FortiAnalyzer 6.0.6 Release

This document provides information about FortiAnalyzer version 6.0.6 build 349.

The recommended minimum screen resolution for the FortiAnalyzer GUI is 1920 x 1080. Please adjust the screen resolution accordingly. Otherwise, the GUI may not display properly.

This section includes the following topics:

- [Supported models on page 4](#)

Supported models

FortiAnalyzer version 6.0.6 supports the following models:

FortiAnalyzer	FAZ-200D, FAZ-200F, FAZ-300D, FAZ-300F, FAZ-400E, FAZ-800F, FAZ-1000D, FAZ-1000E, FAZ-2000E, FAZ-3000D, FAZ-3000E, FAZ-3000F, FAZ-3500E, FAZ-3500F, FAZ-3700F and FAZ-3900E.
FortiAnalyzer VM	FAZ-VM64, FAZ-VM64-ALI, FAZ-VM64-AWS, FAZ-VM64-AWS-OnDemand, FAZ-VM64-Azure, FAZ-VM64-GCP, FAZ-VM64-HV, FAZ-VM64-KVM, FAZ-VM64-OPC, and FAZ-VM64-XEN (Citrix XenServer and Open Source Xen).

Special Notices

This section highlights some of the operational changes that administrators should be aware of in FortiAnalyzer version 6.0.6.

Common Vulnerabilities and Exposures

FortiAnalyzer 6.0.6 is no longer vulnerable to the issue described in the following link - <https://fortiguard.com/psirt/FG-IR-19-144>.

Port 8443 reserved

Port 8443 is reserved for https-logging from FortiClient EMS for Chromebooks.

FortiManager features disabled when FortiAnalyzer HA enabled

If you have FortiManager features enabled on FortiAnalyzer units, and then enable HA for the FortiAnalyzer units, FortiManager features are automatically disabled. FortiManager features are not supported when FortiAnalyzer HA is enabled.

Updated Widgets for Fortinet Security Fabric

After upgrading FortiAnalyzer from 5.6 to 6.0, the NOC Security Fabric widgets, *Security Fabric Score Summary* and *Historical Security Fabric Scores*, no longer show any data. These two widgets have been replaced by the following widgets: *Security Fabric Rating Report* and *Security Fabric Scores* in FortiAnalyzer 6.0. The two new widgets only support FortiOS 6.0 devices.

Hyper-V FortiAnalyzer-VM running on an AMD CPU

A Hyper-V FAZ-VM running on a PC with an AMD CPU may experience a kernel panic. Fortinet recommends running VMs on an Intel-based PC.

SSLv3 on FortiAnalyzer-VM64-AWS

Due to known vulnerabilities in the SSLv3 protocol, FortiAnalyzer-VM64-AWS only enables TLSv1 by default. All other models enable both TLSv1 and SSLv3. If you wish to disable SSLv3 support, please run:

```
config system global
    set ssl-protocol tlsv1
end
```

Pre-processing logic of ebtime

Logs with the following conditions met are considered usable for the calculation of estimated browsing time:

Traffic logs with `logid` of 13 or 2, when `logid == 13`, `hostname` must not be empty. The `service` field should be either HTTP, 80/TCP or 443/TCP.

If all above conditions are met, then `devid`, `vdom`, and `user` (`srcip` if `user` is empty) are combined as a key to identify a user. For time estimation, the current value of `duration` is calculated against history session start and end time, only un-overlapped part are used as the `ebtime` of the current log.

Upgrade Information

You can upgrade FortiAnalyzer 5.6.0 or later directly to 6.0.6.

For other upgrade paths and details about upgrading your FortiAnalyzer, see *FortiAnalyzer Upgrade Guide* in the Document Library.

Upgrading to FortiAnalyzer 6.0.x

Upgrading to FortiAnalyzer 6.0.x automatically triggers an SQL database rebuild, which must complete for FortiAnalyzer to function normally. Verify the database rebuild status using `diagnose sql status rebuild-db`.

This section contains the following topics:

- [Downgrading to previous versions on page 7](#)
- [Firmware image checksums on page 7](#)
- [FortiAnalyzer VM firmware on page 8](#)
- [SNMP MIB files on page 9](#)

Downgrading to previous versions

FortiAnalyzer does not provide a full downgrade path. You can downgrade to a previous firmware release via the GUI or CLI, but doing so results in configuration loss. A system reset is required after the firmware downgrading process has completed. To reset the system, use the following CLI commands via a console port connection:

```
execute reset all-settings
execute format {disk | disk-ext4}
```

Firmware image checksums

The MD5 checksums for all Fortinet software and firmware releases are available at the Customer Service & Support portal, <https://support.fortinet.com>. To verify the integrity of the download, select the *Checksum* link next to the *HTTPS* download link. A dialog box will be displayed with the image file name and checksum code. Compare this checksum with the checksum of the firmware image.
