Change log

The following is a list of documentation changes. For a list of software changes, see the other contents of this document.

Date	Change Description
2025-04-17	Initial release of the FortiRecorder 7.0.6 Release Notes.

Introduction

This document provides a list of new and changed features, bug fixes, known issues, compatibility, and upgrade paths for FortiRecorder 7.0.6 build 0088.

For more information on installing or upgrading, see the [FortiRecorder Administration Guide](#).

Special notices

Licensing and performance guidelines

Licensing and performance information is not generally required for upgrades, but is required during deployment planning and setup, so it has been merged into the existing sections of the FortiRecorder Administration Guide:

- [Licenses](#)
- [Sizing guidelines](#)

Resolved issues

To inquire about a particular bug, please contact [Fortinet Customer Service & Support](#).

Bug ID	Description
0755313	With FortiCam FD50 cameras and edge downloads enabled, high CPU usage occurred.
1104101	When using iSCSI with NetApp, FortiRecorder did not mount the external storage.
1112947	After replacing a disk on FortiRecorder, all camera statuses could become stuck in a state of pending recording, and their view not accessible from <i>Monitor > Video</i> .

Common Vulnerabilities and Exposures

FortiRecorder 7.0.6 is no longer vulnerable to the following CVE/CWE-References.

Visit <https://fortiguard.com/psirt> for more information.

Bug ID	Description
1144535	CWE-327: Use of a Broken or Risky Cryptographic Algorithm
1147095	CVE-2025-32756: Stack-based Buffer Overflow (CWE-121)

FortiCentral

- FortiCentral 7.0 and later
FortiCentral 6.4 is also supported except that older versions cannot use newer features.

Web browsers and plugins

- Apple Safari 18 or later
- Google Chrome 135 or later
- Microsoft Edge 135 or later
- Mozilla Firefox 136 or later

Other web browsers and versions may function correctly, but have not been tested and are not supported by Fortinet.

H.265 display is supported on Microsoft Edge and Apple Safari. For Microsoft Edge, it depends on hardware decoding support of the computer.

Firmware upgrade / downgrade path

Upgrading from earlier versions

Upgrading directly from FortiRecorder 6.4.x to 7.0.6 is supported. For earlier versions, upgrade consecutive versions to FortiRecorder 6.4.0 first, and then upgrade to FortiRecorder 7.0.6.

If you are upgrading to FortiRecorder 6.0.0 during this process, then make a backup of FortiRecorder 2.7.x. Otherwise you will not be able to downgrade. See details on downgrading below.

If you need to upgrade FRC-400D to FortiRecorder 2.5.5 or later, first change BIOS settings so that you can perform a software reboot (only the reset button is supported). Ask Fortinet Support for help with the procedure.

Downgrading to previous firmware versions

Downgrades may cause a loss of configuration information. (New features are not supported by older versions, for example.)

Firmware image checksums

To verify the integrity of the firmware file, use a checksum tool and computer the firmware file's checksum. For example, you could use [certutil on the Windows command line](#):

```
certutil -hashfile firmware.out SHA512
```

Compare it with the checksum indicated by Fortinet Customer Service & Support:

<https://support.fortinet.com>

After logging in, go to *Support > Firmware Image Checksums* (in the *Downloads* section), enter the image file name including the extension, and click *Get Checksum Code*. If the checksums match, then the file is intact.
