FortiAnalyzer 7.6.5 Release

This document provides information about FortiAnalyzer version 7.6.5 build 3653.

> The recommended minimum screen resolution for the FortiAnalyzer GUI is 1920 x 1080. Please adjust the screen resolution accordingly. Otherwise, the GUI may not display properly.

This section includes the following topics:

Supported models

FortiAnalyzer version 7.6.5 supports the following models:

FortiAnalyzer	FAZ-150G, FAZ-300F, FAZ-300G, FAZ-800G, FAZ-810G, FAZ-1000F, FAZ-1000G, FAZ-2000E, FAZ-3000F, FAZ-3000G, FAZ-3100G, FAZ-3500F, FAZ-3500G, FAZ-3510G, FAZ-3700F, and FAZ-3700G.
FortiAnalyzer VM	FAZ_VM64, FAZ_VM64_ALI, FAZ_VM64_AWS, FAZ_VM64_AWSOnDemand, FAZ_VM64_Azure, FAZ_VM64_GCP, FAZ_VM64_HV (including Hyper-V 2016, 2019, and 2022), FAZ_VM64_IBM, FAZ_VM64_KVM, FAZ_VM64_OPC, FAZ_VM64_XEN (for both Citrix and Open Source Xen).

> FAZ-300F supports the subscription license for the SOC service. However performance may be impacted because FAZ-300F has fewer resources and a smaller CPU than other FortiAnalyzer models that support the SOC service.

> For access to container versions of FortiAnalyzer, contact Fortinet Support.

FortiAnalyzer VM subscription license

The FortiAnalyzer VM subscription license supports FortiAnalyzer version 6.4.1 and later. For information about supported firmware, see FortiAnalyzer VM firmware on page 18.

See also Appendix A - Default and maximum number of ADOMs supported on page 63.

	You can use the FortiAnalyzer VM subscription license with new FortiAnalyzer-VM installations.
	For existing FortiAnalyzer-VM installations, you can migrate to a FortiAnalyzer VM subscription license, starting with FortiAnalyzer 7.0.1. See the FortiAnalyzer Administrtation Guide.

Special Notices

This section highlights some of the operational changes that administrators should be aware of in FortiAnalyzer version 7.6.5.

The FortiAnalyzer XML API is no longer supported

The XML API is removed as of FortiAnalyzer 7.6.5.

legacy-auth-mode command added

A new CLI command, `legacy-auth-mode`, has been introduced to enhance the flexibility of OFTP connections between devices and FortiAnalyzer when needed. By default, FortiAnalyzer enforces certificate-based authentication for OFTP connections and validates the device's certificate by checking the Common Name (CN) field — if the CN matches the device's serial number (SN), the connection is accepted.

However, for devices like FortiWeb, FortiMail, and FortiADC, the certificate CN often does not match the SN, causing the OFTP connection to fail. When `legacy-auth-mode` is enabled, FortiAnalyzer allows OFTP connections to fall back to username/password authentication if the certificate CN does not match the SN. This enables compatibility with devices whose certificates use alternative CN formats while still providing a level of authentication. In line with security best practices, the OFTP port should not be exposed when `legacy-auth-mode` is enabled unless proper access restrictions are applied.

```
config system log settings
    (settings)# set legacy-auth-mode ?
        disable - Disable support for legacy authentication mode.
        enable - Enable support for legacy authentication mode.
```

The grep command is added to the CLI

The grep command is added in FortiAnalyzer 7.6.5 CLI. This command can be used to filter larger outputs so that they only show the required information.

For more information, see the FortiAnalyzer CLI Reference.

FortiManager Connector

In FortiAnalyzer 7.6.4, the FMG Connector is moved to *Incidents & Events > Automation > Active Connectors*.

Default password policy for local users

Beginning in FortiAnalyzer 7.6.4, a password policy for local users is enabled and configured by default. If you are setting up FortiAnalyzer 7.6.4 or later, the password created at setup must be at least 8 characters and must contain uppercase letter(s), lowercase letter(s), number(s), and special character(s).

Note that existing password policy settings are maintained after upgrading. For example, if the password policy is disabled prior to upgrading to FortiAnalyzer 7.6.4 or later, it will remain disabled after the upgrade.

Quotations applied to fields containing string-type data

Starting from version 7.6.3, quotations are consistently applied to the fields containing string-type data. For example: srcip, dstip, transip, date, and time.

MEAs removed in FortiAnalyzer 7.6.3

There is no support for MEAs in FortiAnalyzer 7.6.3 and later.

The following management extension applications (MEAs) are removed in FortiAnalyzer 7.6.3:

- FortiSIEM
- FortiSOAR

Migrating the log database from Postgres to ClickHouse

Beginning in FortiAnalyzer 7.6.0, FortiAnalyzer stores logs in a ClickHouse SQL database rather than a Postgres SQL database.

For more information, see the FortiAnalyzer 7.6.0 Upgrade Guide.

Shell access has been removed

As of FortiAnalyzer 7.6.0, shell access has been removed.

The following CLI variables have been removed, which were previously used to enable shell access:

```
config system admin setting
    set shell-access {enable | disable}
    set shell-password <passwd>
```

The following CLI command has been removed, which was previously used to access shell when enabled:

```
execute shell
```

Alert notifications generated by FortiAnalyzer and sent by syslog

Beginning in 7.4.3, alert notifications generated by FortiAnalyzer and sent by syslog will use the RFC-5424 format.

Additional configuration required for SSO users

Beginning in 7.4.3, additional configuration is needed for FortiAnalyzer Users declared as wildcard SSO users.

When configuring Administrators as wildcard SSO users, the `ext-auth-accprofile-override` and/or `ext-auth-adom-override` features, under *Advanced Options*, should be enabled if the intent is to obtain the ADOMs list and/or permission profile from the SAML IdP.

FortiAnalyzer 7.2.3 and later firmware on FortiGuard

Starting in FortiAnalyzer 7.2.1, a setup wizard executes to prompt the user for various configuration steps and registration with FortiCare. During the execution, the FortiAnalyzer unit attempts to communicate with FortiGuard for a list of FortiAnalyzer firmware images currently available on FortiGuard – older and newer.

In the case of FortiAnalyzer 7.2.2, a bug in the GUI prevents the wizard from completing and prevents the user from accessing the FortiAnalyzer unit. The issue has been fixed in 7.2.3 and later and a CLI command has been added to bypass the setup wizard at login time.

```
config system admin setting
    set firmware-upgrade-check disable
```

```
end
```

Fortinet has not uploaded FortiAnalyzer 7.2.3 and later firmware to FortiGuard in order to work around the GUI bug, however, the firmware is available for download from the Fortinet Support website.

Configuration backup requires a password

As of FortiAnalyzer 7.4.2, configuration backup files are automatically encrypted and require you to set a password. The password is required for scheduled backups as well.

In previous versions, the encryption and password were optional.

For more information, see the FortiAnalyzer Administration Guide.

FortiAnalyzer-3500E support

FortiAnalyzer 7.4.2 and later does not support the FortiAnalyzer-3500E device.

FortiAnalyzer 7.4.2 introduces an upgrade of the OpenSSL library to address known vulnerabilities in the library. As a result, the SSL connection that is setup between the FortiAnalyzer-3500E device and the Google Map server hosted by Fortinet uses a SHA2 (2048) public key length. The certificate stored on the BIOS that is used during the setup of the SSL connection contains a SHA1 public key length, which causes the connection setup to fail. Running the following command shows the key length.

```
FAZ3500E # config system certificate local
(local)# ed Fortinet_Local
  (Fortinet_Local)# get
     name : Fortinet_Local
     password : *
     comment : Default local certificate

```

Serial console has changed for FortiAnalyzer deployments on Xen

In FortiAnalyzer 7.4.1, the serial console for Xen deployments has changed from hvc0 (Xen specific) to ttyS0 (standard).

OpenXen in PV mode is not supported in FortiAnalyzer 7.4.1

As of FortiAnalyzer 7.4.1, kernel and rootfs are encrypted. OpenXen in PV mode tries to unzip the kernel and rootfs, but it will fail. Therefore, OpenXen in PV mode cannot be used when deploying or upgrading to FortiAnalyzer 7.4.1. Only HVM (hardware virtual machine) mode is supported for OpenXen in FortiAnalyzer 7.4.1.

Default GUI theme changed

As of FortiAnalyzer 7.4.1, the default GUI theme is *Jade*. The default theme can be changed from *System Settings > Settings*.

FortiManager Features removed

FortiAnalyzer 7.2.1 and later no longer supports FortiManager Features. If you have FortiManager Features enabled before upgrading to FortiAnalyzer 7.2.1, FortiManager Features will be permanently disabled after upgrading to FortiAnalyzer 7.2.1.

Setup wizard requires FortiCare registration

Starting in FortiAnalyzer 7.2.1, the FortiAnalyzer Setup wizard requires you to complete the *Register with FortiCare* step before you can access the FortiAnalyzer appliance or VM. Previously the step was optional.

For FortiAnalyzer units operating in a closed environment, contact customer service to receive an entitlement file, and then load the entitlement file to FortiAnalyzer by using the CLI.

When FortiManager is managing FortiAnalyzer in a closed environment, FortiManager contains the FortiAnalyzer contract information, and you can point FortiAnalyzer to FortiManager.

Hyperscale firewall mode

FortiAnalyzer does not support logs from the following models when they have hyperscale firewall mode and netflow enabled:

- FortiGate-1800F
- FortiGate-1801F
- FortiGate-2600F
- FortiGate-2601F
- FortiGate-4200F
- FortiGate-4201F
- FortiGate-4400F
- FortiGate-4401F

FortiAnalyzer only supports logs when the normal firewall mode with standard FortiGate logging are enabled.

Modifying the interface status with the CLI

Starting in verion 7.0.1, the CLI to modify the interface status has been changed from up/down to enable/disable.

 For example:

```
config system interface
   edit port2
      set status <enable/disable>
   next
end
```

Citrix XenServer default limits and upgrade

Citrix XenServer limits ramdisk to 128M by default. However the FAZ-VM64-XEN image is larger than 128M. Before updating to FortiAnalyzer 6.4, increase the size of the ramdisk setting on Citrix XenServer.

To increase the size of the ramdisk setting:

1. On Citrix XenServer, run the following command:
   ```
   xenstore-write /mh/limits/pv-ramdisk-max-size 536,870,912
   ```

2. Confirm the setting is in effect by running `xenstore-ls`.

```
-----------------------
limits = ""
pv-kernel-max-size = "33554432"
pv-ramdisk-max-size = "536,870,912"
boot-time = ""
---------------------------
```

3. Remove the pending files left in `/run/xen/pygrub`.

> The ramdisk setting returns to the default value after rebooting.

FortiAnalyzer VM upgrade requires more memory

When upgrading FortiAnalyzer VM units from a previous version to FortiAnalyzer 7.2.2 or higher, the upgrade may fail because of memory allocation. As of FortiAnalyzer 7.2.2, FortiAnalyzer VM requires 16 GB of RAM and 4 CPU.

Workaround: Before upgrading FortiAnalyzer VM to FortiAnalyzer 7.2.2, change the memory allocation to 16 GB of RAM.

Maximum ADOM limits for FortiAnalyzer

FortiAnalyzer hardware devices and VMs display a warning when the maximum number of ADOMs is reached. For more details, see Appendix A - Default and maximum number of ADOMs supported on page 63.

Port 8443 reserved

Port 8443 is reserved for https-logging from FortiClient EMS for Chromebooks. See also FortiAnalyzer 7.0 Ports Reference on the Docs Library.

Hyper-V FortiAnalyzer-VM running on an AMD CPU

A Hyper-V FAZ-VM running on a PC with an AMD CPU may experience a kernel panic. Fortinet recommends running VMs on an Intel-based PC.

SSLv3 on FortiAnalyzer-VM64-AWS

Due to known vulnerabilities in the SSLv3 protocol, FortiAnalyzer-VM64-AWS only enables TLSv1 by default. All other models enable both TLSv1 and SSLv3. If you wish to disable SSLv3 support, please run:

```
config system global
      set ssl-protocol t1sv1
end
```

New features

For information about what's new in FortiAnalyzer 7.6.5, see the FortiAnalyzer 7.6 New Features Guide. The index in the New Features Guide lists new features by release.

Upgrade Information

Prior to upgrading your FortiAnalyzer, please review the FortiAnalyzer Upgrade Guide in detail as it includes all of the necessary steps and associated details required to upgrade your FortiAnalyzer device or VM, including recommended upgrade paths.

See the *FortiAnalyzer Upgrade Guide* in the Fortinet Document Library.

This section contains the following topics:

Downgrading to previous firmware versions

FortiAnalyzer does not provide a full downgrade path. You can downgrade to a previous firmware release by using the GUI or CLI, but doing so results in configuration loss. A system reset is required after the firmware downgrade process has completed. To reset the system, use the following CLI commands via a console port connection:

```
execute reset {all-settings | all-except-ip}
execute format disk
```

Firmware image checksums

The MD5 checksums for all Fortinet software and firmware releases are available at the Customer Service & Support portal, https://support.fortinet.com. After logging in, go to *Download > Firmware Image Checksums*, enter the image file name including the extension, and select *Get Checksum Code*.

To change the FortiAnalyzer language setting, go to *System Settings > Admin > Admin Settings*, in *Administrative Settings > Language* select the desired language on the drop-down menu. The default value is *Auto Detect*.

Russian, Hebrew, and Hungarian are not included in the default report languages. You can create your own language translation files for these languages by exporting a predefined language from FortiAnalyzer, modifying the text to a different language, saving the file as a different language name, and then importing the file into FortiAnalyzer. For more information, see the *FortiAnalyzer Administration Guide*.

Supported models

The following tables list which FortiGate, FortiCarrier, FortiDDoS, FortiAnalyzer, FortiMail, FortiSandbox, FortiSwitch, FortiWeb, FortiCache, FortiProxy, FortiAuthenticator, and other Fortinet product models and firmware versions can send logs to a FortiAnalyzer running version 7.6.5.

Software license activated LENC devices are supported, if their platforms are in the supported models list. For example, support of FG-3200D indicates support of FG-3200D-LENC.

Device Manager

Bug ID	Description
1204113	Security rating logs from the FortiGate-HA cluster are causing a SIEM device to be created on the FortiAnalyzer and displayed in the unregistered device list.

Log View

Bug ID	Description
1110895	Correlated logs for FortiMail doesn't show up except in the ADOM which has the root vdoms.
1188362	Some detailed information in FortiMail logs is encapsulated within large message chunks. The current FortiAnalyzer log parsing logic does not yet support extracting these details from those chunks.

Others

Bug ID	Description
1179768	Due to the FortiGate's log schema upgrades/updates, upon FortiAnalyzer's upgrade, the Postgres table schema will be updated, which may take a significant amount of time to complete. The database migration from Postgres to ClickHouse will only begin after the Postgres schema upgrade has successfully finished. As a result, the process might appear to be stuck but it is simply progressing slowly. The only recommended action is to wait patiently for the upgrade to complete.
1196384	The "jitterentropy-rngd" process is using very high CPU even without FIPS enabled in FortiAnalyzer Hardware platform.
1204010	After the FortiAnalyzer upgrade, the timestamp and eventtime fields in the forwarded syslog logs to Splunk no longer match, showing a two-hour discrepancy.

Reports

Bug ID	Description
1179084	The FortiProxy default datasets do not include both required traffic subtypes - http-transaction and forward - even though each session generates both.
1204007	FortiNAC reports are empty.
1211383	When opening a report that contains bare text or similar nodes at top level, the editor throws an exception error.

Existing known issues

The following issues have been identified in a previous version of FortiAnalyzer and remain in FortiAnalyzer 7.6.5.

Device Manager

Bug ID	Description
1227977	Adding FortiSASE devices results in error. The device's serial number does not match database.

Bug ID	Description
1231421	Playbook fail to run for downstream FortiGates in Security Fabric.
1236262	FortiOS Connector does not appear under the correct Security Fabric name.

FortiSOC

Bug ID	Description
1202951	Outbreak Alerts Page displays "The report list is unavailable in FortiGuard" despite Valid License and Connectivity.

FortiView

Bug ID	Description
1092311	FortiAnalyzer may not display any data when accessing *FortiView* in the VPN site-to-site tab.

Others

1217641	The output of the `diagnose fortilogd logvol-adom` is not correct.

Reports

Bug ID	Description
1127015	FortiAnalyzer report charts are shifted if Print Orientation is set to "Portrait".
1218711	FortiAnalyzer could not get vulnerability information from the FortiClient using playbooks.
1224929	Following the upgrade, the data shown in the VPN reports Top 5 Site-to-Site IPsec Tunnels by Bandwidth chart appears to be inaccurate.

System Settings

Bug ID	Description
1142016	The *Index Fetched Logs* feature in *Request Fetch* under *Advanced > Log Fetch* is not functioning as expected.

Appendix A - Default and maximum number of ADOMs supported

This section identifies the supported number of ADOMs for FortiAnalyzer hardware models and virtual machines.

> When operating as a Fabric supervisor, FortiAnalyzer does not count member ADOMs and devices toward its license limit.

See also the FortiAnalyzer Data Sheet.

Hardware models

FortiAnalyzer supports a default number of ADOMs based on hardware model.

Some hardware models support an ADOM subscription license. When you purchase an ADOM subscription license, you increase the number of supported ADOMs. For example, you can purchase an ADOM subscription license for the FAZ-3000G series, which allows you to use up to a maximum of 1200 ADOMs. Other hardware models do not support the ADOM subscription license.

Some older hardware models do not enforce ADOM limits. These models will display a warning message when the ADOM limit is reached or exceeded; adding more ADOMs may affect performance. These devices are still subject to maximum device limits which are listed in the FortiAnalyzer Data Sheet.

The table below lists the maximum number of ADOMs by platform. Models that enforce the maximum as a hard limit are indicated in the *Hard limit* column.

FortiAnalyzer Platform	Maximum number of ADOMs	Hard limit
Desktop models	1	✓
150G	3	✓
300F	25	
300G	25	✓
800G and 810G	50	✓
1000F	50	✓
1000G	50	✓

FortiAnalyzer Platform	Maximum number of ADOMs	Hard limit
2000E	250	
3000F	500	
3000G	500 *1200	✓
3500F	500	
3500G	500 *500	✓
3700F	1200	
3700G	1200 *10,000	✓

*Maximum number of supported ADOMs can be increased to this value with an ADOM subscription license.

Virtual Machines

💡 For subscription licenses, FortiAnalyzer enforces the ADOM limits.
For perpetual licenses, ADOM limits are recommended, but not enforced.

FortiAnalyzer subscription license

Five (5) ADOMs are included with FortiAnalyzer VM subscription licenses. Additional ADOMs can be purchased with an ADOM subscription license.

FortiAnalyzer perpetual license

Recommended maximum number of ADOMs supported:

FortiAnalyzer Platform	Default number of ADOMs
1 GB/Day < License <= 5 GB/Day	10
5 GB/Day < License <= 25 GB/Day	25
25 GB/Day < License <= 100 GB/Day	50

FortiAnalyzer Platform	Default number of ADOMs
100 GB/Day < License <= 500 GB/Day	250
500 GB/Day < License <= 1000 GB/Day	500
1000 GB/Day < License <= 5000 GB/Day	800
License > 5000 GB/Day	1200

- FortiAnalyzer-VM subscription licenses are fully stackable.
- For FortiAnalyzer-VM perpetual licenses, only the GB/Day is stackable.
