FortiAnalyzer	FAZ-200D, FAZ-200F, FAZ-300D, FAZ-300F, FAZ-400E, FAZ-1000D, FAZ-1000E, FAZ-2000E, FAZ-3000D, FAZ-3000E, FAZ-3000F, FAZ-3500E, FAZ-3500F, FAZ-3700F and FAZ-3900E.
FortiAnalyzer VM	FAZ-VM64, FAZ-VM64-AWS, FAZ-VM64-AWS-OnDemand, FAZ-VM64-Azure, FAZ-VM64-HV, FAZ-VM64-KVM, and FAZ-VM64-XEN (Citrix XenServer and Open Source Xen).

What's new

FortiAnalyzer version 6.0.0 includes the following new features and enhancements:

Incident Detection & Response

Event Manager 2.0

- From *Event Manager* > *All Events*, you can now search and filter events, customize columns and save filtered events to a Custom View.
- The secondary *Group By* option from the event handler edit screen provides flexibility on event information organization.
- Built-in event handler to provide threat feed to the FortiOS automation framework.
  You can raise an incident from detected events. The raised incident is listed under the *Incidents* menu for further analysis and evidence collection.

SOC Dashboards

- **Fortinet Security Best Practice Dashboard:** a simple CISO dashboard to show a snapshot of the security of your network, including the current security ranking score, industry peer comparison, and security maturity level.
- **New Vulnerability Dashboard:** displays a summary of detected endpoint vulnerabilities along with the detailed FortiGuard information for each critical vulnerability.

IOC Enhancements

- IOC scan now includes Traffic logs and DNS logs to provide better detection coverage.
- The IOC Notification Service provides event notification to FortiOS when a compromised host is detected.

FortiAnalyzer High Availability

Support automatic failover over IP for log redundancy and high system availability.

Secure Syslog Forwarding

Support forwarding logs in syslog format over TLS/SSL.

Special Notices

This section highlights some of the operational changes that administrators should be aware of in FortiAnalyzer version 6.0.0.

FortiManager features disabled when FortiAnalyzer HA enabled

If you have FortiManager features enabled on FortiAnalyzer units, and then enable HA for the FortiAnalyzer units, FortiManager features are automatically disabled. FortiManager features are not supported when FortiAnalyzer HA is enabled.

Updated Widgets for Fortinet Security Fabric

After upgrading FortiAnalyzer from 5.6 to 6.0, the NOC Security Fabric widgets, *Security Fabric Score Summary* and *Historical Security Fabric Scores*, no longer show any data. These two widgets have been replaced by the following widgets: *Security Fabric Rating Report* and *Security Fabric Scores* in FortiAnalyzer 6.0. The two new widgets only support FortiOS 6.0 devices.

Hyper-V FortiAnalyzer-VM running on an AMD CPU

A Hyper-V FAZ-VM running on a PC with an AMD CPU may experience a kernel panic. Fortinet recommends running VMs on an Intel-based PC.

SSLv3 on FortiAnalyzer-VM64-AWS

Due to known vulnerabilities in the SSLv3 protocol, FortiAnalyzer-VM64-AWS only enables TLSv1 by default. All other models enable both TLSv1 and SSLv3. If you wish to disable SSLv3 support, please run:

```
config system global
     set ssl-protocol t1sv1
end
```

Pre-processing logic of ebtime

Logs with the following conditions met are considered usable for the calculation of estimated browsing time:

Traffic logs with `logid` of `13` or `2`, when `logid == 13`, `hostname` must not be empty. The `service` field should be either `HTTP`, `80/TCP` or `443/TCP`.

If all above conditions are met, then `devid`, `vdom`, and `user` (`srcip` if `user` is empty) are combined as a key to identify a user. For time estimation, the current value of `duration` is calculated against history session start and end time, only un-overlapped part are used as the `ebtime` of the current log.

Upgrade Information

You can upgrade FortiAnalyzer 5.6.0 or later directly to 6.0.0. After upgrading, FortiAnalyzer automatically rebuilds the system database.

If you are upgrading from versions earlier than 5.6.0, you must upgrade to FortiAnalyzer 5.6, then to 6.0.0. We recommend that you upgrade to 5.6.3, the latest version of FortiAnalyzer 5.6.

For details about upgrading FortiAnalyzer, see *FortiAnalyzer Upgrade Guide*.

This section contains the following topics:

Downgrading to previous versions

FortiAnalyzer does not provide a full downgrade path. You can downgrade to a previous firmware release via the GUI or CLI, but doing so results in configuration loss. A system reset is required after the firmware downgrading process has completed. To reset the system, use the following CLI commands via a console port connection:

```
execute reset all-settings
execute format {disk | disk-ext4}
```

Firmware image checksums

The MD5 checksums for all Fortinet software and firmware releases are available at the Customer Service & Support portal, https://support.fortinet.com. To verify the integrity of the download, select the *Checksum* link next to the *HTTPS* download link. A dialog box will be displayed with the image file name and checksum code. Compare this checksum with the checksum of the firmware image.
