Change Log

Date	Change Description
04/15/2019	FortiADC 5.2.1 Manager Release Notes initial release.

Introduction

This *Release Notes* covers the new features, enhancements, known issues, and resolved issues of FortiADC™ Manager Version 5.2.1, Build 0022.

FortiADC Manager allows you to use a web-based user interface to configure remote FortiADC devices. It allows you to simplify and speed up the FortiADC deployment and update process by maintaining configuration templates and policy packages that you can modify and apply as needed.

For additional documentation, visit <http://docs.fortinet.com/fortiadc-d-series/>.

Consult the ADC Manager handbook for setup instructions.

What's new

FortiADC Manager 5.2.1 offers the following new features in its first release:

KVM support available for FortiADC Manager

Upgrade instructions

This is the initial release of the FortiADC Manager as a standalone virtual machine. It replaces earlier versions of FortiADC central management; thus no upgrade path is supported.

Known issues

This section highlights the major known issues discovered in FortiADC 5.2.1 release. For inquiries about particular bugs, please contact [Fortinet Customer Service & Support](#).

Table 1: Known issues

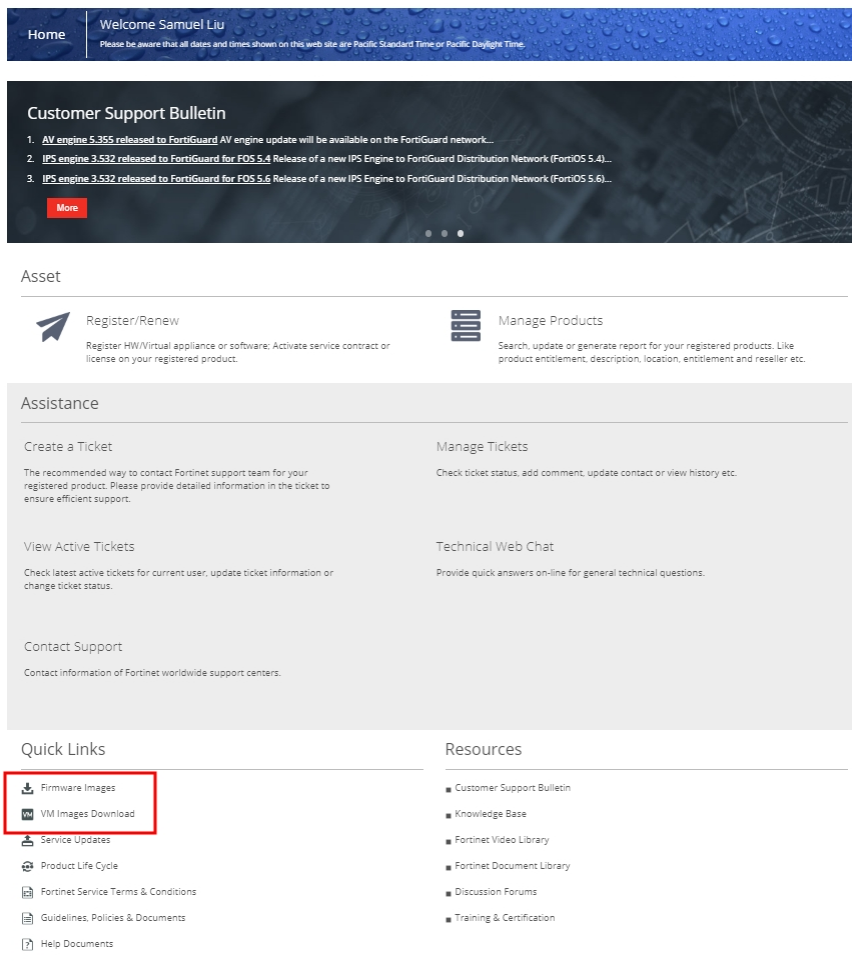

Bug ID	Description
0523976	ADC Manager 5.2.0 does not support Internet Explorer browser.
0530760	Device Management > Individual ADC. When you use the VS widget to create an RS, it only creates a IPv4 RS. To create an IPv6 RS, you have to use the RS widget, not just go into the VS widget, and it will show up as one of the options in the VS widget.

Image checksums

To verify the integrity of the firmware file, use a checksum tool and compute the firmware file's MD5 checksum. Compare it with the checksum indicated by Fortinet. If the checksums match, the file is intact.

MD5 checksums for Fortinet software and firmware releases are available from [Fortinet Customer Service & Support](#). After logging in to the web site, near the bottom of the page, click the Firmware Image Checksums button. (The button appears only if one or more of your devices has a current support contract.) In the File Name field, enter the firmware image file name including its extension, then click Get Checksum Code.
