Traffic	79

Introduction

This document is a detailed reference of all of your FortiWeb appliance's possible log messages. It is organized primarily by the log type:

- Event
- Attack
- Traffic

To look up the meaning of a specific log message, go to the section that matches its **Type** (`type`) field, then look for the table that matches its **ID** (`log_id`).

This document also explains the general structure of FortiWeb log messages, and the meanings of common fields (see [How to interpret FortiWeb logs on page 6](#)).

Scope

This document provides administrators information about log messages that can be recorded by a FortiWeb appliance.

This document does **not** cover how to configure logging. It assumes you have already configured it, and need to know how to interpret the log messages. For instructions on how to configure logging, see the [FortiWeb Administration Guide](#) or [FortiWeb CLI Reference](#).

How to interpret FortiWeb logs

This section explains the composition of FortiWeb log messages.

In some cases, to avoid flooding attack logs with entries, FortiWeb collects multiple attack log messages into a single message. See [Attack on page 33](#).

Header & body fields	6
Log ID numbers	16
Types	16
Subtypes	16
Priority level	17
Message IDs	18

Header & body fields

Each log message is comprised of several field-value pairs. The names may vary slightly between **Raw** versus **Formatted** views in the web UI.

ID (`log_id`) header field and its value

Column Settings		
#	ID	Sub Type
▼ (6)		DDOS based on source IP
1	00070038	DDOS based on source IP
2	00070038	DDOS based on source IP
3	00070038	DDOS based on source IP
4	00070038	DDOS based on source IP
5	00070038	DDOS based on source IP
6	00070038	DDOS based on source IP
▼ (24)		waf_signature_detection
7	00070010	waf_signature_detection

All log messages' fields belong to one of two parts:

- **Header** — Contains the time and date the log originated, a log identifier, a message identifier, the administrative domain (ADOM), the type of log, the severity level (priority) and where the log message originated. **These fields exist in all logs.**
- **Body** — Describes the reason why the log was created, plus any actions that the FortiWeb appliance took to respond to it. **These fields vary by log type.**

Log message header and body

For example, this is a raw-format event log message. Body fields are in **bold**.

```
date=2013-10-07 time=11:30:53 log_id=10000017 msg_id=000000001117 device_id=FVVM040000010871 vd="root"
timezone="(GMT-5:00)Eastern Time(US & Canada)" type=event subtype="system" pri=information trigger_policy=""
user=admin ui=GUI action=login status=success msg="User admin login successfully from GUI
(172.20.120.47)"
```

This attack log message contains the same header fields, but its body fields are different.

```
date=2016-02-19 time=11:23:45 log_id=20000010 msg_id=000139289631 device_id=FV-1KD3A15800072 vd="root"
timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" type=attack subtype="waf_signature_detection"

```

The following table describes each possible header or body field, according to its name as it appears in the **Formatted** or **Raw** view.

Log message fields

Field	Description	Exists in log type	Example field-value pair (Raw view)		
name (Raw view name in parenthes es)		Eve- nt	Atta- ck	Traf- fic	
Header					
Date (date)	The year, month, and day when the log message was	+	+	+	date=2013-10-08

Field name (Raw view name in parentheses)	Description	Exists in log type	Example field-value pair (Raw view)		
		Eve- nt	Atta- ck	Traf- fic	
<p>recorded.</p>					
Time (time)	The hour (according to a 24-hour clock, where 15:00 is 3:00 PM), minute, and second that the log message was recorded.	+	+	+	time=15:38:01
ID (log_id)	See Log ID numbers on page 16 .	+	+	+	log_id=00041101
MSG ID (msg_id)	See Message IDs on page 18 .	+	+	+	msg_id=000000000153
Device ID (device_id)	The identifier, typically the serial number, of the appliance which originally recorded the log.	+	+	+	device_id=FV-1KD2B34567890
ADOM (vd)	The administrative domain (ADOM) in which the log message was recorded	+	+	+	vd="root"
Time Zone (timezone)	The name, geographical region, and Greenwich Mean Time (GMT) adjustment of the time zone in which the appliance is located.	+	+	+	timezone="(GMT-5:00) Eastern Time (US & Canada)"
Type (type)	See Types on page 16 .	+	+	+	type=event
Sub Type (subtype)	See Subtypes on page 16 .	+	+	+	subtype=admin
Level (pri)	See Priority level on page 17 .	+	+	+	pri=alert
Body					
Protocol (proto)	tcp	-	+	+	proto=tcp

Field	Description	Example field-value pair (Raw view)			
		Eve- nt	Atta- ck	Traf- fic	
name (Raw view name in parentheses)	The protocol used by web traffic. By definition, for FortiWeb, this is always TCP.				
Service (service)	http or https The name of the application-layer protocol used by the traffic. By definition, for FortiWeb, this is always HTTP or HTTPS.	-	+	+	service=http
Source (src)	The IP address of the traffic's origin. The source varies by the direction: <ul style="list-style-type: none">In HTTP requests, this is the web browser or other client.In HTTP responses, this is the physical server.	-	+	+	scr=10.0.0.0
Source Port (src_port)	The port number of the traffic's origin.	-	+	+	src_port=3471
Destination (dst)	The IP address of the traffic's destination. The source varies by the direction: <ul style="list-style-type: none">In HTTP requests, this is the physical server.In HTTP responses, this is the web browser or other client.	-	+	+	dst=10.0.0.1
Destination Port (dst_port)	The port number of the traffic's destination.	-	+	+	dst_port=8080
Policy (policy)	The name of the server policy governing the traffic which	-	+	+	policy="policy1"

Field	Description	Example field-value pair (Raw view)			
		Eve- nt	Atta- ck	Traf- fic	
name (Raw view name in parenthes- es)					
	caused the log message.				
User (user)	The daemon or name of the administrator account that performed the action that caused the log message.	+	-	-	user=admin
User Interface (ui)	<p>The type of management interface used by the administrative session which caused the log message.</p> <p>Either:</p> <ul style="list-style-type: none"> • GUI • sshd • telnet • console • none <p>Unless the user is a daemon (which don't have a user interface), logins from none indicate that an administrator used the JavaScript CLI Console widget on System > Status > Status in the web UI (GUI). The source IP address is the same as the one recorded in the corresponding log message for the GUI login.</p> <p>Logins from console indicate use of CLI via the local serial console port.</p>	+	-	-	ui=GUI
Action (action)	<p>The action associated with the log message or policy violation, such as:</p> <p>login</p> <p>or</p> <p>Alert</p>	+	+	-	action=Alert
Status (status)	The result of the action.	+	-	+	status=failure

Field name (Raw view name in parentheses)	Description	Exists in log type			Example field-value pair (Raw view)
		Event	Attack	Traffic	
Reason (reason)	The reason for the status, if any.	+	-	+	reason=name_invalid
Return Code (http_ retcode)	The HTTP return code. If FortiWeb is configured to redirect, this is the rewritten code, not the original one from the server.	-	-	+	http_retcode=200
Request Time (http_ request_ time)	The amount of time it took FortiWeb to process the client request, in milliseconds (ms).	-	-	+	http_request_time=10
Response Time (http_ response_ time)	The amount of processing time for the response in milliseconds (ms). This can be a useful measure of performance issues, especially if processing involves regular expressing matching.	-	-	+	http_response_time=10
Request Bytes (http_ request_ bytes)	The size of the request in bytes.	-	-	+	http_request_bytes=2
Response Bytes (http_ response_ bytes)	The size of the individual response in bytes (B). For chunked responses, this is for each reply; it does not aggregate all related chunks.	-	-	+	http_response_bytes=136
Method (http_ method)	The method, such as GET or POST, used by the HTTP request.	-	+	+	http_method=get

Field name (Raw view name in parentheses)	Description	Exists in log type	Example field-value pair (Raw view)		
		Eve- nt	Atta- ck	Traf- fic	
URL (http_url)	<p>The URL in the HTTP header of the original HTTP request, such as:</p> <pre>/images/buttons/hintO ver.png</pre> <p>This does not include the service (http://) nor host name (example.nl). If FortiWeb is configured to rewrite the URL, this is the original URL from the client, not the rewritten one.</p>	-	+	+	http_url="/image/up.png"
Host (http_host)	<p>The Host: field in the HTTP header of the HTTP request, such as:</p> <pre>www.example.com</pre> <p>or</p> <pre>10.0.0.1:8080</pre> <p>This is typically a fully qualified domain name (FQDN) or IP address and port number that resolves or routes to the virtual server on the FortiWeb appliance.</p> <p>This may be different from your internal DNS name (if any) for the web server, or, if you are using HTTP Host: rewrites, different from the virtual host on the web server.</p> <p>For example, this might be www.example.co.jp instead of www1.local or the virtual host that serves responses for all DNS names, www.example.com.</p>	-	+	+	http_host="example.com"
User Agent	The name and version of the HTTP client, usually a web browser. This is reported by	-	+	+	http_agent="Mozilla/5.0 (Macintosh; Intel Mac OS X 10_8_4) AppleWebKit/537.36

Field	Description	Exists in log type	Example field-value pair (Raw view)		
		Eve- nt	Atta- ck	Traf- fic	
name (Raw view name in parentheses)	User-Agent: HTTP header. In attacks, it is often fake.				(KHTML, like Gecko) Chrome/27.0.1453.110 Safari/537.36"
FortiWeb Session ID	The session identifier for a client's related HTTP requests (if any).	-	+	-	http_session_id=K8BXT3TNYUM710UEGWC8IQBTPX9PRWHB
(http_session_id)	The ID may be unknown if the Session Management option is not enabled in the applied protection profile, and therefore FortiWeb has not injected a session cookie nor inferred a session ID from the protected web application.				
Severity Level (severity_level)	The severity that the administrator configured in the rule or policy governing the traffic which caused the log message.	-	+	-	severity_level=High
Trigger Policy (trigger_policy)	The name of the notification servers used to record and/or deliver this log message (if any). The trigger policy value may be an empty string if no trigger policy was selected.	+	+	-	trigger_policy=notification-server-group1
Signature Subclass (signature_subclasses)	The name of the signature subclass. If the current signature has no subclass, the main class is displayed.	-	+	-	"Cross Site Scripting"
Signature ID	The ID of the specific signature within the subclass that triggered the log message.	-	+	-	"010000001"

Field	Description	Example field-value pair (Raw view)			
		Eve- nt	Atta- ck	Traf- fic	
<code>name</code> (Raw view name in parenthes es) (signatu re_id)					
<code>Source Country</code> (srccountry)	The country that is the source of the traffic.	-	+	+	"United States"
<code>Message (msg)</code>	Details describing the reason why the log message was created. The message varies by the nature of the cause. The <code>msg</code> log field has the lowest priority in the disk log. When the total size of all the log fields exceeds the disk log size limit, FortiWeb truncates the <code>msg</code> field, which helps preserve other log information.	+	+	+	msg="User admin changed dns from GUI (172.20.120.47)"
<code>HTTP Content Routing</code> (content_switch_name)	The name of the associated HTTP content routing policy.	-	+	+	content_switch_name="httproutes1"
<code>Server Pool</code> (server_pool_name)	The name of the server pool in the associated server policy.	-	+	+	server_pool_name="Auto-ServerFarm"
<code>False Positive Mitigation</code>	For violations of SQL injection signatures, specifies whether FortiWeb identified the attack	-	+	-	false_positive_mitigation="yes"

Field name	Description (Raw view name in parenthes es)	Exists in log type	Example field-value pair (Raw view)
Eve- nt	Atta- ck	Traf- fic	
<code>false_positiv e_mitigat ion</code>	using the signature and additional SQL syntax validation (yes) or the just the signature (no).	-	
<code>Threat Scoring</code> <code>log_type</code> <code>event_score</code> <code>score_message</code> <code>entry_sequence</code>	Information about the threat score, which FortiWeb generates based on multiple signature violations by a client, instead of a single signature violation. For details, see Attack log fields .	+ + - + +	log_type=LOG_TYPE_SCORE_SUM event_score=3 score_message="[score_type: total_score] [score_scope: TCP Session] [score_threshold: 5] [score_sum: 7]" entry_sequence="000139289630"
<code>Detailed Information</code> (N/A)	This column contains the entire log message in raw format. If your Column Settings show this column, the entire raw log message will be included in the row under this column, next to the formatted column view of the same log message. This way, if you want to view the entire raw log message, you can simply scroll the page, instead of switching the entire page back and forth from Raw to Formatted log views. This column appears only when using the Formatted log view. It does not actually exist as a field in the raw logs.	+ + + + +	date=2013-10-10 time=00:38:58 log_id=20000051 msg_id=000000000008...

Log ID numbers

The **ID** (`log_id`) is an 8-digit field located in the header, immediately following the time and date fields.

The `log_id` field is a number assigned to all permutations of the same message. It classifies a log message by the nature of the cause of the log message, such as administrator authentication failures or traffic. Other log messages that share the same cause will share the same `log_id`.

For example, creating an administrator account always has the log ID [00003401](#).

Types

Each log message contains a **Type** (`type`) field that indicates its category, and in which log file it is stored.

FortiWeb appliances can record the following categories of log messages:

Log types

Log type	Description
Event	Records system and administrative events, such as downloading a backup copy of the configuration, or daemon activities.
Traffic	Records traffic flow information, such as an HTTP/HTTPS request and its response, if any.
Attack	Records attack and intrusion attempts.

Avoid recording highly frequent log types such as traffic logs to the local hard disk for an extended period of time. **Excessive logging frequency can cause undue wear on the hard disk and may cause premature failure.**

Subtypes

Each log message contains a **Sub Type** (`subtype`) field that further subdivides its category according to the feature involved with the cause of the log message.

For example:

- In event logs, some may have a subtype of admin, system, or other subtypes.
- In attack logs, they have main type and subtypes to reflect the classification of the attacks.
- In traffic logs, the subtype is always http even if the service is HTTPS.

Priority level

Each log message contains a **Level (pri)** field that indicates the estimated severity of the event that caused the log message, such as `pri=warning`, and therefore how high a priority it is likely to be.

Level (pri) associations with the descriptions below are not always uniform. They also may not correspond with **your own** definitions of how severe each event is. If you require notification when a specific event occurs, either configure SNMP traps or alert email by administrator-defined Severity Level (`severity_level`) or ID (`log_id`), **not** by Level (pri).

Approximate log priority levels

Level (0 is highest)	Name	Description
0	Emergency	The system has become unusable.
1	Alert	Immediate action is required. Used in attack logs.
2	Critical	Functionality is affected.
3	Error	An error condition exists and functionality could be affected.
4	Warning	Functionality could be affected.
5	Notification	Information about normal events. Used in traffic logs, and in event logs for administrator logins, time changes, and normal daemon actions.
6	Information	General information about system operations. Used in event logs for configuration changes.

For each location where the FortiWeb appliance can store log files (disk, memory, Syslog or FortiAnalyzer), you can define a severity threshold. The FortiWeb appliance will store all log messages equal to or exceeding the log severity level you select.

For example, if you select **Error**, the FortiWeb appliance will store log messages whose log severity level is **Error**, **Critical**, **Alert**, and **Emergency**.

Avoid recording log messages using low log severity thresholds such as information or notification to the local hard disk for an extended period of time. A low log severity threshold is one possible cause of frequent logging. Excessive logging frequency can cause undue wear on the hard disk and may cause premature failure.

Message IDs

The **MSG ID** (`msg_id`) field is an 12-digit number located in the header, incremented with each individual log message generated by the FortiWeb appliance. It is used only for numbering each entry in the database, and does not necessarily reflect its cause.

Each `msg_id` number is a unique identifier for that specific log entry. No other log messages, regardless of cause, share the same `msg_id`.

Event

Event log messages record subsystem events such as NTP-based time changes, reboots and RAID level changes. They also record configuration changes.

Unless noted as otherwise in each event log's description:

- **Level** (pri) field is information
- **User** (user) field is the name of the administrator account that caused the event
- **User Interface** (ui) field is according to [User Interface on page 10](#)

To go to a sample, additional information, and solution (if applicable) for an event log message, click the **ID** (log_id) field in the table.

Attack

Attack log messages record traffic that violated its matching policy. Log ID numbers of this type are listed in the table [Attack logs by main type, subtype & ID](#).

The operating mode, network topology, and the rule's configured **Action** can all affect how a policy responds to an attack, data leak, or server information disclosure. Depending on your configuration, violating traffic is either:

- blocked
- sanitized, then passed through
- allowed to continue unmodified (that is, logged only)

Attacks that generate log messages periodically

FortiWeb does not record the following types of attack logs individually. Instead, it records them periodically while the attack is ongoing, even if the attack has multiple sources:

- DoS attacks
- Padding oracle attacks
- HTTP/HTTPS protocol constraints

This aggregation prevents FortiWeb from flooding attack logs with identical or very similar messages. To differentiate logs caused by individual attacks from those caused by multiple attacks in the same category, FortiWeb records whether it generated the attack log message after matching multiple signatures.

In the attack log, the message field of aggregated log messages displays the message `rule_name : Custom Access Violation`.

In aggregated attacks log, the type field displays the message `Multiple Custom access rule Violations`.

Logging for threat scoring

By default, FortiWeb does not display all signature violations that contributed to a threat scoring attack log message as individual entries in the attack log. Instead, a single attack log message is displayed for the signature violations that contributed to a combined threat score that exceeded the maximum. However, all the signature violations that contributed to the score are displayed in the message details. (Double-click the message to display its details.)

Also by default, FortiWeb does not display messages for signature violations that generated a threat score but did not exceed the threat scoring threshold.

Use the following CLI command to display the signature violations that contributed to a threat scoring attack log message as individual entries and to display any signature violations that generated a threat score but did not exceed the threat scoring threshold:

```
config log attack-log  
set show-all-log {enable | disable}
```

For more information on CLI commands, see [FortiWeb CLI Reference](#):

<http://docs.fortinet.com/fortiweb/reference>

Threat scoring attack log messages are also displayed in the aggregated attacks log.

Attack log descriptions

To locate a description for an attack log message, match the **ID** (`log_id`) field in the attack log message with that shown in the table [Attack logs by main type, subtype & ID on page 34](#). All attack log messages have the same body fields, described in "Attack log fields" on page 1.

For attack log messages generated by a HTTP protocol constraint, the associated policy name is displayed in the raw view ([policy_name:<protocol_constraint_name>]) but not in the formatted view.

Attack logs by main type, subtype & ID

20000005

Meaning

Parameter name - (URI) triggered parameter validation.

Field name	Description
log_id	20000005 See Log ID numbers on page 16 .
main_type	Parameter Validation
subtype	N/A

Examples

```
v007xxxxdate=2019-08-03 time=13:26:14 log_id=20000005 msg_id=000000270760 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="Parameter Validation" sub_type="N/A" trigger_policy="" severity_level=Low proto=tcp service=http action=Alert_Deny policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=54777 dst=10.101.0.1 dst_port=80 http_method=get http_url="/autotest/dwg/common.html?input=88888" http_host="fortinet.fortiweb.com" http_agent="python-for-fortiweb" http_session_id=None msg="Parameter name - (input) triggered paramater validation" signature_subclass="N/A" signature_id="N/A" signature_cve_id="N/A" srccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool" false_positive_mitigation="none" user_name="Unknown" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=30 history_threat_weight=0 threat_level=High ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="A6:2017-Security Misconfiguration"
```

20000006

Meaning

IP in black list was blocked.

Field name	Description
log_id	20000006 See Log ID numbers on page 16 .
main_type	Black IP List
subtype	N/A

Examples

```
v007xxxxdate=2019-08-02 time=22:42:11 log_id=20000006 msg_id=000000083367 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="Black IP List" sub_type="N/A" trigger_policy="" severity_level=High proto=tcp service=http action=Alert_Deny policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=50744 dst=10.101.0.1 dst_port=80 http_method=get http_url="/autotest/test1.html" http_host="10.0.0.22:8080" http_agent="python-for-fortiweb" http_session_id=none msg="IP in black list was blocked" signature_subclass="N/A" signature_id="N/A" signature_cve_id="N/A" s_rccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool" false_positive_mitigation="none" user_name="Unknown" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=30 history_threat_weight=0 threat_level=High ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="N/A"
```

20000007

Meaning

URL Access rule violation

Field name	Description
log_id	20000007 See Log ID numbers on page 16 .
main_type	URL Access
subtype	N/A

Examples

```
v007xxxxdate=2019-08-03 time=10:16:18 log_id=20000007 msg_id=000000225382 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="URL Access" sub_type="N/A" trigger_policy="" severity_level=Low proto=tcp service=http action=Alert_Deny policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=61304 dst=10.101.0.1 dst_port=80 http_method=get http_url="/php/test.php" http_host="fortinet.fortiweb.com" http_agent="python-for-fortiweb" http_session_id=none msg="URL Access rule (FWB_protection_profile-6) violation" signature_subclass="N/A" signature_id="N/A" signature_cve_id="N/A" srccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool" false_positive_mitigation="none" user_name="Unknown" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=10 history_threat_weight=0 threat_level=Medium ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="A5:2017-Broken Access Control"
```

20000008

Meaning

Parameter, URL, or other elements in the packets triggered signatures included in the signature policy.

Field name	Description
log_id	20000008 See Log ID numbers on page 16 .
main_type	Signature Detection
subtype	<ul style="list-style-type: none"> • Cross Site Scripting • Cross Site Scripting (Extended) • Generic Attacks • Generic Attacks (Extended) • Bad Robot • Information Disclosure • Known Exploits • SQL Injection • SQL Injection (Extended) • SQL Injection (Syntax Based Detection) • Personally Identifiable Information • Trojans

Examples

```
v007xxxxdate=2019-08-03 time=10:17:12 log_id=20000008 msg_id=000000225902 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="Signature Detection" sub_type="Cross Site Scripting" trigger_policy="" severity_level=High proto=tcp service=http action=Alert policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=61385 dst=10.101.0.1 dst_port=80 http_method=get http_url="/examples/jsp/snp/snoop.jsp??picfilename=image_w3default.gif onmousedown="alert('xss success')"&passwd=&ok" http_host="fortinet.fortiweb.com" http_agent="python-for-fortiweb" http_session_id=None msg="Parameter(?picfilename) triggered signature ID 010000063 of Signatures policy Scanner Integration" signature_subclass="Cross Site Scripting" signature_id="010000063" signature_cve_id="N/A" srccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool" false_positive_mitigation="none" user_name="Unknown" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=30 history_threat_weight=0 threat_level=High ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="A7:2017-Cross-Site Scripting (XSS)"
```

20000009

Meaning

custom signature rule violation.

Field name	Description
log_id	20000009 See Log ID numbers on page 16 .
main_type	Custom Signature Detection
subtype	N/A

Examples

```
v007xxxxdate=2019-08-02 time=20:38:36 log_id=20000009 msg_id=000000042790 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="Custom Signature Detection" sub_type="N/A" trigger_policy="" severity_level=High proto=tcp service=http action=Alert policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=59778 dst=10.101.0.1 dst_port=80 http_method=get http_url="/autotest/test.html?para1=auto1test" http_host="fortinet.fortiweb.com" http_agent="python-for-fortiweb" http_session_id=none msg="Parameter triggered custom signature rule FWB_custom_protection_rule" signature_subclass="N/A" signature_id="N/A" signature_cve_id="N/A" srccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool" false_positive_mitigation="none" user_name="Unknown" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=30 history_threat_weight=0 threat_level=High ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="N/A"
```

20000010

Meaning

Brute Force Login Violation

Field name	Description
log_id	20000010 See Log ID numbers on page 16 .
main_type	Brute Force Login
subtype	<ul style="list-style-type: none">• Based on TCP Session• Based on Source IP

Examples

```
v007xxxxdate=2019-08-02 time=23:24:16 log_id=20000010 msg_id=000000098389 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="Brute Force Login" sub_type="Based on TCP Session" trigger_policy="" severity_level=High proto=tcp service=http action=Period_Block policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=57948 dst=10.0.1.5 dst_port=80 http_method=post http_url="/autotest/site_publishing_helper/login_check/0" http_host="fwbqa-win2k3.fwbqa.com" http_agent="python-for-fortiweb" http_session_id=None msg="Brute Force Login Violation" signature_subclass="N/A" signature_id="N/A" signature_cve_id="N/A" srccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool_10.0.1.5" false_positive_mitigation="none" user_name="Unknown" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=50 history_threat_weight=0 threat_level=Critical ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="A2:2017-Broken Authentication"
```

20000011

Meaning

Hidden Field Manipulation

Field name	Description
log_id	20000011 See Log ID numbers on page 16 .
main_type	Hidden Fields
subtype	N/A

Examples

```
v007xxxxdate=2019-08-03 time=00:54:36 log_id=20000011 msg_id=000000124602 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="Hidden Fields" sub_type="N/A" trigger_policy="" severity_level=High proto=tcp service=http action=Alert_Deny policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=52513 dst=10.101.0.1 dst_port=80 http_method=post http_url="/autotest/price.jsp" http_host="fortinet.fortiweb.com" http_agent="python-for-fortiweb" http_session_id=FFFFFFFFNJRBBMQB9CDNEZOWKXLBB5C msg="Hidden Field Manipulation" signature_subclass="N/A" signature_id="N/A" signature_cve_id="N/A" srccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool" false_positive_mitigation="none" user_name="Unknown" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=30 history_threat_weight=0 threat_level=High ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="A6:2017-Security Misconfiguration"
```

20000012

Meaning

User defined in site publish has been locked out.

Field name	Description
log_id	20000012 See Log ID numbers on page 16 .
main_type	Site Publish
subtype	Account Lockout See Subtypes on page 16 .

Examples

```
v007xxxxdate=2019-08-03 time=13:38:38 log_id=20000012 msg_id=000000274786 device_id=FV-1KE4417900002 vd="root" timezone="(GMT+8:00)Beijing,ChongQing,HongKong,Urumgi" timezone_dayst="GMTa-8" type=attack pri=alert main_type="Site Publish" sub_type="Account Lockout" trigger_policy="" severity_level=Low proto=tcp service=http action=Alert_Deny policy="FWB_Policy_Default_AutoTest" src=10.200.10.100 src_port=56642 dst=10.0.1.5 dst_port=80 http_method=post http_url="/autotest/site_publishing_helper/login_check/0" http_host="fwbqa-win2k3.fwbqa.com" http_agent="python-for-fortiweb" http_session_id=None msg="User qa002 [Site Publish] has been locked out" signature_subclass="N/A" signature_id="N/A" signature_cve_id="N/A" srccountry="Reserved" content_switch_name="none" server_pool_name="FWB_server_pool_10.0.1.5" false_positive_mitigation="none" user_name="qa002" monitor_status="Disabled" http_refer="none" http_version="1.x" dev_id="none" threat_weight=0 history_threat_weight=0 threat_level=Off ftp_mode="N/A" ftp_cmd="N/A" cipher_suite="none" ml_log_hmm_probability=0.000000 ml_log_sample_prob_mean=0.000000 ml_log_sample_arglen_mean=0.000000 ml_log_arglen=0 ml_svm_log_main_types=0 ml_svm_log_match_types="none" ml_svm_accuracy="none" ml_domain_index=0 ml_url_dbid=0 ml_arg_dbid=0 ml_allow_method="none" owasp_top10="A2:2017-Broken Authentication"
```

20000013

Meaning

HTTP Parsing Error.

Field name	Description
log_id	20000013 See Log ID numbers on page 16 .

Traffic

Traffic log messages record requests that a FortiWeb policy accepted or blocked. If the request was successful, it also includes the reply. Each log message represents its whole HTTP transaction.

Traffic logs do **not** record non-HTTP/HTTPS traffic such as FTP. This type of traffic is forwarded to your web servers if you have enabled IP-layer forwarding.

Traffic log messages are described below. For descriptions of header fields not mentioned here, see [Header & body fields on page 6](#).

Meaning

Traffic matching and complying with a policy passed through or by FortiWeb.

If there is an error in the message and the request/response used HTTPS, FortiWeb could not scan it. Depending on the mode of operation, an attack could have bypassed FortiWeb.

Solution

Response times can often be improved by regular expression tuning, offloading SSL/TLS from your back-end server to your FortiWeb (especially if the model supports hardware acceleration), and/or offloading compression. For performance tips, see the [FortiWeb Administration Guide](#).

If HTTPS traffic is not flowing as you expect or not being inspected, and you have recently enabled HTTPS, typically this is due to a misconfiguration. The error message in the `msg` field will indicate the appropriate solution:

- No Server Certificate for SSL Connection — FortiWeb does not have the server certificate, so it cannot decode the SSL traffic. To fix this, upload the web server's certificate to FortiWeb.
- SSL Certificate Key Mismatch — An X.509 server certificate was uploaded to FortiWeb, but its private key did not match the one used by this HTTPS session. To fix this, upload the back-end web server's current certificate.
- Ephemeral keys cannot be decrypted — Ephemeral Diffie-Hellman key exchange can't be inspected due to the property of perfect forward secrecy, which makes real-time HTTPS inspection impossible. To fix this, disable ephemeral Diffie-Hellman on the back-end web server, and select a different key exchange method.
- Unsupported Cipher for SSL Connection — Either message digest (MAC) authentication failed or the MAC did not exist, or the transaction used an unsupported cipher suite. To fix this, on the back-end web server, disable cipher suites that are not supported by FortiWeb.
- Unmonitored SSL Connection — The HTTPS session was initiated before FortiWeb was deployed or before the server policy was enabled, so FortiWeb could not listen for the key exchange, and therefore cannot decrypt subsequent requests/responses in this HTTPS session. To fix this, on the back-end web server, clear HTTPS sessions and force clients to renegotiate.

If FortiWeb is operating in Reverse Proxy or True Transparent Proxy mode, the traffic was blocked and no attack could have passed through to your protected web servers. **No action is required except to make sure that you have uploaded to FortiWeb the correct certificate for all protected web servers.**

Otherwise, if your appliance was:

- operating in Offline Protection or Transparent Inspection mode **or**
- configured only to **monitor** traffic (e.g. **Monitor Mode** was enabled or the **Action is Alert**, not **Alert & Deny**)

Solution

examine the web server to determine whether or not an encrypted attack has passed through. You should also examine your web server's HTTPS configuration and disable cipher suites and key exchanges that are not supported by FortiWeb so that during negotiation with clients, your web server does not agree to use encryption that FortiWeb cannot scan for attacks.

By the nature of log-only actions, detected attack attempts are logged but **not** blocked. You may also want to determine if the attack is from a single source IP address or distributed: blacklisting an offending client may help you to efficiently prevent further attack attempts, improving performance, until you can take further action.

By the nature of the network topology for Offline Protection mode (which can potentially cause differences in speeds of the separate routing paths), and asynchronous inspection for Transparent Inspection mode, **blocking cannot be guaranteed and some key exchanges are not supported**. For details, see the [FortiWeb Administration Guide](#).

Field name	Description
ID (log_id)	30000000 All traffic log messages share the same ID (log_id=30000000). See Log ID numbers on page 16 .
Sub Type (subtype)	http All traffic log messages share the same subtype (subtype=http). See Subtypes on page 16 .
Level (pri)	notification See Priority level on page 17 .
Message (msg)	If the HTTP request triggered the FortiWeb web caching feature, the message begins with [Replied by Cache]. The HTTP/HTTPS request's: <ul style="list-style-type: none"> • method • IP layer source and destination address and port numbers (IPv6 addresses are surrounded by square brackets to better demarcate the port number, e.g. [2001:470:19:ad7:6::230]:443) such as: <ul style="list-style-type: none"> • HTTP GET request from 10.0.2.5:8239 to 10.0.2.1:443 • HTTP POST request from 10.0.2.5:8100 to 10.0.2.1:80 If the transaction used HTTPS, and there was an error when either decoding it or participating in the handshake, there may be an error message instead of the HTTP method, such as: HTTP request from 192.0.2.1:40170 to 10.0.2.1:443, Ephemeral keys cannot be decrypted
Source Country (srccountry)	The country that is the source of the traffic.
HTTP Content Routing (content_switch_name)	The name of the associated HTTP content routing policy.

Field name	Description
Server Pool Name (server_pool_name)	The name of the server pool in the associated server policy.
