option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with end point identification option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 with end point identification option to pass.	drop	Drop IPv6 with end point identification option.	trap-to-host	Forward IPv6 with end point identification option to FortiOS.			
	Option	Description										
	allow	Allow IPv6 with end point identification option to pass.										
	drop	Drop IPv6 with end point identification option.										
trap-to-host	Forward IPv6 with end point identification option to FortiOS.											
ipv6-opthomeaddr *	Home address option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 with home address option to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 with home address option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with home address option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 with home address option to pass.	drop	Drop IPv6 with home address option.	trap-to-host	Forward IPv6 with home address option to FortiOS.			
	Option	Description										
	allow	Allow IPv6 with home address option to pass.										
	drop	Drop IPv6 with home address option.										
trap-to-host	Forward IPv6 with home address option to FortiOS.											
ipv6-optinvld *	Invalid option anomalies.Invalid option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 with invalid option to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 with invalid option.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with invalid option to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 with invalid option to pass.	drop	Drop IPv6 with invalid option.	trap-to-host	Forward IPv6 with invalid option to FortiOS.			
	Option	Description										
	allow	Allow IPv6 with invalid option to pass.										
	drop	Drop IPv6 with invalid option.										
trap-to-host	Forward IPv6 with invalid option to FortiOS.											
ipv6-optjumbo *	Jumbo options anomalies.	option	-	trap-to-host								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>allow</i>	Allow IPv6 with jumbo option to pass.		
	<i>drop</i>	Drop IPv6 with jumbo option.		
	<i>trap-to-host</i>	Forward IPv6 with jumbo option to FortiOS.		
ipv6-optnsap *	Network service access point address option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with network service access point address option to pass.		
	<i>drop</i>	Drop IPv6 with network service access point address option.		
	<i>trap-to-host</i>	Forward IPv6 with network service access point address option to FortiOS.		
ipv6-optralert *	Router alert option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with router alert option to pass.		
	<i>drop</i>	Drop IPv6 with router alert option.		
	<i>trap-to-host</i>	Forward IPv6 with router alert option to FortiOS.		
ipv6-opttunnel *	Tunnel encapsulation limit option anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with tunnel encapsulation limit to pass.		
	<i>drop</i>	Drop IPv6 with tunnel encapsulation limit.		
	<i>trap-to-host</i>	Forward IPv6 with tunnel encapsulation limit to FortiOS.		
ipv6-proto-err *	Layer 4 invalid protocol anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 L4 invalid protocol to pass.		
	<i>drop</i>	Drop IPv6 L4 invalid protocol.		
	<i>trap-to-host</i>	Forward IPv6 L4 invalid protocol to FortiOS.		
ipv6-saddr-err *	Source address as multicast anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow IPv6 with source address as multicast to pass.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>drop</td><td>Drop IPv6 with source address as multicast.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with source address as multicast to FortiOS.</td></tr></table>	Option	Description	drop	Drop IPv6 with source address as multicast.	trap-to-host	Forward IPv6 with source address as multicast to FortiOS.					
	Option	Description										
	drop	Drop IPv6 with source address as multicast.										
	trap-to-host	Forward IPv6 with source address as multicast to FortiOS.										
ipv6-unknopt *	Unknown option anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv6 with unknown options to pass.</td></tr><tr><td>drop</td><td>Drop IPv6 with unknown options.</td></tr><tr><td>trap-to-host</td><td>Forward IPv6 with unknown options to FortiOS.</td></tr></table>	Option	Description	allow	Allow IPv6 with unknown options to pass.	drop	Drop IPv6 with unknown options.	trap-to-host	Forward IPv6 with unknown options to FortiOS.			
	Option	Description										
	allow	Allow IPv6 with unknown options to pass.										
	drop	Drop IPv6 with unknown options.										
trap-to-host	Forward IPv6 with unknown options to FortiOS.											
sctp-csum-err *	Invalid IPv4 SCTP checksum anomalies.	option	-	drop								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow IPv4 invalid SCTP checksum.</td></tr><tr><td>drop</td><td>Drop IPv4 invalid SCTP checksum.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 invalid SCTP checksum to main CPU for processing.</td></tr></table>	Option	Description	allow	Allow IPv4 invalid SCTP checksum.	drop	Drop IPv4 invalid SCTP checksum.	trap-to-host	Forward IPv4 invalid SCTP checksum to main CPU for processing.			
	Option	Description										
	allow	Allow IPv4 invalid SCTP checksum.										
	drop	Drop IPv4 invalid SCTP checksum.										
trap-to-host	Forward IPv4 invalid SCTP checksum to main CPU for processing.											
tcp-csum-err	Invalid IPv4 TCP checksum anomalies.	option	-	drop								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>drop</td><td>Drop IPv4 invalid TCP checksum.</td></tr><tr><td>trap-to-host</td><td>Forward IPv4 invalid TCP checksum to main CPU for processing.</td></tr></table>	Option	Description	drop	Drop IPv4 invalid TCP checksum.	trap-to-host	Forward IPv4 invalid TCP checksum to main CPU for processing.					
	Option	Description										
	drop	Drop IPv4 invalid TCP checksum.										
trap-to-host	Forward IPv4 invalid TCP checksum to main CPU for processing.											
tcp-fin-noack *	TCP SYN flood with FIN flag set without ACK setting anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow TCP packets with FIN flag set without ack setting to pass.</td></tr><tr><td>drop</td><td>Drop TCP packets with FIN flag set without ack setting.</td></tr><tr><td>trap-to-host</td><td>Forward TCP packets with FIN flag set without ack setting to FortiOS.</td></tr></table>	Option	Description	allow	Allow TCP packets with FIN flag set without ack setting to pass.	drop	Drop TCP packets with FIN flag set without ack setting.	trap-to-host	Forward TCP packets with FIN flag set without ack setting to FortiOS.			
	Option	Description										
	allow	Allow TCP packets with FIN flag set without ack setting to pass.										
	drop	Drop TCP packets with FIN flag set without ack setting.										
trap-to-host	Forward TCP packets with FIN flag set without ack setting to FortiOS.											
tcp-fin-only *	TCP SYN flood with only FIN flag set anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow TCP packets with FIN flag set only to pass.</td></tr><tr><td>drop</td><td>Drop TCP packets with FIN flag set only.</td></tr><tr><td>trap-to-host</td><td>Forward TCP packets with FIN flag set only to FortiOS.</td></tr></table>	Option	Description	allow	Allow TCP packets with FIN flag set only to pass.	drop	Drop TCP packets with FIN flag set only.	trap-to-host	Forward TCP packets with FIN flag set only to FortiOS.			
	Option	Description										
	allow	Allow TCP packets with FIN flag set only to pass.										
	drop	Drop TCP packets with FIN flag set only.										
trap-to-host	Forward TCP packets with FIN flag set only to FortiOS.											

Parameter	Description	Type	Size	Default								
tcp-land *	TCP land anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP land attack to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP land attack.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP land attack to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP land attack to pass.	<i>drop</i>	Drop TCP land attack.	<i>trap-to-host</i>	Forward TCP land attack to FortiOS.			
Option	Description											
<i>allow</i>	Allow TCP land attack to pass.											
<i>drop</i>	Drop TCP land attack.											
<i>trap-to-host</i>	Forward TCP land attack to FortiOS.											
tcp-no-flag *	TCP SYN flood with no flag set anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets without flag set to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets without flag set.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets without flag set to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets without flag set to pass.	<i>drop</i>	Drop TCP packets without flag set.	<i>trap-to-host</i>	Forward TCP packets without flag set to FortiOS.			
Option	Description											
<i>allow</i>	Allow TCP packets without flag set to pass.											
<i>drop</i>	Drop TCP packets without flag set.											
<i>trap-to-host</i>	Forward TCP packets without flag set to FortiOS.											
tcp-syn-data *	TCP SYN flood packets with data anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP syn packets with data to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP syn packets with data.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP syn packets with data to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP syn packets with data to pass.	<i>drop</i>	Drop TCP syn packets with data.	<i>trap-to-host</i>	Forward TCP syn packets with data to FortiOS.			
Option	Description											
<i>allow</i>	Allow TCP syn packets with data to pass.											
<i>drop</i>	Drop TCP syn packets with data.											
<i>trap-to-host</i>	Forward TCP syn packets with data to FortiOS.											
tcp-syn-fin *	TCP SYN flood SYN/FIN flag set anomalies.	option	-	allow								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets with syn_fin flag set to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets with syn_fin flag set.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets with syn_fin flag set to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets with syn_fin flag set to pass.	<i>drop</i>	Drop TCP packets with syn_fin flag set.	<i>trap-to-host</i>	Forward TCP packets with syn_fin flag set to FortiOS.			
Option	Description											
<i>allow</i>	Allow TCP packets with syn_fin flag set to pass.											
<i>drop</i>	Drop TCP packets with syn_fin flag set.											
<i>trap-to-host</i>	Forward TCP packets with syn_fin flag set to FortiOS.											
tcp-winnuke *	TCP WinNuke anomalies.	option	-	trap-to-host								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow TCP packets winnuke attack to pass.</td></tr><tr><td><i>drop</i></td><td>Drop TCP packets winnuke attack.</td></tr><tr><td><i>trap-to-host</i></td><td>Forward TCP packets winnuke attack to FortiOS.</td></tr></table>	Option	Description	<i>allow</i>	Allow TCP packets winnuke attack to pass.	<i>drop</i>	Drop TCP packets winnuke attack.	<i>trap-to-host</i>	Forward TCP packets winnuke attack to FortiOS.			
Option	Description											
<i>allow</i>	Allow TCP packets winnuke attack to pass.											
<i>drop</i>	Drop TCP packets winnuke attack.											
<i>trap-to-host</i>	Forward TCP packets winnuke attack to FortiOS.											
udp-csum-err	Invalid IPv4 UDP checksum anomalies.	option	-	drop								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>drop</i>	Drop IPv4 invalid UDP checksum.		
	<i>trap-to-host</i>	Forward IPv4 invalid UDP checksum to main CPU for processing.		
udp-land *	UDP land anomalies.	option	-	trap-to-host
	Option	Description		
	<i>allow</i>	Allow UDP land attack to pass.		
	<i>drop</i>	Drop UDP land attack.		
	<i>trap-to-host</i>	Forward UDP land attack to FortiOS.		

* This parameter may not exist in some models.

config hpe

Parameter	Description	Type	Size	Default
all-protocol	Maximum packet rate of each host queue except high priority traffic(1K - 32M pps, default = 400K pps), set 0 to disable.	integer	Minimum value: 0 Maximum value: 32000000	400000 **
arp-max	Maximum ARP packet rate (1K - 32M pps, default = 5K pps). Entry is valid when ARP is removed from high-priority traffic.	integer	Minimum value: 1000 Maximum value: 32000000	5000
enable-shaper	Enable/Disable NPU Host Protection Engine (HPE) for packet type shaper.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable NPU HPE shaping based on packet type.		
	<i>enable</i>	Enable NPU HPE shaping based on packet type.		
esp-max	Maximum ESP packet rate (1K - 32M pps, default = 5K pps).	integer	Minimum value: 1000 Maximum value: 32000000	5000

Parameter	Description	Type	Size	Default
high-priority	Maximum packet rate for high priority traffic packets (1K - 32M pps, default = 400K pps).	integer	Minimum value: 1000 Maximum value: 32000000	400000 **
icmp-max	Maximum ICMP packet rate (1K - 32M pps, default = 5K pps).	integer	Minimum value: 1000 Maximum value: 32000000	5000
ip-frag-max	Maximum fragmented IP packet rate (1K - 32M pps, default = 5K pps).	integer	Minimum value: 1000 Maximum value: 32000000	5000
ip-others-max	Maximum IP packet rate for other packets (packet types that cannot be set with other options) (1K - 32G pps, default = 5K pps).	integer	Minimum value: 1000 Maximum value: 32000000	5000
l2-others-max	Maximum L2 packet rate for L2 packets that are not ARP packets (1K - 32M pps, default = 5K pps).	integer	Minimum value: 1000 Maximum value: 32000000	5000
sctp-max	Maximum SCTP packet rate (1K - 32M pps, default = 5K pps).	integer	Minimum value: 1000 Maximum value: 32000000	5000
tcp-max	Maximum TCP packet rate (1K - 32M pps, default = 40K pps).	integer	Minimum value: 1000 Maximum value: 32000000	40000
tcpfin-rst-max	Maximum TCP carries FIN or RST flags packet rate (1K - 32M pps, default = 40K pps).	integer	Minimum value: 1000 Maximum value: 32000000	40000

Parameter	Description	Type	Size	Default
tcpsyn-ack-max	Maximum TCP carries SYN and ACK flags packet rate (1K - 32M pps, default = 40K pps).	integer	Minimum value: 1000 Maximum value: 32000000	40000
tcpsyn-max	Maximum TCP SYN packet rate (1K - 40M pps, default = 32K pps).	integer	Minimum value: 1000 Maximum value: 32000000	40000
udp-max	Maximum UDP packet rate (1K - 32M pps, default = 40K pps).	integer	Minimum value: 1000 Maximum value: 32000000	40000

** Values may differ between models.

config ip-reassembly

Parameter	Description	Type	Size	Default
max-timeout	Maximum timeout value for IP reassembly (5 us - 600,000,000 us).	integer	Minimum value: 5 Maximum value: 600000000	200000
min-timeout	Minimum timeout value for IP reassembly (5 us - 600,000,000 us).	integer	Minimum value: 5 Maximum value: 600000000	64
status	Set IP reassembly processing status.	option	-	disable
		Option	Description	
		<i>disable</i>	Disable IP reassembly.	
		<i>enable</i>	Enable IP reassembly.	

config isf-np-queues

gen-tv	tcam data gen info tv.	option	-	invalid
	Option	Description		
	valid	gen_t valid.		
	invalid	gen_t invalid.		
ihl	tcam data ipv4 IHL.	integer	Minimum value: 0 Maximum value: 15	0
ip4-id	tcam data ipv4 id.	integer	Minimum value: 0 Maximum value: 65535	0
ip6-fl	tcam data ipv6 flow label.	integer	Minimum value: 0 Maximum value: 1048575	0
ipver	tcam data ip header version.	integer	Minimum value: 0 Maximum value: 15	0

Parameter	Description	Type	Size	Default
l4-wd10	tcam data L4 word10.	integer	Minimum value: 0 Maximum value: 65535	0
l4-wd11	tcam data L4 word11.	integer	Minimum value: 0 Maximum value: 65535	0
l4-wd8	tcam data L4 word8.	integer	Minimum value: 0 Maximum value: 65535	0
l4-wd9	tcam data L4 word9.	integer	Minimum value: 0 Maximum value: 65535	0
mf	tcam data ip flag mf.	option	-	disable
	OptionDescription			
	enable	Enable ip header mf bit.		
	disable	Disable ip header mf bit.		
protocol	tcam data ip protocol.	integer	Minimum value: 0 Maximum value: 255	0
slink	tcam data sublink.	integer	Minimum value: 0 Maximum value: 7	0
smac-change	tcam data source MAC change.	option	-	disable
	OptionDescription			
	enable	Ftag smac change enable.		
	disable	Ftag smac change disable.		

Parameter	Description	Type	Size	Default
sp	tcam data source port.	integer	Minimum value: 0 Maximum value: 4095	0
src-cfi	tcam data source cfi.	option	-	disable
	Option	Description		
	enable	Ftag src_cfi enable.		
	disable	Ftag src_cfi disable.		
src-prio	tcam data source priority.	integer	Minimum value: 0 Maximum value: 7	0
src-updt	tcam data source update.	option	-	disable
	Option	Description		
	enable	Ftag src_updt enable.		
	disable	Ftag src_updt disable.		
srcip	tcam data src ipv4 address.	ipv4-address-any	Not Specified	0.0.0.0
srcipv6	tcam data src ipv6 address.	ipv6-address	Not Specified	::
srcmac	tcam data src macaddr.	mac-address	Not Specified	00:00:00:00:00:00
srcport	tcam data L4 src port.	integer	Minimum value: 0 Maximum value: 65535	0
svid	tcam data source vid.	integer	Minimum value: 0 Maximum value: 4095	0
tcp-ack	tcam data tcp flag ack.	option	-	disable
	Option	Description		
	enable	Enable tcp header ack bit.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable tcp header ack bit.		
tcp-cwr	tcam data tcp flag cwr.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable tcp header cwr bit.		
	<i>disable</i>	Disable tcp header cwr bit.		
tcp-ece	tcam data tcp flag ece.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable tcp header ece bit.		
	<i>disable</i>	Disable tcp header ece bit.		
tcp-fin	tcam data tcp flag fin.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable tcp header fin bit.		
	<i>disable</i>	Disable tcp header fin bit.		
tcp-push	tcam data tcp flag push.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable tcp header push bit.		
	<i>disable</i>	Disable tcp header push bit.		
tcp-rst	tcam data tcp flag rst.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable tcp header rst bit.		
	<i>disable</i>	Disable tcp header rst bit.		
tcp-syn	tcam data tcp flag syn.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable tcp header syn bit.		
	<i>disable</i>	Disable tcp header syn bit.		
tcp-urg	tcam data tcp flag urg.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable tcp header urg bit.		
	<i>disable</i>	Disable tcp header urg bit.		
tgt-cfi	tcam data target cfi.	option	-	disable
	Option	Description		
	<i>enable</i>	Ftag tgt_cfi enable.		
	<i>disable</i>	Ftag tgt_cfi disable.		
tgt-prio	tcam data target priority.	integer	Minimum value: 0 Maximum value: 7	0
tgt-updt	tcam data target port update.	option	-	disable
	Option	Description		
	<i>enable</i>	Ftag tgt update enable.		
	<i>disable</i>	Ftag tgt update disable.		
tgt-v	tcam data target valid.	option	-	invalid
	Option	Description		
	<i>valid</i>	Ftag tgt valid.		
	<i>invalid</i>	Ftag tgt valid.		
tos	tcam data ip tos.	integer	Minimum value: 0 Maximum value: 255	0
tp	tcam data target port.	integer	Minimum value: 0 Maximum value: 4095	0
ttl	tcam data ip ttl.	integer	Minimum value: 0 Maximum value: 255	0

Parameter	Description	Type	Size	Default
tvid	tcam data target vid.	integer	Minimum value: 0 Maximum value: 4095	0
vdid	tcam data vdom id.	integer	Minimum value: 0 Maximum value: 65535	0

config mask

Parameter	Description	Type	Size	Default
df	tcam mask ip flag df.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable ip header df bit.		
	<i>disable</i>	Disable ip header df bit.		
dstip	tcam mask dst ipv4 address.	ipv4-address-any	Not Specified	0.0.0.0
dstipv6	tcam mask dst ipv6 address.	ipv6-address	Not Specified	::

vdm-v	Enable to set sact vdm.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable vdm.</td></tr><tr><td><i>disable</i></td><td>Disable vdm.</td></tr></table>	Option	Description	<i>enable</i>	Enable vdm.	<i>disable</i>	Disable vdm.			
Option	Description									
<i>enable</i>	Enable vdm.									
<i>disable</i>	Disable vdm.									

Parameter	Description	Type	Size	Default						
vdom-id	tcam sact vdom-id.	integer	Minimum value: 0 Maximum value: 16383	0						
vdom-id-v	Enable to set sact vdom-id.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable vdom_id.</td></tr><tr><td><i>disable</i></td><td>Disable vdom_id.</td></tr></table>				Option	Description	<i>enable</i>	Enable vdom_id.	<i>disable</i>	Disable vdom_id.
	Option	Description								
	<i>enable</i>	Enable vdom_id.								
<i>disable</i>	Disable vdom_id.									
x-mode	tcam sact x-mode.	integer	Minimum value: 0 Maximum value: 3	0						
x-mode-v	Enable to set sact x-mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable x_mode.</td></tr><tr><td><i>disable</i></td><td>Disable x_mode.</td></tr></table>				Option	Description	<i>enable</i>	Enable x_mode.	<i>disable</i>	Disable x_mode.
	Option	Description								
	<i>enable</i>	Enable x_mode.								
<i>disable</i>	Disable x_mode.									

config tact

Parameter	Description	Type	Size	Default						
act	tcam tact act.	integer	Minimum value: 0 Maximum value: 3	0						
act-v	Enable to set tact act.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable act.</td></tr><tr><td><i>disable</i></td><td>Disable act.</td></tr></table>				Option	Description	<i>enable</i>	Enable act.	<i>disable</i>	Disable act.
	Option	Description								
	<i>enable</i>	Enable act.								
<i>disable</i>	Disable act.									
fmtuv4-s	tcam tact fmtuv4-s.	integer	Minimum value: 0 Maximum value: 1	0						
fmtuv4-s-v	Enable to set tact fmtuv4-s.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable fmtuv4_s.		
	<i>disable</i>	Disable fmtuv4_s.		
fmtuv6-s	tcam tact fmtuv6-s.	integer	Minimum value: 0 Maximum value: 1	0
fmtuv6-s-v	Enable to set tact fmtuv6-s.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable fmtuv6_s.		
	<i>disable</i>	Disable fmtuv6_s.		
Inkid	tcam tact Inkid.	integer	Minimum value: 0 Maximum value: 15	0
Inkid-v	Enable to set tact Inkid.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Inkid.		
	<i>disable</i>	Disable Inkid.		
mac-id	tcam tact mac-id.	integer	Minimum value: 0 Maximum value: 65535	0
mac-id-v	Enable to set tact mac-id.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable mac_id.		
	<i>disable</i>	Disable mac_id.		
mss-t	tcam tact mss.	integer	Minimum value: 0 Maximum value: 16383	0

Parameter	Description	Type	Size	Default
mss-t-v	Enable to set tact mss.	option	-	disable
	Option Description			
	<i>enable</i>	Enable mss.		
	<i>disable</i>	Disable mss.		
mtuv4	tcam tact mtuv4.	integer	Minimum value: 0 Maximum value: 16383	0
mtuv4-v	Enable to set tact mtuv4.	option	-	disable
	Option Description			
	<i>enable</i>	Enable mtuv4.		
	<i>disable</i>	Disable mtuv4.		
mtuv6	tcam tact mtuv6.	integer	Minimum value: 0 Maximum value: 16383	0
mtuv6-v	Enable to set tact mtuv6.	option	-	disable
	Option Description			
	<i>enable</i>	Enable mtuv6.		
	<i>disable</i>	Disable mtuv6.		
slif-act	tcam tact slif-act.	integer	Minimum value: 0 Maximum value: 3	0
slif-act-v	Enable to set tact slif-act.	option	-	disable
	Option Description			
	<i>enable</i>	Enable slif_act.		
	<i>disable</i>	Disable slif_act.		

Parameter	Description	Type	Size	Default						
sublnkid	tcam tact sublnkid.	integer	Minimum value: 0 Maximum value: 511	0						
sublnkid-v	Enable to set tact sublnkid.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sublnkid.</td></tr><tr><td><i>disable</i></td><td>Disable sublnkid.</td></tr></table>	Option	Description	<i>enable</i>	Enable sublnkid.	<i>disable</i>	Disable sublnkid.			
Option	Description									
<i>enable</i>	Enable sublnkid.									
<i>disable</i>	Disable sublnkid.									
tgtv-act	tcam tact tgtv-act.	integer	Minimum value: 0 Maximum value: 1	0						
tgtv-act-v	Enable to set tact tgtv-act.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable tgtv_act.</td></tr><tr><td><i>disable</i></td><td>Disable tgtv_act.</td></tr></table>	Option	Description	<i>enable</i>	Enable tgtv_act.	<i>disable</i>	Disable tgtv_act.			
Option	Description									
<i>enable</i>	Enable tgtv_act.									
<i>disable</i>	Disable tgtv_act.									
tlif-act	tcam tact tlif-act.	integer	Minimum value: 0 Maximum value: 3	0						
tlif-act-v	Enable to set tact tlif-act.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable tlif_act.</td></tr><tr><td><i>disable</i></td><td>Disable tlif_act.</td></tr></table>	Option	Description	<i>enable</i>	Enable tlif_act.	<i>disable</i>	Disable tlif_act.			
Option	Description									
<i>enable</i>	Enable tlif_act.									
<i>disable</i>	Disable tlif_act.									
tpeid	tcam tact tpeid.	integer	Minimum value: 0 Maximum value: 16383	0						
tpeid-v	Enable to set tact tpeid.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable tpeid.</td></tr><tr><td><i>disable</i></td><td>Disable tpeid.</td></tr></table>	Option	Description	<i>enable</i>	Enable tpeid.	<i>disable</i>	Disable tpeid.			
Option	Description									
<i>enable</i>	Enable tpeid.									
<i>disable</i>	Disable tpeid.									

Parameter	Description	Type	Size	Default						
v6fe	tcam tact v6fe.	integer	Minimum value: 0 Maximum value: 1	0						
v6fe-v	Enable to set tact v6fe.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable v6fe.</td></tr><tr><td><i>disable</i></td><td>Disable v6fe.</td></tr></table>	Option	Description	<i>enable</i>	Enable v6fe.	<i>disable</i>	Disable v6fe.			
Option	Description									
<i>enable</i>	Enable v6fe.									
<i>disable</i>	Disable v6fe.									
vep-en-v	Enable to set tact vep-en.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable vep_en.</td></tr><tr><td><i>disable</i></td><td>Disable vep_en.</td></tr></table>	Option	Description	<i>enable</i>	Enable vep_en.	<i>disable</i>	Disable vep_en.			
Option	Description									
<i>enable</i>	Enable vep_en.									
<i>disable</i>	Disable vep_en.									
vep-slid	tcam tact vep_slid.	integer	Minimum value: 0 Maximum value: 3	0						
vep-slid-v	Enable to set tact vep-slid.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable vep_slid.</td></tr><tr><td><i>disable</i></td><td>Disable vep_slid.</td></tr></table>	Option	Description	<i>enable</i>	Enable vep_slid.	<i>disable</i>	Disable vep_slid.			
Option	Description									
<i>enable</i>	Enable vep_slid.									
<i>disable</i>	Disable vep_slid.									
vep_en	tcam tact vep_en.	integer	Minimum value: 0 Maximum value: 1	0						
xlt-lif	tcam tact xlt-lif.	integer	Minimum value: 0 Maximum value: 4095	0						
xlt-lif-v	Enable to set tact xlt-lif.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable xlt_lif.</td></tr><tr><td><i>disable</i></td><td>Disable xlt_lif.</td></tr></table>	Option	Description	<i>enable</i>	Enable xlt_lif.	<i>disable</i>	Disable xlt_lif.			
Option	Description									
<i>enable</i>	Enable xlt_lif.									
<i>disable</i>	Disable xlt_lif.									

Parameter	Description	Type	Size	Default						
xlt-vid	tcam tact xlt-vid.	integer	Minimum value: 0 Maximum value: 4095	0						
xlt-vid-v	Enable to set tact xlt-vid.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable xlt_vid.</td></tr><tr><td><i>disable</i></td><td>Disable xlt_vid.</td></tr></table>				Option	Description	<i>enable</i>	Enable xlt_vid.	<i>disable</i>	Disable xlt_vid.
Option	Description									
<i>enable</i>	Enable xlt_vid.									
<i>disable</i>	Disable xlt_vid.									

config port-cpu-map

Parameter	Description	Type	Size	Default
cpu-core	The CPU core to map to an interface.	string	Maximum length: 31	all
interface	The interface to map to a CPU core.	string	Maximum length: 15	

config port-npu-map

Parameter	Description	Type	Size	Default
interface	Set NPU interface port for NPU group mapping.	string	Maximum length: 15	
npu-group-index	Mapping NPU group index.	integer	Minimum value: 0 Maximum value: 4294967295	0

config port-path-option

Parameter	Description	Type	Size	Default
ports-using-npu <interface-name>	Set ha/aux ports to handle traffic with NPU (otherwise traffic goes to Intel-NIC and then CPU). Available interfaces for NPU path.	string	Maximum length: 15	

config priority-protocol

Parameter	Description	Type	Size	Default						
bfd	Enable/disable NPU BFD priority protocol.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU BFD priority protocol.</td></tr><tr><td><i>disable</i></td><td>Disable NPU BFD priority protocol.</td></tr></table>	Option	Description	<i>enable</i>	Enable NPU BFD priority protocol.	<i>disable</i>	Disable NPU BFD priority protocol.			
Option	Description									
<i>enable</i>	Enable NPU BFD priority protocol.									
<i>disable</i>	Disable NPU BFD priority protocol.									
bgp	Enable/disable NPU BGP priority protocol.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU BGP priority protocol.</td></tr><tr><td><i>disable</i></td><td>Disable NPU BGP priority protocol.</td></tr></table>	Option	Description	<i>enable</i>	Enable NPU BGP priority protocol.	<i>disable</i>	Disable NPU BGP priority protocol.			
Option	Description									
<i>enable</i>	Enable NPU BGP priority protocol.									
<i>disable</i>	Disable NPU BGP priority protocol.									
slbc	Enable/disable NPU SLBC priority protocol.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU SLBC priority protocol.</td></tr><tr><td><i>disable</i></td><td>Disable NPU SLBC priority protocol.</td></tr></table>	Option	Description	<i>enable</i>	Enable NPU SLBC priority protocol.	<i>disable</i>	Disable NPU SLBC priority protocol.			
Option	Description									
<i>enable</i>	Enable NPU SLBC priority protocol.									
<i>disable</i>	Disable NPU SLBC priority protocol.									

config sw-eh-hash

Parameter	Description	Type	Size	Default										
computation	Set hashing computation.	option	-	xor16										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>xor16</td><td>Use XOR operator to make 16 bits hash.</td></tr><tr><td>xor8</td><td>Use XOR operator to make 8 bits hash.</td></tr><tr><td>xor4</td><td>Use XOR operator to make 4 bits hash.</td></tr><tr><td>crc16</td><td>Use CRC-16-CCITT polynomial to make 16 bits hash.</td></tr></table>	Option	Description	xor16	Use XOR operator to make 16 bits hash.	xor8	Use XOR operator to make 8 bits hash.	xor4	Use XOR operator to make 4 bits hash.	crc16	Use CRC-16-CCITT polynomial to make 16 bits hash.			
Option	Description													
xor16	Use XOR operator to make 16 bits hash.													
xor8	Use XOR operator to make 8 bits hash.													
xor4	Use XOR operator to make 4 bits hash.													
crc16	Use CRC-16-CCITT polynomial to make 16 bits hash.													
destination-ip-lower-16	Include/exclude destination IP address lower 16 bits.	option	-	include										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>include</td><td>Include destination IP address lower 16 bits.</td></tr><tr><td>exclude</td><td>Exclude destination IP address lower 16 bits.</td></tr></table>	Option	Description	include	Include destination IP address lower 16 bits.	exclude	Exclude destination IP address lower 16 bits.							
Option	Description													
include	Include destination IP address lower 16 bits.													
exclude	Exclude destination IP address lower 16 bits.													
destination-ip-upper-16	Include/exclude destination IP address upper 16 bits.	option	-	include										

Parameter	Description	Type	Size	Default
	Option Description			
	<i>include</i>	Include destination IP address upper 16 bits.		
	<i>exclude</i>	Exclude destination IP address upper 16 bits.		
destination-port	Include/exclude destination port if TCP/UDP.	option	-	include
	Option Description			
	<i>include</i>	Include destination port if TCP/UDP.		
	<i>exclude</i>	Exclude destination port if TCP/UDP.		
ip-protocol	Include/exclude IP protocol.	option	-	include
	Option Description			
	<i>include</i>	Include IP protocol.		
	<i>exclude</i>	Exclude IP protocol.		
netmask-length	Network mask length.	integer	Minimum value: 17 Maximum value: 32	32
source-ip-lower-16	Include/exclude source IP address lower 16 bits.	option	-	include
	Option Description			
	<i>include</i>	Include source IP address lower 16 bits.		
	<i>exclude</i>	Exclude source IP address lower 16 bits.		
source-ip-upper-16	Include/exclude source IP address upper 16 bits.	option	-	include
	Option Description			
	<i>include</i>	Include source IP address upper 16 bits.		
	<i>exclude</i>	Exclude source IP address upper 16 bits.		
source-port	Include/exclude source port if TCP/UDP.	option	-	include
	Option Description			
	<i>include</i>	Include source port if TCP/UDP.		
	<i>exclude</i>	Exclude source port if TCP/UDP.		

config sw-tr-hash

Parameter	Description	Type	Size	Default
draco15	Enable/disable DRACO15 hashing.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable using DRACO15 hashing for unicast trunk traffic.		
	<i>disable</i>	Disable using DRACO15 hashing for unicast trunk traffic.		
tcp-udp-port	Include/exclude TCP/UDP source and destination port for unicast trunk traffic.	option	-	exclude
	Option	Description		
	<i>include</i>	Include TCP/UDP source and destination port for unicast trunk traffic.		
	<i>exclude</i>	Exclude TCP/UDP source and destination port for unicast trunk traffic.		

config system npu-post

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 1800F, FortiGate 1801F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 3200F, FortiGate 3201F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F.

It is not available for: FortiGate 1000D, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure NPU attributes after interface initialization.

```
config system npu-post
  Description: Configure NPU attributes after interface initialization.
  config port-npu-map
    Description: Configure port to NPU group list.
```

```

edit <interface>
    set npu-group <group-name1>, <group-name2>, ...
next
end
end

```

config port-npu-map

Parameter	Description	Type	Size	Default
interface	Set NPU interface port for NPU group mapping.	string	Maximum length: 15	
npu-group <group-name>	Mapping NPU group list. NPU group name.	string	Maximum length: 15	

config system npu-setting prp

This command is available for model(s): FortiGate 100F, FortiGate 101F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 60F, FortiWiFi 61F.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure NPU PRP attributes.

```

config system npu-setting prp
    Description: Configure NPU PRP attributes.
    set prp-port-in <interface-name1>, <interface-name2>, ...
    set prp-port-out <interface-name1>, <interface-name2>, ...
end

```

config system npu-setting prp

Parameter	Description	Type	Size	Default
prp-port-in <interface-name>	Ingress port configured to allow the PRP trailer not be stripped off when the PRP packets come in. All of the traffic originating from these ports will always be sent to the host. Physical interface name.	string	Maximum length: 35	
prp-port-out <interface-name>	Egress port configured to allow the PRP trailer not be stripped off when the PRP packets go out. Physical interface name.	string	Maximum length: 35	

config system npu-vlink

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 3200F, FortiGate 3201F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 400F, FortiGate 401F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 600F, FortiGate 601F, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G.

It is not available for: FortiGate 1000D, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 401E, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 601E, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure NPU VDOM link.

```
config system npu-vlink
    Description: Configure NPU VDOM link.
    edit <name>
        next
    end
```

config system npu-vlink

Parameter	Description	Type	Size	Default
name	NPU VDOM link name in format npuX_vlink. X means x-th pair of npu-vlink. Maximum 14 characters.	string	Maximum length: 19	

config system ntp

Configure system NTP information.

```
config system ntp
    Description: Configure system NTP information.
    set authentication [enable|disable]
    set interface <interface-name1>, <interface-name2>, ...
    set key {password}
    set key-id {integer}
    set key-type [MD5|SHA1|...]
    config ntpserver
        Description: Configure the FortiGate to connect to any available third-party NTP
server.
        edit <id>
            set authentication [enable|disable]
            set interface {string}
            set interface-select-method [auto|sdwan|...]
            set ip-type [IPv6|IPv4|...]
            set key {password}
            set key-id {integer}
            set key-type [MD5|SHA1|...]
            set ntpv3 [enable|disable]
            set server {string}

	<i>enable</i>	Enable FortiGate NTP Server Mode.										
<i>disable</i>	Disable FortiGate NTP Server Mode.											
source-ip	Source IP address for communication to the NTP server.	ipv4-address	Not Specified	0.0.0.0								

Parameter	Description	Type	Size	Default
source-ip6	Source IPv6 address for communication to the NTP server.	ipv6-address	Not Specified	::
syncinterval	NTP synchronization interval (1 - 1440 min).	integer	Minimum value: 1 Maximum value: 1440	60
type	Use the FortiGuard NTP server or any other available NTP Server.	option	-	fortiguard
	Option	Description		
	<i>fortiguard</i>	Use the FortiGuard NTP server.		
	<i>custom</i>	Use any other available NTP server.		

config ntpserver

Parameter	Description	Type	Size	Default								
authentication	Enable/disable authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable authentication.</td></tr><tr><td><i>disable</i></td><td>Disable authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable authentication.	<i>disable</i>	Disable authentication.		
	Option	Description										
	<i>enable</i>	Enable authentication.										
	<i>disable</i>	Disable authentication.										
id	NTP server ID.	integer	Minimum value: 0 Maximum value: 4294967295	0								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
	Option	Description										
	<i>auto</i>	Set outgoing interface automatically.										
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.										
<i>specify</i>	Set outgoing interface manually.											
ip-type	Choose to connect to IPv4 or/and IPv6 NTP server.	option	-	Both								

Parameter	Description	Type	Size	Default
	Option	Description		
	IPv6	Enable look up for IPv6 NTP server.		
	IPv4	Enable look up for IPv4 NTP server.		
	Both	Enable look up for both IPv4 and IPv6 NTP server.		
key	Key for MD5(NTPv3)/SHA1(NTPv4)/SHA256 (NTPv4) authentication.	password	Not Specified	
key-id	Key ID for authentication.	integer	Minimum value: 0 Maximum value: 4294967295	0
key-type	Select NTP authentication type.	option	-	MD5
	Option	Description		
	MD5	Enable MD5(NTPv3) authentication.		
	SHA1	Enable SHA1(NTPv4) authentication.		
	SHA256	Enable SHA256(NTPv4) authentication.		
ntp3	Enable to use NTPv3 instead of NTPv4.	option	-	disable
	Option	Description		
	enable	Enable NTPv3.		
	disable	Disable NTPv3 (use NTPv4).		
server	IP address or hostname of the NTP Server.	string	Maximum length: 63	
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config system object-tagging

Configure object tagging.

```
config system object-tagging
    Description: Configure object tagging.
    edit <category>
        set address [disable|mandatory|...]
        set color {integer}
        set device [disable|mandatory|...]
```

```

        set interface [disable|mandatory|...]
        set multiple [enable|disable]
        set tags <name1>, <name2>, ...
    next
end

```

config system object-tagging

Parameter	Description	Type	Size	Default
address	Address.	option	-	optional
	Option	Description		
	disable	Disable.		
	mandatory	Mandatory.		
	optional	Optional.		
category	Tag Category.	string	Maximum length: 63	
color	Color of icon on the GUI.	integer	Minimum value: 0 Maximum value: 32	0
device	Device.	option	-	optional
	Option	Description		
	disable	Disable.		
	mandatory	Mandatory.		
	optional	Optional.		
interface	Interface.	option	-	optional
	Option	Description		
	disable	Disable.		
	mandatory	Mandatory.		
	optional	Optional.		
multiple	Allow multiple tag selection.	option	-	enable
	Option	Description		
	enable	Enable multi-tagging.		
	disable	Disable multi-tagging.		

Parameter	Description	Type	Size	Default
tags <name>	Tags. Tag name.	string	Maximum length: 79	

config system password-policy

Configure password policy for locally defined administrator passwords and IPsec VPN pre-shared keys.

```
config system password-policy
    Description: Configure password policy for locally defined administrator passwords and
    IPsec VPN pre-shared keys.
    set apply-to {option1}, {option2}, ...
    set expire-day {integer}
    set expire-status [enable|disable]
    set login-lockout-upon-downgrade [enable|disable]
    set min-change-characters {integer}
    set min-lower-case-letter {integer}
    set min-non-alphanumeric {integer}
    set min-number {integer}
    set min-upper-case-letter {integer}
    set minimum-length {integer}
    set reuse-password [enable|disable]
    set reuse-password-limit {integer}
    set status [enable|disable]
end
```

config system password-policy

Parameter	Description	Type	Size	Default						
apply-to	Apply password policy to administrator passwords or IPsec pre-shared keys or both. Separate entries with a space.	option	-	admin-password						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>admin-password</i></td><td>Apply to administrator passwords.</td></tr><tr><td><i>ipsec-preshared-key</i></td><td>Apply to IPsec pre-shared keys.</td></tr></table>	Option	Description	<i>admin-password</i>	Apply to administrator passwords.	<i>ipsec-preshared-key</i>	Apply to IPsec pre-shared keys.			
Option	Description									
<i>admin-password</i>	Apply to administrator passwords.									
<i>ipsec-preshared-key</i>	Apply to IPsec pre-shared keys.									
expire-day	Number of days after which passwords expire (1 - 999 days, default = 90).	integer	Minimum value: 1 Maximum value: 999	90						
expire-status	Enable/disable password expiration.	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Passwords expire after expire-day days.</td></tr><tr><td><i>disable</i></td><td>Passwords do not expire.</td></tr></table>	Option	Description	<i>enable</i>	Passwords expire after expire-day days.	<i>disable</i>	Passwords do not expire.			
	Option	Description								
	<i>enable</i>	Passwords expire after expire-day days.								
<i>disable</i>	Passwords do not expire.									
login-lockout-upon-downgrade	Enable/disable administrative user login lockout upon downgrade (default = disable). If enabled, downgrading the FortiOS firmware to a lower version where safer passwords are unsupported will lock out administrative users.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable administrative user login lockout upon downgrade.</td></tr><tr><td><i>disable</i></td><td>Disable administrative user login lockout upon downgrade.</td></tr></table>	Option	Description	<i>enable</i>	Enable administrative user login lockout upon downgrade.	<i>disable</i>	Disable administrative user login lockout upon downgrade.			
	Option	Description								
	<i>enable</i>	Enable administrative user login lockout upon downgrade.								
<i>disable</i>	Disable administrative user login lockout upon downgrade.									
min-change-characters	Minimum number of unique characters in new password which do not exist in old password (0 - 128, default = 0. This attribute overrides reuse-password if both are enabled).	integer	Minimum value: 0 Maximum value: 128	0						
min-lower-case-letter	Minimum number of lowercase characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-non-alphanumeric	Minimum number of non-alphanumeric characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-number	Minimum number of numeric characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-upper-case-letter	Minimum number of uppercase characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
minimum-length	Minimum password length (8 - 128, default = 8).	integer	Minimum value: 8 Maximum value: 128	8						
reuse-password	Enable/disable reuse of password. If both reuse-password and min-change-characters are enabled, min-change-characters overrides.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Administrators are allowed to reuse the same password up to a limit.		
	<i>disable</i>	Administrators must create a new password.		
reuse-password-limit	Number of times passwords can be reused (0 - 20, default = 0. If set to 0, can reuse password an unlimited number of times.).	integer	Minimum value: 0 Maximum value: 20	0
status	Enable/disable setting a password policy for locally defined administrator passwords and IPsec VPN pre-shared keys.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable password policy.		
	<i>disable</i>	Disable password policy.		

config system password-policy-guest-admin

Configure the password policy for guest administrators.

```
config system password-policy-guest-admin
    Description: Configure the password policy for guest administrators.
    set apply-to {option1}, {option2}, ...
    set expire-day {integer}
    set expire-status [enable|disable]
    set min-change-characters {integer}
    set min-lower-case-letter {integer}
    set min-non-alphanumeric {integer}
    set min-number {integer}
    set min-upper-case-letter {integer}
    set minimum-length {integer}
    set reuse-password [enable|disable]
    set reuse-password-limit {integer}
    set status [enable|disable]
end
```

config system password-policy-guest-admin

Parameter	Description	Type	Size	Default
apply-to	Guest administrator to which this password policy applies.	option	-	guest-admin-password

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>guest-admin-password</i></td><td>Apply to guest administrator password.</td></tr></table>	Option	Description	<i>guest-admin-password</i>	Apply to guest administrator password.					
	Option	Description								
<i>guest-admin-password</i>	Apply to guest administrator password.									
expire-day	Number of days after which passwords expire (1 - 999 days, default = 90).	integer	Minimum value: 1 Maximum value: 999	90						
expire-status	Enable/disable password expiration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Passwords expire after expire-day days.</td></tr><tr><td><i>disable</i></td><td>Passwords do not expire.</td></tr></table>	Option	Description	<i>enable</i>	Passwords expire after expire-day days.	<i>disable</i>	Passwords do not expire.			
	Option	Description								
	<i>enable</i>	Passwords expire after expire-day days.								
<i>disable</i>	Passwords do not expire.									
min-change-characters	Minimum number of unique characters in new password which do not exist in old password (0 - 128, default = 0. This attribute overrides reuse-password if both are enabled).	integer	Minimum value: 0 Maximum value: 128	0						
min-lower-case-letter	Minimum number of lowercase characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-non-alphanumeric	Minimum number of non-alphanumeric characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-number	Minimum number of numeric characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-upper-case-letter	Minimum number of uppercase characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
minimum-length	Minimum password length (8 - 128, default = 8).	integer	Minimum value: 8 Maximum value: 128	8						
reuse-password	Enable/disable reuse of password. If both reuse-password and min-change-characters are enabled, min-change-characters overrides.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Administrators are allowed to reuse the same password up to a limit.		
	<i>disable</i>	Administrators must create a new password.		
reuse-password-limit	Number of times passwords can be reused (0 - 20, default = 0. If set to 0, can reuse password an unlimited number of times.).	integer	Minimum value: 0 Maximum value: 20	0
status	Enable/disable setting a password policy for locally defined administrator passwords and IPsec VPN pre-shared keys.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable password policy.		
	<i>disable</i>	Disable password policy.		

config system pcsp-server

Configure PCP server information.

```

config system pcsp-server
  Description: Configure PCP server information.
  config pools
    Description: Configure PCP pools.
    edit <name>
      set allow-opcode {option1}, {option2}, ...
      set announcement-count {integer}
      set arp-reply [disable|enable]
      set client-mapping-limit {integer}
      set client-subnet <subnet1>, <subnet2>, ...
      set description {string}
      set ext-intf {string}
      set extip {user}
      set extport {user}
      set id {integer}
      set intl-intf <interface-name1>, <interface-name2>, ...
      set mapping-filter-limit {integer}
      set maximal-lifetime {integer}
      set minimal-lifetime {integer}
      set multicast-announcement [enable|disable]
      set recycle-delay {integer}
      set third-party [allow|disallow]
      set third-party-subnet <subnet1>, <subnet2>, ...
    next
  end
  set status [enable|disable]
end

```

config system pcp-server

Parameter	Description	Type	Size	Default
status	Enable/disable PCP server.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable PCP Server.		
	<i>disable</i>	Disable PCP Server.		

config pools

Parameter	Description	Type	Size	Default
allow-opcode	Allowed PCP opcode.	option	-	map peer announce
	Option	Description		
	<i>map</i>	Allow opcode MAP.		
	<i>peer</i>	Allow opcode PEER.		
	<i>announce</i>	Allow opcode ANNOUNCE.		
announcement-count	Number of multicast announcements.	integer	Minimum value: 3 Maximum value: 10	3
arp-reply	Enable to respond to ARP requests for external IP (default = enable).	option	-	enable
	Option	Description		
	<i>disable</i>	Disable ARP reply.		
	<i>enable</i>	Enable ARP reply.		
client-mapping-limit	Mapping limit per client (0 - 65535, default = 0, 0 = unlimited).	integer	Minimum value: 0 Maximum value: 65535	0
client-subnet <subnet>	Subnets from which PCP requests are accepted. Client subnets.	string	Maximum length: 79	
description	Description.	string	Maximum length: 127	
ext-intf	External interface name.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default						
extip	IP address or address range on the external interface that you want to map to an address on the internal network.	user	Not Specified							
extport	Incoming port number range that you want to map to a port number on the internal network.	user	Not Specified							
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
intl-intf <interface-name>	Internal interface name. Interface name.	string	Maximum length: 79							
mapping-filter-limit	Filter limit per mapping (0 - 5, default = 1).	integer	Minimum value: 0 Maximum value: 5	1						
maximal-lifetime	Maximal lifetime of a PCP mapping in seconds (3600 - 604800, default = 86400).	integer	Minimum value: 3600 Maximum value: 604800	86400						
minimal-lifetime	Minimal lifetime of a PCP mapping in seconds (60 - 300, default = 120).	integer	Minimum value: 60 Maximum value: 300	120						
multicast-announcement	Enable/disable multicast announcements.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable multicast announcements.</td></tr><tr><td><i>disable</i></td><td>Disable multicast announcements.</td></tr></table>				Option	Description	<i>enable</i>	Enable multicast announcements.	<i>disable</i>	Disable multicast announcements.
Option	Description									
<i>enable</i>	Enable multicast announcements.									
<i>disable</i>	Disable multicast announcements.									
name	PCP pool name.	string	Maximum length: 79							
recycle-delay	Minimum delay (in seconds) the PCP Server will wait before recycling mappings that have expired (0 - 3600, default = 0).	integer	Minimum value: 0 Maximum value: 3600	0						
third-party	Allow/disallow third party option.	option	-	disallow						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>allow</i>	Allow third party option.		
	<i>disallow</i>	Disallow third party option.		
third-party-subnet <subnet>	Subnets from which third party requests are accepted. Third party subnets.	string	Maximum length: 79	

config system physical-switch

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 200F, FortiGate 201F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3200F, FortiGate 3201F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 600F, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 601E, FortiGate 800D, FortiGate 900D, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64.

Configure physical switches.

```
config system physical-switch
    Description: Configure physical switches.
    edit <name>
        set age-enable [enable|disable]
        set age-val {integer}
    next
end
```

config system physical-switch

Parameter	Description	Type	Size	Default
age-enable	Enable/disable layer 2 age timer.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable layer 2 ageing timer.		
	<i>disable</i>	Disable layer 2 ageing timer.		
age-val	Layer 2 table age timer value.	integer	Minimum value: 0 Maximum value: 4294967295	3158067
name	Name.	string	Maximum length: 15	

config system pppoe-interface

Configure the PPPoE interfaces.

```
config system pppoe-interface
  Description: Configure the PPPoE interfaces.
  edit <name>
    set ac-name {string}
    set auth-type [auto|pap|...]
    set device {string}
    set dial-on-demand [enable|disable]
    set disc-retry-timeout {integer}
    set idle-timeout {integer}
    set ipunnumbered {ipv4-address}
    set ipv6 [enable|disable]
    set lcp-echo-interval {integer}
    set lcp-max-echo-fails {integer}
    set padt-retry-timeout {integer}
    set password {password}
    set pppoe-egress-cos [cos0|cos1|...]
    set pppoe-unnumbered-negotiate [enable|disable]
    set service-name {string}
    set username {string}
  next
end
```

config system pppoe-interface

Parameter	Description	Type	Size	Default												
ac-name	PPPoE AC name.	string	Maximum length: 63													
auth-type	PPP authentication type to use.	option	-	auto												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Automatically choose the authentication method.</td></tr><tr><td>pap</td><td>PAP authentication.</td></tr><tr><td>chap</td><td>CHAP authentication.</td></tr><tr><td>mschapv1</td><td>MS-CHAPv1 authentication.</td></tr><tr><td>mschapv2</td><td>MS-CHAPv2 authentication.</td></tr></table>				Option	Description	auto	Automatically choose the authentication method.	pap	PAP authentication.	chap	CHAP authentication.	mschapv1	MS-CHAPv1 authentication.	mschapv2	MS-CHAPv2 authentication.
	Option	Description														
	auto	Automatically choose the authentication method.														
	pap	PAP authentication.														
	chap	CHAP authentication.														
	mschapv1	MS-CHAPv1 authentication.														
mschapv2	MS-CHAPv2 authentication.															
device	Name for the physical interface.	string	Maximum length: 15													
dial-on-demand	Enable/disable dial on demand to dial the PPPoE interface when packets are routed to the PPPoE interface.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable dial on demand.</td></tr><tr><td>disable</td><td>Disable dial on demand.</td></tr></table>				Option	Description	enable	Enable dial on demand.	disable	Disable dial on demand.						
	Option	Description														
	enable	Enable dial on demand.														
disable	Disable dial on demand.															
disc-retry-timeout	PPPoE discovery init timeout value in (0-4294967295 sec).	integer	Minimum value: 0 Maximum value: 4294967295	1												
idle-timeout	PPPoE auto disconnect after idle timeout (0-4294967295 sec).	integer	Minimum value: 0 Maximum value: 4294967295	0												
ipunnumbered	PPPoE unnumbered IP.	ipv4-address	Not Specified	0.0.0.0

config system probe-response

Parameter	Description	Type	Size	Default								
http-probe-value	Value to respond to the monitoring server.	string	Maximum length: 1024	OK								
mode	SLA response mode.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Disable probe.</td></tr><tr><td><i>http-probe</i></td><td>HTTP probe.</td></tr><tr><td><i>twamp</i></td><td>Two way active measurement protocol.</td></tr></table>				Option	Description	<i>none</i>	Disable probe.	<i>http-probe</i>	HTTP probe.	<i>twamp</i>	Two way active measurement protocol.
	Option	Description										
	<i>none</i>	Disable probe.										
	<i>http-probe</i>	HTTP probe.										
<i>twamp</i>	Two way active measurement protocol.											
password	TWAMP responder password in authentication mode.	password	Not Specified									
port	Port number to response.	integer	Minimum value: 1 Maximum value: 65535	8008								
security-mode	TWAMP responder security mode.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Unauthenticated mode.</td></tr><tr><td><i>authentication</i></td><td>Authenticated mode.</td></tr></table>				Option	Description	<i>none</i>	Unauthenticated mode.	<i>authentication</i>	Authenticated mode.		
	Option	Description										
	<i>none</i>	Unauthenticated mode.										
<i>authentication</i>	Authenticated mode.											

Parameter	Description	Type	Size	Default
timeout	An inactivity timer for a twamp test session.	integer	Minimum value: 10 Maximum value: 3600	300
tll-mode	Mode for TWAMP packet TTL modification.	option	-	retain
	Option	Description		
	<i>reinit</i>	Reinitialize TTL.		
	<i>decrease</i>	Decrease TTL.		
	<i>retain</i>	Retain TTL.		

config system proxy-arp

Configure proxy-ARP.

```
config system proxy-arp
    Description: Configure proxy-ARP.
    edit <id>
        set end-ip {ipv4-address}
        set interface {string}
        set ip {ipv4-address}
    next
end
```

config system proxy-arp

Parameter	Description	Type	Size	Default
end-ip	End IP of IP range to be proxied.	ipv4-address	Not Specified	0.0.0.0
id	Unique integer ID of the entry.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Interface acting proxy-ARP.	string	Maximum length: 15	
ip	IP address or start IP to be proxied.	ipv4-address	Not Specified	0.0.0.0

config system ptp

Configure system PTP information.

```

config system ptp
    Description: Configure system PTP information.
    set delay-mechanism [E2E|P2P]
    set interface {string}
    set mode [multicast|hybrid]
    set request-interval {integer}
    config server-interface
        Description: FortiGate interface(s) with PTP server mode enabled. Devices on your
network can contact these interfaces for PTP services.
        edit <id>
            set delay-mechanism [E2E|P2P]
            set server-interface-name {string}
        next
    end
    set server-mode [enable|disable]
    set status [enable|disable]
end

```

config system ptp

Parameter	Description	Type	Size	Default						
delay-mechanism	End to end delay detection or peer to peer delay detection.	option	-	E2E						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>E2E</td><td>End to end delay detection.</td></tr><tr><td>P2P</td><td>Peer to peer delay detection.</td></tr></table>	Option	Description	E2E	End to end delay detection.	P2P	Peer to peer delay detection.			
Option	Description									
E2E	End to end delay detection.									
P2P	Peer to peer delay detection.									
interface	PTP client will reply through this interface.	string	Maximum length: 15							
mode	Multicast transmission or hybrid transmission.	option	-	multicast						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>multicast</td><td>Send PTP packets with multicast.</td></tr><tr><td>hybrid</td><td>Send PTP packets with unicast and multicast.</td></tr></table>	Option	Description	multicast	Send PTP packets with multicast.	hybrid	Send PTP packets with unicast and multicast.			
Option	Description									
multicast	Send PTP packets with multicast.									
hybrid	Send PTP packets with unicast and multicast.									
request-interval	The delay request value is the logarithmic mean interval in seconds between the delay request messages sent by the slave to the master.	integer	Minimum value: 1 Maximum value: 6	1						
server-mode	Enable/disable FortiGate PTP server mode. Your FortiGate becomes an PTP server for other devices on your network.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable FortiGate PTP server mode.		
	<i>disable</i>	Disable FortiGate PTP server mode.		
status	Enable/disable setting the FortiGate system time by synchronizing with an PTP Server.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable synchronization with PTP Server.		
	<i>disable</i>	Disable synchronization with PTP Server.		

config server-interface

Parameter	Description	Type	Size	Default
delay-mechanism	End to end delay detection or peer to peer delay detection.	option	-	E2E
	Option	Description		
	<i>E2E</i>	End to end delay detection.		
	<i>P2P</i>	Peer to peer delay detection.		
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server-interface-name	Interface name.	string	Maximum length: 15	

config system replacemsg admin

Replacement messages. Read-only.

```

config system replacemsg admin
    Description: Replacement messages. Read-only.
    edit <msg-type>
        set buffer {var-string}
        set format [none|text|...]
        set header [none|http|...]
    next
end

```

config system replacemsg admin

Parameter	Description	Type	Size	Default
buffer	Message string.	var-string	Maximum length: 32768	
format	Format flag.	option	-	none
	OptionDescription			
	none	No format type.		
	text	Text format.		
	html	HTML format.		
header	Header flag.	option	-	none
	OptionDescription			
	none	No header type.		
	http	HTTP		
	8bit	8 bit.		
msg-type	Message type.	string	Maximum length: 28	

config system replacemsg alertmail

Replacement messages. Read-only.

```
config system replacemsg alertmail
  Description: Replacement messages. Read-only.
  edit <msg-type>
    set buffer {var-string}
    set format [none|text|...]
    set header [none|http|...]
  next
end
```

config system replacemsg alertmail

Parameter	Description	Type	Size	Default
buffer	Message string.	var-string	Maximum length: 32768	

Parameter	Description	Type	Size	Default
format	Format flag.	option	-	none
	Option	Description		
	<i>none</i>	No format type.		
	<i>text</i>	Text format.		
	<i>html</i>	HTML format.		
header	Header flag.	option	-	none
	Option	Description		
	<i>none</i>	No header type.		
	<i>http</i>	HTTP		
	<i>8bit</i>	8 bit.		
msg-type	Message type.	string	Maximum length: 28	

config system replacemsg auth

Replacement messages. Read-only.

```

config system replacemsg auth
    Description: Replacement messages. Read-only.
    edit <msg-type>
        set buffer {var-string}
        set format [none|text|...]
        set header [none|http|...]
    next
end

```

config system replacemsg auth

Parameter	Description	Type	Size	Default
buffer	Message string.	var-string	Maximum length: 32768	
format	Format flag.	option	-	none
	Option	Description		
	<i>none</i>	No format type.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>text</i>	Text format.		
	<i>html</i>	HTML format.		
header	Header flag.	option	-	none
	Option	Description		
	<i>none</i>	No header type.		
	<i>http</i>	HTTP		
	<i>8bit</i>	8 bit.		
msg-type	Message type.	string	Maximum length: 28	

config system replacemsg automation

Replacement messages. Read-only.

```
config system replacemsg automation
  Description: Replacement messages. Read-only.
  edit <msg-type>
    set buffer {var-string}
    set format [none|text|...]
    set header [none|http|...]
  next
end
```

config system replacemsg automation

Parameter	Description	Type	Size	Default
buffer	Message string.	var-string	Maximum length: 32768	
format	Format flag.	option	-	none
	Option	Description		
	<i>none</i>	No format type.		
	<i>text</i>	Text format.		
	<i>html</i>	HTML format.		
header	Header flag.	option	-	none

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>none</i>	No header type.		
	<i>http</i>	HTTP		
	<i>8bit</i>	8 bit.		
msg-type	Message type.	string	Maximum length: 28	

config system replacemsg custom-message

Replacement messages. Read-only.

```
config system replacemsg custom-message
    Description: Replacement messages. Read-only.
    edit <msg-type>
        set buffer {var-string}
        set format [none|text|...]
        set header [none|http|...]
    next
end
```

config system replacemsg custom-message

Parameter	Description	Type	Size	Default
buffer	Message string.	var-string	Maximum length: 32768	
format	Format flag.	option	-	none
	Option	Description		
	<i>none</i>	No format type.		
	<i>text</i>	Text format.		
	<i>html</i>	HTML format.		
header	Header flag.	option	-	none
	Option	Description		
	<i>none</i>	No header type.		
	<i>http</i>	HTTP		
	<i>8bit</i>	8 bit.		

Parameter	Description	Type	Size	Default
msg-type	Message type.	string	Maximum length: 28	

config system replacemsg fortiguard-wf

Replacement messages. Read-only.

```
config system replacemsg fortiguard-wf
    Description: Replacement messages. Read-only.
    edit <msg-type>
        set buffer {var-string}
        set format [none|text|...]
        set header [none|http|...]
    next
end
```

config system replacemsg fortiguard-wf

config system sdwan

Parameter	Description	Type	Size	Default
app-perf-log-period	Time interval in seconds that application performance logs are generated (0 - 3600, default = 0).	integer	Minimum value: 0 Maximum value: 3600	0
duplication-max-discrepancy	Maximum discrepancy between two packets for deduplication in milliseconds (250 - 1000, default = 250).	integer	Minimum value: 250 Maximum value: 1000	250
duplication-max-num	Maximum number of interface members a packet is duplicated in the SD-WAN zone (2 - 4, default = 2; if set to 3, the original packet plus 2 more copies are created).	integer	Minimum value: 2 Maximum value: 4	2
fail-alert-interfaces <name>	Physical interfaces that will be alerted. Physical interface name.	string	Maximum length: 79	
fail-detect	Enable/disable SD-WAN Internet connection status checking (failure detection).	option	-	disable
		Option	Description	
		<i>enable</i>	Enable status checking.	
		<i>disable</i>	Disable status checking.	

Parameter	Description	Type	Size	Default												
load-balance-mode	Algorithm or mode to use for load balancing Internet traffic to SD-WAN members.	option	-	source-ip-based												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>source-ip-based</td><td>Source IP load balancing. All traffic from a source IP is sent to the same interface.</td></tr><tr><td>weight-based</td><td>Weight-based load balancing. Interfaces with higher weights have higher priority and get more traffic.</td></tr><tr><td>usage-based</td><td>Usage-based load balancing. All traffic is sent to the first interface on the list. When the bandwidth on that interface exceeds the spill-over limit new traffic is sent to the next interface.</td></tr><tr><td>source-dest-ip-based</td><td>Source and destination IP load balancing. All traffic from a source IP to a destination IP is sent to the same interface.</td></tr><tr><td>measured-volume-based</td><td>Volume-based load balancing. Traffic is load balanced based on traffic volume (in bytes). More traffic is sent to interfaces with higher volume ratios.</td></tr></table>	Option	Description	source-ip-based	Source IP load balancing. All traffic from a source IP is sent to the same interface.	weight-based	Weight-based load balancing. Interfaces with higher weights have higher priority and get more traffic.	usage-based	Usage-based load balancing. All traffic is sent to the first interface on the list. When the bandwidth on that interface exceeds the spill-over limit new traffic is sent to the next interface.	source-dest-ip-based	Source and destination IP load balancing. All traffic from a source IP to a destination IP is sent to the same interface.	measured-volume-based	Volume-based load balancing. Traffic is load balanced based on traffic volume (in bytes). More traffic is sent to interfaces with higher volume ratios.			
Option	Description															
source-ip-based	Source IP load balancing. All traffic from a source IP is sent to the same interface.															
weight-based	Weight-based load balancing. Interfaces with higher weights have higher priority and get more traffic.															
usage-based	Usage-based load balancing. All traffic is sent to the first interface on the list. When the bandwidth on that interface exceeds the spill-over limit new traffic is sent to the next interface.															
source-dest-ip-based	Source and destination IP load balancing. All traffic from a source IP to a destination IP is sent to the same interface.															
measured-volume-based	Volume-based load balancing. Traffic is load balanced based on traffic volume (in bytes). More traffic is sent to interfaces with higher volume ratios.															
neighbor-hold-boot-time	Waiting period in seconds when switching from the primary neighbor to the secondary neighbor from the neighbor start. (0 - 10000000, default = 0).	integer	Minimum value: 0 Maximum value: 10000000	0												
neighbor-hold-down	Enable/disable hold switching from the secondary neighbor to the primary neighbor.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable hold switching from the secondary neighbor to the primary neighbor.</td></tr><tr><td>disable</td><td>Disable hold switching from the secondary neighbor to the primary neighbor.</td></tr></table>	Option	Description	enable	Enable hold switching from the secondary neighbor to the primary neighbor.	disable	Disable hold switching from the secondary neighbor to the primary neighbor.									
Option	Description															
enable	Enable hold switching from the secondary neighbor to the primary neighbor.															
disable	Disable hold switching from the secondary neighbor to the primary neighbor.															
neighbor-hold-down-time	Waiting period in seconds when switching from the secondary neighbor to the primary neighbor when hold-down is disabled. (0 - 10000000, default = 0).	integer	Minimum value: 0 Maximum value: 10000000	0												
speedtest-bypass-routing	Enable/disable bypass routing when speedtest on a SD-WAN member.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable SD-WAN.</td></tr><tr><td>enable</td><td>Enable SD-WAN.</td></tr></table>	Option	Description	disable	Disable SD-WAN.	enable	Enable SD-WAN.									
Option	Description															
disable	Disable SD-WAN.															
enable	Enable SD-WAN.															

Parameter	Description	Type	Size	Default
status	Enable/disable SD-WAN.	option	-	disable
	Option Description			
	<i>disable</i>	Disable SD-WAN.		
	<i>enable</i>	Enable SD-WAN.		

config duplication

Parameter	Description	Type	Size	Default
dstaddr <name>	Destination address or address group names. Address or address group name.	string	Maximum length: 79	
dstaddr6 <name>	Destination address6 or address6 group names. Address6 or address6 group name.	string	Maximum length: 79	
dstintf <name>	Outgoing (egress) interfaces or zones. Interface, zone or SDWAN zone name.	string	Maximum length: 79	
id	Duplication rule ID (1 - 255).	integer	Minimum value: 1 Maximum value: 255	0
packet-de- duplication	Enable/disable discarding of packets that have been duplicated.	option	-	disable
	Option Description			
	<i>enable</i>	Enable discarding of packets that have been duplicated.		
	<i>disable</i>	Disable discarding of packets that have been duplicated.		
packet- duplication	Configure packet duplication method.	option	-	disable
	Option Description			
	<i>disable</i>	Disable packet duplication.		
	<i>force</i>	Duplicate packets across all interface members of the SD-WAN zone.		
	<i>on-demand</i>	Duplicate packets across all interface members of the SD-WAN zone based on the link quality.		
service <name>	Service and service group name. Service and service group name.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default						
service-id <id>	SD-WAN service rule ID list. SD-WAN service rule ID.	integer	Minimum value: 0 Maximum value: 4294967295							
sla-match-service	Enable/disable packet duplication matching health-check SLAs in service rule.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable packet duplication matching health-check SLAs in service rule (matching all SLAs of current defined service).</td></tr><tr><td><i>disable</i></td><td>Disable packet duplication matching health-check SLAs in service rule (matching all SLAs of all defined health-check).</td></tr></table>				Option	Description	<i>enable</i>	Enable packet duplication matching health-check SLAs in service rule (matching all SLAs of current defined service).	<i>disable</i>	Disable packet duplication matching health-check SLAs in service rule (matching all SLAs of all defined health-check).
Option	Description									
<i>enable</i>	Enable packet duplication matching health-check SLAs in service rule (matching all SLAs of current defined service).									
<i>disable</i>	Disable packet duplication matching health-check SLAs in service rule (matching all SLAs of all defined health-check).									
srcaddr <name>	Source address or address group names. Address or address group name.	string	Maximum length: 79							
srcaddr6 <name>	Source address6 or address6 group names. Address6 or address6 group name.	string	Maximum length: 79							
srcintf <name>	Incoming (ingress) interfaces or zones. Interface, zone or SDWAN zone name.	string	Maximum length: 79							

config health-check

Parameter	Description	Type	Size	Default						
addr-mode	Address mode (IPv4 or IPv6).	option	-	ipv4						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>IPv4 mode.</td></tr><tr><td>ipv6</td><td>IPv6 mode.</td></tr></table>				Option	Description	ipv4	IPv4 mode.	ipv6	IPv6 mode.
	Option	Description								
	ipv4	IPv4 mode.								
ipv6	IPv6 mode.									
class-id	Traffic class ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
detect-mode	The mode determining how to detect the server.	option	-	active						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>active</td><td>The probes are sent actively.</td></tr></table>				Option	Description	active	The probes are sent actively.		
	Option	Description								
active	The probes are sent actively.									

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>passive</i></td><td>The traffic measures health without probes.</td></tr><tr><td><i>prefer-passive</i></td><td>The probes are sent in case of no new traffic.</td></tr><tr><td><i>remote</i></td><td>Link health obtained from remote peers.</td></tr><tr><td><i>agent-based</i></td><td>Traffic health is measured from the fabric connectors.</td></tr></table>	Option	Description	<i>passive</i>	The traffic measures health without probes.	<i>prefer-passive</i>	The probes are sent in case of no new traffic.	<i>remote</i>	Link health obtained from remote peers.	<i>agent-based</i>	Traffic health is measured from the fabric connectors.			
	Option	Description												
	<i>passive</i>	The traffic measures health without probes.												
	<i>prefer-passive</i>	The probes are sent in case of no new traffic.												
	<i>remote</i>	Link health obtained from remote peers.												
<i>agent-based</i>	Traffic health is measured from the fabric connectors.													
diffservcode	Differentiated services code point (DSCP) in the IP header of the probe packet.	user	Not Specified											
dns-match-ip	Response IP expected from DNS server if the protocol is DNS.	ipv4-address	Not Specified	0.0.0.0										
dns-request-domain	Fully qualified domain name to resolve for the DNS probe.	string	Maximum length: 255	www.example.com										
embed-measured-health	Enable/disable embedding measured health information.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable embed measured health.</td></tr><tr><td><i>disable</i></td><td>Disable embed measured health.</td></tr></table>	Option	Description	<i>enable</i>	Enable embed measured health.	<i>disable</i>	Disable embed measured health.							
	Option	Description												
	<i>enable</i>	Enable embed measured health.												
<i>disable</i>	Disable embed measured health.													
failtime	Number of failures before server is considered lost (1 - 3600, default = 5).	integer	Minimum value: 1 Maximum value: 3600	5										
fortiguard	Enable/disable use of FortiGuard predefined server.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of FortiGuard predefined server.</td></tr><tr><td><i>enable</i></td><td>Enable use of FortiGuard predefined server.</td></tr></table>	Option	Description	<i>disable</i>	Disable use of FortiGuard predefined server.	<i>enable</i>	Enable use of FortiGuard predefined server.							
	Option	Description												
	<i>disable</i>	Disable use of FortiGuard predefined server.												
<i>enable</i>	Enable use of FortiGuard predefined server.													
fortiguard-name	Predefined health-check target name.	string	Maximum length: 35											
ftp-file	Full path and file name on the FTP server to download for FTP health-check to probe.	string	Maximum length: 254											
ftp-mode	FTP mode.	option	-	passive										

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>passive</i></td><td>The FTP health-check initiates and establishes the data connection.</td></tr><tr><td><i>port</i></td><td>The FTP server initiates and establishes the data connection.</td></tr></table>	Option	Description	<i>passive</i>	The FTP health-check initiates and establishes the data connection.	<i>port</i>	The FTP server initiates and establishes the data connection.					
	Option	Description										
	<i>passive</i>	The FTP health-check initiates and establishes the data connection.										
<i>port</i>	The FTP server initiates and establishes the data connection.											
ha-priority	HA election priority (1 - 50).	integer	Minimum value: 1 Maximum value: 50	1								
http-agent	String in the http-agent field in the HTTP header.	string	Maximum length: 1024	Chrome/ Safari/								
http-get	URL used to communicate with the server if the protocol is HTTP.	string	Maximum length: 1024	/								
http-match	Response string expected from the server if the protocol is HTTP.	string	Maximum length: 1024									
interval	Status check interval in milliseconds, or the time between attempting to connect to the server (20 - 3600*1000 msec, default = 500).	integer	Minimum value: 20 Maximum value: 3600000	500								
members <seq-num>	Member sequence number list. Member sequence number.	integer	Minimum value: 0 Maximum value: 4294967295									
mos-codec	Codec to use for MOS calculation (default = g711).	option	-	g711								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>g711</i></td><td>Calculate MOS based on the G.711 codec.</td></tr><tr><td><i>g722</i></td><td>Calculate MOS based on the G.722 codec.</td></tr><tr><td><i>g729</i></td><td>Calculate MOS based on the G.729 codec.</td></tr></table>	Option	Description	<i>g711</i>	Calculate MOS based on the G.711 codec.	<i>g722</i>	Calculate MOS based on the G.722 codec.	<i>g729</i>	Calculate MOS based on the G.729 codec.			
	Option	Description										
	<i>g711</i>	Calculate MOS based on the G.711 codec.										
	<i>g722</i>	Calculate MOS based on the G.722 codec.										
<i>g729</i>	Calculate MOS based on the G.729 codec.											
name	Status check or health check name.	string	Maximum length: 35									
packet-size	Packet size of a TWAMP test session. (124/158 - 1024)	integer	Minimum value: 0 Maximum value: 65535	124								

Parameter	Description	Type	Size	Default																				
password	TWAMP controller password in authentication mode.	password	Not Specified																					
port	Port number used to communicate with the server over the selected protocol (0 - 65535, default = 0, auto select. http, tcp-connect: 80, udp-echo, tcp-echo: 7, dns: 53, ftp: 21, twamp: 862).	integer	Minimum value: 0 Maximum value: 65535	0																				
probe-count	Number of most recent probes that should be used to calculate latency and jitter (5 - 30, default = 30).	integer	Minimum value: 5 Maximum value: 30	30																				
probe-packets	Enable/disable transmission of probe packets.	option	-	enable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable transmission of probe packets.</td></tr><tr><td>enable</td><td>Enable transmission of probe packets.</td></tr></table>				Option	Description	disable	Disable transmission of probe packets.	enable	Enable transmission of probe packets.														
Option	Description																							
disable	Disable transmission of probe packets.																							
enable	Enable transmission of probe packets.																							
probe-timeout	Time to wait before a probe packet is considered lost (20 - 3600*1000 msec, default = 500).	integer	Minimum value: 20 Maximum value: 3600000	500																				
protocol	Protocol used to determine if the FortiGate can communicate with the server.	option	-	ping																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ping</td><td>Use PING to test the link with the server.</td></tr><tr><td>tcp-echo</td><td>Use TCP echo to test the link with the server.</td></tr><tr><td>udp-echo</td><td>Use UDP echo to test the link with the server.</td></tr><tr><td>http</td><td>Use HTTP-GET to test the link with the server.</td></tr><tr><td>https</td><td>Use HTTPS-GET to test the link with the server.</td></tr><tr><td>twamp</td><td>Use TWAMP to test the link with the server.</td></tr><tr><td>dns</td><td>Use DNS query to test the link with the server.</td></tr><tr><td>tcp-connect</td><td>Use a full TCP connection to test the link with the server.</td></tr><tr><td>ftp</td><td>Use FTP to test the link with the server.</td></tr></table>				Option	Description	ping	Use PING to test the link with the server.	tcp-echo	Use TCP echo to test the link with the server.	udp-echo	Use UDP echo to test the link with the server.	http	Use HTTP-GET to test the link with the server.	https	Use HTTPS-GET to test the link with the server.	twamp	Use TWAMP to test the link with the server.	dns	Use DNS query to test the link with the server.	tcp-connect	Use a full TCP connection to test the link with the server.	ftp	Use FTP to test the link with the server.
Option	Description																							
ping	Use PING to test the link with the server.																							
tcp-echo	Use TCP echo to test the link with the server.																							
udp-echo	Use UDP echo to test the link with the server.																							
http	Use HTTP-GET to test the link with the server.																							
https	Use HTTPS-GET to test the link with the server.																							
twamp	Use TWAMP to test the link with the server.																							
dns	Use DNS query to test the link with the server.																							
tcp-connect	Use a full TCP connection to test the link with the server.																							
ftp	Use FTP to test the link with the server.																							

Parameter	Description	Type	Size	Default						
quality-measured-method	Method to measure the quality of tcp-connect.	option	-	half-open						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>half-open</td><td>Measure the round trip between syn and ack.</td></tr><tr><td>half-close</td><td>Measure the round trip between fin and ack.</td></tr></table>				Option	Description	half-open	Measure the round trip between syn and ack.	half-close	Measure the round trip between fin and ack.
	Option	Description								
	half-open	Measure the round trip between syn and ack.								
half-close	Measure the round trip between fin and ack.									
recoverytime	Number of successful responses received before server is considered recovered (1 - 3600, default = 5).	integer	Minimum value: 1 Maximum value: 3600	5						
security-mode	Twamp controller security mode.	option	-	none						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>Unauthenticated mode.</td></tr><tr><td>authentication</td><td>Authenticated mode.</td></tr></table>				Option	Description	none	Unauthenticated mode.	authentication	Authenticated mode.
	Option	Description								
	none	Unauthenticated mode.								
authentication	Authenticated mode.									
server	IP address or FQDN name of the server.	string	Maximum length: 79							
sla-fail-log-period	Time interval in seconds that SLA fail log messages will be generated (0 - 3600, default = 0).	integer	Minimum value: 0 Maximum value: 3600	0						
sla-id-redistribute	Select the ID from the SLA sub-table. The selected SLA's priority value will be distributed into the routing table (0 - 32, default = 0).	integer	Minimum value: 0 Maximum value: 32	0						
sla-pass-log-period	Time interval in seconds that SLA pass log messages will be generated (0 - 3600, default = 0).	integer	Minimum value: 0 Maximum value: 3600	0						
source	Source IP address used in the health-check packet to the server.	ipv4-address	Not Specified	0.0.0.0						
source6	Source IPv6 address used in the health-check packet to server.	ipv6-address	Not Specified	::						
system-dns	Enable/disable system DNS as the probe server.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	disable	Disable system DNS as the probe server.		
	enable	Enable system DNS as the probe server.		
threshold-alert-jitter	Alert threshold for jitter (ms, default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold-alert-latency	Alert threshold for latency (ms, default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold-alert-packetloss	Alert threshold for packet loss (percentage, default = 0).	integer	Minimum value: 0 Maximum value: 100	0
threshold-warning-jitter	Warning threshold for jitter (ms, default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold-warning-latency	Warning threshold for latency (ms, default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
threshold-warning-packetloss	Warning threshold for packet loss (percentage, default = 0).	integer	Minimum value: 0 Maximum value: 100	0
update-cascade-interface	Enable/disable update cascade interface.	option	-	enable
	Option	Description		
	enable	Enable update cascade interface.		
	disable	Disable update cascade interface.		

Parameter	Description	Type	Size	Default						
update-static-route	Enable/disable updating the static route.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable updating the static route.</td></tr><tr><td><i>disable</i></td><td>Disable updating the static route.</td></tr></table>				Option	Description	<i>enable</i>	Enable updating the static route.	<i>disable</i>	Disable updating the static route.
	Option	Description								
	<i>enable</i>	Enable updating the static route.								
<i>disable</i>	Disable updating the static route.									
user	The user name to access probe server.	string	Maximum length: 64							
vrf	Virtual Routing Forwarding ID.	integer	Minimum value: 0 Maximum value: 511	0						

config sla

Parameter	Description	Type	Size	Default												
id	SLA ID.	integer	Minimum value: 1 Maximum value: 32	0												
jitter-threshold	Jitter for SLA to make decision in milliseconds. (0 - 10000000, default = 5).	integer	Minimum value: 0 Maximum value: 10000000	5												
latency-threshold	Latency for SLA to make decision in milliseconds. (0 - 10000000, default = 5).	integer	Minimum value: 0 Maximum value: 10000000	5												
link-cost-factor	Criteria on which to base link selection.	option	-	latency jitter packet-loss												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>latency</td><td>Select link based on latency.</td></tr><tr><td>jitter</td><td>Select link based on jitter.</td></tr><tr><td>packet-loss</td><td>Select link based on packet loss.</td></tr><tr><td>mos</td><td>Select link based on Mean Opinion Score (MOS).</td></tr><tr><td>remote</td><td>Select link based on available remote SLA status.</td></tr></table>				Option	Description	latency	Select link based on latency.	jitter	Select link based on jitter.	packet-loss	Select link based on packet loss.	mos	Select link based on Mean Opinion Score (MOS).	remote	Select link based on available remote SLA status.
Option	Description															
latency	Select link based on latency.															
jitter	Select link based on jitter.															
packet-loss	Select link based on packet loss.															
mos	Select link based on Mean Opinion Score (MOS).															
remote	Select link based on available remote SLA status.															

Parameter	Description	Type	Size	Default
mos-threshold	Minimum Mean Opinion Score for SLA to be marked as pass. (1.0 - 5.0, default = 3.6).	string	Maximum length: 35	3.6
packetloss-threshold	Packet loss for SLA to make decision in percentage. (0 - 100, default = 0).	integer	Minimum value: 0 Maximum value: 100	0
priority-in-sla	Value to be distributed into routing table when in-sla (0 - 65535, default = 0).	integer	Minimum value: 0 Maximum value: 65535	0
priority-out-sla	Value to be distributed into routing table when out-sla (0 - 65535, default = 0).	integer	Minimum value: 0 Maximum value: 65535	0

config members

Parameter	Description	Type	Size	Default
comment	Comments.	var-string	Maximum length: 255	
cost	Cost of this interface for services in SLA mode (0 - 4294967295, default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
gateway	The default gateway for this interface. Usually the default gateway of the Internet service provider that this interface is connected to.	ipv4-address	Not Specified	0.0.0.0
gateway6	IPv6 gateway.	ipv6-address	Not Specified	::
ingress-spillover-threshold	Ingress spillover threshold for this interface (0 - 16776000 kbit/s). When this traffic volume threshold is reached, new sessions spill over to other interfaces in the SD-WAN.	integer	Minimum value: 0 Maximum value: 16776000	0
interface	Interface name.	string	Maximum length: 15	
preferred-source	Preferred source of route for this member.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default
priority	Priority of the interface for IPv4 (1 - 65535, default = 1). Used for SD-WAN rules or priority rules.	integer	Minimum value: 1 Maximum value: 65535	1
priority-in-sla	Preferred priority of routes to this member when this member is in-sla (0 - 65535, default = 0).	integer	Minimum value: 0 Maximum value: 65535	0
priority-out-sla	Preferred priority of routes to this member when this member is out-of-sla (0 - 65535, default = 0).	integer	Minimum value: 0 Maximum value: 65535	0
priority6	Priority of the interface for IPv6 (1 - 65535, default = 1024). Used for SD-WAN rules or priority rules.	integer	Minimum value: 1 Maximum value: 65535	1024
seq-num	Sequence number(1-512).	integer	Minimum value: 0 Maximum value: 512	0
source	Source IP address used in the health-check packet to the server.	ipv4-address	Not Specified	0.0.0.0
source6	Source IPv6 address used in the health-check packet to the server.	ipv6-address	Not Specified	::
spillover-threshold	Egress spillover threshold for this interface (0 - 16776000 kbit/s). When this traffic volume threshold is reached, new sessions spill over to other interfaces in the SD-WAN.	integer	Minimum value: 0 Maximum value: 16776000	0
status	Enable/disable this interface in the SD-WAN.	option	-	enable
	Option Description			
	<i>disable</i>	Disable this interface in the SD-WAN.		
	<i>enable</i>	Enable this interface in the SD-WAN.		
transport-group	Measured transport group (0 - 255).	integer	Minimum value: 0 Maximum value: 255	0

Parameter	Description	Type	Size	Default
volume-ratio	Measured volume ratio (this value / sum of all values = percentage of link volume, 1 - 255).	integer	Minimum value: 1 Maximum value: 255	1
weight	Weight of this interface for weighted load balancing. (1 - 255) More traffic is directed to interfaces with higher weights.	integer	Minimum value: 1 Maximum value: 255	1
zone	Zone name.	string	Maximum length: 35	virtual-wan-link

config neighbor

Parameter	Description	Type	Size	Default								
health-check	SD-WAN health-check name.	string	Maximum length: 35									
ip	IP/IPv6 address of neighbor or neighbor-group name.	string	Maximum length: 45									
member <seq-num>	Member sequence number list. Member sequence number.	integer	Minimum value: 0 Maximum value: 4294967295									
minimum-sla-meet-members	Minimum number of members which meet SLA when the neighbor is preferred.	integer	Minimum value: 1 Maximum value: 255	1								
mode	What metric to select the neighbor.	option	-	sla								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>sla</td><td>Select neighbor based on SLA link quality.</td></tr><tr><td>speedtest</td><td>Select neighbor based on the speedtest status.</td></tr></table>				Option	Description	sla	Select neighbor based on SLA link quality.	speedtest	Select neighbor based on the speedtest status.		
Option	Description											
sla	Select neighbor based on SLA link quality.											
speedtest	Select neighbor based on the speedtest status.											
role	Role of neighbor.	option	-	standalone								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>standalone</td><td>Standalone neighbor.</td></tr><tr><td>primary</td><td>Primary neighbor.</td></tr><tr><td>secondary</td><td>Secondary neighbor.</td></tr></table>				Option	Description	standalone	Standalone neighbor.	primary	Primary neighbor.	secondary	Secondary neighbor.
Option	Description											
standalone	Standalone neighbor.											
primary	Primary neighbor.											
secondary	Secondary neighbor.											

Parameter	Description	Type	Size	Default						
route-metric	Route-metric of neighbor.	option	-	preferable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>preferable</i></td><td>Select neighbor based on its hc to match bgp preferable/unpreferable route_map.</td></tr><tr><td><i>priority</i></td><td>Select neighbor based on its members' priority-in-sla/priority-out-sla value.</td></tr></table>				Option	Description	<i>preferable</i>	Select neighbor based on its hc to match bgp preferable/unpreferable route_map.	<i>priority</i>	Select neighbor based on its members' priority-in-sla/priority-out-sla value.
	Option	Description								
	<i>preferable</i>	Select neighbor based on its hc to match bgp preferable/unpreferable route_map.								
<i>priority</i>	Select neighbor based on its members' priority-in-sla/priority-out-sla value.									
service-id	SD-WAN service ID to work with the neighbor.	integer	Minimum value: 0 Maximum value: 4294967295	0						
sla-id	SLA ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						

config service

Parameter	Description	Type	Size	Default
addr-mode	Address mode (IPv4 or IPv6).	option	-	ipv4
	Option	Description		
	<i>ipv4</i>	IPv4 mode.		
	<i>ipv6</i>	IPv6 mode.		
agent-exclusive	Set/unset the service as agent use exclusively.	option	-	disable
	Option	Description		
	<i>enable</i>	Set the service as agent use exclusively.		
	<i>disable</i>	Unset the service as agent use exclusively.		
bandwidth-weight	Coefficient of reciprocal of available bidirectional bandwidth in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0
comment	Comments.	var-string	Maximum length: 255	
default	Enable/disable use of SD-WAN as default service.	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of SD-WAN as default service.</td></tr><tr><td><i>disable</i></td><td>Disable use of SD-WAN as default service.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of SD-WAN as default service.	<i>disable</i>	Disable use of SD-WAN as default service.			
	Option	Description								
	<i>enable</i>	Enable use of SD-WAN as default service.								
<i>disable</i>	Disable use of SD-WAN as default service.									
dscp-forward	Enable/disable forward traffic DSCP tag.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of forward DSCP tag.</td></tr><tr><td><i>disable</i></td><td>Disable use of forward DSCP tag.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of forward DSCP tag.	<i>disable</i>	Disable use of forward DSCP tag.			
	Option	Description								
	<i>enable</i>	Enable use of forward DSCP tag.								
<i>disable</i>	Disable use of forward DSCP tag.									
dscp-forward-tag	Forward traffic DSCP tag.	user	Not Specified							
dscp-reverse	Enable/disable reverse traffic DSCP tag.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of reverse DSCP tag.</td></tr><tr><td><i>disable</i></td><td>Disable use of reverse DSCP tag.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of reverse DSCP tag.	<i>disable</i>	Disable use of reverse DSCP tag.			
	Option	Description								
	<i>enable</i>	Enable use of reverse DSCP tag.								
<i>disable</i>	Disable use of reverse DSCP tag.									
dscp-reverse-tag	Reverse traffic DSCP tag.	user	Not Specified							
dst <name>	Destination address name. Address or address group name.	string	Maximum length: 79							
dst-negate	Enable/disable negation of destination address match.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable destination address negation.</td></tr><tr><td><i>disable</i></td><td>Disable destination address negation.</td></tr></table>	Option	Description	<i>enable</i>	Enable destination address negation.	<i>disable</i>	Disable destination address negation.			
	Option	Description								
	<i>enable</i>	Enable destination address negation.								
<i>disable</i>	Disable destination address negation.									
dst6 <name>	Destination address6 name. Address6 or address6 group name.	string	Maximum length: 79							
end-port	End destination port number.	integer	Minimum value: 0 Maximum value: 65535	65535						
end-src-port	End source port number.	integer	Minimum value: 0 Maximum value: 65535	65535						

Parameter	Description	Type	Size	Default														
gateway	Enable/disable SD-WAN service gateway.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable SD-WAN service gateway.</td></tr><tr><td>disable</td><td>Disable SD-WAN service gateway.</td></tr></table>	Option	Description	enable	Enable SD-WAN service gateway.	disable	Disable SD-WAN service gateway.											
Option	Description																	
enable	Enable SD-WAN service gateway.																	
disable	Disable SD-WAN service gateway.																	
groups <name>	User groups. Group name.	string	Maximum length: 79															
hash-mode	Hash algorithm for selected priority members for load balance mode.	option	-	round-robin														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>round-robin</td><td>All traffic are distributed to selected interfaces in equal portions and circular order.</td></tr><tr><td>source-ip-based</td><td>All traffic from a source IP is sent to the same interface.</td></tr><tr><td>source-dest-ip-based</td><td>All traffic from a source IP to a destination IP is sent to the same interface.</td></tr><tr><td>inbandwidth</td><td>All traffic are distributed to a selected interface with most available bandwidth for incoming traffic.</td></tr><tr><td>outbandwidth</td><td>All traffic are distributed to a selected interface with most available bandwidth for outgoing traffic.</td></tr><tr><td>bibandwidth</td><td>All traffic are distributed to a selected interface with most available bandwidth for both incoming and outgoing traffic.</td></tr></table>	Option	Description	round-robin	All traffic are distributed to selected interfaces in equal portions and circular order.	source-ip-based	All traffic from a source IP is sent to the same interface.	source-dest-ip-based	All traffic from a source IP to a destination IP is sent to the same interface.	inbandwidth	All traffic are distributed to a selected interface with most available bandwidth for incoming traffic.	outbandwidth	All traffic are distributed to a selected interface with most available bandwidth for outgoing traffic.	bibandwidth	All traffic are distributed to a selected interface with most available bandwidth for both incoming and outgoing traffic.			
Option	Description																	
round-robin	All traffic are distributed to selected interfaces in equal portions and circular order.																	
source-ip-based	All traffic from a source IP is sent to the same interface.																	
source-dest-ip-based	All traffic from a source IP to a destination IP is sent to the same interface.																	
inbandwidth	All traffic are distributed to a selected interface with most available bandwidth for incoming traffic.																	
outbandwidth	All traffic are distributed to a selected interface with most available bandwidth for outgoing traffic.																	
bibandwidth	All traffic are distributed to a selected interface with most available bandwidth for both incoming and outgoing traffic.																	
health-check <name>	Health check list. Health check name.	string	Maximum length: 79															
hold-down-time	Waiting period in seconds when switching from the back-up member to the primary member (0 - 10000000, default = 0).	integer	Minimum value: 0 Maximum value: 10000000	0														
id	SD-WAN rule ID (1 - 4000).	integer	Minimum value: 1 Maximum value: 4000	0														
input-device <name>	Source interface name. Interface name.	string	Maximum length: 79															
input-device-negate	Enable/disable negation of input device match.	option	-	disable														

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable negation of input device match.</td></tr><tr><td><i>disable</i></td><td>Disable negation of input device match.</td></tr></table>	Option	Description	<i>enable</i>	Enable negation of input device match.	<i>disable</i>	Disable negation of input device match.			
	Option	Description								
	<i>enable</i>	Enable negation of input device match.								
<i>disable</i>	Disable negation of input device match.									
input-zone <name>	Source input-zone name. Zone.	string	Maximum length: 79							
internet-service	Enable/disable use of Internet service for application-based load balancing.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable cloud service to support application-based load balancing.</td></tr><tr><td><i>disable</i></td><td>Disable cloud service to support application-based load balancing.</td></tr></table>	Option	Description	<i>enable</i>	Enable cloud service to support application-based load balancing.	<i>disable</i>	Disable cloud service to support application-based load balancing.			
	Option	Description								
	<i>enable</i>	Enable cloud service to support application-based load balancing.								
<i>disable</i>	Disable cloud service to support application-based load balancing.									
internet-service-app-ctrl <id>	Application control based Internet Service ID list. Application control based Internet Service ID.	integer	Minimum value: 0 Maximum value: 4294967295							
internet-service-app-ctrl-category <id>	IDs of one or more application control categories. Application control category ID.	integer	Minimum value: 0 Maximum value: 4294967295							
internet-service-app-ctrl-group <name>	Application control based Internet Service group list. Application control based Internet Service group name.	string	Maximum length: 79							
internet-service-custom <name>	Custom Internet service name list. Custom Internet service name.	string	Maximum length: 79							
internet-service-custom-group <name>	Custom Internet Service group list. Custom Internet Service group name.	string	Maximum length: 79							
internet-service-group <name>	Internet Service group list. Internet Service group name.	string	Maximum length: 79							
internet-service-name <name>	Internet service name list. Internet service name.	string	Maximum length: 79							

Parameter	Description	Type	Size	Default
jitter-weight	Coefficient of jitter in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0
latency-weight	Coefficient of latency in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0
link-cost-factor	Link cost factor.	option	-	latency
	Option		Description	
	latency		Select link based on latency.	
	jitter		Select link based on jitter.	
	packet-loss		Select link based on packet loss.	
	inbandwidth		Select link based on available bandwidth of incoming traffic.	
	outbandwidth		Select link based on available bandwidth of outgoing traffic.	
	bibandwidth		Select link based on available bandwidth of bidirectional traffic.	
	custom-profile-1		Select link based on customized profile.	
link-cost-threshold	Percentage threshold change of link cost values that will result in policy route regeneration (0 - 10000000, default = 10).	integer	Minimum value: 0 Maximum value: 10000000	10
load-balance	Enable/disable load-balance.	option	-	disable
	Option		Description	
	enable		Enable load-balance.	
	disable		Disable load-balance.	
minimum-sla-meet-members	Minimum number of members which meet SLA.	integer	Minimum value: 0 Maximum value: 255	0
mode	Control how the SD-WAN rule sets the priority of interfaces in the SD-WAN.	option	-	manual

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Assign interfaces a priority based on quality.</td></tr><tr><td><i>manual</i></td><td>Assign interfaces a priority manually.</td></tr><tr><td><i>priority</i></td><td>Assign interfaces a priority based on the link-cost-factor quality of the interface.</td></tr><tr><td><i>sla</i></td><td>Assign interfaces a priority based on selected SLA settings.</td></tr></table>	Option	Description	<i>auto</i>	Assign interfaces a priority based on quality.	<i>manual</i>	Assign interfaces a priority manually.	<i>priority</i>	Assign interfaces a priority based on the link-cost-factor quality of the interface.	<i>sla</i>	Assign interfaces a priority based on selected SLA settings.			
	Option	Description												
	<i>auto</i>	Assign interfaces a priority based on quality.												
	<i>manual</i>	Assign interfaces a priority manually.												
	<i>priority</i>	Assign interfaces a priority based on the link-cost-factor quality of the interface.												
<i>sla</i>	Assign interfaces a priority based on selected SLA settings.													
name	SD-WAN rule name.	string	Maximum length: 35											
packet-loss-weight	Coefficient of packet-loss in the formula of custom-profile-1.	integer	Minimum value: 0 Maximum value: 10000000	0										
passive-measurement	Enable/disable passive measurement based on the service criteria.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable passive measurement of user traffic.</td></tr><tr><td><i>disable</i></td><td>Disable passive measurement of user traffic.</td></tr></table>	Option	Description	<i>enable</i>	Enable passive measurement of user traffic.	<i>disable</i>	Disable passive measurement of user traffic.							
	Option	Description												
	<i>enable</i>	Enable passive measurement of user traffic.												
<i>disable</i>	Disable passive measurement of user traffic.													
priority-members <seq-num>	Member sequence number list. Member sequence number.	integer	Minimum value: 0 Maximum value: 4294967295											
priority-zone <name>	Priority zone name list. Priority zone name.	string	Maximum length: 79											
protocol	Protocol number.	integer	Minimum value: 0 Maximum value: 255	0										
quality-link	Quality grade.	integer	Minimum value: 0 Maximum value: 255	0										
role	Service role to work with neighbor.	option	-	standalone										

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>standalone</i></td><td>Standalone service.</td></tr><tr><td><i>primary</i></td><td>Primary service for primary neighbor.</td></tr><tr><td><i>secondary</i></td><td>Secondary service for secondary neighbor.</td></tr></table>	Option	Description	<i>standalone</i>	Standalone service.	<i>primary</i>	Primary service for primary neighbor.	<i>secondary</i>	Secondary service for secondary neighbor.			
	Option	Description										
	<i>standalone</i>	Standalone service.										
	<i>primary</i>	Primary service for primary neighbor.										
<i>secondary</i>	Secondary service for secondary neighbor.											
shortcut	Enable/disable shortcut for this service.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of ADVPN shortcut for this service.</td></tr><tr><td><i>disable</i></td><td>Disable use of ADVPN shortcut for this service.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of ADVPN shortcut for this service.	<i>disable</i>	Disable use of ADVPN shortcut for this service.					
	Option	Description										
	<i>enable</i>	Enable use of ADVPN shortcut for this service.										
<i>disable</i>	Disable use of ADVPN shortcut for this service.											
shortcut-priority	High priority of ADVPN shortcut for this service.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable a high priority of ADVPN shortcut for this service.</td></tr><tr><td><i>disable</i></td><td>Disable a high priority of ADVPN shortcut for this service.</td></tr><tr><td><i>auto</i></td><td>Auto enable a high priority of ADVPN shortcut for this service if ADVPN2.0 enabled.</td></tr></table>	Option	Description	<i>enable</i>	Enable a high priority of ADVPN shortcut for this service.	<i>disable</i>	Disable a high priority of ADVPN shortcut for this service.	<i>auto</i>	Auto enable a high priority of ADVPN shortcut for this service if ADVPN2.0 enabled.			
	Option	Description										
	<i>enable</i>	Enable a high priority of ADVPN shortcut for this service.										
	<i>disable</i>	Disable a high priority of ADVPN shortcut for this service.										
<i>auto</i>	Auto enable a high priority of ADVPN shortcut for this service if ADVPN2.0 enabled.											
sla-compare-method	Method to compare SLA value for SLA mode.	option	-	order								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>order</i></td><td>Compare SLA value based on the order of health-check.</td></tr><tr><td><i>number</i></td><td>Compare SLA value based on the number of satisfied health-check. Limits health-checks to only configured member interfaces.</td></tr></table>	Option	Description	<i>order</i>	Compare SLA value based on the order of health-check.	<i>number</i>	Compare SLA value based on the number of satisfied health-check. Limits health-checks to only configured member interfaces.					
	Option	Description										
	<i>order</i>	Compare SLA value based on the order of health-check.										
<i>number</i>	Compare SLA value based on the number of satisfied health-check. Limits health-checks to only configured member interfaces.											
sla-stickiness	Enable/disable SLA stickiness (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Traffic remains in the original session path if the path is within the SLA.</td></tr><tr><td><i>disable</i></td><td>Traffic switches to the best path regardless of the SLA.</td></tr></table>	Option	Description	<i>enable</i>	Traffic remains in the original session path if the path is within the SLA.	<i>disable</i>	Traffic switches to the best path regardless of the SLA.					
	Option	Description										
	<i>enable</i>	Traffic remains in the original session path if the path is within the SLA.										
<i>disable</i>	Traffic switches to the best path regardless of the SLA.											
src <name>	Source address name. Address or address group name.	string	Maximum length: 79									
src-negate	Enable/disable negation of source address match.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable source address negation.</td></tr></table>	Option	Description	<i>enable</i>	Enable source address negation.							
	Option	Description										
<i>enable</i>	Enable source address negation.											

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable source address negation.</td></tr></table>	Option	Description	<i>disable</i>	Disable source address negation.									
	Option	Description												
<i>disable</i>	Disable source address negation.													
src6 <name>	Source address6 name. Address6 or address6 group name.	string	Maximum length: 79											
standalone-action	Enable/disable service when selected neighbor role is standalone while service role is not standalone.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable service when selected neighbor role is standalone.</td></tr><tr><td><i>disable</i></td><td>Disable service when selected neighbor role is standalone.</td></tr></table>	Option	Description	<i>enable</i>	Enable service when selected neighbor role is standalone.	<i>disable</i>	Disable service when selected neighbor role is standalone.							
	Option	Description												
	<i>enable</i>	Enable service when selected neighbor role is standalone.												
<i>disable</i>	Disable service when selected neighbor role is standalone.													
start-port	Start destination port number.	integer	Minimum value: 0 Maximum value: 65535	1										
start-src-port	Start source port number.	integer	Minimum value: 0 Maximum value: 65535	1										
status	Enable/disable SD-WAN service.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SD-WAN service.</td></tr><tr><td><i>disable</i></td><td>Disable SD-WAN service.</td></tr></table>	Option	Description	<i>enable</i>	Enable SD-WAN service.	<i>disable</i>	Disable SD-WAN service.							
	Option	Description												
	<i>enable</i>	Enable SD-WAN service.												
<i>disable</i>	Disable SD-WAN service.													
tie-break	Method of selecting member if more than one meets the SLA.	option	-	zone										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>zone</i></td><td>Use the setting that is configured for the members' zone.</td></tr><tr><td><i>cfg-order</i></td><td>Members that meet the SLA are selected in the order they are configured.</td></tr><tr><td><i>fib-best-match</i></td><td>Members that meet the SLA are selected that match the longest prefix in the routing table.</td></tr><tr><td><i>input-device</i></td><td>Members that meet the SLA are selected by matching the input device.</td></tr></table>	Option	Description	<i>zone</i>	Use the setting that is configured for the members' zone.	<i>cfg-order</i>	Members that meet the SLA are selected in the order they are configured.	<i>fib-best-match</i>	Members that meet the SLA are selected that match the longest prefix in the routing table.	<i>input-device</i>	Members that meet the SLA are selected by matching the input device.			
	Option	Description												
	<i>zone</i>	Use the setting that is configured for the members' zone.												
	<i>cfg-order</i>	Members that meet the SLA are selected in the order they are configured.												
	<i>fib-best-match</i>	Members that meet the SLA are selected that match the longest prefix in the routing table.												
<i>input-device</i>	Members that meet the SLA are selected by matching the input device.													
tos	Type of service bit pattern.	user	Not Specified											
tos-mask	Type of service evaluated bits.	user	Not Specified											

Parameter	Description	Type	Size	Default
use-shortcut-sla	Enable/disable use of ADVPN shortcut for quality comparison.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable use of ADVPN shortcut for quality comparison.		
	<i>disable</i>	Disable use of ADVPN shortcut for quality comparison.		
users <name>	User name. User name.	string	Maximum length: 79	
zone-mode	Enable/disable zone mode.	option	-	disable
	Option	Description		
	<i>enable</i>	Traffic steered based on zone.		
	<i>disable</i>	Traffic steered based on member.		

config sla

Parameter	Description	Type	Size	Default
health-check	SD-WAN health-check.	string	Maximum length: 35	
id	SLA ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

config zone

Parameter	Description	Type	Size	Default
advpn-health-check	Health check for ADVPN local overlay link quality.	string	Maximum length: 35	
advpn-select	Enable/disable selection of ADVPN based on SDWAN information.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable selection of ADVPN based on SDWAN information.		
	<i>disable</i>	Disable selection of ADVPN based on SDWAN information.		

Parameter	Description	Type	Size	Default								
minimum-sla-meet-members	Minimum number of members which meet SLA when the neighbor is preferred.	integer	Minimum value: 1 Maximum value: 255	1								
name	Zone name.	string	Maximum length: 35									
service-sla-tie-break	Method of selecting member if more than one meets the SLA.	option	-	cfg-order								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>cfg-order</td><td>Members that meet the SLA are selected in the order they are configured.</td></tr><tr><td>fib-best-match</td><td>Members that meet the SLA are selected that match the longest prefix in the routing table.</td></tr><tr><td>input-device</td><td>Members that meet the SLA are selected by matching the input device.</td></tr></table>				Option	Description	cfg-order	Members that meet the SLA are selected in the order they are configured.	fib-best-match	Members that meet the SLA are selected that match the longest prefix in the routing table.	input-device	Members that meet the SLA are selected by matching the input device.
Option	Description											
cfg-order	Members that meet the SLA are selected in the order they are configured.											
fib-best-match	Members that meet the SLA are selected that match the longest prefix in the routing table.											
input-device	Members that meet the SLA are selected by matching the input device.											

config system security-rating controls

Settings for individual Security Rating controls.

```

config system security-rating controls
    Description: Settings for individual Security Rating controls.
    edit <name>
        set display-insight [enable|disable]
        set display-report [enable|disable]
    next
end

```

config system security-rating controls

Parameter	Description	Type	Size	Default
display-insight	Enable/disable displaying the Security Rating control as an insight across the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable displaying the Security Rating control as an insight across the GUI.		
	<i>disable</i>	Disable displaying the Security Rating control as an insight across the GUI.		
display-report	Enable/disable displaying the Security Rating control in the default report.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable displaying the Security Rating control in the default report.		
	<i>disable</i>	Disable displaying the Security Rating control in the default report.		
name	Security Rating control name.	string	Maximum length: 35	

config system security-rating settings

Settings for Security Rating.

```
config system security-rating settings
    Description: Settings for Security Rating.
    set override-sync [enable|disable]
end
```

config system security-rating settings

Parameter	Description	Type	Size	Default
override-sync	Enable/disable overriding Security Rating control settings synced from the Security Fabric's root FortiGate.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable overriding the Security Rating control settings synced from the Security Fabric root FortiGate.		
	<i>disable</i>	Disable overriding the Security Rating control settings synced from the Security Fabric root FortiGate.		

config system serial-port

This command is available for model(s): FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Serial port list. Read-only.

```
config system serial-port
  Description: Serial port list. Read-only.
  edit <name>
  next
end
```

config system serial-port

Parameter	Description	Type	Size	Default
name	Serial port name.	string	Maximum length: 35	

config system session-helper

Configure session helper.

```
config system session-helper
  Description: Configure session helper.
  edit <id>
    set name [ftp|tftp|...]
    set port {integer}
```

```

        set protocol {integer}
    next
end

```

config system session-helper

protocol	Protocol number.	integer	Minimum value: 0 Maximum value: 255	0																																

config system session-ttl

Configure global session TTL timers for this FortiGate.

```
config system session-ttl
  Description: Configure global session TTL timers for this FortiGate.
  set default {user}
  config port
    Description: Session TTL port.
    edit <id>
      set end-port {integer}
      set protocol {integer}
      set refresh-direction [both|outgoing|...]
      set start-port {integer}
      set timeout {user}
    next
  end
end
```

config system session-ttl

Parameter	Description	Type	Size	Default
default	Default timeout.	user	Not Specified	

config port

Parameter	Description	Type	Size	Default
end-port	End port number.	integer	Minimum value: 0 Maximum value: 65535	0
id	Table entry ID.	integer	Minimum value: 0 Maximum value: 65535	0
protocol	Protocol (0 - 255).	integer	Minimum value: 0 Maximum value: 255	0
refresh-direction	Configure refresh direction.	option	-	both

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>both</i>	Refresh both directions.		
	<i>outgoing</i>	Refresh outgoing direction (original).		
	<i>incoming</i>	Refresh incoming direction (reply).		
start-port	Start port number.	integer	Minimum value: 0 Maximum value: 65535	0
timeout	Session timeout (TTL).	user	Not Specified

config system settings

Parameter	Description	Type	Size	Default
allow-linkdown-path	Enable/disable link down path.	option	-	disable
	Option	Description		
	<i>enable</i>	Allow link down path.		
	<i>disable</i>	Do not allow link down path.		
allow-subnet-overlap	Enable/disable allowing interface subnets to use overlapping IP addresses.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable overlapping subnets.		
	<i>disable</i>	Disable overlapping subnets.		
asymroute	Enable/disable IPv4 asymmetric routing.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable IPv4 asymmetric routing.		
	<i>disable</i>	Disable IPv4 asymmetric routing.		
asymroute-icmp	Enable/disable ICMP asymmetric routing.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable ICMP asymmetric routing.		
	<i>disable</i>	Disable ICMP asymmetric routing.		
asymroute6	Enable/disable asymmetric IPv6 routing.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable asymmetric IPv6 routing.		
	<i>disable</i>	Disable asymmetric IPv6 routing.		
asymroute6-icmp	Enable/disable asymmetric ICMPv6 routing.	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable asymmetric ICMPv6 routing.</td></tr><tr><td><i>disable</i></td><td>Disable asymmetric ICMPv6 routing.</td></tr></table>	Option	Description	<i>enable</i>	Enable asymmetric ICMPv6 routing.	<i>disable</i>	Disable asymmetric ICMPv6 routing.			
Option	Description									
<i>enable</i>	Enable asymmetric ICMPv6 routing.									
<i>disable</i>	Disable asymmetric ICMPv6 routing.									
auxiliary-session	Enable/disable auxiliary session.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auxiliary session for this VDOM.</td></tr><tr><td><i>disable</i></td><td>Disable auxiliary session for this VDOM.</td></tr></table>	Option	Description	<i>enable</i>	Enable auxiliary session for this VDOM.	<i>disable</i>	Disable auxiliary session for this VDOM.			
Option	Description									
<i>enable</i>	Enable auxiliary session for this VDOM.									
<i>disable</i>	Disable auxiliary session for this VDOM.									
bfd	Enable/disable Bi-directional Forwarding Detection (BFD) on all interfaces.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Bi-directional Forwarding Detection (BFD) on all interfaces.</td></tr><tr><td><i>disable</i></td><td>Disable Bi-directional Forwarding Detection (BFD) on all interfaces.</td></tr></table>	Option	Description	<i>enable</i>	Enable Bi-directional Forwarding Detection (BFD) on all interfaces.	<i>disable</i>	Disable Bi-directional Forwarding Detection (BFD) on all interfaces.			
Option	Description									
<i>enable</i>	Enable Bi-directional Forwarding Detection (BFD) on all interfaces.									
<i>disable</i>	Disable Bi-directional Forwarding Detection (BFD) on all interfaces.									
bfd-desired-min-tx	BFD desired minimal transmit interval (1 - 100000 ms, default = 250).	integer	Minimum value: 1 Maximum value: 100000	250						
bfd-detect-mult	BFD detection multiplier (1 - 50, default = 3).	integer	Minimum value: 1 Maximum value: 50	3						
bfd-dont-enforce-src-port	Enable to not enforce verifying the source port of BFD Packets.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verifying the source port of BFD Packets.</td></tr><tr><td><i>disable</i></td><td>Disable verifying the source port of BFD Packets.</td></tr></table>	Option	Description	<i>enable</i>	Enable verifying the source port of BFD Packets.	<i>disable</i>	Disable verifying the source port of BFD Packets.			
Option	Description									
<i>enable</i>	Enable verifying the source port of BFD Packets.									
<i>disable</i>	Disable verifying the source port of BFD Packets.									
bfd-required-min-rx	BFD required minimal receive interval (1 - 100000 ms, default = 250).	integer	Minimum value: 1 Maximum value: 100000	250						
block-land-attack	Enable/disable blocking of land attacks.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Do not block land attack.		
	<i>enable</i>	Block land attack.		
central-nat	Enable/disable central NAT.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable central NAT.		
	<i>disable</i>	Disable central NAT.		
comments	VDOM comments.	var-string	Maximum length: 255	
default-app-port-as-service	Enable/disable policy service enforcement based on application default ports.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
default-policy-expiry-days	Default policy expiry in days (0 - 365 days, default = 30).	integer	Minimum value: 0 Maximum value: 365	30
default-voip-alg-mode	Configure how the FortiGate handles VoIP traffic when a policy that accepts the traffic doesn't include a VoIP profile.	option	-	proxy-based
	Option	Description		
	<i>proxy-based</i>	Use a default proxy-based VoIP ALG.		
	<i>kernel-helper-based</i>	Use the SIP session helper.		
deny-tcp-with-icmp	Enable/disable denying TCP by sending an ICMP communication prohibited packet.	option	-	disable
	Option	Description		
	<i>enable</i>	Deny TCP with ICMP.		
	<i>disable</i>	Disable denying TCP with ICMP.		
detect-unknown-esp	Enable/disable detection of unknown ESP packets (default = enable).	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable detection of unknown ESP packets and drop the ESP packet if it's unknown.		
	<i>disable</i>	Disable detection of unknown ESP packets.		
device	Interface to use for management access for NAT mode.	string	Maximum length: 35	
dhcp-proxy	Enable/disable the DHCP Proxy.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable the DHCP proxy.		
	<i>disable</i>	Disable the DHCP proxy.		
dhcp-proxy-interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
dhcp-proxy-interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
dhcp-proxy-vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0
dhcp-server-ip	DHCP Server IPv4 address.	user	Not Specified	
dhcp6-server-ip	DHCPv6 server IPv6 address.	user	Not Specified	
discovered-device-timeout	Timeout for discovered devices (1 - 365 days, default = 28).	integer	Minimum value: 1 Maximum value: 365	28
dyn-addr-session-check	Enable/disable dirty session check caused by dynamic address updates.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable dirty session check caused by dynamic address updates.		
	<i>disable</i>	Disable dirty session check caused by dynamic address updates.		
ecmp-max-paths	Maximum number of Equal Cost Multi-Path (ECMP) next-hops. Set to 1 to disable ECMP routing (1 - 255, default = 255).	integer	Minimum value: 1 Maximum value: 255	255
email-portal-check-dns	Enable/disable using DNS to validate email addresses collected by a captive portal.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable email address checking with DNS.		
	<i>enable</i>	Enable email address checking with DNS.		
ext-resource-session-check	Enable/disable dirty session check caused by external resource updates.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable dirty session check caused by external resource updates.		
	<i>disable</i>	Disable dirty session check caused by external resource updates.		
firewall-session-dirty	Select how to manage sessions affected by firewall policy configuration changes.	option	-	check-all
	Option	Description		
	<i>check-all</i>	All sessions affected by a firewall policy change are flushed from the session table. When new packets are received they are re-evaluated by stateful inspection and re-added to the session table.		
	<i>check-new</i>	Established sessions for changed firewall policies continue without being affected by the policy configuration change. New sessions are evaluated according to the new firewall policy configuration.		
	<i>check-policy-option</i>	Sessions are managed individually depending on the firewall policy. Some sessions may restart. Some may continue.		
fqdn-session-check	Enable/disable dirty session check caused by FQDN updates.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable dirty session check caused by FQDN updates.		
	<i>disable</i>	Disable dirty session check caused by FQDN updates.		

Parameter	Description	Type	Size	Default						
fw-session-hairpin	Enable/disable checking for a matching policy each time hairpin traffic goes through the FortiGate.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Perform a policy check every time.</td></tr><tr><td><i>disable</i></td><td>Perform a policy check only the first time the session is received.</td></tr></table>	Option	Description	<i>enable</i>	Perform a policy check every time.	<i>disable</i>	Perform a policy check only the first time the session is received.			
Option	Description									
<i>enable</i>	Perform a policy check every time.									
<i>disable</i>	Perform a policy check only the first time the session is received.									
gateway	Transparent mode IPv4 default gateway IP address.	ipv4-address	Not Specified	0.0.0.0						
gateway6	Transparent mode IPv6 default gateway IP address.	ipv6-address	Not Specified	::						
gui-advanced-policy	Enable/disable advanced policy configuration on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable advanced policy configuration on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable advanced policy configuration on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable advanced policy configuration on the GUI.	<i>disable</i>	Disable advanced policy configuration on the GUI.			
Option	Description									
<i>enable</i>	Enable advanced policy configuration on the GUI.									
<i>disable</i>	Disable advanced policy configuration on the GUI.									
gui-advanced-wireless-features	Enable/disable advanced wireless features in GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable advanced wireless features in GUI.</td></tr><tr><td><i>disable</i></td><td>Disable advanced wireless features in GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable advanced wireless features in GUI.	<i>disable</i>	Disable advanced wireless features in GUI.			
Option	Description									
<i>enable</i>	Enable advanced wireless features in GUI.									
<i>disable</i>	Disable advanced wireless features in GUI.									
gui-allow-unnamed-policy	Enable/disable the requirement for policy naming on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the requirement for policy naming on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable the requirement for policy naming on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable the requirement for policy naming on the GUI.	<i>disable</i>	Disable the requirement for policy naming on the GUI.			
Option	Description									
<i>enable</i>	Enable the requirement for policy naming on the GUI.									
<i>disable</i>	Disable the requirement for policy naming on the GUI.									
gui-antivirus	Enable/disable AntiVirus on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AntiVirus on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable AntiVirus on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable AntiVirus on the GUI.	<i>disable</i>	Disable AntiVirus on the GUI.			
Option	Description									
<i>enable</i>	Enable AntiVirus on the GUI.									
<i>disable</i>	Disable AntiVirus on the GUI.									
gui-ap-profile	Enable/disable FortiAP profiles on the GUI.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable FortiAP profiles on the GUI.		
	<i>disable</i>	Disable FortiAP profiles on the GUI.		
gui-application-control	Enable/disable application control on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable application control on the GUI.		
	<i>disable</i>	Disable application control on the GUI.		
gui-casb	Enable/disable Inline-CASB on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Inline-CASB on the GUI.		
	<i>disable</i>	Disable Inline-CASB on the GUI.		
gui-default-policy-columns <name>	Default columns to display for policy lists on GUI. Select column name.	string	Maximum length: 79	
gui-dhcp-advanced	Enable/disable advanced DHCP options on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable advanced DHCP options on the GUI.		
	<i>disable</i>	Disable advanced DHCP options on the GUI.		
gui-dlp-advanced	Enable/disable Show advanced DLP expressions on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Show advanced DLP expressions on the GUI.		
	<i>disable</i>	Disable Show advanced DLP expressions on the GUI.		
gui-dlp-profile	Enable/disable Data Loss Prevention on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Data Loss Prevention on the GUI.		
	<i>disable</i>	Disable Data Loss Prevention on the GUI.		

Parameter	Description	Type	Size	Default						
gui-dns-database	Enable/disable DNS database settings on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DNS database settings on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable DNS database settings on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable DNS database settings on the GUI.	<i>disable</i>	Disable DNS database settings on the GUI.			
Option	Description									
<i>enable</i>	Enable DNS database settings on the GUI.									
<i>disable</i>	Disable DNS database settings on the GUI.									
gui-dnsfilter	Enable/disable DNS Filtering on the GUI.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DNS Filtering on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable DNS Filtering on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable DNS Filtering on the GUI.	<i>disable</i>	Disable DNS Filtering on the GUI.			
Option	Description									
<i>enable</i>	Enable DNS Filtering on the GUI.									
<i>disable</i>	Disable DNS Filtering on the GUI.									
gui-dos-policy	Enable/disable DoS policies on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DoS policies on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable DoS policies on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable DoS policies on the GUI.	<i>disable</i>	Disable DoS policies on the GUI.			
Option	Description									
<i>enable</i>	Enable DoS policies on the GUI.									
<i>disable</i>	Disable DoS policies on the GUI.									
gui-dynamic-device-os-id	Enable/disable Create dynamic addresses to manage known devices.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Create dynamic addresses to manage known devices.</td></tr><tr><td><i>disable</i></td><td>Disable Create dynamic addresses to manage known devices.</td></tr></table>	Option	Description	<i>enable</i>	Enable Create dynamic addresses to manage known devices.	<i>disable</i>	Disable Create dynamic addresses to manage known devices.			
Option	Description									
<i>enable</i>	Enable Create dynamic addresses to manage known devices.									
<i>disable</i>	Disable Create dynamic addresses to manage known devices.									
gui-dynamic-routing	Enable/disable dynamic routing on the GUI.	option	-	enable **						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable dynamic routing on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable dynamic routing on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable dynamic routing on the GUI.	<i>disable</i>	Disable dynamic routing on the GUI.			
Option	Description									
<i>enable</i>	Enable dynamic routing on the GUI.									
<i>disable</i>	Disable dynamic routing on the GUI.									
gui-email-collection	Enable/disable email collection on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable email collection on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable email collection on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable email collection on the GUI.	<i>disable</i>	Disable email collection on the GUI.			
Option	Description									
<i>enable</i>	Enable email collection on the GUI.									
<i>disable</i>	Disable email collection on the GUI.									

Parameter	Description	Type	Size	Default								
gui-enforce-change-summary	Enforce change summaries for select tables in the GUI.	option	-	require								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>No change summary requirement.</td></tr><tr><td><i>require</i></td><td>Change summary required.</td></tr><tr><td><i>optional</i></td><td>Change summary optional.</td></tr></table>	Option	Description	<i>disable</i>	No change summary requirement.	<i>require</i>	Change summary required.	<i>optional</i>	Change summary optional.			
Option	Description											
<i>disable</i>	No change summary requirement.											
<i>require</i>	Change summary required.											
<i>optional</i>	Change summary optional.											
gui-explicit-proxy	Enable/disable the explicit proxy on the GUI.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable the explicit proxy on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable the explicit proxy on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable the explicit proxy on the GUI.	<i>disable</i>	Disable the explicit proxy on the GUI.					
Option	Description											
<i>enable</i>	Enable the explicit proxy on the GUI.											
<i>disable</i>	Disable the explicit proxy on the GUI.											
gui-file-filter	Enable/disable File-filter on the GUI.	option	-	enable **								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable File-filter on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable File-filter on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable File-filter on the GUI.	<i>disable</i>	Disable File-filter on the GUI.					
Option	Description											
<i>enable</i>	Enable File-filter on the GUI.											
<i>disable</i>	Disable File-filter on the GUI.											
gui-fortiap-split-tunneling	Enable/disable FortiAP split tunneling on the GUI.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiAP split tunneling on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable FortiAP split tunneling on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiAP split tunneling on the GUI.	<i>disable</i>	Disable FortiAP split tunneling on the GUI.					
Option	Description											
<i>enable</i>	Enable FortiAP split tunneling on the GUI.											
<i>disable</i>	Disable FortiAP split tunneling on the GUI.											
gui-fortiextender-controller	Enable/disable FortiExtender on the GUI.	option	-	disable **								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FortiExtender on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable FortiExtender on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable FortiExtender on the GUI.	<i>disable</i>	Disable FortiExtender on the GUI.					
Option	Description											
<i>enable</i>	Enable FortiExtender on the GUI.											
<i>disable</i>	Disable FortiExtender on the GUI.											
gui-gtp *	Enable/disable Manage general radio packet service (GPRS) protocols on the GUI.	option	-	enable								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable Manage general radio packet service (GPRS) protocols on the GUI.		
	<i>disable</i>	Disable Manage general radio packet service (GPRS) protocols on the GUI.		
gui-icap	Enable/disable ICAP on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable ICAP on the GUI.		
	<i>disable</i>	Disable ICAP on the GUI.		
gui-implicit-policy	Enable/disable implicit firewall policies on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable implicit firewall policies on the GUI.		
	<i>disable</i>	Disable implicit firewall policies on the GUI.		
gui-ips	Enable/disable IPS on the GUI.	option	-	enable **
	Option	Description		
	<i>enable</i>	Enable IPS on the GUI.		
	<i>disable</i>	Disable IPS on the GUI.		
gui-load-balance	Enable/disable server load balancing on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable server load balancing on the GUI.		
	<i>disable</i>	Disable server load balancing on the GUI.		
gui-local-in-policy	Enable/disable Local-In policies on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Local-In policies on the GUI.		
	<i>disable</i>	Disable Local-In policies on the GUI.		
gui-multicast-policy	Enable/disable multicast firewall policies on the GUI.	option	-	disable

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable multicast firewall policies on the GUI.		
	<i>disable</i>	Disable multicast firewall policies on the GUI.		
gui-multiple-interface-policy	Enable/disable adding multiple interfaces to a policy on the GUI.	option	-	disable
	Option Description			
	<i>enable</i>	Enable adding multiple interfaces to a policy on the GUI.		
	<i>disable</i>	Disable adding multiple interfaces to a policy on the GUI.		
gui-object-colors	Enable/disable object colors on the GUI.	option	-	enable
	Option Description			
	<i>enable</i>	Enable object colors on the GUI.		
	<i>disable</i>	Disable object colors on the GUI.		
gui-ot	Enable/disable Operational technology features on the GUI.	option	-	disable
	Option Description			
	<i>enable</i>	Enable Operational technology features on the GUI.		
	<i>disable</i>	Disable Operational technology features on the GUI.		
gui-policy-based-ipsec	Enable/disable policy-based IPsec VPN on the GUI.	option	-	disable
	Option Description			
	<i>enable</i>	Enable policy-based IPsec VPN on the GUI.		
	<i>disable</i>	Disable policy-based IPsec VPN on the GUI.		
gui-policy-disclaimer	Enable/disable policy disclaimer on the GUI.	option	-	disable
	Option Description			
	<i>enable</i>	Enable policy disclaimer on the GUI.		
	<i>disable</i>	Disable policy disclaimer on the GUI.		

Parameter	Description	Type	Size	Default						
gui-route-tag-address-creation	Enable/disable route-tag addresses on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable route-tag addresses on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable route-tag addresses on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable route-tag addresses on the GUI.	<i>disable</i>	Disable route-tag addresses on the GUI.			
Option	Description									
<i>enable</i>	Enable route-tag addresses on the GUI.									
<i>disable</i>	Disable route-tag addresses on the GUI.									
gui-security-profile-group	Enable/disable Security Profile Groups on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Security Profile Groups on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Security Profile Groups on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Security Profile Groups on the GUI.	<i>disable</i>	Disable Security Profile Groups on the GUI.			
Option	Description									
<i>enable</i>	Enable Security Profile Groups on the GUI.									
<i>disable</i>	Disable Security Profile Groups on the GUI.									
gui-spamfilter	Enable/disable Antispam on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Antispam on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable Antispam on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable Antispam on the GUI.	<i>disable</i>	Disable Antispam on the GUI.			
Option	Description									
<i>enable</i>	Enable Antispam on the GUI.									
<i>disable</i>	Disable Antispam on the GUI.									
gui-sslvpn *	Enable/disable SSL-VPN settings pages on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-VPN settings pages on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-VPN settings pages on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-VPN settings pages on the GUI.	<i>disable</i>	Disable SSL-VPN settings pages on the GUI.			
Option	Description									
<i>enable</i>	Enable SSL-VPN settings pages on the GUI.									
<i>disable</i>	Disable SSL-VPN settings pages on the GUI.									
gui-sslvpn-clients *	Enable/disable SSL-VPN clients on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-VPN clients on the GUI.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-VPN clients on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-VPN clients on the GUI.	<i>disable</i>	Disable SSL-VPN clients on the GUI.			
Option	Description									
<i>enable</i>	Enable SSL-VPN clients on the GUI.									
<i>disable</i>	Disable SSL-VPN clients on the GUI.									
gui-sslvpn-personal-bookmarks *	Enable/disable SSL-VPN personal bookmark management on the GUI.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-VPN personal bookmark management on the GUI.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-VPN personal bookmark management on the GUI.					
Option	Description									
<i>enable</i>	Enable SSL-VPN personal bookmark management on the GUI.									

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable SSL-VPN personal bookmark management on the GUI.		
gui-sslvpn-realms *	Enable/disable SSL-VPN realms on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable SSL-VPN realms on the GUI.		
	<i>disable</i>	Disable SSL-VPN realms on the GUI.		
gui-switch-controller *	Enable/disable the switch controller on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable the switch controller on the GUI.		
	<i>disable</i>	Disable the switch controller on the GUI.		
gui-threat-weight	Enable/disable threat weight on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable threat weight on the GUI.		
	<i>disable</i>	Disable threat weight on the GUI.		
gui-traffic-shaping	Enable/disable traffic shaping on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable traffic shaping on the GUI.		
	<i>disable</i>	Disable traffic shaping on the GUI.		
gui-videofilter	Enable/disable Video filtering on the GUI.	option	-	enable **
	Option	Description		
	<i>enable</i>	Enable Video filtering on the GUI.		
	<i>disable</i>	Disable Video filtering on the GUI.		
gui-virtual-patch-profile	Enable/disable Virtual Patching on the GUI.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable Virtual Patching on the GUI.		
	<i>disable</i>	Disable Virtual Patching on the GUI.		
gui-voip-profile	Enable/disable VoIP profiles on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable VoIP profiles on the GUI.		
	<i>disable</i>	Disable VoIP profiles on the GUI.		
gui-vpn	Enable/disable IPsec VPN settings pages on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable IPsec VPN settings pages on the GUI.		
	<i>disable</i>	Disable IPsec VPN settings pages on the GUI.		
gui-waf-profile	Enable/disable Web Application Firewall on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Web Application Firewall on the GUI.		
	<i>disable</i>	Disable Web Application Firewall on the GUI.		
gui-wan-load-balancing	Enable/disable SD-WAN on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable SD-WAN on the GUI.		
	<i>disable</i>	Disable SD-WAN on the GUI.		
gui-wanopt-cache *	Enable/disable WAN Optimization and Web Caching on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable WAN Optimization and Web Caching on the GUI.		
	<i>disable</i>	Disable WAN Optimization and Web Caching on the GUI.		
gui-webfilter	Enable/disable Web filtering on the GUI.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable Web filtering on the GUI.		
	<i>disable</i>	Disable Web filtering on the GUI.		
gui-webfilter-advanced	Enable/disable advanced web filtering on the GUI.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable advanced web filtering on the GUI.		
	<i>disable</i>	Disable advanced web filtering on the GUI.		
gui-wireless-controller	Enable/disable the wireless controller on the GUI.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable the wireless controller on the GUI.		
	<i>disable</i>	Disable the wireless controller on the GUI.		
gui-ztna	Enable/disable Zero Trust Network Access features on the GUI.	option	-	enable **
	Option	Description		
	<i>enable</i>	Enable Zero Trust Network Access features on the GUI.		
	<i>disable</i>	Disable Zero Trust Network Access features on the GUI.		
h323-direct-model	Enable/disable H323 direct model.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable H323 direct model.		
	<i>enable</i>	Enable H323 direct model.		
http-external-dest	Offload HTTP traffic to FortiWeb or FortiCache.	option	-	fortiweb
	Option	Description		
	<i>fortiweb</i>	Offload HTTP traffic to FortiWeb for Web Application Firewall inspection.		
	<i>forticache</i>	Offload HTTP traffic to FortiCache for external web caching and WAN optimization.		

Parameter	Description	Type	Size	Default						
ike-dn-format	Configure IKE ASN.1 Distinguished Name format conventions.	option	-	with-space						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>with-space</i></td><td>Format IKE ASN.1 Distinguished Names with spaces between attribute names and values.</td></tr><tr><td><i>no-space</i></td><td>Format IKE ASN.1 Distinguished Names without spaces between attribute names and values.</td></tr></table>	Option	Description	<i>with-space</i>	Format IKE ASN.1 Distinguished Names with spaces between attribute names and values.	<i>no-space</i>	Format IKE ASN.1 Distinguished Names without spaces between attribute names and values.			
Option	Description									
<i>with-space</i>	Format IKE ASN.1 Distinguished Names with spaces between attribute names and values.									
<i>no-space</i>	Format IKE ASN.1 Distinguished Names without spaces between attribute names and values.									
ike-policy-route	Enable/disable IKE Policy Based Routing (PBR).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IKE Policy Based Routing (PBR).</td></tr><tr><td><i>disable</i></td><td>Disable IKE Policy Based Routing (PBR).</td></tr></table>	Option	Description	<i>enable</i>	Enable IKE Policy Based Routing (PBR).	<i>disable</i>	Disable IKE Policy Based Routing (PBR).			
Option	Description									
<i>enable</i>	Enable IKE Policy Based Routing (PBR).									
<i>disable</i>	Disable IKE Policy Based Routing (PBR).									
ike-port	UDP port for IKE/IPsec traffic (default 500).	integer	Minimum value: 1024 Maximum value: 65535	500						
ike-quick-crash-detect	Enable/disable IKE quick crash detection (RFC 6290).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IKE quick crash detection (RFC 6290).</td></tr><tr><td><i>disable</i></td><td>Disable IKE quick crash detection (RFC 6290).</td></tr></table>	Option	Description	<i>enable</i>	Enable IKE quick crash detection (RFC 6290).	<i>disable</i>	Disable IKE quick crash detection (RFC 6290).			
Option	Description									
<i>enable</i>	Enable IKE quick crash detection (RFC 6290).									
<i>disable</i>	Disable IKE quick crash detection (RFC 6290).									
ike-session-resume	Enable/disable IKEv2 session resumption (RFC 5723).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IKEv2 session resumption (RFC 5723).</td></tr><tr><td><i>disable</i></td><td>Disable IKEv2 session resumption (RFC 5723).</td></tr></table>	Option	Description	<i>enable</i>	Enable IKEv2 session resumption (RFC 5723).	<i>disable</i>	Disable IKEv2 session resumption (RFC 5723).			
Option	Description									
<i>enable</i>	Enable IKEv2 session resumption (RFC 5723).									
<i>disable</i>	Disable IKEv2 session resumption (RFC 5723).									
ike-tcp-port	TCP port for IKE/IPsec traffic (default 443).	integer	Minimum value: 1 Maximum value: 65535	443						
internet-service-app-ctrl-size	Maximum number of tuple entries (protocol, port, IP address, application ID) stored by the FortiGate unit (0 - 4294967295, default = 32768). A smaller value limits the FortiGate unit from learning about internet applications.	integer	Minimum value: 0 Maximum value: 4294967295	32768						

Parameter	Description	Type	Size	Default								
internet-service-database-cache	Enable/disable Internet Service database caching.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Internet Service database caching.</td></tr><tr><td><i>enable</i></td><td>Enable Internet Service database caching.</td></tr></table>	Option	Description	<i>disable</i>	Disable Internet Service database caching.	<i>enable</i>	Enable Internet Service database caching.					
Option	Description											
<i>disable</i>	Disable Internet Service database caching.											
<i>enable</i>	Enable Internet Service database caching.											
intree-ses-best-route	Force the intree session to always use the best route.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>force</i></td><td>Force the intree session to always use the best route.</td></tr><tr><td><i>disable</i></td><td>Don't force the intree session to always use the best route.</td></tr></table>	Option	Description	<i>force</i>	Force the intree session to always use the best route.	<i>disable</i>	Don't force the intree session to always use the best route.					
Option	Description											
<i>force</i>	Force the intree session to always use the best route.											
<i>disable</i>	Don't force the intree session to always use the best route.											
ip	IP address and netmask.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0								
ip6	IPv6 address prefix for NAT mode.	ipv6-prefix	Not Specified	::/0								
lan-extension-controller-addr	Controller IP address or FQDN to connect.	string	Maximum length: 255									
link-down-access	Enable/disable link down access traffic.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Allow link down access traffic.</td></tr><tr><td><i>disable</i></td><td>Block link down access traffic.</td></tr></table>	Option	Description	<i>enable</i>	Allow link down access traffic.	<i>disable</i>	Block link down access traffic.					
Option	Description											
<i>enable</i>	Allow link down access traffic.											
<i>disable</i>	Block link down access traffic.											
lldp-reception	Enable/disable Link Layer Discovery Protocol (LLDP) reception for this VDOM or apply global settings to this VDOM.	option	-	global								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable LLDP reception for this VDOM.</td></tr><tr><td><i>disable</i></td><td>Disable LLDP reception for this VDOM.</td></tr><tr><td><i>global</i></td><td>Use the global LLDP reception configuration for this VDOM.</td></tr></table>	Option	Description	<i>enable</i>	Enable LLDP reception for this VDOM.	<i>disable</i>	Disable LLDP reception for this VDOM.	<i>global</i>	Use the global LLDP reception configuration for this VDOM.			
Option	Description											
<i>enable</i>	Enable LLDP reception for this VDOM.											
<i>disable</i>	Disable LLDP reception for this VDOM.											
<i>global</i>	Use the global LLDP reception configuration for this VDOM.											
lldp-transmission	Enable/disable Link Layer Discovery Protocol (LLDP) transmission for this VDOM or apply global settings to this VDOM.	option	-	global								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable LLDP transmission for this VDOM.		
	<i>disable</i>	Disable LLDP transmission for this VDOM.		
	<i>global</i>	Use the global LLDP transmission configuration for this VDOM.		
location-id	Local location ID in the form of an IPv4 address.	ipv4-address	Not Specified	0.0.0.0
mac-ttl	Duration of MAC addresses in Transparent mode (300 - 8640000 sec, default = 300).	integer	Minimum value: 300 Maximum value: 8640000	300
manageip	Transparent mode IPv4 management IP address and netmask.	user	Not Specified	
manageip6	Transparent mode IPv6 management IP address and netmask.	ipv6-prefix	Not Specified	::/0
multicast-forward	Enable/disable multicast forwarding.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable multicast forwarding.		
	<i>disable</i>	Disable multicast forwarding.		
multicast-skip-policy	Enable/disable allowing multicast traffic through the FortiGate without a policy check.	option	-	disable
	Option	Description		
	<i>enable</i>	Allowing multicast traffic through the FortiGate without creating a multicast firewall policy.		
	<i>disable</i>	Require a multicast policy to allow multicast traffic to pass through the FortiGate.		
multicast-ttl-notchange	Enable/disable preventing the FortiGate from changing the TTL for forwarded multicast packets.	option	-	disable
	Option	Description		
	<i>enable</i>	The multicast TTL is not changed.		
	<i>disable</i>	The multicast TTL may be changed.		

Parameter	Description	Type	Size	Default						
nat46-force-ipv4-packet-forwarding	Enable/disable mandatory IPv4 packet forwarding in NAT46.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.</td></tr><tr><td><i>disable</i></td><td>Disable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.</td></tr></table>	Option	Description	<i>enable</i>	Enable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.	<i>disable</i>	Disable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.			
Option	Description									
<i>enable</i>	Enable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.									
<i>disable</i>	Disable mandatory IPv4 packet forwarding when IPv4 DF is set to 1.									
nat46-generate-ipv6-fragment-header	Enable/disable NAT46 IPv6 fragment header generation.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NAT46 IPv6 fragment header generation.</td></tr><tr><td><i>disable</i></td><td>Disable NAT46 IPv6 fragment header generation.</td></tr></table>	Option	Description	<i>enable</i>	Enable NAT46 IPv6 fragment header generation.	<i>disable</i>	Disable NAT46 IPv6 fragment header generation.			
Option	Description									
<i>enable</i>	Enable NAT46 IPv6 fragment header generation.									
<i>disable</i>	Disable NAT46 IPv6 fragment header generation.									
nat64-force-ipv6-packet-forwarding	Enable/disable mandatory IPv6 packet forwarding in NAT64.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable mandatory IPv6 packet forwarding</td></tr><tr><td><i>disable</i></td><td>Disable mandatory IPv6 packet forwarding</td></tr></table>	Option	Description	<i>enable</i>	Enable mandatory IPv6 packet forwarding	<i>disable</i>	Disable mandatory IPv6 packet forwarding			
Option	Description									
<i>enable</i>	Enable mandatory IPv6 packet forwarding									
<i>disable</i>	Disable mandatory IPv6 packet forwarding									
ngfw-mode	Next Generation Firewall (NGFW) mode.	option	-	profile-based						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>profile-based</i></td><td>Application and web-filtering are configured using profiles applied to policy entries.</td></tr><tr><td><i>policy-based</i></td><td>Application and web-filtering are configured as policy match conditions.</td></tr></table>	Option	Description	<i>profile-based</i>	Application and web-filtering are configured using profiles applied to policy entries.	<i>policy-based</i>	Application and web-filtering are configured as policy match conditions.			
Option	Description									
<i>profile-based</i>	Application and web-filtering are configured using profiles applied to policy entries.									
<i>policy-based</i>	Application and web-filtering are configured as policy match conditions.									
opmode	Firewall operation mode (NAT or Transparent).	option	-	nat						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>nat</i></td><td>Change to NAT mode.</td></tr><tr><td><i>transparent</i></td><td>Change to transparent mode.</td></tr></table>	Option	Description	<i>nat</i>	Change to NAT mode.	<i>transparent</i>	Change to transparent mode.			
Option	Description									
<i>nat</i>	Change to NAT mode.									
<i>transparent</i>	Change to transparent mode.									
policy-offload-level *	Configure firewall policy offload level.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>disable</i>	Disable policy offloading.		
	<i>dos-offload</i>	Only enable DoS policy offloading.		
prp-trailer-action	Enable/disable action to take on PRP trailer.	option	-	disable
	Option Description			
	<i>enable</i>	Try to keep PRP trailer.		
	<i>disable</i>	Trim PRP trailer.		
sccp-port	TCP port the SCCP proxy monitors for SCCP traffic (0 - 65535, default = 2000).	integer	Minimum value: 0 Maximum value: 65535	2000
sctp-session-without-init	Enable/disable Sctp session creation without Sctp INIT.	option	-	disable
	Option Description			
	<i>enable</i>	Enable Sctp session creation without Sctp INIT.		
	<i>disable</i>	Disable Sctp session creation without Sctp INIT.		
ses-denied-multicast-traffic	Enable/disable including denied multicast session in the session table.	option	-	disable
	Option Description			
	<i>enable</i>	Include denied multicast sessions in the session table.		
	<i>disable</i>	Do not add denied multicast sessions to the session table.		
ses-denied-traffic	Enable/disable including denied session in the session table.	option	-	disable
	Option Description			
	<i>enable</i>	Include denied sessions in the session table.		
	<i>disable</i>	Do not add denied sessions to the session table.		
sip-expectation	Enable/disable the SIP kernel session helper to create an expectation for port 5060.	option	-	disable

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Allow SIP session helper to create an expectation for port 5060.		
	<i>disable</i>	Prevent SIP session helper from creating an expectation for port 5060.		
sip-nat-trace	Enable/disable recording the original SIP source IP address when NAT is used.	option	-	enable
	Option Description			
	<i>enable</i>	Record the original SIP source IP address when NAT is used.		
	<i>disable</i>	Do not record the original SIP source IP address when NAT is used.		
sip-ssl-port	TCP port the SIP proxy monitors for SIP SSL/TLS traffic (0 - 65535, default = 5061).	integer	Minimum value: 0 Maximum value: 65535	5061
sip-tcp-port	TCP port the SIP proxy monitors for SIP traffic (0 - 65535, default = 5060).	integer	Minimum value: 1 Maximum value: 65535	5060
sip-udp-port	UDP port the SIP proxy monitors for SIP traffic (0 - 65535, default = 5060).	integer	Minimum value: 1 Maximum value: 65535	5060
snat-hairpin-traffic	Enable/disable source NAT (SNAT) for hairpin traffic.	option	-	enable
	Option Description			
	<i>enable</i>	Enable SNAT for hairpin traffic.		
	<i>disable</i>	Disable SNAT for hairpin traffic.		
status	Enable/disable this VDOM.	option	-	enable
	Option Description			
	<i>enable</i>	Enable this VDOM.		
	<i>disable</i>	Disable this VDOM.		
strict-src-check	Enable/disable strict source verification.	option	-	disable
	Option Description			
	<i>enable</i>	Enable strict source verification.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable strict source verification.		
tcp-session-without-syn	Enable/disable allowing TCP session without SYN flags.	option	-	disable
	Option	Description		
	<i>enable</i>	Allow TCP session without SYN flags.		
	<i>disable</i>	Do not allow TCP session without SYN flags.		
utf8-spam-tagging	Enable/disable converting antispam tags to UTF-8 for better non-ASCII character support.	option	-	enable
	Option	Description		
	<i>enable</i>	Convert antispam tags to UTF-8.		
	<i>disable</i>	Do not convert antispam tags.		
v4-ecmp-mode	IPv4 Equal-cost multi-path (ECMP) routing and load balancing mode.	option	-	source-ip-based
	Option	Description		
	<i>source-ip-based</i>	Select next hop based on source IP.		
	<i>weight-based</i>	Select next hop based on weight.		
	<i>usage-based</i>	Select next hop based on usage.		
	<i>source-dest-ip-based</i>	Select next hop based on both source and destination IPs.		
vdom-type	Vdom type (traffic, lan-extension or admin).	option	-	traffic
	Option	Description		
	<i>traffic</i>	Change to traffic VDOM		
	<i>lan-extension</i>	Change to lan-extension VDOM		
	<i>admin</i>	Change to admin VDOM		
vpn-stats-log	Enable/disable periodic VPN log statistics for one or more types of VPN. Separate names with a space.	option	-	ipsec pptp l2tp ssl **
	Option	Description		
	<i>ipsec</i>	IPsec.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>pptp</i>	PPTP.		
	<i>l2tp</i>	L2TP.		
	<i>ssl</i>	SSL.		
vpn-stats-period	Period to send VPN log statistics (0 or 60 - 86400 sec).	integer	Minimum value: 0 Maximum value: 4294967295	600
wccp-cache-engine	Enable/disable WCCP cache engine.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable WCCP cache engine.		
	<i>disable</i>	Disable WCCP cache engine.		

* This parameter may not exist in some models.

** Values may differ between models.

config system sflow

Configure sFlow.

```

config system sflow
  Description: Configure sFlow.
  config collectors
    Description: sFlow collectors.
    edit <id>
      set collector-ip {ipv4-address}
      set collector-port {integer}
      set interface {string}
      set interface-select-method [auto|sdwan|...]
      set source-ip {ipv4-address}
    next
  end
end

```

config collectors

Parameter	Description	Type	Size	Default								
collector-ip	IP addresses of the sFlow collectors that sFlow agents added to interfaces in this VDOM send sFlow datagrams to.	ipv4-address	Not Specified	0.0.0.0								
collector-port	UDP port number used for sending sFlow datagrams (configure only if required by your sFlow collector or your network configuration) (0 - 65535, default = 6343).	integer	Minimum value: 0 Maximum value: 65535	6343								
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
source-ip	Source IP address for sFlow agent.	ipv4-address	Not Specified	0.0.0.0								

config system sit-tunnel

Configure IPv6 tunnel over IPv4.

```
config system sit-tunnel
  Description: Configure IPv6 tunnel over IPv4.
  edit <name>
    set auto-asic-offload [enable|disable]
    set destination {ipv4-address}
    set interface {string}
    set ip6 {ipv6-prefix}
    set source {ipv4-address}
    set use-sdwan [disable|enable]
  next
end
```

config system sit-tunnel

Parameter	Description	Type	Size	Default						
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable auto ASIC offloading.</td></tr><tr><td>disable</td><td>Disable ASIC offloading.</td></tr></table>	Option	Description	enable	Enable auto ASIC offloading.	disable	Disable ASIC offloading.			
Option	Description									
enable	Enable auto ASIC offloading.									
disable	Disable ASIC offloading.									
destination	Destination IP address of the tunnel.	ipv4-address	Not Specified	0.0.0.0						
interface	Interface name.	string	Maximum length: 15							
ip6	IPv6 address of the tunnel.	ipv6-prefix	Not Specified	::/0						
name	Tunnel name.	string	Maximum length: 15							
source	Source IP address of the tunnel.	ipv4-address	Not Specified	0.0.0.0						
use-sdwan	Enable/disable use of SD-WAN to reach remote gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable use of SD-WAN to reach remote gateway.</td></tr><tr><td>enable</td><td>Enable use of SD-WAN to reach remote gateway.</td></tr></table>	Option	Description	disable	Disable use of SD-WAN to reach remote gateway.	enable	Enable use of SD-WAN to reach remote gateway.			
Option	Description									
disable	Disable use of SD-WAN to reach remote gateway.									
enable	Enable use of SD-WAN to reach remote gateway.									

* This parameter may not exist in some models.

config system smc-ntp

This command is available for model(s): FortiGate 1100E, FortiGate 1101E, FortiGate 1800F, FortiGate 1801F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700F, FortiGate 3701F, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 900G, FortiGate 901G.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 120G, FortiGate 121G, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 3100D, FortiGate 3200D, FortiGate 3700D, FortiGate 3960E, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 5001E1, FortiGate 5001E, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure SMC NTP information.

```
config system smc-ntp
  Description: Configure SMC NTP information.
  set channel {integer}
  config ntpserver
    Description: Configure the FortiGate SMC to connect to an NTP server.
    edit <id>
      set server {ipv4-address}
    next
  end
  set ntpsync [enable|disable]
  set syncinterval {integer}
end
```

config system smc-ntp

Parameter	Description	Type	Size	Default
channel	SMC NTP client will send NTP packets through this channel.	integer	Minimum value: 1 Maximum value: 65535	5

Parameter	Description	Type	Size	Default
ntpsync	Enable/disable setting the FortiGate SMC system time by synchronizing with an NTP server.	option	-	disable
	Option	Description		
	enable	Enable synchronization with NTP server in SMC.		
	disable	Disable synchronization with NTP server in SMC.		
syncinterval	SMC NTP synchronization interval (1 - 65535 secs).	integer	Minimum value: 1 Maximum value: 65535	60

config ntpserver

Parameter	Description	Type	Size	Default
id	NTP server ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server	IP address of the NTP server.	ipv4-address	Not Specified	0.0.0.0

config system sms-server

Configure SMS server for sending SMS messages to support user authentication.

```
config system sms-server
    Description: Configure SMS server for sending SMS messages to support user authentication.
    edit <name>
        set mail-server {string}
    next
end
```

config system sms-server

Parameter	Description	Type	Size	Default
mail-server	Email-to-SMS server domain name.	string	Maximum length: 63	
name	Name of SMS server.	string	Maximum length: 35	

config system snmp community

SNMP community configuration.

```
config system snmp community
  Description: SNMP community configuration.
  edit <id>
    set events {option1}, {option2}, ...
    config hosts
      Description: Configure IPv4 SNMP managers (hosts).
      edit <id>
        set ha-direct [enable|disable]
        set host-type [any|query|...]
        set interface {string}

config system snmp community

Parameter	Description	Type	Size	Default
events	SNMP trap events.	option	-	cpu-high mem- low log-full intf- ip vpn-tun-up vpn-tun-down ha-switch ha- hb-failure ips- signature ips- anomaly av- virus av- oversize av- pattern av- fragmented fm- if-change bgp- established bgp-backward- transition ha- member-up ha- member-down ent-conf- change av- conserve av- bypass av- oversize- passed av- oversize- blocked ips- pkg-update ips- fail-open temperature- high voltage- alert power- supply faz- disconnect faz fan-failure wc- ap-up wc-ap- down fswctl- session-up fswctl-session- down load- balance-real- server-down per-cpu-high dhcp pool- usage ippool interface ospf- nbr-state- change ospf- virtnbr-state- change **

Parameter	Description	Type	Size	Default

Option	Description
<i>cpu-high</i>	Send a trap when CPU usage is high.
<i>mem-low</i>	Send a trap when used memory is high, free memory is low, or freeable memory is high.
<i>log-full</i>	Send a trap when log disk space becomes low.
<i>intf-ip</i>	Send a trap when an interface IP address is changed.
<i>vpn-tun-up</i>	Send a trap when a VPN tunnel comes up.
<i>vpn-tun-down</i>	Send a trap when a VPN tunnel goes down.
<i>ha-switch</i>	Send a trap after an HA failover when the backup unit has taken over.
<i>ha-hb-failure</i>	Send a trap when HA heartbeats are not received.
<i>ips-signature</i>	Send a trap when IPS detects an attack.
<i>ips-anomaly</i>	Send a trap when IPS finds an anomaly.
<i>av-virus</i>	Send a trap when AntiVirus finds a virus.
<i>av-oversize</i>	Send a trap when AntiVirus finds an oversized file.
<i>av-pattern</i>	Send a trap when AntiVirus finds file matching pattern.
<i>av-fragmented</i>	Send a trap when AntiVirus finds a fragmented file.
<i>fm-if-change</i>	Send a trap when FortiManager interface changes. Send a FortiManager trap.
<i>fm-conf-change</i>	Send a trap when a configuration change is made by a FortiGate administrator and the FortiGate is managed by FortiManager.
<i>bgp-established</i>	Send a trap when a BGP FSM transitions to the established state.
<i>bgp-backward-transition</i>	Send a trap when a BGP FSM goes from a high numbered state to a lower numbered state.
<i>ha-member-up</i>	Send a trap when an HA cluster member goes up.
<i>ha-member-down</i>	Send a trap when an HA cluster member goes down.
<i>ent-conf-change</i>	Send a trap when an entity MIB change occurs (RFC4133).
<i>av-conserve</i>	Send a trap when the FortiGate enters conserve mode.
<i>av-bypass</i>	Send a trap when the FortiGate enters bypass mode.
<i>av-oversize-passed</i>	Send a trap when AntiVirus passes an oversized file.
<i>av-oversize-blocked</i>	Send a trap when AntiVirus blocks an oversized file.

Parameter	Description	Type	Size	Default

Option	Description
<i>ips-pkg-update</i>	Send a trap when the IPS signature database or engine is updated.
<i>ips-fail-open</i>	Send a trap when the IPS network buffer is full.
<i>temperature-high</i>	Send a trap when a temperature sensor registers a temperature that is too high.
<i>voltage-alert</i>	Send a trap when a voltage sensor registers a voltage that is outside of the normal range.
<i>power-supply</i>	Send a trap when a power supply fails or restores.
<i>faz-disconnect</i>	Send a trap when a FortiAnalyzer disconnects from the FortiGate.
<i>faz</i>	Send a trap when Fortianalyzer main server failover and alternate server take over, or alternate server failover and main server take over.
<i>fan-failure</i>	Send a trap when a fan fails.
<i>wc-ap-up</i>	Send a trap when a managed FortiAP comes up.
<i>wc-ap-down</i>	Send a trap when a managed FortiAP goes down.
<i>fswctl-session-up</i>	Send a trap when a FortiSwitch controller session comes up.
<i>fswctl-session-down</i>	Send a trap when a FortiSwitch controller session goes down.
<i>load-balance-real-server-down</i>	Send a trap when a server load balance real server goes down.
<i>device-new</i>	Send a trap when a new device is found.
<i>per-cpu-high</i>	Send a trap when per-CPU usage is high.
<i>dhcp</i>	Send a trap when the DHCP server exhausts the IP pool, an IP address already is in use, or a DHCP client interface received a DHCP-NAK.
<i>pool-usage</i>	Send a trap about ippool usage.
<i>ippool</i>	Send a trap for ippool events.
<i>interface</i>	Send a trap for interface event.
<i>ospf-nbr-state-change</i>	Send a trap when there has been a change in the state of a non-virtual OSPF neighbor.
<i>ospf-virtnbr-state-change</i>	Send a trap when there has been a change in the state of an OSPF virtual neighbor.

Parameter	Description	Type	Size	Default						
id	Community ID.	integer	Minimum value: 0 Maximum value: 4294967295	0						
mib-view	SNMP access control MIB view.	string	Maximum length: 32							
name	Community name.	string	Maximum length: 35							
query-v1-port	SNMP v1 query port (default = 161).	integer	Minimum value: 1 Maximum value: 65535	161						
query-v1-status	Enable/disable SNMP v1 queries.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
query-v2c-port	SNMP v2c query port (default = 161).	integer	Minimum value: 0 Maximum value: 65535	161						
query-v2c-status	Enable/disable SNMP v2c queries.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
status	Enable/disable this SNMP community.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
trap-v1-lport	SNMP v1 trap local port (default = 162).	integer	Minimum value: 1 Maximum value: 65535	162						

Parameter	Description	Type	Size	Default						
trap-v1-rport	SNMP v1 trap remote port (default = 162).	integer	Minimum value: 1 Maximum value: 65535	162						
trap-v1-status	Enable/disable SNMP v1 traps.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
trap-v2c-lport	SNMP v2c trap local port (default = 162).	integer	Minimum value: 1 Maximum value: 65535	162						
trap-v2c-rport	SNMP v2c trap remote port (default = 162).	integer	Minimum value: 1 Maximum value: 65535	162						
trap-v2c-status	Enable/disable SNMP v2c traps.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
vdoms <name>	SNMP access control VDOMs. VDOM name.	string	Maximum length: 79							

** Values may differ between models.

config hosts

Parameter	Description	Type	Size	Default

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									

Parameter	Description	Type	Size	Default
host-type	Control whether the SNMP manager sends SNMP queries, receives SNMP traps, or both. No traps will be sent when IP type is subnet.	option	-	any
	Option	Description		
	<i>any</i>	Accept queries from and send traps to this SNMP manager.		
	<i>query</i>	Accept queries from this SNMP manager but do not send traps.		
	<i>trap</i>	Send traps to this SNMP manager but do not accept SNMP queries from this SNMP manager.		
id	Host entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
ip	IPv4 address of the SNMP manager (host).	user	Not Specified	
source-ip	Source IPv4 address for SNMP traps.	ipv4-address	Not Specified	0.0.0.0
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config system snmp mib-view

SNMP Access Control MIB View configuration.

```
config system snmp mib-view
    Description: SNMP Access Control MIB View configuration.
    edit <name>
        set exclude {string}
        set include {string}
```

```
next
end
```

config system snmp mib-view

Parameter	Description	Type	Size	Default
exclude	OID subtrees to be excluded in the view. Maximum 64 allowed.	string	Maximum length: 79	
include	OID subtrees to be included in the view. Maximum 16 allowed.	string	Maximum length: 79	
name	MIB view name.	string	Maximum length: 32	

config system snmp rmon-stat

SNMP Remote Network Monitoring (RMON) Ethernet statistics configuration.

```
config system snmp rmon-stat
    Description: SNMP Remote Network Monitoring (RMON) Ethernet statistics configuration.
    edit <id>
        set owner {string}
        set source {string}
    next
end
```

config system snmp rmon-stat

Parameter	Description	Type	Size	Default
id	RMON Ethernet statistics entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
owner	Owner of the Ethernet statistics entry.	string	Maximum length: 127	
source	Data source of the Ethernet statistics entry.	string	Maximum length: 15	

config system snmp sysinfo

SNMP system info configuration.

```
config system snmp sysinfo
    Description: SNMP system info configuration.
```

```

set append-index [enable|disable]
set contact-info {var-string}
set description {var-string}
set engine-id {string}
set engine-id-type [text|hex|...]
set location {var-string}
set non-mgmt-vdom-query [enable|disable]
set status [enable|disable]
set trap-free-memory-threshold {integer}
set trap-freeable-memory-threshold {integer}
set trap-high-cpu-threshold {integer}
set trap-log-full-threshold {integer}
set trap-low-memory-threshold {integer}
end

```

config system snmp sysinfo

Parameter	Description	Type	Size	Default								
append-index	Enable/disable allowance of appending vdom or interface index in some RFC tables.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.

set vrf-select {integer}

```

```

next

```

```

end

```

config system snmp user

Parameter	Description	Type	Size	Default
auth-proto	Authentication protocol.	option	-	sha
	Option	Description		
	md5	HMAC-MD5-96 authentication protocol.		
	sha	HMAC-SHA-96 authentication protocol.		
	sha224	HMAC-SHA224 authentication protocol.		
	sha256	HMAC-SHA256 authentication protocol.		
	sha384	HMAC-SHA384 authentication protocol.		
	sha512	HMAC-SHA512 authentication protocol.		
auth-pwd	Password for authentication protocol.	password	Not Specified	

Parameter	Description	Type	Size	Default
events	SNMP notifications (traps) to send.	option	-	cpu-high mem- low log-full intf- ip vpn-tun-up vpn-tun-down ha-switch ha- hb-failure ips- signature ips- anomaly av- virus av- oversize av- pattern av- fragmented fm- if-change bgp- established bgp-backward- transition ha- member-up ha- member-down ent-conf- change av- conserve av- bypass av- oversize- passed av- oversize- blocked ips- pkg-update ips- fail-open temperature- high voltage- alert power- supply faz- disconnect faz fan-failure wc- ap-up wc-ap- down fswctl- session-up fswctl-session- down load- balance-real- server-down per-cpu-high dhcp pool- usage ippool interface ospf- nbr-state- change ospf- virtnbr-state- change **

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>cpu-high</i>	Send a trap when CPU usage is high.		
	<i>mem-low</i>	Send a trap when used memory is high, free memory is low, or freeable memory is high.		
	<i>log-full</i>	Send a trap when log disk space becomes low.		
	<i>intf-ip</i>	Send a trap when an interface IP address is changed.		
	<i>vpn-tun-up</i>	Send a trap when a VPN tunnel comes up.		
	<i>vpn-tun-down</i>	Send a trap when a VPN tunnel goes down.		
	<i>ha-switch</i>	Send a trap after an HA failover when the backup unit has taken over.		
	<i>ha-hb-failure</i>	Send a trap when HA heartbeats are not received.		
	<i>ips-signature</i>	Send a trap when IPS detects an attack.		
	<i>ips-anomaly</i>	Send a trap when IPS finds an anomaly.		
	<i>av-virus</i>	Send a trap when AntiVirus finds a virus.		
	<i>av-oversize</i>	Send a trap when AntiVirus finds an oversized file.		
	<i>av-pattern</i>	Send a trap when AntiVirus finds file matching pattern.		
	<i>av-fragmented</i>	Send a trap when AntiVirus finds a fragmented file.		
	<i>fm-if-change</i>	Send a trap when FortiManager interface changes. Send a FortiManager trap.		
	<i>fm-conf-change</i>	Send a trap when a configuration change is made by a FortiGate administrator and the FortiGate is managed by FortiManager.		
	<i>bgp-established</i>	Send a trap when a BGP FSM transitions to the established state.		
	<i>bgp-backward-transition</i>	Send a trap when a BGP FSM goes from a high numbered state to a lower numbered state.		
	<i>ha-member-up</i>	Send a trap when an HA cluster member goes up.		
	<i>ha-member-down</i>	Send a trap when an HA cluster member goes down.		
	<i>ent-conf-change</i>	Send a trap when an entity MIB change occurs (RFC4133).		
	<i>av-conserve</i>	Send a trap when the FortiGate enters conserve mode.		
	<i>av-bypass</i>	Send a trap when the FortiGate enters bypass mode.		
	<i>av-oversize-passed</i>	Send a trap when AntiVirus passes an oversized file.		
	<i>av-oversize-blocked</i>	Send a trap when AntiVirus blocks an oversized file.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>ips-pkg-update</i>	Send a trap when the IPS signature database or engine is updated.		
	<i>ips-fail-open</i>	Send a trap when the IPS network buffer is full.		
	<i>temperature-high</i>	Send a trap when a temperature sensor registers a temperature that is too high.		
	<i>voltage-alert</i>	Send a trap when a voltage sensor registers a voltage that is outside of the normal range.		
	<i>power-supply</i>	Send a trap when a power supply fails or restores.		
	<i>faz-disconnect</i>	Send a trap when a FortiAnalyzer disconnects from the FortiGate.		
	<i>faz</i>	Send a trap when Fortianalyzer main server failover and alternate server take over, or alternate server failover and main server take over.		
	<i>fan-failure</i>	Send a trap when a fan fails.		
	<i>wc-ap-up</i>	Send a trap when a managed FortiAP comes up.		
	<i>wc-ap-down</i>	Send a trap when a managed FortiAP goes down.		
	<i>fswctl-session-up</i>	Send a trap when a FortiSwitch controller session comes up.		
	<i>fswctl-session-down</i>	Send a trap when a FortiSwitch controller session goes down.		
	<i>load-balance-real-server-down</i>	Send a trap when a server load balance real server goes down.		
	<i>device-new</i>	Send a trap when a new device is found.		
	<i>per-cpu-high</i>	Send a trap when per-CPU usage is high.		
	<i>dhcp</i>	Send a trap when the DHCP server exhausts the IP pool, an IP address already is in use, or a DHCP client interface received a DHCP-NAK.		
	<i>pool-usage</i>	Send a trap about ippool usage.		
	<i>ippool</i>	Send a trap for ippool events.		
	<i>interface</i>	Send a trap for interface event.		
<i>ospf-nbr-state-change</i>	Send a trap when there has been a change in the state of a non-virtual OSPF neighbor.			
<i>ospf-virtnbr-state-change</i>	Send a trap when there has been a change in the state of an OSPF virtual neighbor.			
ha-direct	Enable/disable direct management of HA cluster members.	option	-	disable

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
	Option	Description												
	<i>enable</i>	Enable setting.												
<i>disable</i>	Disable setting.													
interface	Specify outgoing interface to reach server.	string	Maximum length: 15											
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.					
	Option	Description												
	<i>auto</i>	Set outgoing interface automatically.												
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.												
<i>specify</i>	Set outgoing interface manually.													
mib-view	SNMP access control MIB view.	string	Maximum length: 32											
name	SNMP user name.	string	Maximum length: 32											
notify-hosts	SNMP managers to send notifications (traps) to.	ipv4-address	Not Specified											
notify-hosts6	IPv6 SNMP managers to send notifications (traps) to.	ipv6-address	Not Specified											
priv-proto	Privacy (encryption) protocol.	option	-	aes										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>aes</i></td><td>CFB128-AES-128 symmetric encryption protocol.</td></tr><tr><td><i>des</i></td><td>CBC-DES symmetric encryption protocol.</td></tr><tr><td><i>aes256</i></td><td>CFB128-AES-256 symmetric encryption protocol.</td></tr><tr><td><i>aes256cisco</i></td><td>CFB128-AES-256 symmetric encryption protocol compatible with CISCO.</td></tr></table>	Option	Description	<i>aes</i>	CFB128-AES-128 symmetric encryption protocol.	<i>des</i>	CBC-DES symmetric encryption protocol.	<i>aes256</i>	CFB128-AES-256 symmetric encryption protocol.	<i>aes256cisco</i>	CFB128-AES-256 symmetric encryption protocol compatible with CISCO.			
	Option	Description												
	<i>aes</i>	CFB128-AES-128 symmetric encryption protocol.												
	<i>des</i>	CBC-DES symmetric encryption protocol.												
	<i>aes256</i>	CFB128-AES-256 symmetric encryption protocol.												
<i>aes256cisco</i>	CFB128-AES-256 symmetric encryption protocol compatible with CISCO.													
priv-pwd	Password for privacy (encryption) protocol.	password	Not Specified											
queries	Enable/disable SNMP queries for this user.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
	Option	Description												
	<i>enable</i>	Enable setting.												
<i>disable</i>	Disable setting.													

Parameter	Description	Type	Size	Default								
query-port	SNMPv3 query port (default = 161).	integer	Minimum value: 1 Maximum value: 65535	161								
security-level	Security level for message authentication and encryption.	option	-	no-auth-no-priv								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>no-auth-no-priv</td><td>Message with no authentication and no privacy (encryption).</td></tr><tr><td>auth-no-priv</td><td>Message with authentication but no privacy (encryption).</td></tr><tr><td>auth-priv</td><td>Message with authentication and privacy (encryption).</td></tr></table>				Option	Description	no-auth-no-priv	Message with no authentication and no privacy (encryption).	auth-no-priv	Message with authentication but no privacy (encryption).	auth-priv	Message with authentication and privacy (encryption).
	Option	Description										
	no-auth-no-priv	Message with no authentication and no privacy (encryption).										
	auth-no-priv	Message with authentication but no privacy (encryption).										
auth-priv	Message with authentication and privacy (encryption).											
source-ip	Source IP for SNMP trap.	ipv4-address	Not Specified	0.0.0.0								
source-ipv6	Source IPv6 for SNMP trap.	ipv6-address	Not Specified	::								
status	Enable/disable this SNMP user.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.		
	Option	Description										
	enable	Enable setting.										
disable	Disable setting.											
trap-lport	SNMPv3 local trap port (default = 162).	integer	Minimum value: 1 Maximum value: 65535	162								
trap-rport	SNMPv3 trap remote port (default = 162).	integer	Minimum value: 1 Maximum value: 65535	162								
trap-status	Enable/disable traps for this SNMP user.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.		
	Option	Description										
	enable	Enable setting.										
disable	Disable setting.											
vdoms <name>	SNMP access control VDOMs. VDOM name.	string	Maximum length: 79									

Parameter	Description	Type	Size	Default
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

** Values may differ between models.

config system speed-test-schedule

Speed test schedule for each interface.

```
config system speed-test-schedule
    Description: Speed test schedule for each interface.
    edit <interface>
        set ctrl-port {integer}
        set diffserv {user}
        set dynamic-server [disable|enable]
        set mode [UDP|TCP|...]
        set schedules <name1>, <name2>, ...
        set server-name {string}
        set server-port {integer}
        set status [disable|enable]
        set update-inbandwidth [disable|enable]
        set update-inbandwidth-maximum {integer}
        set update-inbandwidth-minimum {integer}
        set update-outbandwidth [disable|enable]
        set update-outbandwidth-maximum {integer}
        set update-outbandwidth-minimum {integer}
        set update-shaper [disable|local|...]
    next
end
```

config system speed-test-schedule

Parameter	Description	Type	Size	Default
ctrl-port	Port of the controller to get access token.	integer	Minimum value: 1 Maximum value: 65535	5200
diffserv	DSCP used for speed test.	user	Not Specified	
dynamic-server	Enable/disable dynamic server option.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable dynamic server.		
	<i>enable</i>	Enable dynamic server.The speed test server will be found automatically.		
interface	Interface name.	string	Maximum length: 35	
mode	Protocol Auto(default), TCP or UDP used for speed test.	option	-	Auto
	Option	Description		
	<i>UDP</i>	Protocol UDP for speed test.		
	<i>TCP</i>	Protocol TCP for speed test.		
	<i>Auto</i>	Dynamically selects TCP or UDP based on the speed test setting		
schedules <name>	Schedules for the interface. Name of a firewall recurring schedule.	string	Maximum length: 31	
server-name	Speed test server name.	string	Maximum length: 35	
server-port	Port of the server to run speed test.	integer	Minimum value: 1 Maximum value: 65535	5201
status	Enable/disable scheduled speed test.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable scheduled speed test.		
	<i>enable</i>	Enable scheduled speed test.		
update-inbandwidth	Enable/disable bypassing interface's inbound bandwidth setting.	option	-	disable
	Option	Description		
	<i>disable</i>	Honor interface's inbandwidth shaping.		
	<i>enable</i>	Ignore interface's inbandwidth shaping.		

Parameter	Description	Type	Size	Default										
update-inbandwidth-maximum	Maximum downloading bandwidth (kbps) to be used in a speed test.	integer	Minimum value: 0 Maximum value: 16776000	0										
update-inbandwidth-minimum	Minimum downloading bandwidth (kbps) to be considered effective.	integer	Minimum value: 0 Maximum value: 16776000	0										
update-outbandwidth	Enable/disable bypassing interface's outbound bandwidth setting.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Honor interface's outbandwidth shaping.</td></tr><tr><td><i>enable</i></td><td>Ignore updating interface's outbandwidth shaping.</td></tr></table>				Option	Description	<i>disable</i>	Honor interface's outbandwidth shaping.	<i>enable</i>	Ignore updating interface's outbandwidth shaping.				
Option	Description													
<i>disable</i>	Honor interface's outbandwidth shaping.													
<i>enable</i>	Ignore updating interface's outbandwidth shaping.													
update-outbandwidth-maximum	Maximum uploading bandwidth (kbps) to be used in a speed test.	integer	Minimum value: 0 Maximum value: 16776000	0										
update-outbandwidth-minimum	Minimum uploading bandwidth (kbps) to be considered effective.	integer	Minimum value: 0 Maximum value: 16776000	0										
update-shaper	Set egress shaper based on the test result.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable updating egress shaper.</td></tr><tr><td><i>local</i></td><td>Update local-side egress shaper.</td></tr><tr><td><i>remote</i></td><td>Update remote-side egress shaper.</td></tr><tr><td><i>both</i></td><td>Update both local-side and remote-side egress shaper.</td></tr></table>				Option	Description	<i>disable</i>	Disable updating egress shaper.	<i>local</i>	Update local-side egress shaper.	<i>remote</i>	Update remote-side egress shaper.	<i>both</i>	Update both local-side and remote-side egress shaper.
Option	Description													
<i>disable</i>	Disable updating egress shaper.													
<i>local</i>	Update local-side egress shaper.													
<i>remote</i>	Update remote-side egress shaper.													
<i>both</i>	Update both local-side and remote-side egress shaper.													

config system speed-test-server

The `config system speed-test-server` command is read-only. Administrators cannot configure custom servers.

Configure speed test server list.

```
config system speed-test-server
  Description: Configure speed test server list.
  edit <name>
    config host
      Description: Hosts of the server.
      edit <id>
        set distance {integer}
        set ip {ipv4-address}
        set latitude {string}
        set longitude {string}
        set password {password}
        set port {integer}
        set user {string}
      next
    end
    set timestamp {integer}
  next
end
```

config system speed-test-server

Parameter	Description	Type	Size	Default
name	Speed test server name.	string	Maximum length: 35	
timestamp	Speed test server timestamp.	integer	Minimum value: 0 Maximum value: 4294967295	0

config host

Parameter	Description	Type	Size	Default
distance	Speed test host distance.	integer	Minimum value: 0 Maximum value: 4294967295	0
id	Server host ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ip	Server host IPv4 address.	ipv4-address	Not Specified	0.0.0.0

Parameter	Description	Type	Size	Default
latitude	Speed test host latitude.	string	Maximum length: 7	
longitude	Speed test host longitude.	string	Maximum length: 7	
password	Speed test host password.	password	Not Specified	
port	Server host port number to communicate with client.	integer	Minimum value: 1 Maximum value: 65535	5204
user	Speed test host user name.	string	Maximum length: 64	

config system speed-test-setting

Configure speed test setting.

```
config system speed-test-setting
    Description: Configure speed test setting.
    set latency-threshold {integer}
    set multiple-tcp-stream {integer}
end
```

config system speed-test-setting

Parameter	Description	Type	Size	Default
latency-threshold	Speed test latency threshold in milliseconds (0 - 2000, default = 60) for the Auto mode. If the latency exceeds this threshold, the speed test will use the UDP protocol; otherwise, it will use the TCP protocol.	integer	Minimum value: 0 Maximum value: 2000	60
multiple-tcp-stream	Number of parallel client streams (1 - 64, default = 4) for the TCP protocol to run during the speed test.	integer	Minimum value: 1 Maximum value: 64	4

config system ssh-config

Configure SSH config.

```
config system ssh-config
    Description: Configure SSH config.
    set ssh-enc-algo {option1}, {option2}, ...
    set ssh-hsk {user}
    set ssh-hsk-algo {option1}, {option2}, ...
```

```

set ssh-hsk-override [disable|enable]
set ssh-hsk-password {password}
set ssh-kex-algo {option1}, {option2}, ...
set ssh-mac-algo {option1}, {option2}, ...
end

```

config system ssh-config

config system standalone-cluster

Parameter	Description	Type	Size	Default						
asymmetric-traffic-control	Asymmetric traffic control mode.	option	-	cps-preferred						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>cps-preferred</i></td><td>Connection per second (CPS) preferred.</td></tr><tr><td><i>strict-anti-replay</i></td><td>Strict anti-replay check.</td></tr></table>	Option	Description	<i>cps-preferred</i>	Connection per second (CPS) preferred.	<i>strict-anti-replay</i>	Strict anti-replay check.			
Option	Description									
<i>cps-preferred</i>	Connection per second (CPS) preferred.									
<i>strict-anti-replay</i>	Strict anti-replay check.									
encryption	Enable/disable encryption when synchronizing sessions.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable encryption when synchronizing sessions.</td></tr><tr><td><i>disable</i></td><td>Disable encryption when synchronizing sessions.</td></tr></table>	Option	Description	<i>enable</i>	Enable encryption when synchronizing sessions.	<i>disable</i>	Disable encryption when synchronizing sessions.			
Option	Description									
<i>enable</i>	Enable encryption when synchronizing sessions.									
<i>disable</i>	Disable encryption when synchronizing sessions.									
group-member-id	Cluster member ID (0 - 15).	integer	Minimum value: 0 Maximum value: 15	0						
layer2-connection	Indicate whether layer 2 connections are present among FGSP members.	option	-	unavailable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>available</i></td><td>There exist layer 2 connections among FGSP members.</td></tr><tr><td><i>unavailable</i></td><td>There does not exist layer 2 connection among FGSP members.</td></tr></table>	Option	Description	<i>available</i>	There exist layer 2 connections among FGSP members.	<i>unavailable</i>	There does not exist layer 2 connection among FGSP members.			
Option	Description									
<i>available</i>	There exist layer 2 connections among FGSP members.									
<i>unavailable</i>	There does not exist layer 2 connection among FGSP members.									
monitor-interface <name>	Configure a list of interfaces on which to monitor itself. Monitoring is performed on the status of the interface. Interface name.	string	Maximum length: 79							
pingsvr-monitor-interface <name>	List of pingsvr monitor interface to check for remote IP monitoring. Interface name.	string	Maximum length: 79							
psksecret	Pre-shared secret for session synchronization (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							
session-sync-dev	Offload session-sync process to kernel and sync sessions using connected interface(s) directly.	user	Not Specified							

Parameter	Description	Type	Size	Default
standalone-group-id	Cluster group ID (0 - 255). Must be the same for all members.	integer	Minimum value: 0 Maximum value: 255	0

config cluster-peer

Parameter	Description	Type	Size	Default						
down-intfs-before-sess-sync <name>	List of interfaces to be turned down before session synchronization is complete. Interface name.	string	Maximum length: 79							
hb-interval	Heartbeat interval (1 - 20 (100*ms). Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 20	2						
hb-lost-threshold	Lost heartbeat threshold (1 - 60). Increase to reduce false positives.	integer	Minimum value: 1 Maximum value: 60	10						
ipsec-tunnel-sync	Enable/disable IPsec tunnel synchronization.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPsec tunnel synchronization.</td></tr><tr><td><i>disable</i></td><td>Disable IPsec tunnel synchronization.</td></tr></table>				Option	Description	<i>enable</i>	Enable IPsec tunnel synchronization.	<i>disable</i>	Disable IPsec tunnel synchronization.
Option	Description									
<i>enable</i>	Enable IPsec tunnel synchronization.									
<i>disable</i>	Disable IPsec tunnel synchronization.									
peerip	IP address of the interface on the peer unit that is used for the session synchronization link.	ipv4-address	Not Specified	0.0.0.0						
peervd	VDOM that contains the session synchronization link interface on the peer unit. Usually both peers would have the same peervd.	string	Maximum length: 31	root						
secondary-add-ipsec-routes	Enable/disable IKE route announcement on the backup unit.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Add IKE routes to the backup unit.</td></tr><tr><td><i>disable</i></td><td>Do not add IKE routes to the backup unit.</td></tr></table>				Option	Description	<i>enable</i>	Add IKE routes to the backup unit.	<i>disable</i>	Do not add IKE routes to the backup unit.
Option	Description									
<i>enable</i>	Add IKE routes to the backup unit.									
<i>disable</i>	Do not add IKE routes to the backup unit.									

Parameter	Description	Type	Size	Default
sync-id	Sync ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
syncvd <name>	Sessions from these VDOMs are synchronized using this session synchronization configuration. VDOM name.	string	Maximum length: 79	

config session-sync-filter

Parameter	Description	Type	Size	Default
dstaddr	Only sessions to this IPv4 address are synchronized.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0
dstaddr6	Only sessions to this IPv6 address are synchronized.	ipv6-network	Not Specified	::/0
dstintf	Only sessions to this interface are synchronized.	string	Maximum length: 15	
srcaddr	Only sessions from this IPv4 address are synchronized.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0
srcaddr6	Only sessions from this IPv6 address are synchronized.	ipv6-network	Not Specified	::/0
srcintf	Only sessions from this interface are synchronized.	string	Maximum length: 15	

config custom-service

Parameter	Description	Type	Size	Default
dst-port-range	Custom service destination port range.	user	Not Specified	0-0
id	Custom service ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
src-port-range	Custom service source port range.	user	Not Specified	0-0

config monitor-prefix

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
prefix	Prefix.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0
vdom	VDOM name.	string	Maximum length: 31	
vrf	VRF ID.	integer	Minimum value: 0 Maximum value: 511	0

config system storage

Configure logical storage.

```
config system storage
  Description: Configure logical storage.
  edit <name>
    set device {string}
    set media-status [enable|disable|...]
    set order {integer}
    set partition {string}
    set size {integer}
    set status [enable|disable]
    set usage [log|wanopt]
    set wanopt-mode [mix|wanopt|...]
  next
end
```

config system storage

Parameter	Description	Type	Size	Default
device	Partition device.	string	Maximum length: 19	?
media-status	The physical status of current media.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Storage is enabled.		
	<i>disable</i>	Storage is disabled.		
	<i>fail</i>	Storage have some fail sector.		
name	Storage name.	string	Maximum length: 35	default_n
order	Set storage order.	integer	Minimum value: 0 Maximum value: 255	0
partition	Label of underlying partition.	string	Maximum length: 16	<unknown>
size	Partition size.	integer	Minimum value: 0 Maximum value: 4294967295	0
status	Enable/disable storage.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
usage *	Use hard disk for logging or WAN Optimization (default = log).	option	-	log **
	Option	Description		
	<i>log</i>	Use hard disk for logging.		
	<i>wanopt</i>	Use hard disk for WAN Optimization.		
wanopt-mode *	WAN Optimization mode (default = mix).	option	-	mix
	Option	Description		
	<i>mix</i>	Use hard disk for WAN Optimization mix mode.		
	<i>wanopt</i>	Use hard disk for WAN Optimization wanopt mode.		
	<i>webcache</i>	Use hard disk for WAN Optimization webcache mode.		

* This parameter may not exist in some models.

** Values may differ between models.

config system stp

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 200F, FortiGate 201F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3200F, FortiGate 3201F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 600F, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 601E, FortiGate 800D, FortiGate 900D, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64.

Configure Spanning Tree Protocol (STP).

```
config system stp
    Description: Configure Spanning Tree Protocol (STP).
    set forward-delay {integer}
    set hello-time {integer}
    set max-age {integer}
    set max-hops {integer}
    set switch-priority [0|4096|...]
end
```

config system stp

Parameter	Description	Type	Size	Default
forward-delay	Forward delay (4 - 30 sec, default = 15).	integer	Minimum value: 4 Maximum value: 30	15
hello-time	Hello time (1 - 10 sec, default = 2).	integer	Minimum value: 1 Maximum value: 10	2

Parameter	Description	Type	Size	Default
max-age	Maximum packet age (6 - 40 sec, default = 20).	integer	Minimum value: 6 Maximum value: 40	20
max-hops	Maximum number of hops (1 - 40, default = 20).	integer	Minimum value: 1 Maximum value: 40	20
switch-priority	STP switch priority; the lower the number the higher the priority (select from 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, and 57344).	option	-	32768

Option	Description
0	0
4096	4096
8192	8192
12288	12288
16384	16384
20480	20480
24576	24576
28672	28672
32768	32768
36864	36864
40960	40960
45056	45056
49152	49152
53248	53248
57344	57344

config system switch-interface

Configure software switch interfaces by grouping physical and WiFi interfaces.

```
config system switch-interface
```

```
Description: Configure software switch interfaces by grouping physical and WiFi interfaces.
```

```
edit <name>
```

```

    set intra-switch-policy [implicit|explicit]
    set mac-ttl {integer}
    set member <interface-name1>, <interface-name2>, ...
    set span [disable|enable]
    set span-dest-port {string}
    set span-direction [rx|tx|...]
    set span-source-port <interface-name1>, <interface-name2>, ...
    set type [switch|hub]
    set vdom {string}
next
end

```

config system switch-interface

Parameter	Description	Type	Size	Default
intra-switch-policy	Allow any traffic between switch interfaces or require firewall policies to allow traffic between switch interfaces.	option	-	implicit
	Option	Description		
	<i>implicit</i>	Traffic between switch members is implicitly allowed.		
	<i>explicit</i>	Traffic between switch members must match firewall policies.		
mac-ttl	Duration for which MAC addresses are held in the ARP table (300 - 8640000 sec, default = 300).	integer	Minimum value: 300 Maximum value: 8640000	300
member <interface-name>	Names of the interfaces that belong to the virtual switch. Interface name.	string	Maximum length: 79	
name	Interface name (name cannot be in use by any other interfaces, VLANs, or inter-VDOM links).	string	Maximum length: 15	
span	Enable/disable port spanning. Port spanning echoes traffic received by the software switch to the span destination port.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable port spanning.		
	<i>enable</i>	Enable port spanning.		
span-dest-port	SPAN destination port name. All traffic on the SPAN source ports is echoed to the SPAN destination port.	string	Maximum length: 15	
span-direction	The direction in which the SPAN port operates, either: rx, tx, or both.	option	-	both

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rx</i></td><td>Copies only received packets from source SPAN ports to the destination SPAN port.</td></tr><tr><td><i>tx</i></td><td>Copies only transmitted packets from source SPAN ports to the destination SPAN port.</td></tr><tr><td><i>both</i></td><td>Copies both received and transmitted packets from source SPAN ports to the destination SPAN port.</td></tr></table>	Option	Description	<i>rx</i>	Copies only received packets from source SPAN ports to the destination SPAN port.	<i>tx</i>	Copies only transmitted packets from source SPAN ports to the destination SPAN port.	<i>both</i>	Copies both received and transmitted packets from source SPAN ports to the destination SPAN port.			
	Option	Description										
	<i>rx</i>	Copies only received packets from source SPAN ports to the destination SPAN port.										
	<i>tx</i>	Copies only transmitted packets from source SPAN ports to the destination SPAN port.										
<i>both</i>	Copies both received and transmitted packets from source SPAN ports to the destination SPAN port.											
span-source-port	Physical interface name. Port spanning echoes all traffic on the SPAN source ports to the SPAN destination port.	string	Maximum length: 79									
<interface-name>	Physical interface name.											
type	Type of switch based on functionality: switch for normal functionality, or hub to duplicate packets to all port members.	option	-	switch								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>switch</i></td><td>Switch for normal switch functionality (available in NAT mode only).</td></tr><tr><td><i>hub</i></td><td>Hub to duplicate packets to all member ports.</td></tr></table>	Option	Description	<i>switch</i>	Switch for normal switch functionality (available in NAT mode only).	<i>hub</i>	Hub to duplicate packets to all member ports.					
	Option	Description										
	<i>switch</i>	Switch for normal switch functionality (available in NAT mode only).										
<i>hub</i>	Hub to duplicate packets to all member ports.											
vdom	VDOM that the software switch belongs to.	string	Maximum length: 31									

config system timezone

Show timezone. Read-only.

```
config system timezone
    Description: Show timezone. Read-only.
    edit <name>
    next
end
```

config system timezone

Parameter	Description	Type	Size	Default
name	Database name of a timezone.	string	Maximum length: 63	

config system tos-based-priority

Configure Type of Service (ToS) based priority table to set network traffic priorities.

```

config system tos-based-priority
    Description: Configure Type of Service (ToS) based priority table to set network traffic
    priorities.
    edit <id>
        set priority [low|medium|...]
        set tos {integer}
    next
end

```

config system tos-based-priority

Parameter	Description	Type	Size	Default
id	Item ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
priority	ToS based priority level to low, medium or high (these priorities match firewall traffic shaping priorities) (default = medium).	option	-	high
	Option		Description	
	<i>low</i>		Low priority.	
	<i>medium</i>		Medium priority.	
	<i>high</i>		High priority.	
tos	Value of the ToS byte in the IP datagram header (0-15, 8: minimize delay, 4: maximize throughput, 2: maximize reliability, 1: minimize monetary cost, and 0: default service).	integer	Minimum value: 0 Maximum value: 15	0

config system vdom

Configure virtual domain.

```

config system vdom
    Description: Configure virtual domain.
    edit <name>
        set flag {integer}
        set short-name {string}
        set vcluster-id {integer}
    next
end

```

config system vdom

Parameter	Description	Type	Size	Default
flag	Flag.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	VDOM name.	string	Maximum length: 31	
short-name	VDOM short name.	string	Maximum length: 11	
vcluster-id	Virtual cluster ID (0 - 4294967295).	integer	Minimum value: 0 Maximum value: 4294967295	0

config system vdom-dns

Configure DNS servers for a non-management VDOM.

```
config system vdom-dns
  Description: Configure DNS servers for a non-management VDOM.
  set alt-primary {ipv4-address}
  set alt-secondary {ipv4-address}
  set interface {string}
  set interface-select-method [auto|sdwan|...]
  set ip6-primary {ipv6-address}
  set ip6-secondary {ipv6-address}
  set primary {ipv4-address}
  set protocol {option1}, {option2}, ...
  set secondary {ipv4-address}
  set server-hostname <hostname1>, <hostname2>, ...
  set server-select-method [least-rtt|failover]
  set source-ip {ipv4-address}
  set source-ip-interface {string}
  set ssl-certificate {string}
  set vdom-dns [enable|disable]
  set vrf-select {integer}
end
```

config system vdom-dns

Parameter	Description	Type	Size	Default
alt-primary	Alternate primary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0
alt-secondary	Alternate secondary DNS server. This is not used as a failover DNS server.	ipv4-address	Not Specified	0.0.0.0
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
ip6-primary	Primary IPv6 DNS server IP address for the VDOM.	ipv6-address	Not Specified	::
ip6-secondary	Secondary IPv6 DNS server IP address for the VDOM.	ipv6-address	Not Specified	::
primary	Primary DNS server IP address for the VDOM.	ipv4-address	Not Specified	0.0.0.0
protocol	DNS transport protocols.	option	-	cleartext
	Option	Description		
	<i>cleartext</i>	DNS over UDP/53, DNS over TCP/53.		
	<i>dot</i>	DNS over TLS/853.		
	<i>doh</i>	DNS over HTTPS/443.		
secondary	Secondary DNS server IP address for the VDOM.	ipv4-address	Not Specified	0.0.0.0
server-hostname <hostname>	DNS server host name list. DNS server host name list separated by space (maximum 4 domains).	string	Maximum length: 127	
server-select-method	Specify how configured servers are prioritized.	option	-	least-rtt

Parameter	Description	Type	Size	Default
	Option	Description		
	least-rtt	Select servers based on least round trip time.		
	failover	Select servers based on the order they are configured.		
source-ip	Source IP for communications with the DNS server.	ipv4-address	Not Specified	0.0.0.0
source-ip-interface	IP address of the specified interface as the source IP address.	string	Maximum length: 15	
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_Factory
vdom-dns	Enable/disable configuring DNS servers for the current VDOM.	option	-	disable
	Option	Description		
	enable	Enable configuring DNS servers for the current VDOM.		
	disable	Disable configuring DNS servers for the current VDOM.		
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config system vdom-exception

Global configuration objects that can be configured independently across different ha peers for all VDOMs or for the defined VDOM scope.

```
config system vdom-exception
    Description: Global configuration objects that can be configured independently across
different ha peers for all VDOMs or for the defined VDOM scope.
    edit <id>
        set object [log.fortianalyzer.setting|log.fortianalyzer.override-setting|...]
        set scope [all|inclusive|...]
        set vdom <name1>, <name2>, ...
    next
end
```

config system vdom-exception

Parameter	Description	Type	Size	Default
id	Index (1 - 4096).	integer	Minimum value: 1 Maximum value: 4096	0
object	Name of the configuration object that can be configured independently for all VDOMs.	option	-	

Option	Description
<i>log.fortianalyzer.setting</i>	log.fortianalyzer.setting
<i>log.fortianalyzer.override-setting</i>	log.fortianalyzer.override-setting
<i>log.fortianalyzer2.setting</i>	log.fortianalyzer2.setting
<i>log.fortianalyzer2.override-setting</i>	log.fortianalyzer2.override-setting
<i>log.fortianalyzer3.setting</i>	log.fortianalyzer3.setting
<i>log.fortianalyzer3.override-setting</i>	log.fortianalyzer3.override-setting
<i>log.fortianalyzer-cloud.setting</i>	log.fortianalyzer-cloud.setting
<i>log.fortianalyzer-cloud.override-setting</i>	log.fortianalyzer-cloud.override-setting
<i>log.syslogd.setting</i>	log.syslogd.setting
<i>log.syslogd.override-setting</i>	log.syslogd.override-setting
<i>log.syslogd2.setting</i>	log.syslogd2.setting
<i>log.syslogd2.override-setting</i>	log.syslogd2.override-setting
<i>log.syslogd3.setting</i>	log.syslogd3.setting
<i>log.syslogd3.override-setting</i>	log.syslogd3.override-setting
<i>log.syslogd4.setting</i>	log.syslogd4.setting
<i>log.syslogd4.override-setting</i>	log.syslogd4.override-setting
<i>system.gre-tunnel</i>	system.gre-tunnel
<i>system.central-management</i>	system.central-management
<i>system.csf</i>	system.csf
<i>user.radius</i>	user.radius

Parameter	Description	Type	Size	Default
	Option		Description	
	<i>log.syslogd.setting</i>	log.syslogd.setting		
	<i>log.syslogd.override-setting</i>	log.syslogd.override-setting		
	<i>firewall.address</i>	firewall.address		
scope	Determine whether the configuration object can be configured separately for all VDOMs or if some VDOMs share the same configuration.	option	-	all
	Option		Description	
	<i>all</i>	Object configuration independent for all VDOMs.		
	<i>inclusive</i>	Object configuration independent for the listed VDOMs. Other VDOMs use the global configuration.		
	<i>exclusive</i>	Use the global object configuration for the listed VDOMs. Other VDOMs can be configured independently.		
vdom <name>	Names of the VDOMs. VDOM name.	string	Maximum length: 79	

config system vdom-link

Configure VDOM links.

```

config system vdom-link
    Description: Configure VDOM links.
    edit <name>
        set type [ppp|ethernet]
        set vcluster [vcluster1|vcluster2]
    next
end

```

config system vdom-link

Parameter	Description	Type	Size	Default
name	VDOM link name (maximum = 11 characters).	string	Maximum length: 11	
type	VDOM link type: PPP or Ethernet.	option	-	ppp

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>ppp</i>	PPP VDOM link.		
	<i>ethernet</i>	Ethernet VDOM link.		
vcluster	Virtual cluster.	option	-	vcluster1
	Option	Description		
	<i>vcluster1</i>	Virtual cluster 1.		
	<i>vcluster2</i>	Virtual cluster 2.		

config system vdom-netflow

Configure NetFlow per VDOM.

```

config system vdom-netflow
    Description: Configure NetFlow per VDOM.
    config collectors
        Description: Netflow collectors.
        edit <id>
            set collector-ip {string}
            set collector-port {integer}
            set interface {string}
            set interface-select-method [auto|sdwan|...]
            set source-ip {string}
            set source-ip-interface {string}
            set vrf-select {integer}
        next
    end
    set vdom-netflow [enable|disable]
end

```

config system vdom-netflow

Parameter	Description	Type	Size	Default
vdom-netflow	Enable/disable NetFlow per VDOM.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable NetFlow per VDOM.		
	<i>disable</i>	Disable NetFlow per VDOM.		

config collectors

Parameter	Description	Type	Size	Default								
collector-ip	Collector IP.	string	Maximum length: 63									
collector-port	NetFlow collector port number.	integer	Minimum value: 0 Maximum value: 65535	2055								
id	ID.	integer	Minimum value: 1 Maximum value: 6	0								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
source-ip	Source IP address for communication with the NetFlow agent.	string	Maximum length: 63									
source-ip-interface	Name of the interface used to determine the source IP for exporting packets.	string	Maximum length: 15									
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0								

config system vdom-property

Configure VDOM property.

```
config system vdom-property
  Description: Configure VDOM property.
  edit <name>
    set custom-service {user}
    set description {string}
    set dialup-tunnel {user}
    set firewall-address {user}
    set firewall-addrggrp {user}
```

```

set firewall-policy {user}
set ipsec-phase1 {user}
set ipsec-phase1-interface {user}
set ipsec-phase2 {user}
set ipsec-phase2-interface {user}
set log-disk-quota {user}
set onetime-schedule {user}
set proxy {user}
set recurring-schedule {user}
set service-group {user}
set session {user}
set snmp-index {integer}
set sslvpn {user}
set user {user}
set user-group {user}
next
end

```

config system vdom-property

Parameter	Description	Type	Size	Default
custom-service	Maximum guaranteed number of firewall custom services.	user	Not Specified	
description	Description.	string	Maximum length: 127	
dialup-tunnel	Maximum guaranteed number of dial-up tunnels.	user	Not Specified	
firewall-address	Maximum guaranteed number of firewall addresses (IPv4, IPv6, multicast).	user	Not Specified	
firewall-addgrp	Maximum guaranteed number of firewall address groups (IPv4, IPv6).	user	Not Specified	
firewall-policy	Maximum guaranteed number of firewall policies (policy, DoS-policy4, DoS-policy6, multicast).	user	Not Specified	
ipsec-phase1	Maximum guaranteed number of VPN IPsec phase 1 tunnels.	user	Not Specified	
ipsec-phase1-interface	Maximum guaranteed number of VPN IPsec phase1 interface tunnels.	user	Not Specified	
ipsec-phase2	Maximum guaranteed number of VPN IPsec phase 2 tunnels.	user	Not Specified	
ipsec-phase2-interface	Maximum guaranteed number of VPN IPsec phase2 interface tunnels.	user	Not Specified	
log-disk-quota	Log disk quota in megabytes (MB). Range depends on how much disk space is available.	user	Not Specified	

Parameter	Description	Type	Size	Default
name	VDOM name.	string	Maximum length: 31	
onetime-schedule	Maximum guaranteed number of firewall one-time schedules.	user	Not Specified	
proxy *	Maximum guaranteed number of concurrent proxy users.	user	Not Specified	
recurring-schedule	Maximum guaranteed number of firewall recurring schedules.	user	Not Specified	
service-group	Maximum guaranteed number of firewall service groups.	user	Not Specified	
session	Maximum guaranteed number of sessions.	user	Not Specified	
snmp-index	Permanent SNMP Index of the virtual domain (1 - 2147483647).	integer	Minimum value: 1 Maximum value: 2147483647	0
sslvpn *	Maximum guaranteed number of SSL-VPNs.	user	Not Specified	
user	Maximum guaranteed number of local users.	user	Not Specified	
user-group	Maximum guaranteed number of user groups.	user	Not Specified	

* This parameter may not exist in some models.

config system vdom-radius-server

Configure a RADIUS server to use as a RADIUS Single Sign On (RSSO) server for this VDOM.

```
config system vdom-radius-server
    Description: Configure a RADIUS server to use as a RADIUS Single Sign On (RSSO) server
for this VDOM.
    edit <name>
        set radius-server-vdom {string}
        set status [enable|disable]
    next
end
```

config system vdom-radius-server

Parameter	Description	Type	Size	Default
name	Name of the VDOM that you are adding the RADIUS server to.	string	Maximum length: 31	

Parameter	Description	Type	Size	Default
radius-server-vdom	Use this option to select another VDOM containing a VDOM RADIUS server to use for the current VDOM.	string	Maximum length: 31	
status	Enable/disable the RADIUS server for this VDOM.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable the RADIUS server for this VDOM.		
	<i>disable</i>	Disable the RADIUS server for this VDOM.		

config system vdom-sflow

Configure sFlow per VDOM to add or change the IP address and UDP port that FortiGate sFlow agents in this VDOM use to send sFlow datagrams to an sFlow collector.

```
config system vdom-sflow
    Description: Configure sFlow per VDOM to add or change the IP address and UDP port that
    FortiGate sFlow agents in this VDOM use to send sFlow datagrams to an sFlow collector.
    config collectors
        Description: sFlow collectors.
        edit <id>
            set collector-ip {ipv4-address}
            set collector-port {integer}
            set interface {string}
            set interface-select-method [auto|sdwan|...]
            set source-ip {ipv4-address}
        next
    end
    set vdom-sflow [enable|disable]
end
```

config system vdom-sflow

Parameter	Description	Type	Size	Default
vdom-sflow	Enable/disable the sFlow configuration for the current VDOM.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable sFlow for this VDOM.		
	<i>disable</i>	Disable sFlow for this VDOM.		

config collectors

Parameter	Description	Type	Size	Default								
collector-ip	IP addresses of the sFlow collectors that sFlow agents added to interfaces in this VDOM send sFlow datagrams to.	ipv4-address	Not Specified	0.0.0.0								
collector-port	UDP port number used for sending sFlow datagrams (configure only if required by your sFlow collector or your network configuration) (0 - 65535, default = 6343).	integer	Minimum value: 0 Maximum value: 65535	6343								
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
source-ip	Source IP address for sFlow agent.	ipv4-address	Not Specified	0.0.0.0								

config system vin-alarm

This command is available for model(s): FortiGateRugged 70F 3G4G, FortiGateRugged 70F. It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure vin alarm settings.

```
config system vin-alarm
    Description: Configure vin alarm settings.
    set psu-1-initial-voltage {integer}
    set psu-1-threshold-low-percent {integer}
    set psu-2-initial-voltage {integer}
    set psu-2-threshold-low-percent {integer}
    set status [disable|enable]
end
```

config system vin-alarm

Parameter	Description	Type	Size	Default
psu-1-initial-voltage	Initial voltage for the first PSU	integer	Minimum value: 10 Maximum value: 125	0
psu-1-threshold-low-percent	Percentage threshold at which the first PSU voltage drops to trigger a low voltage alarm (default = 80)	integer	Minimum value: 1 Maximum value: 99	80

Parameter	Description	Type	Size	Default						
psu-2-initial-voltage	Initial voltage for the second PSU	integer	Minimum value: 10 Maximum value: 125	0						
psu-2-threshold-low-percent	Percentage threshold at which the second PSU voltage drops to trigger a low voltage alarm (default = 80)	integer	Minimum value: 1 Maximum value: 99	80						
status	Enable/disable vin alarm.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable vin alarm.</td></tr><tr><td><i>enable</i></td><td>Enable vin alarm.</td></tr></table>				Option	Description	<i>disable</i>	Disable vin alarm.	<i>enable</i>	Enable vin alarm.
Option	Description									
<i>disable</i>	Disable vin alarm.									
<i>enable</i>	Enable vin alarm.									

config system virtual-switch

This command is available for model(s): FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 200F, FortiGate 201F, FortiGate 2600F, FortiGate 2601F, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3200F, FortiGate 3201F, FortiGate 3500F, FortiGate 3501F, FortiGate 3700F, FortiGate 3701F, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 600F, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000D, FortiGate 2000E, FortiGate 200E, FortiGate 201E, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 3000D, FortiGate 3100D, FortiGate 3200D, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3960E, FortiGate 3980E, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 601E, FortiGate 800D, FortiGate 900D, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64.

Configure virtual hardware switch interfaces.

```
config system virtual-switch
    Description: Configure virtual hardware switch interfaces.
    edit <name>
```

```

    set physical-switch {string}
    config port
        Description: Configure member ports.
        edit <name>
            set alias {string}
        next
    end
    set span [disable|enable]
    set span-dest-port {string}
    set span-direction [rx|tx|...]
    set span-source-port {string}
    set vlan {integer}
next
end

```

config system virtual-switch

Parameter	Description	Type	Size	Default								
name	Name of the virtual switch.	string	Maximum length: 15									
physical-switch	Physical switch parent.	string	Maximum length: 15									
span *	Enable/disable SPAN.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable SPAN.</td></tr><tr><td><i>enable</i></td><td>Enable SPAN.</td></tr></table>				Option	Description	<i>disable</i>	Disable SPAN.	<i>enable</i>	Enable SPAN.		
	Option	Description										
	<i>disable</i>	Disable SPAN.										
<i>enable</i>	Enable SPAN.											
span-dest-port *	SPAN destination port.	string	Maximum length: 15									
span-direction *	SPAN direction.	option	-	both								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rx</i></td><td>SPAN receive direction only.</td></tr><tr><td><i>tx</i></td><td>SPAN transmit direction only.</td></tr><tr><td><i>both</i></td><td>SPAN both directions.</td></tr></table>				Option	Description	<i>rx</i>	SPAN receive direction only.	<i>tx</i>	SPAN transmit direction only.	<i>both</i>	SPAN both directions.
	Option	Description										
	<i>rx</i>	SPAN receive direction only.										
	<i>tx</i>	SPAN transmit direction only.										
<i>both</i>	SPAN both directions.											
span-source-port *	SPAN source port.	string	Maximum length: 15									
vlan *	VLAN.	integer	Minimum value: 0 Maximum value: 4294967295	0								

* This parameter may not exist in some models.

config port

Parameter	Description	Type	Size	Default
alias	Alias.	string	Maximum length: 25	
name	Physical interface name.	string	Maximum length: 15	

config system virtual-wire-pair

Configure virtual wire pairs.

```
config system virtual-wire-pair
  Description: Configure virtual wire pairs.
  edit <name>
    set member <interface-name1>, <interface-name2>, ...
    set outer-vlan-id <vlanid1>, <vlanid2>, ...
    set poweroff-bypass [enable|disable]
    set poweron-bypass [enable|disable]
    set vlan-filter {user}
    set wildcard-vlan [enable|disable]
  next
end
```

config system virtual-wire-pair

Parameter	Description	Type	Size	Default						
member <interface-name>	Interfaces belong to the virtual-wire-pair. Interface name.	string	Maximum length: 79							
name	Virtual-wire-pair name. Must be a unique interface name.	string	Maximum length: 11							
outer-vlan-id <vlanid> *	Outer VLAN ID. VLAN ID (1 - 4094).	integer	Minimum value: 1 Maximum value: 4094							
poweroff-bypass *	Enable/disable interface bypass state when power off.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable bypass when power off.</td></tr><tr><td>disable</td><td>Disable bypass when power off.</td></tr></table>				Option	Description	enable	Enable bypass when power off.	disable	Disable bypass when power off.
Option	Description									
enable	Enable bypass when power off.									
disable	Disable bypass when power off.									

Parameter	Description	Type	Size	Default
poweron-bypass *	Enable/disable interface bypass state when power on.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable bypass when power on.		
	<i>disable</i>	Disable bypass when power on.		
vlan-filter	VLAN ranges to allow	user	Not Specified	
wildcard-vlan	Enable/disable wildcard VLAN.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable wildcard VLAN.		
	<i>disable</i>	Disable wildcard VLAN.		

* This parameter may not exist in some models.

config system vene-interface

Configure virtual network enabler tunnels.

```

config system vene-interface
    Description: Configure virtual network enabler tunnels.
    edit <name>
        set auto-asic-offload [enable|disable]
        set bmr-hostname {password}
        set br {string}
        set http-password {password}
        set http-username {string}
        set interface {string}
        set ipv4-address {ipv4-classnet-host}
        set mode [map-e|fixed-ip|...]
        set ssl-certificate {string}
        set update-url {string}
    next
end

```

config system vene-interface

Parameter	Description	Type	Size	Default
auto-asic-offload *	Enable/disable tunnel ASIC offloading.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable auto ASIC offloading.		
	<i>disable</i>	Disable ASIC offloading.		
bmr-hostname	BMR hostname.	password	Not Specified	
br	IPv6 address or FQDN of the border relay.	string	Maximum length: 255	
http-password	HTTP authentication password.	password	Not Specified	
http-username	HTTP authentication user name.	string	Maximum length: 64	
interface	Interface name.	string	Maximum length: 15	
ipv4-address	Tunnel IPv4 address and netmask.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0
mode	VNE tunnel mode.	option	-	map-e
	Option	Description		
	<i>map-e</i>	Map-e mode.		
	<i>fixed-ip</i>	Fixed-ip mode.		
	<i>ds-lite</i>	DS-Lite mode.		
name	VNE tunnel name.	string	Maximum length: 15	
ssl-certificate	Name of local certificate for SSL connections.	string	Maximum length: 35	Fortinet_Factory
update-url	URL of provisioning server.	string	Maximum length: 511	

* This parameter may not exist in some models.

config system vpce

This command is available for model(s): FortiGate-VM for Aliyun, FortiGate-VM for GCP.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Configure system VPC configuration.

```
config system vpce
    Description: Configure system VPC configuration.
    edit <id>
        set endpoint-id {string}
        set name {string}
        set vdom {string}
    next
end
```

config system vpce

Parameter	Description	Type	Size	Default
endpoint-id	VPC endpoint ID.	string	Maximum length: 32	
id	Entry ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
name	VPC endpoint name.	string	Maximum length: 63	
vdom	VDOM name.	string	Maximum length: 31	

config system vxlan

Configure VXLAN devices.

```
config system vxlan
    Description: Configure VXLAN devices.
    edit <name>
        set dstport {integer}
        set evpn-id {integer}
        set interface {string}
        set ip-version [ipv4-unicast|ipv6-unicast|...]
        set learn-from-traffic [enable|disable]
        set multicast-ttl {integer}
        set remote-ip <ip1>, <ip2>, ...
        set remote-ip6 <ip61>, <ip62>, ...
        set vni {integer}
    next
end
```

config system vxlan

Parameter	Description	Type	Size	Default
dstport	VXLAN destination port (1 - 65535, default = 4789).	integer	Minimum value: 1 Maximum value: 65535	4789
evpn-id	EVPN instance.	integer	Minimum value: 1 Maximum value: 65535	0
interface	Outgoing interface for VXLAN encapsulated traffic.	string	Maximum length: 15	
ip-version	IP version to use for the VXLAN interface and so for communication over the VXLAN. IPv4 or IPv6 unicast or multicast.	option	-	ipv4-unicast

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ipv4-unicast</i></td><td>Use IPv4 unicast addressing over the VXLAN.</td></tr><tr><td><i>ipv6-unicast</i></td><td>Use IPv6 unicast addressing over the VXLAN.</td></tr><tr><td><i>ipv4-multicast</i></td><td>Use IPv4 multicast addressing over the VXLAN.</td></tr><tr><td><i>ipv6-multicast</i></td><td>Use IPv6 multicast addressing over the VXLAN.</td></tr></table>				Option	Description	<i>ipv4-unicast</i>	Use IPv4 unicast addressing over the VXLAN.	<i>ipv6-unicast</i>	Use IPv6 unicast addressing over the VXLAN.	<i>ipv4-multicast</i>	Use IPv4 multicast addressing over the VXLAN.	<i>ipv6-multicast</i>	Use IPv6 multicast addressing over the VXLAN.
	Option	Description												
	<i>ipv4-unicast</i>	Use IPv4 unicast addressing over the VXLAN.												
	<i>ipv6-unicast</i>	Use IPv6 unicast addressing over the VXLAN.												
	<i>ipv4-multicast</i>	Use IPv4 multicast addressing over the VXLAN.												
<i>ipv6-multicast</i>	Use IPv6 multicast addressing over the VXLAN.													
learn-from-traffic	Enable/disable VXLAN MAC learning from traffic.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable VXLAN MAC learning from traffic.</td></tr><tr><td><i>disable</i></td><td>Disable VXLAN MAC learning from traffic.</td></tr></table>				Option	Description	<i>enable</i>	Enable VXLAN MAC learning from traffic.	<i>disable</i>	Disable VXLAN MAC learning from traffic.				
	Option	Description												
	<i>enable</i>	Enable VXLAN MAC learning from traffic.												
<i>disable</i>	Disable VXLAN MAC learning from traffic.													
multicast-ttl	VXLAN multicast TTL (1-255, default = 0).	integer	Minimum value: 1 Maximum value: 255	0										
name	VXLAN device or interface name. Must be a unique interface name.	string	Maximum length: 15											
remote-ip <ip>	IPv4 address of the VXLAN interface on the device at the remote end of the VXLAN. IPv4 address.	string	Maximum length: 15											
remote-ip6 <ip6>	IPv6 IP address of the VXLAN interface on the device at the remote end of the VXLAN. IPv6 address.	string	Maximum length: 45											
vni	VXLAN network ID.	integer	Minimum value: 1 Maximum value: 16777215	0										

config system wccp

Configure WCCP.

```
config system wccp
  Description: Configure WCCP.
  edit <service-id>
    set assignment-bucket-format [wccp-v2|cisco-implementation]
    set assignment-dstaddr-mask {ipv4-netmask-any}
    set assignment-method [HASH|MASK|...]
    set assignment-srcaddr-mask {ipv4-netmask-any}
```

```

set assignment-weight {integer}
set authentication [enable|disable]
set cache-engine-method [GRE|L2]
set cache-id {ipv4-address}
set forward-method [GRE|L2|...]
set group-address {ipv4-address-multicast}
set password {password}
set ports {user}
set ports-defined [source|destination]
set primary-hash {option1}, {option2}, ...
set priority {integer}
set protocol {integer}
set return-method [GRE|L2|...]
set router-id {ipv4-address}
set router-list {user}
set server-list {user}
set server-type [forward|proxy]
set service-type [auto|standard|...]

```

```

next

```

```

end

```

config system wccp

Parameter	Description	Type	Size	Default								
assignment-bucket-format	Assignment bucket format for the WCCP cache engine.	option	-	cisco-implementation								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>wccp-v2</td><td>WCCP-v2 bucket format.</td></tr><tr><td>cisco-implementation</td><td>Cisco bucket format.</td></tr></table>				Option	Description	wccp-v2	WCCP-v2 bucket format.	cisco-implementation	Cisco bucket format.		
Option	Description											
wccp-v2	WCCP-v2 bucket format.											
cisco-implementation	Cisco bucket format.											
assignment-dstaddr-mask	Assignment destination address mask.	ipv4-netmask-any	Not Specified	0.0.0.0								
assignment-method	Hash key assignment preference.	option	-	HASH								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>HASH</td><td>HASH assignment method.</td></tr><tr><td>MASK</td><td>MASK assignment method.</td></tr><tr><td>any</td><td>HASH or MASK.</td></tr></table>				Option	Description	HASH	HASH assignment method.	MASK	MASK assignment method.	any	HASH or MASK.
Option	Description											
HASH	HASH assignment method.											
MASK	MASK assignment method.											
any	HASH or MASK.											
assignment-srcaddr-mask	Assignment source address mask.	ipv4-netmask-any	Not Specified	0.0.23.65								

Parameter	Description	Type	Size	Default								
assignment-weight	Assignment of hash weight/ratio for the WCCP cache engine.	integer	Minimum value: 0 Maximum value: 255	0								
authentication	Enable/disable MD5 authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable MD5 authentication.</td></tr><tr><td><i>disable</i></td><td>Disable MD5 authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable MD5 authentication.	<i>disable</i>	Disable MD5 authentication.					
Option	Description											
<i>enable</i>	Enable MD5 authentication.											
<i>disable</i>	Disable MD5 authentication.											
cache-engine-method	Method used to forward traffic to the routers or to return to the cache engine.	option	-	GRE								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>GRE</i></td><td>GRE encapsulation.</td></tr><tr><td><i>L2</i></td><td>L2 rewrite.</td></tr></table>	Option	Description	<i>GRE</i>	GRE encapsulation.	<i>L2</i>	L2 rewrite.					
Option	Description											
<i>GRE</i>	GRE encapsulation.											
<i>L2</i>	L2 rewrite.											
cache-id	IP address known to all routers. If the addresses are the same, use the default 0.0.0.0.	ipv4-address	Not Specified	0.0.0.0								
forward-method	Method used to forward traffic to the cache servers.	option	-	GRE								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>GRE</i></td><td>GRE encapsulation.</td></tr><tr><td><i>L2</i></td><td>L2 rewrite.</td></tr><tr><td><i>any</i></td><td>GRE or L2.</td></tr></table>	Option	Description	<i>GRE</i>	GRE encapsulation.	<i>L2</i>	L2 rewrite.	<i>any</i>	GRE or L2.			
Option	Description											
<i>GRE</i>	GRE encapsulation.											
<i>L2</i>	L2 rewrite.											
<i>any</i>	GRE or L2.											
group-address	IP multicast address used by the cache routers. For the FortiGate to ignore multicast WCCP traffic, use the default 0.0.0.0.	ipv4-address-multicast	Not Specified	0.0.0.0								
password	Password for MD5 authentication.	password	Not Specified									
ports	Service ports.	user	Not Specified									
ports-defined	Match method.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>source</i></td><td>Source port match.</td></tr><tr><td><i>destination</i></td><td>Destination port match.</td></tr></table>	Option	Description	<i>source</i>	Source port match.	<i>destination</i>	Destination port match.					
Option	Description											
<i>source</i>	Source port match.											
<i>destination</i>	Destination port match.											

Parameter	Description	Type	Size	Default										
primary-hash	Hash method.	option	-	dst-ip										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>src-ip</td><td>Source IP hash.</td></tr><tr><td>dst-ip</td><td>Destination IP hash.</td></tr><tr><td>src-port</td><td>Source port hash.</td></tr><tr><td>dst-port</td><td>Destination port hash.</td></tr></table>	Option	Description	src-ip	Source IP hash.	dst-ip	Destination IP hash.	src-port	Source port hash.	dst-port	Destination port hash.			
	Option	Description												
	src-ip	Source IP hash.												
	dst-ip	Destination IP hash.												
	src-port	Source port hash.												
dst-port	Destination port hash.													
priority	Service priority.	integer	Minimum value: 0 Maximum value: 255	0										
protocol	Service protocol.	integer	Minimum value: 0 Maximum value: 255	0										
return-method	Method used to decline a redirected packet and return it to the FortiGate unit.	option	-	GRE										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>GRE</td><td>GRE encapsulation.</td></tr><tr><td>L2</td><td>L2 rewrite.</td></tr><tr><td>any</td><td>GRE or L2.</td></tr></table>	Option	Description	GRE	GRE encapsulation.	L2	L2 rewrite.	any	GRE or L2.					
	Option	Description												
	GRE	GRE encapsulation.												
	L2	L2 rewrite.												
any	GRE or L2.													
router-id	IP address known to all cache engines. If all cache engines connect to the same FortiGate interface, use the default 0.0.0.0.	ipv4-address	Not Specified	0.0.0.0										
router-list	IP addresses of one or more WCCP routers.	user	Not Specified											
server-list	IP addresses and netmasks for up to four cache servers.	user	Not Specified											
server-type	Cache server type.	option	-	forward										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>forward</td><td>Forward server.</td></tr><tr><td>proxy</td><td>Proxy server.</td></tr></table>	Option	Description	forward	Forward server.	proxy	Proxy server.							
	Option	Description												
	forward	Forward server.												
proxy	Proxy server.													
service-id	Service ID.	string	Maximum length: 3											

Parameter	Description	Type	Size	Default
service-type	WCCP service type used by the cache server for logical interception and redirection of traffic.	option	-	auto
	Option	Description		
	auto	auto		
	standard	Standard service.		
	dynamic	Dynamic service.

```
config system wireless ap-status
    Description: Configure accepted wireless AP.
    edit <id>
        set bssid {mac-address}
        set ssid {string}
        set status [rogue|accepted|...]
    next
end
```

config system wireless ap-status

Parameter	Description	Type	Size	Default
bssid	AP's BSSID.	mac-address	Not Specified	00:00:00:00:00:00
id	AP ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ssid	AP's ssid	string	Maximum length: 32	
status	AP status.	option	-	rogue
		Option	Description	
		<i>rogue</i>	Rogue.	
		<i>accepted</i>	Accepted.	
		<i>suppressed</i>	Suppressed.	

config system wireless settings

This command is available for model(s): FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F.

It is not available for: FortiGate 1000D, FortiGate 1000F, FortiGate 1001F, FortiGate 100F, FortiGate 101F, FortiGate 1100E, FortiGate 1101E, FortiGate 120G, FortiGate 121G, FortiGate 1800F, FortiGate 1801F, FortiGate 2000E, FortiGate 200E, FortiGate 200F, FortiGate 201E, FortiGate 201F, FortiGate 2200E, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3000F, FortiGate 3001F, FortiGate 300E, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3200F, FortiGate 3201F, FortiGate 3300E, FortiGate 3301E, FortiGate 3400E, FortiGate 3401E, FortiGate 3500F, FortiGate 3501F, FortiGate 3600E, FortiGate 3601E, FortiGate 3700D, FortiGate 3700F, FortiGate 3701F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 401E, FortiGate 401F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4201F, FortiGate 4400F, FortiGate 4401F, FortiGate 5001E1, FortiGate 5001E, FortiGate 500E, FortiGate 501E, FortiGate 600E, FortiGate 600F, FortiGate 601E, FortiGate 601F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 71F, FortiGate 800D, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 900G, FortiGate 901G, FortiGate 90G, FortiGate 91G, FortiGate-VM for Aliyun, FortiGate-VM for AWS, FortiGate-VM for Azure, FortiGate-VM for GCP, FortiGate-VM for OPC, FortiGate-VM64, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 80F 2R, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

Wireless radio configuration.

```
config system wireless settings
    Description: Wireless radio configuration.
    set band [802.11a|802.11b|...]
    set beacon-interval {integer}
    set bgscan [disable|enable]
    set bgscan-idle {integer}
    set bgscan-interval {integer}
    set channel {integer}
    set channel-bonding [enable|disable]
    set geography [World|Americas|...]
    set mode [CLIENT|AP|...]
    set power-level {integer}
    set rogue-scan [enable|disable]
    set rogue-scan-mac-adjacency {integer}
    set short-guard-interval [enable|disable]
end
```

config system wireless settings

Parameter	Description	Type	Size	Default
band	Band.	option	-	802.11g
	Option	Description		
	802.11a	802.11a.		
	802.11b	802.11b.		
	802.11g	802.11g.		
	802.11g-only	802.11g only.		
	802.11n	802.11n at 2.4G band.		
	802.11ng-only	802.11ng only at 2.4G band.		
	802.11n-only	802.11n only at 2.4G band.		
	802.11n-5G	802.11n at 5G band.		
	802.11n-5G-only	802.11n only at 5G band.		
	802.11ac	802.11ac at 5G band.		
	802.11acn-only	802.11acn only at 5G band.		
	802.11ac-only	802.11ac only at 5G band.		
beacon-interval	Beacon level (25 - 1000).	integer	Minimum value: 25 Maximum value: 1000	100
bgscan	Enable/disable background rogue AP scan.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable background rogue AP scan.		
	<i>enable</i>	Enable background rogue AP scan.		
bgscan-idle	Interval between scanning channels (100 - 1000 ms).	integer	Minimum value: 100 Maximum value: 1000	250
bgscan-interval	Interval between two rounds of scanning (15 - 3600 sec).	integer	Minimum value: 15 Maximum value: 3600	120
channel	Channel.	integer	Minimum value: 0 Maximum value: 4294967295	0
channel-bonding	Supported channel width.	option	-	disable
	Option	Description		
	<i>enable</i>	20/40 MHz.		
	<i>disable</i>	20 MHz.		
geography	Geography.	option	-	Americas
	Option	Description		
	<i>World</i>	World.		
	<i>Americas</i>	Americas.		
	<i>EMEA</i>	EMEA.		
	<i>Israel</i>	Israel.		
	<i>Japan</i>	Japan.		
mode	Mode.	option	-	AP
	Option	Description		
	<i>CLIENT</i>	Client.		
	<i>AP</i>	Access point.		
	<i>SCAN</i>	Scan.		

Parameter	Description	Type	Size	Default
power-level	Power level (0 - 17).	integer	Minimum value: 0 Maximum value: 17	17
rogue-scan	Enable/disable rogue scan.	option	-	disable
	Option	Description		
	enable	Enable rogue scan.		
	disable	Disable rogue scan.		
rogue-scan-mac-adjacency	MAC adjacency (0-31).	integer	Minimum value: 0 Maximum value: 31	7
short-guard-interval	Enable/disable short guard interval.	option	-	disable
	Option	Description		
	enable	400 ns long guard interval.		
	disable	800 ns short guard interval.		

config system zone

Configure zones to group two or more interfaces. When a zone is created you can configure policies for the zone instead of individual interfaces in the zone.

```
config system zone
    Description: Configure zones to group two or more interfaces. When a zone is created you
    can configure policies for the zone instead of individual interfaces in the zone.
    edit <name>
        set description {string}
        set interface <interface-name1>, <interface-name2>, ...
        set intrazone [allow|deny]
        config tagging
            Description: Config object tagging.
            edit <name>
                set category {string}
                set tags <name1>, <name2>, ...
            next
        end
    next
end
```

config system zone

Parameter	Description	Type	Size	Default						
description	Description.	string	Maximum length: 127							
interface <interface-name>	Add interfaces to this zone. Interfaces must not be assigned to another zone or have firewall policies defined. Select interfaces to add to the zone.	string	Maximum length: 79							
intrazone	Allow or deny traffic routing between different interfaces in the same zone (default = deny).	option	-	deny						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow traffic between interfaces in the zone.</td></tr><tr><td>deny</td><td>Deny traffic between interfaces in the zone.</td></tr></table>				Option	Description	allow	Allow traffic between interfaces in the zone.	deny	Deny traffic between interfaces in the zone.
Option	Description									
allow	Allow traffic between interfaces in the zone.									
deny	Deny traffic between interfaces in the zone.									
name	Zone name.	string	Maximum length: 35							

config tagging

Parameter	Description	Type	Size	Default
category	Tag category.	string	Maximum length: 63	
name	Tagging entry name.	string	Maximum length: 63	
tags <name>	Tags. Tag name.	string	Maximum length: 79	

user

This section includes syntax for the following commands:

- [config user adgrp on page 1884](#)

config user adgrp

Configure FSSO groups.

```
config user adgrp
  Description: Configure FSSO groups.
  edit <name>
    set connector-source {string}
    set id {integer}
    set server-name {string}
  next
end
```

config user adgrp

Parameter	Description	Type	Size	Default
connector-source	FSSO connector source.	string	Maximum length: 35	
id	Group ID. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Name.	string	Maximum length: 511	
server-name	FSSO agent name.	string	Maximum length: 35	

config user certificate

Configure certificate users.

```
config user certificate
  Description: Configure certificate users.
  edit <name>
    set common-name {string}
    set id {integer}
    set issuer {string}
    set status [enable|disable]
    set type [single-certificate|trusted-issuer]
  next
end
```

config user certificate

Parameter	Description	Type	Size	Default
common-name	Certificate common name.	string	Maximum length: 64	
id	User ID. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0
issuer	CA certificate used for client certificate verification.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default						
name	User name.	string	Maximum length: 64							
status	Enable/disable allowing the certificate user to authenticate with the FortiGate unit.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable user.</td></tr><tr><td><i>disable</i></td><td>Disable user.</td></tr></table>				Option	Description	<i>enable</i>	Enable user.	<i>disable</i>	Disable user.
Option	Description									
<i>enable</i>	Enable user.									
<i>disable</i>	Disable user.									
type	Type of certificate authentication method.	option	-	single-certificate						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>single-certificate</i></td><td>Single certificate.</td></tr><tr><td><i>trusted-issuer</i></td><td>Trusted CA issuer.</td></tr></table>				Option	Description	<i>single-certificate</i>	Single certificate.	<i>trusted-issuer</i>	Trusted CA issuer.
Option	Description									
<i>single-certificate</i>	Single certificate.									
<i>trusted-issuer</i>	Trusted CA issuer.									

config user domain-controller

Configure domain controller entries.

```
config user domain-controller
    Description: Configure domain controller entries.
    edit <name>
        set ad-mode [none|ds|...]
        set adlds-dn {string}
        set adlds-ip-address {ipv4-address}
        set adlds-ip6 {ipv6-address}
        set adlds-port {integer}
        set change-detection [enable|disable]
        set change-detection-period {integer}
        set dns-srv-lookup [enable|disable]
        set domain-name {string}
        config extra-server
            Description: Extra servers.
            edit <id>
                set ip-address {ipv4-address}
                set port {integer}
                set source-ip-address {ipv4-address}
                set source-port {integer}
            next
        end
        set hostname {string}
        set interface {string}
        set interface-select-method [auto|sdwan|...]
        set ip-address {ipv4-address}
        set ip6 {ipv6-address}
        set ldap-server <name1>, <name2>, ...
        set password {password}
```

```

        set port {integer}
        set replication-port {integer}
        set source-ip-address {ipv4-address}
        set source-ip6 {ipv6-address}
        set source-port {integer}
        set username {string}
    next
end

```

config user domain-controller

Parameter	Description	Type	Size	Default								
ad-mode	Set Active Directory mode.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>The server is not configured as an Active Directory Domain Server (AD DS).</td></tr><tr><td><i>ds</i></td><td>The server is configured as an Active Directory Domain Server (AD DS).</td></tr><tr><td><i>lds</i></td><td>The server is an Active Directory Lightweight Domain Server (AD LDS).</td></tr></table>	Option	Description	<i>none</i>	The server is not configured as an Active Directory Domain Server (AD DS).	<i>ds</i>	The server is configured as an Active Directory Domain Server (AD DS).	<i>lds</i>	The server is an Active Directory Lightweight Domain Server (AD LDS).			
	Option	Description										
	<i>none</i>	The server is not configured as an Active Directory Domain Server (AD DS).										
	<i>ds</i>	The server is configured as an Active Directory Domain Server (AD DS).										
<i>lds</i>	The server is an Active Directory Lightweight Domain Server (AD LDS).											
adlds-dn	AD LDS distinguished name.	string	Maximum length: 255									
adlds-ip-address	AD LDS IPv4 address.	ipv4-address	Not Specified	0.0.0.0								
adlds-ip6	AD LDS IPv6 address.	ipv6-address	Not Specified	::								
adlds-port	Port number of AD LDS service (default = 389).	integer	Minimum value: 0 Maximum value: 65535	389								
change-detection	Enable/disable detection of a configuration change in the Active Directory server.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable detection of a configuration change in the Active Directory server.</td></tr><tr><td><i>disable</i></td><td>Disable detection of a configuration change in the Active Directory server.</td></tr></table>	Option	Description	<i>enable</i>	Enable detection of a configuration change in the Active Directory server.	<i>disable</i>	Disable detection of a configuration change in the Active Directory server.					
	Option	Description										
	<i>enable</i>	Enable detection of a configuration change in the Active Directory server.										
<i>disable</i>	Disable detection of a configuration change in the Active Directory server.											
change-detection-period	Minutes to detect a configuration change in the Active Directory server (5 - 10080 minutes (7 days), default = 60).	integer	Minimum value: 5 Maximum value: 10080	60								

Parameter	Description	Type	Size	Default								
dns-srv-lookup	Enable/disable DNS service lookup.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable DNS service lookup.</td></tr><tr><td><i>disable</i></td><td>Disable DNS service lookup.</td></tr></table>	Option	Description	<i>enable</i>	Enable DNS service lookup.	<i>disable</i>	Disable DNS service lookup.					
	Option	Description										
	<i>enable</i>	Enable DNS service lookup.										
<i>disable</i>	Disable DNS service lookup.											
domain-name	Domain DNS name.	string	Maximum length: 255									
hostname	Hostname of the server to connect to.	string	Maximum length: 255									
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.			
	Option	Description										
	<i>auto</i>	Set outgoing interface automatically.										
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.										
<i>specify</i>	Set outgoing interface manually.											
ip-address	Domain controller IPv4 address.	ipv4-address	Not Specified	0.0.0.0								
ip6	Domain controller IPv6 address.	ipv6-address	Not Specified	::								
ldap-server <name>	LDAP server name(s). LDAP server name.	string	Maximum length: 79									
name	Domain controller entry name.	string	Maximum length: 35									
password	Password for specified username.	password	Not Specified									
port	Port to be used for communication with the domain controller (default = 445).	integer	Minimum value: 0 Maximum value: 65535	445								

Parameter	Description	Type	Size	Default
replication-port	Port to be used for communication with the domain controller for replication service. Port number 0 indicates automatic discovery.	integer	Minimum value: 0 Maximum value: 65535	0
source-ip-address	FortiGate IPv4 address to be used for communication with the domain controller.	ipv4-address	Not Specified	0.0.0.0
source-ip6	FortiGate IPv6 address to be used for communication with the domain controller.	ipv6-address	Not Specified	::
source-port	Source port to be used for communication with the domain controller.	integer	Minimum value: 0 Maximum value: 65535	0
username	User name to sign in with. Must have proper permissions for service.	string	Maximum length: 64	

config extra-server

Parameter	Description	Type	Size	Default
id	Server ID.	integer	Minimum value: 1 Maximum value: 100	0
ip-address	Domain controller IP address.	ipv4-address	Not Specified	0.0.0.0
port	Port to be used for communication with the domain controller (default = 445).	integer	Minimum value: 0 Maximum value: 65535	445
source-ip-address	FortiGate IPv4 address to be used for communication with the domain controller.	ipv4-address	Not Specified	0.0.0.0
source-port	Source port to be used for communication with the domain controller.	integer	Minimum value: 0 Maximum value: 65535	0

config user exchange

Configure MS Exchange server entries.

```

config user exchange
    Description: Configure MS Exchange server entries.
    edit <name>
        set auth-level [connect|call|...]
        set auth-type [spnego|ntlm|...]
        set auto-discover-kdc [enable|disable]
        set connect-protocol [rpc-over-tcp|rpc-over-http|...]
        set domain-name {string}
        set http-auth-type [basic|ntlm]
        set ip {ipv4-address-any}
        set kdc-ip <ipv41>, <ipv42>, ...
        set password {password}
        set server-name {string}
        set ssl-min-proto-version [default|SSLv3|...]
        set username {string}
    next
end

```

config user exchange

Parameter	Description	Type	Size	Default												
auth-level	Authentication security level used for the RPC protocol layer.	option	-	privacy												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>connect</i></td><td>RPC authentication level 'connect'.</td></tr><tr><td><i>call</i></td><td>RPC authentication level 'call'.</td></tr><tr><td><i>packet</i></td><td>RPC authentication level 'packet'.</td></tr><tr><td><i>integrity</i></td><td>RPC authentication level 'integrity'.</td></tr><tr><td><i>privacy</i></td><td>RPC authentication level 'privacy'.</td></tr></table>	Option	Description	<i>connect</i>	RPC authentication level 'connect'.	<i>call</i>	RPC authentication level 'call'.	<i>packet</i>	RPC authentication level 'packet'.	<i>integrity</i>	RPC authentication level 'integrity'.	<i>privacy</i>	RPC authentication level 'privacy'.			
Option	Description															
<i>connect</i>	RPC authentication level 'connect'.															
<i>call</i>	RPC authentication level 'call'.															
<i>packet</i>	RPC authentication level 'packet'.															
<i>integrity</i>	RPC authentication level 'integrity'.															
<i>privacy</i>	RPC authentication level 'privacy'.															
auth-type	Authentication security type used for the RPC protocol layer.	option	-	kerberos												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>spnego</i></td><td>Negotiate authentication.</td></tr><tr><td><i>ntlm</i></td><td>NTLM authentication.</td></tr><tr><td><i>kerberos</i></td><td>Kerberos authentication.</td></tr></table>	Option	Description	<i>spnego</i>	Negotiate authentication.	<i>ntlm</i>	NTLM authentication.	<i>kerberos</i>	Kerberos authentication.							
Option	Description															
<i>spnego</i>	Negotiate authentication.															
<i>ntlm</i>	NTLM authentication.															
<i>kerberos</i>	Kerberos authentication.															
auto-discover-kdc	Enable/disable automatic discovery of KDC IP addresses.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic discovery of KDC IP addresses.</td></tr><tr><td><i>disable</i></td><td>Disable automatic discovery of KDC IP addresses.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic discovery of KDC IP addresses.	<i>disable</i>	Disable automatic discovery of KDC IP addresses.									
Option	Description															
<i>enable</i>	Enable automatic discovery of KDC IP addresses.															
<i>disable</i>	Disable automatic discovery of KDC IP addresses.															

Parameter	Description	Type	Size	Default								
connect-protocol	Connection protocol used to connect to MS Exchange service.	option	-	rpc-over-https								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>rpc-over-tcp</td><td>Connect using RPC-over-TCP. Use for MS Exchange 2010 and earlier versions. Supported in MS Exchange 2013.</td></tr><tr><td>rpc-over-http</td><td>Connect using RPC-over-HTTP. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.</td></tr><tr><td>rpc-over-https</td><td>Connect using RPC-over-HTTPS. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.</td></tr></table>				Option	Description	rpc-over-tcp	Connect using RPC-over-TCP. Use for MS Exchange 2010 and earlier versions. Supported in MS Exchange 2013.	rpc-over-http	Connect using RPC-over-HTTP. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.	rpc-over-https	Connect using RPC-over-HTTPS. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.
	Option	Description										
	rpc-over-tcp	Connect using RPC-over-TCP. Use for MS Exchange 2010 and earlier versions. Supported in MS Exchange 2013.										
	rpc-over-http	Connect using RPC-over-HTTP. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.										
rpc-over-https	Connect using RPC-over-HTTPS. Use for MS Exchange 2016 and later versions. Supported in MS Exchange 2013.											
domain-name	MS Exchange server fully qualified domain name.	string	Maximum length: 79									
http-auth-type	Authentication security type used for the HTTP transport.	option	-	ntlm								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>basic</td><td>Basic HTTP authentication.</td></tr><tr><td>ntlm</td><td>NTLM HTTP authentication.</td></tr></table>				Option	Description	basic	Basic HTTP authentication.	ntlm	NTLM HTTP authentication.		
	Option	Description										
	basic	Basic HTTP authentication.										
ntlm	NTLM HTTP authentication.											
ip	Server IPv4 address.	ipv4-address-any	Not Specified	0.0.0.0								
kdc-ip<ipv4>	KDC IPv4 addresses for Kerberos authentication. KDC IPv4 addresses for Kerberos authentication.	string	Maximum length: 79									
name	MS Exchange server entry name.	string	Maximum length: 35									
password	Password for the specified username.	password	Not Specified									
server-name	MS Exchange server hostname.	string	Maximum length: 63									
ssl-min-protocol-version	Minimum SSL/TLS protocol version for HTTPS transport (default is to follow system global setting).	option	-	default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Follow system global setting.</td></tr><tr><td>SSLv3</td><td>SSLv3.</td></tr><tr><td>TLSv1</td><td>TLSv1.</td></tr></table>				Option	Description	default	Follow system global setting.	SSLv3	SSLv3.	TLSv1	TLSv1.
	Option	Description										
	default	Follow system global setting.										
	SSLv3	SSLv3.										
TLSv1	TLSv1.											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>TLSv1-1</i>	TLSv1.1.		
	<i>TLSv1-2</i>	TLSv1.2.		
	<i>TLSv1-3</i>	TLSv1.3.		
username	User name used to sign in to the server. Must have proper permissions for service.	string	Maximum length: 64	

config user external-identity-provider

Configure external identity provider.

```

config user external-identity-provider

        set vrf-select {integer}
    next
end

```

config user external-identity-provider

Parameter	Description	Type	Size	Default
group-attr-name	Group attribute name in authentication query.	string	Maximum length: 63	id
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
	Option	Description								
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.								
<i>specify</i>	Set outgoing interface manually.									
name	External identity provider name.	string	Maximum length: 35							
port	External identity provider service port number (0 to use default).	integer	Minimum value: 0 Maximum value: 65535	0						
server-identity-check	Enable/disable server's identity check against its certificate and subject alternative name(s).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not check server's identity against its certificate and subject alternative name(s).</td></tr><tr><td><i>enable</i></td><td>Check server's identity against its certificate and subject alternative name(s).</td></tr></table>				Option	Description	<i>disable</i>	Do not check server's identity against its certificate and subject alternative name(s).	<i>enable</i>	Check server's identity against its certificate and subject alternative name(s).
	Option	Description								
	<i>disable</i>	Do not check server's identity against its certificate and subject alternative name(s).								
<i>enable</i>	Check server's identity against its certificate and subject alternative name(s).									
source-ip	Use this IPv4/v6 address to connect to the external identity provider.	string	Maximum length: 63							
timeout	Connection timeout value in seconds (default=5).	integer	Minimum value: 1 Maximum value: 60	5						
type	External identity provider type.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ms-graph</i></td><td>Microsoft Graph server.</td></tr></table>				Option	Description	<i>ms-graph</i>	Microsoft Graph server.		
	Option	Description								
<i>ms-graph</i>	Microsoft Graph server.									
url	External identity provider URL (e.g. "https://example.com:8080/api/v1"). Read-only.	string	Maximum length: 127							
user-attr-name	User attribute name in authentication query.	string	Maximum length: 63	userPrincipalName						
version	External identity API version.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>v1.0</i></td><td>MS Graph REST API v1.0.</td></tr><tr><td><i>beta</i></td><td>MS Graph REST API beta (debug build only).</td></tr></table>				Option	Description	<i>v1.0</i>	MS Graph REST API v1.0.	<i>beta</i>	MS Graph REST API beta (debug build only).
	Option	Description								
	<i>v1.0</i>	MS Graph REST API v1.0.								
<i>beta</i>	MS Graph REST API beta (debug build only).									

Parameter	Description	Type	Size	Default
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config user fortitoken

Configure FortiToken.

```
config user fortitoken
    Description: Configure FortiToken.
    edit <serial-number>
        set activation-code {string}
        set activation-expire {integer}
        set comments {var-string}
        set license {string}
        set os-ver {string}
        set reg-id {string}
        set seed {string}
        set status [active|lock]
    next
end
```

config user fortitoken

Parameter	Description	Type	Size	Default
activation-code	Mobile token user activation-code.	string	Maximum length: 32	
activation-expire	Mobile token user activation-code expire time.	integer	Minimum value: 0 Maximum value: 4294967295	0
comments	Comment.	var-string	Maximum length: 255	
license	Mobile token license.	string	Maximum length: 31	
os-ver	Device Mobile Version.	string	Maximum length: 15	
reg-id	Device Reg ID.	string	Maximum length: 256	
seed	Token seed.	string	Maximum length: 208	

Parameter	Description	Type	Size	Default						
serial-number	Serial number.	string	Maximum length: 16							
status	Status.	option	-	active						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>active</i></td><td>Activate FortiToken.</td></tr><tr><td><i>lock</i></td><td>Lock FortiToken.</td></tr></table>				Option	Description	<i>active</i>	Activate FortiToken.	<i>lock</i>	Lock FortiToken.
Option	Description									
<i>active</i>	Activate FortiToken.									
<i>lock</i>	Lock FortiToken.									

config user fsso

Configure Fortinet Single Sign On (FSSO) agents.

```
config user fsso
  Description: Configure Fortinet Single Sign On (FSSO) agents.
  edit <name>
    set group-poll-interval {integer}
    set interface {string}
    set interface-select-method [auto|sdwan|...]
    set ldap-poll [enable|disable]

    set vrf-select {integer}
  next
end
```

config user fssso

Parameter	Description	Type	Size	Default								
group-poll-interval	Interval in minutes within to fetch groups from FSSO server, or unset to disable.	integer	Minimum value: 1 Maximum value: 2880	0								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.
Option	Description											
<i>auto</i>	Set outgoing interface automatically.											
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											
<i>specify</i>	Set outgoing interface manually.											
ldap-poll	Enable/disable automatic fetching of groups from LDAP server.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic fetching of groups from LDAP server.</td></tr><tr><td><i>disable</i></td><td>Disable automatic fetching of groups from LDAP server.</td></tr></table>				Option	Description	<i>enable</i>	Enable automatic fetching of groups from LDAP server.	<i>disable</i>	Disable automatic fetching of groups from LDAP server.		
Option	Description											
<i>enable</i>	Enable automatic fetching of groups from LDAP server.											
<i>disable</i>	Disable automatic fetching of groups from LDAP server.											
ldap-poll-filter	Filter used to fetch groups.	string	Maximum length: 2047	(objectCategory=group)								
ldap-poll-interval	Interval in minutes within to fetch groups from LDAP server.	integer	Minimum value: 1 Maximum value: 2880	180								
ldap-server	LDAP server to get group information.	string	Maximum length: 35									
logon-timeout	Interval in minutes to keep logons after FSSO server down.	integer	Minimum value: 1 Maximum value: 2880	5								
name	Name.	string	Maximum length: 35									
password	Password of the first FSSO collector agent.	password	Not Specified									

Parameter	Description	Type	Size	Default
password2	Password of the second FSSO collector agent.	password	Not Specified	
password3	Password of the third FSSO collector agent.	password	Not Specified	
password4	Password of the fourth FSSO collector agent.	password	Not Specified	
password5	Password of the fifth FSSO collector agent.	password	Not Specified	
port	Port of the first FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port2	Port of the second FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port3	Port of the third FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port4	Port of the fourth FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
port5	Port of the fifth FSSO collector agent.	integer	Minimum value: 1 Maximum value: 65535	8000
server	Domain name or IP address of the first FSSO collector agent.	string	Maximum length: 63	
server2	Domain name or IP address of the second FSSO collector agent.	string	Maximum length: 63	
server3	Domain name or IP address of the third FSSO collector agent.	string	Maximum length: 63	

Parameter	Description	Type	Size	Default						
server4	Domain name or IP address of the fourth FSSO collector agent.	string	Maximum length: 63							
server5	Domain name or IP address of the fifth FSSO collector agent.	string	Maximum length: 63							
sni	Server Name Indication.	string	Maximum length: 255							
source-ip	Source IP for communications to FSSO agent.	ipv4-address	Not Specified	0.0.0.0						
source-ip6	IPv6 source for communications to FSSO agent.	ipv6-address	Not Specified	::						
ssl	Enable/disable use of SSL.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of SSL.</td></tr><tr><td><i>disable</i></td><td>Disable use of SSL.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of SSL.	<i>disable</i>	Disable use of SSL.			
Option	Description									
<i>enable</i>	Enable use of SSL.									
<i>disable</i>	Disable use of SSL.									
ssl-server-host-ip-check	Enable/disable server host/IP verification.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable server host/IP verification.</td></tr><tr><td><i>disable</i></td><td>Disable server host/IP verification.</td></tr></table>	Option	Description	<i>enable</i>	Enable server host/IP verification.	<i>disable</i>	Disable server host/IP verification.			
Option	Description									
<i>enable</i>	Enable server host/IP verification.									
<i>disable</i>	Disable server host/IP verification.									
ssl-trusted-cert	Trusted server certificate or CA certificate.	string	Maximum length: 79							
type	Server type.	option	-	default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>All other unspecified types of servers.</td></tr><tr><td><i>fortinac</i></td><td>FortiNAC server.</td></tr></table>	Option	Description	<i>default</i>	All other unspecified types of servers.	<i>fortinac</i>	FortiNAC server.			
Option	Description									
<i>default</i>	All other unspecified types of servers.									
<i>fortinac</i>	FortiNAC server.									
user-info-server	LDAP server to get user information.	string	Maximum length: 35							
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0						

config user fssso-polling

Configure FSSO active directory servers for polling mode.

```

config user fsso-polling
  Description: Configure FSSO active directory servers for polling mode.
  edit <id>
    config adgrp
      Description: LDAP Group Info.
      edit <name>
        next
      end
    set default-domain {string}
    set ldap-server {string}
    set logon-history {integer}
    set password {password}
    set polling-frequency {integer}
    set port {integer}
    set server {string}
    set smb-ntlmv1-auth [enable|disable]
    set smbv1 [enable|disable]
    set status [enable|disable]
    set user {string}
  next
end

```

config user fsso-polling

Parameter	Description	Type	Size	Default
default-domain	Default domain managed by this Active Directory server.	string	Maximum length: 35	
id	Active Directory server ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
ldap-server	LDAP server name used in LDAP connection strings.	string	Maximum length: 35	
logon-history	Number of hours of logon history to keep, 0 means keep all history.	integer	Minimum value: 0 Maximum value: 48	8
password	Password required to log into this Active Directory server.	password	Not Specified	
polling-frequency	Polling frequency (every 1 to 30 seconds).	integer	Minimum value: 1 Maximum value: 30	10

Parameter	Description	Type	Size	Default						
port	Port to communicate with this Active Directory server.	integer	Minimum value: 0 Maximum value: 65535	0						
server	Host name or IP address of the Active Directory server.	string	Maximum length: 63							
smb-ntlmv1-auth	Enable/disable support of NTLMv1 for Samba authentication.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable support of NTLMv1 for Samba authentication.</td></tr><tr><td><i>disable</i></td><td>Disable support of NTLMv1 for Samba authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable support of NTLMv1 for Samba authentication.	<i>disable</i>	Disable support of NTLMv1 for Samba authentication.
Option	Description									
<i>enable</i>	Enable support of NTLMv1 for Samba authentication.									
<i>disable</i>	Disable support of NTLMv1 for Samba authentication.									
smbv1	Enable/disable support of SMBv1 for Samba.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable support of SMBv1 for Samba.</td></tr><tr><td><i>disable</i></td><td>Disable support of SMBv1 for Samba.</td></tr></table>				Option	Description	<i>enable</i>	Enable support of SMBv1 for Samba.	<i>disable</i>	Disable support of SMBv1 for Samba.
Option	Description									
<i>enable</i>	Enable support of SMBv1 for Samba.									
<i>disable</i>	Disable support of SMBv1 for Samba.									
status	Enable/disable polling for the status of this Active Directory server.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
user	User name required to log into this Active Directory server.	string	Maximum length: 35							

config adgrp

Parameter	Description	Type	Size	Default
name	Name.	string	Maximum length: 511	

config user group

Configure user groups.

```
config user group
    Description: Configure user groups.
    edit <name>
        set auth-concurrent-override [enable|disable]
```

```

set auth-concurrent-value {integer}

end

```

config user group

Parameter	Description	Type	Size	Default
auth-concurrent-override	Enable/disable overriding the global number of concurrent authentication sessions for this user group.	option	-	disable

Parameter	Description	Type	Size	Default									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable auth-concurrent-override.</td></tr><tr><td><i>disable</i></td><td>Disable auth-concurrent-override.</td></tr></table>		Option	Description	<i>enable</i>	Enable auth-concurrent-override.	<i>disable</i>	Disable auth-concurrent-override.					
	Option	Description											
	<i>enable</i>	Enable auth-concurrent-override.											
<i>disable</i>	Disable auth-concurrent-override.												
auth-concurrent-value	Maximum number of concurrent authenticated connections per user (0 - 100).	integer	Minimum value: 0 Maximum value: 100	0									
authtimeout	Authentication timeout in minutes for this user group. 0 to use the global user setting auth-timeout.	integer	Minimum value: 0 Maximum value: 43200	0									
company	Set the action for the company guest user field.	option	-	optional									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>optional</i></td><td>Optional.</td></tr><tr><td><i>mandatory</i></td><td>Mandatory.</td></tr><tr><td><i>disabled</i></td><td>Disabled.</td></tr></table>		Option	Description	<i>optional</i>	Optional.	<i>mandatory</i>	Mandatory.	<i>disabled</i>	Disabled.			
	Option	Description											
	<i>optional</i>	Optional.											
	<i>mandatory</i>	Mandatory.											
<i>disabled</i>	Disabled.												
email	Enable/disable the guest user email address field.	option	-	enable									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr></table>		Option	Description	<i>disable</i>	Disable setting.	<i>enable</i>	Enable setting.					
	Option	Description											
	<i>disable</i>	Disable setting.											
<i>enable</i>	Enable setting.												
expire	Time in seconds before guest user accounts expire (1 - 31536000).	integer	Minimum value: 1 Maximum value: 31536000	14400									
expire-type	Determine when the expiration countdown begins.	option	-	immediately									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>immediately</i></td><td>Immediately.</td></tr><tr><td><i>first-successful-login</i></td><td>First successful login.</td></tr></table>		Option	Description	<i>immediately</i>	Immediately.	<i>first-successful-login</i>	First successful login.					
	Option	Description											
	<i>immediately</i>	Immediately.											
<i>first-successful-login</i>	First successful login.												
group-type	Set the group to be for firewall authentication, FSSO, RSSO, or guest users.	option	-	firewall									

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>firewall</i></td><td>Firewall.</td></tr><tr><td><i>fsso-service</i></td><td>Fortinet Single Sign-On Service.</td></tr><tr><td><i>rsso</i></td><td>RADIUS based Single Sign-On Service.</td></tr><tr><td><i>guest</i></td><td>Guest.</td></tr></table>	Option	Description	<i>firewall</i>	Firewall.	<i>fsso-service</i>	Fortinet Single Sign-On Service.	<i>rsso</i>	RADIUS based Single Sign-On Service.	<i>guest</i>	Guest.			
	Option	Description												
	<i>firewall</i>	Firewall.												
	<i>fsso-service</i>	Fortinet Single Sign-On Service.												
	<i>rsso</i>	RADIUS based Single Sign-On Service.												
<i>guest</i>	Guest.													
http-digest-realm	Realm attribute for MD5-digest authentication.	string	Maximum length: 35											
id	Group ID. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0										
max-accounts	Maximum number of guest accounts that can be created for this group (0 means unlimited).	integer	Minimum value: 0 Maximum value: 1024 **	0										
member <name>	Names of users, peers, LDAP servers, RADIUS servers or external idp servers to add to the user group. Group member name.	string	Maximum length: 511											
mobile-phone	Enable/disable the guest user mobile phone number field.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr></table>	Option	Description	<i>disable</i>	Disable setting.	<i>enable</i>	Enable setting.							
	Option	Description												
	<i>disable</i>	Disable setting.												
<i>enable</i>	Enable setting.													
multiple-guest-add	Enable/disable addition of multiple guests.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr></table>	Option	Description	<i>disable</i>	Disable setting.	<i>enable</i>	Enable setting.							
	Option	Description												
	<i>disable</i>	Disable setting.												
<i>enable</i>	Enable setting.													
name	Group name.	string	Maximum length: 35											
password	Guest user password type.	option	-	auto-generate										

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>auto-generate</i>	Automatically generate.		
	<i>specify</i>	Specify.		
	<i>disable</i>	Disable.		
sms-custom-server	SMS server.	string	Maximum length: 35	
sms-server	Send SMS through FortiGuard or other external server.	option	-	fortiguard
	Option	Description		
	<i>fortiguard</i>	Send SMS by FortiGuard.		
	<i>custom</i>	Send SMS by custom server.		
sponsor	Set the action for the sponsor guest user field.	option	-	optional
	Option	Description		
	<i>optional</i>	Optional.		
	<i>mandatory</i>	Mandatory.		
	<i>disabled</i>	Disabled.		
sso-attribute-value	Name of the RADIUS user group that this local user group represents.	string	Maximum length: 511	
user-id	Guest user ID type.	option	-	email
	Option	Description		
	<i>email</i>	Email address.		
	<i>auto-generate</i>	Automatically generate.		
	<i>specify</i>	Specify.		
user-name	Enable/disable the guest user name entry.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable setting.		
	<i>enable</i>	Enable setting.		

** Values may differ between models.

config guest

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
company	Set the action for the company guest user field.	string	Maximum length: 35	
email	Email.	string	Maximum length: 64	
expiration	Expire time.	user	Not Specified	
id	Guest ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
mobile-phone	Mobile phone.	string	Maximum length: 35	
name	Guest name.	string	Maximum length: 64	
password	Guest password.	password	Not Specified	
sponsor	Set the action for the sponsor guest user field.	string	Maximum length: 35	
user-id	Guest ID.	string	Maximum length: 64	

config match

Parameter	Description	Type	Size	Default
group-name	Name of matching user or group on remote authentication server or SCIM.	string	Maximum length: 511	
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
server-name	Name of remote auth server.	string	Maximum length: 35	

config user krb-keytab

Configure Kerberos keytab entries.

```

config user krb-keytab
    Description: Configure Kerberos keytab entries.
    edit <name>
        set keytab {string}
        set ldap-server <name1>, <name2>, ...
        set pac-data [enable|disable]
        set principal {string}
    next
end

```

config user krb-keytab

Parameter	Description	Type	Size	Default						
keytab	Base64 coded keytab file containing a pre-shared key.	string	Maximum length: 8191							
ldap-server <name>	LDAP server name(s). LDAP server name.	string	Maximum length: 79							
name	Kerberos keytab entry name.	string	Maximum length: 35							
pac-data	Enable/disable parsing PAC data in the ticket.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable parsing PAC data in the ticket.</td></tr><tr><td><i>disable</i></td><td>Disable parsing PAC data in the ticket.</td></tr></table>				Option	Description	<i>enable</i>	Enable parsing PAC data in the ticket.	<i>disable</i>	Disable parsing PAC data in the ticket.
Option	Description									
<i>enable</i>	Enable parsing PAC data in the ticket.									
<i>disable</i>	Disable parsing PAC data in the ticket.									
principal	Kerberos service principal. For example, HTTP/myfgt.example.com@example.com.	string	Maximum length: 511							

config user ldap

Configure LDAP server entries.

```

config user ldap
    Description: Configure LDAP server entries.
    edit <name>
        set account-key-cert-field [othername|rfc822name|...]

config user ldap

Parameter	Description	Type	Size	Default
account-key-cert-field	Define subject identity field in certificate for user access right checking.	option	-	othername

Parameter	Description	Type	Size	Default
account-key-filter	Account key filter, using the UPN as the search filter.	string	Maximum length: 2047	(&(userPrincipalName=%s)(!(UserAccountControl:1.2.840.113556.1.4.803:=2)))
account-key-processing	Account key processing operation. The FortiGate will keep either the whole domain or strip the domain from the subject identity.	option	-	same
	Option		Description	
	<i>same</i>		Same as subject identity field.	
	<i>strip</i>		Strip domain string from subject identity field.	
antiphish	Enable/disable AntiPhishing credential backend.	option	-	disable
	Option		Description	
	<i>enable</i>		Enable AntiPhishing credential backend.	
	<i>disable</i>		Disable AntiPhishing credential backend.	
ca-cert	CA certificate name.	string	Maximum length: 79	
client-cert	Client certificate name.	string	Maximum length: 79	
client-cert-auth	Enable/disable using client certificate for TLS authentication.	option	-	disable
	Option		Description	
	<i>enable</i>		Enable using client certificate for TLS authentication.	
	<i>disable</i>		Disable using client certificate for TLS authentication.	

Parameter	Description	Type	Size	Default								
cnid	Common name identifier for the LDAP server. The common name identifier for most LDAP servers is "cn".	string	Maximum length: 20	cn								
dn	Distinguished name used to look up entries on the LDAP server.	string	Maximum length: 511									
group-filter	Filter used for group matching.	string	Maximum length: 2047									
group-member-check	Group member checking methods.	option	-	user-attr								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>user-attr</i></td><td>User attribute checking.</td></tr><tr><td><i>group-object</i></td><td>Group object checking.</td></tr><tr><td><i>posix-group-object</i></td><td>POSIX group object checking.</td></tr></table>				Option	Description	<i>user-attr</i>	User attribute checking.	<i>group-object</i>	Group object checking.	<i>posix-group-object</i>	POSIX group object checking.
Option	Description											
<i>user-attr</i>	User attribute checking.											
<i>group-object</i>	Group object checking.											
<i>posix-group-object</i>	POSIX group object checking.											
group-object-filter	Filter used for group searching.	string	Maximum length: 2047	(&(objectcategory=group)(member=*))								
group-search-base	Search base used for group searching.	string	Maximum length: 511									
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
member-attr	Name of attribute from which to get group membership.	string	Maximum length: 63	memberOf
name	LDAP server entry name.	string	Maximum length: 35	
obtain-user-info	Enable/disable obtaining of user information.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable obtaining of user information.		
	<i>disable</i>	Disable obtaining of user information.		
password	Password for initial binding.	password	Not Specified	
password-attr	Name of attribute to get password hash.	string	Maximum length: 35	userPassword
password-expiry-warning	Enable/disable password expiry warnings.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable password expiry warnings.		
	<i>disable</i>	Disable password expiry warnings.		
password-renewal	Enable/disable online password renewal.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable online password renewal.		
	<i>disable</i>	Disable online password renewal.		

Parameter	Description	Type	Size	Default								
port	Port to be used for communication with the LDAP server (default = 389).	integer	Minimum value: 1 Maximum value: 65535	389								
search-type	Search type.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>recursive</i></td><td>Recursively retrieve the user-group chain information of a user in a particular Microsoft AD domain.</td></tr></table>	Option	Description	<i>recursive</i>	Recursively retrieve the user-group chain information of a user in a particular Microsoft AD domain.							
Option	Description											
<i>recursive</i>	Recursively retrieve the user-group chain information of a user in a particular Microsoft AD domain.											
secondary-server	Secondary LDAP server CN domain name or IP.	string	Maximum length: 63									
secure	Port to be used for authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>No SSL.</td></tr><tr><td><i>starttls</i></td><td>Use StartTLS.</td></tr><tr><td><i>ldaps</i></td><td>Use LDAPS.</td></tr></table>	Option	Description	<i>disable</i>	No SSL.	<i>starttls</i>	Use StartTLS.	<i>ldaps</i>	Use LDAPS.			
Option	Description											
<i>disable</i>	No SSL.											
<i>starttls</i>	Use StartTLS.											
<i>ldaps</i>	Use LDAPS.											
server	LDAP server CN domain name or IP.	string	Maximum length: 63									
server-identity-check	Enable/disable LDAP server identity check (verify server domain name/IP address against the server certificate).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable server identity check.</td></tr><tr><td><i>disable</i></td><td>Disable server identity check.</td></tr></table>	Option	Description	<i>enable</i>	Enable server identity check.	<i>disable</i>	Disable server identity check.					
Option	Description											
<i>enable</i>	Enable server identity check.											
<i>disable</i>	Disable server identity check.											

Parameter	Description	Type	Size	Default
source-ip	FortiGate IP address to be used for communication with the LDAP server.	string	Maximum length: 63	
source-ip-interface	Source interface for communication with the LDAP server.	string	Maximum length: 15	
source-port	Source port to be used for communication with the LDAP server.	integer	Minimum value: 0 Maximum value: 65535	0
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections (default is to follow system global setting).	option	-	default
		Option	Description	
		<i>default</i>	Follow system global setting.	
		<i>SSLv3</i>	SSLv3.	
		<i>TLSv1</i>	TLSv1.	
		<i>TLSv1-1</i>	TLSv1.1.	
		<i>TLSv1-2</i>	TLSv1.2.	
		<i>TLSv1-3</i>	TLSv1.3.	

Parameter	Description	Type	Size	Default								
status-ttl	Time for which server reachability is cached so that when a server is unreachable, it will not be retried for at least this period of time (0 = cache disabled, default = 300).	integer	Minimum value: 0 Maximum value: 600	300								
tertiary-server	Tertiary LDAP server CN domain name or IP.	string	Maximum length: 63									
two-factor	Enable/disable two-factor authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>disable two-factor authentication.</td></tr><tr><td><i>fortitoken-cloud</i></td><td>FortiToken Cloud Service.</td></tr></table>				Option	Description	<i>disable</i>	disable two-factor authentication.	<i>fortitoken-cloud</i>	FortiToken Cloud Service.		
Option	Description											
<i>disable</i>	disable two-factor authentication.											
<i>fortitoken-cloud</i>	FortiToken Cloud Service.											
two-factor-authentication	Authentication method by FortiToken Cloud.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>fortitoken</i></td><td>FortiToken authentication.</td></tr><tr><td><i>email</i></td><td>Email one time password.</td></tr><tr><td><i>sms</i></td><td>SMS one time password.</td></tr></table>				Option	Description	<i>fortitoken</i>	FortiToken authentication.	<i>email</i>	Email one time password.	<i>sms</i>	SMS one time password.
Option	Description											
<i>fortitoken</i>	FortiToken authentication.											
<i>email</i>	Email one time password.											
<i>sms</i>	SMS one time password.											
two-factor-filter	Filter used to synchronize users to FortiToken Cloud.	string	Maximum length: 2047									

Parameter	Description	Type	Size	Default								
two-factor-notification	Notification method for user activation by FortiToken Cloud.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>email</td><td>Email notification for activation code.</td></tr><tr><td>sms</td><td>SMS notification for activation code.</td></tr></table>	Option	Description	email	Email notification for activation code.	sms	SMS notification for activation code.					
Option	Description											
email	Email notification for activation code.											
sms	SMS notification for activation code.											
type	Authentication type for LDAP searches.	option	-	simple								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>simple</td><td>Simple password authentication without search.</td></tr><tr><td>anonymous</td><td>Bind using anonymous user search.</td></tr><tr><td>regular</td><td>Bind using username/password and then search.</td></tr></table>	Option	Description	simple	Simple password authentication without search.	anonymous	Bind using anonymous user search.	regular	Bind using username/password and then search.			
Option	Description											
simple	Simple password authentication without search.											
anonymous	Bind using anonymous user search.											
regular	Bind using username/password and then search.											
user-info-exchange-server	MS Exchange server from which to fetch user information.	string	Maximum length: 35									
username	Username (full DN) for initial binding.	string	Maximum length: 511									
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0								

config user local

Configure local users.

```
config user local
    Description: Configure local users.
    edit <name>
        set auth-concurrent-override [enable|disable]

config user local

Parameter	Description	Type	Size	Default
auth-concurrent-override	Enable/disable overriding the policy-auth-concurrent under config system global.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable auth-concurrent-override.		
	<i>disable</i>	Disable auth-concurrent-override.		
auth-concurrent-value	Maximum number of concurrent logins permitted from the same user.	integer	Minimum value: 0 Maximum value: 100	0
authtimeout	Time in minutes before the authentication timeout for a user is reached.	integer	Minimum value: 0 Maximum value: 1440	0
email-to	Two-factor recipient's email address.	string	Maximum length: 63	
fortitoken	Two-factor recipient's FortiToken serial number.	string	Maximum length: 16	

Parameter	Description	Type	Size	Default						
id	User ID. Read-only.	integer	Minimum value: 0 Maximum value: 4294967295	0						
ldap-server	Name of LDAP server with which the user must authenticate.	string	Maximum length: 35							
name	Local user name.	string	Maximum length: 64							
passwd	User's password.	password	Not Specified							
passwd-policy	Password policy to apply to this user, as defined in config user password-policy.	string	Maximum length: 35							
passwd-time	Time of the last password update.	user	Not Specified							
ppk-identity	IKEv2 Postquantum Preshared Key Identity.	string	Maximum length: 35							
ppk-secret	IKEv2 Postquantum Preshared Key (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified							
qkd-profile	Quantum Key Distribution (QKD) profile.	string	Maximum length: 35							
radius-server	Name of RADIUS server with which the user must authenticate.	string	Maximum length: 35							
sms-custom-server	Two-factor recipient's SMS server.	string	Maximum length: 35							
sms-phone	Two-factor recipient's mobile phone number.	string	Maximum length: 15							
sms-server	Send SMS through FortiGuard or other external server.	option	-	fortiguard						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>fortiguard</td><td>Send SMS by FortiGuard.</td></tr><tr><td>custom</td><td>Send SMS by custom server.</td></tr></table>				Option	Description	fortiguard	Send SMS by FortiGuard.	custom	Send SMS by custom server.
Option	Description									
fortiguard	Send SMS by FortiGuard.									
custom	Send SMS by custom server.									
status	Enable/disable allowing the local user to authenticate with the FortiGate unit.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable user.</td></tr><tr><td>disable</td><td>Disable user.</td></tr></table>				Option	Description	enable	Enable user.	disable	Disable user.
Option	Description									
enable	Enable user.									
disable	Disable user.									

Parameter	Description	Type	Size	Default
tacacs+-server	Name of TACACS+ server with which the user must authenticate.	string	Maximum length: 35	
two-factor	Enable/disable two-factor authentication.	option	-	disable
	Option Description			
	<i>disable</i>	disable		
	<i>fortitoken</i>	FortiToken		
	<i>fortitoken-cloud</i>	FortiToken Cloud Service.		
	<i>email</i>	Email authentication code.		
	<i>sms</i>	SMS authentication code.		
two-factor-authentication	Authentication method by FortiToken Cloud.	option	-	
	Option Description			
	<i>fortitoken</i>	FortiToken authentication.		
	<i>email</i>	Email one time password.		
	<i>sms</i>	SMS one time password.		
two-factor-notification	Notification method for user activation by FortiToken Cloud.	option	-	
	Option Description			
	<i>email</i>	Email notification for activation code.		
	<i>sms</i>	SMS notification for activation code.		
type	Authentication method.	option	-	password
	Option Description			
	<i>password</i>	Password authentication.		
	<i>radius</i>	RADIUS server authentication.		
	<i>tacacs+</i>	TACACS+ server authentication.		
	<i>ldap</i>	LDAP server authentication.		
username-sensitivity	Enable/disable case and accent sensitivity when performing username matching (accents are stripped and case is ignored when disabled).	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Ignore case and accents. Username at prompt not required to match case or accents.		
	<i>enable</i>	Do not ignore case and accents. Username at prompt must be an exact match.		
workstation	Name of the remote user workstation, if you want to limit the user to authenticate only from a particular workstation.	string	Maximum length: 35	

config user nac-policy

Configure NAC policy matching pattern to identify matching NAC devices.

```

config user nac-policy
    Description: Configure NAC policy matching pattern to identify matching NAC devices.
    edit <name>
        set category [device|firewall-user|...]
        set description {string}
        set ems-tag {string}
        set family {string}
        set firewall-address {string}
        set fortivoice-tag {string}
        set host {string}
        set hw-vendor {string}
        set hw-version {string}
        set mac {string}
        set match-period {integer}
        set match-type [dynamic|override]
        set os {string}
        set severity <severity-num1>, <severity-num2>, ...
        set src {string}
        set ssid-policy {string}
        set status [enable|disable]
        set sw-version {string}
        set switch-fortilink {string}
        set switch-group <name1>, <name2>, ...
        set switch-mac-policy {string}
        set type {string}
        set user {string}
        set user-group {string}
    next
end

```

config user nac-policy

Parameter	Description	Type	Size	Default												
category	Category of NAC policy.	option	-	device												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>device</td><td>Device category.</td></tr><tr><td>firewall-user</td><td>Firewall user category.</td></tr><tr><td>ems-tag</td><td>EMS Tag category.</td></tr><tr><td>fortivoice-tag</td><td>FortiVoice Tag category.</td></tr><tr><td>vulnerability</td><td>Vulnerability category.</td></tr></table>	Option	Description	device	Device category.	firewall-user	Firewall user category.	ems-tag	EMS Tag category.	fortivoice-tag	FortiVoice Tag category.	vulnerability	Vulnerability category.			
	Option	Description														
	device	Device category.														
	firewall-user	Firewall user category.														
	ems-tag	EMS Tag category.														
	fortivoice-tag	FortiVoice Tag category.														
vulnerability	Vulnerability category.															
description	Description for the NAC policy matching pattern.	string	Maximum length: 63													
ems-tag	NAC policy matching EMS tag.	string	Maximum length: 79													
family	NAC policy matching family.	string	Maximum length: 31													
firewall-address *	Dynamic firewall address to associate MAC which match this policy.	string	Maximum length: 79													
fortivoice-tag	NAC policy matching FortiVoice tag.	string	Maximum length: 79													
host	NAC policy matching host.	string	Maximum length: 64													
hw-vendor	NAC policy matching hardware vendor.	string	Maximum length: 15													
hw-version	NAC policy matching hardware version.	string	Maximum length: 15													
mac	NAC policy matching MAC address.	string	Maximum length: 17													
match-period	Number of days the matched devices will be retained (0 - always retain)	integer	Minimum value: 0 Maximum value: 120	0												
match-type	Match and retain the devices based on the type.	option	-	dynamic												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>dynamic</td><td>Matched devices will be removed on dynamic events like link-down,device-inactivity,switch-offline.</td></tr></table>	Option	Description	dynamic	Matched devices will be removed on dynamic events like link-down,device-inactivity,switch-offline.											
	Option	Description														
dynamic	Matched devices will be removed on dynamic events like link-down,device-inactivity,switch-offline.															

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>override</i></td><td>Matched devices will be retained until the match-period.</td></tr></table>	Option	Description	<i>override</i>	Matched devices will be retained until the match-period.					
Option	Description									
<i>override</i>	Matched devices will be retained until the match-period.									
name	NAC policy name.	string	Maximum length: 63							
os	NAC policy matching operating system.	string	Maximum length: 31							
severity <severity-num>	NAC policy matching devices vulnerability severity lists. Enter multiple severity levels, where 0 = Info, 1 = Low, ..., 4 = Critical	integer	Minimum value: 0 Maximum value: 4							
src	NAC policy matching source.	string	Maximum length: 15							
ssid-policy	SSID policy to be applied on the matched NAC policy.	string	Maximum length: 35							
status	Enable/disable NAC policy.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NAC policy.</td></tr><tr><td><i>disable</i></td><td>Disable NAC policy.</td></tr></table>	Option	Description	<i>enable</i>	Enable NAC policy.	<i>disable</i>	Disable NAC policy.			
Option	Description									
<i>enable</i>	Enable NAC policy.									
<i>disable</i>	Disable NAC policy.									
sw-version	NAC policy matching software version.	string	Maximum length: 15							
switch-fortilink *	FortiLink interface for which this NAC policy belongs to.	string	Maximum length: 15							
switch-group <name> *	List of managed FortiSwitch groups on which NAC policy can be applied. Managed FortiSwitch group name from available options.	string	Maximum length: 79							
switch-mac-policy *	Switch MAC policy action to be applied on the matched NAC policy.	string	Maximum length: 63							
type	NAC policy matching type.	string	Maximum length: 15							
user	NAC policy matching user.	string	Maximum length: 64							
user-group	NAC policy matching user group.	string	Maximum length: 35							

* This parameter may not exist in some models.

config user password-policy

Configure user password policy.

```
config user password-policy
  Description: Configure user password policy.
  edit <name>
    set expire-days {integer}
    set expire-status [enable|disable]
    set expired-password-renewal [enable|disable]
    set min-change-characters {integer}
    set min-lower-case-letter {integer}
    set min-non-alphanumeric {integer}
    set min-number {integer}
    set min-upper-case-letter {integer}
    set minimum-length {integer}
    set reuse-password [enable|disable]
    set reuse-password-limit {integer}
    set warn-days {integer}
  next
end
```

config user password-policy

Parameter	Description	Type	Size	Default						
expire-days	Time in days before the user's password expires.	integer	Minimum value: 0 Maximum value: 999	180						
expire-status	Enable/disable password expiration.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Passwords expire after expire-day days.</td></tr><tr><td><i>disable</i></td><td>Passwords do not expire.</td></tr></table>	Option	Description	<i>enable</i>	Passwords expire after expire-day days.	<i>disable</i>	Passwords do not expire.			
Option	Description									
<i>enable</i>	Passwords expire after expire-day days.									
<i>disable</i>	Passwords do not expire.									
expired-password-renewal	Enable/disable renewal of a password that already is expired.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable renewal of a password that already is expired.</td></tr><tr><td><i>disable</i></td><td>Disable renewal of a password that already is expired.</td></tr></table>	Option	Description	<i>enable</i>	Enable renewal of a password that already is expired.	<i>disable</i>	Disable renewal of a password that already is expired.			
Option	Description									
<i>enable</i>	Enable renewal of a password that already is expired.									
<i>disable</i>	Disable renewal of a password that already is expired.									
min-change-characters	Minimum number of unique characters in new password which do not exist in old password (0 - 128, default = 0. This attribute overrides reuse-password if both are enabled).	integer	Minimum value: 0 Maximum value: 128	0						

Parameter	Description	Type	Size	Default						
min-lower-case-letter	Minimum number of lowercase characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-non-alphanumeric	Minimum number of non-alphanumeric characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-number	Minimum number of numeric characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
min-upper-case-letter	Minimum number of uppercase characters in password (0 - 128, default = 0).	integer	Minimum value: 0 Maximum value: 128	0						
minimum-length	Minimum password length (8 - 128, default = 8).	integer	Minimum value: 8 Maximum value: 128	8						
name	Password policy name.	string	Maximum length: 35							
reuse-password	Enable/disable reuse of password. If both reuse-password and min-change-characters are enabled, min-change-characters overrides.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Users are allowed to reuse the same password up to a limit.</td></tr><tr><td><i>disable</i></td><td>Users must create a new password.</td></tr></table>				Option	Description	<i>enable</i>	Users are allowed to reuse the same password up to a limit.	<i>disable</i>	Users must create a new password.
Option	Description									
<i>enable</i>	Users are allowed to reuse the same password up to a limit.									
<i>disable</i>	Users must create a new password.									
reuse-password-limit	Number of times passwords can be reused (0 - 20, default = 0. If set to 0, can reuse password an unlimited number of times.).	integer	Minimum value: 0 Maximum value: 20	0						
warn-days	Time in days before a password expiration warning message is displayed to the user upon login.	integer	Minimum value: 0 Maximum value: 30	15						

config user peer

Configure peer users.

```

config user peer
  Description: Configure peer users.
  edit <name>
    set ca {string}
    set cn {string}
    set cn-type [string|email|...]
    set mandatory-ca-verify [enable|disable]
    set mfa-mode [none|password|...]
    set mfa-password {password}
    set mfa-server {string}
    set mfa-username {string}
    set ocsp-override-server {string}
    set passwd {password}
    set subject {string}
    set two-factor [enable|disable]
  next
end

```

config user peer

Parameter	Description	Type	Size	Default												
ca	Name of the CA certificate.	string	Maximum length: 127													
cn	Peer certificate common name.	string	Maximum length: 255													
cn-type	Peer certificate common name type.	option	-	string												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>string</i></td><td>Normal string.</td></tr><tr><td><i>email</i></td><td>Email address.</td></tr><tr><td><i>FQDN</i></td><td>Fully Qualified Domain Name.</td></tr><tr><td><i>ipv4</i></td><td>IPv4 address.</td></tr><tr><td><i>ipv6</i></td><td>IPv6 address.</td></tr></table>	Option	Description	<i>string</i>	Normal string.	<i>email</i>	Email address.	<i>FQDN</i>	Fully Qualified Domain Name.	<i>ipv4</i>	IPv4 address.	<i>ipv6</i>	IPv6 address.			
	Option	Description														
	<i>string</i>	Normal string.														
	<i>email</i>	Email address.														
	<i>FQDN</i>	Fully Qualified Domain Name.														
	<i>ipv4</i>	IPv4 address.														
<i>ipv6</i>	IPv6 address.															
mandatory-ca-verify	Determine what happens to the peer if the CA certificate is not installed. Disable to automatically consider the peer certificate as valid.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.									
	Option	Description														
	<i>enable</i>	Enable setting.														
<i>disable</i>	Disable setting.															
mfa-mode	MFA mode for remote peer authentication/authorization.	option	-	none												

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>none</i>	None.		
	<i>password</i>	Specified username/password.		
	<i>subject-identity</i>	Subject identity extracted from certificate.		
mfa-password	Unified password for remote authentication. This field may be left empty when RADIUS authentication is used, in which case the FortiGate will use the RADIUS username as a password.	password	Not Specified	
mfa-server	Name of a remote authenticator. Performs client access right check.	string	Maximum length: 35	
mfa-username	Unified username for remote authentication.	string	Maximum length: 35	
name	Peer name.	string	Maximum length: 35	
ocsp-override-server	Online Certificate Status Protocol (OCSP) server for certificate retrieval.	string	Maximum length: 35	
passwd	Peer's password used for two-factor authentication.	password	Not Specified	
subject	Peer certificate name constraints.	string	Maximum length: 255	
two-factor	Enable/disable two-factor authentication, applying certificate and password-based authentication.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable 2-factor authentication.		
	<i>disable</i>	Disable 2-factor authentication.		

config user peergrp

Configure peer groups.

```
config user peergrp
    Description: Configure peer groups.
    edit <name>
        set member <name1>, <name2>, ...
    next
end
```

config user peergrp

Parameter	Description	Type	Size	Default
member <name>	Peer group members. Peer group member name.	string	Maximum length: 35	
name	Peer group name.	string	Maximum length: 35	

config user pop3

POP3 server entry configuration.

```
config user pop3
  Description: POP3 server entry configuration.
  edit <name>
    set port {integer}
    set secure [none|starttls|...]
    set server {string}
    set ssl-min-proto-version [default|SSLv3|...]
  next
end
```

config user pop3

Parameter	Description	Type	Size	Default								
name	POP3 server entry name.	string	Maximum length: 35									
port	POP3 service port number.	integer	Minimum value: 0 Maximum value: 65535	0								
secure	SSL connection.	option	-	starttls								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>starttls</i></td><td>Use StartTLS.</td></tr><tr><td><i>pop3s</i></td><td>Use POP3 over SSL.</td></tr></table>				Option	Description	<i>none</i>	None.	<i>starttls</i>	Use StartTLS.	<i>pop3s</i>	Use POP3 over SSL.
	Option	Description										
	<i>none</i>	None.										
	<i>starttls</i>	Use StartTLS.										
<i>pop3s</i>	Use POP3 over SSL.											
server	Server domain name or IP address.	string	Maximum length: 63									

Parameter	Description	Type	Size	Default														
ssl-min-protocol-version	Minimum supported protocol version for SSL/TLS connections (default is to follow system global setting).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Follow system global setting.</td></tr><tr><td>SSLv3</td><td>SSLv3.</td></tr><tr><td>TLSv1</td><td>TLSv1.</td></tr><tr><td>TLSv1-1</td><td>TLSv1.1.</td></tr><tr><td>TLSv1-2</td><td>TLSv1.2.</td></tr><tr><td>TLSv1-3</td><td>TLSv1.3.</td></tr></table>				Option	Description	default	Follow system global setting.	SSLv3	SSLv3.	TLSv1	TLSv1.	TLSv1-1	TLSv1.1.	TLSv1-2	TLSv1.2.	TLSv1-3	TLSv1.3.
	Option	Description																
	default	Follow system global setting.																
	SSLv3	SSLv3.																
	TLSv1	TLSv1.																
	TLSv1-1	TLSv1.1.																
	TLSv1-2	TLSv1.2.																
	TLSv1-3	TLSv1.3.																

config user quarantine

Configure quarantine support.

```
config user quarantine
  Description: Configure quarantine support.
  set firewall-groups {string}
  set quarantine [enable|disable]
  config targets
    Description: Quarantine entry to hold multiple MACs.
    edit <entry>
      set description {string}
      config macs
        Description: Quarantine MACs.
        edit <mac>
          set description {string}
          set drop [disable|enable]
          set parent {string}
        next
      end
    next
  end
  set traffic-policy {string}
end
```

config user quarantine

Parameter	Description	Type	Size	Default
firewall-groups	Firewall address group which includes all quarantine MAC address.	string	Maximum length: 79	
quarantine	Enable/disable quarantine.	option	-	enable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable quarantine.</td></tr><tr><td><i>disable</i></td><td>Disable quarantine.</td></tr></table>				Option	Description	<i>enable</i>	Enable quarantine.	<i>disable</i>	Disable quarantine.
	Option	Description								
	<i>enable</i>	Enable quarantine.								
<i>disable</i>	Disable quarantine.									
traffic-policy *	Traffic policy for quarantined MACs.	string	Maximum length: 63							

* This parameter may not exist in some models.

config targets

Parameter	Description	Type	Size	Default
description	Description for the quarantine entry.	string	Maximum length: 63	
entry	Quarantine entry name.	string	Maximum length: 63	

config macs

Parameter	Description	Type	Size	Default
description	Description for the quarantine MAC.	string	Maximum length: 63	
drop	Enable/disable dropping of quarantined device traffic.	option	-	disable
	Option	Description		
	disable	Sends quarantined device traffic to FortiGate.		
	enable	Blocks quarantined device traffic to FortiGate.		
mac	Quarantine MAC.	mac-address	Not Specified	00:00:00:00:00:00
parent	Parent entry name. Read-only.	string	Maximum length: 63	

config user radius

Configure RADIUS server entries.

```
config user radius
    Description: Configure RADIUS server entries.
    edit <name>
        set account-key-cert-field [othername|rfc822name|...]
```

```

set account-key-processing [same|strip]

config user radius

Parameter	Description	Type	Size	Default
account-key-cert-field	Define subject identity field in certificate for user access right checking.	option	-	othername
	Option	Description		
	<i>othername</i>	Other name in SAN.		
	<i>rfc822name</i>	RFC822 email address in SAN.		
	<i>dnsname</i>	DNS name in SAN.		
	<i>cn</i>	CN in subject.		
account-key-processing	Account key processing operation. The FortiGate will keep either the whole domain or strip the domain from the subject identity.	option	-	same
	Option	Description		
	<i>same</i>	Same as subject identity field.		
	<i>strip</i>	Strip domain string from subject identity field.		
acct-all-servers	Enable/disable sending of accounting messages to all configured servers (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Send accounting messages to all configured servers.		
	<i>disable</i>	Send accounting message only to servers that are confirmed to be reachable.		

Parameter	Description	Type	Size	Default												
acct-interim-interval	Time in seconds between each accounting interim update message.	integer	Minimum value: 60 Maximum value: 86400	0												
all-usergroup	Enable/disable automatically including this RADIUS server in all user groups.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not automatically include this server in a user group.</td></tr><tr><td>enable</td><td>Include this RADIUS server in every user group.</td></tr></table>				Option	Description	disable	Do not automatically include this server in a user group.	enable	Include this RADIUS server in every user group.						
	Option	Description														
	disable	Do not automatically include this server in a user group.														
enable	Include this RADIUS server in every user group.															
auth-type	Authentication methods/protocols permitted for this RADIUS server.	option	-	auto												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Use PAP, MSCHAP_v2, and CHAP (in that order).</td></tr><tr><td>ms_chap_v2</td><td>Microsoft Challenge Handshake Authentication Protocol version 2.</td></tr><tr><td>ms_chap</td><td>Microsoft Challenge Handshake Authentication Protocol.</td></tr><tr><td>chap</td><td>Challenge Handshake Authentication Protocol.</td></tr><tr><td>pap</td><td>Password Authentication Protocol.</td></tr></table>				Option	Description	auto	Use PAP, MSCHAP_v2, and CHAP (in that order).	ms_chap_v2	Microsoft Challenge Handshake Authentication Protocol version 2.	ms_chap	Microsoft Challenge Handshake Authentication Protocol.	chap	Challenge Handshake Authentication Protocol.	pap	Password Authentication Protocol.
	Option	Description														
	auto	Use PAP, MSCHAP_v2, and CHAP (in that order).														
	ms_chap_v2	Microsoft Challenge Handshake Authentication Protocol version 2.														
	ms_chap	Microsoft Challenge Handshake Authentication Protocol.														
	chap	Challenge Handshake Authentication Protocol.														
pap	Password Authentication Protocol.															
ca-cert	CA of server to trust under TLS.	string	Maximum length: 79													
call-station-id-type	Calling & Called station identifier type configuration (default = legacy), this option is not available for 802.1x authentication.	option	-	legacy												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>legacy</td><td>Calling & Called station identifier is the value previously used by each daemon.</td></tr><tr><td>IP</td><td>Calling & Called station identifier is the value of IP address.</td></tr><tr><td>MAC</td><td>Calling & Called station identifier is the value of MAC address.</td></tr></table>				Option	Description	legacy	Calling & Called station identifier is the value previously used by each daemon.	IP	Calling & Called station identifier is the value of IP address.	MAC	Calling & Called station identifier is the value of MAC address.				
	Option	Description														
	legacy	Calling & Called station identifier is the value previously used by each daemon.														
	IP	Calling & Called station identifier is the value of IP address.														
MAC	Calling & Called station identifier is the value of MAC address.															
class <name>	Class attribute name(s). Class name.	string	Maximum length: 79													
client-cert	Client certificate to use under TLS.	string	Maximum length: 35													

Parameter	Description	Type	Size	Default
delimiter	Configure delimiter to be used for separating profile group names in the SSO attribute (default = plus character "+").	option	-	plus
	Option	Description		
	<i>plus</i>	Plus character "+".		
	<i>comma</i>	Comma character ",".		
group-override-attr-type	RADIUS attribute type to override user group information.	option	-	
	Option	Description		
	<i>filter-Id</i>	Filter-Id		
	<i>class</i>	Class		
h3c-compatibility	Enable/disable compatibility with the H3C, a mechanism that performs security checking for authentication.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable H3C compatibility.		
	<i>disable</i>	Disable H3C compatibility.		
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
mac-case	MAC authentication case (default = lowercase).	option	-	lowercase
	Option	Description		
	<i>uppercase</i>	Use uppercase MAC.		
	<i>lowercase</i>	Use lowercase MAC.		
mac-password-delimiter	MAC authentication password delimiter (default = hyphen).	option	-	hyphen

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>hyphen</td><td>Use hyphen as delimiter for MAC authentication password.</td></tr><tr><td>single-hyphen</td><td>Use single hyphen as delimiter for MAC authentication password.</td></tr><tr><td>colon</td><td>Use colon as delimiter for MAC authentication password.</td></tr><tr><td>none</td><td>No delimiter for MAC authentication password.</td></tr></table>	Option	Description	hyphen	Use hyphen as delimiter for MAC authentication password.	single-hyphen	Use single hyphen as delimiter for MAC authentication password.	colon	Use colon as delimiter for MAC authentication password.	none	No delimiter for MAC authentication password.			
	Option	Description												
	hyphen	Use hyphen as delimiter for MAC authentication password.												
	single-hyphen	Use single hyphen as delimiter for MAC authentication password.												
	colon	Use colon as delimiter for MAC authentication password.												
none	No delimiter for MAC authentication password.													
mac-username-delimiter	MAC authentication username delimiter (default = hyphen).	option	-	hyphen										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>hyphen</td><td>Use hyphen as delimiter for MAC authentication username.</td></tr><tr><td>single-hyphen</td><td>Use single hyphen as delimiter for MAC authentication username.</td></tr><tr><td>colon</td><td>Use colon as delimiter for MAC authentication username.</td></tr><tr><td>none</td><td>No delimiter for MAC authentication username.</td></tr></table>	Option	Description	hyphen	Use hyphen as delimiter for MAC authentication username.	single-hyphen	Use single hyphen as delimiter for MAC authentication username.	colon	Use colon as delimiter for MAC authentication username.	none	No delimiter for MAC authentication username.			
	Option	Description												
	hyphen	Use hyphen as delimiter for MAC authentication username.												
	single-hyphen	Use single hyphen as delimiter for MAC authentication username.												
	colon	Use colon as delimiter for MAC authentication username.												
none	No delimiter for MAC authentication username.													
name	RADIUS server entry name.	string	Maximum length: 35											
nas-id	Custom NAS identifier.	string	Maximum length: 255											
nas-id-type	NAS identifier type configuration (default = legacy).	option	-	legacy										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>legacy</td><td>NAS-ID value is the value previously used by each daemon.</td></tr><tr><td>custom</td><td>NAS-ID value is customized.</td></tr><tr><td>hostname</td><td>NAS-ID value is hostname or HA group name if applicable.</td></tr></table>	Option	Description	legacy	NAS-ID value is the value previously used by each daemon.	custom	NAS-ID value is customized.	hostname	NAS-ID value is hostname or HA group name if applicable.					
	Option	Description												
	legacy	NAS-ID value is the value previously used by each daemon.												
	custom	NAS-ID value is customized.												
hostname	NAS-ID value is hostname or HA group name if applicable.													
nas-ip	IP address used to communicate with the RADIUS server and used as NAS-IP-Address and Called-Station-ID attributes.	ipv4-address	Not Specified	0.0.0.0										
password-encoding	Password encoding.	option	-	auto										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Use original password encoding.</td></tr><tr><td>ISO-8859-1</td><td>Use ISO-8859-1 password encoding.</td></tr></table>	Option	Description	auto	Use original password encoding.	ISO-8859-1	Use ISO-8859-1 password encoding.							
	Option	Description												
	auto	Use original password encoding.												
ISO-8859-1	Use ISO-8859-1 password encoding.													

Parameter	Description	Type	Size	Default						
password-renewal	Enable/disable password renewal.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable password renewal.</td></tr><tr><td><i>disable</i></td><td>Disable password renewal.</td></tr></table>	Option	Description	<i>enable</i>	Enable password renewal.	<i>disable</i>	Disable password renewal.			
Option	Description									
<i>enable</i>	Enable password renewal.									
<i>disable</i>	Disable password renewal.									
radius-coa	Enable to allow a mechanism to change the attributes of an authentication, authorization, and accounting session after it is authenticated.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS CoA.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS CoA.</td></tr></table>	Option	Description	<i>enable</i>	Enable RADIUS CoA.	<i>disable</i>	Disable RADIUS CoA.			
Option	Description									
<i>enable</i>	Enable RADIUS CoA.									
<i>disable</i>	Disable RADIUS CoA.									
radius-port	RADIUS service port number.	integer	Minimum value: 0 Maximum value: 65535	0						
require-message-authenticator	Require message authenticator in authentication response.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Make the validation of message authenticator mandatory in authentication response.</td></tr><tr><td><i>disable</i></td><td>Make the validation of message authenticator optional in authentication response.</td></tr></table>	Option	Description	<i>enable</i>	Make the validation of message authenticator mandatory in authentication response.	<i>disable</i>	Make the validation of message authenticator optional in authentication response.			
Option	Description									
<i>enable</i>	Make the validation of message authenticator mandatory in authentication response.									
<i>disable</i>	Make the validation of message authenticator optional in authentication response.									
rsso	Enable/disable RADIUS based single sign on feature.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS based single sign on feature.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS based single sign on feature.</td></tr></table>	Option	Description	<i>enable</i>	Enable RADIUS based single sign on feature.	<i>disable</i>	Disable RADIUS based single sign on feature.			
Option	Description									
<i>enable</i>	Enable RADIUS based single sign on feature.									
<i>disable</i>	Disable RADIUS based single sign on feature.									
rsso-context-timeout	Time in seconds before the logged out user is removed from the "user context list" of logged on users.	integer	Minimum value: 0 Maximum value: 4294967295	28800						

Parameter	Description	Type	Size	Default
rsso-endpoint-attribute	RADIUS attributes used to extract the user end point identifier from the RADIUS Start record.	option	-	Calling-Station-Id
	Option	Description		
	User-Name	Use this attribute.		
	NAS-IP-Address	Use this attribute.		
	Framed-IP-Address	Use this attribute.		
	Framed-IP-Netmask	Use this attribute.		
	Filter-Id	Use this attribute.		
	Login-IP-Host	Use this attribute.		
	Reply-Message	Use this attribute.		
	Callback-Number	Use this attribute.

Acct-Multi-Session-Id	Use this attribute.																																																	

Parameter	Description	Type	Size	Default
rsso-ep-one-ip-only	Enable/disable the replacement of old IP addresses with new ones for the same endpoint on RADIUS accounting Start messages.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable replacement of old IP address with new IP address for the same endpoint on RADIUS accounting start.		
	<i>disable</i>	Disable replacement of old IP address with new IP address for the same endpoint on RADIUS accounting start.		
rsso-flush-ip-session	Enable/disable flushing user IP sessions on RADIUS accounting Stop messages.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable flush user IP sessions on RADIUS accounting stop.		
	<i>disable</i>	Disable flush user IP sessions on RADIUS accounting stop.		
rsso-log-flags	Events to log.	option	-	protocol-error profile-missing accounting-stop-missed accounting-event endpoint-block radiusd-other
	Option	Description		
	<i>protocol-error</i>	Enable this log type.		
	<i>profile-missing</i>	Enable this log type.		
	<i>accounting-stop-missed</i>	Enable this log type.		
	<i>accounting-event</i>	Enable this log type.		
	<i>endpoint-block</i>	Enable this log type.		
	<i>radiusd-other</i>	Enable this log type.		
	<i>none</i>	Disable all logging.		

Parameter	Description	Type	Size	Default						
rsso-log-period	Time interval in seconds that group event log messages will be generated for dynamic profile events.	integer	Minimum value: 0 Maximum value: 4294967295	0						
rsso-radius-response	Enable/disable sending RADIUS response packets after receiving Start and Stop records.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending RADIUS response packets.</td></tr><tr><td><i>disable</i></td><td>Disable sending RADIUS response packets.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending RADIUS response packets.	<i>disable</i>	Disable sending RADIUS response packets.			
Option	Description									
<i>enable</i>	Enable sending RADIUS response packets.									
<i>disable</i>	Disable sending RADIUS response packets.									
rsso-radius-server-port	UDP port to listen on for RADIUS Start and Stop records.	integer	Minimum value: 0 Maximum value: 65535	1813						
rsso-secret	RADIUS secret used by the RADIUS accounting server.	password	Not Specified							
rsso-validate-request-secret	Enable/disable validating the RADIUS request shared secret in the Start or End record.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable validating RADIUS request shared secret.</td></tr><tr><td><i>disable</i></td><td>Disable validating RADIUS request shared secret.</td></tr></table>	Option	Description	<i>enable</i>	Enable validating RADIUS request shared secret.	<i>disable</i>	Disable validating RADIUS request shared secret.			
Option	Description									
<i>enable</i>	Enable validating RADIUS request shared secret.									
<i>disable</i>	Disable validating RADIUS request shared secret.									
secondary-secret	Secret key to access the secondary server.	password	Not Specified							
secondary-server	Secondary RADIUS CN domain name or IP address.	string	Maximum length: 63							
secret	Pre-shared secret key used to access the primary RADIUS server.	password	Not Specified							
server	Primary RADIUS server CN domain name or IP address.	string	Maximum length: 63							
server-identity-check	Enable/disable RADIUS server identity check (verify server domain name/IP address against the server certificate).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable server identity check.</td></tr><tr><td><i>disable</i></td><td>Disable server identity check.</td></tr></table>	Option	Description	<i>enable</i>	Enable server identity check.	<i>disable</i>	Disable server identity check.			
Option	Description									
<i>enable</i>	Enable server identity check.									
<i>disable</i>	Disable server identity check.									

Parameter	Description	Type	Size	Default
source-ip	Source IP address for communications to the RADIUS server.	string	Maximum length: 63	
source-ip-interface	Source interface for communication with the RADIUS server.	string	Maximum length: 15	
sso-attribute	RADIUS attribute that contains the profile group name to be extracted from the RADIUS Start record.	option	-	Class

Option	Description
<i>User-Name</i>	Use this attribute.
<i>NAS-IP-Address</i>	Use this attribute.
<i>Framed-IP-Address</i>	Use this attribute.
<i>Framed-IP-Netmask</i>	Use this attribute.
<i>Filter-Id</i>	Use this attribute.
<i>Login-IP-Host</i>	Use this attribute.
<i>Reply-Message</i>	Use this attribute.
<i>Callback-Number</i>	Use this attribute.
<i>Callback-Id</i>	Use this attribute.
<i>Framed-Route</i>	Use this attribute.
<i>Framed-IPX-Network</i>	Use this attribute.
<i>Class</i>	Use this attribute.
<i>Called-Station-Id</i>	Use this attribute.
<i>Calling-Station-Id</i>	Use this attribute.
<i>NAS-Identifier</i>	Use this attribute.
<i>Proxy-State</i>	Use this attribute.
<i>Login-LAT-Service</i>	Use this attribute.
<i>Login-LAT-Node</i>	Use this attribute.

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>Login-LAT-Group</td><td>Use this attribute.</td></tr><tr><td>Framed-AppleTalk-Zone</td><td>Use this attribute.</td></tr><tr><td>Acct-Session-Id</td><td>Use this attribute.</td></tr><tr><td>Acct-Multi-Session-Id</td><td>Use this attribute.</td></tr></table>	Option	Description	Login-LAT-Group	Use this attribute.	Framed-AppleTalk-Zone	Use this attribute.	Acct-Session-Id	Use this attribute.	Acct-Multi-Session-Id	Use this attribute.			
	Option	Description												
	Login-LAT-Group	Use this attribute.												
	Framed-AppleTalk-Zone	Use this attribute.												
	Acct-Session-Id	Use this attribute.												
Acct-Multi-Session-Id	Use this attribute.													
sso-attribute-key	Key prefix for SSO group value in the SSO attribute.	string	Maximum length: 35											
sso-attribute-value-override	Enable/disable override old attribute value with new value for the same endpoint.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable override old attribute value with new value for the same endpoint.</td></tr><tr><td>disable</td><td>Disable override old attribute value with new value for the same endpoint.</td></tr></table>	Option	Description	enable	Enable override old attribute value with new value for the same endpoint.	disable	Disable override old attribute value with new value for the same endpoint.							
	Option	Description												
	enable	Enable override old attribute value with new value for the same endpoint.												
disable	Disable override old attribute value with new value for the same endpoint.													
status-ttl	Time for which server reachability is cached so that when a server is unreachable, it will not be retried for at least this period of time (0 = cache disabled, default = 300).	integer	Minimum value: 0 Maximum value: 600	300										
switch-controller-acct-fast-framedip-detect	Switch controller accounting message Framed-IP detection from DHCP snooping (seconds, default=2).	integer	Minimum value: 2 Maximum value: 600	2										
switch-controller-nas-ip-dynamic *	Enable/Disable switch-controller nas-ip dynamic to dynamically set nas-ip.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable dynamic NAS-IP setting.</td></tr><tr><td>disable</td><td>Disable dynamic NAS-IP setting.</td></tr></table>	Option	Description	enable	Enable dynamic NAS-IP setting.	disable	Disable dynamic NAS-IP setting.							
	Option	Description												
	enable	Enable dynamic NAS-IP setting.												
disable	Disable dynamic NAS-IP setting.													
switch-controller-service-type	RADIUS service type.	option	-											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>login</i>	User should be connected to a host.		
	<i>framed</i>	User use Framed Protocol.		
	<i>callback-login</i>	User disconnected and called back.		
	<i>callback-framed</i>	User disconnected and called back, then a Framed Protocol.		
	<i>outbound</i>	User granted access to outgoing devices.		
	<i>administrative</i>	User granted access to the administrative unsigned interface.		
	<i>nas-prompt</i>	User provided a command prompt on the NAS.		
	<i>authenticate-only</i>	Authentication requested, and no auth info needs to be returned.		
	<i>callback-nas-prompt</i>	User disconnected and called back, then provided a command prompt.		
	<i>call-check</i>	Used by the NAS in an Access-Request packet, Access-Accept to answer the call.		
<i>callback-administrative</i>	User disconnected and called back, granted access to the admin unsigned interface.			
tertiary-secret	Secret key to access the tertiary server.	password	Not Specified	
tertiary-server	Tertiary RADIUS CN domain name or IP address.	string	Maximum length: 63	
timeout	Time in seconds to retry connecting server.	integer	Minimum value: 1 Maximum value: 300	5
tls-min-protocol-version	Minimum supported protocol version for TLS connections (default is to follow system global setting).	option	-	default
	Option	Description		
	<i>default</i>	Follow system global setting.		
	<i>SSLv3</i>	SSLv3.		
	<i>TLSv1</i>	TLSv1.		
	<i>TLSv1-1</i>	TLSv1.1.		
	<i>TLSv1-2</i>	TLSv1.2.		
	<i>TLSv1-3</i>	TLSv1.3.		

Parameter	Description	Type	Size	Default
transport-protocol	Transport protocol to be used (default = udp).	option	-	udp
	Option Description			
	<i>udp</i>	UDP.		
	<i>tcp</i>	TCP.		
	<i>tls</i>	TLS over TCP.		
use-management-vdom	Enable/disable using management VDOM to send requests.	option	-	disable
	Option Description			
	<i>enable</i>	Send requests using the management VDOM.		
	<i>disable</i>	Send requests using the current VDOM.		
username-case-sensitive	Enable/disable case sensitive user names.	option	-	disable
	Option Description			
	<i>enable</i>	Enable username case-sensitive.		
	<i>disable</i>	Disable username case-sensitive.		
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

* This parameter may not exist in some models.

config accounting-server

Parameter	Description	Type	Size	Default
id	ID (0 - 4294967295).	integer	Minimum value: 0 Maximum value: 4294967295	0
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>auto</i>	Set outgoing interface automatically.		
	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.		
	<i>specify</i>	Set outgoing interface manually.		
port	RADIUS accounting port number.	integer	Minimum value: 0 Maximum value: 65535	0
secret	Secret key.	password	Not Specified	
server	Server CN domain name or IP address.	string	Maximum length: 63	
source-ip	Source IP address for communications to the RADIUS server.	string	Maximum length: 63	
status	Status.	option	-	disable
	Option	Description		
	<i>enable</i>	Log to remote syslog server.		
	<i>disable</i>	Do not log to remote syslog server.		
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

config user saml

SAML server entry configuration.

```
config user saml
  Description: SAML server entry configuration.
  edit <name>
    set adfs-claim [enable|disable]
    set cert {string}
    set clock-tolerance {integer}
    set digest-method [shal|sha256]
    set entity-id {string}
    set group-claim-type [email|given-name|...]
    set group-name {string}
    set idp-cert {string}
    set idp-entity-id {string}
    set idp-single-logout-url {string}
    set idp-single-sign-on-url {string}
    set limit-relaystate [enable|disable]
```

```

    set reauth [enable|disable]
    set scim-client {string}
    set single-logout-url {string}
    set single-sign-on-url {string}
    set user-claim-type [email|given-name|...]
    set user-name {string}
  next
end

```

config user saml

Parameter	Description	Type	Size	Default										
adfs-claim	Enable/disable ADFS Claim for user/group attribute in assertion statement (default = disable).	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ADFS Claim for user/group attribute in assertion statement.</td></tr><tr><td><i>disable</i></td><td>Disable ADFS Claim for user/group attribute in assertion statement.</td></tr></table>				Option	Description	<i>enable</i>	Enable ADFS Claim for user/group attribute in assertion statement.	<i>disable</i>	Disable ADFS Claim for user/group attribute in assertion statement.				
Option	Description													
<i>enable</i>	Enable ADFS Claim for user/group attribute in assertion statement.													
<i>disable</i>	Disable ADFS Claim for user/group attribute in assertion statement.													
cert	Certificate to sign SAML messages.	string	Maximum length: 35											
clock-tolerance	Clock skew tolerance in seconds (0 - 300, default = 15, 0 = no tolerance).	integer	Minimum value: 0 Maximum value: 300	15										
digest-method	Digest method algorithm (default = sha1).	option	-	sha1										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sha1</i></td><td>Digest Method Algorithm is SHA1.</td></tr><tr><td><i>sha256</i></td><td>Digest Method Algorithm is SHA256.</td></tr></table>				Option	Description	<i>sha1</i>	Digest Method Algorithm is SHA1.	<i>sha256</i>	Digest Method Algorithm is SHA256.				
Option	Description													
<i>sha1</i>	Digest Method Algorithm is SHA1.													
<i>sha256</i>	Digest Method Algorithm is SHA256.													
entity-id	SP entity ID.	string	Maximum length: 255											
group-claim-type	Group claim in assertion statement.	option	-	group										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>email</i></td><td>E-mail address of the user.</td></tr><tr><td><i>given-name</i></td><td>Given name of the user.</td></tr><tr><td><i>name</i></td><td>Unique name of the user.</td></tr><tr><td><i>upn</i></td><td>User principal name (UPN) of the user.</td></tr></table>				Option	Description	<i>email</i>	E-mail address of the user.	<i>given-name</i>	Given name of the user.	<i>name</i>	Unique name of the user.	<i>upn</i>	User principal name (UPN) of the user.
Option	Description													
<i>email</i>	E-mail address of the user.													
<i>given-name</i>	Given name of the user.													
<i>name</i>	Unique name of the user.													
<i>upn</i>	User principal name (UPN) of the user.													

Parameter	Description	Type	Size	Default																																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>common-name</i></td><td>Common name of the user.</td></tr><tr><td><i>email-adfs-1x</i></td><td>E-mail address of the user when interoperating with AD FS 1.1 or ADFS 1.0.</td></tr><tr><td><i>group</i></td><td>Group that the user is a member of.</td></tr><tr><td><i>upn-adfs-1x</i></td><td>User principal name (UPN) of the user.</td></tr><tr><td><i>role</i></td><td>Role that the user has.</td></tr><tr><td><i>sur-name</i></td><td>Surname of the user</td></tr><tr><td><i>ppid</i></td><td>Private identifier of the user.</td></tr><tr><td><i>name-identifier</i></td><td>SAML name identifier of the user.</td></tr><tr><td><i>authentication-method</i></td><td>Method used to authenticate the user.</td></tr><tr><td><i>deny-only-group-sid</i></td><td>Deny-only group SID of the user.</td></tr><tr><td><i>deny-only-primary-sid</i></td><td>Deny-only primary SID of the user.</td></tr><tr><td><i>deny-only-primary-group-sid</i></td><td>Deny-only primary group SID of the user.</td></tr><tr><td><i>group-sid</i></td><td>Group SID of the user.</td></tr><tr><td><i>primary-group-sid</i></td><td>Primary group SID of the user.</td></tr><tr><td><i>primary-sid</i></td><td>Primary SID of the user.</td></tr><tr><td><i>windows-account-name</i></td><td>Domain account name of the user in the form of <domain>\<user>.</td></tr></table>	Option	Description	<i>common-name</i>	Common name of the user.	<i>email-adfs-1x</i>	E-mail address of the user when interoperating with AD FS 1.1 or ADFS 1.0.	<i>group</i>	Group that the user is a member of.	<i>upn-adfs-1x</i>	User principal name (UPN) of the user.	<i>role</i>	Role that the user has.	<i>sur-name</i>	Surname of the user	<i>ppid</i>	Private identifier of the user.	<i>name-identifier</i>	SAML name identifier of the user.	<i>authentication-method</i>	Method used to authenticate the user.	<i>deny-only-group-sid</i>	Deny-only group SID of the user.	<i>deny-only-primary-sid</i>	Deny-only primary SID of the user.	<i>deny-only-primary-group-sid</i>	Deny-only primary group SID of the user.	<i>group-sid</i>	Group SID of the user.	<i>primary-group-sid</i>	Primary group SID of the user.	<i>primary-sid</i>	Primary SID of the user.	<i>windows-account-name</i>	Domain account name of the user in the form of <domain>\<user>.			
	Option	Description																																				
	<i>common-name</i>	Common name of the user.																																				
	<i>email-adfs-1x</i>	E-mail address of the user when interoperating with AD FS 1.1 or ADFS 1.0.																																				
	<i>group</i>	Group that the user is a member of.																																				
	<i>upn-adfs-1x</i>	User principal name (UPN) of the user.

	<i>primary-sid</i>	Primary SID of the user.		
<i>windows-account-name</i>	Domain account name of the user in the form of <domain>\<user>.			
user-name	User name in assertion statement.	string	Maximum length: 255	

config user scim

Configure SCIM client entries.

```

config user scim
  Description: Configure SCIM client entries.
  edit <name>
    set auth-method [token|base]
    set base-url {string}
    set certificate {string}
    set client-identity-check [enable|disable]
    set id {integer}
    set secret {password}
    set status [enable|disable]
    set token-certificate {string}
  next
end

```

config user scim

Parameter	Description	Type	Size	Default
auth-method	TLS client authentication methods (default = bearer token).	option	-	token
	Option	Description		
	<i>token</i>	Bearer token.		
	<i>base</i>	Base.		
base-url	Server URL to receive SCIM create, read, update, delete (CRUD) requests.	string	Maximum length: 127	
certificate	Certificate for client verification during TLS handshake.	string	Maximum length: 79	
client-identity-check	Enable/disable client identity check.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable client identity check.		
	<i>disable</i>	Disable client identity check.		
id	SCIM client ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	SCIM client name.	string	Maximum length: 35	
secret	Secret for token verification or base authentication.	password	Not Specified	
status	Enable/disable System for Cross-domain Identity Management (SCIM).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable System for Cross-domain Identity Management (SCIM).		
	<i>disable</i>	Disable System for Cross-domain Identity Management (SCIM).		
token-certificate	Certificate for token verification.	string	Maximum length: 79	

config user security-exempt-list

Configure security exemption list.

```

config user security-exempt-list
    Description: Configure security exemption list.
    edit <name>
        set description {string}
        config rule
            Description: Configure rules for exempting users from captive portal
authentication.
            edit <id>
                set dstaddr <name1>, <name2>, ...

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>default</i></td><td>Follow system global setting.</td></tr><tr><td><i>SSLv3</i></td><td>SSLv3.</td></tr><tr><td><i>TLSv1</i></td><td>TLSv1.</td></tr><tr><td><i>TLSv1-1</i></td><td>TLSv1.1.</td></tr><tr><td><i>TLSv1-2</i></td><td>TLSv1.2.</td></tr><tr><td><i>TLSv1-3</i></td><td>TLSv1.3.</td></tr></table>	Option	Description	<i>default</i>	Follow system global setting.	<i>SSLv3</i>	SSLv3.	<i>TLSv1</i>	TLSv1.	<i>TLSv1-1</i>	TLSv1.1.	<i>TLSv1-2</i>	TLSv1.2.	<i>TLSv1-3</i>	TLSv1.3.			
	Option	Description																
	<i>default</i>	Follow system global setting.																
	<i>SSLv3</i>	SSLv3.																
	<i>TLSv1</i>	TLSv1.																
	<i>TLSv1-1</i>	TLSv1.1.																
	<i>TLSv1-2</i>	TLSv1.2.																
<i>TLSv1-3</i>	TLSv1.3.																	
auth-ssl-sigalgs	Set signature algorithms related to HTTPS authentication (affects TLS version <= 1.2 only, default is to enable all).	option	-	all														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>no-rsa-pss</i></td><td>Disable RSA-PSS signature algorithms for HTTPS authentication.</td></tr><tr><td><i>all</i></td><td>Enable all supported signature algorithms for HTTPS authentication.</td></tr></table>	Option	Description	<i>no-rsa-pss</i>	Disable RSA-PSS signature algorithms for HTTPS authentication.	<i>all</i>	Enable all supported signature algorithms for HTTPS authentication.											
	Option	Description																
	<i>no-rsa-pss</i>	Disable RSA-PSS signature algorithms for HTTPS authentication.																
<i>all</i>	Enable all supported signature algorithms for HTTPS authentication.																	
auth-timeout	Time in minutes before the firewall user authentication timeout requires the user to re-authenticate.	integer	Minimum value: 1 Maximum value: 1440	5														

Parameter	Description	Type	Size	Default										
auth-timeout-type	Control if authenticated users have to login again after a hard timeout, after an idle timeout, or after a session timeout.	option	-	idle-timeout										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>idle-timeout</i></td><td>Idle timeout.</td></tr><tr><td><i>hard-timeout</i></td><td>Hard timeout.</td></tr><tr><td><i>new-session</i></td><td>New session timeout.</td></tr></table>	Option	Description	<i>idle-timeout</i>	Idle timeout.	<i>hard-timeout</i>	Hard timeout.	<i>new-session</i>	New session timeout.					
Option	Description													
<i>idle-timeout</i>	Idle timeout.													
<i>hard-timeout</i>	Hard timeout.													
<i>new-session</i>	New session timeout.													
auth-type	Supported firewall policy authentication protocols/methods.	option	-	http https ftp telnet										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>http</i></td><td>Allow HTTP authentication.</td></tr><tr><td><i>https</i></td><td>Allow HTTPS authentication.</td></tr><tr><td><i>ftp</i></td><td>Allow FTP authentication.</td></tr><tr><td><i>telnet</i></td><td>Allow TELNET authentication.</td></tr></table>	Option	Description	<i>http</i>	Allow HTTP authentication.	<i>https</i>	Allow HTTPS authentication.	<i>ftp</i>	Allow FTP authentication.	<i>telnet</i>	Allow TELNET authentication.			
Option	Description													
<i>http</i>	Allow HTTP authentication.													
<i>https</i>	Allow HTTPS authentication.													
<i>ftp</i>	Allow FTP authentication.													
<i>telnet</i>	Allow TELNET authentication.													
default-user-password-policy	Default password policy to apply to all local users unless otherwise specified, as defined in config user password-policy.	string	Maximum length: 35											
per-policy-disclaimer	Enable/disable per policy disclaimer.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable per policy disclaimer.</td></tr><tr><td><i>disable</i></td><td>Disable per policy disclaimer.</td></tr></table>	Option	Description	<i>enable</i>	Enable per policy disclaimer.	<i>disable</i>	Disable per policy disclaimer.							
Option	Description													
<i>enable</i>	Enable per policy disclaimer.													
<i>disable</i>	Disable per policy disclaimer.													
radius-ses-timeout-act	Set the RADIUS session timeout to a hard timeout or to ignore RADIUS server session timeouts.	option	-	hard-timeout										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>hard-timeout</i></td><td>Use session timeout from RADIUS as hard-timeout.</td></tr><tr><td><i>ignore-timeout</i></td><td>Ignore session timeout from RADIUS.</td></tr></table>	Option	Description	<i>hard-timeout</i>	Use session timeout from RADIUS as hard-timeout.	<i>ignore-timeout</i>	Ignore session timeout from RADIUS.							
Option	Description													
<i>hard-timeout</i>	Use session timeout from RADIUS as hard-timeout.													
<i>ignore-timeout</i>	Ignore session timeout from RADIUS.													

config auth-ports

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
port	Non-standard port for firewall user authentication.	integer	Minimum value: 1 Maximum value: 65535	1024
type	Service type.	option	-	http
	Option	Description		
	http	HTTP service.		
	https	HTTPS service.		
	ftp	FTP service.		
	telnet	TELNET service.		

config user tacacs+

Configure TACACS+ server entries.

```
config user tacacs+
  Description: Configure TACACS+ server entries.
  edit <name>
    set authen-type [mschap|chap|...]
    set authorization [enable|disable]
    set interface {string}
    set interface-select-method [auto|sdwan|...]
    set key {password}
    set port {integer}
    set secondary-key {password}
    set secondary-server {string}
    set server {string}
    set source-ip {string}
    set status-ttl {integer}
    set tertiary-key {password}
    set tertiary-server {string}
    set vrf-select {integer}
  next
end
```

config user tacacs+

Parameter	Description	Type	Size	Default												
authen-type	Allowed authentication protocols/methods.	option	-	auto												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>mschap</i></td><td>MSCHAP.</td></tr><tr><td><i>chap</i></td><td>CHAP.</td></tr><tr><td><i>pap</i></td><td>PAP.</td></tr><tr><td><i>ascii</i></td><td>ASCII.</td></tr><tr><td><i>auto</i></td><td>Use PAP, MSCHAP, and CHAP (in that order).</td></tr></table>	Option	Description	<i>mschap</i>	MSCHAP.	<i>chap</i>	CHAP.	<i>pap</i>	PAP.	<i>ascii</i>	ASCII.	<i>auto</i>	Use PAP, MSCHAP, and CHAP (in that order).			
Option	Description															
<i>mschap</i>	MSCHAP.															
<i>chap</i>	CHAP.															
<i>pap</i>	PAP.															
<i>ascii</i>	ASCII.															
<i>auto</i>	Use PAP, MSCHAP, and CHAP (in that order).															
authorization	Enable/disable TACACS+ authorization.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable TACACS+ authorization.</td></tr><tr><td><i>disable</i></td><td>Disable TACACS+ authorization.</td></tr></table>	Option	Description	<i>enable</i>	Enable TACACS+ authorization.	<i>disable</i>	Disable TACACS+ authorization.									
Option	Description															
<i>enable</i>	Enable TACACS+ authorization.															
<i>disable</i>	Disable TACACS+ authorization.															
interface	Specify outgoing interface to reach server.	string	Maximum length: 15													
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Set outgoing interface automatically.</td></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>auto</i>	Set outgoing interface automatically.	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.	<i>specify</i>	Set outgoing interface manually.							
Option	Description															
<i>auto</i>	Set outgoing interface automatically.															
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.															
<i>specify</i>	Set outgoing interface manually.															
key	Key to access the primary server.	password	Not Specified													
name	TACACS+ server entry name.	string	Maximum length: 35													
port	Port number of the TACACS+ server.	integer	Minimum value: 1 Maximum value: 65535	49												
secondary-key	Key to access the secondary server.	password	Not Specified													

Parameter	Description	Type	Size	Default
secondary-server	Secondary TACACS+ server CN domain name or IP address.	string	Maximum length: 63	
server	Primary TACACS+ server CN domain name or IP address.	string	Maximum length: 63	
source-ip	Source IP address for communications to TACACS+ server.	string	Maximum length: 63	
status-ttl	Time for which server reachability is cached so that when a server is unreachable, it will not be retried for at least this period of time (0 = cache disabled, default = 300).	integer	Minimum value: 0 Maximum value: 600	300
tertiary-key	Key to access the tertiary server.	password	Not Specified	
tertiary-server	Tertiary TACACS+ server CN domain name or IP address.	string	Maximum length: 63	
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0

videofilter

This section includes syntax for the following commands:

- [config videofilter keyword on page 1956](#)
- [config videofilter profile on page 1957](#)
- [config videofilter youtube-key on page 1959](#)

config videofilter keyword

Configure video filter keywords.

```
config videofilter keyword
  Description: Configure video filter keywords.
  edit <id>
    set comment {var-string}
    set match [or|and]
    set name {string}
    config word
      Description: List of keywords.
      edit <name>
        set comment {var-string}
        set pattern-type [wildcard|regex]
        set status [enable|disable]
      next
    end
  next
end
```

config videofilter keyword

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
match	Keyword matching logic.	option	-	or
		Option	Description	
		or	Match any keyword.	

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>and</i>	Match all keywords.		
name	Name.	string	Maximum length: 35	

config word

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
name	Name.	string	Maximum length: 79	
pattern-type	Pattern type.	option	-	wildcard
	Option	Description		
	<i>wildcard</i>	Wildcard pattern.		
	<i>regex</i>	Perl regular expression.		
status	Enable(consider)/disable(ignore) this keyword.	option	-	enable
	Option	Description		
	<i>enable</i>	Consider this keyword.		
	<i>disable</i>	Ignore this keyword.		

config videofilter profile

Configure VideoFilter profile.

```
config videofilter profile
  Description: Configure VideoFilter profile.
  edit <name>
    set comment {var-string}
    set dailymotion [enable|disable]
    config filters
      Description: YouTube filter entries.
      edit <id>
        set action [allow|monitor|...]
        set category {string}
        set channel {string}
        set comment {var-string}
        set keyword {integer}
        set log [enable|disable]
        set type [category|channel|...]
```

```

        next
    end
    set replacemsg-group {string}
    set vimeo [enable|disable]
    set youtube [enable|disable]
next
end

```

config videofilter profile

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
dailymotion	Enable/disable Dailymotion video source.	option	-	enable
	Option	Description		
	enable	Enable Dailymotion source.		
	disable	Disable Dailymotion source.		
name	Name.	string	Maximum length: 47	
replacemsg-group	Replacement message group.	string	Maximum length: 35	
vimeo	Enable/disable Vimeo video source.	option	-	enable
	Option	Description		
	enable	Enable Vimeo source.		
	disable	Disable Vimeo source.		
youtube	Enable/disable YouTube video source.	option	-	enable
	Option	Description		
	enable	Enable YouTube source.		
	disable	Disable YouTube source.		

config filters

Parameter	Description	Type	Size	Default
action	Video filter action.	option	-	monitor
	Option	Description		
	<i>allow</i>	Allow videos to be accessed.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>monitor</i>	Monitor videos.		
	<i>block</i>	Block videos.		
category	FortiGuard category ID.	string	Maximum length: 7	
channel	Channel ID.	string	Maximum length: 255	
comment	Comment.	var-string	Maximum length: 255	
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
keyword	Video filter keyword ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
log	Enable/disable logging.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable logging.		
	<i>disable</i>	Disable logging.		
type	Filter type.	option	-	category
	Option	Description		
	<i>category</i>	Filter videos by FortiGuard category.		
	<i>channel</i>	Filter videos by channel ID.		
	<i>title</i>	Filter videos by title.		
	<i>description</i>	Filter videos by description.		

config videofilter youtube-key

Configure YouTube API keys.

```
config videofilter youtube-key
    Description: Configure YouTube API keys.
```

```
edit <id>
    set key {string}
next
end
```

config videofilter youtube-key

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
key	Key.	string	Maximum length: 47	

virtual-patch

This section includes syntax for the following commands:

- [config virtual-patch profile on page 1961](#)

config virtual-patch profile

Configure virtual-patch profile.

```
config virtual-patch profile
  Description: Configure virtual-patch profile.
  edit <name>
    set action [pass|block]
    set comment {var-string}
    config exemption
      Description: Exempt devices or rules.
      edit <id>
        set device <mac1>, <mac2>, ...
        set rule <id1>, <id2>, ...
        set status [enable|disable]
      next
    end
    set log [enable|disable]
    set severity {option1}, {option2}, ...
  next
end
```

config virtual-patch profile

Parameter	Description	Type	Size	Default						
action	Action (pass/block).	option	-	block						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Allows session that match the profile.</td></tr><tr><td><i>block</i></td><td>Blocks sessions that match the profile.</td></tr></table>	Option	Description	<i>pass</i>	Allows session that match the profile.	<i>block</i>	Blocks sessions that match the profile.			
Option	Description									
<i>pass</i>	Allows session that match the profile.									
<i>block</i>	Blocks sessions that match the profile.									
comment	Comment.	var-string	Maximum length: 255							
log	Enable/disable logging of detection.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging.					
Option	Description									
<i>enable</i>	Enable logging.									

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable logging.		
name	Profile name.	string	Maximum length: 47	
severity	Relative severity of the signature (low, medium, high, critical).	option	-	info low medium high critical
	Option	Description		
	<i>info</i>	info		
	<i>low</i>	low		
	<i>medium</i>	medium		
	<i>high</i>	high		
	<i>critical</i>	critical		

config exemption

Parameter	Description	Type	Size	Default
device <mac>	Device MAC addresses. Device MAC address.	mac-address	Not Specified	
id	IDs.	integer	Minimum value: 0 Maximum value: 4294967295	0
rule <id>	Patch signature rule IDs. Rule IDs.	integer	Minimum value: 0 Maximum value: 4294967295	
status	Enable/disable exemption.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable exemption.		
	<i>disable</i>	Disable exemption.		

voip

This section includes syntax for the following commands:

- [config voip profile on page 1963](#)

config voip profile

Configure VoIP profiles.

```
config voip profile
  Description: Configure VoIP profiles.

<i>dest-ip</i>	Destination IP.											
block-ack	Enable/disable block ACK requests.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
block-bye	Enable/disable block BYE requests.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
block-cancel	Enable/disable block CANCEL requests.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
block-geo-red-options	Enable/disable block OPTIONS requests, but OPTIONS requests still notify for redundancy.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
block-info	Enable/disable block INFO requests.	option	-	disable								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-invite	Enable/disable block INVITE requests.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-long-lines	Enable/disable block requests with headers exceeding max-line-length.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-message	Enable/disable block MESSAGE requests.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-notify	Enable/disable block NOTIFY requests.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-options	Enable/disable block OPTIONS requests and no OPTIONS as notifying message for redundancy either.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-prack	Enable/disable block prack requests.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-publish	Enable/disable block PUBLISH requests.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-refer	Enable/disable block REFER requests.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-register	Enable/disable block REGISTER requests.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-subscribe	Enable/disable block SUBSCRIBE requests.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-unknown	Block unrecognized SIP requests (enabled by default).	option	-	enable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
block-update	Enable/disable block UPDATE requests.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
bye-rate	BYE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
bye-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
call-id-regex	Validate PCRE regular expression for Call-Id header value.	var-string	Maximum length: 511	
call-keepalive	Continue tracking calls with no RTP for this many minutes.	integer	Minimum value: 0 Maximum value: 10080	0
cancel-rate	CANCEL request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
cancel-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
contact-fixup	Fixup contact anyway even if contact's IP:port doesn't match session's IP:port.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
content-type-regex	Validate PCRE regular expression for Content-Type header value.	var-string	Maximum length: 511	
hnt-restrict-source-ip	Enable/disable restrict RTP source IP to be the same as SIP source IP when HNT is enabled.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
hosted-nat-traversal	Hosted NAT Traversal (HNT).	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
info-rate	INFO request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
info-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
invite-rate	INVITE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
invite-rate-track	Track the packet protocol field.	option	-	none

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
ips-rtp	Enable/disable allow IPS on RTP.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
log-call-summary	Enable/disable logging of SIP call summary.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
log-violations	Enable/disable logging of SIP violations.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
malformed-header-allow	Action for malformed Allow header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-call-id	Action for malformed Call-ID header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		

Parameter	Description	Type	Size	Default								
malformed-header-contact	Action for malformed Contact header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-content-length	Action for malformed Content-Length header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-content-type	Action for malformed Content-Type header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-cseq	Action for malformed CSeq header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-expires	Action for malformed Expires header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.					
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>respond</i>	Respond with error code.		
malformed-header-from	Action for malformed From header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-max-forwards	Action for malformed Max-Forwards header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-no-proxy-require	Action for malformed SIP messages without Proxy-Require header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-no-require	Action for malformed SIP messages without Require header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		

Parameter	Description	Type	Size	Default								
malformed-header-p-asserted-identity	Action for malformed P-Asserted-Identity header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-rack	Action for malformed RACK header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-record-route	Action for malformed Record-Route header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-route	Action for malformed Route header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-rseq	Action for malformed RSeq header.	option	-	pass								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-a	Action for malformed SDP a line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-b	Action for malformed SDP b line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-c	Action for malformed SDP c line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-i	Action for malformed SDP i line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-k	Action for malformed SDP k line.	option	-	pass

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-m	Action for malformed SDP m line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-o	Action for malformed SDP o line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-r	Action for malformed SDP r line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-s	Action for malformed SDP s line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-t	Action for malformed SDP t line.	option	-	pass

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-v	Action for malformed SDP v line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-z	Action for malformed SDP z line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-to	Action for malformed To header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-via	Action for malformed VIA header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-request-line	Action for malformed request line.	option	-	pass

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
max-body-length	Maximum SIP message body length (0 meaning no limit).	integer	Minimum value: 0 Maximum value: 4294967295	0
max-dialogs	Maximum number of concurrent calls/dialogs (per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
max-idle-dialogs	Maximum number established but idle dialogs to retain (per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
max-line-length	Maximum SIP header line length (78-4096).	integer	Minimum value: 78 Maximum value: 4096	998
message-rate	MESSAGE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
message-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
nat-port-range	RTP NAT port range.	user	Not Specified	5117-65533

Parameter	Description	Type	Size	Default								
nat-trace	Enable/disable preservation of original IP in SDP i line.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
no-sdp-fixup	Enable/disable no SDP fix-up.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
notify-rate	NOTIFY request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
notify-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
open-contact-pinhole	Enable/disable open pinhole for non-REGISTER Contact port.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
open-record-route-pinhole	Enable/disable open pinhole for Record-Route port.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											

Parameter	Description	Type	Size	Default								
open-register-pinhole	Enable/disable open pinhole for REGISTER Contact port.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
open-via-pinhole	Enable/disable open pinhole for Via port.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
options-rate	OPTIONS request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
options-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
prack-rate	PRACK request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
prack-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											

Parameter	Description	Type	Size	Default								
preserve-override	Override i line to preserve original IPs (default: append).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable status.</td></tr><tr><td>enable</td><td>Enable status.</td></tr></table>	Option	Description	disable	Disable status.	enable	Enable status.					
	Option	Description										
	disable	Disable status.										
enable	Enable status.											
provisional-invite-expiry-time	Expiry time (10-3600, in seconds) for provisional INVITE.	integer	Minimum value: 10 Maximum value: 3600	210								
publish-rate	PUBLISH request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
publish-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>None.</td></tr><tr><td>src-ip</td><td>Source IP.</td></tr><tr><td>dest-ip</td><td>Destination IP.</td></tr></table>	Option	Description	none	None.	src-ip	Source IP.	dest-ip	Destination IP.			
	Option	Description										
	none	None.										
	src-ip	Source IP.										
dest-ip	Destination IP.											
refer-rate	REFER request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
refer-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>None.</td></tr><tr><td>src-ip</td><td>Source IP.</td></tr><tr><td>dest-ip</td><td>Destination IP.</td></tr></table>	Option	Description	none	None.	src-ip	Source IP.	dest-ip	Destination IP.			
	Option	Description										
	none	None.										
	src-ip	Source IP.										
dest-ip	Destination IP.											
register-contact-trace	Enable/disable trace original IP/port within the contact header of REGISTER requests.	option	-	disable								

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
	Option	Description										
	<i>disable</i>	Disable status.										
<i>enable</i>	Enable status.											
register-rate	REGISTER request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
register-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
	Option	Description										
	<i>none</i>	None.										
	<i>src-ip</i>	Source IP.										
<i>dest-ip</i>	Destination IP.											
rfc2543-branch	Enable/disable support via branch compliant with RFC 2543.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
	Option	Description										
	<i>disable</i>	Disable status.										
<i>enable</i>	Enable status.											
rtp	Enable/disable create pinholes for RTP traffic to traverse firewall.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
	Option	Description										
	<i>disable</i>	Disable status.										
<i>enable</i>	Enable status.											
ssl-algorithm	Relative strength of encryption algorithms accepted in negotiation.	option	-	high								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>high</i></td><td>High encryption. Allow only AES and ChaCha.</td></tr><tr><td><i>medium</i></td><td>Medium encryption. Allow AES, ChaCha, 3DES, and RC4.</td></tr><tr><td><i>low</i></td><td>Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.</td></tr></table>	Option	Description	<i>high</i>	High encryption. Allow only AES and ChaCha.	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.			
	Option	Description										
	<i>high</i>	High encryption. Allow only AES and ChaCha.										
	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.										
<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.											

Parameter	Description	Type	Size	Default												
ssl-auth-client	Require a client certificate and authenticate it with the peer/peergrp.	string	Maximum length: 35													
ssl-auth-server	Authenticate the server's certificate with the peer/peergrp.	string	Maximum length: 35													
ssl-client-certificate	Name of Certificate to offer to server if requested.	string	Maximum length: 35													
ssl-client-renegotiation	Allow/block client renegotiation by server.	option	-	allow												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow a SSL client to renegotiate.</td></tr><tr><td>deny</td><td>Abort any SSL connection that attempts to renegotiate.</td></tr><tr><td>secure</td><td>Reject any SSL connection that does not offer a RFC 5746 Secure Renegotiation Indication.</td></tr></table>				Option	Description	allow	Allow a SSL client to renegotiate.	deny	Abort any SSL connection that attempts to renegotiate.	secure	Reject any SSL connection that does not offer a RFC 5746 Secure Renegotiation Indication.				
Option	Description															
allow	Allow a SSL client to renegotiate.															
deny	Abort any SSL connection that attempts to renegotiate.															
secure	Reject any SSL connection that does not offer a RFC 5746 Secure Renegotiation Indication.															
ssl-max-version	Highest SSL/TLS version to negotiate.	option	-	tls-1.3												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ssl-3.0</td><td>SSL 3.0.</td></tr><tr><td>tls-1.0</td><td>TLS 1.0.</td></tr><tr><td>tls-1.1</td><td>TLS 1.1.</td></tr><tr><td>tls-1.2</td><td>TLS 1.2.</td></tr><tr><td>tls-1.3</td><td>TLS 1.3.</td></tr></table>				Option	Description	ssl-3.0	SSL 3.0.	tls-1.0	TLS 1.0.	tls-1.1	TLS 1.1.	tls-1.2	TLS 1.2.	tls-1.3	TLS 1.3.
Option	Description															
ssl-3.0	SSL 3.0.															
tls-1.0	TLS 1.0.															
tls-1.1	TLS 1.1.															
tls-1.2	TLS 1.2.															
tls-1.3	TLS 1.3.															
ssl-min-version	Lowest SSL/TLS version to negotiate.	option	-	tls-1.1												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ssl-3.0</td><td>SSL 3.0.</td></tr><tr><td>tls-1.0</td><td>TLS 1.0.</td></tr><tr><td>tls-1.1</td><td>TLS 1.1.</td></tr><tr><td>tls-1.2</td><td>TLS 1.2.</td></tr><tr><td>tls-1.3</td><td>TLS 1.3.</td></tr></table>				Option	Description	ssl-3.0	SSL 3.0.	tls-1.0	TLS 1.0.	tls-1.1	TLS 1.1.	tls-1.2	TLS 1.2.	tls-1.3	TLS 1.3.
Option	Description															
ssl-3.0	SSL 3.0.															
tls-1.0	TLS 1.0.															
tls-1.1	TLS 1.1.															
tls-1.2	TLS 1.2.															
tls-1.3	TLS 1.3.															
ssl-mode	SSL/TLS mode for encryption & decryption of traffic.	option	-	off												

Parameter	Description	Type	Size	Default
	Option	Description		
	off	No SSL.		
	full	Client to FortiGate and FortiGate to Server SSL.		
ssl-pfs	SSL Perfect Forward Secrecy.	option	-	allow
	Option	Description		
	require	PFS mandatory.		
	deny	PFS rejected.		
	allow	PFS allowed.		
ssl-send-empty-frags	Send empty fragments to avoid attack on CBC IV (SSL 3.0 & TLS 1.0 only).	option	-	enable
	Option	Description		
	enable	Send empty fragments.		
	disable	Do not send empty fragments.		
ssl-server-certificate	Name of Certificate return to the client in every SSL connection.	string	Maximum length: 35	
status	Enable/disable SIP.	option	-	enable
	Option	Description		
	disable	Disable status.		
	enable	Enable status.		
strict-register	Enable/disable only allow the registrar to connect.	option	-	enable
	Option	Description		
	disable	Disable status.		
	enable	Enable status.		
subscribe-rate	SUBSCRIBE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
subscribe-rate-track	Track the packet protocol field.	option	-	none

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
unknown-header	Action for unknown SIP header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
update-rate	UPDATE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0
update-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.

config vpn certificate ca

CA certificate.

```
config vpn certificate ca
  Description: CA certificate.
  edit <name>
    set auto-update-days {integer}
    set auto-update-days-warning {integer}
    set ca {user}
    set ca-identifier {string}
    set est-url {string}
    set fabric-ca [disable|enable]
```

```

        set obsolete [disable|enable]
        set range [global|vdom]
        set scep-url {string}
        set source [factory|user|...]
        set source-ip {ipv4-address}
        set ssl-inspection-trusted [enable|disable]
    next
end

```

config vpn certificate ca

Parameter	Description	Type	Size	Default
auto-update-days	Number of days to wait before requesting an updated CA certificate (0 - 4294967295, 0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0
auto-update-days-warning	Number of days before an expiry-warning message is generated (0 - 4294967295, 0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0
ca	CA certificate as a PEM file.	user	Not Specified	
ca-identifier	CA identifier of the SCEP server.	string	Maximum length: 255	
est-url	URL of the EST server.	string	Maximum length: 255	
fabric-ca	Enable/disable synchronization of CA across Security Fabric.	option	-	disable
	Option		Description	
	<i>disable</i>		Disable synchronization of CA across Security Fabric.	
	<i>enable</i>		Enable synchronization of CA across Security Fabric.	
name	Name.	string	Maximum length: 79	
obsolete	Enable/disable this CA as obsoleted.	option	-	disable
	Option		Description	
	<i>disable</i>		Alive.	
	<i>enable</i>		Obsolete.	

Parameter	Description	Type	Size	Default
range	Either global or VDOM IP address range for the CA certificate.	option	-	vdom
	Option	Description		
	<i>global</i>	Global range.		
	<i>vdom</i>	VDOM IP address range.		
scep-url	URL of the SCEP server.	string	Maximum length: 255	
source	CA certificate source type.	option	-	user
	Option	Description		
	<i>factory</i>	Factory installed certificate.		
	<i>user</i>	User generated certificate.		
	<i>bundle</i>	Bundle file certificate.		
source-ip	Source IP address for communications to the SCEP server.	ipv4-address	Not Specified	0.0.0.0
ssl-inspection-trusted	Enable/disable this CA as a trusted CA for SSL inspection.	option	-	enable
	Option	Description		
	<i>enable</i>	Trusted CA for SSL inspection.		
	<i>disable</i>	Untrusted CA for SSL inspection.		

config vpn certificate crl

Certificate Revocation List as a PEM file.

```
config vpn certificate crl
  Description: Certificate Revocation List as a PEM file.
  edit <name>
    set crl {user}
    set http-url {string}
    set ldap-password {password}
    set ldap-server {string}
    set ldap-username {string}
    set range [global|vdom]
    set scep-cert {string}
    set scep-url {string}
    set source [factory|user|...]
    set source-ip {ipv4-address}
    set update-interval {integer}
```

```

        set update-vdom {string}
    next
end

```

config vpn certificate crl

Parameter	Description	Type	Size	Default								
crl	Certificate Revocation List as a PEM file.	user	Not Specified									
http-url	HTTP server URL for CRL auto-update.	string	Maximum length: 255									
ldap-password	LDAP server user password.	password	Not Specified									
ldap-server	LDAP server name for CRL auto-update.	string	Maximum length: 35									
ldap-username	LDAP server user name.	string	Maximum length: 63									
name	Name.	string	Maximum length: 35									
range	Either global or VDOM IP address range for the certificate.	option	-	vdom								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>global</i></td><td>Global range.</td></tr><tr><td><i>vdom</i></td><td>VDOM IP address range.</td></tr></table>				Option	Description	<i>global</i>	Global range.	<i>vdom</i>	VDOM IP address range.		
	Option	Description										
	<i>global</i>	Global range.										
<i>vdom</i>	VDOM IP address range.											
scep-cert	Local certificate for SCEP communication for CRL auto-update.	string	Maximum length: 35	Fortinet_CA_SSL								
scep-url	SCEP server URL for CRL auto-update.	string	Maximum length: 255									
source	Certificate source type.	option	-	user								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>factory</i></td><td>Factory installed certificate.</td></tr><tr><td><i>user</i></td><td>User generated certificate.</td></tr><tr><td><i>bundle</i></td><td>Bundle file certificate.</td></tr></table>				Option	Description	<i>factory</i>	Factory installed certificate.	<i>user</i>	User generated certificate.	<i>bundle</i>	Bundle file certificate.
	Option	Description										
	<i>factory</i>	Factory installed certificate.										
	<i>user</i>	User generated certificate.										
<i>bundle</i>	Bundle file certificate.											
source-ip	Source IP address for communications to a HTTP or SCEP CA server.	ipv4-address	Not Specified	0.0.0.0								

Parameter	Description	Type	Size	Default
update-interval	Time in seconds before the FortiGate checks for an updated CRL. Set to 0 to update only when it expires.	integer	Minimum value: 0 Maximum value: 4294967295	0
update-vdom	VDOM for CRL update.	string	Maximum length: 31	root

config vpn certificate local

Local keys and certificates.

```
config vpn certificate local
    Description: Local keys and certificates.
    edit <name>
        set acme-ca-url {string}
        set acme-domain {string}
        set acme-email {string}
        set acme-renew-window {integer}
        set acme-rsa-key-size {integer}
        set auto-regenerate-days {integer}
        set auto-regenerate-days-warning {integer}
        set ca-identifier {string}
        set certificate {user}
        set cmp-path {string}
        set cmp-regeneration-method [keyupdate|renewal]
        set cmp-server {string}
        set cmp-server-cert {string}
        set comments {string}
        set csr {user}
        set enroll-protocol [none|scep|...]
        set est-ca-id {string}
        set est-client-cert {string}
        set est-http-password {password}
        set est-http-username {string}
        set est-server {string}
        set est-server-cert {string}
        set est-srp-password {password}
        set est-srp-username {string}
        set ike-localid {string}
        set ike-localid-type [asn1dn|fqdn]
        set name-encoding [printable|utf8]
        set password {password}
        set private-key {user}
        set private-key-retain [enable|disable]
        set range [global|vdom]
        set scep-password {password}
        set scep-url {string}
        set source [factory|user|...]
        set source-ip {ipv4-address}
        set state {user}
```

next
end

config vpn certificate local

Parameter	Description	Type	Size	Default
acme-ca-url	The URL for the ACME CA server (Let's Encrypt is the default provider).	string	Maximum length: 255	https://acme-v02.api.letsencrypt.org/directory
acme-domain	A valid domain that resolves to this FortiGate unit.	string	Maximum length: 255	
acme-email	Contact email address that is required by some CAs like LetsEncrypt.	string	Maximum length: 255	
acme-renew-window	Beginning of the renewal window (in days before certificate expiration, 30 by default).	integer	Minimum value: 1 Maximum value: 100	30
acme-rsa-key-size	Length of the RSA private key of the generated cert (Minimum 2048 bits).	integer	Minimum value: 2048 Maximum value: 4096	2048
auto-regenerate-days	Number of days to wait before expiry of an updated local certificate is requested (0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0
auto-regenerate-days-warning	Number of days to wait before an expiry warning message is generated (0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0
ca-identifier	CA identifier of the CA server for signing via SCEP.	string	Maximum length: 255	
certificate	PEM format certificate.	user	Not Specified	
cmp-path	Path location inside CMP server.	string	Maximum length: 255	
cmp-regeneration-method	CMP auto-regeneration method.	option	-	keyupdate

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>keyupate</i>	Key Update.		
	<i>renewal</i>	Renewal.		
cmp-server	Address and port for CMP server (format = address:port).	string	Maximum length: 63	
cmp-server-cert	CMP server certificate.	string	Maximum length: 79	
comments	Comment.	string	Maximum length: 511	
csr	Certificate Signing Request.	user	Not Specified	
enroll-protocol	Certificate enrollment protocol.	option	-	none
	Option	Description		
	<i>none</i>	None (default).		
	<i>scep</i>	Simple Certificate Enrollment Protocol.		
	<i>cmpv2</i>	Certificate Management Protocol Version 2.		
	<i>acme2</i>	Automated Certificate Management Environment Version 2.		
	<i>est</i>	Enrollment over Secure Transport.		
est-ca-id	CA identifier of the CA server for signing via EST.	string	Maximum length: 255	
est-client-cert	Certificate used to authenticate this FortiGate to EST server.	string	Maximum length: 79	
est-http-password	HTTP Authentication password for signing via EST.	password	Not Specified	
est-http-username	HTTP Authentication username for signing via EST.	string	Maximum length: 63	
est-server	Address and port for EST server (e.g. https://example.com:1234).	string	Maximum length: 255	
est-server-cert	EST server's certificate must be verifiable by this certificate to be authenticated.	string	Maximum length: 79	

Parameter	Description	Type	Size	Default						
est-srp-password	EST SRP authentication password.	password	Not Specified							
est-srp-username	EST SRP authentication username.	string	Maximum length: 63							
ike-localid	Local ID the FortiGate uses for authentication as a VPN client.	string	Maximum length: 63							
ike-localid-type	IKE local ID type.	option	-	asn1dn						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>asn1dn</td><td>ASN.1 distinguished name.</td></tr><tr><td>fqdn</td><td>Fully qualified domain name.</td></tr></table>				Option	Description	asn1dn	ASN.1 distinguished name.	fqdn	Fully qualified domain name.
Option	Description									
asn1dn	ASN.1 distinguished name.									
fqdn	Fully qualified domain name.									
name	Name.	string	Maximum length: 35							
name-encoding	Name encoding method for auto-regeneration.	option	-	printable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>printable</td><td>Printable encoding (default).</td></tr><tr><td>utf8</td><td>UTF-8 encoding.</td></tr></table>				Option	Description	printable	Printable encoding (default).	utf8	UTF-8 encoding.
Option	Description									
printable	Printable encoding (default).									
utf8	UTF-8 encoding.									
password	Password as a PEM file.	password	Not Specified							
private-key	PEM format key encrypted with a password.	user	Not Specified							
private-key-retain	Enable/disable retention of private key during SCEP renewal (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Keep the existing private key during SCEP renewal.</td></tr><tr><td>disable</td><td>Generate a new private key during SCEP renewal.</td></tr></table>				Option	Description	enable	Keep the existing private key during SCEP renewal.	disable	Generate a new private key during SCEP renewal.
Option	Description									
enable	Keep the existing private key during SCEP renewal.									
disable	Generate a new private key during SCEP renewal.									
range	Either a global or VDOM IP address range for the certificate.	option	-	vdom						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>global</td><td>Global range.</td></tr><tr><td>vdom</td><td>VDOM IP address range.</td></tr></table>				Option	Description	global	Global range.	vdom	VDOM IP address range.
Option	Description									
global	Global range.									
vdom	VDOM IP address range.									

Parameter	Description	Type	Size	Default
scep-password	SCEP server challenge password for auto-regeneration.	password	Not Specified	
scep-url	SCEP server URL.	string	Maximum length: 255	
source	Certificate source type.	option	-	user
	Option	Description		
	factory	Factory installed certificate.		
	user	User generated certificate.		
	bundle	Bundle file certificate.		
source-ip	Source IP address for communications to the SCEP server.	ipv4-address	Not Specified	0.0.0.0
state	Certificate Signing Request State. Read-only.	user	Not Specified	

config vpn certificate ocsp-server

OCSP server configuration.

```

config vpn certificate ocsp-server
    Description: OCSP server configuration.
    edit <name>
        set cert {string}
        set secondary-cert {string}
        set secondary-url {string}
        set source-ip {string}
        set unavail-action [revoke|ignore]
        set url {string}
    next
end

```

config vpn certificate ocsp-server

Parameter	Description	Type	Size	Default
cert	OCSP server certificate.	string	Maximum length: 127	
name	OCSP server entry name.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default						
secondary-cert	Secondary OCSP server certificate.	string	Maximum length: 127							
secondary-url	Secondary OCSP server URL.	string	Maximum length: 127							
source-ip	Source IP address for dynamic AIA and OCSP queries.	string	Maximum length: 63							
unavail-action	Action when server is unavailable (revoke the certificate or ignore the result of the check).	option	-	revoke						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>revoke</td><td>Revoke certificate if server is unavailable.</td></tr><tr><td>ignore</td><td>Ignore OCSP check if server is unavailable.</td></tr></table>				Option	Description	revoke	Revoke certificate if server is unavailable.	ignore	Ignore OCSP check if server is unavailable.
	Option	Description								
	revoke	Revoke certificate if server is unavailable.								
ignore	Ignore OCSP check if server is unavailable.									
url	OCSP server URL.	string	Maximum length: 127							

config vpn certificate remote

Remote certificate as a PEM file.

```
config vpn certificate remote
    Description: Remote certificate as a PEM file.
    edit <name>
        set range [global|vdom]
        set remote {user}
        set source [factory|user|...]
    next
end
```

config vpn certificate remote

Parameter	Description	Type	Size	Default
name	Name.	string	Maximum length: 35	
range	Either the global or VDOM IP address range for the remote certificate.	option	-	vdom
	Option	Description		
	global	Global range.		
	vdom	VDOM IP address range.		

Parameter	Description	Type	Size	Default								
remote	Remote certificate.	user	Not Specified									
source	Remote certificate source type.	option	-	user								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>factory</i></td><td>Factory installed certificate.</td></tr><tr><td><i>user</i></td><td>User generated certificate.</td></tr><tr><td><i>bundle</i></td><td>Bundle file certificate.</td></tr></table>				Option	Description	<i>factory</i>	Factory installed certificate.	<i>user</i>	User generated certificate.	<i>bundle</i>	Bundle file certificate.
Option	Description											
<i>factory</i>	Factory installed certificate.											
<i>user</i>	User generated certificate.											
<i>bundle</i>	Bundle file certificate.											

config vpn certificate setting

VPN certificate setting.

```

config vpn certificate setting
    Description: VPN certificate setting.
    set cert-expire-warning {integer}
    set certname-dsa1024 {string}
    set certname-dsa2048 {string}
    set certname-ecdsa256 {string}
    set certname-ecdsa384 {string}
    set certname-ecdsa521 {string}
    set certname-ed25519 {string}
    set certname-ed448 {string}
    set certname-rsa1024 {string}
    set certname-rsa2048 {string}
    set certname-rsa4096 {string}
    set check-ca-cert [enable|disable]
    set check-ca-chain [enable|disable]
    set cmp-key-usage-checking [enable|disable]
    set cmp-save-extra-certs [enable|disable]
    set cn-allow-multi [disable|enable]
    set cn-match [substring|value]
    config crl-verification
        Description: CRL verification options.
        set chain-crl-absence [ignore|revoke]
        set expiry [ignore|revoke]
        set leaf-crl-absence [ignore|revoke]
    end
    set interface {string}
    set interface-select-method [auto|sdwan|...]
    set ocsp-default-server {string}
    set ocsp-option [certificate|server]
    set ocsp-status [enable|mandatory|...]
    set proxy {string}
    set proxy-password {password}
    set proxy-port {integer}
    set proxy-username {string}
    set source-ip {string}
    set ssl-min-proto-version [default|SSLv3|...]

```

```

set strict-ocsp-check [enable|disable]
set subject-match [substring|value]
set subject-set [subset|superset]
set vrf-select {integer}
end

```

config vpn certificate setting

Parameter	Description	Type	Size	Default
cert-expire-warning	Number of days before a certificate expires to send a warning. Set to 0 to disable sending of the warning (0 - 100, default = 14).	integer	Minimum value: 0 Maximum value: 100	14
certname-dsa1024	1024 bit DSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_DSA1024
certname-dsa2048	2048 bit DSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_DSA2048
certname-ecdsa256	256 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA256
certname-ecdsa384	384 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA384
certname-ecdsa521	521 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA521
certname-ed25519	253 bit EdDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ED25519
certname-ed448	456 bit EdDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ED448
certname-rsa1024	1024 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA1024
certname-rsa2048	2048 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA2048
certname-rsa4096	4096 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA4096

Parameter	Description	Type	Size	Default						
check-ca-cert	Enable/disable verification of the user certificate and pass authentication if any CA in the chain is trusted (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of the user certificate.</td></tr><tr><td><i>disable</i></td><td>Disable verification of the user certificate.</td></tr></table>	Option	Description	<i>enable</i>	Enable verification of the user certificate.	<i>disable</i>	Disable verification of the user certificate.			
Option	Description									
<i>enable</i>	Enable verification of the user certificate.									
<i>disable</i>	Disable verification of the user certificate.									
check-ca-chain	Enable/disable verification of the entire certificate chain and pass authentication only if the chain is complete and all of the CAs in the chain are trusted (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of the entire certificate chain.</td></tr><tr><td><i>disable</i></td><td>Disable verification of the entire certificate chain.</td></tr></table>	Option	Description	<i>enable</i>	Enable verification of the entire certificate chain.	<i>disable</i>	Disable verification of the entire certificate chain.			
Option	Description									
<i>enable</i>	Enable verification of the entire certificate chain.									
<i>disable</i>	Disable verification of the entire certificate chain.									
cmp-key-usage-checking	Enable/disable server certificate key usage checking in CMP mode (default = enable).	option	-	enable
