Change Log

Date	Change Description
2024-10-18	Initial release of FortiMail 7.6.0 OCI Deployment Guide

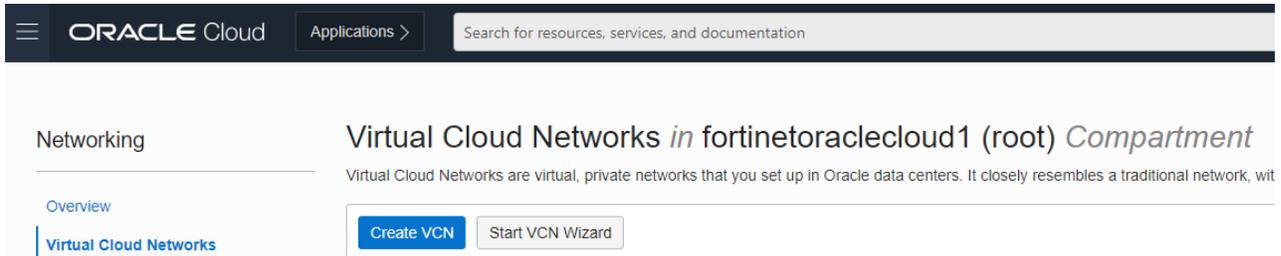

Introduction

This document describes how to deploy FortiMail VM on Oracle Cloud Infrastructure (OCI). Note that some company or product related information is hidden on purpose in the screen captures.

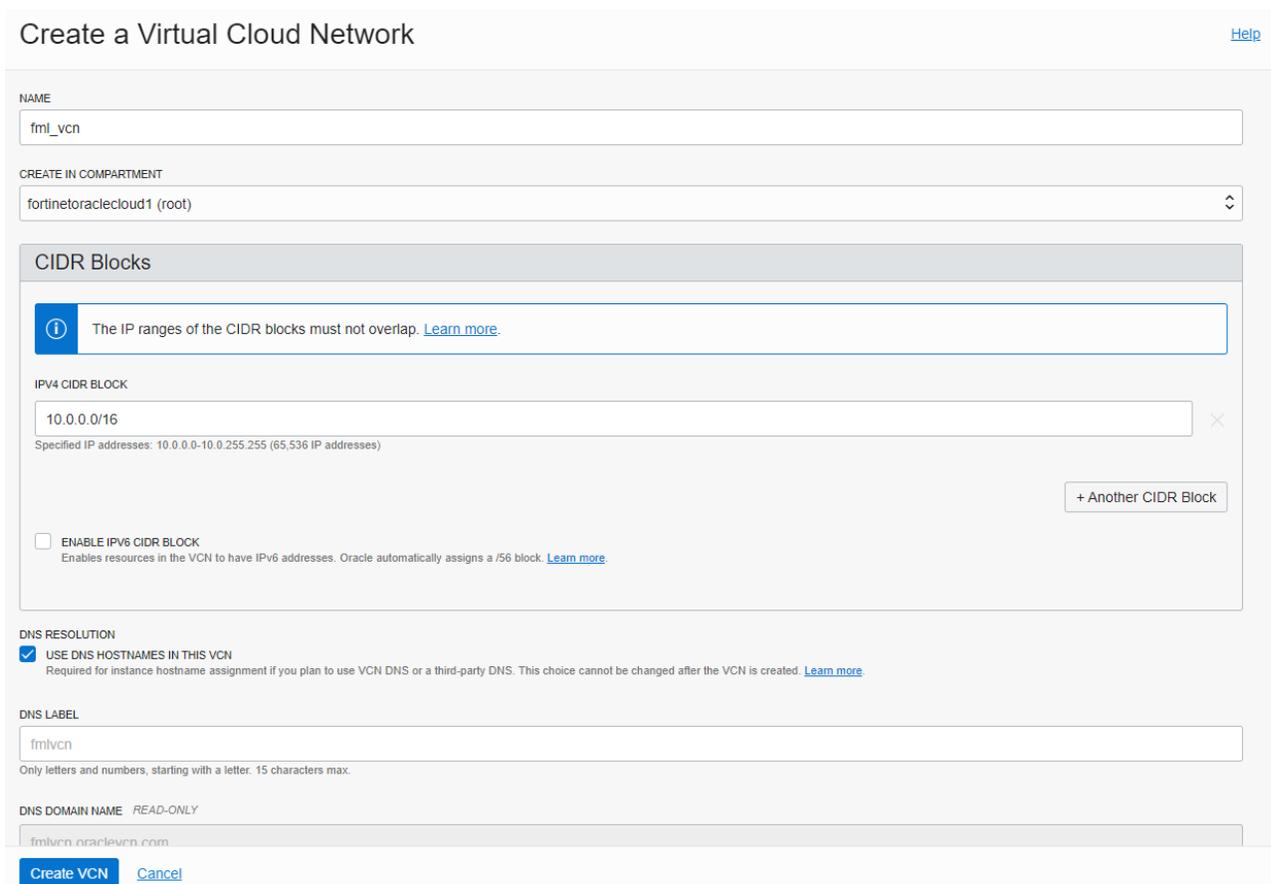

For details about how to use FortiMail, see the FortiMail Administration Guide on <https://docs.fortinet.com>.

Creating a Virtual Cloud Network and Public-facing Subnet

1. In OCI, go to Networking > Virtual Cloud Networks, and click Create Virtual Cloud Network.

2. Enter the NAME and IPV4 CIDR BLOCK, then Create VCN.

3. In the VCN details page, create a public-facing subnet.

Creating a Virtual Cloud Network and Public-facing Subnet

Networking » Virtual Cloud Networks » Virtual Cloud Network Details

- Internet Gateways (0)

Subnets *in fortinetoraclecloud1 (root) Compartment*

[Create Subnet](#)

Name	State	IPv4 CIDR Block	Subnet Access
No items found.			

- When creating the subnet, choose SUBNET TYPE as Regional, SUBNET ACCESS as Public Subnet.

Create Subnet

NAME

fml_vcn_public_sub

CREATE IN COMPARTMENT

fortinetoraclecloud1 (root)

SUBNET TYPE

Regional (Recommended)
Instances in the subnet can be created in any availability domain in the region. Useful for high availability. ✓

Availability Domain-specific
Instances in the subnet can only be created in one availability domain in the region.

CIDR Block

CIDR BLOCK

10.0.0.0/24

Specified IP addresses: 10.0.0.0-10.0.0.255 (256 IP addresses)

ROUTE TABLE COMPARTMENT IN FORTINETORACLECLOUD1 (ROOT) [\(CHANGE COMPARTMENT\)](#)

Default Route Table for fml_vcn

SUBNET ACCESS

Private Subnet
Prohibit public IP addresses for Instances in this Subnet

Public Subnet
Allow public IP addresses for Instances in this Subnet ✓

Leave ROUTE TABLE, DHCP OPTIONS, and SECURITY LIST as default, and you will need to modify them later.

DNS LABEL

Only letters and numbers, starting with a letter. 15 characters max.

DNS DOMAIN NAME READ-ONLY

DHCP OPTIONS COMPARTMENT IN FORTINETORACLECLOUD1 (ROOT) [\(CHANGE COMPARTMENT\)](#)

Security Lists

You can associate up to 5 network security lists with the subnet.

SECURITY LIST COMPARTMENT IN FORTINETORACLECLOUD1 (ROOT) [\(CHANGE COMPARTMENT\)](#)

[Show Tagging Options](#)

5. To access FortiMail with HTTPS, add an Ingress Rule in Default Security List.

You will see that three rules are set up by default, including port 22 for SSH access. There would be more ports needed for later testing, such as port 25 for SMTP, and you can always add or modify these rules later.

Networking > Virtual Cloud Networks > fml_vcn > Security List Details Subnet provisioning successfully initiated.

Default Security List for fml_vcn

Instance traffic is controlled by firewall rules on each Instance in addition to this Security List

DESCRIPTION OPTIONAL

Maximum 255 characters

+ Another Route Rule

Creating a FortiMail-VM Instance

1. Go to <https://support.fortinet.com> and download the FortiMail VM image FML_VMOC-64-vxx-build0xxx-FORTINET.out.openxen.zip file. Unzip it to get the 'fortimail-opc.qcow2' file, which is needed to deploy FortiMail on OCI.
2. On OCI, go to Object Storage, then click Create Bucket to create a standard storage bucket.

You can create the Bucket with default settings.

3. Click into the bucket you just created and upload the *. qcow2 file to Objects.

[Object Storage](#) » Bucket Details

Learn more about [Object Storage URLs](#). Also, see the instructions to [create a pre-authenticated request](#).

Image type

VMDK
Virtual machine disk file format. For disk images used in virtual machines.

QCOW2
For disk image files used by QEMU.

OCI
For images that were exported from Oracle Cloud Infrastructure. The launch mode is specified in the .oci file and can't be changed in the Console.

Launch mode

Firmware: BIOS **NIC attachment type:** PV NIC

Boot volume type: PV **Remote data volume:** PV

Paravirtualized Mode
For virtual machines that [support paravirtualized drivers](#), created outside of Oracle Cloud Infrastructure.

Emulated Mode
For virtual machines that [don't support paravirtualized drivers](#), created outside of Oracle Cloud Infrastructure from older on-premises physical or virtual machines.

Native Mode
For images that were exported from Oracle Cloud Infrastructure.

- From the newly imported image, click Create Instance. Take note of the Compatible Shapes, and make sure to choose a shape from this list in later steps.

--------------------------------	------------------------------	------------------------------

[Hide advanced options](#)

Capacity type

- On-demand capacity
Place the instance on a shared host using on-demand capacity.
- Preemptible capacity
Place the instance on a shared host using [preemptible capacity](#). This instance can be reclaimed at any time.
- Capacity reservation
Place the instance on a shared host, and have it count against a [capacity reservation](#).
- Dedicated host
Place the instance on a [dedicated virtual machine host](#).

Fault Domain
Let Oracle choose the best fault domain

[When should I specify a fault domain?](#)

Image and shape are chosen automatically. You can modify the shape as desired.

Image and shape Collapse

A [shape](#) is a template that determines the number of CPUs, amount of memory, and other resources allocated to an instance. The image is the operating system that runs on top of the shape.

Image

fml-v70116-20210421 Change Image

Shape

AMD VM.Standard.E3.Flex
Virtual Machine, 1 core OCPU, 16 GB memory, 1 Gbps network bandwidth Change Shape

9. Choose your VCN and its public subnet. For public access to FortiMail, you must assign a public IPV4 address.

Networking [Collapse](#)

[Networking](#) is how your instance connects to the internet and other resources in the Console. To make sure you can [connect to your instance](#), assign a public IP address to the instance.

Network
 Select existing virtual cloud network Create new virtual cloud network Enter subnet OCID

Virtual cloud network in **fortinetoracled1 (root)** ([Change Compartment](#))

fml_vcn

Subnet
 Select existing subnet Create new public subnet

Subnet in **fortinetoracled1 (root)** ([Change Compartment](#))

fml_vcn_public_sub (Regional)

Public IP Address
 Assign a public IPv4 address Do not assign a public IPv4 address

! Assigning a public IP address makes this instance accessible from the internet. If you're not sure whether you need a public IP address, you can always assign one later.

[Show advanced options](#)

10. Click Generate SSH key pair and Save Private Key. The private key will be used for SSH accessing. You can also paste your own SSH public key or skip this step for now. Specify the customer boot volume size as minimum 50GB.

Add SSH keys

Linux-based instances use an [SSH key pair](#) instead of a password to authenticate remote users. Generate a key pair or upload your own public key now. When you [connect to the instance](#), you will provide the associated private key.

Generate SSH key pair Upload public key files (.pub) Paste public keys No SSH keys

i Download the private key so that you can connect to the instance using SSH. It will not be shown again.

[Save Private Key](#)
[Save Public Key](#)

Boot volume

Your [boot volume](#) is a detachable device that contains the image used to boot your compute instance.

Specify a custom boot volume size
[Volume performance](#) varies with volume size. Default boot volume size: 46.6 GB

Boot volume size (GB)

50

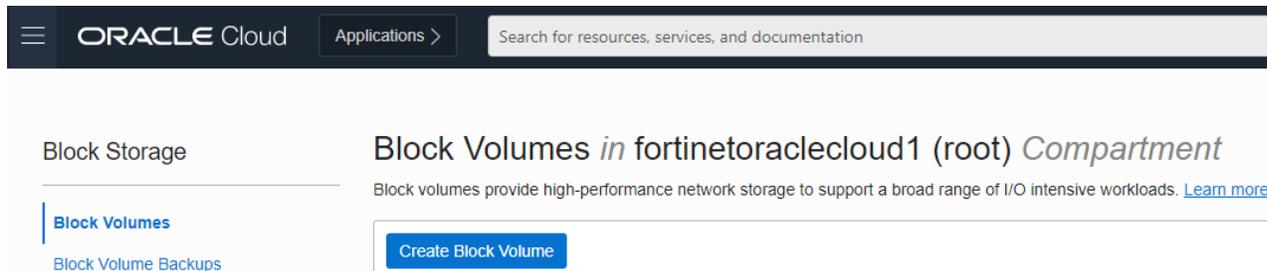

Integer between 50 GB and 32,768 GB (32 TB). Must be larger than the default boot volume size for the selected image.

Encrypt this volume with a key that you manage
By default, Oracle manages the keys that encrypt this volume, but you can choose a key from a vault that you have access to if you want greater control over the key's lifecycle and how it's used. [Learn more about managing your own encryption keys](#)

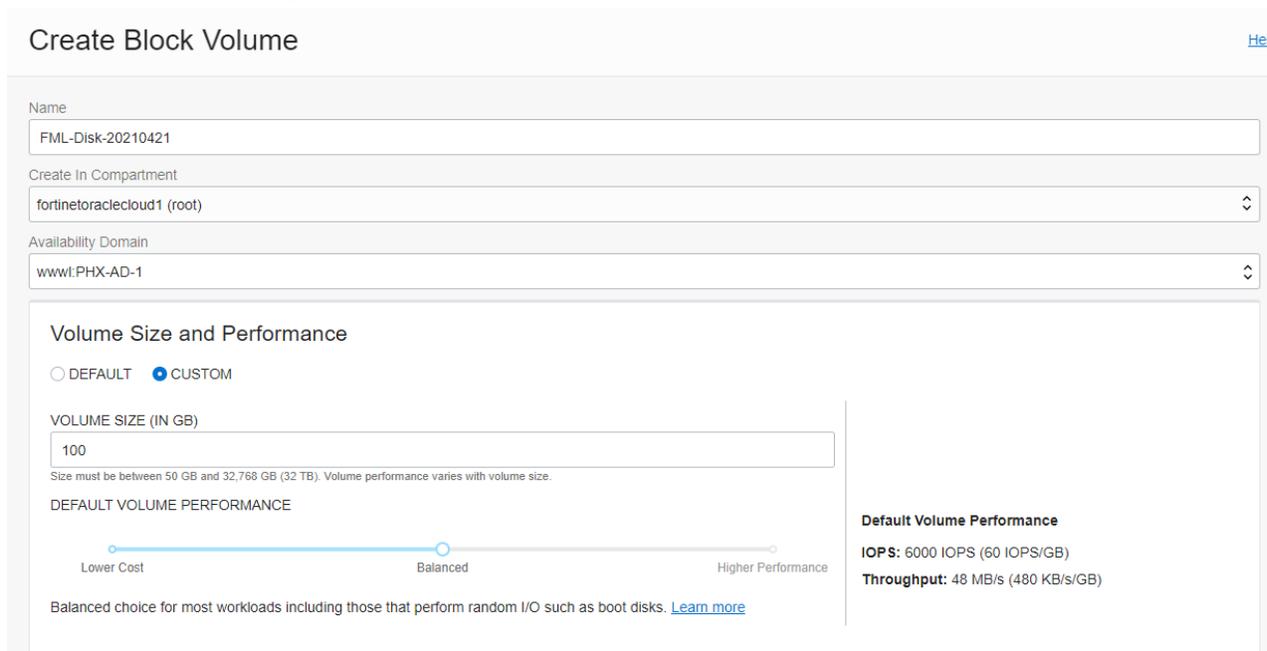

At this stage, the deployment is not complete yet. You also need to add a storage volume as a system log disk and attach it to the FortiMail instance. If you want FortiMail to run inline across two or multiple subnets, you will also need to add one or more virtual network interfaces and attach them to the FortiMail instance.

Attaching Storage to FortiMail

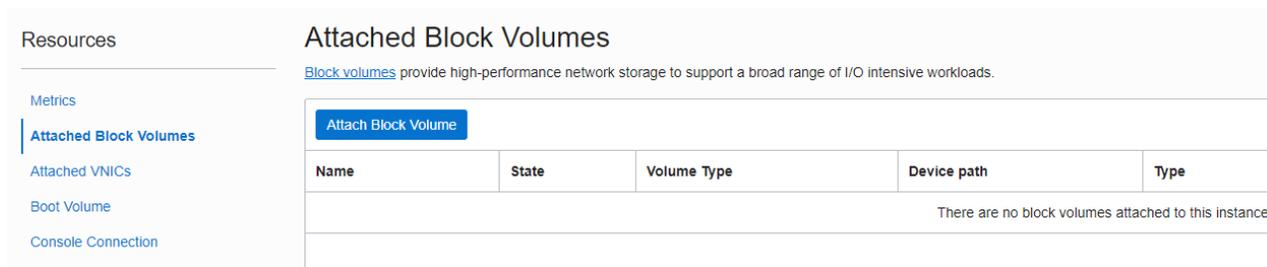

1. On OCI, go to Storage > Block Volumes > Create Block Volume.

Make sure the Availability Domain is the same as your instance, and customize a smaller volume size, for example, 100GB. Keep other settings as default.

2. Once provisioned, return to the FortiMail instance. Click Attach Block Volume.

3. Select the block volume that you created earlier and ensure the attachment type is PARAVIRTUALIZED.

Attach Block Volume [Help](#)

Use in-transit encryption

Volume

Select volume Enter volume OCID

Volume in **fortinetoraclecloud1 (root)** [Change Compartment](#)

FML-Disk-20210421

Access

Read/Write
Configures the volume attachment as read/write, not shared with other instances. This enables attachment to a single instance only and is the default configuration.

Read/Write - Shareable
Configures the volume attachment as read/write, shareable with other instances. This enables read/write attachment to multiple instances.

Read Only - Shareable
Configures the volume attachment as read-only, enabling attachment to multiple instances.

After attaching the block volume, make sure to reboot the FortiMail instance.

 **Please Login**

Remember me

Log In

 **Please Login**

You must change your password from the default before continuing.

Change Password

- The last step is to upload a valid FML VM license, and then you should be able to see the FortiMail Admin GUI.

The screenshot displays the FortiMail Admin GUI for 'FortiMail VM02'. The interface is divided into several sections:

- System Information:** Shows details such as Serial number (FEVM0200000), Up time (0 day(s) 0 hour(s) 26 minute(s) 24 second(s)), System time (Wed, Apr 21, 2021 11:00:46 PDT), Reboot time (Wed, Apr 21, 2021 10:34:22 PDT), Firmware version (v7.0.0, build116, 2021.04.16), System configuration (Backup/Restore), Operation mode (Gateway), Current administrator (admin), HA mode (Configured Off), Log disk (Capacity 19 GB, Used 32 MB), Mailbox disk (Capacity 78 GB, Used 276 MB), and Email throughput (0 messages per minute).
- License Information:** Lists various licenses including AntiVirus (No license), AV definition (Version 1.00000), AV engine (Version 6.00258), Virus outbreak (Licensed), AntiSpam (Licensed), AS definition (Version 1.00001), VM (Registered), FortiSandbox (Disabled), and FortiCloud (Not Activated).
- System Resource:** Displays usage metrics: CPU usage (0%), Memory usage (6%), System load (1%), and Log disk usage (0%).
- Statistics History (Count, 30 Days):** Shows 'No data!'.
- Statistics Summary (Today):** Shows 'No data!'.
- Statistics Summary:** A table showing message classification statistics:

Messages	Total	This Year	This Month	This Week	Today	This Hour	This Minute
Not Spam Classified By	Subtotal	0	0	0	0	0	0
Spam Classified By	Subtotal	0	0	0	0	0	0
Virus Classified By	Subtotal	0	0	0	0	0	0
Total		0	0	0	0	0	0
- Throughput History (Scan Speed, 30 Days):** A line graph showing throughput over time, with a y-axis ranging from 2 KB/s to 10 KB/s.

- For further testing on this FortiMail instance, you may need to add more rules in Security List. For example, a rule to open port 25 is necessary for SMTP testing.

The screenshot shows the 'Add Ingress Rules' configuration page. The title is 'Ingress Rule 1'. The rule description is 'Allows TCP traffic 25 Simple Mail Transfer Protocol (SMTP)'. The configuration includes:

- STATELESS:** A checkbox that is currently unchecked.
- SOURCE TYPE:** Set to 'CIDR'.
- SOURCE CIDR:** Set to '0.0.0.0/0'. Below this, it specifies 'Specified IP addresses: 0.0.0.0-255.255.255.255 (4,294,967,296 IP addresses)'.
- IP PROTOCOL:** Set to 'TCP'.
- SOURCE PORT RANGE:** Set to 'All'. Examples: 80, 20-22.
- DESTINATION PORT RANGE:** Set to '25'. Examples: 80, 20-22.
- DESCRIPTION:** A text input field for an optional description, with a note 'Maximum 255 characters'.
- + Another Ingress Rule:** A button at the bottom right to add a new rule.
