Change Log

Date	Change description
2023-03-10	FortiDevSec version 23.1.a release document.

Introduction

FortiDevSec is a cloud-based automated application security tool that performs intensive and comprehensive scans for an accurate vulnerability assessment of your application. It integrates continuous application security testing into major DevOps Continuous Integration (CI) Continuous Deployment (CD) environments, embedding itself into the process of developing and deploying applications to evaluate and detect security gaps that you can mitigate/remediate in the course of the Software Development LifeCycle (SDLC). The automated scanning process resides in your CI/CD pipeline and allows you to scan your applications without manual intervention and is completely non-intrusive with no disruptions to your setup. The easy-to-understand application security assessment approach of FortiDevSec allows you to build secure applications and involves a simple 3-step procedure that facilitates application scanning with minimal know-how of the application security domain. For detailed product overview, configuration, and usage procedures see the *FortiDevSec User Guide*.

What's New

This release of FortiDevSec includes bug fixes for FortiDAST Forticare sub user implementation and license.

Note: Scanner docker images must be updated using `docker pull <image>` command to the latest version to use the new features.

Product Integration and Support

The following table lists the latest supported/tested web browsers for FortiDevSec version 23.1.a:

Item	Supported version
Web browser	<ul style="list-style-type: none">• Microsoft Edge version 105.0.1343.42• Mozilla Firefox version 104.0.2• Google Chrome version 105.0.5195.127• Apple Safari version 15.3 Other web browsers may work correctly but Fortinet does not support them.

Resolved Issues

The following issues have been resolved in FortiDevSec version 23.1.a.

Issue ID	Description
882127	FortiDevSec DAST scan retrieves contracts belonging to different org IDs or serial numbers based on sub user account IDs returned from Forticare.
881622	The progress of FortiDevSec DAST scan is not being displayed in the terminal from where it was triggered.
882622	DAST scan fails to add new asset when one of the multiple FortiDevSec standard licenses is expired.

Known Issues

The following issues are known in FortiDevSec version 23.1.a.

Issue ID	Description
861630	The FortiDAST asset scan configuration details can only be added by logging in to FortiDAST after performing the initial scan.
876413	[FortiDAST Proxy] Scan fails when FQDN of the internal asset is used as target.
891704	Scans initiated from the master user account on subuser's account fails if the subuser has not logged in to FortiDevSec GUI at least once.
