Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											
<i>respond</i>	Respond with error code.											
malformed-header-expires	Action for malformed Expires header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.					
Option	Description											
<i>discard</i>	Discard malformed messages.											
<i>pass</i>	Bypass malformed messages.											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>respond</i>	Respond with error code.		
malformed-header-from	Action for malformed From header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-max-forwards	Action for malformed Max-Forwards header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-no-proxy-require	Action for malformed SIP messages without Proxy-Require header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-no-require	Action for malformed SIP messages without Require header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		

Parameter	Description	Type	Size	Default
malformed-header-p-asserted-identity	Action for malformed P-Asserted-Identity header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-rack	Action for malformed RACK header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-record-route	Action for malformed Record-Route header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-route	Action for malformed Route header.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-rseq	Action for malformed RSeq header.	option	-	pass

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-a	Action for malformed SDP a line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-b	Action for malformed SDP b line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-c	Action for malformed SDP c line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-i	Action for malformed SDP i line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-k	Action for malformed SDP k line.	option	-	pass

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-m	Action for malformed SDP m line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-o	Action for malformed SDP o line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-r	Action for malformed SDP r line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-s	Action for malformed SDP s line.	option	-	pass
	Option	Description		
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-t	Action for malformed SDP t line.	option	-	pass

Parameter	Description	Type	Size	Default
	Option Description			
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-v	Action for malformed SDP v line.	option	-	pass
	Option Description			
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-sdp-z	Action for malformed SDP z line.	option	-	pass
	Option Description			
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-to	Action for malformed To header.	option	-	pass
	Option Description			
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-header-via	Action for malformed VIA header.	option	-	pass
	Option Description			
	<i>discard</i>	Discard malformed messages.		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
malformed-request-line	Action for malformed request line.	option	-	pass

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr><tr><td><i>pass</i></td><td>Bypass malformed messages.</td></tr><tr><td><i>respond</i></td><td>Respond with error code.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.	<i>pass</i>	Bypass malformed messages.	<i>respond</i>	Respond with error code.			
	Option	Description										
	<i>discard</i>	Discard malformed messages.										
	<i>pass</i>	Bypass malformed messages.										
<i>respond</i>	Respond with error code.											
max-body-length	Maximum SIP message body length (0 meaning no limit).	integer	Minimum value: 0 0 Maximum value: 4294967295									
max-dialogs	Maximum number of concurrent calls/dialogs (per policy).	integer	Minimum value: 0 0 Maximum value: 4294967295									
max-idle-dialogs	Maximum number established but idle dialogs to retain (per policy).	integer	Minimum value: 0 0 Maximum value: 4294967295									
max-line-length	Maximum SIP header line length (78-4096).	integer	Minimum value: 998 78 Maximum value: 4096									
message-rate	MESSAGE request rate limit (per second, per policy).	integer	Minimum value: 0 0 Maximum value: 4294967295									
message-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
	Option	Description										
	<i>none</i>	None.										
	<i>src-ip</i>	Source IP.										
<i>dest-ip</i>	Destination IP.											
nat-port-range	RTP NAT port range.	user	Not Specified	5117-65533								
nat-trace	Enable/disable preservation of original IP in SDP i line.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.							
	Option	Description										
<i>disable</i>	Disable status.											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable status.		
	<i>disable</i>	Disable status.		
no-sdp-fixup	Enable/disable no SDP fix-up.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
notify-rate	NOTIFY request rate limit (per second, per policy).	integer	Minimum value: 0 0 Maximum value: 4294967295	0
notify-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
open-contact-pinhole	Enable/disable open pinhole for non-REGISTER Contact port.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
open-record-route-pinhole	Enable/disable open pinhole for Record-Route port.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
open-register-pinhole	Enable/disable open pinhole for REGISTER Contact port.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable status.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable status.		
open-via-pinhole	Enable/disable open pinhole for Via port.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
options-rate	OPTIONS request rate limit (per second, per policy).	integer	Minimum value: 0 0 Maximum value: 4294967295	0
options-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
prack-rate	PRACK request rate limit (per second, per policy).	integer	Minimum value: 0 0 Maximum value: 4294967295	0
prack-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
preserve-override	Override i line to preserve original IPs (default: append).	option	-	disable
	Option	Description		
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		

Parameter	Description	Type	Size	Default								
provisional-invite-expiry-time	Expiry time (10-3600, in seconds) for provisional INVITE.	integer	Minimum value: 10 Maximum value: 3600	210								
publish-rate	PUBLISH request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
publish-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>				Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.
	Option	Description										
	<i>none</i>	None.										
	<i>src-ip</i>	Source IP.										
<i>dest-ip</i>	Destination IP.											
refer-rate	REFER request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
refer-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>				Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.
	Option	Description										
	<i>none</i>	None.										
	<i>src-ip</i>	Source IP.										
<i>dest-ip</i>	Destination IP.											
register-contact-trace	Enable/disable trace original IP/port within the contact header of REGISTER requests.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>				Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.		
	Option	Description										
	<i>disable</i>	Disable status.										
<i>enable</i>	Enable status.											
register-rate	REGISTER request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
register-rate-track	Track the packet protocol field.	option	-	none								

Parameter	Description	Type	Size	Default
	Option Description			
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.		
rfc2543-branch	Enable/disable support via branch compliant with RFC 2543.	option	-	disable
	Option Description			
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
rtp	Enable/disable create pinholes for RTP traffic to traverse firewall.	option	-	enable
	Option Description			
	<i>disable</i>	Disable status.		
	<i>enable</i>	Enable status.		
ssl-algorithm	Relative strength of encryption algorithms accepted in negotiation.	option	-	high
	Option Description			
	<i>high</i>	High encryption. Allow only AES and ChaCha.		
	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.		
	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.		
ssl-auth-client	Require a client certificate and authenticate it with the peer/peergrp.	string	Maximum length: 35	
ssl-auth-server	Authenticate the server's certificate with the peer/peergrp.	string	Maximum length: 35	
ssl-client-certificate	Name of Certificate to offer to server if requested.	string	Maximum length: 35	
ssl-client-renegotiation	Allow/block client renegotiation by server.	option	-	allow
	Option Description			
	<i>allow</i>	Allow a SSL client to renegotiate.		
	<i>deny</i>	Abort any SSL connection that attempts to renegotiate.		

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>secure</i></td><td>Reject any SSL connection that does not offer a RFC 5746 Secure Renegotiation Indication.</td></tr></table>	Option	Description	<i>secure</i>	Reject any SSL connection that does not offer a RFC 5746 Secure Renegotiation Indication.											
	Option	Description														
<i>secure</i>	Reject any SSL connection that does not offer a RFC 5746 Secure Renegotiation Indication.															
ssl-max-version	Highest SSL/TLS version to negotiate.	option	-	tls-1.3												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ssl-3.0</i></td><td>SSL 3.0.</td></tr><tr><td><i>tls-1.0</i></td><td>TLS 1.0.</td></tr><tr><td><i>tls-1.1</i></td><td>TLS 1.1.</td></tr><tr><td><i>tls-1.2</i></td><td>TLS 1.2.</td></tr><tr><td><i>tls-1.3</i></td><td>TLS 1.3.</td></tr></table>	Option	Description	<i>ssl-3.0</i>	SSL 3.0.	<i>tls-1.0</i>	TLS 1.0.	<i>tls-1.1</i>	TLS 1.1.	<i>tls-1.2</i>	TLS 1.2.	<i>tls-1.3</i>	TLS 1.3.			
	Option	Description														
	<i>ssl-3.0</i>	SSL 3.0.														
	<i>tls-1.0</i>	TLS 1.0.														
	<i>tls-1.1</i>	TLS 1.1.														
	<i>tls-1.2</i>	TLS 1.2.														
<i>tls-1.3</i>	TLS 1.3.															
ssl-min-version	Lowest SSL/TLS version to negotiate.	option	-	tls-1.1												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ssl-3.0</i></td><td>SSL 3.0.</td></tr><tr><td><i>tls-1.0</i></td><td>TLS 1.0.</td></tr><tr><td><i>tls-1.1</i></td><td>TLS 1.1.</td></tr><tr><td><i>tls-1.2</i></td><td>TLS 1.2.</td></tr><tr><td><i>tls-1.3</i></td><td>TLS 1.3.</td></tr></table>	Option	Description	<i>ssl-3.0</i>	SSL 3.0.	<i>tls-1.0</i>	TLS 1.0.	<i>tls-1.1</i>	TLS 1.1.	<i>tls-1.2</i>	TLS 1.2.	<i>tls-1.3</i>	TLS 1.3.			
	Option	Description														
	<i>ssl-3.0</i>	SSL 3.0.														
	<i>tls-1.0</i>	TLS 1.0.														
	<i>tls-1.1</i>	TLS 1.1.														
	<i>tls-1.2</i>	TLS 1.2.														
<i>tls-1.3</i>	TLS 1.3.															
ssl-mode	SSL/TLS mode for encryption & decryption of traffic.	option	-	off												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>off</i></td><td>No SSL.</td></tr><tr><td><i>full</i></td><td>Client to FortiGate and FortiGate to Server SSL.</td></tr></table>	Option	Description	<i>off</i>	No SSL.	<i>full</i>	Client to FortiGate and FortiGate to Server SSL.									
	Option	Description														
	<i>off</i>	No SSL.														
<i>full</i>	Client to FortiGate and FortiGate to Server SSL.															
ssl-pfs	SSL Perfect Forward Secrecy.	option	-	allow												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>require</i></td><td>PFS mandatory.</td></tr><tr><td><i>deny</i></td><td>PFS rejected.</td></tr><tr><td><i>allow</i></td><td>PFS allowed.</td></tr></table>	Option	Description	<i>require</i>	PFS mandatory.	<i>deny</i>	PFS rejected.	<i>allow</i>	PFS allowed.							
	Option	Description														
	<i>require</i>	PFS mandatory.														
	<i>deny</i>	PFS rejected.														
<i>allow</i>	PFS allowed.															

Parameter	Description	Type	Size	Default								
ssl-send-empty-frags	Send empty fragments to avoid attack on CBC IV (SSL 3.0 & TLS 1.0 only).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Send empty fragments.</td></tr><tr><td><i>disable</i></td><td>Do not send empty fragments.</td></tr></table>	Option	Description	<i>enable</i>	Send empty fragments.	<i>disable</i>	Do not send empty fragments.					
Option	Description											
<i>enable</i>	Send empty fragments.											
<i>disable</i>	Do not send empty fragments.											
ssl-server-certificate	Name of Certificate return to the client in every SSL connection.	string	Maximum length: 35									
status	Enable/disable SIP.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
strict-register	Enable/disable only allow the registrar to connect.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable status.</td></tr><tr><td><i>enable</i></td><td>Enable status.</td></tr></table>	Option	Description	<i>disable</i>	Disable status.	<i>enable</i>	Enable status.					
Option	Description											
<i>disable</i>	Disable status.											
<i>enable</i>	Enable status.											
subscribe-rate	SUBSCRIBE request rate limit (per second, per policy).	integer	Minimum value: 0 Maximum value: 4294967295	0								
subscribe-rate-track	Track the packet protocol field.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>src-ip</i></td><td>Source IP.</td></tr><tr><td><i>dest-ip</i></td><td>Destination IP.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>src-ip</i>	Source IP.	<i>dest-ip</i>	Destination IP.			
Option	Description											
<i>none</i>	None.											
<i>src-ip</i>	Source IP.											
<i>dest-ip</i>	Destination IP.											
unknown-header	Action for unknown SIP header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>discard</i></td><td>Discard malformed messages.</td></tr></table>	Option	Description	<i>discard</i>	Discard malformed messages.							
Option	Description											
<i>discard</i>	Discard malformed messages.											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>pass</i>	Bypass malformed messages.		
	<i>respond</i>	Respond with error code.		
update-rate	UPDATE request rate limit (per second, per policy).	integer	Minimum value: 0 0 Maximum value: 4294967295	0
update-rate-track	Track the packet protocol field.	option	-	none
	Option	Description		
	<i>none</i>	None.		
	<i>src-ip</i>	Source IP.		
	<i>dest-ip</i>	Destination IP.

config vpn certificate ca

CA certificate.

```
config vpn certificate ca
  Description: CA certificate.
  edit <name>
    set auto-update-days {integer}
    set auto-update-days-warning {integer}
    set ca {user}
    set ca-identifier {string}
```

```

set est-url {string}
set fabric-ca [disable|enable]
set obsolete [disable|enable]
set range [global|vdom]
set scep-url {string}
set source [factory|user|...]
set source-ip {ipv4-address}
set ssl-inspection-trusted [enable|disable]
next
end

```

config vpn certificate ca

Parameter	Description	Type	Size	Default
auto-update-days	Number of days to wait before requesting an updated CA certificate (0 - 4294967295, 0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0
auto-update-days-warning	Number of days before an expiry-warning message is generated (0 - 4294967295, 0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0
ca	CA certificate as a PEM file.	user	Not Specified	
ca-identifier	CA identifier of the SCEP server.	string	Maximum length: 255	
est-url	URL of the EST server.	string	Maximum length: 255	
fabric-ca	Enable/disable synchronization of CA across Security Fabric.	option	-	disable
	Option		Description	
	<i>disable</i>		Disable synchronization of CA across Security Fabric.	
	<i>enable</i>		Enable synchronization of CA across Security Fabric.	
name	Name.	string	Maximum length: 79	
obsolete	Enable/disable this CA as obsoleted.	option	-	disable
	Option		Description	
	<i>disable</i>		Alive.	
	<i>enable</i>		Obsolete.	

Parameter	Description	Type	Size	Default
range	Either global or VDOM IP address range for the CA certificate.	option	-	vdom
	Option	Description		
	<i>global</i>	Global range.		
	<i>vdom</i>	VDOM IP address range.		
scep-url	URL of the SCEP server.	string	Maximum length: 255	
source	CA certificate source type.	option	-	user
	Option	Description		
	<i>factory</i>	Factory installed certificate.		
	<i>user</i>	User generated certificate.		
	<i>bundle</i>	Bundle file certificate.		
source-ip	Source IP address for communications to the SCEP server.	ipv4-address	Not Specified	0.0.0.0
ssl-inspection-trusted	Enable/disable this CA as a trusted CA for SSL inspection.	option	-	enable
	Option	Description		
	<i>enable</i>	Trusted CA for SSL inspection.		
	<i>disable</i>	Untrusted CA for SSL inspection.		

config vpn certificate crl

Certificate Revocation List as a PEM file.

```

config vpn certificate crl
  Description: Certificate Revocation List as a PEM file.
  edit <name>
    set crl {user}
    set http-url {string}
    set ldap-password {password}
    set ldap-server {string}
    set ldap-username {string}
    set range [global|vdom]
    set scep-cert {string}
    set scep-url {string}
    set source [factory|user|...]

```

```

    set source-ip {ipv4-address}
    set update-interval {integer}
    set update-vdom {string}
next
end

```

config vpn certificate crl

Parameter	Description	Type	Size	Default								
crl	Certificate Revocation List as a PEM file.	user	Not Specified									
http-url	HTTP server URL for CRL auto-update.	string	Maximum length: 255									
ldap-password	LDAP server user password.	password	Not Specified									
ldap-server	LDAP server name for CRL auto-update.	string	Maximum length: 35									
ldap-username	LDAP server user name.	string	Maximum length: 63									
name	Name.	string	Maximum length: 35									
range	Either global or VDOM IP address range for the certificate.	option	-	vdom								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>global</i></td><td>Global range.</td></tr><tr><td><i>vdom</i></td><td>VDOM IP address range.</td></tr></table>				Option	Description	<i>global</i>	Global range.	<i>vdom</i>	VDOM IP address range.		
Option	Description											
<i>global</i>	Global range.											
<i>vdom</i>	VDOM IP address range.											
scep-cert	Local certificate for SCEP communication for CRL auto-update.	string	Maximum length: 35	Fortinet_CA_SSL								
scep-url	SCEP server URL for CRL auto-update.	string	Maximum length: 255									
source	Certificate source type.	option	-	user								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>factory</i></td><td>Factory installed certificate.</td></tr><tr><td><i>user</i></td><td>User generated certificate.</td></tr><tr><td><i>bundle</i></td><td>Bundle file certificate.</td></tr></table>				Option	Description	<i>factory</i>	Factory installed certificate.	<i>user</i>	User generated certificate.	<i>bundle</i>	Bundle file certificate.
Option	Description											
<i>factory</i>	Factory installed certificate.											
<i>user</i>	User generated certificate.											
<i>bundle</i>	Bundle file certificate.											
source-ip	Source IP address for communications to a HTTP or SCEP CA server.	ipv4-address	Not Specified	0.0.0.0								

Parameter	Description	Type	Size	Default
update-interval	Time in seconds before the FortiGate checks for an updated CRL. Set to 0 to update only when it expires.	integer	Minimum value: 0 Maximum value: 4294967295	0
update-vdom	VDOM for CRL update.	string	Maximum length: 31	root

config vpn certificate hsm-local

Local certificates whose keys are stored on HSM.

```

config vpn certificate hsm-local
    Description: Local certificates whose keys are stored on HSM.
    edit <name>
        set api-version [unknown|gch-default]
        set certificate {user}
        set comments {string}
        set gch-cloud-service-name {string}

config vpn certificate local

Parameter	Description	Type	Size	Default
acme-ca-url	The URL for the ACME CA server (Let's Encrypt is the default provider).	string	Maximum length: 255	https://acme-v02.api.letsencrypt.org/directory
acme-domain	A valid domain that resolves to this FortiGate unit.	string	Maximum length: 255	
acme-eab-key-hmac	External Account Binding HMAC Key (URL-encoded base64).	password	Not Specified	
acme-eab-key-id	External Account Binding Key ID (optional setting).	var-string	Maximum length: 255	
acme-email	Contact email address that is required by some CAs like LetsEncrypt.	string	Maximum length: 255	
acme-renew-window	Beginning of the renewal window (in days before certificate expiration, 30 by default).	integer	Minimum value: 1 Maximum value: 100	30
acme-rsa-key-size	Length of the RSA private key of the generated cert (Minimum 2048 bits).	integer	Minimum value: 2048 Maximum value: 4096	2048
auto-regenerate-days	Number of days to wait before expiry of an updated local certificate is requested (0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default												
auto-regenerate-days-warning	Number of days to wait before an expiry warning message is generated (0 = disabled).	integer	Minimum value: 0 Maximum value: 4294967295	0												
ca-identifier	CA identifier of the CA server for signing via SCEP.	string	Maximum length: 255													
certificate	PEM format certificate.	user	Not Specified													
cmp-path	Path location inside CMP server.	string	Maximum length: 255													
cmp-regeneration-method	CMP auto-regeneration method.	option	-	keyupate												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>keyupate</td><td>Key Update.</td></tr><tr><td>renewal</td><td>Renewal.</td></tr></table>				Option	Description	keyupate	Key Update.	renewal	Renewal.						
Option	Description															
keyupate	Key Update.															
renewal	Renewal.															
cmp-server	Address and port for CMP server (format = address:port).	string	Maximum length: 63													
cmp-server-cert	CMP server certificate.	string	Maximum length: 79													
comments	Comment.	string	Maximum length: 511													
csr	Certificate Signing Request.	user	Not Specified													
enroll-protocol	Certificate enrollment protocol.	option	-	none												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>None (default).</td></tr><tr><td>scep</td><td>Simple Certificate Enrollment Protocol.</td></tr><tr><td>cmpv2</td><td>Certificate Management Protocol Version 2.</td></tr><tr><td>acme2</td><td>Automated Certificate Management Environment Version 2.</td></tr><tr><td>est</td><td>Enrollment over Secure Transport.</td></tr></table>				Option	Description	none	None (default).	scep	Simple Certificate Enrollment Protocol.	cmpv2	Certificate Management Protocol Version 2.	acme2	Automated Certificate Management Environment Version 2.	est	Enrollment over Secure Transport.
Option	Description															
none	None (default).															
scep	Simple Certificate Enrollment Protocol.															
cmpv2	Certificate Management Protocol Version 2.															
acme2	Automated Certificate Management Environment Version 2.															
est	Enrollment over Secure Transport.															
est-ca-id	CA identifier of the CA server for signing via EST.	string	Maximum length: 255													

Parameter	Description	Type	Size	Default						
est-client-cert	Certificate used to authenticate this FortiGate to EST server.	string	Maximum length: 79							
est-http-password	HTTP Authentication password for signing via EST.	password	Not Specified							
est-http-username	HTTP Authentication username for signing via EST.	string	Maximum length: 63							
est-regeneration-method	EST behavioral options during re-enrollment.	option	-	create-new-key						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>create-new-key</td><td>Create new private key during re-enrollment.</td></tr><tr><td>use-existing-key</td><td>Reuse existing private key during re-enrollment.</td></tr></table>				Option	Description	create-new-key	Create new private key during re-enrollment.	use-existing-key	Reuse existing private key during re-enrollment.
Option	Description									
create-new-key	Create new private key during re-enrollment.									
use-existing-key	Reuse existing private key during re-enrollment.									
est-server	Address and port for EST server (e.g. https://example.com:1234).	string	Maximum length: 255							
est-server-cert	EST server's certificate must be verifiable by this certificate to be authenticated.	string	Maximum length: 79							
est-srp-password	EST SRP authentication password.	password	Not Specified							
est-srp-username	EST SRP authentication username.	string	Maximum length: 63							
ike-localid	Local ID the FortiGate uses for authentication as a VPN client.	string	Maximum length: 63							
ike-localid-type	IKE local ID type.	option	-	asn1dn						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>asn1dn</td><td>ASN.1 distinguished name.</td></tr><tr><td>fqdn</td><td>Fully qualified domain name.</td></tr></table>				Option	Description	asn1dn	ASN.1 distinguished name.	fqdn	Fully qualified domain name.
Option	Description									
asn1dn	ASN.1 distinguished name.									
fqdn	Fully qualified domain name.									

Parameter	Description	Type	Size	Default								
name	Name.	string	Maximum length: 35									
name-encoding	Name encoding method for auto-regeneration.	option	-	printable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>printable</i></td><td>Printable encoding (default).</td></tr><tr><td><i>utf8</i></td><td>UTF-8 encoding.</td></tr></table>	Option	Description	<i>printable</i>	Printable encoding (default).	<i>utf8</i>	UTF-8 encoding.					
Option	Description											
<i>printable</i>	Printable encoding (default).											
<i>utf8</i>	UTF-8 encoding.											
password	Password as a PEM file.	password	Not Specified									
private-key	PEM format key encrypted with a password.	user	Not Specified									
private-key-retain	Enable/disable retention of private key during SCEP renewal (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Keep the existing private key during SCEP renewal.</td></tr><tr><td><i>disable</i></td><td>Generate a new private key during SCEP renewal.</td></tr></table>	Option	Description	<i>enable</i>	Keep the existing private key during SCEP renewal.	<i>disable</i>	Generate a new private key during SCEP renewal.					
Option	Description											
<i>enable</i>	Keep the existing private key during SCEP renewal.											
<i>disable</i>	Generate a new private key during SCEP renewal.											
range	Either a global or VDOM IP address range for the certificate.	option	-	vdom								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>global</i></td><td>Global range.</td></tr><tr><td><i>vdom</i></td><td>VDOM IP address range.</td></tr></table>	Option	Description	<i>global</i>	Global range.	<i>vdom</i>	VDOM IP address range.					
Option	Description											
<i>global</i>	Global range.											
<i>vdom</i>	VDOM IP address range.											
scep-password	SCEP server challenge password for auto-regeneration.	password	Not Specified									
scep-url	SCEP server URL.	string	Maximum length: 255									
source	Certificate source type.	option	-	user								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>factory</i></td><td>Factory installed certificate.</td></tr><tr><td><i>user</i></td><td>User generated certificate.</td></tr><tr><td><i>bundle</i></td><td>Bundle file certificate.</td></tr></table>	Option	Description	<i>factory</i>	Factory installed certificate.	<i>user</i>	User generated certificate.	<i>bundle</i>	Bundle file certificate.			
Option	Description											
<i>factory</i>	Factory installed certificate.											
<i>user</i>	User generated certificate.											
<i>bundle</i>	Bundle file certificate.											

Parameter	Description	Type	Size	Default
source-ip	Source IP address for communications to the SCEP server.	ipv4-address	Not Specified	0.0.0.0
state	Certificate Signing Request State. Read-only.	user	Not Specified	

config vpn certificate ocsf-server

OCSP server configuration.

```

config vpn certificate ocsf-server
  Description: OCSP server configuration.
  edit <name>
    set cert {string}
    set secondary-cert {string}
    set secondary-url {string}
    set source-ip {string}
    set unavail-action [revoke|ignore]
    set url {string}
  next
end

```

config vpn certificate ocsf-server

Parameter	Description	Type	Size	Default
cert	OCSP server certificate.	string	Maximum length: 127	
name	OCSP server entry name.	string	Maximum length: 35	
secondary-cert	Secondary OCSP server certificate.	string	Maximum length: 127	
secondary-url	Secondary OCSP server URL.	string	Maximum length: 127	
source-ip	Source IP address for dynamic AIA and OCSP queries.	string	Maximum length: 63	
unavail-action	Action when server is unavailable (revoke the certificate or ignore the result of the check).	option	-	revoke

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>revoke</i>	Revoke certificate if server is unavailable.		
	<i>ignore</i>	Ignore OCSP check if server is unavailable.		
url	OCSP server URL.	string	Maximum length: 127	

config vpn certificate remote

Remote certificate as a PEM file.

```
config vpn certificate remote
  Description: Remote certificate as a PEM file.
  edit <name>
    set range [global|vdom]
    set remote {user}
    set source [factory|user|...]
  next
end
```

config vpn certificate remote

Parameter	Description	Type	Size	Default
name	Name.	string	Maximum length: 35	
range	Either the global or VDOM IP address range for the remote certificate.	option	-	vdom
	Option	Description		
	<i>global</i>	Global range.		
	<i>vdom</i>	VDOM IP address range.		
remote	Remote certificate.	user	Not Specified	
source	Remote certificate source type.	option	-	user
	Option	Description		
	<i>factory</i>	Factory installed certificate.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>user</i>	User generated certificate.		
	<i>bundle</i>	Bundle file certificate.		

config vpn certificate setting

VPN certificate setting.

```

```

```

set subject-set [subset|superset]
set vrf-select {integer}
end

```

config vpn certificate setting

Parameter	Description	Type	Size	Default
cert-expire-warning	Number of days before a certificate expires to send a warning. Set to 0 to disable sending of the warning (0 - 100, default = 14).	integer	Minimum value: 0 Maximum value: 100	14
certname-dsa1024	1024 bit DSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_DSA1024
certname-dsa2048	2048 bit DSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_DSA2048
certname-ecdsa256	256 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA256
certname-ecdsa384	384 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA384
certname-ecdsa521	521 bit ECDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ECDSA521
certname-ed25519	253 bit EdDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ED25519
certname-ed448	456 bit EdDSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_ED448
certname-rsa1024	1024 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA1024
certname-rsa2048	2048 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA2048
certname-rsa4096	4096 bit RSA key certificate for re-signing server certificates for SSL inspection.	string	Maximum length: 35	Fortinet_SSL_RSA4096

Parameter	Description	Type	Size	Default						
check-ca-cert	Enable/disable verification of the user certificate and pass authentication if any CA in the chain is trusted (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of the user certificate.</td></tr><tr><td><i>disable</i></td><td>Disable verification of the user certificate.</td></tr></table>	Option	Description	<i>enable</i>	Enable verification of the user certificate.	<i>disable</i>	Disable verification of the user certificate.			
Option	Description									
<i>enable</i>	Enable verification of the user certificate.									
<i>disable</i>	Disable verification of the user certificate.									
check-ca-chain	Enable/disable verification of the entire certificate chain and pass authentication only if the chain is complete and all of the CAs in the chain are trusted (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable verification of the entire certificate chain.</td></tr><tr><td><i>disable</i></td><td>Disable verification of the entire certificate chain.</td></tr></table>	Option	Description	<i>enable</i>	Enable verification of the entire certificate chain.	<i>disable</i>	Disable verification of the entire certificate chain.			
Option	Description									
<i>enable</i>	Enable verification of the entire certificate chain.									
<i>disable</i>	Disable verification of the entire certificate chain.									
cmp-key-usage-checking	Enable/disable server certificate key usage checking in CMP mode (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable server certificate key usage checking in CMP mode.</td></tr><tr><td><i>disable</i></td><td>Disable server certificate key usage checking in CMP mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable server certificate key usage checking in CMP mode.	<i>disable</i>	Disable server certificate key usage checking in CMP mode.			
Option	Description									
<i>enable</i>	Enable server certificate key usage checking in CMP mode.									
<i>disable</i>	Disable server certificate key usage checking in CMP mode.									
cmp-save-extra-certs	Enable/disable saving extra certificates in CMP mode (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable saving extra certificates in CMP mode.</td></tr><tr><td><i>disable</i></td><td>Disable saving extra certificates in CMP mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable saving extra certificates in CMP mode.	<i>disable</i>	Disable saving extra certificates in CMP mode.			
Option	Description									
<i>enable</i>	Enable saving extra certificates in CMP mode.									
<i>disable</i>	Disable saving extra certificates in CMP mode.									
cn-allow-multi	When searching for a matching certificate, allow multiple CN fields in certificate subject name (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Does not allow multiple CN entries in certificate matching.</td></tr><tr><td><i>enable</i></td><td>Allow multiple CN entries in certificate matching.</td></tr></table>	Option	Description	<i>disable</i>	Does not allow multiple CN entries in certificate matching.	<i>enable</i>	Allow multiple CN entries in certificate matching.			
Option	Description									
<i>disable</i>	Does not allow multiple CN entries in certificate matching.									
<i>enable</i>	Allow multiple CN entries in certificate matching.									

Parameter	Description	Type	Size	Default								
cn-match	When searching for a matching certificate, control how to do CN value matching with certificate subject name (default = substring).	option	-	substring								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>substring</td><td>Find a match if the name being searched for is a part or the same as a certificate CN.</td></tr><tr><td>value</td><td>Find a match if the name being searched for is same as a certificate CN.</td></tr></table>	Option	Description	substring	Find a match if the name being searched for is a part or the same as a certificate CN.	value	Find a match if the name being searched for is same as a certificate CN.					
Option	Description											
substring	Find a match if the name being searched for is a part or the same as a certificate CN.											
value	Find a match if the name being searched for is same as a certificate CN.											
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Set outgoing interface automatically.</td></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	auto	Set outgoing interface automatically.	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.			
Option	Description											
auto	Set outgoing interface automatically.											
sdwan	Set outgoing interface by SD-WAN or policy routing rules.											
specify	Set outgoing interface manually.											
ocsp-default-server	Default OCSP server.	string	Maximum length: 35									
ocsp-option	Specify whether the OCSP URL is from certificate or configured OCSP server.	option	-	server								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>certificate</td><td>Use URL from certificate.</td></tr><tr><td>server</td><td>Use URL from configured OCSP server.</td></tr></table>	Option	Description	certificate	Use URL from certificate.	server	Use URL from configured OCSP server.					
Option	Description											
certificate	Use URL from certificate.											
server	Use URL from configured OCSP server.											
ocsp-status	Enable/disable receiving certificates using the OCSP.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>OCSP is performed if CRL is not checked.</td></tr><tr><td>mandatory</td><td>If cert is not revoked by CRL, OCSP is performed.</td></tr><tr><td>disable</td><td>OCSP is not performed.</td></tr></table>	Option	Description	enable	OCSP is performed if CRL is not checked.	mandatory	If cert is not revoked by CRL, OCSP is performed.	disable	OCSP is not performed.			
Option	Description											
enable	OCSP is performed if CRL is not checked.											
mandatory	If cert is not revoked by CRL, OCSP is performed.											
disable	OCSP is not performed.											
proxy	Proxy server FQDN or IP for OCSP/CA queries during certificate verification.	string	Maximum length: 127									

Parameter	Description	Type	Size	Default														
proxy-password	Proxy server password.	password	Not Specified															
proxy-port	Proxy server port (1 - 65535, default = 8080).	integer	Minimum value: 1 Maximum value: 65535	8080														
proxy-username	Proxy server user name.	string	Maximum length: 63															
source-ip	Source IP address for dynamic AIA and OCSP queries.	string	Maximum length: 63															
ssl-min-proto-version	Minimum supported protocol version for SSL/TLS connections (default is to follow system global setting).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Follow system global setting.</td></tr><tr><td>SSLv3</td><td>SSLv3.</td></tr><tr><td>TLSv1</td><td>TLSv1.</td></tr><tr><td>TLSv1-1</td><td>TLSv1.1.</td></tr><tr><td>TLSv1-2</td><td>TLSv1.2.</td></tr><tr><td>TLSv1-3</td><td>TLSv1.3.</td></tr></table>				Option	Description	default	Follow system global setting.	SSLv3	SSLv3.	TLSv1	TLSv1.	TLSv1-1	TLSv1.1.	TLSv1-2	TLSv1.2.	TLSv1-3	TLSv1.3.
Option	Description																	
default	Follow system global setting.																	
SSLv3	SSLv3.																	
TLSv1	TLSv1.																	
TLSv1-1	TLSv1.1.																	
TLSv1-2	TLSv1.2.																	
TLSv1-3	TLSv1.3.																	
strict-ocsp-check	Enable/disable strict mode OCSP checking.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable strict mode OCSP checking.</td></tr><tr><td>disable</td><td>Disable strict mode OCSP checking.</td></tr></table>				Option	Description	enable	Enable strict mode OCSP checking.	disable	Disable strict mode OCSP checking.								
Option	Description																	
enable	Enable strict mode OCSP checking.																	
disable	Disable strict mode OCSP checking.																	
subject-match	When searching for a matching certificate, control how to do RDN value matching with certificate subject name (default = substring).	option	-	substring														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>substring</td><td>Find a match if the name being searched for is a part or the same as a certificate subject RDN.</td></tr><tr><td>value</td><td>Find a match if the name being searched for is same as a certificate subject RDN.</td></tr></table>				Option	Description	substring	Find a match if the name being searched for is a part or the same as a certificate subject RDN.	value	Find a match if the name being searched for is same as a certificate subject RDN.								
Option	Description																	
substring	Find a match if the name being searched for is a part or the same as a certificate subject RDN.																	
value	Find a match if the name being searched for is same as a certificate subject RDN.																	

Parameter	Description	Type	Size	Default						
subject-set	When searching for a matching certificate, control how to do RDN set matching with certificate subject name (default = subset).	option	-	subset						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>subset</i></td><td>Find a match if the name being searched for is a subset of a certificate subject.</td></tr><tr><td><i>superset</i></td><td>Find a match if the name being searched for is a superset of a certificate subject.</td></tr></table>				Option	Description	<i>subset</i>	Find a match if the name being searched for is a subset of a certificate subject.	<i>superset</i>	Find a match if the name being searched for is a superset of a certificate subject.
Option	Description									
<i>subset</i>	Find a match if the name being searched for is a subset of a certificate subject.									
<i>superset</i>	Find a match if the name being searched for is a superset of a certificate subject.									
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	0						

config crt-verification

Parameter	Description	Type	Size	Default						
chain-crl-absence	CRL verification option when CRL of any certificate in chain is absent (default = ignore).	option	-	ignore						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ignore</td><td>CRL verification is ignored if CRL of any certificate in chain is absent.</td></tr><tr><td>revoke</td><td>Certificate will be revoked if CRL of any certificate in chain is absent.</td></tr></table>	Option	Description	ignore	CRL verification is ignored if CRL of any certificate in chain is absent.	revoke	Certificate will be revoked if CRL of any certificate in chain is absent.			
Option	Description									
ignore	CRL verification is ignored if CRL of any certificate in chain is absent.									
revoke	Certificate will be revoked if CRL of any certificate in chain is absent.									
expiry	CRL verification option when CRL is expired (default = ignore).	option	-	ignore						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ignore</td><td>Certificate status will be verified even if CRL is expired.</td></tr><tr><td>revoke</td><td>Certificate will be revoked if CRL is expired.</td></tr></table>	Option	Description	ignore	Certificate status will be verified even if CRL is expired.	revoke	Certificate will be revoked if CRL is expired.			
Option	Description									
ignore	Certificate status will be verified even if CRL is expired.									
revoke	Certificate will be revoked if CRL is expired.									
leaf-crl-absence	CRL verification option when leaf CRL is absent (default = ignore).	option	-	ignore						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ignore</td><td>CRL verification against leaf certificate is ignored if CRL is absent.</td></tr><tr><td>revoke</td><td>Certificate will be revoked if CRL of leaf certificate is absent.</td></tr></table>	Option	Description	ignore	CRL verification against leaf certificate is ignored if CRL is absent.	revoke	Certificate will be revoked if CRL of leaf certificate is absent.			
Option	Description									
ignore	CRL verification against leaf certificate is ignored if CRL is absent.									
revoke	Certificate will be revoked if CRL of leaf certificate is absent.									

config vpn ipsec concentrator

Concentrator configuration.

```
config vpn ipsec concentrator
  Description: Concentrator configuration.
  edit <id>
    set member <name1>, <name2>, ...
    set name {string}
    set src-check [disable|enable]
  next
end
```

config vpn ipsec concentrator

Parameter	Description	Type	Size	Default
id	Concentrator ID (1 - 65535).	integer	Minimum value: 1 Maximum value: 65535	0
member <name>	Names of up to 3 VPN tunnels to add to the concentrator. Member name.	string	Maximum length: 79	
name	Concentrator name.	string	Maximum length: 35	
src-check	Enable to check source address of phase 2 selector. Disable to check only the destination selector.	option	-	disable
		Option	Description	
		<i>disable</i>	Ignore source selector when choosing tunnel.	
		<i>enable</i>	Use source selector to choose tunnel.	

config vpn ipsec fec

Configure Forward Error Correction (FEC) mapping profiles.

```
config vpn ipsec fec
  Description: Configure Forward Error Correction (FEC) mapping profiles.
  edit <name>
    config mappings
```

```

Description: FEC redundancy mapping table.
edit <seqno>
    set bandwidth-bi-threshold {integer}
    set bandwidth-down-threshold {integer}
    set bandwidth-up-threshold {integer}
    set base {integer}
    set latency-threshold {integer}
    set packet-loss-threshold {integer}
    set redundant {integer}
next
end
next
end

```

config vpn ipsec fec

Parameter	Description	Type	Size	Default
name	Profile name.	string	Maximum length: 35	

config mappings

Parameter	Description	Type	Size	Default
bandwidth-bi-threshold	Apply FEC parameters when available bi-bandwidth is $\geq$ threshold (kbps, 0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0
bandwidth-down-threshold	Apply FEC parameters when available down bandwidth is $\geq$ threshold (kbps, 0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0
bandwidth-up-threshold	Apply FEC parameters when available up bandwidth is $\geq$ threshold (kbps, 0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0
base	Number of base FEC packets (1 - 20).	integer	Minimum value: 1 Maximum value: 20	0
latency-threshold	Apply FEC parameters when latency is $\leq$ threshold (0 means no threshold).	integer	Minimum value: 0 Maximum value: 4294967295	0

Parameter	Description	Type	Size	Default
packet-loss-threshold	Apply FEC parameters when packet loss is >= threshold (0 - 100, 0 means no threshold).	integer	Minimum value: 0 Maximum value: 100	0
redundant	Number of redundant FEC packets (1 - 5).	integer	Minimum value: 1 Maximum value: 5	0
seqno	Sequence number (1 - 64).	integer	Minimum value: 0 Maximum value: 64	0

config vpn ipsec manualkey

Configure IPsec manual keys.

```

config vpn ipsec manualkey
  Description: Configure IPsec manual keys.
  edit <name>
    set authentication [null|md5|...]
    set authkey {user}
    set enckey {user}
    set encryption [null|des|...]
    set interface {string}

Parameter	Description	Type	Size	Default
acct-verify	Enable/disable verification of RADIUS accounting record.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable verification of RADIUS accounting record.		
	<i>disable</i>	Disable verification of RADIUS accounting record.		
add-gw-route	Enable/disable automatically add a route to the remote gateway.	option	-	disable
	Option	Description		
	<i>enable</i>	Automatically add a route to the remote gateway.		
	<i>disable</i>	Do not automatically add a route to the remote gateway.		
add-route	Enable/disable control addition of a route to peer destination selector.	option	-	disable
	Option	Description		
	<i>disable</i>	Do not add a route to destination of peer selector.		
	<i>enable</i>	Add route to destination of peer selector.		
addke1	ADDKE1 group.	option	-

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>psk</i></td><td>PSK authentication method.</td></tr><tr><td><i>signature</i></td><td>Signature authentication method.</td></tr></table>	Option	Description	<i>psk</i>	PSK authentication method.	<i>signature</i>	Signature authentication method.			
Option	Description									
<i>psk</i>	PSK authentication method.									
<i>signature</i>	Signature authentication method.									
authpasswd	XAuth password (max 35 characters).	password	Not Specified							
authusr	XAuth user name.	string	Maximum length: 64							
authusrgrp	Authentication user group.	string	Maximum length: 35							
auto-negotiate	Enable/disable automatic initiation of IKE SA negotiation.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic initiation of IKE SA negotiation.</td></tr><tr><td><i>disable</i></td><td>Disable automatic initiation of IKE SA negotiation.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic initiation of IKE SA negotiation.	<i>disable</i>	Disable automatic initiation of IKE SA negotiation.			
Option	Description									
<i>enable</i>	Enable automatic initiation of IKE SA negotiation.									
<i>disable</i>	Disable automatic initiation of IKE SA negotiation.									
auto-transport-threshold	Timeout in seconds before falling back to next transport protocol.	integer	Minimum value: 1 Maximum value: 300	15						
azure-ad-autoconnect	Enable/disable Azure AD Auto-Connect for FortiClient.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Azure AD Auto-Connect for FortiClient.</td></tr><tr><td><i>disable</i></td><td>Disable Azure AD Auto-Connect for FortiClient.</td></tr></table>	Option	Description	<i>enable</i>	Enable Azure AD Auto-Connect for FortiClient.	<i>disable</i>	Disable Azure AD Auto-Connect for FortiClient.			
Option	Description									
<i>enable</i>	Enable Azure AD Auto-Connect for FortiClient.									
<i>disable</i>	Disable Azure AD Auto-Connect for FortiClient.									
backup-gateway <address>	Instruct unity clients about the backup gateway address(es). Address of backup gateway.	string	Maximum length: 79							
banner	Message that unity client should display after connecting.	var-string	Maximum length: 1024							
cert-id-validation	Enable/disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.	option	-	enable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.		
	<i>disable</i>	Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.		
cert-peer-username-strip	Enable/disable domain stripping on certificate identity.	option	-	disable
	Option Description			
	<i>disable</i>	Disable domain stripping on certificate identity.		
	<i>enable</i>	Enable domain stripping on certificate identity.		
cert-peer-username-validation	Enable/disable cross validation of peer username and the identity in the peer's certificate.	option	-	none
	Option Description			
	<i>none</i>	Disable cross validation of peer username and the identity in the peer's certificate.		
	<i>othername</i>	Validate principal name in SAN othername.		
	<i>rfc822name</i>	Validate RFC822 email address in SAN.		
	<i>cn</i>	Validate CN in subject.		
cert-trust-store	CA certificate trust store.	option	-	local
	Option Description			
	<i>local</i>	Use local CA certificate.		
	<i>ems</i>	Use EMS CA certificate.		
certificate <name>	Names of up to 4 signed personal certificates. Certificate name.	string	Maximum length: 79	
childless-ike	Enable/disable childless IKEv2 initiation (RFC 6023).	option	-	disable
	Option Description			
	<i>enable</i>	Enable childless IKEv2 initiation (RFC 6023).		
	<i>disable</i>	Disable childless IKEv2 initiation (RFC 6023).		

Parameter	Description	Type	Size	Default						
client-auto-negotiate	Enable/disable allowing the VPN client to bring up the tunnel when there is no traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr><tr><td>enable</td><td>Enable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr></table>	Option	Description	disable	Disable allowing the VPN client to bring up the tunnel when there is no traffic.	enable	Enable allowing the VPN client to bring up the tunnel when there is no traffic.			
Option	Description									
disable	Disable allowing the VPN client to bring up the tunnel when there is no traffic.									
enable	Enable allowing the VPN client to bring up the tunnel when there is no traffic.									
client-keep-alive	Enable/disable allowing the VPN client to keep the tunnel up when there is no traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr><tr><td>enable</td><td>Enable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr></table>	Option	Description	disable	Disable allowing the VPN client to keep the tunnel up when there is no traffic.	enable	Enable allowing the VPN client to keep the tunnel up when there is no traffic.			
Option	Description									
disable	Disable allowing the VPN client to keep the tunnel up when there is no traffic.									
enable	Enable allowing the VPN client to keep the tunnel up when there is no traffic.									
client-resume	Enable/disable resumption of offline FortiClient sessions. When a FortiClient enabled laptop is closed or enters sleep/hibernate mode, enabling this feature allows FortiClient to keep the tunnel during this period, and allows users to immediately resume using the IPsec tunnel when the device wakes up.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable client session resumption.</td></tr><tr><td>disable</td><td>Disable client session resumption.</td></tr></table>	Option	Description	enable	Enable client session resumption.	disable	Disable client session resumption.			
Option	Description									
enable	Enable client session resumption.									
disable	Disable client session resumption.									
client-resume-interval	Maximum time in seconds during which a VPN client may resume using a tunnel after a client PC has entered sleep mode or temporarily lost its network connection (120 - 172800, default = 7200).	integer	Minimum value: 120 Maximum value: 172800	7200						
comments	Comment.	var-string	Maximum length: 255							

Parameter	Description	Type	Size	Default
dev-id	Device ID carried by the device ID notification.	string	Maximum length: 63	
dev-id-notification	Enable/disable device ID notification.	option	-	disable
	Option		Description	
	disable		Disable device ID notification.	
	enable		Enable device ID notification.	
dhcp-ra-giaddr	Relay agent gateway IP address to use in the giaddr field of DHCP requests.	ipv4-address	Not Specified	0.0.0.0
dhcp6-ra-linkaddr	Relay agent IPv6 link address to use in DHCP6 requests.	ipv6-address	Not Specified	::
dhgrp	DH group.	option	-	14
	Option		Description	
	1		DH Group 1.	
	2		DH Group 2.	
	5		DH Group 5.	
	14		DH Group 14.	
	15		DH Group 15.

	18		DH Group 18.	
	19		DH Group 19.	
	20		DH Group 20.	
	21		DH Group 21.	
	27		DH Group 27.	
	28		DH Group 28.	
	29		DH Group 29.	
	30		DH Group 30.	
	31		DH Group 31.	
	32		DH Group 32.	

Parameter	Description	Type	Size	Default								
digital-signature-auth	Enable/disable IKEv2 Digital Signature Authentication (RFC 7427).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IKEv2 Digital Signature Authentication (RFC 7427).</td></tr><tr><td>disable</td><td>Disable IKEv2 Digital Signature Authentication (RFC 7427).</td></tr></table>	Option	Description	enable	Enable IKEv2 Digital Signature Authentication (RFC 7427).	disable	Disable IKEv2 Digital Signature Authentication (RFC 7427).					
Option	Description											
enable	Enable IKEv2 Digital Signature Authentication (RFC 7427).											
disable	Disable IKEv2 Digital Signature Authentication (RFC 7427).											
distance	Distance for routes added by IKE (1 - 255).	integer	Minimum value: 1 Maximum value: 255	15								
dns-mode	DNS server mode.	option	-	manual								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>manual</td><td>Manually configure DNS servers.</td></tr><tr><td>auto</td><td>Use default DNS servers.</td></tr></table>	Option	Description	manual	Manually configure DNS servers.	auto	Use default DNS servers.					
Option	Description											
manual	Manually configure DNS servers.											
auto	Use default DNS servers.											
domain	Instruct unity clients about the single default DNS domain.	string	Maximum length: 63									
dpd	Dead Peer Detection mode.	option	-	on-demand								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable Dead Peer Detection.</td></tr><tr><td>on-idle</td><td>Trigger Dead Peer Detection when IPsec is idle.</td></tr><tr><td>on-demand</td><td>Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.</td></tr></table>	Option	Description	disable	Disable Dead Peer Detection.	on-idle	Trigger Dead Peer Detection when IPsec is idle.	on-demand	Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.			
Option	Description											
disable	Disable Dead Peer Detection.											
on-idle	Trigger Dead Peer Detection when IPsec is idle.											
on-demand	Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.											
dpd-retrycount	Number of DPD retry attempts.	integer	Minimum value: 0 Maximum value: 10	3								
dpd-retryinterval	DPD retry interval.	user	Not Specified									
eap	Enable/disable IKEv2 EAP authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IKEv2 EAP authentication.</td></tr><tr><td>disable</td><td>Disable IKEv2 EAP authentication.</td></tr></table>	Option	Description	enable	Enable IKEv2 EAP authentication.	disable	Disable IKEv2 EAP authentication.					
Option	Description											
enable	Enable IKEv2 EAP authentication.											
disable	Disable IKEv2 EAP authentication.											

Parameter	Description	Type	Size	Default								
eap-cert-auth	Enable/disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.</td></tr><tr><td><i>disable</i></td><td>Disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.</td></tr></table>	Option	Description	<i>enable</i>	Enable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.	<i>disable</i>	Disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.					
Option	Description											
<i>enable</i>	Enable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.											
<i>disable</i>	Disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.											
eap-exclude-peergrp	Peer group excluded from EAP authentication.	string	Maximum length: 35									
eap-identity	IKEv2 EAP peer identity type.	option	-	use-id-payload								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>use-id-payload</i></td><td>Use IKEv2 IDi payload to resolve peer identity.</td></tr><tr><td><i>send-request</i></td><td>Use EAP identity request to resolve peer identity.</td></tr></table>	Option	Description	<i>use-id-payload</i>	Use IKEv2 IDi payload to resolve peer identity.	<i>send-request</i>	Use EAP identity request to resolve peer identity.					
Option	Description											
<i>use-id-payload</i>	Use IKEv2 IDi payload to resolve peer identity.											
<i>send-request</i>	Use EAP identity request to resolve peer identity.											
ems-sn-check	Enable/disable verification of EMS serial number.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EMS serial number verification.</td></tr><tr><td><i>disable</i></td><td>Disable EMS serial number verification.</td></tr></table>	Option	Description	<i>enable</i>	Enable EMS serial number verification.	<i>disable</i>	Disable EMS serial number verification.					
Option	Description											
<i>enable</i>	Enable EMS serial number verification.											
<i>disable</i>	Disable EMS serial number verification.											
enforce-unique-id	Enable/disable peer ID uniqueness check.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable peer ID uniqueness enforcement.</td></tr><tr><td><i>keep-new</i></td><td>Enforce peer ID uniqueness, keep new connection if collision found.</td></tr><tr><td><i>keep-old</i></td><td>Enforce peer ID uniqueness, keep old connection if collision found.</td></tr></table>	Option	Description	<i>disable</i>	Disable peer ID uniqueness enforcement.	<i>keep-new</i>	Enforce peer ID uniqueness, keep new connection if collision found.	<i>keep-old</i>	Enforce peer ID uniqueness, keep old connection if collision found.			
Option	Description											
<i>disable</i>	Disable peer ID uniqueness enforcement.											
<i>keep-new</i>	Enforce peer ID uniqueness, keep new connection if collision found.											
<i>keep-old</i>	Enforce peer ID uniqueness, keep old connection if collision found.											
esn *	Extended sequence number (ESN) negotiation.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>require</i></td><td>Require extended sequence number.</td></tr><tr><td><i>allow</i></td><td>Allow extended sequence number.</td></tr><tr><td><i>disable</i></td><td>Disable extended sequence number.</td></tr></table>	Option	Description	<i>require</i>	Require extended sequence number.	<i>allow</i>	Allow extended sequence number.	<i>disable</i>	Disable extended sequence number.			
Option	Description											
<i>require</i>	Require extended sequence number.											
<i>allow</i>	Allow extended sequence number.											
<i>disable</i>	Disable extended sequence number.											

Parameter	Description	Type	Size	Default
exchange-fgt-device-id	Enable/disable device identifier exchange with peer FortiGate units for use of VPN monitor data by FortiManager.	option	-	disable
	Option Description			
	<i>enable</i>	Enable exchange of FortiGate device identifier.		
	<i>disable</i>	Disable exchange of FortiGate device identifier.		
fec-base	Number of base Forward Error Correction packets (1 - 20).	integer	Minimum value: 1 Maximum value: 20	10
fec-codec	Forward Error Correction encoding/decoding algorithm.	option	-	rs
	Option Description			
	<i>rs</i>	Reed-Solomon FEC algorithm.		
	<i>xor</i>	XOR FEC algorithm.		
fec-egress	Enable/disable Forward Error Correction for egress IPsec traffic.	option	-	disable
	Option Description			
	<i>enable</i>	Enable Forward Error Correction for egress IPsec traffic.		
	<i>disable</i>	Disable Forward Error Correction for egress IPsec traffic.		
fec-health-check	SD-WAN health check.	string	Maximum length: 35	
fec-ingress	Enable/disable Forward Error Correction for ingress IPsec traffic.	option	-	disable
	Option Description			
	<i>enable</i>	Enable Forward Error Correction for ingress IPsec traffic.		
	<i>disable</i>	Disable Forward Error Correction for ingress IPsec traffic.		
fec-mapping-profile	Forward Error Correction (FEC) mapping profile.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
fec-receive-timeout	Timeout in milliseconds before dropping Forward Error Correction packets (1 - 1000).	integer	Minimum value: 1 Maximum value: 1000	50
fec-redundant	Number of redundant Forward Error Correction packets (1 - 5 for reed-solomon, 1 for xor).	integer	Minimum value: 1 Maximum value: 5	1
fec-send-timeout	Timeout in milliseconds before sending Forward Error Correction packets (1 - 1000).	integer	Minimum value: 1 Maximum value: 1000	5
fgsp-sync	Enable/disable IPsec syncing of tunnels for FGSP IPsec.	option	-	disable
	Option	Description		
	enable	Enable IPsec syncing of tunnels to other cluster members.		
	disable	Disable IPsec syncing of tunnels to other cluster members.		
fortinet-esp	Enable/disable Fortinet ESP encapsulaton.	option	-	disable
	Option	Description		
	enable	Enable Fortinet ESP encapsulation.		
	disable	Disable Fortinet ESP encapsulaton.		
fragmentation	Enable/disable fragment IKE message on re-transmission.	option	-	enable
	Option	Description		
	enable	Enable intra-IKE fragmentation support on re-transmission.		
	disable	Disable intra-IKE fragmentation support.		
fragmentation-mtu	IKE fragmentation MTU (500 - 16000).	integer	Minimum value: 500 Maximum value: 16000	1200
group-authentication	Enable/disable IKEv2 IDi group authentication.	option	-	disable

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable IKEv2 IDi group authentication.		
	<i>disable</i>	Disable IKEv2 IDi group authentication.		
group-authentication-secret	Password for IKEv2 ID group authentication. ASCII string or hexadecimal indicated by a leading 0x.	password-3	Not Specified	
ha-sync-esp-seqno	Enable/disable sequence number jump ahead for IPsec HA.	option	-	enable
	Option Description			
	<i>enable</i>	Enable HA syncing of ESP sequence numbers.		
	<i>disable</i>	Disable HA syncing of ESP sequence numbers.		
idle-timeout	Enable/disable IPsec tunnel idle timeout.	option	-	disable
	Option Description			
	<i>enable</i>	Enable IPsec tunnel idle timeout.		
	<i>disable</i>	Disable IPsec tunnel idle timeout.		
idle-timeoutinterval	IPsec tunnel idle timeout in minutes (5 - 43200).	integer	Minimum value: 5 Maximum value: 43200	15
ike-version	IKE protocol version.	option	-	1
	Option Description			
	1	Use IKEv1 protocol.		
	2	Use IKEv2 protocol.		
inbound-dscp-copy	Enable/disable copy the dscp in the ESP header to the inner IP Header.	option	-	disable
	Option Description			
	<i>enable</i>	Enable copy the dscp in the ESP header to the inner IP Header.		
	<i>disable</i>	Disable copy the dscp in the ESP header to the inner IP Header.		

Parameter	Description	Type	Size	Default						
include-local-lan	Enable/disable allow local LAN access on unity clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable local LAN access on Unity clients.</td></tr><tr><td>enable</td><td>Enable local LAN access on Unity clients.</td></tr></table>	Option	Description	disable	Disable local LAN access on Unity clients.	enable	Enable local LAN access on Unity clients.			
Option	Description									
disable	Disable local LAN access on Unity clients.									
enable	Enable local LAN access on Unity clients.									
interface	Local physical, aggregate, or VLAN outgoing interface.	string	Maximum length: 35							
internal-domain-list <domain-name>	One or more internal domain names in quotes separated by spaces. Domain name.	string	Maximum length: 79							
ip-delay-interval	IP address reuse delay interval in seconds (0 - 28800).	integer	Minimum value: 0 Maximum value: 28800	0						
ipv4-dns-server1	IPv4 DNS server 1.	ipv4-address	Not Specified	0.0.0.0						
ipv4-dns-server2	IPv4 DNS server 2.	ipv4-address	Not Specified	0.0.0.0						
ipv4-dns-server3	IPv4 DNS server 3.	ipv4-address	Not Specified	0.0.0.0						
ipv4-end-ip	End of IPv4 range.	ipv4-address	Not Specified	0.0.0.0						
ipv4-name	IPv4 address name.	string	Maximum length: 79							
ipv4-netmask	IPv4 Netmask.	ipv4-netmask	Not Specified	255.255.255.255						
ipv4-split-exclude	IPv4 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79							
ipv4-split-include	IPv4 split-include subnets.	string	Maximum length: 79							
ipv4-start-ip	Start of IPv4 range.	ipv4-address	Not Specified	0.0.0.0						
ipv4-wins-server1	WINS server 1.	ipv4-address	Not Specified	0.0.0.0						
ipv4-wins-server2	WINS server 2.	ipv4-address	Not Specified	0.0.0.0						

Parameter	Description	Type	Size	Default						
ipv6-auto-linklocal	Enable/disable auto generation of IPv6 link-local address using last 8 bytes of mode-cfg assigned IPv6 address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable mode-cfg auto configuration of IPv6 link-local address.</td></tr><tr><td>disable</td><td>Disable mode-cfg auto configuration of IPv6 link-local address.</td></tr></table>	Option	Description	enable	Enable mode-cfg auto configuration of IPv6 link-local address.	disable	Disable mode-cfg auto configuration of IPv6 link-local address.			
Option	Description									
enable	Enable mode-cfg auto configuration of IPv6 link-local address.									
disable	Disable mode-cfg auto configuration of IPv6 link-local address.									
ipv6-dns-server1	IPv6 DNS server 1.	ipv6-address	Not Specified	::						
ipv6-dns-server2	IPv6 DNS server 2.	ipv6-address	Not Specified	::						
ipv6-dns-server3	IPv6 DNS server 3.	ipv6-address	Not Specified	::						
ipv6-end-ip	End of IPv6 range.	ipv6-address	Not Specified	::						
ipv6-name	IPv6 address name.	string	Maximum length: 79							
ipv6-prefix	IPv6 prefix.	integer	Minimum value: 1 Maximum value: 128	128						
ipv6-split-exclude	IPv6 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79							
ipv6-split-include	IPv6 split-include subnets.	string	Maximum length: 79							
ipv6-start-ip	Start of IPv6 range.	ipv6-address	Not Specified	::						
keepalive	NAT-T keep alive interval.	integer	Minimum value: 5 Maximum value: 900	10						
keylife	Time to wait in seconds before phase 1 encryption key expires.	integer	Minimum value: 120 Maximum value: 172800	86400						
kms	Key Management Services server.	string	Maximum length: 35							

Parameter	Description	Type	Size	Default
link-cost	VPN tunnel underlay link cost.	integer	Minimum value: 0 Maximum value: 255	0
local-gw	Local VPN gateway.	ipv4-address	Not Specified	0.0.0.0
localid	Local ID.	string	Maximum length: 63	
localid-type	Local ID type.	option	-	auto
	Option		Description	
	auto		Select ID type automatically.	
	fqdn		Use fully qualified domain name.	
	user-fqdn		Use user fully qualified domain name.	
	keyid		Use key-id string.	
	address		Use local IP address.	
	asn1dn		Use ASN.1 distinguished name.	
loopback-asymroute	Enable/disable asymmetric routing for IKE traffic on loopback interface.	option	-	enable
	Option		Description	
	enable		Allow ingress/egress IKE traffic to be routed over different interfaces.	
	disable		Ingress/egress IKE traffic must be routed over the same interface.	
mesh-selector-type	Add selectors containing subsets of the configuration depending on traffic.	option	-	disable
	Option		Description	
	disable		Disable.	
	subnet		Enable addition of matching subnet selector.	
	host		Enable addition of host to host selector.	
mode	ID protection mode used to establish a secure channel.	option	-	main

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>aggressive</i></td><td>Aggressive mode.</td></tr><tr><td><i>main</i></td><td>Main mode.</td></tr></table>	Option	Description	<i>aggressive</i>	Aggressive mode.	<i>main</i>	Main mode.					
	Option	Description										
	<i>aggressive</i>	Aggressive mode.										
<i>main</i>	Main mode.											
mode-cfg	Enable/disable configuration method.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Configuration Method.</td></tr><tr><td><i>enable</i></td><td>Enable Configuration Method.</td></tr></table>	Option	Description	<i>disable</i>	Disable Configuration Method.	<i>enable</i>	Enable Configuration Method.					
	Option	Description										
	<i>disable</i>	Disable Configuration Method.										
<i>enable</i>	Enable Configuration Method.											
mode-cfg-allow-client-selector	Enable/disable mode-cfg client to use custom phase2 selectors.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Mode-cfg client to use wildcard selectors.</td></tr><tr><td><i>enable</i></td><td>Mode-cfg client to use custom selectors.</td></tr></table>	Option	Description	<i>disable</i>	Mode-cfg client to use wildcard selectors.	<i>enable</i>	Mode-cfg client to use custom selectors.					
	Option	Description										
	<i>disable</i>	Mode-cfg client to use wildcard selectors.										
<i>enable</i>	Mode-cfg client to use custom selectors.											
name	IPsec remote gateway name.	string	Maximum length: 35									
nattraversal	Enable/disable NAT traversal.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPsec NAT traversal.</td></tr><tr><td><i>disable</i></td><td>Disable IPsec NAT traversal.</td></tr><tr><td><i>forced</i></td><td>Force IPsec NAT traversal on.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPsec NAT traversal.	<i>disable</i>	Disable IPsec NAT traversal.	<i>forced</i>	Force IPsec NAT traversal on.			
	Option	Description										
	<i>enable</i>	Enable IPsec NAT traversal.										
	<i>disable</i>	Disable IPsec NAT traversal.										
<i>forced</i>	Force IPsec NAT traversal on.											
negotiate-timeout	IKE SA negotiation timeout in seconds (1 - 300).	integer	Minimum value: 1 Maximum value: 300	30								
network-id	VPN gateway network ID.	integer	Minimum value: 0 Maximum value: 255	0								
network-overlay	Enable/disable network overlays.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable network overlays.</td></tr><tr><td><i>enable</i></td><td>Enable network overlays.</td></tr></table>	Option	Description	<i>disable</i>	Disable network overlays.	<i>enable</i>	Enable network overlays.					
	Option	Description										
	<i>disable</i>	Disable network overlays.										
<i>enable</i>	Enable network overlays.											

Parameter	Description	Type	Size	Default												
npu-offload *	Enable/disable offloading NPU.	option	-	enable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU offloading.</td></tr><tr><td><i>disable</i></td><td>Disable NPU offloading.</td></tr></table>	Option	Description	<i>enable</i>	Enable NPU offloading.	<i>disable</i>	Disable NPU offloading.									
Option	Description															
<i>enable</i>	Enable NPU offloading.															
<i>disable</i>	Disable NPU offloading.															
peer	Accept this peer certificate.	string	Maximum length: 35													
peergrp	Accept this peer certificate group.	string	Maximum length: 35													
peerid	Accept this peer identity.	string	Maximum length: 255													
peertype	Accept this peer type.	option	-	peer												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Accept any peer ID.</td></tr><tr><td><i>one</i></td><td>Accept this peer ID.</td></tr><tr><td><i>dialup</i></td><td>Accept peer ID in dialup group.</td></tr><tr><td><i>peer</i></td><td>Accept this peer certificate.</td></tr><tr><td><i>peergrp</i></td><td>Accept this peer certificate group.</td></tr></table>	Option	Description	<i>any</i>	Accept any peer ID.	<i>one</i>	Accept this peer ID.	<i>dialup</i>	Accept peer ID in dialup group.	<i>peer</i>	Accept this peer certificate.	<i>peergrp</i>	Accept this peer certificate group.			
Option	Description															
<i>any</i>	Accept any peer ID.															
<i>one</i>	Accept this peer ID.															
<i>dialup</i>	Accept peer ID in dialup group.															
<i>peer</i>	Accept this peer certificate.															
<i>peergrp</i>	Accept this peer certificate group.															
ppk	Enable/disable IKEv2 Postquantum Preshared Key (PPK).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>allow</i></td><td>Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>require</i></td><td>Require use of IKEv2 Postquantum Preshared Key (PPK).</td></tr></table>	Option	Description	<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).	<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).	<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).							
Option	Description															
<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).															
<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).															
<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).															
ppk-identity	IKEv2 Postquantum Preshared Key Identity.	string	Maximum length: 35													
ppk-secret	IKEv2 Postquantum Preshared Key (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified													
priority	Priority for routes added by IKE (1 - 65535).	integer	Minimum value: 1 Maximum value: 65535	1												

Parameter	Description	Type	Size	Default
proposal	Phase1 proposal.	option	-	
	Option	Description		
	<i>des-md5</i>	des-md5		
	<i>des-sha1</i>	des-sha1		
	<i>des-sha256</i>	des-sha256

	<i>seed-sha512</i>	seed-sha512		

Parameter	Description	Type	Size	Default								
psksecret	Pre-shared secret for PSK authentication (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified									
psksecret-remote	Pre-shared secret for remote side PSK authentication (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified									
qkd	Enable/disable use of Quantum Key Distribution (QKD) server.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable use of a Quantum Key Distribution (QKD) server.</td></tr><tr><td>allow</td><td>Allow, but do not require, use of a Quantum Key Distribution (QKD) server.</td></tr><tr><td>require</td><td>Require use of a Quantum Key Distribution (QKD) server.</td></tr></table>	Option	Description	disable	Disable use of a Quantum Key Distribution (QKD) server.	allow	Allow, but do not require, use of a Quantum Key Distribution (QKD) server.	require	Require use of a Quantum Key Distribution (QKD) server.			
Option	Description											
disable	Disable use of a Quantum Key Distribution (QKD) server.											
allow	Allow, but do not require, use of a Quantum Key Distribution (QKD) server.											
require	Require use of a Quantum Key Distribution (QKD) server.											
qkd-hybrid	Enable/disable use of Quantum Key Distribution (QKD) hybrid keys.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable use of Quantum Key Distribution (QKD) hybrid keys.</td></tr><tr><td>allow</td><td>Allow, but do not require, use of Quantum Key Distribution (QKD) hybrid keys.</td></tr><tr><td>require</td><td>Require use of Quantum Key Distribution (QKD) hybrid keys.</td></tr></table>	Option	Description	disable	Disable use of Quantum Key Distribution (QKD) hybrid keys.	allow	Allow, but do not require, use of Quantum Key Distribution (QKD) hybrid keys.	require	Require use of Quantum Key Distribution (QKD) hybrid keys.			
Option	Description											
disable	Disable use of Quantum Key Distribution (QKD) hybrid keys.											
allow	Allow, but do not require, use of Quantum Key Distribution (QKD) hybrid keys.											
require	Require use of Quantum Key Distribution (QKD) hybrid keys.											
qkd-profile	Quantum Key Distribution (QKD) server profile.	string	Maximum length: 35									
reauth	Enable/disable re-authentication upon IKE SA lifetime expiration.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable IKE SA re-authentication.</td></tr><tr><td>enable</td><td>Enable IKE SA re-authentication.</td></tr></table>	Option	Description	disable	Disable IKE SA re-authentication.	enable	Enable IKE SA re-authentication.					
Option	Description											
disable	Disable IKE SA re-authentication.											
enable	Enable IKE SA re-authentication.											
rekey	Enable/disable phase1 rekey.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable phase1 rekey.</td></tr><tr><td>disable</td><td>Disable phase1 rekey.</td></tr></table>	Option	Description	enable	Enable phase1 rekey.	disable	Disable phase1 rekey.					
Option	Description											
enable	Enable phase1 rekey.											
disable	Disable phase1 rekey.											

Parameter	Description	Type	Size	Default												
remote-gw	Remote VPN gateway.	ipv4-address	Not Specified	0.0.0.0												
remote-gw-country	IPv4 addresses associated to a specific country.	string	Maximum length: 2													
remote-gw-end-ip	Last IPv4 address in the range.	ipv4-address-any	Not Specified	0.0.0.0												
remote-gw-match	Set type of IPv4 remote gateway address matching.	option	-	any												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Match any IPv4 gateway address.</td></tr><tr><td><i>ipmask</i></td><td>Match IPv4 gateway address and mask.</td></tr><tr><td><i>iprange</i></td><td>Match IPv4 gateway address range.</td></tr><tr><td><i>geography</i></td><td>Match IPv4 gateway address from a specified country.</td></tr><tr><td><i>ztna</i></td><td>Match IPv4 gateway address against ZTNA posture tags.</td></tr></table>	Option	Description	<i>any</i>	Match any IPv4 gateway address.	<i>ipmask</i>	Match IPv4 gateway address and mask.	<i>iprange</i>	Match IPv4 gateway address range.	<i>geography</i>	Match IPv4 gateway address from a specified country.	<i>ztna</i>	Match IPv4 gateway address against ZTNA posture tags.			
Option	Description															
<i>any</i>	Match any IPv4 gateway address.															
<i>ipmask</i>	Match IPv4 gateway address and mask.															
<i>iprange</i>	Match IPv4 gateway address range.															
<i>geography</i>	Match IPv4 gateway address from a specified country.															
<i>ztna</i>	Match IPv4 gateway address against ZTNA posture tags.															
remote-gw-start-ip	First IPv4 address in the range.	ipv4-address-any	Not Specified	0.0.0.0												
remote-gw-subnet	IPv4 address and subnet mask.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0												
remote-gw-ztna-tags <name>	IPv4 ZTNA posture tags. Address name.	string	Maximum length: 79													
remote-gw6-country	IPv6 addresses associated to a specific country.	string	Maximum length: 2													
remote-gw6-end-ip	Last IPv6 address in the range.	ipv6-address	Not Specified	::												
remote-gw6-match	Set type of IPv6 remote gateway address matching.	option	-	any												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Match any IPv6 gateway address.</td></tr><tr><td><i>ipprefix</i></td><td>Match IPv6 gateway address and prefix.</td></tr><tr><td><i>iprange</i></td><td>Match IPv6 gateway address range.</td></tr><tr><td><i>geography</i></td><td>Match IPv6 gateway address from a specified country.</td></tr></table>	Option	Description	<i>any</i>	Match any IPv6 gateway address.	<i>ipprefix</i>	Match IPv6 gateway address and prefix.	<i>iprange</i>	Match IPv6 gateway address range.	<i>geography</i>	Match IPv6 gateway address from a specified country.					
Option	Description															
<i>any</i>	Match any IPv6 gateway address.															
<i>ipprefix</i>	Match IPv6 gateway address and prefix.															
<i>iprange</i>	Match IPv6 gateway address range.															
<i>geography</i>	Match IPv6 gateway address from a specified country.															
remote-gw6-start-ip	First IPv6 address in the range.	ipv6-address	Not Specified	::												

Parameter	Description	Type	Size	Default						
remote-gw6-subnet	IPv6 address and prefix.	ipv6-network	Not Specified	::/0						
remotegw-ddns	Domain name of remote gateway. For example, name.ddns.com.	string	Maximum length: 63							
rsa-signature-format	Digital Signature Authentication RSA signature format.	option	-	pkcs1						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>pkcs1</td><td>RSASSA PKCS#1 v1.5.</td></tr><tr><td>pss</td><td>RSASSA Probabilistic Signature Scheme (PSS).</td></tr></table>	Option	Description	pkcs1	RSASSA PKCS#1 v1.5.	pss	RSASSA Probabilistic Signature Scheme (PSS).			
Option	Description									
pkcs1	RSASSA PKCS#1 v1.5.									
pss	RSASSA Probabilistic Signature Scheme (PSS).									
rsa-signature-hash-override	Enable/disable IKEv2 RSA signature hash algorithm override.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IKEv2 RSA signature hash algorithm override.</td></tr><tr><td>disable</td><td>Disable IKEv2 RSA signature hash algorithm override.</td></tr></table>	Option	Description	enable	Enable IKEv2 RSA signature hash algorithm override.	disable	Disable IKEv2 RSA signature hash algorithm override.			
Option	Description									
enable	Enable IKEv2 RSA signature hash algorithm override.									
disable	Disable IKEv2 RSA signature hash algorithm override.									
save-password	Enable/disable saving XAuth username and password on VPN clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable saving XAuth username and password on VPN clients.</td></tr><tr><td>enable</td><td>Enable saving XAuth username and password on VPN clients.</td></tr></table>	Option	Description	disable	Disable saving XAuth username and password on VPN clients.	enable	Enable saving XAuth username and password on VPN clients.			
Option	Description									
disable	Disable saving XAuth username and password on VPN clients.									
enable	Enable saving XAuth username and password on VPN clients.									
send-cert-chain	Enable/disable sending certificate chain.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable sending certificate chain.</td></tr><tr><td>disable</td><td>Disable sending certificate chain.</td></tr></table>	Option	Description	enable	Enable sending certificate chain.	disable	Disable sending certificate chain.			
Option	Description									
enable	Enable sending certificate chain.									
disable	Disable sending certificate chain.									
shared-idle-timeout	Enable/disable IPsec tunnel shared idle timeout.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable IPsec tunnel shared idle timeout. The location-id attribute must be configured on both spokes. Shared idle timeout is supported only on IKEv2 since remote-location is available only for IKEv2.</td></tr><tr><td>disable</td><td>Disable IPsec tunnel shared idle timeout.</td></tr></table>	Option	Description	enable	Enable IPsec tunnel shared idle timeout. The location-id attribute must be configured on both spokes. Shared idle timeout is supported only on IKEv2 since remote-location is available only for IKEv2.	disable	Disable IPsec tunnel shared idle timeout.			
Option	Description									
enable	Enable IPsec tunnel shared idle timeout. The location-id attribute must be configured on both spokes. Shared idle timeout is supported only on IKEv2 since remote-location is available only for IKEv2.									
disable	Disable IPsec tunnel shared idle timeout.									

Parameter	Description	Type	Size	Default										
signature-hash-alg	Digital Signature Authentication hash algorithms.	option	-	sha2-512										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>sha1</td><td>SHA1.</td></tr><tr><td>sha2-256</td><td>SHA2-256.</td></tr><tr><td>sha2-384</td><td>SHA2-384.</td></tr><tr><td>sha2-512</td><td>SHA2-512.</td></tr></table>	Option	Description	sha1	SHA1.	sha2-256	SHA2-256.	sha2-384	SHA2-384.	sha2-512	SHA2-512.			
Option	Description													
sha1	SHA1.													
sha2-256	SHA2-256.													
sha2-384	SHA2-384.													
sha2-512	SHA2-512.													
split-include-service	Split-include services.	string	Maximum length: 79											
suite-b	Use Suite-B.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not use UI suite.</td></tr><tr><td>suite-b-gcm-128</td><td>Use Suite-B-GCM-128.</td></tr><tr><td>suite-b-gcm-256</td><td>Use Suite-B-GCM-256.</td></tr></table>	Option	Description	disable	Do not use UI suite.	suite-b-gcm-128	Use Suite-B-GCM-128.	suite-b-gcm-256	Use Suite-B-GCM-256.					
Option	Description													
disable	Do not use UI suite.													
suite-b-gcm-128	Use Suite-B-GCM-128.													
suite-b-gcm-256	Use Suite-B-GCM-256.													
transport	Set IKE transport protocol.	option	-	auto										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>udp</td><td>Use UDP transport for IKE.</td></tr><tr><td>auto</td><td>Use AUTO transport for IKE.</td></tr><tr><td>tcp</td><td>Use TCP transport for IKE.</td></tr></table>	Option	Description	udp	Use UDP transport for IKE.	auto	Use AUTO transport for IKE.	tcp	Use TCP transport for IKE.					
Option	Description													
udp	Use UDP transport for IKE.													
auto	Use AUTO transport for IKE.													
tcp	Use TCP transport for IKE.													
type	Remote gateway type.	option	-	static										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>static</td><td>Remote VPN gateway has fixed IP address.</td></tr><tr><td>dynamic</td><td>Remote VPN gateway has dynamic IP address.</td></tr><tr><td>ddns</td><td>Remote VPN gateway has dynamic IP address and is a dynamic DNS client.</td></tr></table>	Option	Description	static	Remote VPN gateway has fixed IP address.	dynamic	Remote VPN gateway has dynamic IP address.	ddns	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.					
Option	Description													
static	Remote VPN gateway has fixed IP address.													
dynamic	Remote VPN gateway has dynamic IP address.													
ddns	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.													
unity-support	Enable/disable support for Cisco UNITY Configuration Method extensions.	option	-	enable										

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable Cisco Unity Configuration Method Extensions.		
	<i>enable</i>	Enable Cisco Unity Configuration Method Extensions.		
usrgrp	User group name for dialup peers.	string	Maximum length: 35	
wizard-type	GUI VPN Wizard Type.	option	-	custom
	Option	Description		
	<i>custom</i>	Custom VPN configuration.		
	<i>dialup-forticlient</i>	Dial Up - FortiClient Windows, Mac and Android.		
	<i>dialup-ios</i>	Dial Up - iPhone / iPad Native IPsec Client.		
	<i>dialup-android</i>	Dial Up - Android Native IPsec Client.		
	<i>dialup-windows</i>	Dial Up - Windows Native IPsec Client.		
	<i>dialup-cisco</i>	Dial Up - Cisco IPsec Client.		
	<i>static-fortigate</i>	Site to Site - FortiGate.		
	<i>dialup-fortigate</i>	Dial Up - FortiGate.		
	<i>static-cisco</i>	Site to Site - Cisco.		
	<i>dialup-cisco-fw</i>	Dialup Up - Cisco Firewall.		
	<i>simplified-static-fortigate</i>	Site to Site - FortiGate (SD-WAN).		
	<i>hub-fortigate-auto-discovery</i>	Hub role in a Hub-and-Spoke auto-discovery VPN.		
	<i>spoke-fortigate-auto-discovery</i>	Spoke role in a Hub-and-Spoke auto-discovery VPN.		
	<i>fabric-overlay-orchestrator</i>	Fabric Overlay Orchestrator.		
xauthtype	XAuth type.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable.		
	<i>client</i>	Enable as client.		
	<i>pap</i>	Enable as server PAP.		
	<i>chap</i>	Enable as server CHAP.		
	<i>auto</i>	Enable as server auto.		

* This parameter may not exist in some models.

config ipv4-exclude-range

Parameter	Description	Type	Size	Default
end-ip	End of IPv4 exclusive range.	ipv4-address	Not Specified	0.0.0.0
id	ID.	integer	Minimum value: 0 0 Maximum value: 4294967295	0
start-ip	Start of IPv4 exclusive range.	ipv4-address	Not Specified	0.0.0.0

config ipv6-exclude-range

Parameter	Description	Type	Size	Default

	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use as an aggregate member.</td></tr><tr><td>disable</td><td>Disable use as an aggregate member.</td></tr></table>	Option	Description	enable	Enable use as an aggregate member.	disable	Disable use as an aggregate member.							
	Option	Description												
	enable	Enable use as an aggregate member.												
disable	Disable use as an aggregate member.													
aggregate-weight	Link weight for aggregate.	integer	Minimum value: 1 1 Maximum value: 100											
assign-ip	Enable/disable assignment of IP to IPsec interface via configuration method.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not assign an IP address to the IPsec interface.</td></tr><tr><td>enable</td><td>Assign an IP address to the IPsec interface.</td></tr></table>	Option	Description	disable	Do not assign an IP address to the IPsec interface.	enable	Assign an IP address to the IPsec interface.							
	Option	Description												
	disable	Do not assign an IP address to the IPsec interface.												
enable	Assign an IP address to the IPsec interface.													
assign-ip-from	Method by which the IP address will be assigned.	option	-	range										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>range</td><td>Assign IP address from locally defined range.</td></tr><tr><td>usrgrp</td><td>Assign IP address via user group.</td></tr><tr><td>dhcp</td><td>Assign IP address via DHCP.</td></tr><tr><td>name</td><td>Assign IP address from firewall address or group.</td></tr></table>	Option	Description	range	Assign IP address from locally defined range.	usrgrp	Assign IP address via user group.	dhcp	Assign IP address via DHCP.	name	Assign IP address from firewall address or group.			
	Option	Description												
	range	Assign IP address from locally defined range.												
	usrgrp	Assign IP address via user group.												
	dhcp	Assign IP address via DHCP.												
name	Assign IP address from firewall address or group.													
authmethod	Authentication method.	option	-	psk										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>psk</td><td>PSK authentication method.</td></tr><tr><td>signature</td><td>Signature authentication method.</td></tr></table>	Option	Description	psk	PSK authentication method.	signature	Signature authentication method.							
	Option	Description												
	psk	PSK authentication method.												
signature	Signature authentication method.													

Parameter	Description	Type	Size	Default						
authmethod-remote	Authentication method (remote side).	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>psk</i></td><td>PSK authentication method.</td></tr><tr><td><i>signature</i></td><td>Signature authentication method.</td></tr></table>	Option	Description	<i>psk</i>	PSK authentication method.	<i>signature</i>	Signature authentication method.			
Option	Description									
<i>psk</i>	PSK authentication method.									
<i>signature</i>	Signature authentication method.									
authpasswd	XAuth password (max 35 characters).	password	Not Specified							
authusr	XAuth user name.	string	Maximum length: 64							
authusrgrp	Authentication user group.	string	Maximum length: 35							
auto-discovery-crossover	Allow/block set-up of short-cut tunnels between different network IDs.	option	-	allow						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow set-up of short-cut tunnels between different network IDs.</td></tr><tr><td><i>block</i></td><td>Block set-up of short-cut tunnels between different network IDs.</td></tr></table>	Option	Description	<i>allow</i>	Allow set-up of short-cut tunnels between different network IDs.	<i>block</i>	Block set-up of short-cut tunnels between different network IDs.			
Option	Description									
<i>allow</i>	Allow set-up of short-cut tunnels between different network IDs.									
<i>block</i>	Block set-up of short-cut tunnels between different network IDs.									
auto-discovery-dialup-placeholder	Control if this dynamic gateway is used for shortcut connections only.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable placeholder restriction.</td></tr><tr><td><i>enable</i></td><td>Enable placeholder restriction to only accept shortcut connections on this dial-up gateway.</td></tr></table>	Option	Description	<i>disable</i>	Disable placeholder restriction.	<i>enable</i>	Enable placeholder restriction to only accept shortcut connections on this dial-up gateway.			
Option	Description									
<i>disable</i>	Disable placeholder restriction.									
<i>enable</i>	Enable placeholder restriction to only accept shortcut connections on this dial-up gateway.									
auto-discovery-forwarder	Enable/disable forwarding auto-discovery short-cut messages.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable forwarding auto-discovery short-cut messages.</td></tr><tr><td><i>disable</i></td><td>Disable forwarding auto-discovery short-cut messages.</td></tr></table>	Option	Description	<i>enable</i>	Enable forwarding auto-discovery short-cut messages.	<i>disable</i>	Disable forwarding auto-discovery short-cut messages.			
Option	Description									
<i>enable</i>	Enable forwarding auto-discovery short-cut messages.									
<i>disable</i>	Disable forwarding auto-discovery short-cut messages.									
auto-discovery-offer-interval	Interval between shortcut offer messages in seconds (1 - 300, default = 5).	integer	Minimum value: 5 1 Maximum value: 300							

Parameter	Description	Type	Size	Default						
auto-discovery-psk	Enable/disable use of pre-shared secrets for authentication of auto-discovery tunnels.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable use of pre-shared-secret authentication for auto-discovery tunnels.</td></tr><tr><td><i>disable</i></td><td>Disable use of authentication defined by 'authmethod' for auto-discovery tunnels.</td></tr></table>	Option	Description	<i>enable</i>	Enable use of pre-shared-secret authentication for auto-discovery tunnels.	<i>disable</i>	Disable use of authentication defined by 'authmethod' for auto-discovery tunnels.			
Option	Description									
<i>enable</i>	Enable use of pre-shared-secret authentication for auto-discovery tunnels.									
<i>disable</i>	Disable use of authentication defined by 'authmethod' for auto-discovery tunnels.									
auto-discovery-receiver	Enable/disable accepting auto-discovery short-cut messages.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable receiving auto-discovery short-cut messages.</td></tr><tr><td><i>disable</i></td><td>Disable receiving auto-discovery short-cut messages.</td></tr></table>	Option	Description	<i>enable</i>	Enable receiving auto-discovery short-cut messages.	<i>disable</i>	Disable receiving auto-discovery short-cut messages.			
Option	Description									
<i>enable</i>	Enable receiving auto-discovery short-cut messages.									
<i>disable</i>	Disable receiving auto-discovery short-cut messages.									
auto-discovery-sender	Enable/disable sending auto-discovery short-cut messages.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sending auto-discovery short-cut messages.</td></tr><tr><td><i>disable</i></td><td>Disable sending auto-discovery short-cut messages.</td></tr></table>	Option	Description	<i>enable</i>	Enable sending auto-discovery short-cut messages.	<i>disable</i>	Disable sending auto-discovery short-cut messages.			
Option	Description									
<i>enable</i>	Enable sending auto-discovery short-cut messages.									
<i>disable</i>	Disable sending auto-discovery short-cut messages.									
auto-discovery-shortcuts	Control deletion of child short-cut tunnels when the parent tunnel goes down.	option	-	independent						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>independent</i></td><td>Short-cut tunnels remain up if the parent tunnel goes down.</td></tr><tr><td><i>dependent</i></td><td>Short-cut tunnels are brought down if the parent tunnel goes down.</td></tr></table>	Option	Description	<i>independent</i>	Short-cut tunnels remain up if the parent tunnel goes down.	<i>dependent</i>	Short-cut tunnels are brought down if the parent tunnel goes down.			
Option	Description									
<i>independent</i>	Short-cut tunnels remain up if the parent tunnel goes down.									
<i>dependent</i>	Short-cut tunnels are brought down if the parent tunnel goes down.									
auto-negotiate	Enable/disable automatic initiation of IKE SA negotiation.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic initiation of IKE SA negotiation.</td></tr><tr><td><i>disable</i></td><td>Disable automatic initiation of IKE SA negotiation.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic initiation of IKE SA negotiation.	<i>disable</i>	Disable automatic initiation of IKE SA negotiation.			
Option	Description									
<i>enable</i>	Enable automatic initiation of IKE SA negotiation.									
<i>disable</i>	Disable automatic initiation of IKE SA negotiation.									
auto-transport-threshold	Timeout in seconds before falling back to next transport protocol.	integer	Minimum value: 15 1 Maximum value: 300							

Parameter	Description	Type	Size	Default										
azure-ad-autoconnect	Enable/disable Azure AD Auto-Connect for FortiClient.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable Azure AD Auto-Connect for FortiClient.</td></tr><tr><td>disable</td><td>Disable Azure AD Auto-Connect for FortiClient.</td></tr></table>	Option	Description	enable	Enable Azure AD Auto-Connect for FortiClient.	disable	Disable Azure AD Auto-Connect for FortiClient.							
Option	Description													
enable	Enable Azure AD Auto-Connect for FortiClient.													
disable	Disable Azure AD Auto-Connect for FortiClient.													
backup-gateway<address>	Instruct unity clients about the backup gateway address(es). Address of backup gateway.	string	Maximum length: 79											
banner	Message that unity client should display after connecting.	var-string	Maximum length: 1024											
cert-id-validation	Enable/disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.</td></tr><tr><td>disable</td><td>Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.</td></tr></table>	Option	Description	enable	Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.	disable	Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.							
Option	Description													
enable	Enable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.													
disable	Disable cross validation of peer ID and the identity in the peer's certificate as specified in RFC 4945.													
cert-peer-username-strip	Enable/disable domain stripping on certificate identity.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable domain stripping on certificate identity.</td></tr><tr><td>enable</td><td>Enable domain stripping on certificate identity.</td></tr></table>	Option	Description	disable	Disable domain stripping on certificate identity.	enable	Enable domain stripping on certificate identity.							
Option	Description													
disable	Disable domain stripping on certificate identity.													
enable	Enable domain stripping on certificate identity.													
cert-peer-username-validation	Enable/disable cross validation of peer username and the identity in the peer's certificate.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>none</td><td>Disable cross validation of peer username and the identity in the peer's certificate.</td></tr><tr><td>othername</td><td>Validate principal name in SAN othername.</td></tr><tr><td>rfc822name</td><td>Validate RFC822 email address in SAN.</td></tr><tr><td>cn</td><td>Validate CN in subject.</td></tr></table>	Option	Description	none	Disable cross validation of peer username and the identity in the peer's certificate.	othername	Validate principal name in SAN othername.	rfc822name	Validate RFC822 email address in SAN.	cn	Validate CN in subject.			
Option	Description													
none	Disable cross validation of peer username and the identity in the peer's certificate.													
othername	Validate principal name in SAN othername.													
rfc822name	Validate RFC822 email address in SAN.													
cn	Validate CN in subject.													

Parameter	Description	Type	Size	Default						
cert-trust-store	CA certificate trust store.	option	-	local						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>local</td><td>Use local CA certificate.</td></tr><tr><td>ems</td><td>Use EMS CA certificate.</td></tr></table>	Option	Description	local	Use local CA certificate.	ems	Use EMS CA certificate.			
Option	Description									
local	Use local CA certificate.									
ems	Use EMS CA certificate.									
certificate <name>	The names of up to 4 signed personal certificates. Certificate name.	string	Maximum length: 79							
childless-ike	Enable/disable childless IKEv2 initiation (RFC 6023).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable childless IKEv2 initiation (RFC 6023).</td></tr><tr><td>disable</td><td>Disable childless IKEv2 initiation (RFC 6023).</td></tr></table>	Option	Description	enable	Enable childless IKEv2 initiation (RFC 6023).	disable	Disable childless IKEv2 initiation (RFC 6023).			
Option	Description									
enable	Enable childless IKEv2 initiation (RFC 6023).									
disable	Disable childless IKEv2 initiation (RFC 6023).									
client-auto-negotiate	Enable/disable allowing the VPN client to bring up the tunnel when there is no traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr><tr><td>enable</td><td>Enable allowing the VPN client to bring up the tunnel when there is no traffic.</td></tr></table>	Option	Description	disable	Disable allowing the VPN client to bring up the tunnel when there is no traffic.	enable	Enable allowing the VPN client to bring up the tunnel when there is no traffic.			
Option	Description									
disable	Disable allowing the VPN client to bring up the tunnel when there is no traffic.									
enable	Enable allowing the VPN client to bring up the tunnel when there is no traffic.									
client-keep-alive	Enable/disable allowing the VPN client to keep the tunnel up when there is no traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr><tr><td>enable</td><td>Enable allowing the VPN client to keep the tunnel up when there is no traffic.</td></tr></table>	Option	Description	disable	Disable allowing the VPN client to keep the tunnel up when there is no traffic.	enable	Enable allowing the VPN client to keep the tunnel up when there is no traffic.			
Option	Description									
disable	Disable allowing the VPN client to keep the tunnel up when there is no traffic.									
enable	Enable allowing the VPN client to keep the tunnel up when there is no traffic.									

Parameter	Description	Type	Size	Default						
client-resume	Enable/disable resumption of offline FortiClient sessions. When a FortiClient enabled laptop is closed or enters sleep/hibernate mode, enabling this feature allows FortiClient to keep the tunnel during this period, and allows users to immediately resume using the IPsec tunnel when the device wakes up.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable client session resumption.</td></tr><tr><td>disable</td><td>Disable client session resumption.</td></tr></table>	Option	Description	enable	Enable client session resumption.	disable	Disable client session resumption.			
Option	Description									
enable	Enable client session resumption.									
disable	Disable client session resumption.									
client-resume-interval	Maximum time in seconds during which a VPN client may resume using a tunnel after a client PC has entered sleep mode or temporarily lost its network connection (120 - 172800, default = 7200).	integer	Minimum value: 120 Maximum value: 172800	7200						
comments	Comment.	var-string	Maximum length: 255							
default-gw	IPv4 address of default route gateway to use for traffic exiting the interface.	ipv4-address	Not Specified	0.0.0.0						
default-gw-priority	Priority for default gateway route. A higher priority number signifies a less preferred route.	integer	Minimum value: 0 Maximum value: 4294967295	0						
dev-id	Device ID carried by the device ID notification.	string	Maximum length: 63							
dev-id-notification	Enable/disable device ID notification.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable device ID notification.</td></tr><tr><td>enable</td><td>Enable device ID notification.</td></tr></table>	Option	Description	disable	Disable device ID notification.	enable	Enable device ID notification.			
Option	Description									
disable	Disable device ID notification.									
enable	Enable device ID notification.									

Parameter	Description	Type	Size	Default
dhcp-ra-giaddr	Relay agent gateway IP address to use in the giaddr field of DHCP requests.	ipv4-address	Not Specified	0.0.0.0
dhcp6-ra-linkaddr	Relay agent IPv6 link address to use in DHCP6 requests.	ipv6-address	Not Specified	::
dhgrp	DH group.	option	-	14
	Option	Description		
	1	DH Group 1.		
	2	DH Group 2.		
	5	DH Group 5.		
	14	DH Group 14.		
	15	DH Group 15.		
	16	DH Group 16.		
	17	DH Group 17.		
	18	DH Group 18.		
	19	DH Group 19.		
	20	DH Group 20.		
	21	DH Group 21.		
	27	DH Group 27.		
	28	DH Group 28.		
	29	DH Group 29.		
	30	DH Group 30.		
	31	DH Group 31.		
	32	DH Group 32.		
digital-signature-auth	Enable/disable IKEv2 Digital Signature Authentication (RFC 7427).	option	-	disable
	Option	Description		
	enable	Enable IKEv2 Digital Signature Authentication (RFC 7427).		
	disable	Disable IKEv2 Digital Signature Authentication (RFC 7427).		

Parameter	Description	Type	Size	Default								
distance	Distance for routes added by IKE (1 - 255).	integer	Minimum value: 1 Maximum value: 255	15								
dns-mode	DNS server mode.	option	-	manual								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>manual</i></td><td>Manually configure DNS servers.</td></tr><tr><td><i>auto</i></td><td>Use default DNS servers.</td></tr></table>	Option	Description	<i>manual</i>	Manually configure DNS servers.	<i>auto</i>	Use default DNS servers.					
Option	Description											
<i>manual</i>	Manually configure DNS servers.											
<i>auto</i>	Use default DNS servers.											
domain	Instruct unity clients about the single default DNS domain.	string	Maximum length: 63									
dpd	Dead Peer Detection mode.	option	-	on-demand								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Dead Peer Detection.</td></tr><tr><td><i>on-idle</i></td><td>Trigger Dead Peer Detection when IPsec is idle.</td></tr><tr><td><i>on-demand</i></td><td>Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.</td></tr></table>	Option	Description	<i>disable</i>	Disable Dead Peer Detection.	<i>on-idle</i>	Trigger Dead Peer Detection when IPsec is idle.	<i>on-demand</i>	Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.			
Option	Description											
<i>disable</i>	Disable Dead Peer Detection.											
<i>on-idle</i>	Trigger Dead Peer Detection when IPsec is idle.											
<i>on-demand</i>	Trigger Dead Peer Detection when IPsec traffic is sent but no reply is received from the peer.											
dpd-retrycount	Number of DPD retry attempts.	integer	Minimum value: 0 Maximum value: 10	3								
dpd-retryinterval	DPD retry interval.	user	Not Specified									
eap	Enable/disable IKEv2 EAP authentication.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IKEv2 EAP authentication.</td></tr><tr><td><i>disable</i></td><td>Disable IKEv2 EAP authentication.</td></tr></table>	Option	Description	<i>enable</i>	Enable IKEv2 EAP authentication.	<i>disable</i>	Disable IKEv2 EAP authentication.					
Option	Description											
<i>enable</i>	Enable IKEv2 EAP authentication.											
<i>disable</i>	Disable IKEv2 EAP authentication.											
eap-cert-auth	Enable/disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.</td></tr><tr><td><i>disable</i></td><td>Disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.</td></tr></table>	Option	Description	<i>enable</i>	Enable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.	<i>disable</i>	Disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.					
Option	Description											
<i>enable</i>	Enable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.											
<i>disable</i>	Disable peer certificate authentication in addition to EAP if peer is a FortiClient endpoint.											

Parameter	Description	Type	Size	Default										
eap-exclude-peergrp	Peer group excluded from EAP authentication.	string	Maximum length: 35											
eap-identity	IKEv2 EAP peer identity type.	option	-	use-id-payload										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>use-id-payload</i></td><td>Use IKEv2 IDi payload to resolve peer identity.</td></tr><tr><td><i>send-request</i></td><td>Use EAP identity request to resolve peer identity.</td></tr></table>				Option	Description	<i>use-id-payload</i>	Use IKEv2 IDi payload to resolve peer identity.	<i>send-request</i>	Use EAP identity request to resolve peer identity.				
	Option	Description												
	<i>use-id-payload</i>	Use IKEv2 IDi payload to resolve peer identity.												
<i>send-request</i>	Use EAP identity request to resolve peer identity.													
ems-sn-check	Enable/disable verification of EMS serial number.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EMS serial number verification.</td></tr><tr><td><i>disable</i></td><td>Disable EMS serial number verification.</td></tr></table>				Option	Description	<i>enable</i>	Enable EMS serial number verification.	<i>disable</i>	Disable EMS serial number verification.				
	Option	Description												
	<i>enable</i>	Enable EMS serial number verification.												
<i>disable</i>	Disable EMS serial number verification.													
encap-local-gw4	Local IPv4 address of GRE/VXLAN tunnel.	ipv4-address	Not Specified	0.0.0.0										
encap-local-gw6	Local IPv6 address of GRE/VXLAN tunnel.	ipv6-address	Not Specified	::										
encap-remote-gw4	Remote IPv4 address of GRE/VXLAN tunnel.	ipv4-address	Not Specified	0.0.0.0										
encap-remote-gw6	Remote IPv6 address of GRE/VXLAN tunnel.	ipv6-address	Not Specified	::										
encapsulation	Enable/disable GRE/VXLAN/VPNID encapsulation.	option	-	none										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No additional encapsulation.</td></tr><tr><td><i>gre</i></td><td>GRE encapsulation.</td></tr><tr><td><i>vxlan</i></td><td>VXLAN encapsulation.</td></tr><tr><td><i>vpn-id-ipip</i></td><td>VPN ID with IPIP encapsulation.</td></tr></table>				Option	Description	<i>none</i>	No additional encapsulation.	<i>gre</i>	GRE encapsulation.	<i>vxlan</i>	VXLAN encapsulation.	<i>vpn-id-ipip</i>	VPN ID with IPIP encapsulation.
	Option	Description												
	<i>none</i>	No additional encapsulation.												
	<i>gre</i>	GRE encapsulation.												
	<i>vxlan</i>	VXLAN encapsulation.												
<i>vpn-id-ipip</i>	VPN ID with IPIP encapsulation.													
encapsulation-address	Source for GRE/VXLAN tunnel address.	option	-	ike										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ike</i></td><td>Use IKE/IPsec gateway addresses.</td></tr></table>				Option	Description	<i>ike</i>	Use IKE/IPsec gateway addresses.						
	Option	Description												
<i>ike</i>	Use IKE/IPsec gateway addresses.													

Parameter	Description	Type	Size	Default
	Option	Description		
	ipv4	Specify separate GRE/VXLAN tunnel address.		
	ipv6	Specify separate GRE/VXLAN tunnel address.		
enforce-unique-id	Enable/disable peer ID uniqueness check.	option	-	disable
	Option	Description		
	disable	Disable peer ID uniqueness enforcement.		
	keep-new	Enforce peer ID uniqueness, keep new connection if collision found.		
	keep-old	Enforce peer ID uniqueness, keep old connection if collision found.		
esn *	Extended sequence number (ESN) negotiation.	option	-	disable
	Option	Description		
	require	Require extended sequence number.		
	allow	Allow extended sequence number.		
	disable	Disable extended sequence number.		
exchange-fgt-device-id	Enable/disable device identifier exchange with peer FortiGate units for use of VPN monitor data by FortiManager.	option	-	disable
	Option	Description		
	enable	Enable exchange of FortiGate device identifier.		
	disable	Disable exchange of FortiGate device identifier.		
exchange-interface-ip	Enable/disable exchange of IPsec interface IP address.	option	-	disable
	Option	Description		
	enable	Enable exchange of IPsec interface IP address.		
	disable	Disable exchange of IPsec interface IP address.		
exchange-ip-addr4	IPv4 address to exchange with peers.	ipv4-address	Not Specified	0.0.0.0
exchange-ip-addr6	IPv6 address to exchange with peers.	ipv6-address	Not Specified	::

Parameter	Description	Type	Size	Default						
fec-base	Number of base Forward Error Correction packets (1 - 20).	integer	Minimum value: 1 Maximum value: 20	10						
fec-codec	Forward Error Correction encoding/decoding algorithm.	option	-	rs						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>rs</td><td>Reed-Solomon FEC algorithm.</td></tr><tr><td>xor</td><td>XOR FEC algorithm.</td></tr></table>	Option	Description	rs	Reed-Solomon FEC algorithm.	xor	XOR FEC algorithm.			
Option	Description									
rs	Reed-Solomon FEC algorithm.									
xor	XOR FEC algorithm.									
fec-egress	Enable/disable Forward Error Correction for egress IPsec traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable Forward Error Correction for egress IPsec traffic.</td></tr><tr><td>disable</td><td>Disable Forward Error Correction for egress IPsec traffic.</td></tr></table>	Option	Description	enable	Enable Forward Error Correction for egress IPsec traffic.	disable	Disable Forward Error Correction for egress IPsec traffic.			
Option	Description									
enable	Enable Forward Error Correction for egress IPsec traffic.									
disable	Disable Forward Error Correction for egress IPsec traffic.									
fec-health-check	SD-WAN health check.	string	Maximum length: 35							
fec-ingress	Enable/disable Forward Error Correction for ingress IPsec traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable Forward Error Correction for ingress IPsec traffic.</td></tr><tr><td>disable</td><td>Disable Forward Error Correction for ingress IPsec traffic.</td></tr></table>	Option	Description	enable	Enable Forward Error Correction for ingress IPsec traffic.	disable	Disable Forward Error Correction for ingress IPsec traffic.			
Option	Description									
enable	Enable Forward Error Correction for ingress IPsec traffic.									
disable	Disable Forward Error Correction for ingress IPsec traffic.									
fec-mapping-profile	Forward Error Correction (FEC) mapping profile.	string	Maximum length: 35							
fec-receive-timeout	Timeout in milliseconds before dropping Forward Error Correction packets (1 - 1000).	integer	Minimum value: 1 Maximum value: 1000	50						
fec-redundant	Number of redundant Forward Error Correction packets (1 - 5 for reed-solomon, 1 for xor).	integer	Minimum value: 1 Maximum value: 5	1						
fec-send-timeout	Timeout in milliseconds before sending Forward Error Correction packets (1 - 1000).	integer	Minimum value: 1 Maximum value: 1000	5						
fgsp-sync	Enable/disable IPsec syncing of tunnels for FGSP IPsec.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable IPsec syncing of tunnels to other cluster members.		
	<i>disable</i>	Disable IPsec syncing of tunnels to other cluster members.		
fortinet-esp	Enable/disable Fortinet ESP encapsulation.	option	-	disable
	Option Description			
	<i>enable</i>	Enable Fortinet ESP encapsulation.		
	<i>disable</i>	Disable Fortinet ESP encapsulation.		
fragmentation	Enable/disable fragment IKE message on re-transmission.	option	-	enable
	Option Description			
	<i>enable</i>	Enable intra-IKE fragmentation support on re-transmission.		
	<i>disable</i>	Disable intra-IKE fragmentation support.		
fragmentation-mtu	IKE fragmentation MTU (500 - 16000).	integer	Minimum value: 500 Maximum value: 16000	1200
group-authentication	Enable/disable IKEv2 IDi group authentication.	option	-	disable
	Option Description			
	<i>enable</i>	Enable IKEv2 IDi group authentication.		
	<i>disable</i>	Disable IKEv2 IDi group authentication.		
group-authentication-secret	Password for IKEv2 ID group authentication. ASCII string or hexadecimal indicated by a leading 0x.	password-3	Not Specified	
ha-sync-esp-seqno	Enable/disable sequence number jump ahead for IPsec HA.	option	-	enable
	Option Description			
	<i>enable</i>	Enable HA syncing of ESP sequence numbers.		
	<i>disable</i>	Disable HA syncing of ESP sequence numbers.		
idle-timeout	Enable/disable IPsec tunnel idle timeout.	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPsec tunnel idle timeout.</td></tr><tr><td><i>disable</i></td><td>Disable IPsec tunnel idle timeout.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPsec tunnel idle timeout.	<i>disable</i>	Disable IPsec tunnel idle timeout.			
	Option	Description								
	<i>enable</i>	Enable IPsec tunnel idle timeout.								
<i>disable</i>	Disable IPsec tunnel idle timeout.									
idle-timeoutinterval	IPsec tunnel idle timeout in minutes (5 - 43200).	integer	Minimum value: 15 5 Maximum value: 43200							
ike-version	IKE protocol version.	option	-	1						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>1</td><td>Use IKEv1 protocol.</td></tr><tr><td>2</td><td>Use IKEv2 protocol.</td></tr></table>	Option	Description	1	Use IKEv1 protocol.	2	Use IKEv2 protocol.			
	Option	Description								
	1	Use IKEv1 protocol.								
2	Use IKEv2 protocol.									
inbound-dscp-copy	Enable/disable copy the dscp in the ESP header to the inner IP Header.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable copy the dscp in the ESP header to the inner IP Header.</td></tr><tr><td><i>disable</i></td><td>Disable copy the dscp in the ESP header to the inner IP Header.</td></tr></table>	Option	Description	<i>enable</i>	Enable copy the dscp in the ESP header to the inner IP Header.	<i>disable</i>	Disable copy the dscp in the ESP header to the inner IP Header.			
	Option	Description								
	<i>enable</i>	Enable copy the dscp in the ESP header to the inner IP Header.								
<i>disable</i>	Disable copy the dscp in the ESP header to the inner IP Header.									
include-local-lan	Enable/disable allow local LAN access on unity clients.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable local LAN access on Unity clients.</td></tr><tr><td><i>enable</i></td><td>Enable local LAN access on Unity clients.</td></tr></table>	Option	Description	<i>disable</i>	Disable local LAN access on Unity clients.	<i>enable</i>	Enable local LAN access on Unity clients.			
	Option	Description								
	<i>disable</i>	Disable local LAN access on Unity clients.								
<i>enable</i>	Enable local LAN access on Unity clients.									
interface	Local physical, aggregate, or VLAN outgoing interface.	string	Maximum length: 35							
internal-domain-list <domain-name>	One or more internal domain names in quotes separated by spaces. Domain name.	string	Maximum length: 79							
ip-delay-interval	IP address reuse delay interval in seconds (0 - 28800).	integer	Minimum value: 0 0 Maximum value: 28800							
ip-fragmentation	Determine whether IP packets are fragmented before or after IPsec encapsulation.	option	-	post-encapsulation						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pre-encapsulation</i></td><td>Fragment before IPsec encapsulation.</td></tr><tr><td><i>post-encapsulation</i></td><td>Fragment after IPsec encapsulation (RFC compliant).</td></tr></table>	Option	Description	<i>pre-encapsulation</i>	Fragment before IPsec encapsulation.	<i>post-encapsulation</i>	Fragment after IPsec encapsulation (RFC compliant).			
	Option	Description								
	<i>pre-encapsulation</i>	Fragment before IPsec encapsulation.								
<i>post-encapsulation</i>	Fragment after IPsec encapsulation (RFC compliant).									
ip-version	IP version to use for VPN interface.	option	-	4						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>4</td><td>Use IPv4 addressing for gateways.</td></tr><tr><td>6</td><td>Use IPv6 addressing for gateways.</td></tr></table>	Option	Description	4	Use IPv4 addressing for gateways.	6	Use IPv6 addressing for gateways.			
	Option	Description								
	4	Use IPv4 addressing for gateways.								
6	Use IPv6 addressing for gateways.									
ipv4-dns-server1	IPv4 DNS server 1.	ipv4-address	Not Specified	0.0.0.0						
ipv4-dns-server2	IPv4 DNS server 2.	ipv4-address	Not Specified	0.0.0.0						
ipv4-dns-server3	IPv4 DNS server 3.	ipv4-address	Not Specified	0.0.0.0						
ipv4-end-ip	End of IPv4 range.	ipv4-address	Not Specified	0.0.0.0						
ipv4-name	IPv4 address name.	string	Maximum length: 79							
ipv4-netmask	IPv4 Netmask.	ipv4-netmask	Not Specified	255.255.255.255						
ipv4-split-exclude	IPv4 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79							
ipv4-split-include	IPv4 split-include subnets.	string	Maximum length: 79							
ipv4-start-ip	Start of IPv4 range.	ipv4-address	Not Specified	0.0.0.0						
ipv4-wins-server1	WINS server 1.	ipv4-address	Not Specified	0.0.0.0						
ipv4-wins-server2	WINS server 2.	ipv4-address	Not Specified	0.0.0.0						

Parameter	Description	Type	Size	Default						
ipv6-auto-linklocal	Enable/disable auto generation of IPv6 link-local address using last 8 bytes of mode-cfg assigned IPv6 address.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable mode-cfg auto configuration of IPv6 link-local address.</td></tr><tr><td><i>disable</i></td><td>Disable mode-cfg auto configuration of IPv6 link-local address.</td></tr></table>				Option	Description	<i>enable</i>	Enable mode-cfg auto configuration of IPv6 link-local address.	<i>disable</i>	Disable mode-cfg auto configuration of IPv6 link-local address.
Option	Description									
<i>enable</i>	Enable mode-cfg auto configuration of IPv6 link-local address.									
<i>disable</i>	Disable mode-cfg auto configuration of IPv6 link-local address.									
ipv6-dns-server1	IPv6 DNS server 1.	ipv6-address	Not Specified	::						
ipv6-dns-server2	IPv6 DNS server 2.	ipv6-address	Not Specified	::						
ipv6-dns-server3	IPv6 DNS server 3.	ipv6-address	Not Specified	::						
ipv6-end-ip	End of IPv6 range.	ipv6-address	Not Specified	::						
ipv6-name	IPv6 address name.	string	Maximum length: 79							
ipv6-prefix	IPv6 prefix.	integer	Minimum value: 1 Maximum value: 128	128						
ipv6-split-exclude	IPv6 subnets that should not be sent over the IPsec tunnel.	string	Maximum length: 79							
ipv6-split-include	IPv6 split-include subnets.	string	Maximum length: 79							
ipv6-start-ip	Start of IPv6 range.	ipv6-address	Not Specified	::						
keepalive	NAT-T keep alive interval.	integer	Minimum value: 5 Maximum value: 900	10						
keylife	Time to wait in seconds before phase 1 encryption key expires.	integer	Minimum value: 120 Maximum value: 172800	86400						
kms	Key Management Services server.	string	Maximum length: 35							
link-cost	VPN tunnel underlay link cost.	integer	Minimum value: 0 Maximum value: 255	0						

Parameter	Description	Type	Size	Default
local-gw	IPv4 address of the local gateway's external interface.	ipv4-address	Not Specified	0.0.0.0
local-gw6	IPv6 address of the local gateway's external interface.	ipv6-address	Not Specified	::
localid	Local ID.	string	Maximum length: 63	
localid-type	Local ID type.	option	-	auto
	Option		Description	
	auto	Select ID type automatically.		
	fqdn	Use fully qualified domain name.		
	user-fqdn	Use user fully qualified domain name.		
	keyid	Use key-id string.		
	address	Use local IP address.		
	asn1dn	Use ASN.1 distinguished name.		
loopback-asymroute	Enable/disable asymmetric routing for IKE traffic on loopback interface.	option	-	enable
	Option		Description	
	enable	Allow ingress/egress IKE traffic to be routed over different interfaces.		
	disable	Ingress/egress IKE traffic must be routed over the same interface.		
mesh-selector-type	Add selectors containing subsets of the configuration depending on traffic.	option	-	disable
	Option		Description	
	disable	Disable.		
	subnet	Enable addition of matching subnet selector.		
	host	Enable addition of host to host selector.		
mode	The ID protection mode used to establish a secure channel.	option	-	main

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>aggressive</i></td><td>Aggressive mode.</td></tr><tr><td><i>main</i></td><td>Main mode.</td></tr></table>	Option	Description	<i>aggressive</i>	Aggressive mode.	<i>main</i>	Main mode.					
	Option	Description										
	<i>aggressive</i>	Aggressive mode.										
<i>main</i>	Main mode.											
mode-cfg	Enable/disable configuration method.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Configuration Method.</td></tr><tr><td><i>enable</i></td><td>Enable Configuration Method.</td></tr></table>	Option	Description	<i>disable</i>	Disable Configuration Method.	<i>enable</i>	Enable Configuration Method.					
	Option	Description										
	<i>disable</i>	Disable Configuration Method.										
<i>enable</i>	Enable Configuration Method.											
mode-cfg-allow-client-selector	Enable/disable mode-cfg client to use custom phase2 selectors.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Mode-cfg client to use wildcard selectors.</td></tr><tr><td><i>enable</i></td><td>Mode-cfg client to use custom selectors.</td></tr></table>	Option	Description	<i>disable</i>	Mode-cfg client to use wildcard selectors.	<i>enable</i>	Mode-cfg client to use custom selectors.					
	Option	Description										
	<i>disable</i>	Mode-cfg client to use wildcard selectors.										
<i>enable</i>	Mode-cfg client to use custom selectors.											
monitor <name>	IPsec interface as backup for primary interface. IPsec interface as backup for primary interface.	string	Maximum length: 79									
monitor-hold-down-delay	Time to wait in seconds before recovery once primary re-establishes.	integer	Minimum value: 0 Maximum value: 31536000									
monitor-hold-down-time	Time of day at which to fail back to primary after it re-establishes.	user	Not Specified									
monitor-hold-down-type	Recovery time method when primary interface re-establishes.	option	-	immediate								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>immediate</i></td><td>Fail back immediately after primary recovers.</td></tr><tr><td><i>delay</i></td><td>Number of seconds to delay fail back after primary recovers.</td></tr><tr><td><i>time</i></td><td>Specify a time at which to fail back after primary recovers.</td></tr></table>	Option	Description	<i>immediate</i>	Fail back immediately after primary recovers.	<i>delay</i>	Number of seconds to delay fail back after primary recovers.	<i>time</i>	Specify a time at which to fail back after primary recovers.			
	Option	Description										
	<i>immediate</i>	Fail back immediately after primary recovers.										
	<i>delay</i>	Number of seconds to delay fail back after primary recovers.										
<i>time</i>	Specify a time at which to fail back after primary recovers.											
monitor-hold-down-weekday	Day of the week to recover once primary re-establishes.	option	-	sunday								

Parameter	Description	Type	Size	Default																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>everyday</i></td><td>Every Day.</td></tr><tr><td><i>sunday</i></td><td>Sunday.</td></tr><tr><td><i>monday</i></td><td>Monday.</td></tr><tr><td><i>tuesday</i></td><td>Tuesday.</td></tr><tr><td><i>wednesday</i></td><td>Wednesday.</td></tr><tr><td><i>thursday</i></td><td>Thursday.</td></tr><tr><td><i>friday</i></td><td>Friday.</td></tr><tr><td><i>saturday</i></td><td>Saturday.</td></tr></table>	Option	Description	<i>everyday</i>	Every Day.	<i>sunday</i>	Sunday.	<i>monday</i>	Monday.	<i>tuesday</i>	Tuesday.	<i>wednesday</i>	Wednesday.	<i>thursday</i>	Thursday.	<i>friday</i>	Friday.	<i>saturday</i>	Saturday.			
	Option	Description																				
	<i>everyday</i>	Every Day.																				
	<i>sunday</i>	Sunday.																				
	<i>monday</i>	Monday.																				
	<i>tuesday</i>	Tuesday.																				
	<i>wednesday</i>	Wednesday.																				
	<i>thursday</i>	Thursday.																				
	<i>friday</i>	Friday.																				
<i>saturday</i>	Saturday.																					
monitor-min	Minimum number of links to become degraded before activating this interface. Zero (0) means all links must be down before activating this interface.	integer	Minimum value: 0 0 Maximum value: 4294967295																			
name	IPsec remote gateway name.	string	Maximum length: 15																			
nattraversal	Enable/disable NAT traversal.	option	-	enable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPsec NAT traversal.</td></tr><tr><td><i>disable</i></td><td>Disable IPsec NAT traversal.</td></tr><tr><td><i>forced</i></td><td>Force IPsec NAT traversal on.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPsec NAT traversal.	<i>disable</i>	Disable IPsec NAT traversal.	<i>forced</i>	Force IPsec NAT traversal on.													
	Option	Description																				
	<i>enable</i>	Enable IPsec NAT traversal.																				
	<i>disable</i>	Disable IPsec NAT traversal.																				
<i>forced</i>	Force IPsec NAT traversal on.																					
negotiate-timeout	IKE SA negotiation timeout in seconds (1 - 300).	integer	Minimum value: 30 1 Maximum value: 300																			
net-device	Enable/disable kernel device creation.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Create a kernel device for every tunnel.</td></tr><tr><td><i>disable</i></td><td>Do not create a kernel device for tunnels.</td></tr></table>	Option	Description	<i>enable</i>	Create a kernel device for every tunnel.	<i>disable</i>	Do not create a kernel device for tunnels.															
	Option	Description																				
	<i>enable</i>	Create a kernel device for every tunnel.																				
<i>disable</i>	Do not create a kernel device for tunnels.																					
network-id	VPN gateway network ID.	integer	Minimum value: 0 0 Maximum value: 255																			

Parameter	Description	Type	Size	Default								
network-overlay	Enable/disable network overlays.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable network overlays.</td></tr><tr><td><i>enable</i></td><td>Enable network overlays.</td></tr></table>	Option	Description	<i>disable</i>	Disable network overlays.	<i>enable</i>	Enable network overlays.					
Option	Description											
<i>disable</i>	Disable network overlays.											
<i>enable</i>	Enable network overlays.											
npu-offload *	Enable/disable offloading NPU.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable NPU offloading.</td></tr><tr><td><i>disable</i></td><td>Disable NPU offloading.</td></tr></table>	Option	Description	<i>enable</i>	Enable NPU offloading.	<i>disable</i>	Disable NPU offloading.					
Option	Description											
<i>enable</i>	Enable NPU offloading.											
<i>disable</i>	Disable NPU offloading.											
packet-redistribution *	Enable/disable packet distribution (RPS) on the IPsec interface.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable packet redistribution.</td></tr><tr><td><i>disable</i></td><td>Disable packet redistribution.</td></tr></table>	Option	Description	<i>enable</i>	Enable packet redistribution.	<i>disable</i>	Disable packet redistribution.					
Option	Description											
<i>enable</i>	Enable packet redistribution.											
<i>disable</i>	Disable packet redistribution.											
passive-mode	Enable/disable IPsec passive mode for static tunnels.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable IPsec passive mode.</td></tr><tr><td><i>disable</i></td><td>Disable IPsec passive mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable IPsec passive mode.	<i>disable</i>	Disable IPsec passive mode.					
Option	Description											
<i>enable</i>	Enable IPsec passive mode.											
<i>disable</i>	Disable IPsec passive mode.											
peer	Accept this peer certificate.	string	Maximum length: 35									
peergrp	Accept this peer certificate group.	string	Maximum length: 35									
peerid	Accept this peer identity.	string	Maximum length: 255									
peertype	Accept this peer type.	option	-	peer								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Accept any peer ID.</td></tr><tr><td><i>one</i></td><td>Accept this peer ID.</td></tr><tr><td><i>dialup</i></td><td>Accept peer ID in dialup group.</td></tr></table>	Option	Description	<i>any</i>	Accept any peer ID.	<i>one</i>	Accept this peer ID.	<i>dialup</i>	Accept peer ID in dialup group.			
Option	Description											
<i>any</i>	Accept any peer ID.											
<i>one</i>	Accept this peer ID.											
<i>dialup</i>	Accept peer ID in dialup group.											

Parameter	Description	Type	Size	Default																						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>peer</i></td><td>Accept this peer certificate.</td></tr><tr><td><i>peergrp</i></td><td>Accept this peer certificate group.</td></tr></table>	Option	Description	<i>peer</i>	Accept this peer certificate.	<i>peergrp</i>	Accept this peer certificate group.																			
	Option	Description																								
	<i>peer</i>	Accept this peer certificate.																								
<i>peergrp</i>	Accept this peer certificate group.																									
ppk	Enable/disable IKEv2 Postquantum Preshared Key (PPK).	option	-	disable																						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>allow</i></td><td>Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).</td></tr><tr><td><i>require</i></td><td>Require use of IKEv2 Postquantum Preshared Key (PPK).</td></tr></table>	Option	Description	<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).	<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).	<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).																	
	Option	Description																								
	<i>disable</i>	Disable use of IKEv2 Postquantum Preshared Key (PPK).																								
	<i>allow</i>	Allow, but do not require, use of IKEv2 Postquantum Preshared Key (PPK).																								
<i>require</i>	Require use of IKEv2 Postquantum Preshared Key (PPK).																									
ppk-identity	IKEv2 Postquantum Preshared Key Identity.	string	Maximum length: 35																							
ppk-secret	IKEv2 Postquantum Preshared Key (ASCII string or hexadecimal encoded with a leading 0x).	password-3	Not Specified																							
priority	Priority for routes added by IKE (1 - 65535).	integer	Minimum value: 1 1 Maximum value: 65535																							
proposal	Phase1 proposal.	option	-

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable phase1 rekey.</td></tr><tr><td><i>disable</i></td><td>Disable phase1 rekey.</td></tr></table>	Option	Description	<i>enable</i>	Enable phase1 rekey.	<i>disable</i>	Disable phase1 rekey.					
	Option	Description										
	<i>enable</i>	Enable phase1 rekey.										
<i>disable</i>	Disable phase1 rekey.											
remote-gw	IPv4 address of the remote gateway's external interface.	ipv4-address	Not Specified	0.0.0.0								
remote-gw-country	IPv4 addresses associated to a specific country.	string	Maximum length: 2									
remote-gw-end-ip	Last IPv4 address in the range.	ipv4-address-any	Not Specified	0.0.0.0								
remote-gw-match	Set type of IPv4 remote gateway address matching.	option	-	any								

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Match any IPv4 gateway address.</td></tr><tr><td><i>ipmask</i></td><td>Match IPv4 gateway address and mask.</td></tr><tr><td><i>iprange</i></td><td>Match IPv4 gateway address range.</td></tr><tr><td><i>geography</i></td><td>Match IPv4 gateway address from a specified country.</td></tr><tr><td><i>ztna</i></td><td>Match IPv4 gateway address against ZTNA posture tags.</td></tr></table>	Option	Description	<i>any</i>	Match any IPv4 gateway address.	<i>ipmask</i>	Match IPv4 gateway address and mask.	<i>iprange</i>	Match IPv4 gateway address range.	<i>geography</i>	Match IPv4 gateway address from a specified country.	<i>ztna</i>	Match IPv4 gateway address against ZTNA posture tags.			
	Option	Description														
	<i>any</i>	Match any IPv4 gateway address.														
	<i>ipmask</i>	Match IPv4 gateway address and mask.														
	<i>iprange</i>	Match IPv4 gateway address range.														
	<i>geography</i>	Match IPv4 gateway address from a specified country.														
<i>ztna</i>	Match IPv4 gateway address against ZTNA posture tags.															
remote-gw-start-ip	First IPv4 address in the range.	ipv4-address-any	Not Specified	0.0.0.0												
remote-gw-subnet	IPv4 address and subnet mask.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0												
remote-gw-ztna-tags <name>	IPv4 ZTNA posture tags. Address name.	string	Maximum length: 79													
remote-gw6	IPv6 address of the remote gateway's external interface.	ipv6-address	Not Specified	::												
remote-gw6-country	IPv6 addresses associated to a specific country.	string	Maximum length: 2													
remote-gw6-end-ip	Last IPv6 address in the range.	ipv6-address	Not Specified	::												
remote-gw6-match	Set type of IPv6 remote gateway address matching.	option	-	any												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>any</i></td><td>Match any IPv6 gateway address.</td></tr><tr><td><i>ipprefix</i></td><td>Match IPv6 gateway address and prefix.</td></tr><tr><td><i>iprange</i></td><td>Match IPv6 gateway address range.</td></tr><tr><td><i>geography</i></td><td>Match IPv6 gateway address from a specified country.</td></tr></table>	Option	Description	<i>any</i>	Match any IPv6 gateway address.	<i>ipprefix</i>	Match IPv6 gateway address and prefix.	<i>iprange</i>	Match IPv6 gateway address range.	<i>geography</i>	Match IPv6 gateway address from a specified country.					
	Option	Description														
	<i>any</i>	Match any IPv6 gateway address.														
	<i>ipprefix</i>	Match IPv6 gateway address and prefix.														
	<i>iprange</i>	Match IPv6 gateway address range.														
<i>geography</i>	Match IPv6 gateway address from a specified country.															
remote-gw6-start-ip	First IPv6 address in the range.	ipv6-address	Not Specified	::												
remote-gw6-subnet	IPv6 address and prefix.	ipv6-network	Not Specified	::/0												
remotegw-ddns	Domain name of remote gateway. For example, name.ddns.com.	string	Maximum length: 63													
rsa-signature-format	Digital Signature Authentication RSA signature format.	option	-	pkcs1												

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>pkcs1</i>	RSASSA PKCS#1 v1.5.		
	<i>pss</i>	RSASSA Probabilistic Signature Scheme (PSS).		
rsa-signature-hash-override	Enable/disable IKEv2 RSA signature hash algorithm override.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable IKEv2 RSA signature hash algorithm override.		
	<i>disable</i>	Disable IKEv2 RSA signature hash algorithm override.		
save-password	Enable/disable saving XAuth username and password on VPN clients.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable saving XAuth username and password on VPN clients.		
	<i>enable</i>	Enable saving XAuth username and password on VPN clients.		
send-cert-chain	Enable/disable sending certificate chain.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable sending certificate chain.		
	<i>disable</i>	Disable sending certificate chain.		
shared-idle-timeout	Enable/disable IPsec tunnel shared idle timeout.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable IPsec tunnel shared idle timeout. The location-id attribute must be configured on both spokes. Shared idle timeout is supported only on IKEv2 since remote-location is available only for IKEv2.		
	<i>disable</i>	Disable IPsec tunnel shared idle timeout.		
signature-hash-alg	Digital Signature Authentication hash algorithms.	option	-	sha2-512

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>sha1</td><td>SHA1.</td></tr><tr><td>sha2-256</td><td>SHA2-256.</td></tr><tr><td>sha2-384</td><td>SHA2-384.</td></tr><tr><td>sha2-512</td><td>SHA2-512.</td></tr></table>	Option	Description	sha1	SHA1.	sha2-256	SHA2-256.	sha2-384	SHA2-384.	sha2-512	SHA2-512.			
	Option	Description												
	sha1	SHA1.												
	sha2-256	SHA2-256.												
	sha2-384	SHA2-384.												
sha2-512	SHA2-512.													
split-include-service	Split-include services.	string	Maximum length: 79											
suite-b	Use Suite-B.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not use UI suite.</td></tr><tr><td>suite-b-gcm-128</td><td>Use Suite-B-GCM-128.</td></tr><tr><td>suite-b-gcm-256</td><td>Use Suite-B-GCM-256.</td></tr></table>	Option	Description	disable	Do not use UI suite.	suite-b-gcm-128	Use Suite-B-GCM-128.	suite-b-gcm-256	Use Suite-B-GCM-256.					
	Option	Description												
	disable	Do not use UI suite.												
	suite-b-gcm-128	Use Suite-B-GCM-128.												
	suite-b-gcm-256	Use Suite-B-GCM-256.												
transport	Set IKE transport protocol.	option	-	auto										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>udp</td><td>Use UDP transport for IKE.</td></tr><tr><td>auto</td><td>Use AUTO transport for IKE.</td></tr><tr><td>tcp</td><td>Use TCP transport for IKE.</td></tr></table>	Option	Description	udp	Use UDP transport for IKE.	auto	Use AUTO transport for IKE.	tcp	Use TCP transport for IKE.					
	Option	Description												
	udp	Use UDP transport for IKE.												
	auto	Use AUTO transport for IKE.												
	tcp	Use TCP transport for IKE.												
type	Remote gateway type.	option	-	static										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>static</td><td>Remote VPN gateway has fixed IP address.</td></tr><tr><td>dynamic</td><td>Remote VPN gateway has dynamic IP address.</td></tr><tr><td>ddns</td><td>Remote VPN gateway has dynamic IP address and is a dynamic DNS client.</td></tr></table>	Option	Description	static	Remote VPN gateway has fixed IP address.	dynamic	Remote VPN gateway has dynamic IP address.	ddns	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.					
	Option	Description												
	static	Remote VPN gateway has fixed IP address.												
	dynamic	Remote VPN gateway has dynamic IP address.												
	ddns	Remote VPN gateway has dynamic IP address and is a dynamic DNS client.												
unity-support	Enable/disable support for Cisco UNITY Configuration Method extensions.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable Cisco Unity Configuration Method Extensions.</td></tr><tr><td>enable</td><td>Enable Cisco Unity Configuration Method Extensions.</td></tr></table>	Option	Description	disable	Disable Cisco Unity Configuration Method Extensions.	enable	Enable Cisco Unity Configuration Method Extensions.							
	Option	Description												
	disable	Disable Cisco Unity Configuration Method Extensions.												
enable	Enable Cisco Unity Configuration Method Extensions.													

Parameter	Description	Type	Size	Default
usrgrp	User group name for dialup peers.	string	Maximum length: 35	
vni	VNI of VXLAN tunnel.	integer	Minimum value: 0 1 Maximum value: 16777215	
wizard-type	GUI VPN Wizard Type.	option	-	custom
	Option	Description		
	custom	Custom VPN configuration.		
	dialup-forticlient	Dial Up - FortiClient Windows, Mac and Android.		
	dialup-ios	Dial Up - iPhone / iPad Native IPsec Client.		
	dialup-android	Dial Up - Android Native IPsec Client.		
	dialup-windows	Dial Up - Windows Native IPsec Client.		
	dialup-cisco	Dial Up - Cisco IPsec Client.		
	static-fortigate	Site to Site - FortiGate.		
	dialup-fortigate	Dial Up - FortiGate.		
	static-cisco	Site to Site - Cisco.		
	dialup-cisco-fw	Dialup Up - Cisco Firewall.		
	simplified-static-fortigate	Site to Site - FortiGate (SD-WAN).		
	hub-fortigate-auto-discovery	Hub role in a Hub-and-Spoke auto-discovery VPN.		
	spoke-fortigate-auto-discovery	Spoke role in a Hub-and-Spoke auto-discovery VPN.		
	fabric-overlay-orchestrator	Fabric Overlay Orchestrator.		
xauthtype	XAuth type.	option	-	disable
	Option	Description		
	disable	Disable.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>client</i>	Enable as client.		
	<i>pap</i>	Enable as server PAP.		
	<i>chap</i>	Enable as server CHAP.		
	<i>auto</i>	Enable as server auto.		

* This parameter may not exist in some models.

config ipv4-exclude-range

Parameter	Description	Type	Size	Default
end-ip	End of IPv4 exclusive range.	ipv4-address	Not Specified	0.0.0.0
id	ID.	integer	Minimum value: 0 0 Maximum value: 4294967295	0
start-ip	Start of IPv4 exclusive range.	ipv4-address	Not Specified	0.0.0.0

	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>use-old</i></td><td>Use the old route and do not add the new route.</td></tr><tr><td><i>use-new</i></td><td>Delete the old route and add the new route.</td></tr><tr><td><i>allow</i></td><td>Allow overlapping routes.</td></tr></table>	Option	Description	<i>use-old</i>	Use the old route and do not add the new route.	<i>use-new</i>	Delete the old route and add the new route.	<i>allow</i>	Allow overlapping routes.																								
	Option	Description																															
	<i>use-old</i>	Use the old route and do not add the new route.																															
	<i>use-new</i>	Delete the old route and add the new route.																															
<i>allow</i>	Allow overlapping routes.																																
selector-match	Match type to use when comparing selectors.	option	-	auto																													

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>exact</i>	Match selectors exactly.		
	<i>subset</i>	Match selectors by subset.		
	<i>auto</i>	Use subset or exact match depending on selector address type.		
single-source	Enable/disable single source IP restriction.	option	-	disable
	Option	Description		
	<i>enable</i>	Only single source IP will be accepted.		
	<i>disable</i>	Source IP range will be accepted.		
src-addr-type	Local proxy ID type.	option	-	subnet
	Option	Description		
	<i>subnet</i>	IPv4 subnet.		
	<i>range</i>	IPv4 range.		
	<i>ip</i>	IPv4 IP.		
	<i>name</i>	IPv4 firewall address or group name.		
src-end-ip	Local proxy ID end.	ipv4-address-any	Not Specified	0.0.0.0
src-end-ip6	Local proxy ID IPv6 end.	ipv6-address	Not Specified	::
src-name	Local proxy ID name.	string	Maximum length: 79	
src-name6	Local proxy ID name.	string	Maximum length: 79	
src-port	Quick mode source port (1 - 65535 or 0 for all).	integer	Minimum value: 0 0 Maximum value: 65535	0
src-start-ip	Local proxy ID start.	ipv4-address-any	Not Specified	0.0.0.0
src-start-ip6	Local proxy ID IPv6 start.	ipv6-address	Not Specified	::

Parameter	Description	Type	Size	Default
src-subnet	Local proxy ID subnet.	ipv4-classnet-any	Not Specified	0.0.0.0 0.0.0.0
src-subnet6	Local proxy ID IPv6 subnet.	ipv6-prefix	Not Specified	::/0
use-natip	Enable to use the FortiGate public IP as the source selector when outbound NAT is used.	option	-	enable

Option	Description
<i>enable</i>	Replace source selector with interface IP when using outbound NAT.
<i>disable</i>	Do not modify source selector when using outbound NAT.

	<table><tr><th>Option</th><th>Description</th></tr><tr><td>range</td><td>PPTP client IP from manual config (range from sip to eip).</td></tr><tr><td>usrgrp</td><td>PPTP client IP from user-group defined server.</td></tr></table>				Option	Description	range	PPTP client IP from manual config (range from sip to eip).	usrgrp	PPTP client IP from user-group defined server.
	Option	Description								
	range	PPTP client IP from manual config (range from sip to eip).								
usrgrp	PPTP client IP from user-group defined server.									
local-ip	Local IP to be used for peer's remote IP.	ipv4-address	Not Specified	0.0.0.0						
sip	Start IP.	ipv4-address	Not Specified	0.0.0.0						
status	Enable/disable FortiGate as a PPTP gateway.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>				Option	Description	enable	Enable setting.	disable	Disable setting.
	Option	Description								
	enable	Enable setting.								
disable	Disable setting.									
usrgrp	User group.	string	Maximum length: 35							

config vpn qkd

Configure Quantum Key Distribution servers

```

config vpn qkd
    Description: Configure Quantum Key Distribution servers
    edit <name>
        set certificate <name1>, <name2>, ...
        set comment {var-string}
        set id {string}
        set peer {string}
        set port {integer}
        set server {string}
    next
end

```

config vpn qkd

Parameter	Description	Type	Size	Default
certificate <name>	Names of up to 4 certificates to offer to the KME. Certificate name.	string	Maximum length: 79	
comment	Comment.	var-string	Maximum length: 255	
id	Quantum Key Distribution ID assigned by the KME.	string	Maximum length: 291	
name	Quantum Key Distribution configuration name.	string	Maximum length: 35	
peer	Authenticate Quantum Key Device's certificate with the peer/peergrp.	string	Maximum length: 35	
port	Port to connect to on the KME.	integer	Minimum value: 1 Maximum value: 65535	0
server	IPv4, IPv6 or DNS address of the KME.	string	Maximum length: 63

config vpn ssl settings

Parameter	Description	Type	Size	Default																
algorithm	Force the Agentless VPN security level. High allows only high. Medium allows medium and high. Low allows any.	option	-	high																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>high</td><td>High algorithms.</td></tr><tr><td>medium</td><td>High and medium algorithms.</td></tr><tr><td>default</td><td>default</td></tr><tr><td>low</td><td>All algorithms.</td></tr></table>	Option	Description	high	High algorithms.	medium	High and medium algorithms.	default	default	low	All algorithms.									
Option	Description																			
high	High algorithms.																			
medium	High and medium algorithms.																			
default	default																			
low	All algorithms.																			
auth-session-check-source-ip	Enable/disable checking of source IP for authentication session.	option	-	enable																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable checking of source IP for authentication session.</td></tr><tr><td>disable</td><td>Disable checking of source IP for authentication session.</td></tr></table>	Option	Description	enable	Enable checking of source IP for authentication session.	disable	Disable checking of source IP for authentication session.													
Option	Description																			
enable	Enable checking of source IP for authentication session.																			
disable	Disable checking of source IP for authentication session.																			
auth-timeout	Agentless VPN authentication timeout (1 - 259200 sec (3 days), 0 for no timeout).	integer	Minimum value: 0 Maximum value: 259200	28800																
banned-cipher	Select one or more cipher technologies that cannot be used in Agentless VPN negotiations. Only applies to TLS 1.2 and below.	option	-	SHA1 SHA256 SHA384																
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>RSA</td><td>Ban the use of cipher suites using RSA key.</td></tr><tr><td>DHE</td><td>Ban the use of cipher suites using authenticated ephemeral DH key agreement.</td></tr><tr><td>ECDHE</td><td>Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.</td></tr><tr><td>DSS</td><td>Ban the use of cipher suites using DSS authentication.</td></tr><tr><td>ECDSA</td><td>Ban the use of cipher suites using ECDSA authentication.</td></tr><tr><td>AES</td><td>Ban the use of cipher suites using either 128 or 256 bit AES.</td></tr><tr><td>AESGCM</td><td>Ban the use of cipher suites AES in Galois Counter Mode (GCM).</td></tr></table>	Option	Description	RSA	Ban the use of cipher suites using RSA key.	DHE	Ban the use of cipher suites using authenticated ephemeral DH key agreement.	ECDHE	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.	DSS	Ban the use of cipher suites using DSS authentication.	ECDSA	Ban the use of cipher suites using ECDSA authentication.	AES	Ban the use of cipher suites using either 128 or 256 bit AES.	AESGCM	Ban the use of cipher suites AES in Galois Counter Mode (GCM).			
Option	Description																			
RSA	Ban the use of cipher suites using RSA key.																			
DHE	Ban the use of cipher suites using authenticated ephemeral DH key agreement.																			
ECDHE	Ban the use of cipher suites using authenticated ephemeral ECDH key agreement.																			
DSS	Ban the use of cipher suites using DSS authentication.																			
ECDSA	Ban the use of cipher suites using ECDSA authentication.																			
AES	Ban the use of cipher suites using either 128 or 256 bit AES.																			
AESGCM	Ban the use of cipher suites AES in Galois Counter Mode (GCM).																			

Parameter	Description	Type	Size	Default																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>CAMELLIA</td><td>Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.</td></tr><tr><td>3DES</td><td>Ban the use of cipher suites using triple DES</td></tr><tr><td>SHA1</td><td>Ban the use of cipher suites using HMAC-SHA1.</td></tr><tr><td>SHA256</td><td>Ban the use of cipher suites using HMAC-SHA256.</td></tr><tr><td>SHA384</td><td>Ban the use of cipher suites using HMAC-SHA384.</td></tr><tr><td>STATIC</td><td>Ban the use of cipher suites using static keys.</td></tr><tr><td>CHACHA20</td><td>Ban the use of cipher suites using ChaCha20.</td></tr><tr><td>ARIA</td><td>Ban the use of cipher suites using ARIA.</td></tr><tr><td>AESCCM</td><td>Ban the use of cipher suites using AESCCM.</td></tr></table>	Option	Description	CAMELLIA	Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.	3DES	Ban the use of cipher suites using triple DES	SHA1	Ban the use of cipher suites using HMAC-SHA1.	SHA256	Ban the use of cipher suites using HMAC-SHA256.	SHA384	Ban the use of cipher suites using HMAC-SHA384.	STATIC	Ban the use of cipher suites using static keys.	CHACHA20	Ban the use of cipher suites using ChaCha20.	ARIA	Ban the use of cipher suites using ARIA.	AESCCM	Ban the use of cipher suites using AESCCM.			
	Option	Description																						
	CAMELLIA	Ban the use of cipher suites using either 128 or 256 bit CAMELLIA.																						
	3DES	Ban the use of cipher suites using triple DES																						
	SHA1	Ban the use of cipher suites using HMAC-SHA1.																						
	SHA256	Ban the use of cipher suites using HMAC-SHA256.																						
	SHA384	Ban the use of cipher suites using HMAC-SHA384.																						
	STATIC	Ban the use of cipher suites using static keys.																						
	CHACHA20	Ban the use of cipher suites using ChaCha20.																						
	ARIA	Ban the use of cipher suites using ARIA.																						
AESCCM	Ban the use of cipher suites using AESCCM.																							
browser-language-detection	Enable/disable overriding the configured system language based on the preferred language of the browser.	option	-	enable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.																	
	Option	Description																						
	enable	Enable setting.																						
disable	Disable setting.																							
check-referer	Enable/disable verification of referer field in HTTP request header.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable verification of referer field in HTTP request header.</td></tr><tr><td>disable</td><td>Disable verification of referer field in HTTP request header.</td></tr></table>	Option	Description	enable	Enable verification of referer field in HTTP request header.	disable	Disable verification of referer field in HTTP request header.																	
	Option	Description																						
	enable	Enable verification of referer field in HTTP request header.																						
disable	Disable verification of referer field in HTTP request header.																							
ciphersuite	Select one or more TLS 1.3 ciphersuites to enable. Does not affect ciphers in TLS 1.2 and below. At least one must be enabled. To disable all, set ssl-max-proto-ver to tls1-2 or below.	option	-	TLS-AES-128-GCM-SHA256 TLS-AES-256-GCM-SHA384 TLS-CHACHA20-POLY1305-SHA256																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>TLS-AES-128-GCM-SHA256</td><td>Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.</td></tr></table>	Option	Description	TLS-AES-128-GCM-SHA256	Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.																			
	Option	Description																						
TLS-AES-128-GCM-SHA256	Enable TLS-AES-128-GCM-SHA256 in TLS 1.3.																							

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>TLS-AES-256-GCM-SHA384</i></td><td>Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.</td></tr><tr><td><i>TLS-CHACHA20-POLY1305-SHA256</i></td><td>Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.</td></tr><tr><td><i>TLS-AES-128-CCM-SHA256</i></td><td>Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.</td></tr><tr><td><i>TLS-AES-128-CCM-8-SHA256</i></td><td>Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.</td></tr></table>	Option	Description	<i>TLS-AES-256-GCM-SHA384</i>	Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.	<i>TLS-CHACHA20-POLY1305-SHA256</i>	Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.	<i>TLS-AES-128-CCM-SHA256</i>	Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.	<i>TLS-AES-128-CCM-8-SHA256</i>	Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.			
	Option	Description												
	<i>TLS-AES-256-GCM-SHA384</i>	Enable TLS-AES-256-GCM-SHA384 in TLS 1.3.												
	<i>TLS-CHACHA20-POLY1305-SHA256</i>	Enable TLS-CHACHA20-POLY1305-SHA256 in TLS 1.3.												
	<i>TLS-AES-128-CCM-SHA256</i>	Enable TLS-AES-128-CCM-SHA256 in TLS 1.3.												
<i>TLS-AES-128-CCM-8-SHA256</i>	Enable TLS-AES-128-CCM-8-SHA256 in TLS 1.3.													
client-sigalgs	Set signature algorithms related to client authentication. Affects TLS version <= 1.2 only.	option	-	all										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>no-rsa-pss</i></td><td>Disable RSA-PSS signature algorithms for client authentication.</td></tr><tr><td><i>all</i></td><td>Enable all supported signature algorithms for client authentication.</td></tr></table>	Option	Description	<i>no-rsa-pss</i>	Disable RSA-PSS signature algorithms for client authentication.	<i>all</i>	Enable all supported signature algorithms for client authentication.							
	Option	Description												
	<i>no-rsa-pss</i>	Disable RSA-PSS signature algorithms for client authentication.												
<i>all</i>	Enable all supported signature algorithms for client authentication.													
default-portal	Default Agentless VPN portal.	string	Maximum length: 35											
deflate-compression-level	Compression level (0~9).	integer	Minimum value: 0 Maximum value: 9	6										
deflate-min-data-size	Minimum amount of data that triggers compression (200 - 65535 bytes).	integer	Minimum value: 200 Maximum value: 65535	300										
dns-suffix	DNS suffix used for Agentless VPN clients.	var-string	Maximum length: 253											
dtls-heartbeat-fail-count	Number of missing heartbeats before the connection is considered dropped.	integer	Minimum value: 3 Maximum value: 10	3										
dtls-heartbeat-idle-timeout	Idle timeout before DTLS heartbeat is sent.	integer	Minimum value: 3 Maximum value: 10	3										
dtls-heartbeat-interval	Interval between DTLS heartbeat.	integer	Minimum value: 3 Maximum value: 10	3										

Parameter	Description	Type	Size	Default								
dtls-hello-timeout	SSLVPN maximum DTLS hello timeout (10 - 60 sec, default = 10).	integer	Minimum value: 10 Maximum value: 60	10								
dual-stack-mode	Agentless web mode: support IPv4 and IPv6 bookmarks in the portal.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
Option	Description											
<i>enable</i>	Enable setting.											
<i>disable</i>	Disable setting.											
encode-2f-sequence	Encode \2F sequence to forward slash in URLs.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
Option	Description											
<i>enable</i>	Enable setting.											
<i>disable</i>	Disable setting.											
encrypt-and-store-password	Encrypt and store user passwords for Agentless VPN web sessions.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
Option	Description											
<i>enable</i>	Enable setting.											
<i>disable</i>	Disable setting.											
force-two-factor-auth	Enable/disable only PKI users with two-factor authentication for Agentless VPNs.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
Option	Description											
<i>enable</i>	Enable setting.											
<i>disable</i>	Disable setting.											
header-x-forwarded-for	Forward the same, add, or remove HTTP header.	option	-	add								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Forward the same HTTP header.</td></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>pass</i>	Forward the same HTTP header.	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.			
Option	Description											
<i>pass</i>	Forward the same HTTP header.											
<i>add</i>	Add the HTTP header.											
<i>remove</i>	Remove the HTTP header.											
hsts-include-subdomains	Add HSTS includeSubDomains response header.	option	-	disable								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
http-compression	Enable/disable to allow HTTP compression over Agentless VPN connections.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
http-only-cookie	Enable/disable Agentless VPN support for HttpOnly cookies.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
http-request-body-timeout	Agentless VPN session is disconnected if an HTTP request body is not received within this time (1 - 60 sec, default = 20).	integer	Minimum value: 0 Maximum value: 4294967295	30
http-request-header-timeout	Agentless VPN session is disconnected if an HTTP request header is not received within this time (1 - 60 sec, default = 20).	integer	Minimum value: 0 Maximum value: 4294967295	20
https-redirect	Enable/disable redirect of port 80 to Agentless VPN port.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
idle-timeout	Agentless VPN disconnects if idle for specified time in seconds.	integer	Minimum value: 0 Maximum value: 259200	300
login-attempt-limit	Agentless VPN maximum login attempt times before block (0 - 10, default = 2, 0 = no limit).	integer	Minimum value: 0 Maximum value: 10	2

Parameter	Description	Type	Size	Default
login-block-time	Time for which a user is blocked from logging in after too many failed login attempts (0 - 86400 sec, default = 60).	integer	Minimum value: 0 Maximum value: 86400	60
login-timeout	Agentless VPN maximum login timeout (10 - 180 sec, default = 30).	integer	Minimum value: 10 Maximum value: 180	30
port	Agentless VPN access port (1 - 65535).	integer	Minimum value: 1 Maximum value: 65535	10443
port-precedence	Enable/disable, Enable means that if Agentless VPN connections are allowed on an interface admin GUI connections are blocked on that interface.	option	-	enable
	Option		Description	
	enable		Enable setting.	
	disable		Disable setting.	
reqclientcert	Enable/disable to require client certificates for all Agentless VPN users.	option	-	disable
	Option		Description	
	enable		Enable setting.	
	disable		Disable setting.	
server-hostname	Server hostname for HTTPS. When set, will be used for Agentless VPN web proxy host header for any redirection.	string	Maximum length: 255	
servercert	Name of the server certificate to be used for Agentless VPNs.	string	Maximum length: 35	
source-address <name>	Source address of incoming traffic. Address name.	string	Maximum length: 79	
source-address-negate	Enable/disable negated source address match.	option	-	disable
	Option		Description	
	enable		Enable setting.	
	disable		Disable setting.	

Parameter	Description	Type	Size	Default										
source-address6 <name>	IPv6 source address of incoming traffic. IPv6 address name.	string	Maximum length: 79											
source-address6-negate	Enable/disable negated source IPv6 address match.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
Option	Description													
<i>enable</i>	Enable setting.													
<i>disable</i>	Disable setting.													
source-interface <name>	Agentless VPN source interface of incoming traffic. Interface name.	string	Maximum length: 35											
ssl-client-renegotiation	Enable/disable to allow client renegotiation by the server if the tunnel goes down.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Abort any SSL connection that attempts to renegotiate.</td></tr><tr><td><i>enable</i></td><td>Allow a SSL client to renegotiate.</td></tr></table>	Option	Description	<i>disable</i>	Abort any SSL connection that attempts to renegotiate.	<i>enable</i>	Allow a SSL client to renegotiate.							
Option	Description													
<i>disable</i>	Abort any SSL connection that attempts to renegotiate.													
<i>enable</i>	Allow a SSL client to renegotiate.													
ssl-insert-empty-fragment	Enable/disable insertion of empty fragment.	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.							
Option	Description													
<i>enable</i>	Enable setting.													
<i>disable</i>	Disable setting.													
ssl-max-protocol-ver	SSL maximum protocol version.	option	-	tls1-3										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls1-0</i></td><td>TLS version 1.0.</td></tr><tr><td><i>tls1-1</i></td><td>TLS version 1.1.</td></tr><tr><td><i>tls1-2</i></td><td>TLS version 1.2.</td></tr><tr><td><i>tls1-3</i></td><td>TLS version 1.3.</td></tr></table>	Option	Description	<i>tls1-0</i>	TLS version 1.0.	<i>tls1-1</i>	TLS version 1.1.	<i>tls1-2</i>	TLS version 1.2.	<i>tls1-3</i>	TLS version 1.3.			
Option	Description													
<i>tls1-0</i>	TLS version 1.0.													
<i>tls1-1</i>	TLS version 1.1.													
<i>tls1-2</i>	TLS version 1.2.													
<i>tls1-3</i>	TLS version 1.3.													
ssl-min-protocol-ver	SSL minimum protocol version.	option	-	tls1-2										

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls1-0</i></td><td>TLS version 1.0.</td></tr><tr><td><i>tls1-1</i></td><td>TLS version 1.1.</td></tr><tr><td><i>tls1-2</i></td><td>TLS version 1.2.</td></tr><tr><td><i>tls1-3</i></td><td>TLS version 1.3.</td></tr></table>	Option	Description	<i>tls1-0</i>	TLS version 1.0.	<i>tls1-1</i>	TLS version 1.1.	<i>tls1-2</i>	TLS version 1.2.	<i>tls1-3</i>	TLS version 1.3.			
	Option	Description												
	<i>tls1-0</i>	TLS version 1.0.												
	<i>tls1-1</i>	TLS version 1.1.

name	Signature subclass name.	string	Maximum length: 127	

wanopt

This section includes syntax for the following commands:

- [config wanopt auth-group on page 2322](#)
- [config wanopt cache-service on page 2324](#)
- [config wanopt content-delivery-network-rule on page 2327](#)
- [config wanopt peer on page 2333](#)
- [config wanopt profile on page 2334](#)
- [config wanopt remote-storage on page 2343](#)
- [config wanopt settings on page 2344](#)
- [config wanopt webcache on page 2346](#)

config wanopt auth-group

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101F, FortiGate 1101E, FortiGate 121G, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3201F, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 71F, FortiGate 800D, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 901G, FortiGate 91G, FortiGate-VM64 Aliyun, FortiGate-VM64 AWS, FortiGate-VM64 Azure, FortiGate-VM64 GCP, FortiGate-VM64 OPC, FortiGate-VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100F, FortiGate 1100E, FortiGate 120G, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 900G, FortiGate 90G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R.

Configure WAN optimization authentication groups.

```

config wanopt auth-group
  Description: Configure WAN optimization authentication groups.
  edit <name>
    set auth-method [cert|psk]
    set cert {string}
    set peer {string}
    set peer-accept [any|defined|...]
    set psk {password}
  next
end

```

config wanopt auth-group

Parameter	Description	Type	Size	Default
auth-method	Select certificate or pre-shared key authentication for this authentication group.	option	-	cert
	Option	Description		
	<i>cert</i>	Certificate authentication.		
	<i>psk</i>	Pre-shared secret key authentication.		
cert	Name of certificate to identify this peer.	string	Maximum length: 35	
name	Auth-group name.	string	Maximum length: 35	
peer	If peer-accept is set to one, select the name of one peer to add to this authentication group. The peer must have added with the wanopt peer command.	string	Maximum length: 35	
peer-accept	Determine if this auth group accepts, any peer, a list of defined peers, or just one peer.	option	-	any
	Option	Description		
	<i>any</i>	Accept any peer that can authenticate with this auth group.		
	<i>defined</i>	Accept only the peers added with the wanopt peer command.		
	<i>one</i>	Accept the peer added to this auth group using the peer option.		
psk	Pre-shared key used by the peers in this authentication group.	password	Not Specified	

config wanopt cache-service

It is not available for: FortiGate 1000F, FortiGate 100F, FortiGate 1100E, FortiGate 120G, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 900G, FortiGate 90G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R.

Designate cache-service for wan-optimization and webcache.

```
config wanopt cache-service
  Description: Designate cache-service for wan-optimization and webcache.
  set acceptable-connections [any|peers]
  set collaboration [enable|disable]
  set device-id {string}
  config dst-peer
    Description: Modify cache-service destination peer list.
    edit <device-id>
      set auth-type {integer}
      set encode-type {integer}
      set ip {ipv4-address-any}
      set priority {integer}
    next
  end
  set prefer-scenario [balance|prefer-speed|...]
  config src-peer
    Description: Modify cache-service source peer list.
    edit <device-id>
      set auth-type {integer}
      set encode-type {integer}
      set ip {ipv4-address-any}
```

```

        set priority {integer}
    next
end
end

```

config wanopt cache-service

Parameter	Description	Type	Size	Default
acceptable-connections	Set strategy when accepting cache collaboration connection.	option	-	any
	Option	Description		
	<i>any</i>	We can accept any cache-collaboration connection.		
	<i>peers</i>	We can only accept connections that are already in src-peers.		
collaboration	Enable/disable cache-collaboration between cache-service clusters.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable cache cache-collaboration.		
	<i>disable</i>	Disable cache cache-collaboration.		
device-id	Set identifier for this cache device.	string	Maximum length: 35	default_dev_id
prefer-scenario	Set the preferred cache behavior towards the balance between latency and hit-ratio.	option	-	balance
	Option	Description		
	<i>balance</i>	Balance between speed and cache hit ratio.		
	<i>prefer-speed</i>	Prefer response speed at the expense of increased cache bypasses.		
	<i>prefer-cache</i>	Prefer improving hit-ratio through increasing latency tolerance.		

config dst-peer

Parameter	Description	Type	Size	Default
auth-type	Set authentication type for this peer.	integer	Minimum value: 0 Maximum value: 255	0
device-id	Device ID of this peer.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
encode-type	Set encode type for this peer.	integer	Minimum value: 0 Maximum value: 255	0
ip	Set cluster IP address of this peer.	ipv4-address-any	Not Specified	0.0.0.0
priority	Set priority for this peer.	integer	Minimum value: 0 Maximum value: 255	1

config src-peer

Parameter	Description	Type	Size	Default
auth-type	Set authentication type for this peer.	integer	Minimum value: 0 Maximum value: 255	0
device-id	Device ID of this peer.	string	Maximum length: 35	
encode-type	Set encode type for this peer.	integer	Minimum value: 0 Maximum value: 255	0
ip	Set cluster IP address of this peer.	ipv4-address-any	Not Specified	0.0.0.0
priority	Set priority for this peer.	integer	Minimum value: 0 Maximum value: 255	1

config wanopt content-delivery-network-rule

Parameter	Description	Type	Size	Default						
category	Content delivery network rule category.	option	-	vcache						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>vcache</td><td>Vcache content delivery network.</td></tr><tr><td>youtube</td><td>Youtube content delivery network.</td></tr></table>				Option	Description	vcache	Vcache content delivery network.	youtube	Youtube content delivery network.
	Option	Description								
	vcache	Vcache content delivery network.								
youtube	Youtube content delivery network.									
comment	Comment about this CDN-rule.	var-string	Maximum length: 255							
host-domain-name-suffix <name>	Suffix portion of the fully qualified domain name. For example, fortinet.com in "www.fortinet.com". Suffix portion of the fully qualified domain name.	string	Maximum length: 79							
name	Name of table.	string	Maximum length: 35							
request-cache-control	Enable/disable HTTP request cache control.	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
response-cache-control	Enable/disable HTTP response cache control.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
response-expires	Enable/disable HTTP response cache expires.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
status	Enable/disable WAN optimization content delivery network rules.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
updateserver	Enable/disable update server.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

config rules

Parameter	Description	Type	Size	Default
match-mode	Match criteria for collecting content ID.	option	-	all
	Option	Description		
	<i>all</i>	Must match all of the match entries.		
	<i>any</i>	Must match any of the match entries.		

Parameter	Description	Type	Size	Default						
name	WAN optimization content delivery network rule name.	string	Maximum length: 35							
skip-rule-mode	Skip mode when evaluating skip-rules.	option	-	all						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>all</i></td><td>Must match all skip entries.</td></tr><tr><td><i>any</i></td><td>Must match any skip entries.</td></tr></table>				Option	Description	<i>all</i>	Must match all skip entries.	<i>any</i>	Must match any skip entries.
Option	Description									
<i>all</i>	Must match all skip entries.									
<i>any</i>	Must match any skip entries.									

config content-id

Parameter	Description	Type	Size	Default						
end-direction	Search direction from end-str match.	option	-	forward						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>forward</i></td><td>Forward direction.</td></tr><tr><td><i>backward</i></td><td>Backward direction.</td></tr></table>				Option	Description	<i>forward</i>	Forward direction.	<i>backward</i>	Backward direction.
	Option	Description								
	<i>forward</i>	Forward direction.								
<i>backward</i>	Backward direction.									
end-skip	Number of characters in URL to skip after end-str has been matched.	integer	Minimum value: 0 0 Maximum value: 4294967295							
end-str	String from which to end search.	string	Maximum length: 35							
range-str	Name of content ID within the start string and end string.	string	Maximum length: 35							
start-direction	Search direction from start-str match.	option	-	forward						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>forward</i></td><td>Forward direction.</td></tr><tr><td><i>backward</i></td><td>Backward direction.</td></tr></table>				Option	Description	<i>forward</i>	Forward direction.	<i>backward</i>	Backward direction.
	Option	Description								
	<i>forward</i>	Forward direction.								
<i>backward</i>	Backward direction.									
start-skip	Number of characters in URL to skip after start-str has been matched.	integer	Minimum value: 0 0 Maximum value: 4294967295							
start-str	String from which to start search.	string	Maximum length: 35	/						

Parameter	Description	Type	Size	Default
target	Option in HTTP header or URL parameter to match.	option	-	path
	Option	Description		
	<i>path</i>	Match with the URL path.		
	<i>parameter</i>	Match with the URL parameters.		
	<i>referrer</i>	Match with the Referrer option in HTTP header.		
	<i>youtube-map</i>	Match Youtube content-id collection.		
	<i>youtube-id</i>	Match Youtube content-id.		
	<i>youku-id</i>	Match Youku content-id.		
	<i>hls-manifest</i>	Match with HLS manifest.		
	<i>dash-manifest</i>	Match with DASH manifest.		
	<i>hls-fragment</i>	Match HLS stream fragment.		
	<i>dash-fragment</i>	Match DASH stream fragment.		

config match-entries

Parameter	Description	Type	Size	Default
id	Rule ID.	integer	Minimum value: 0 0 Maximum value: 4294967295	
pattern <string>	Pattern string for matching target (Referrer or URL pattern). For example, a, a*c, *a*, a*c*e, and *. Pattern strings.	string	Maximum length: 79	
target	Option in HTTP header or URL parameter to match.	option	-	path
	Option	Description		
	<i>path</i>	Match with the URL path.		
	<i>parameter</i>	Match with the URL parameters.		
	<i>referrer</i>	Match with the Referrer option in HTTP header.		
	<i>youtube-map</i>	Match Youtube content-id collection.		
	<i>youtube-id</i>	Match Youtube content-id.		
	<i>youku-id</i>	Match Youku content-id.		

config skip-entries

Parameter	Description	Type	Size	Default														
id	Rule ID.	integer	Minimum value: 0 Maximum value: 4294967295															
pattern <string>	Pattern string for matching target (Referrer or URL pattern). For example, a, a*c, *a*, a*c*e, and *. Pattern strings.	string	Maximum length: 79															
target	Option in HTTP header or URL parameter to match.	option	-	path														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>path</td><td>Match with the URL path.</td></tr><tr><td>parameter</td><td>Match with the URL parameters.</td></tr><tr><td>referrer</td><td>Match with the Referrer option in HTTP header.</td></tr><tr><td>youtube-map</td><td>Match Youtube content-id collection.</td></tr><tr><td>youtube-id</td><td>Match Youtube content-id.</td></tr><tr><td>youku-id</td><td>Match Youku content-id.</td></tr></table>				Option	Description	path	Match with the URL path.	parameter	Match with the URL parameters.	referrer	Match with the Referrer option in HTTP header.	youtube-map	Match Youtube content-id collection.	youtube-id	Match Youtube content-id.	youku-id	Match Youku content-id.
Option	Description																	
path	Match with the URL path.																	
parameter	Match with the URL parameters.																	
referrer	Match with the Referrer option in HTTP header.																	
youtube-map	Match Youtube content-id collection.																	
youtube-id	Match Youtube content-id.																	
youku-id	Match Youku content-id.																	

config wanopt peer

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101F, FortiGate 1101E, FortiGate 121G, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3201F, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 71F, FortiGate 800D, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 901G, FortiGate 91G, FortiGate-VM64 Aliyun, FortiGate-VM64 AWS, FortiGate-VM64 Azure, FortiGate-VM64 GCP, FortiGate-VM64 OPC, FortiGate-VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100F, FortiGate 1100E, FortiGate 120G, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 900G, FortiGate 90G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R.

Configure WAN optimization peers.

```
config wanopt peer
  Description: Configure WAN optimization peers.
  edit <peer-host-id>
    set ip {ipv4-address-any}
  next
end
```

config wanopt peer

Parameter	Description	Type	Size	Default
ip	Peer IP address.	ipv4-address-any	Not Specified	0.0.0.0
peer-host-id	Peer host ID.	string	Maximum length: 35	

config wanopt profile

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101F, FortiGate 1101E, FortiGate 121G, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3201F, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 71F, FortiGate 800D, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 901G, FortiGate 91G, FortiGate-VM64 Aliyun, FortiGate-VM64 AWS, FortiGate-VM64 Azure, FortiGate-VM64 GCP, FortiGate-VM64 OPC, FortiGate-VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100F, FortiGate 1100E, FortiGate 120G, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 900G, FortiGate 90G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R.

Configure WAN optimization profiles.

```
config wanopt profile
  Description: Configure WAN optimization profiles.
  edit <name>
    set auth-group {string}
    config cifs
      Description: Enable/disable CIFS (Windows sharing) WAN Optimization and configure CIFS
      WAN Optimization features.
      set byte-caching [enable|disable]
      set prefer-chunking [dynamic|fix]
      set protocol-opt [protocol|tcp]
      set secure-tunnel [enable|disable]

    end
    set transparent [enable|disable]
next
end

```

config wanopt profile

Parameter	Description	Type	Size	Default
auth-group	Optionally add an authentication group to restrict access to the WAN Optimization tunnel to peers in the authentication group.	string	Maximum length: 35	
comments	Comment.	var-string	Maximum length: 255	

Parameter	Description	Type	Size	Default
name	Profile name.	string	Maximum length: 35	
transparent	Enable/disable transparent mode.	option	-	enable
	Option	Description		
	<i>enable</i>	Determine if WAN Optimization changes client packet source addresses. Affects the routing configuration on the server network.		
	<i>disable</i>	Disable transparent mode. Client packets source addresses are changed to the source address of the FortiGate internal interface. Similar to source NAT.		

config cifs

Parameter	Description	Type	Size	Default						
byte-caching	Enable/disable byte-caching. Byte caching reduces the amount of traffic by caching file data sent across the WAN and in future serving if from the cache.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable byte-caching.</td></tr><tr><td><i>disable</i></td><td>Disable byte-caching.</td></tr></table>	Option	Description	<i>enable</i>	Enable byte-caching.	<i>disable</i>	Disable byte-caching.			
Option	Description									
<i>enable</i>	Enable byte-caching.									
<i>disable</i>	Disable byte-caching.									
prefer-chunking	Select dynamic or fixed-size data chunking for WAN Optimization.	option	-	fix						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dynamic</i></td><td>Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.</td></tr><tr><td><i>fix</i></td><td>Select fixed data chunking.</td></tr></table>	Option	Description	<i>dynamic</i>	Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.	<i>fix</i>	Select fixed data chunking.			
Option	Description									
<i>dynamic</i>	Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.									
<i>fix</i>	Select fixed data chunking.									
protocol-opt	Select protocol specific optimization or generic TCP optimization.	option	-	protocol						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>protocol</i></td><td>Using protocol-specific optimization.</td></tr><tr><td><i>tcp</i></td><td>Using generic TCP optimization.</td></tr></table>	Option	Description	<i>protocol</i>	Using protocol-specific optimization.	<i>tcp</i>	Using generic TCP optimization.			
Option	Description									
<i>protocol</i>	Using protocol-specific optimization.									
<i>tcp</i>	Using generic TCP optimization.									
secure-tunnel	Enable/disable securing the WAN Opt tunnel using SSL. Secure and non-secure tunnels use the same TCP port (7810).	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable SSL-secured tunnelling.		
	<i>disable</i>	Disable SSL-secured tunnelling.		
status	Enable/disable WAN Optimization.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable WAN Optimization.		
	<i>disable</i>	Disable WAN Optimization.		
tunnel-sharing	Tunnel sharing mode for aggressive/non-aggressive and/or interactive/non-interactive protocols.	option	-	private
	Option	Description		
	<i>shared</i>	For profiles that accept nonaggressive and non-interactive protocols.		
	<i>express-shared</i>	For profiles that accept interactive protocols such as Telnet.		
	<i>private</i>	For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.		

config ftp

Parameter	Description	Type	Size	Default
byte-caching	Enable/disable byte-caching. Byte caching reduces the amount of traffic by caching file data sent across the WAN and in future serving if from the cache.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable byte-caching.		
	<i>disable</i>	Disable byte-caching.		
prefer-chunking	Select dynamic or fixed-size data chunking for WAN Optimization.	option	-	fix
	Option	Description		
	<i>dynamic</i>	Select dynamic data chunking to help to detect persistent data chunks in a changed file or in an embedded unknown protocol.		
	<i>fix</i>	Select fixed data chunking.		

Parameter	Description	Type	Size	Default								
protocol-opt	Select protocol specific optimization or generic TCP optimization.	option	-	protocol								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>protocol</i></td><td>Using protocol-specific optimization.</td></tr><tr><td><i>tcp</i></td><td>Using generic TCP optimization.</td></tr></table>	Option	Description	<i>protocol</i>	Using protocol-specific optimization.	<i>tcp</i>	Using generic TCP optimization.					
Option	Description											
<i>protocol</i>	Using protocol-specific optimization.											
<i>tcp</i>	Using generic TCP optimization.											
secure-tunnel	Enable/disable securing the WAN Opt tunnel using SSL. Secure and non-secure tunnels use the same TCP port (7810).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable SSL-secured tunnelling.</td></tr><tr><td><i>disable</i></td><td>Disable SSL-secured tunnelling.</td></tr></table>	Option	Description	<i>enable</i>	Enable SSL-secured tunnelling.	<i>disable</i>	Disable SSL-secured tunnelling.					
Option	Description											
<i>enable</i>	Enable SSL-secured tunnelling.											
<i>disable</i>	Disable SSL-secured tunnelling.											
status	Enable/disable WAN Optimization.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WAN Optimization.</td></tr><tr><td><i>disable</i></td><td>Disable WAN Optimization.</td></tr></table>	Option	Description	<i>enable</i>	Enable WAN Optimization.	<i>disable</i>	Disable WAN Optimization.					
Option	Description											
<i>enable</i>	Enable WAN Optimization.											
<i>disable</i>	Disable WAN Optimization.

	<i>enable</i>	Enable byte-caching.		
	<i>disable</i>	Disable byte-caching.		
byte-caching-opt	Select whether TCP byte-caching uses system memory only or both memory and disk space.	option	-	mem-only
	Option	Description		
	<i>mem-only</i>	Byte caching with memory only.		
	<i>mem-disk</i>	Byte caching with memory and disk.		
port	Port numbers or port number ranges for TCP. Only packets with a destination port number that matches this port number or range are accepted by this profile.	user	Not Specified	
secure-tunnel	Enable/disable securing the WAN Opt tunnel using SSL. Secure and non-secure tunnels use the same TCP port (7810).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable SSL-secured tunnelling.		
	<i>disable</i>	Disable SSL-secured tunnelling.		
ssl	Enable/disable SSL/TLS offloading (hardware acceleration) for traffic in this tunnel.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable SSL/TLS offloading.		
	<i>disable</i>	Disable SSL/TLS offloading.		
ssl-port	Port numbers or port number ranges on which to expect HTTPS traffic for SSL/TLS offloading.	user	Not Specified	
status	Enable/disable WAN Optimization.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable WAN Optimization.		
	<i>disable</i>	Disable WAN Optimization.		
tunnel-sharing	Tunnel sharing mode for aggressive/non-aggressive and/or interactive/non-interactive protocols.	option	-	private
	Option	Description		
	<i>shared</i>	For profiles that accept nonaggressive and non-interactive protocols.		
	<i>express-shared</i>	For profiles that accept interactive protocols such as Telnet.		
	<i>private</i>	For profiles that accept aggressive protocols such as HTTP and FTP so that these aggressive protocols do not share tunnels with less-aggressive protocols.		

config wanopt remote-storage

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101F, FortiGate 1101E, FortiGate 121G, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3201F, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 71F, FortiGate 800D, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 901G, FortiGate 91G, FortiGate-VM64 Aliyun, FortiGate-VM64 AWS, FortiGate-VM64 Azure, FortiGate-VM64 GCP, FortiGate-VM64 OPC, FortiGate-VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100F, FortiGate 1100E, FortiGate 120G, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 900G, FortiGate 90G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R.

Configure a remote cache device as Web cache storage.

```
config wanopt remote-storage
  Description: Configure a remote cache device as Web cache storage.
  set local-cache-id {string}
  set remote-cache-id {string}
  set remote-cache-ip {ipv4-address-any}
  set status [disable|enable]
end
```

config wanopt remote-storage

Parameter	Description	Type	Size	Default
local-cache-id	ID that this device uses to connect to the remote device.	string	Maximum length: 35	
remote-cache-id	ID of the remote device to which the device connects.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default
remote-cache-ip	IP address of the remote device to which the device connects.	ipv4-address-any	Not Specified	0.0.0.0
status	Enable/disable using remote device as Web cache storage.	option	-	disable
		Option	Description	
		<i>disable</i>	Use local disks as Web cache storage.	
		<i>enable</i>	Use a remote device as Web cache storage.	

config wanopt settings

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101F, FortiGate 1101E, FortiGate 121G, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3201F, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 71F, FortiGate 800D, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 901G, FortiGate 91G, FortiGate-VM64 Aliyun, FortiGate-VM64 AWS, FortiGate-VM64 Azure, FortiGate-VM64 GCP, FortiGate-VM64 OPC, FortiGate-VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100F, FortiGate 1100E, FortiGate 120G, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 900G, FortiGate 90G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R.

Configure WAN optimization settings.

```
config wanopt settings
  Description: Configure WAN optimization settings.
  set auto-detect-algorithm [simple|diff-req-resp]
  set host-id {string}
  set tunnel-optimization [memory-usage|balanced|...]
```

```

set tunnel-ssl-algorithm [high|medium|...]
end

```

config wanopt settings

Parameter	Description	Type	Size	Default								
auto-detect-algorithm	Auto detection algorithms used in tunnel negotiations.	option	-	simple								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>simple</i></td><td>Use the same TCP option value in SYN/SYNACK packets. Backward compatible.</td></tr><tr><td><i>diff-req-resp</i></td><td>Use different TCP option values in SYN/SYNACK packets to avoid false positive detection.</td></tr></table>	Option	Description	<i>simple</i>	Use the same TCP option value in SYN/SYNACK packets. Backward compatible.	<i>diff-req-resp</i>	Use different TCP option values in SYN/SYNACK packets to avoid false positive detection.					
Option	Description											
<i>simple</i>	Use the same TCP option value in SYN/SYNACK packets. Backward compatible.											
<i>diff-req-resp</i>	Use different TCP option values in SYN/SYNACK packets to avoid false positive detection.											
host-id	Local host ID (must also be entered in the remote FortiGate's peer list).	string	Maximum length: 35	default-id								
tunnel-optimization	WANOpt tunnel optimization option.	option	-	balanced **								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>memory-usage</i></td><td>Optimize tunnel for low system memory usage.</td></tr><tr><td><i>balanced</i></td><td>Optimize tunnel to balance between system memory usage and throughput.</td></tr><tr><td><i>throughput</i></td><td>Optimize tunnel for throughput.</td></tr></table>	Option	Description	<i>memory-usage</i>	Optimize tunnel for low system memory usage.	<i>balanced</i>	Optimize tunnel to balance between system memory usage and throughput.	<i>throughput</i>	Optimize tunnel for throughput.			
Option	Description											
<i>memory-usage</i>	Optimize tunnel for low system memory usage.											
<i>balanced</i>	Optimize tunnel to balance between system memory usage and throughput.											
<i>throughput</i>	Optimize tunnel for throughput.											
tunnel-ssl-algorithm	Relative strength of encryption algorithms accepted during tunnel negotiation.	option	-	high								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>high</i></td><td>High encryption. Allow only AES and ChaCha.</td></tr><tr><td><i>medium</i></td><td>Medium encryption. Allow AES, ChaCha, 3DES, and RC4.</td></tr><tr><td><i>low</i></td><td>Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.</td></tr></table>	Option	Description	<i>high</i>	High encryption. Allow only AES and ChaCha.	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.			
Option	Description											
<i>high</i>	High encryption. Allow only AES and ChaCha.											
<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.											
<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.											

** Values may differ between models.

config wanopt webcache

This command is available for model(s): FortiGate 1000D, FortiGate 1001F, FortiGate 101F, FortiGate 1101E, FortiGate 121G, FortiGate 1801F, FortiGate 2000E, FortiGate 201E, FortiGate 201F, FortiGate 2201E, FortiGate 2500E, FortiGate 2600F, FortiGate 2601F, FortiGate 3000D, FortiGate 3001F, FortiGate 301E, FortiGate 3100D, FortiGate 3200D, FortiGate 3201F, FortiGate 3301E, FortiGate 3401E, FortiGate 3501F, FortiGate 3601E, FortiGate 3700D, FortiGate 3701F, FortiGate 401E, FortiGate 401F, FortiGate 4201F, FortiGate 4401F, FortiGate 5001E1, FortiGate 501E, FortiGate 601E, FortiGate 601F, FortiGate 71F, FortiGate 800D, FortiGate 81F-POE, FortiGate 81F, FortiGate 900D, FortiGate 901G, FortiGate 91G, FortiGate-VM64 Aliyun, FortiGate-VM64 AWS, FortiGate-VM64 Azure, FortiGate-VM64 GCP, FortiGate-VM64 OPC, FortiGate-VM64, FortiGateRugged 70F 3G4G, FortiGateRugged 70F, FortiWiFi 80F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G DSL, FortiWiFi 81F 2R 3G4G-POE, FortiWiFi 81F 2R-POE, FortiWiFi 81F 2R.

It is not available for: FortiGate 1000F, FortiGate 100F, FortiGate 1100E, FortiGate 120G, FortiGate 1800F, FortiGate 200E, FortiGate 200F, FortiGate 2200E, FortiGate 3000F, FortiGate 300E, FortiGate 3200F, FortiGate 3300E, FortiGate 3400E, FortiGate 3500F, FortiGate 3600E, FortiGate 3700F, FortiGate 3960E, FortiGate 3980E, FortiGate 400E Bypass, FortiGate 400E, FortiGate 400F, FortiGate 40F 3G4G, FortiGate 40F, FortiGate 4200F, FortiGate 4400F, FortiGate 5001E, FortiGate 500E, FortiGate 600E, FortiGate 600F, FortiGate 60F, FortiGate 61F, FortiGate 70F, FortiGate 80F Bypass, FortiGate 80F DSL, FortiGate 80F-POE, FortiGate 80F, FortiGate 900G, FortiGate 90G, FortiGateRugged 60F 3G4G, FortiGateRugged 60F, FortiWiFi 40F 3G4G, FortiWiFi 40F, FortiWiFi 60F, FortiWiFi 61F, FortiWiFi 80F 2R.

Configure global Web cache settings.

```
config wanopt webcache
  Description: Configure global Web cache settings.
  set always-revalidate [enable|disable]
  set cache-by-default [enable|disable]
  set cache-cookie [enable|disable]
  set cache-expired [enable|disable]
  set default-ttl {integer}
  set external [enable|disable]
  set fresh-factor {integer}
  set host-validate [enable|disable]
  set ignore-conditional [enable|disable]
  set ignore-ie-reload [enable|disable]
  set ignore-ims [enable|disable]
  set ignore-pnc [enable|disable]
  set max-object-size {integer}
  set max-ttl {integer}
  set min-ttl {integer}
  set neg-resp-time {integer}
  set reval-pnc [enable|disable]
end
```

config wanopt webcache

Parameter	Description	Type	Size	Default						
always-revalidate	Enable/disable revalidation of requested cached objects, which have content on the server, before serving it to the client.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable revalidation of requested cached objects.</td></tr><tr><td><i>disable</i></td><td>Disable revalidation of requested cached objects.</td></tr></table>	Option	Description	<i>enable</i>	Enable revalidation of requested cached objects.	<i>disable</i>	Disable revalidation of requested cached objects.			
Option	Description									
<i>enable</i>	Enable revalidation of requested cached objects.									
<i>disable</i>	Disable revalidation of requested cached objects.									
cache-by-default	Enable/disable caching content that lacks explicit caching policies from the server.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable caching content that lacks explicit caching policies.</td></tr><tr><td><i>disable</i></td><td>Disable caching content that lacks explicit caching policies.</td></tr></table>	Option	Description	<i>enable</i>	Enable caching content that lacks explicit caching policies.	<i>disable</i>	Disable caching content that lacks explicit caching policies.			
Option	Description									
<i>enable</i>	Enable caching content that lacks explicit caching policies.									
<i>disable</i>	Disable caching content that lacks explicit caching policies.									
cache-cookie	Enable/disable caching cookies. Since cookies contain information for or about individual users, they not usually cached.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Cache cookies.</td></tr><tr><td><i>disable</i></td><td>Do not cache cookies.</td></tr></table>	Option	Description	<i>enable</i>	Cache cookies.	<i>disable</i>	Do not cache cookies.			
Option	Description									
<i>enable</i>	Cache cookies.									
<i>disable</i>	Do not cache cookies.									
cache-expired	Enable/disable caching type-1 objects that are already expired on arrival.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
default-ttl	Default object expiry time (default = 1440 min (1 day); maximum = 5256000 min (10 years)). This only applies to those objects that do not have an expiry time set by the web server.	integer	Minimum value: 1440 Maximum value: 5256000							
external	Enable/disable external Web caching.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable external Web caching.</td></tr><tr><td><i>disable</i></td><td>Disable external Web caching.</td></tr></table>	Option	Description	<i>enable</i>	Enable external Web caching.	<i>disable</i>	Disable external Web caching.			
Option	Description									
<i>enable</i>	Enable external Web caching.									
<i>disable</i>	Disable external Web caching.									

Parameter	Description	Type	Size	Default						
fresh-factor	Frequency that the server is checked to see if any objects have expired (1 - 100, default = 100). The higher the fresh factor, the less often the checks occur.	integer	Minimum value: 1 Maximum value: 100	100						
host-validate	Enable/disable validating "Host:" with original server IP.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable validating "Host:" with original server IP.</td></tr><tr><td><i>disable</i></td><td>Disable validating "Host:" with original server IP.</td></tr></table>	Option	Description	<i>enable</i>	Enable validating "Host:" with original server IP.	<i>disable</i>	Disable validating "Host:" with original server IP.			
Option	Description									
<i>enable</i>	Enable validating "Host:" with original server IP.									
<i>disable</i>	Disable validating "Host:" with original server IP.									
ignore-conditional	Enable/disable controlling the behavior of cache-control HTTP 1.1 header values.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ignoring cache-control HTTP 1.1 header values.</td></tr><tr><td><i>disable</i></td><td>Disable ignoring cache-control HTTP 1.1 header values.</td></tr></table>	Option	Description	<i>enable</i>	Enable ignoring cache-control HTTP 1.1 header values.	<i>disable</i>	Disable ignoring cache-control HTTP 1.1 header values.			
Option	Description									
<i>enable</i>	Enable ignoring cache-control HTTP 1.1 header values.									
<i>disable</i>	Disable ignoring cache-control HTTP 1.1 header values.									
ignore-ie-reload	Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.</td></tr><tr><td><i>disable</i></td><td>Disable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.</td></tr></table>	Option	Description	<i>enable</i>	Enable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.	<i>disable</i>	Disable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.			
Option	Description									
<i>enable</i>	Enable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.									
<i>disable</i>	Disable Enable/disable ignoring the PNC-interpretation of Internet Explorer's Accept: / header.									
ignore-ims	Enable/disable ignoring the if-modified-since (IMS) header.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ignoring the if-modified-since (IMS) header.</td></tr><tr><td><i>disable</i></td><td>Disable ignoring the if-modified-since (IMS) header.</td></tr></table>	Option	Description	<i>enable</i>	Enable ignoring the if-modified-since (IMS) header.	<i>disable</i>	Disable ignoring the if-modified-since (IMS) header.			
Option	Description									
<i>enable</i>	Enable ignoring the if-modified-since (IMS) header.									
<i>disable</i>	Disable ignoring the if-modified-since (IMS) header.									
ignore-pnc	Enable/disable ignoring the pragma no-cache (PNC) header.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable ignoring the pragma no-cache (PNC) header.</td></tr><tr><td><i>disable</i></td><td>Disable ignoring the pragma no-cache (PNC) header.</td></tr></table>	Option	Description	<i>enable</i>	Enable ignoring the pragma no-cache (PNC) header.	<i>disable</i>	Disable ignoring the pragma no-cache (PNC) header.			
Option	Description									
<i>enable</i>	Enable ignoring the pragma no-cache (PNC) header.									
<i>disable</i>	Disable ignoring the pragma no-cache (PNC) header.									

Parameter	Description	Type	Size	Default
max-object-size	Maximum cacheable object size in kB (1 - 2147483 kb (2GB). All objects that exceed this are delivered to the client but not stored in the web cache.	integer	Minimum value: 1 Maximum value: 2147483	512000
max-ttl	Maximum time an object can stay in the web cache without checking to see if it has expired on the server (default = 7200 min (5 days); maximum = 5256000 min (10 years)).	integer	Minimum value: 1 Maximum value: 5256000	7200
min-ttl	Minimum time an object can stay in the web cache without checking to see if it has expired on the server (default = 5 min; maximum = 5256000 (10 years)).	integer	Minimum value: 1 Maximum value: 5256000	5
neg-resp-time	Time in minutes to cache negative responses or errors (0 - 4294967295, default = 0 which means negative responses are not cached).	integer	Minimum value: 0 Maximum value: 4294967295	0
reval-pnc	Enable/disable revalidation of pragma-no-cache (PNC) to address bandwidth concerns.	option	-	disable
		Option	Description	
		<i>enable</i>	Enable revalidation of pragma-no-cache (PNC).	
		<i>disable</i>	Disable revalidation of pragma-no-cache (PNC).	

web-proxy

This section includes syntax for the following commands:

- [config web-proxy debug-url on page 2350](#)
- [config web-proxy explicit on page 2351](#)
- [config web-proxy fast-fallback on page 2358](#)
- [config web-proxy forward-server-group on page 2362](#)
- [config web-proxy forward-server on page 2359](#)
- [config web-proxy global on page 2363](#)
- [config web-proxy isolator-server on page 2368](#)
- [config web-proxy profile on page 2369](#)
- [config web-proxy url-match on page 2374](#)
- [config web-proxy wisp on page 2375](#)

config web-proxy debug-url

Configure debug URL addresses.

```
config web-proxy debug-url
  Description: Configure debug URL addresses.
  edit <name>
    set exact [enable|disable]
    set status [enable|disable]
    set url-pattern {string}
  next
end
```

config web-proxy debug-url

Parameter	Description	Type	Size	Default
exact	Enable/disable matching the exact path.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable matching the exact path.		
	<i>disable</i>	Disable matching the exact path.		
name	Debug URL name.	string	Maximum length: 63	

Parameter	Description	Type	Size	Default
status	Enable/disable this URL exemption.	option	-	enable
	Option	Description		
	enable	Enable this URL exemption.		
	disable	Disable this URL exemption.		
url-pattern	URL exemption pattern.	string	Maximum length: 511	

config web-proxy explicit

Configure explicit Web proxy settings.

```
config web-proxy explicit
  Description: Configure explicit Web proxy settings.
  set client-cert [disable|enable]
  set empty-cert-action [accept|block|...]
  set ftp-incoming-port {user}
  set ftp-over-http [enable|disable]
  set http-connection-mode [static|multiplex|...]
  set http-incoming-port {user}
  set https-incoming-port {user}
  set https-replacement-message [enable|disable]
  set incoming-ip {ipv4-address-any}
  set incoming-ip6 {ipv6-address}
  set interface {string}
  set interface-select-method [sdwan|specify]
  set ipv6-status [enable|disable]
  set message-upon-server-error [enable|disable]
  set outgoing-ip {ipv4-address-any}
  set outgoing-ip6 {ipv6-address}
  set pac-file-data {user}
  set pac-file-name {string}
  set pac-file-server-port {user}
  set pac-file-server-status [enable|disable]
  set pac-file-through-https [enable|disable]
  set pac-file-url {user}
config pac-policy
  Description: PAC policies.
  edit <policyid>
    set comments {var-string}
    set dstaddr <name1>, <name2>, ...
    set pac-file-data {user}
    set pac-file-name {string}
    set srcaddr <name1>, <name2>, ...
    set srcaddr6 <name1>, <name2>, ...
    set status [enable|disable]
```

```

    next
end
set pref-dns-result [ipv4|ipv6|...]
set realm {string}
set sec-default-action [accept|deny]
set secure-web-proxy [disable|enable|...]
set secure-web-proxy-cert <name1>, <name2>, ...
set socks [enable|disable]
set socks-incoming-port {user}
set ssl-algorithm [high|medium|...]
set ssl-dh-bits [768|1024|...]
set status [enable|disable]
set strict-guest [enable|disable]
set trace-auth-no-rsp [enable|disable]
set unknown-http-version [reject|best-effort]
set user-agent-detect [disable|enable]
set vrf-select {integer}
end

```

config web-proxy explicit

Parameter	Description	Type	Size	Default
client-cert	Enable/disable to request client certificate.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable client certificate request.		
	<i>enable</i>	Enable client certificate request.		
empty-cert-action	Action of an empty client certificate.	option	-	block
	Option	Description		
	<i>accept</i>	Accept the SSL handshake if the client certificate is empty.		
	<i>block</i>	Block the SSL handshake if the client certificate is empty.		
	<i>accept-unmanageable</i>	Accept the SSL handshake only if the end-point is unmanageable.		
ftp-incoming-port	Accept incoming FTP-over-HTTP requests on one or more ports (0 - 65535, default = 0; use the same as HTTP).	user	Not Specified	
ftp-over-http	Enable to proxy FTP-over-HTTP sessions sent from a web browser.	option	-	disable

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable FTP-over-HTTP sessions.</td></tr><tr><td><i>disable</i></td><td>Disable FTP-over-HTTP sessions.</td></tr></table>	Option	Description	<i>enable</i>	Enable FTP-over-HTTP sessions.	<i>disable</i>	Disable FTP-over-HTTP sessions.					
	Option	Description										
	<i>enable</i>	Enable FTP-over-HTTP sessions.										
<i>disable</i>	Disable FTP-over-HTTP sessions.											
http-connection-mode	HTTP connection mode (default = static).	option	-	static								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Only one server connection exists during the proxy session.</td></tr><tr><td><i>multiplex</i></td><td>Established connections are held until the proxy session ends.</td></tr><tr><td><i>serverpool</i></td><td>Established connections are shared with other proxy sessions.</td></tr></table>	Option	Description	<i>static</i>	Only one server connection exists during the proxy session.	<i>multiplex</i>	Established connections are held until the proxy session ends.	<i>serverpool</i>	Established connections are shared with other proxy sessions.			
	Option	Description										
	<i>static</i>	Only one server connection exists during the proxy session.										
	<i>multiplex</i>	Established connections are held until the proxy session ends.										
<i>serverpool</i>	Established connections are shared with other proxy sessions.											
http-incoming-port	Accept incoming HTTP requests on one or more ports (0 - 65535, default = 8080).	user	Not Specified									
https-incoming-port	Accept incoming HTTPS requests on one or more ports (0 - 65535, default = 0, use the same as HTTP).	user	Not Specified									
https-replacement-message	Enable/disable sending the client a replacement message for HTTPS requests.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display a replacement message for HTTPS requests.</td></tr><tr><td><i>disable</i></td><td>Do not display a replacement message for HTTPS requests.</td></tr></table>	Option	Description	<i>enable</i>	Display a replacement message for HTTPS requests.	<i>disable</i>	Do not display a replacement message for HTTPS requests.					
	Option	Description										
	<i>enable</i>	Display a replacement message for HTTPS requests.										
<i>disable</i>	Do not display a replacement message for HTTPS requests.											
incoming-ip	Restrict the explicit HTTP proxy to only accept sessions from this IP address. An interface must have this IP address.	ipv4-address-any	Not Specified	0.0.0.0								
incoming-ip6	Restrict the explicit web proxy to only accept sessions from this IPv6 address. An interface must have this IPv6 address.	ipv6-address	Not Specified	::								
interface	Specify outgoing interface to reach server.	string	Maximum length: 15									
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	sdwan								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sdwan</i></td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr></table>	Option	Description	<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.							
	Option	Description										
<i>sdwan</i>	Set outgoing interface by SD-WAN or policy routing rules.											

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>specify</i></td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	<i>specify</i>	Set outgoing interface manually.					
	Option	Description								
<i>specify</i>	Set outgoing interface manually.									
ipv6-status	Enable/disable allowing an IPv6 web proxy destination in policies and all IPv6 related entries in this command.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable allowing an IPv6 web proxy destination.</td></tr><tr><td><i>disable</i></td><td>Disable allowing an IPv6 web proxy destination.</td></tr></table>	Option	Description	<i>enable</i>	Enable allowing an IPv6 web proxy destination.	<i>disable</i>	Disable allowing an IPv6 web proxy destination.			
	Option	Description								
	<i>enable</i>	Enable allowing an IPv6 web proxy destination.								
<i>disable</i>	Disable allowing an IPv6 web proxy destination.									
message-upon-server-error	Enable/disable displaying a replacement message when a server error is detected.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Display a replacement message when a server error is detected.</td></tr><tr><td><i>disable</i></td><td>Do not display a replacement message when a server error is detected.</td></tr></table>	Option	Description	<i>enable</i>	Display a replacement message when a server error is detected.	<i>disable</i>	Do not display a replacement message when a server error is detected.			
	Option	Description								
	<i>enable</i>	Display a replacement message when a server error is detected.								
<i>disable</i>	Do not display a replacement message when a server error is detected.									
outgoing-ip	Outgoing HTTP requests will have this IP address as their source address. An interface must have this IP address.	ipv4-address-any	Not Specified							
outgoing-ip6	Outgoing HTTP requests will leave this IPv6. Multiple interfaces can be specified. Interfaces must have these IPv6 addresses.	ipv6-address	Not Specified							
pac-file-data	PAC file contents enclosed in quotes (maximum of 256K bytes).	user	Not Specified							
pac-file-name	Pac file name.	string	Maximum length: 63	proxy.pac						
pac-file-server-port	Port number that PAC traffic from client web browsers uses to connect to the explicit web proxy (0 - 65535, default = 0; use the same as HTTP).	user	Not Specified							
pac-file-server-status	Enable/disable Proxy Auto-Configuration (PAC) for users of this explicit proxy profile.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Proxy Auto-Configuration (PAC).</td></tr><tr><td><i>disable</i></td><td>Disable Proxy Auto-Configuration (PAC).</td></tr></table>	Option	Description	<i>enable</i>	Enable Proxy Auto-Configuration (PAC).	<i>disable</i>	Disable Proxy Auto-Configuration (PAC).			
	Option	Description								
	<i>enable</i>	Enable Proxy Auto-Configuration (PAC).								
<i>disable</i>	Disable Proxy Auto-Configuration (PAC).									

Parameter	Description	Type	Size	Default										
pac-file-through-https	Enable/disable to get Proxy Auto-Configuration (PAC) through HTTPS.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable to get Proxy Auto-Configuration (PAC) through HTTPS.</td></tr><tr><td>disable</td><td>Disable to get Proxy Auto-Configuration (PAC) through HTTPS.</td></tr></table>	Option	Description	enable	Enable to get Proxy Auto-Configuration (PAC) through HTTPS.	disable	Disable to get Proxy Auto-Configuration (PAC) through HTTPS.							
Option	Description													
enable	Enable to get Proxy Auto-Configuration (PAC) through HTTPS.													
disable	Disable to get Proxy Auto-Configuration (PAC) through HTTPS.													
pac-file-url	PAC file access URL. Read-only.	user	Not Specified											
pref-dns-result	Prefer resolving addresses using the configured IPv4 or IPv6 DNS server (default = ipv4).	option	-	ipv4										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ipv4</td><td>Send the IPv4 request first and then the IPv6 request. Use the DNS response that returns to the FortiGate first.</td></tr><tr><td>ipv6</td><td>Send the IPv6 request first and then the IPv4 request. Use the DNS response that returns to the FortiGate first.</td></tr><tr><td>ipv4-strict</td><td>Use the IPv4 DNS response. If the IPv6 DNS response arrives first, wait 50ms for the IPv4 response and then use the IPv4 response, otherwise the IPv6.</td></tr><tr><td>ipv6-strict</td><td>Use the IPv6 DNS response. If the IPv4 DNS response arrives first, wait 50ms for the IPv6 response and then use the IPv6 response, otherwise the IPv4.</td></tr></table>	Option	Description	ipv4	Send the IPv4 request first and then the IPv6 request. Use the DNS response that returns to the FortiGate first.	ipv6	Send the IPv6 request first and then the IPv4 request. Use the DNS response that returns to the FortiGate first.	ipv4-strict	Use the IPv4 DNS response. If the IPv6 DNS response arrives first, wait 50ms for the IPv4 response and then use the IPv4 response, otherwise the IPv6.	ipv6-strict	Use the IPv6 DNS response. If the IPv4 DNS response arrives first, wait 50ms for the IPv6 response and then use the IPv6 response, otherwise the IPv4.			
Option	Description													
ipv4	Send the IPv4 request first and then the IPv6 request. Use the DNS response that returns to the FortiGate first.													
ipv6	Send the IPv6 request first and then the IPv4 request. Use the DNS response that returns to the FortiGate first.													
ipv4-strict	Use the IPv4 DNS response. If the IPv6 DNS response arrives first, wait 50ms for the IPv4 response and then use the IPv4 response, otherwise the IPv6.													
ipv6-strict	Use the IPv6 DNS response. If the IPv4 DNS response arrives first, wait 50ms for the IPv6 response and then use the IPv6 response, otherwise the IPv4.													
realm	Authentication realm used to identify the explicit web proxy (maximum of 63 characters).	string	Maximum length: 63	default										
sec-default-action	Accept or deny explicit web proxy sessions when no web proxy firewall policy exists.	option	-	deny										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>accept</td><td>Accept requests. All explicit web proxy traffic is accepted whether there is an explicit web proxy policy or not.</td></tr><tr><td>deny</td><td>Deny requests unless there is a matching explicit web proxy policy.</td></tr></table>	Option	Description	accept	Accept requests. All explicit web proxy traffic is accepted whether there is an explicit web proxy policy or not.	deny	Deny requests unless there is a matching explicit web proxy policy.							
Option	Description													
accept	Accept requests. All explicit web proxy traffic is accepted whether there is an explicit web proxy policy or not.													
deny	Deny requests unless there is a matching explicit web proxy policy.													
secure-web-proxy	Enable/disable/require the secure web proxy for HTTP and HTTPS session.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable secure webproxy.</td></tr><tr><td>enable</td><td>Enable secure webproxy access.</td></tr></table>	Option	Description	disable	Disable secure webproxy.	enable	Enable secure webproxy access.							
Option	Description													
disable	Disable secure webproxy.													
enable	Enable secure webproxy access.													

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>secure</i>	Require secure webproxy access.		
secure-web-proxy-cert <name>	Name of certificates for secure web proxy. Certificate list.	string	Maximum length: 79	
socks	Enable/disable the SOCKS proxy.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable the SOCKS proxy.		
	<i>disable</i>	Disable the SOCKS proxy.		
socks-incoming-port	Accept incoming SOCKS proxy requests on one or more ports (0 - 65535, default = 0; use the same as HTTP).	user	Not Specified	
ssl-algorithm	Relative strength of encryption algorithms accepted in HTTPS deep scan: high, medium, or low.	option	-	low
	Option	Description		
	<i>high</i>	High encryption. Allow only AES and ChaCha.		
	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.		
	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.		
ssl-dh-bits	Bit-size of Diffie-Hellman (DH) prime used in DHE-RSA negotiation (default = 2048).	option	-	2048
	Option	Description		
	<i>768</i>	768-bit Diffie-Hellman prime.		
	<i>1024</i>	1024-bit Diffie-Hellman prime.		
	<i>1536</i>	1536-bit Diffie-Hellman prime.		
	<i>2048</i>	2048-bit Diffie-Hellman prime.		
status	Enable/disable the explicit Web proxy for HTTP and HTTPS session.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable the explicit web proxy.		
	<i>disable</i>	Disable the explicit web proxy.		

Parameter	Description	Type	Size	Default						
strict-guest	Enable/disable strict guest user checking by the explicit web proxy.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable strict guest user checking.</td></tr><tr><td><i>disable</i></td><td>Disable strict guest user checking.</td></tr></table>	Option	Description	<i>enable</i>	Enable strict guest user checking.	<i>disable</i>	Disable strict guest user checking.			
Option	Description									
<i>enable</i>	Enable strict guest user checking.									
<i>disable</i>	Disable strict guest user checking.									
trace-auth-no-rsp	Enable/disable logging timed-out authentication requests.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging timed-out authentication requests.</td></tr><tr><td><i>disable</i></td><td>Disable logging timed-out authentication requests.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging timed-out authentication requests.	<i>disable</i>	Disable logging timed-out authentication requests.			
Option	Description									
<i>enable</i>	Enable logging timed-out authentication requests.									
<i>disable</i>	Disable logging timed-out authentication requests.									
unknown-http-version	How to handle HTTP sessions that do not comply with HTTP 0.9, 1.0, or 1.1.	option	-	reject						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>reject</i></td><td>Reject or tear down HTTP sessions that do not use HTTP 0.9, 1.0, or 1.1.</td></tr><tr><td><i>best-effort</i></td><td>Assume all HTTP sessions comply with HTTP 0.9, 1.0, or 1.1. If a session uses a different HTTP version, it may not parse correctly and the connection may be lost.</td></tr></table>	Option	Description	<i>reject</i>	Reject or tear down HTTP sessions that do not use HTTP 0.9, 1.0, or 1.1.	<i>best-effort</i>	Assume all HTTP sessions comply with HTTP 0.9, 1.0, or 1.1. If a session uses a different HTTP version, it may not parse correctly and the connection may be lost.			
Option	Description									
<i>reject</i>	Reject or tear down HTTP sessions that do not use HTTP 0.9, 1.0, or 1.1.									
<i>best-effort</i>	Assume all HTTP sessions comply with HTTP 0.9, 1.0, or 1.1. If a session uses a different HTTP version, it may not parse correctly and the connection may be lost.									
user-agent-detect	Enable/disable to detect device type by HTTP user-agent if no client certificate provided.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable to detect unknown device by HTTP user-agent if no client certificate provided.</td></tr><tr><td><i>enable</i></td><td>Enable to detect unknown device by HTTP user-agent if no client certificate provided.</td></tr></table>	Option	Description	<i>disable</i>	Disable to detect unknown device by HTTP user-agent if no client certificate provided.	<i>enable</i>	Enable to detect unknown device by HTTP user-agent if no client certificate provided.			
Option	Description									
<i>disable</i>	Disable to detect unknown device by HTTP user-agent if no client certificate provided.									
<i>enable</i>	Enable to detect unknown device by HTTP user-agent if no client certificate provided.									
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	-1						

config pac-policy

Parameter	Description	Type	Size	Default
comments	Optional comments.	var-string	Maximum length: 1023	
dstaddr <name>	Destination address objects. Address name.	string	Maximum length: 79	
pac-file-data	PAC file contents enclosed in quotes (maximum of 256K bytes).	user	Not Specified	
pac-file-name	Pac file name.	string	Maximum length: 63	proxy.pac
policyid	Policy ID.	integer	Minimum value: 1 Maximum value: 100	0
srcaddr <name>	Source address objects. Address name.	string	Maximum length: 79	
srcaddr6 <name>	Source address6 objects. Address name.	string	Maximum length: 79	
status	Enable/disable policy.	option	-	enable
		Option	Description	
		enable	Enable policy.	
		disable	Disable policy.	

config web-proxy fast-fallback

Proxy destination connection fast-fallback.

```
config web-proxy fast-fallback
  Description: Proxy destination connection fast-fallback.
  edit <name>
    set connection-mode [sequentially|simultaneously]
    set connection-timeout {integer}
    set protocol [IPv4-first|IPv6-first|...]
    set status [enable|disable]
  next
end
```

config web-proxy fast-fallback

Parameter	Description	Type	Size	Default
connection-mode	Connection mode for multiple destinations.	option	-	sequentially
	Option	Description		
	<i>sequentially</i>	Connect the different destinations sequentially.		
	<i>simultaneously</i>	Connect the different destinations simultaneously.		
connection-timeout	Number of milliseconds to wait before starting another connection (200 - 1800000, default = 200). For sequential connection-mode only.	integer	Minimum value: 200 Maximum value: 1800000	200
name	Configure a name for the fast-fallback entry.	string	Maximum length: 63	
protocol	Connection protocols for multiple destinations.	option	-	IPv4-first
	Option	Description		
	<i>IPv4-first</i>	Connect IPv4 destinations first.		
	<i>IPv6-first</i>	Connect IPv6 destinations first.		
	<i>IPv4-only</i>	Connect IPv4 destinations only.		
	<i>IPv6-only</i>	Connect IPv6 destinations only.		
status	Enable/disable the fast-fallback entry.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable Status of the entry.		
	<i>disable</i>	Disable Status of the entry.		

config web-proxy forward-server

Configure forward-server addresses.

```
config web-proxy forward-server
  Description: Configure forward-server addresses.
  edit <name>
    set addr-type [ip|ipv6|...]
    set comment {string}
    set fqdn {string}
```

```

set healthcheck [disable|enable]
set interface {string}
set interface-select-method [sdwan|specify]
set ip {ipv4-address-any}
set ipv6 {ipv6-address}
set masquerade [enable|disable]
set monitor {string}
set password {password}
set port {integer}
set server-down-option [block|pass]
set username {string}
set vrf-select {integer}
next
end

```

config web-proxy forward-server

Parameter	Description	Type	Size	Default
addr-type	Address type of the forwarding proxy server: IP or FQDN.	option	-	ip
	Option	Description		
	<i>ip</i>	Use an IPv4 address for the forwarding proxy server.		
	<i>ipv6</i>	Use an IPv6 address for the forwarding proxy server.		
	<i>fqdn</i>	Use the FQDN for the forwarding proxy server.		
comment	Comment.	string	Maximum length: 63	
fqdn	Forward server Fully Qualified Domain Name (FQDN).	string	Maximum length: 255	
healthcheck	Enable/disable forward server health checking. Attempts to connect through the remote forwarding server to a destination to verify that the forwarding server is operating normally.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable health checking.		
	<i>enable</i>	Enable health checking.		
interface	Specify outgoing interface to reach server.	string	Maximum length: 15	

Parameter	Description	Type	Size	Default						
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	sdwan						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>	Option	Description	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.			
Option	Description									
sdwan	Set outgoing interface by SD-WAN or policy routing rules.									
specify	Set outgoing interface manually.									
ip	Forward proxy server IP address.	ipv4-address-any	Not Specified	0.0.0.0						
ipv6	Forward proxy server IPv6 address.	ipv6-address	Not Specified	::						
masquerade	Enable/disable use of the of the IP address of the outgoing interface as the client IP address (default = enable)	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of the IP address of the outgoing interface as the client IP address.</td></tr><tr><td>disable</td><td>Disable use of the of the IP address of the outgoing interface as the client IP address.</td></tr></table>	Option	Description	enable	Enable use of the IP address of the outgoing interface as the client IP address.	disable	Disable use of the of the IP address of the outgoing interface as the client IP address.			
Option	Description									
enable	Enable use of the IP address of the outgoing interface as the client IP address.									
disable	Disable use of the of the IP address of the outgoing interface as the client IP address.									
monitor	URL for forward server health check monitoring (default = www.google.com).	string	Maximum length: 255	www.google.com						
name	Server name.	string	Maximum length: 63							
password	HTTP authentication password.	password	Not Specified							
port	Port number that the forwarding server expects to receive HTTP sessions on (1 - 65535, default = 3128).	integer	Minimum value: 1 Maximum value: 65535	3128						
server-down-option	Action to take when the forward server is found to be down: block sessions until the server is back up or pass sessions to their destination.	option	-	block						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>block</td><td>Block sessions until the server is back up.</td></tr><tr><td>pass</td><td>Pass sessions to their destination bypassing the forward server.</td></tr></table>	Option	Description	block	Block sessions until the server is back up.	pass	Pass sessions to their destination bypassing the forward server.			
Option	Description									
block	Block sessions until the server is back up.									
pass	Pass sessions to their destination bypassing the forward server.									

Parameter	Description	Type	Size	Default
username	HTTP authentication user name.	string	Maximum length: 64	
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	-1

config web-proxy forward-server-group

Configure a forward server group consisting of multiple forward servers. Supports failover and load balancing.

```

config web-proxy forward-server-group
    Description: Configure a forward server group consisting of multiple forward servers. Supports
    failover and load balancing.
    edit <name>
        set affinity [enable|disable]
        set group-down-option [block|pass]
        set ldb-method [weighted|least-session|...]
        config server-list
            Description: Add web forward servers to a list to form a server group. Optionally
            assign weights to each server.
            edit <name>
                set weight {integer}
            next
        end
    next
end

```

config web-proxy forward-server-group

Parameter	Description	Type	Size	Default
affinity	Enable/disable affinity, attaching a source-ip's traffic to the assigned forwarding server until the forward-server-affinity-timeout is reached (under web-proxy global).	option	-	enable
	Option	Description		
	<i>enable</i>	Enable affinity.		
	<i>disable</i>	Disable affinity.		

Parameter	Description	Type	Size	Default								
group-down-option	Action to take when all of the servers in the forward server group are down: block sessions until at least one server is back up or pass sessions to their destination.	option	-	block								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>block</i></td><td>Block sessions until at least one server in the group is back up.</td></tr><tr><td><i>pass</i></td><td>Pass sessions to their destination bypassing servers in the forward server group.</td></tr></table>	Option	Description	<i>block</i>	Block sessions until at least one server in the group is back up.	<i>pass</i>	Pass sessions to their destination bypassing servers in the forward server group.					
Option	Description											
<i>block</i>	Block sessions until at least one server in the group is back up.											
<i>pass</i>	Pass sessions to their destination bypassing servers in the forward server group.											
ldb-method	Load balance method: weighted or least-session.	option	-	weighted								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>weighted</i></td><td>Load balance traffic to forward servers based on assigned weights. Weights are ratios of total number of sessions.</td></tr><tr><td><i>least-session</i></td><td>Send new sessions to the server with lowest session count.</td></tr><tr><td><i>active-passive</i></td><td>Send new sessions to the next active server in the list. Servers are selected with highest weight first and then in order as they are configured. Traffic switches back to the first server upon failure recovery.</td></tr></table>	Option	Description	<i>weighted</i>	Load balance traffic to forward servers based on assigned weights. Weights are ratios of total number of sessions.	<i>least-session</i>	Send new sessions to the server with lowest session count.	<i>active-passive</i>	Send new sessions to the next active server in the list. Servers are selected with highest weight first and then in order as they are configured. Traffic switches back to the first server upon failure recovery.			
Option	Description											
<i>weighted</i>	Load balance traffic to forward servers based on assigned weights. Weights are ratios of total number of sessions.											
<i>least-session</i>	Send new sessions to the server with lowest session count.											
<i>active-passive</i>	Send new sessions to the next active server in the list. Servers are selected with highest weight first and then in order as they are configured. Traffic switches back to the first server upon failure recovery.											
name	Configure a forward server group consisting one or multiple forward servers. Supports failover and load balancing.	string	Maximum length: 63									

config server-list

Parameter	Description	Type	Size	Default
name	Forward server name.	string	Maximum length: 63	
weight	Optionally assign a weight of the forwarding server for weighted load balancing (1 - 100, default = 10).	integer	Minimum value: 1 Maximum value: 100	10

config web-proxy global

Configure Web proxy global settings.

```
config web-proxy global
  Description: Configure Web proxy global settings.
  set always-learn-client-ip [enable|disable]
```

```

set fast-policy-match [enable|disable]
set forward-proxy-auth [enable|disable]
set forward-server-affinity-timeout {integer}

set src-affinity-exempt-addr {ipv4-address-any}
set src-affinity-exempt-addr6 {ipv6-address}
set ssl-ca-cert {string}
set ssl-cert {string}
set strict-web-check [enable|disable]
set webproxy-profile {string}
end

```

end

config web-proxy global

Parameter	Description	Type	Size	Default						
always-learn-client-ip	Enable/disable learning the client's IP address from headers for every request.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable learning the client's IP address from headers for every request.</td></tr><tr><td><i>disable</i></td><td>Disable learning the client's IP address from headers for every request.</td></tr></table>	Option	Description	<i>enable</i>	Enable learning the client's IP address from headers for every request.	<i>disable</i>	Disable learning the client's IP address from headers for every request.			
Option	Description									
<i>enable</i>	Enable learning the client's IP address from headers for every request.									
<i>disable</i>	Disable learning the client's IP address from headers for every request.									
fast-policy-match	Enable/disable fast matching algorithm for explicit and transparent proxy policy.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
Option	Description									
<i>enable</i>	Enable setting.									
<i>disable</i>	Disable setting.									
forward-proxy-auth	Enable/disable forwarding proxy authentication headers.	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable forwarding proxy authentication headers.</td></tr><tr><td><i>disable</i></td><td>Disable forwarding proxy authentication headers.</td></tr></table>	Option	Description	<i>enable</i>	Enable forwarding proxy authentication headers.	<i>disable</i>	Disable forwarding proxy authentication headers.			
	Option	Description								
	<i>enable</i>	Enable forwarding proxy authentication headers.								
<i>disable</i>	Disable forwarding proxy authentication headers.									
forward-server-affinity-timeout	Period of time before the source IP's traffic is no longer assigned to the forwarding server (6 - 60 min, default = 30).	integer	Minimum value: 6 Maximum value: 60	30						
http2-client-window-size	HTTP/2 client initial window size in bytes (65535 - 2147483647, default = 1048576 (1MB)).	integer	Minimum value: 65535 Maximum value: 2147483647	1048576						
http2-server-window-size	HTTP/2 server initial window size in bytes (65535 - 2147483647, default = 1048576 (1MB)).	integer	Minimum value: 65535 Maximum value: 2147483647	1048576						
ldap-user-cache	Enable/disable LDAP user cache for explicit and transparent proxy user.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.			
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
learn-client-ip	Enable/disable learning the client's IP address from headers.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable learning the client's IP address from headers.</td></tr><tr><td><i>disable</i></td><td>Disable learning the client's IP address from headers.</td></tr></table>	Option	Description	<i>enable</i>	Enable learning the client's IP address from headers.	<i>disable</i>	Disable learning the client's IP address from headers.			
	Option	Description								
	<i>enable</i>	Enable learning the client's IP address from headers.								
<i>disable</i>	Disable learning the client's IP address from headers.									
learn-client-ip-from-header	Learn client IP address from the specified headers.	option	-							
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>true-client-ip</i></td><td>Learn the client IP address from the True-Client-IP header.</td></tr><tr><td><i>x-real-ip</i></td><td>Learn the client IP address from the X-Real-IP header.</td></tr></table>	Option	Description	<i>true-client-ip</i>	Learn the client IP address from the True-Client-IP header.	<i>x-real-ip</i>	Learn the client IP address from the X-Real-IP header.			
	Option	Description								
	<i>true-client-ip</i>	Learn the client IP address from the True-Client-IP header.								
<i>x-real-ip</i>	Learn the client IP address from the X-Real-IP header.									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>x-forwarded-for</i></td><td>Learn the client IP address from the X-Forwarded-For header.</td></tr></table>	Option	Description	<i>x-forwarded-for</i>	Learn the client IP address from the X-Forwarded-For header.					
Option	Description									
<i>x-forwarded-for</i>	Learn the client IP address from the X-Forwarded-For header.									
learn-client-ip-srcaddr <name>	Source address name (srcaddr or srcaddr6 must be set). Address name.	string	Maximum length: 79							
learn-client-ip-srcaddr6 <name>	IPv6 Source address name (srcaddr or srcaddr6 must be set). Address name.	string	Maximum length: 79							
log-app-id	Enable/disable always log application type in traffic log.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging application type in traffic log.</td></tr><tr><td><i>disable</i></td><td>Disable logging application type in traffic log.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging application type in traffic log.	<i>disable</i>	Disable logging application type in traffic log.			
Option	Description									
<i>enable</i>	Enable logging application type in traffic log.									
<i>disable</i>	Disable logging application type in traffic log.									
log-forward-server	Enable/disable forward server name logging in forward traffic log.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging forward server name in forward traffic log.</td></tr><tr><td><i>disable</i></td><td>Disable logging forward server name in forward traffic log.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging forward server name in forward traffic log.	<i>disable</i>	Disable logging forward server name in forward traffic log.			
Option	Description									
<i>enable</i>	Enable logging forward server name in forward traffic log.									
<i>disable</i>	Disable logging forward server name in forward traffic log.									
log-policy-pending	Enable/disable logging sessions that are pending on policy matching.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable logging sessions that are pending on policy matching.</td></tr><tr><td><i>disable</i></td><td>Disable logging sessions that are pending on policy matching.</td></tr></table>	Option	Description	<i>enable</i>	Enable logging sessions that are pending on policy matching.	<i>disable</i>	Disable logging sessions that are pending on policy matching.			
Option	Description									
<i>enable</i>	Enable logging sessions that are pending on policy matching.									
<i>disable</i>	Disable logging sessions that are pending on policy matching.									
max-message-length	Maximum length of HTTP message, not including body (16 - 256 Kbytes, default = 32).	integer	Minimum value: 16 Maximum value: 256	32						
max-request-length	Maximum length of HTTP request line (2 - 64 Kbytes, default = 8).	integer	Minimum value: 2 Maximum value: 64	8						

Parameter	Description	Type	Size	Default
max-waf-body-cache-length	Maximum length of HTTP messages processed by Web Application Firewall (WAF) (1 - 1024 Kbytes, default = 1).	integer	Minimum value: 1 Maximum value: 1024	1
proxy-fqdn	Fully Qualified Domain Name of the explicit web proxy (default = default.fqdn) that clients connect to.	string	Maximum length: 255	default.fqdn
proxy-transparent-cert-inspection	Enable/disable transparent proxy certificate inspection.	option	-	disable
	Option		Description	
	<i>enable</i>		Enable proxying certificate inspection in transparent mode.	
	<i>disable</i>		Disable proxying certificate inspection in transparent mode.	
request-obs-fold	Action when HTTP/1.x request header contains obs-fold.	option	-	keep
	Option		Description	
	<i>replace-with-sp</i>		Replace CRLF in obs-fold with SP in the request header for HTTP/1.x.	
	<i>block</i>		Block HTTP/1.x request with obs-fold.	
	<i>keep</i>		Keep obs-fold in the request header for HTTP/1.x. There are known security risks.	
src-affinity-exempt-addr	IPv4 source addresses to exempt proxy affinity.	ipv4-address-any	Not Specified	
src-affinity-exempt-addr6	IPv6 source addresses to exempt proxy affinity.	ipv6-address	Not Specified	
ssl-ca-cert	SSL CA certificate for SSL interception.	string	Maximum length: 35	Fortinet_CA_SSL
ssl-cert	SSL certificate for SSL interception.	string	Maximum length: 35	Fortinet_Factory
strict-web-check	Enable/disable strict web checking to block web sites that send incorrect headers that don't conform to HTTP.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable strict web checking.		
	<i>disable</i>	Disable strict web checking.		
webproxy-profile	Name of the web proxy profile to apply when explicit proxy traffic is allowed by default and traffic is accepted that does not match an explicit proxy policy.	string	Maximum length: 63	

config web-proxy isolator-server

Configure forward-server addresses.

```

config web-proxy isolator-server
  Description: Configure forward-server addresses.
  edit <name>
    set addr-type [ip|ipv6|...]
    set comment {string}
    set fqdn {string}
    set interface {string}
    set interface-select-method [sdwan|specify]
    set ip {ipv4-address-any}
    set ipv6 {ipv6-address}
    set masquerade [enable|disable]
    set port {integer}
    set vrf-select {integer}
  next
end

```

config web-proxy isolator-server

Parameter	Description	Type	Size	Default
addr-type	Address type of the forwarding proxy server: IP or FQDN.	option	-	ip
	Option	Description		
	<i>ip</i>	Use an IPv4 address for the forwarding proxy server.		
	<i>ipv6</i>	Use an IPv6 address for the forwarding proxy server.		
	<i>fqdn</i>	Use the FQDN for the forwarding proxy server.		
comment	Comment.	string	Maximum length: 63	

Parameter	Description	Type	Size	Default						
fqdn	Forward server Fully Qualified Domain Name (FQDN).	string	Maximum length: 255							
interface	Specify outgoing interface to reach server.	string	Maximum length: 15							
interface-select-method	Specify how to select outgoing interface to reach server.	option	-	sdwan						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>sdwan</td><td>Set outgoing interface by SD-WAN or policy routing rules.</td></tr><tr><td>specify</td><td>Set outgoing interface manually.</td></tr></table>				Option	Description	sdwan	Set outgoing interface by SD-WAN or policy routing rules.	specify	Set outgoing interface manually.
Option	Description									
sdwan	Set outgoing interface by SD-WAN or policy routing rules.									
specify	Set outgoing interface manually.									
ip	Forward proxy server IP address.	ipv4-address-any	Not Specified	0.0.0.0						
ipv6	Forward proxy server IPv6 address.	ipv6-address	Not Specified	::						
masquerade	Enable/disable use of the of the IP address of the outgoing interface as the client IP address (default = enable)	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of the IP address of the outgoing interface as the client IP address.</td></tr><tr><td>disable</td><td>Disable use of the of the IP address of the outgoing interface as the client IP address.</td></tr></table>				Option	Description	enable	Enable use of the IP address of the outgoing interface as the client IP address.	disable	Disable use of the of the IP address of the outgoing interface as the client IP address.
Option	Description									
enable	Enable use of the IP address of the outgoing interface as the client IP address.									
disable	Disable use of the of the IP address of the outgoing interface as the client IP address.									
name	Server name.	string	Maximum length: 63							
port	Port number that the forwarding server expects to receive HTTP sessions on (1 - 65535, default = 3128).	integer	Minimum value: 1 Maximum value: 65535	3128						
vrf-select	VRF ID used for connection to server.	integer	Minimum value: 0 Maximum value: 511	-1						

config web-proxy profile

Configure web proxy profiles.

```

config web-proxy profile
  Description: Configure web proxy profiles.
  edit <name>
    set header-client-ip [pass|add|...]
    set header-front-end-https [pass|add|...]
    set header-via-request [pass|add|...]
    set header-via-response [pass|add|...]
    set header-x-authenticated-groups [pass|add|...]
    set header-x-authenticated-user [pass|add|...]
    set header-x-forwarded-client-cert [pass|add|...]
    set header-x-forwarded-for [pass|add|...]
  config headers
    Description: Configure HTTP forwarded requests headers.
    edit <id>
      set action [add-to-request|add-to-response|...]
      set add-option [append|new-on-not-found|...]
      set base64-encoding [disable|enable]
      set content {string}
      set dstaddr <name1>, <name2>, ...
      set dstaddr6 <name1>, <name2>, ...
      set name {string}
      set protocol {option1}, {option2}, ...
    next
  end
  set log-header-change [enable|disable]
  set strip-encoding [enable|disable]
next
end

```

config web-proxy profile

Parameter	Description	Type	Size	Default								
header-client-ip	Action to take on the HTTP client-IP header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Forward the same HTTP header.</td></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>pass</i>	Forward the same HTTP header.	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.			
	Option	Description										
	<i>pass</i>	Forward the same HTTP header.										
	<i>add</i>	Add the HTTP header.										
<i>remove</i>	Remove the HTTP header.											
header-front-end-https	Action to take on the HTTP front-end-HTTPS header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-via-request	Action to take on the HTTP via header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	Option	Description		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-via-response	Action to take on the HTTP via header in forwarded responses: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	Option	Description		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-x-authenticated-groups	Action to take on the HTTP x-authenticated-groups header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	Option	Description		
	<i>pass</i>	Forward the same HTTP header.		
	<i>add</i>	Add the HTTP header.		
	<i>remove</i>	Remove the HTTP header.		
header-x-authenticated-user	Action to take on the HTTP x-authenticated-user header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass
	Option	Description		
	<i>pass</i>	Forward the same HTTP header.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.					
Option	Description											
<i>add</i>	Add the HTTP header.											
<i>remove</i>	Remove the HTTP header.											
header-x-forwarded-client-cert	Action to take on the HTTP x-forwarded-client-cert header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Forward the same HTTP header.</td></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>pass</i>	Forward the same HTTP header.	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.			
Option	Description											
<i>pass</i>	Forward the same HTTP header.											
<i>add</i>	Add the HTTP header.											
<i>remove</i>	Remove the HTTP header.											
header-x-forwarded-for	Action to take on the HTTP x-forwarded-for header in forwarded requests: forwards (pass), adds, or removes the HTTP header.	option	-	pass								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>pass</i></td><td>Forward the same HTTP header.</td></tr><tr><td><i>add</i></td><td>Add the HTTP header.</td></tr><tr><td><i>remove</i></td><td>Remove the HTTP header.</td></tr></table>	Option	Description	<i>pass</i>	Forward the same HTTP header.	<i>add</i>	Add the HTTP header.	<i>remove</i>	Remove the HTTP header.			
Option	Description											
<i>pass</i>	Forward the same HTTP header.											
<i>add</i>	Add the HTTP header.											
<i>remove</i>	Remove the HTTP header.											
log-header-change	Enable/disable logging HTTP header changes.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Enable/disable logging HTTP header changes.</td></tr><tr><td><i>disable</i></td><td>Disable Enable/disable logging HTTP header changes.</td></tr></table>	Option	Description	<i>enable</i>	Enable Enable/disable logging HTTP header changes.	<i>disable</i>	Disable Enable/disable logging HTTP header changes.					
Option	Description											
<i>enable</i>	Enable Enable/disable logging HTTP header changes.											
<i>disable</i>	Disable Enable/disable logging HTTP header changes.											
name	Profile name.	string	Maximum length: 63									
strip-encoding	Enable/disable stripping unsupported encoding from the request header.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable stripping of unsupported encoding from the request header.</td></tr><tr><td><i>disable</i></td><td>Disable stripping of unsupported encoding from the request header.</td></tr></table>	Option	Description	<i>enable</i>	Enable stripping of unsupported encoding from the request header.	<i>disable</i>	Disable stripping of unsupported encoding from the request header.					
Option	Description											
<i>enable</i>	Enable stripping of unsupported encoding from the request header.											
<i>disable</i>	Disable stripping of unsupported encoding from the request header.											

config headers

Parameter	Description	Type	Size	Default														
action	Configure adding, removing, or logging of the HTTP header entry in HTTP requests and responses.	option	-	add-to-request														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>add-to-request</i></td><td>Add the HTTP header to request.</td></tr><tr><td><i>add-to-response</i></td><td>Add the HTTP header to response.</td></tr><tr><td><i>remove-from-request</i></td><td>Remove the HTTP header from request.</td></tr><tr><td><i>remove-from-response</i></td><td>Remove the HTTP header from response.</td></tr><tr><td><i>monitor-request</i></td><td>Record the HTTP header in utm-webfilter log.</td></tr><tr><td><i>monitor-response</i></td><td>Record the HTTP header in utm-webfilter log.</td></tr></table>	Option	Description	<i>add-to-request</i>	Add the HTTP header to request.	<i>add-to-response</i>	Add the HTTP header to response.	<i>remove-from-request</i>	Remove the HTTP header from request.	<i>remove-from-response</i>	Remove the HTTP header from response.	<i>monitor-request</i>	Record the HTTP header in utm-webfilter log.	<i>monitor-response</i>	Record the HTTP header in utm-webfilter log.			
Option	Description																	
<i>add-to-request</i>	Add the HTTP header to request.																	
<i>add-to-response</i>	Add the HTTP header to response.																	
<i>remove-from-request</i>	Remove the HTTP header from request.																	
<i>remove-from-response</i>	Remove the HTTP header from response.																	
<i>monitor-request</i>	Record the HTTP header in utm-webfilter log.																	
<i>monitor-response</i>	Record the HTTP header in utm-webfilter log.																	
add-option	Configure options to append content to existing HTTP header or add new HTTP header.	option	-	new														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>append</i></td><td>Append content to existing HTTP header or create new header if HTTP header is not found.</td></tr><tr><td><i>new-on-not-found</i></td><td>Create new header only if existing HTTP header is not found.</td></tr><tr><td><i>new</i></td><td>Create new header regardless if existing HTTP header is found or not.</td></tr><tr><td><i>replace</i></td><td>Replace content to existing HTTP header or create new header if HTTP header is not found.</td></tr><tr><td><i>replace-when-match</i></td><td>Replace content to existing HTTP header.</td></tr></table>	Option	Description	<i>append</i>	Append content to existing HTTP header or create new header if HTTP header is not found.	<i>new-on-not-found</i>	Create new header only if existing HTTP header is not found.	<i>new</i>	Create new header regardless if existing HTTP header is found or not.	<i>replace</i>	Replace content to existing HTTP header or create new header if HTTP header is not found.	<i>replace-when-match</i>	Replace content to existing HTTP header.					
Option	Description																	
<i>append</i>	Append content to existing HTTP header or create new header if HTTP header is not found.																	
<i>new-on-not-found</i>	Create new header only if existing HTTP header is not found.																	
<i>new</i>	Create new header regardless if existing HTTP header is found or not.																	
<i>replace</i>	Replace content to existing HTTP header or create new header if HTTP header is not found.																	
<i>replace-when-match</i>	Replace content to existing HTTP header.																	
base64-encoding	Enable/disable use of base64 encoding of HTTP content.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable use of base64 encoding of HTTP content.</td></tr><tr><td><i>enable</i></td><td>Enable use of base64 encoding of HTTP content.</td></tr></table>	Option	Description	<i>disable</i>	Disable use of base64 encoding of HTTP content.	<i>enable</i>	Enable use of base64 encoding of HTTP content.											
Option	Description																	
<i>disable</i>	Disable use of base64 encoding of HTTP content.																	
<i>enable</i>	Enable use of base64 encoding of HTTP content.																	

Parameter	Description	Type	Size	Default						
content	HTTP header content.	string	Maximum length: 3999							
dstaddr <name>	Destination address and address group names. Address name.	string	Maximum length: 79							
dstaddr6 <name>	Destination address and address group names (IPv6). Address name.	string	Maximum length: 79							
id	HTTP forwarded header id.	integer	Minimum value: 0 Maximum value: 4294967295							
name	HTTP forwarded header name.	string	Maximum length: 79							
protocol	Configure protocol(s) to take add-option action on (HTTP, HTTPS, or both).	option	-	https http						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>https</td><td>Perform add-option action on HTTPS.</td></tr><tr><td>http</td><td>Perform add-option action on HTTP.</td></tr></table>				Option	Description	https	Perform add-option action on HTTPS.	http	Perform add-option action on HTTP.
Option	Description									
https	Perform add-option action on HTTPS.									
http	Perform add-option action on HTTP.									

config web-proxy url-match

Exempt URLs from web proxy forwarding, caching and fast-fallback.

```

config web-proxy url-match
  Description: Exempt URLs from web proxy forwarding, caching and fast-fallback.
  edit <name>
    set cache-exemption [enable|disable]
    set comment {var-string}
    set fast-fallback {string}
    set forward-server {string}
    set status [enable|disable]
    set url-pattern {string}
  next
end

```

config web-proxy url-match

Parameter	Description	Type	Size	Default
cache-exemption	Enable/disable exempting this URL pattern from caching.	option	-	disable
	Option Description			
	<i>enable</i>	Enable exempting this URL pattern from caching.		
	<i>disable</i>	Disable exempting this URL pattern from caching.		
comment	Comment.	var-string	Maximum length: 255	
fast-fallback	Fast fallback configuration entry name.	string	Maximum length: 63	
forward-server	Forward server name.	string	Maximum length: 63	
name	Configure a name for the URL to be exempted.	string	Maximum length: 63	
status	Enable/disable exempting the URLs matching the URL pattern from web proxy forwarding, caching and fast-fallback.	option	-	enable
	Option Description			
	<i>enable</i>	Enable exempting the matching URLs.		
	<i>disable</i>	Disable exempting the matching URLs.		
url-pattern	URL pattern to be exempted from web proxy forwarding, caching and fast-fallback.	string	Maximum length: 511	

config web-proxy wisp

Configure Websense Integrated Services Protocol (WISP) servers.

```
config web-proxy wisp
  Description: Configure Websense Integrated Services Protocol (WISP) servers.
  edit <name>
    set comment {var-string}
    set max-connections {integer}
    set outgoing-ip {ipv4-address-any}
    set server-ip {ipv4-address-any}
    set server-port {integer}
    set timeout {integer}
```

```
next
end
```

config web-proxy wisp

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
max-connections	Maximum number of web proxy WISP connections (4 - 4096, default = 64).	integer	Minimum value: 4 Maximum value: 4096	64
name	Server name.	string	Maximum length: 35	
outgoing-ip	WISP outgoing IP address.	ipv4-address-any	Not Specified	0.0.0.0
server-ip	WISP server IP address.	ipv4-address-any	Not Specified	0.0.0.0
server-port	WISP server port (1 - 65535, default = 15868).	integer	Minimum value: 1 Maximum value: 65535	15868
timeout	Period of time before WISP requests time out (1 - 15 sec, default = 5).	integer	Minimum value: 1 Maximum value: 15	5

webfilter

This section includes syntax for the following commands:

config webfilter content

Configure Web filter banned word table.

```
config webfilter content
  Description: Configure Web filter banned word table.
  edit <id>
    set comment {var-string}
    config entries
      Description: Configure banned word entries.
      edit <name>
        set action [block|exempt]
        set lang [western|simch|...]
        set pattern-type [wildcard|regex]
        set score {integer}
        set status [enable|disable]
      next
    end
    set name {string}
  next
end
```

config webfilter content

Parameter	Description	Type	Size	Default
comment	Optional comments.	var-string	Maximum length: 255	
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	
name	Name of table.	string	Maximum length: 63	

config entries

Parameter	Description	Type	Size	Default
action	Block or exempt word when a match is found.	option	-	block
	Option	Description		
	<i>block</i>	Block matches.		
	<i>exempt</i>	Exempt matches.		
lang	Language of banned word.	option	-	western
	Option	Description		
	<i>western</i>	Western.		
	<i>simch</i>	Simplified Chinese.		
	<i>trach</i>	Traditional Chinese.		
	<i>japanese</i>	Japanese.		
	<i>korean</i>	Korean.		
	<i>french</i>	French.		
	<i>thai</i>	Thai.		
	<i>spanish</i>	Spanish.		
	<i>cyrillic</i>	Cyrillic.		
name	Banned word.	string	Maximum length: 127	
pattern-type	Banned word pattern type: wildcard pattern or Perl regular expression.	option	-	wildcard

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>wildcard</i>	Wildcard pattern.		
	<i>regex</i>	Perl regular expression.		
score	Score, to be applied every time the word appears on a web page (0 - 4294967295, default = 10).	integer	Minimum value: 10 0 Maximum value: 4294967295	
status	Enable/disable banned word.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		

config webfilter content-header

Configure content types used by Web filter.

```

config webfilter content-header
  Description: Configure content types used by Web filter.
  edit <id>
    set comment {var-string}
    config entries
      Description: Configure content types used by web filter.
      edit <pattern>
        set action [block|allow|...]
        set category {user}
      next
    end
    set name {string}
  next
end

```

config webfilter content-header

Parameter	Description	Type	Size	Default
comment	Optional comments.	var-string	Maximum length: 255	

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
name	Name of table.	string	Maximum length: 63	

config entries

Parameter	Description	Type	Size	Default
action	Action to take for this content type.	option	-	allow
	Option	Description		
	block	Block content type.		
	allow	Allow content type.		
	exempt	Exempt content type.		
category	Categories that this content type applies to.	user	Not Specified	all
pattern	Content type (regular expression).	string	Maximum length: 31	

config webfilter fortiguard

Configure FortiGuard Web Filter service.

```

config webfilter fortiguard
    Description: Configure FortiGuard Web Filter service.
    set cache-mem-permille {integer}
    set cache-mode [ttl|db-ver]
    set cache-prefix-match [enable|disable]
    set close-ports [enable|disable]
    set embed-image [enable|disable]
    set ovr-auth-https [enable|disable]
    set ovr-auth-port-http {integer}
    set ovr-auth-port-https {integer}
    set ovr-auth-port-https-flow {integer}
    set ovr-auth-port-warning {integer}
    set request-packet-size-limit {integer}
    set warn-auth-https [enable|disable]
end

```

config webfilter fortiguard

Parameter	Description	Type	Size	Default						
cache-mem-permille	Maximum permille of available memory allocated to caching (1 - 150).	integer	Minimum value: 1 Maximum value: 150	1						
cache-mode	Cache entry expiration mode.	option	-	ttl						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ttl</td><td>Expire cache items by time-to-live.</td></tr><tr><td>db-ver</td><td>Expire cache items when the server DB version changes.</td></tr></table>	Option	Description	ttl	Expire cache items by time-to-live.	db-ver	Expire cache items when the server DB version changes.			
Option	Description									
ttl	Expire cache items by time-to-live.									
db-ver	Expire cache items when the server DB version changes.									
cache-prefix-match	Enable/disable prefix matching in the cache.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
close-ports	Close ports used for HTTP/HTTPS override authentication and disable user overrides.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
embed-image	Enable/disable embedding images into replacement messages (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									
ovrd-auth-https	Enable/disable use of HTTPS for override authentication.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable setting.</td></tr><tr><td>disable</td><td>Disable setting.</td></tr></table>	Option	Description	enable	Enable setting.	disable	Disable setting.			
Option	Description									
enable	Enable setting.									
disable	Disable setting.									

Parameter	Description	Type	Size	Default
ovrd-auth-port-http	Port to use for FortiGuard Web Filter HTTP override authentication.	integer	Minimum value: 0 Maximum value: 65535	8008
ovrd-auth-port-https	Port to use for FortiGuard Web Filter HTTPS override authentication in proxy mode.	integer	Minimum value: 0 Maximum value: 65535	8010
ovrd-auth-port-https-flow	Port to use for FortiGuard Web Filter HTTPS override authentication in flow mode.	integer	Minimum value: 0 Maximum value: 65535	8015
ovrd-auth-port-warning	Port to use for FortiGuard Web Filter Warning override authentication.	integer	Minimum value: 0 Maximum value: 65535	8020
request-packet-size-limit	Limit size of URL request packets sent to FortiGuard server (0 for default).	integer	Minimum value: 576 Maximum value: 10000	0
warn-auth-https	Enable/disable use of HTTPS for warning and authentication.	option	-	enable
		Option	Description	
		<i>enable</i>	Enable setting.	
		<i>disable</i>	Disable setting.	

config webfilter ftgd-local-cat

Configure FortiGuard Web Filter local categories.

```
config webfilter ftgd-local-cat
    Description: Configure FortiGuard Web Filter local categories.
    edit <desc>
        set id {integer}
        set status [enable|disable]
```

```
next
end
```

config webfilter ftgd-local-cat

Parameter	Description	Type	Size	Default
desc	Local category description.	string	Maximum length: 79	
id	Local category ID.	integer	Minimum value: 140 Maximum value: 191	0
status	Enable/disable the local category.	option	-	enable
		Option	Description	
		enable	Enable the local category.	
		disable	Disable the local category.	

config webfilter ftgd-local-rating

Configure local FortiGuard Web Filter local ratings.

```
config webfilter ftgd-local-rating
  Description: Configure local FortiGuard Web Filter local ratings.
  edit <url>
    set comment {var-string}
    set rating {user}
    set status [enable|disable]
  next
end
```

config webfilter ftgd-local-rating

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
rating	Local rating.	user	Not Specified	
status	Enable/disable local rating.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable local rating.		
	<i>disable</i>	Disable local rating.		
url	URL to rate locally.	string	Maximum length: 511	

config webfilter ftgd-local-risk

Configure FortiGuard Web Filter local risk score.

```
config webfilter ftgd-local-risk
  Description: Configure FortiGuard Web Filter local risk score.
  edit <url>
    set comment {var-string}
    set risk-score {integer}
    set status [enable|disable]
  next
end
```

config webfilter ftgd-local-risk

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
risk-score	Local risk score.	integer	Minimum value: 0 Maximum value: 100	0
status	Enable/disable local risk score.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable local risk level.		
	<i>disable</i>	Disable local risk level.		
url	URL to rate locally.	string	Maximum length: 511	

config webfilter ftgd-risk-level

Configure FortiGuard Web Filter risk level.

```
config webfilter ftgd-risk-level
  Description: Configure FortiGuard Web Filter risk level.
  edit <name>
    set high {integer}
    set low {integer}
  next
end
```

config webfilter ftgd-risk-level

Parameter	Description	Type	Size	Default
high	Risk level high.	integer	Minimum value: 0 Maximum value: 100	0
low	Risk level low.	integer	Minimum value: 0 Maximum value: 100	0
name	Risk level name.	string	Maximum length: 35	

config webfilter ips-urlfilter-cache-setting

Configure IPS URL filter cache settings.

```
config webfilter ips-urlfilter-cache-setting
  Description: Configure IPS URL filter cache settings.
  set dns-retry-interval {integer}
  set extended-ttl {integer}
end
```

config webfilter ips-urlfilter-cache-setting

Parameter	Description	Type	Size	Default
dns-retry-interval	Retry interval. Refresh DNS faster than TTL to capture multiple IPs for hosts. 0 means use DNS server's TTL only.	integer	Minimum value: 0 Maximum value: 2147483	0
extended-ttl	Extend time to live beyond reported by DNS. Use of 0 means use DNS server's TTL.	integer	Minimum value: 0 Maximum value: 2147483	0

config webfilter ips-urlfilter-setting

Configure IPS URL filter settings.

```
config webfilter ips-urlfilter-setting
  Description: Configure IPS URL filter settings.
  set device {string}
  set distance {integer}
  set gateway {ipv4-address}
  set geo-filter {var-string}
end
```

config webfilter ips-urlfilter-setting

Parameter	Description	Type	Size	Default
device	Interface for this route.	string	Maximum length: 35	
distance	Administrative distance (1 - 255) for this route.	integer	Minimum value: 1 Maximum value: 255	1
gateway	Gateway IP address for this route.	ipv4-address	Not Specified	0.0.0.0
geo-filter	Filter based on geographical location. Route will NOT be installed if the resolved IP address belongs to the country in the filter.	var-string	Maximum length: 255	

config webfilter ips-urlfilter-setting6

Configure IPS URL filter settings for IPv6.

```
config webfilter ips-urlfilter-setting6
  Description: Configure IPS URL filter settings for IPv6.
  set device {string}
  set distance {integer}
  set gateway6 {ipv6-address}
  set geo-filter {var-string}
end
```

config webfilter ips-urlfilter-setting6

Parameter	Description	Type	Size	Default
device	Interface for this route.	string	Maximum length: 35	
distance	Administrative distance (1 - 255) for this route.	integer	Minimum value: 1 Maximum value: 255	1
gateway6	Gateway IPv6 address for this route.	ipv6-address	Not Specified	::
geo-filter	Filter based on geographical location. Route will NOT be installed if the resolved IPv6 address belongs to the country in the filter.	var-string	Maximum length: 255	

config webfilter override

Configure FortiGuard Web Filter administrative overrides.

```
config webfilter override
  Description: Configure FortiGuard Web Filter administrative overrides.
  edit <id>
    set expires {user}
    set initiator {string}
    set ip {ipv4-address}
    set ip6 {ipv6-address}
    set new-profile {string}
    set old-profile {string}
    set scope [user|user-group|...]
    set status [enable|disable]
    set user {string}
    set user-group {string}
  end
```

next
end

config webfilter override

Parameter	Description	Type	Size	Default
expires	Override expiration date and time, from 5 minutes to 365 from now (format: yyyy/mm/dd hh:mm:ss).	user	Not Specified	1969/12/31 16:00:00 **
id	Override rule ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
initiator	Initiating user of override (read-only setting).	string	Maximum length: 64	
ip	IPv4 address which the override applies.	ipv4-address	Not Specified	0.0.0.0
ip6	IPv6 address which the override applies.	ipv6-address	Not Specified	::
new-profile	Name of the new web filter profile used by the override.	string	Maximum length: 47	
old-profile	Name of the web filter profile which the override applies.	string	Maximum length: 47	
scope	Override either the specific user, user group, IPv4 address, or IPv6 address.	option	-	user
	Option Description			
	user	Override the specified user.		
	user-group	Override the specified user group.		
	ip	Override the specified IP address.		
	ip6	Override the specified IPv6 address.		
status	Enable/disable override rule.	option	-	disable
	Option Description			
	enable	Enable override rule.		
	disable	Disable override rule.		
user	Name of the user which the override applies.	string	Maximum length: 64	

Parameter	Description	Type	Size	Default
user-group	Specify the user group for which the override applies.	string	Maximum length: 63	

** Values may differ between models.

config webfilter profile

Configure Web filter profiles.

```

config webfilter profile
  Description: Configure Web filter profiles.
  edit <name>
    config antiphish
      Description: AntiPhishing profile.
      set authentication [domain-controller|ldap]

<i>disable</i>	Disable web proxy WISP.											
wisp-algorithm	WISP server selection algorithm.	option	-	auto-learning								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>primary-secondary</i></td><td>Select the first healthy server in order.</td></tr><tr><td><i>round-robin</i></td><td>Select the next healthy server.</td></tr><tr><td><i>auto-learning</i></td><td>Select the lightest loading healthy server.</td></tr></table>	Option	Description	<i>primary-secondary</i>	Select the first healthy server in order.	<i>round-robin</i>	Select the next healthy server.	<i>auto-learning</i>	Select the lightest loading healthy server.			
Option	Description											
<i>primary-secondary</i>	Select the first healthy server in order.											
<i>round-robin</i>	Select the next healthy server.											
<i>auto-learning</i>	Select the lightest loading healthy server.											

Parameter	Description	Type	Size	Default
wisp-servers <name>	WISP servers. Server name.	string	Maximum length: 79	

config antiphish

Parameter	Description	Type	Size	Default						
authentication	Authentication methods.	option	-	domain-controller						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>domain-controller</i></td><td>Domain Controller to verify user credential.</td></tr><tr><td><i>ldap</i></td><td>LDAP to verify user credential.</td></tr></table>	Option	Description	<i>domain-controller</i>	Domain Controller to verify user credential.	<i>ldap</i>	LDAP to verify user credential.			
Option	Description									
<i>domain-controller</i>	Domain Controller to verify user credential.									
<i>ldap</i>	LDAP to verify user credential.									
check-basic-auth	Enable/disable checking of HTTP Basic Auth field for known credentials.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable checking of HTTP Basic Auth field for known credentials.</td></tr><tr><td><i>disable</i></td><td>Disable checking of HTTP Basic Auth field for known credentials.</td></tr></table>	Option	Description	<i>enable</i>	Enable checking of HTTP Basic Auth field for known credentials.	<i>disable</i>	Disable checking of HTTP Basic Auth field for known credentials.			
Option	Description									
<i>enable</i>	Enable checking of HTTP Basic Auth field for known credentials.									
<i>disable</i>	Disable checking of HTTP Basic Auth field for known credentials.									
check-uri	Enable/disable checking of GET URI parameters for known credentials.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable checking of GET URI for username and password fields.</td></tr><tr><td><i>disable</i></td><td>Disable checking of GET URI for username and password fields.</td></tr></table>	Option	Description	<i>enable</i>	Enable checking of GET URI for username and password fields.	<i>disable</i>	Disable checking of GET URI for username and password fields.			
Option	Description									
<i>enable</i>	Enable checking of GET URI for username and password fields.									
<i>disable</i>	Disable checking of GET URI for username and password fields.									
check-username-only	Enable/disable username only matching of credentials. Action will be taken for valid usernames regardless of password validity.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable username only credential matches.</td></tr><tr><td><i>disable</i></td><td>Disable username only credential matches.</td></tr></table>	Option	Description	<i>enable</i>	Enable username only credential matches.	<i>disable</i>	Disable username only credential matches.			
Option	Description									
<i>enable</i>	Enable username only credential matches.									
<i>disable</i>	Disable username only credential matches.									
default-action	Action to be taken when there is no matching rule.	option	-	exempt						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>exempt</i></td><td>Exempt requests from matching.</td></tr></table>	Option	Description	<i>exempt</i>	Exempt requests from matching.					
Option	Description									
<i>exempt</i>	Exempt requests from matching.									

Parameter	Description	Type	Size	Default
	Option Description			
	<i>log</i>	Log all matched requests.		
	<i>block</i>	Block all matched requests.		
domain-controller	Domain for which to verify received credentials against.	string	Maximum length: 63	
ldap	LDAP server for which to verify received credentials against.	string	Maximum length: 63	
max-body-len	Maximum size of a POST body to check for credentials.	integer	Minimum value: 0 Maximum value: 4294967295	1024
status	Toggle AntiPhishing functionality.	option	-	disable
	Option Description			
	<i>enable</i>	Enable AntiPhishing functionality.		
	<i>disable</i>	Disable AntiPhishing functionality.		

config custom-patterns

Parameter	Description	Type	Size	Default
category	Category that the pattern matches.	option	-	username
	Option Description			
	<i>username</i>	Pattern matches username fields.		
	<i>password</i>	Pattern matches password fields.		
pattern	Target pattern.	string	Maximum length: 255	
type	Pattern will be treated either as a regex pattern or literal string.	option	-	regex
	Option Description			
	<i>regex</i>	Pattern will be treated as a regex pattern.		
	<i>literal</i>	Pattern will be treated as a literal string.		

config inspection-entries

Parameter	Description	Type	Size	Default
action	Action to be taken upon an AntiPhishing match.	option	-	exempt
	Option	Description		
	<i>exempt</i>	Exempt requests from matching.		
	<i>log</i>	Log all matched requests.		
	<i>block</i>	Block all matched requests.		
fortiguard-category	FortiGuard category to match.	user	Not Specified	0
name	Inspection target name.	string	Maximum length: 63	

config ftgd-wf

Parameter	Description	Type	Size	Default
exempt-quota	Do not stop quota for these categories.	user	Not Specified	17
max-quota-timeout	Maximum FortiGuard quota used by single page view in seconds (excludes streams).	integer	Minimum value: 1 Maximum value: 86400	300
options	Options for FortiGuard Web Filter.	option	-	ftgd-disable
	Option	Description		
	<i>error-allow</i>	Allow web pages with a rating error to pass through.		
	<i>rate-server-ip</i>	Rate the server IP in addition to the domain name.		
	<i>connect-request-bypass</i>	Bypass connection which has CONNECT request.		
	<i>ftgd-disable</i>	Disable FortiGuard scanning.		
ovrd	Allow web filter profile overrides.	user	Not Specified	
rate-crl-urls	Enable/disable rating CRL by URL.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable rating CRL by URL.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable rating CRL by URL.		
rate-css-urls	Enable/disable rating CSS by URL.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable rating CSS by URL.		
	<i>enable</i>	Enable rating CSS by URL.		
rate-javascript-urls	Enable/disable rating JavaScript by URL.	option	-	enable
	Option	Description		
	<i>disable</i>	Disable rating JavaScript by URL.		
	<i>enable</i>	Enable rating JavaScript by URL.		

config filters

Parameter	Description	Type	Size	Default
action	Action to take for matches.	option	-	monitor
	Option	Description		
	<i>block</i>	Block access.		
	<i>authenticate</i>	Authenticate user before allowing access.		
	<i>monitor</i>	Allow access while logging the action.		
	<i>warning</i>	Allow access after warning the user.		
auth-usr-grp <name>	Groups with permission to authenticate. User group name.	string	Maximum length: 79	
category	Categories and groups the filter examines.	integer	Minimum value: 0 Maximum value: 255	0
id	ID number.	integer	Minimum value: 0 Maximum value: 255	0
log	Enable/disable logging.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
override-replacemsg	Override replacement message.	string	Maximum length: 28	
warn-duration	Duration of warnings.	user	Not Specified	5m
warning-duration-type	Re-display warning after closing browser or after a timeout.	option	-	timeout
	Option	Description		
	<i>session</i>	After session ends.		
	<i>timeout</i>	After timeout occurs.		
warning-prompt	Warning prompts in each category or each domain.	option	-	per-category
	Option	Description		
	<i>per-domain</i>	Per-domain warnings.		
	<i>per-category</i>	Per-category warnings.		

config quota

Parameter	Description	Type	Size	Default
category	FortiGuard categories to apply quota to (category action must be set to monitor).	user	Not Specified	
duration	Duration of quota.	user	Not Specified	5m
id	ID number.	integer	Minimum value: 0 Maximum value: 4294967295	0
override-replacemsg	Override replacement message.	string	Maximum length: 28	
type	Quota type.	option	-	time
	Option	Description		
	<i>time</i>	Use a time-based quota.		

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>traffic</i></td><td>Use a traffic-based quota.</td></tr></table>				Option	Description	<i>traffic</i>	Use a traffic-based quota.						
	Option	Description												
<i>traffic</i>	Use a traffic-based quota.													
unit	Traffic quota unit of measurement.	option	-	MB										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>B</i></td><td>Quota in bytes.</td></tr><tr><td><i>KB</i></td><td>Quota in kilobytes.</td></tr><tr><td><i>MB</i></td><td>Quota in megabytes.</td></tr><tr><td><i>GB</i></td><td>Quota in gigabytes.</td></tr></table>				Option	Description	<i>B</i>	Quota in bytes.	<i>KB</i>	Quota in kilobytes.	<i>MB</i>	Quota in megabytes.	<i>GB</i>	Quota in gigabytes.
	Option	Description												
	<i>B</i>	Quota in bytes.												
	<i>KB</i>	Quota in kilobytes.												
	<i>MB</i>	Quota in megabytes.												
<i>GB</i>	Quota in gigabytes.													
value	Traffic quota value.	integer	Minimum value: 1024 1 Maximum value: 4294967295											

config risk

Parameter	Description	Type	Size	Default						
action	Action to take for matches.	option	-	monitor						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>block</i></td><td>Block access.</td></tr><tr><td><i>monitor</i></td><td>Allow access while logging the action.</td></tr></table>				Option	Description	<i>block</i>	Block access.	<i>monitor</i>	Allow access while logging the action.
	Option	Description								
	<i>block</i>	Block access.								
<i>monitor</i>	Allow access while logging the action.									
id	ID number.	integer	Minimum value: 0 Maximum value: 255	0						
log	Enable/disable logging.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>				Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.
	Option	Description								
	<i>enable</i>	Enable setting.								
<i>disable</i>	Disable setting.									
risk-level	Risk level to be examined.	string	Maximum length: 35							

config override

Parameter	Description	Type	Size	Default												
ovrd-cookie	Allow/deny browser-based (cookie) overrides.	option	-	deny												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>allow</i></td><td>Allow browser-based (cookie) override.</td></tr><tr><td><i>deny</i></td><td>Deny browser-based (cookie) override.</td></tr></table>	Option	Description	<i>allow</i>	Allow browser-based (cookie) override.	<i>deny</i>	Deny browser-based (cookie) override.									
Option	Description															
<i>allow</i>	Allow browser-based (cookie) override.															
<i>deny</i>	Deny browser-based (cookie) override.															
ovrd-dur	Override duration.	user	Not Specified	15m												
ovrd-dur-mode	Override duration mode.	option	-	constant												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>constant</i></td><td>Constant mode.</td></tr><tr><td><i>ask</i></td><td>Prompt for duration when initiating an override.</td></tr></table>	Option	Description	<i>constant</i>	Constant mode.	<i>ask</i>	Prompt for duration when initiating an override.									
Option	Description															
<i>constant</i>	Constant mode.															
<i>ask</i>	Prompt for duration when initiating an override.															
ovrd-scope	Override scope.	option	-	user												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>user</i></td><td>Override for the user.</td></tr><tr><td><i>user-group</i></td><td>Override for the user's group.</td></tr><tr><td><i>ip</i></td><td>Override for the initiating IP.</td></tr><tr><td><i>browser</i></td><td>Create browser-based (cookie) override.</td></tr><tr><td><i>ask</i></td><td>Prompt for scope when initiating an override.</td></tr></table>	Option	Description	<i>user</i>	Override for the user.	<i>user-group</i>	Override for the user's group.	<i>ip</i>	Override for the initiating IP.	<i>browser</i>	Create browser-based (cookie) override.	<i>ask</i>	Prompt for scope when initiating an override.			
Option	Description															
<i>user</i>	Override for the user.															
<i>user-group</i>	Override for the user's group.															
<i>ip</i>	Override for the initiating IP.															
<i>browser</i>	Create browser-based (cookie) override.															
<i>ask</i>	Prompt for scope when initiating an override.															
ovrd-user-group <name>	User groups with permission to use the override. User group name.	string	Maximum length: 79													
profile <name>	Web filter profile with permission to create overrides. Web profile.	string	Maximum length: 79													
profile-attribute	Profile attribute to retrieve from the RADIUS server.	option	-	Login-LAT-Service												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>User-Name</i></td><td>Use this attribute.</td></tr><tr><td><i>NAS-IP-Address</i></td><td>Use this attribute.</td></tr></table>	Option	Description	<i>User-Name</i>	Use this attribute.	<i>NAS-IP-Address</i>	Use this attribute.									
Option	Description															
<i>User-Name</i>	Use this attribute.															
<i>NAS-IP-Address</i>	Use this attribute.															

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>Framed-IP-Address</i>	Use this attribute.		
	<i>Framed-IP-Netmask</i>	Use this attribute.		
	<i>Filter-Id</i>	Use this attribute.		
	<i>Login-IP-Host</i>	Use this attribute.		
	<i>Reply-Message</i>	Use this attribute.		
	<i>Callback-Number</i>	Use this attribute.		
	<i>Callback-Id</i>	Use this attribute.		
	<i>Framed-Route</i>	Use this attribute.		
	<i>Framed-IPX-Network</i>	Use this attribute.		
	<i>Class</i>	Use this attribute.		
	<i>Called-Station-Id</i>	Use this attribute.		
	<i>Calling-Station-Id</i>	Use this attribute.		
	<i>NAS-Identifier</i>	Use this attribute.		
	<i>Proxy-State</i>	Use this attribute.		
	<i>Login-LAT-Service</i>	Use this attribute.		
	<i>Login-LAT-Node</i>	Use this attribute.		
	<i>Login-LAT-Group</i>	Use this attribute.		
	<i>Framed-AppleTalk-Zone</i>	Use this attribute.		
	<i>Acct-Session-Id</i>	Use this attribute.		
<i>Acct-Multi-Session-Id</i>	Use this attribute.			
profile-type	Override profile type.	option	-	list

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>list</i>	Profile chosen from list.		
	<i>radius</i>	Profile determined by RADIUS server.		

config web

Parameter	Description	Type	Size	Default
allowlist	FortiGuard allowlist settings.	option	-	
	Option	Description		
	<i>exempt-av</i>	Exempt antivirus.		
	<i>exempt-webcontent</i>	Exempt web content.		
	<i>exempt-activex-java-cookie</i>	Exempt ActiveX-JAVA-Cookie.		
	<i>exempt-dlp</i>	Exempt DLP.		
	<i>exempt-rangeblock</i>	Exempt RangeBlock.		
	<i>extended-log-others</i>	Support extended log.		
blocklist	Enable/disable automatic addition of URLs detected by FortiSandbox to blocklist.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
bword-table	Banned word table ID.	integer	Minimum value: 0 0 Maximum value: 4294967295	
bword-threshold	Banned word score threshold.	integer	Minimum value: 10 0 Maximum value: 2147483647	

Parameter	Description	Type	Size	Default								
content-header-list	Content header list.	integer	Minimum value: 0 Maximum value: 4294967295	0								
keyword-match <pattern>	Search keywords to log when match is found. Pattern/keyword to search for.	string	Maximum length: 79	**								
log-search	Enable/disable logging all search phrases.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable setting.</td></tr><tr><td><i>disable</i></td><td>Disable setting.</td></tr></table>	Option	Description	<i>enable</i>	Enable setting.	<i>disable</i>	Disable setting.					
Option	Description											
<i>enable</i>	Enable setting.											
<i>disable</i>	Disable setting.											
safe-search	Safe search type.	option	-									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>url</i></td><td>Insert safe search string into URL.</td></tr><tr><td><i>header</i></td><td>Insert safe search header.</td></tr></table>	Option	Description	<i>url</i>	Insert safe search string into URL.	<i>header</i>	Insert safe search header.					
Option	Description											
<i>url</i>	Insert safe search string into URL.											
<i>header</i>	Insert safe search header.											
urlfilter-table	URL filter table ID.	integer	Minimum value: 0 Maximum value: 4294967295	0								
vimeo-restrict	Set Vimeo-restrict ("7" = don't show mature content, "134" = don't show unrated and mature content). A value of cookie "content_rating".	string	Maximum length: 63									
youtube-restrict	YouTube EDU filter level.	option	-	none								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>Full access for YouTube.</td></tr><tr><td><i>strict</i></td><td>Strict access for YouTube.</td></tr><tr><td><i>moderate</i></td><td>Moderate access for YouTube.</td></tr></table>	Option	Description	<i>none</i>	Full access for YouTube.	<i>strict</i>	Strict access for YouTube.	<i>moderate</i>	Moderate access for YouTube.			
Option	Description											
<i>none</i>	Full access for YouTube.											
<i>strict</i>	Strict access for YouTube.											
<i>moderate</i>	Moderate access for YouTube.											

config webfilter search-engine

Configure web filter search engines.

```
config webfilter search-engine
    Description: Configure web filter search engines.
```

```

edit <name>
    set charset [utf-8|gb2312]
    set hostname {string}
    set query {string}
    set safesearch [disable|url|...]
    set safesearch-str {string}
    set url {string}
next
end

```

config webfilter search-engine

Parameter	Description	Type	Size	Default																		
charset	Search engine charset.	option	-	utf-8																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>utf-8</td><td>UTF-8 encoding.</td></tr><tr><td>gb2312</td><td>GB2312 encoding.</td></tr></table>				Option	Description	utf-8	UTF-8 encoding.	gb2312	GB2312 encoding.												
	Option	Description																				
	utf-8	UTF-8 encoding.																				
gb2312	GB2312 encoding.																					
hostname	Hostname (regular expression).	string	Maximum length: 127																			
name	Search engine name.	string	Maximum length: 35																			
query	Code used to prefix a query (must end with an equals character).	string	Maximum length: 15																			
safesearch	Safe search method. You can disable safe search, add the safe search string to URLs, or insert a safe search header.	option	-	disable																		
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Site does not support safe search.</td></tr><tr><td>url</td><td>Safe search selected with a parameter in the URL.</td></tr><tr><td>header</td><td>Safe search selected by search header (i.e. youtube.edu).</td></tr><tr><td>translate</td><td>Perform URL FortiGuard check on translated URL.</td></tr><tr><td>yt-pattern</td><td>Pattern to match YouTube channel ID.</td></tr><tr><td>yt-scan</td><td>Perform IPS scan.</td></tr><tr><td>yt-video</td><td>Pattern to match YouTube video name.</td></tr><tr><td>yt-channel</td><td>Pattern to match YouTube channel name.</td></tr></table>				Option	Description	disable	Site does not support safe search.	url	Safe search selected with a parameter in the URL.	header	Safe search selected by search header (i.e. youtube.edu).	translate	Perform URL FortiGuard check on translated URL.	yt-pattern	Pattern to match YouTube channel ID.	yt-scan	Perform IPS scan.	yt-video	Pattern to match YouTube video name.	yt-channel	Pattern to match YouTube channel name.
	Option	Description																				
	disable	Site does not support safe search.																				
	url	Safe search selected with a parameter in the URL.																				
	header	Safe search selected by search header (i.e. youtube.edu).																				
	translate	Perform URL FortiGuard check on translated URL.																				
	yt-pattern	Pattern to match YouTube channel ID.																				
	yt-scan	Perform IPS scan.																				
yt-video	Pattern to match YouTube video name.																					
yt-channel	Pattern to match YouTube channel name.																					

Parameter	Description	Type	Size	Default
safesearch-str	Safe search parameter used in the URL in URL mode. In translate mode, it provides either the regex to translate the URL or the special case to translate the URL.	string	Maximum length: 255	
url	URL (regular expression).	string	Maximum length: 127

set weight-rogue-ap {integer}
set weight-spectral-rssi {integer}
set weight-weather-channel {integer}
next
end

```

config wireless-controller arrp-profile

Parameter	Description	Type	Size	Default						
comment	Comment.	var-string	Maximum length: 255							
darrp-optimize	Time for running Distributed Automatic Radio Resource Provisioning (DARRP) optimizations (0 - 86400 sec, default = 86400, 0 = disable).	integer	Minimum value: 0 Maximum value: 86400	86400						
darrp-optimize-schedules <name>	Firewall schedules for DARRP running time. DARRP will run periodically based on darrp-optimize within the schedules. Separate multiple schedule names with a space. Schedule name.	string	Maximum length: 35							
include-dfs-channel	Enable/disable use of DFS channel in DARRP channel selection phase 1 (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Include DFS channel in darrp channel selection phase 1.</td></tr><tr><td>disable</td><td>Exclude DFS channel in darrp channel selection phase 1.</td></tr></table>				Option	Description	enable	Include DFS channel in darrp channel selection phase 1.	disable	Exclude DFS channel in darrp channel selection phase 1.
Option	Description									
enable	Include DFS channel in darrp channel selection phase 1.									
disable	Exclude DFS channel in darrp channel selection phase 1.									
include-weather-channel	Enable/disable use of weather channel in DARRP channel selection phase 1 (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Include weather channel in darrp channel selection phase 1.</td></tr><tr><td>disable</td><td>Exclude weather channel in darrp channel selection phase 1.</td></tr></table>				Option	Description	enable	Include weather channel in darrp channel selection phase 1.	disable	Exclude weather channel in darrp channel selection phase 1.
Option	Description									
enable	Include weather channel in darrp channel selection phase 1.									
disable	Exclude weather channel in darrp channel selection phase 1.									

Parameter	Description	Type	Size	Default						
monitor-period	Period in seconds to measure average transmit retries and receive errors (default = 300).	integer	Minimum value: 0 Maximum value: 65535	300						
name	WiFi ARRP profile name.	string	Maximum length: 35							
override-darrp-optimize	Enable to override setting darrp-optimize and darrp-optimize-schedules (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Override setting darrp-optimize and darrp-optimize-schedules.</td></tr><tr><td>disable</td><td>Use setting darrp-optimize and darrp-optimize-schedules.</td></tr></table>				Option	Description	enable	Override setting darrp-optimize and darrp-optimize-schedules.	disable	Use setting darrp-optimize and darrp-optimize-schedules.
Option	Description									
enable	Override setting darrp-optimize and darrp-optimize-schedules.									
disable	Use setting darrp-optimize and darrp-optimize-schedules.									
selection-period	Period in seconds to measure average channel load, noise floor, spectral RSSI (default = 3600).	integer	Minimum value: 0 Maximum value: 65535	3600						
threshold-ap	Threshold to reject channel in DARRP channel selection phase 1 due to surrounding APs (0 - 500, default = 250).	integer	Minimum value: 0 Maximum value: 500	250						
threshold-channel-load	Threshold in percentage to reject channel in DARRP channel selection phase 1 due to channel load (0 - 100, default = 60).	integer	Minimum value: 0 Maximum value: 100	60						
threshold-noise-floor	Threshold in dBm to reject channel in DARRP channel selection phase 1 due to noise floor (-95 to -20, default = -85).	string	Maximum length: 7	-85						
threshold-rx-errors	Threshold in percentage for receive errors to trigger channel reselection in DARRP monitor stage (0 - 100, default = 50).	integer	Minimum value: 0 Maximum value: 100	50						
threshold-spectral-rssi	Threshold in dBm to reject channel in DARRP channel selection phase 1 due to spectral RSSI (-95 to -20, default = -65).	string	Maximum length: 7	-65						

Parameter	Description	Type	Size	Default
threshold-tx-retries	Threshold in percentage for transmit retries to trigger channel reselection in DARRP monitor stage (0 - 1000, default = 300).	integer	Minimum value: 0 Maximum value: 1000	300
weight-channel-load	Weight in DARRP channel score calculation for channel load (0 - 2000, default = 20).	integer	Minimum value: 0 Maximum value: 2000	20
weight-dfs-channel	Weight in DARRP channel score calculation for DFS channel (0 - 2000, default = 0).	integer	Minimum value: 0 Maximum value: 2000	0
weight-managed-ap	Weight in DARRP channel score calculation for managed APs (0 - 2000, default = 50).	integer	Minimum value: 0 Maximum value: 2000	50
weight-noise-floor	Weight in DARRP channel score calculation for noise floor (0 - 2000, default = 40).	integer	Minimum value: 0 Maximum value: 2000	40
weight-rogue-ap	Weight in DARRP channel score calculation for rogue APs (0 - 2000, default = 10).	integer	Minimum value: 0 Maximum value: 2000	10
weight-spectral-rssi	Weight in DARRP channel score calculation for spectral RSSI (0 - 2000, default = 40).	integer	Minimum value: 0 Maximum value: 2000	40
weight-weather-channel	Weight in DARRP channel score calculation for weather channel (0 - 2000, default = 0).	integer	Minimum value: 0 Maximum value: 2000	0

set rolling-wtp-upgrade [enable|disable]
set rolling-wtp-upgrade-threshold {string}
set tunnel-mode [compatible|strict]
set wpad-process-count {integer}
set wtp-share [enable|disable]
end

```

config wireless-controller global

Parameter	Description	Type	Size	Default
acd-process-count	Configure the number cw_acd daemons for multi-core CPU support (default = 0).	integer	Minimum value: 0 Maximum value: 255	0
ap-log-server	Enable/disable configuring FortiGate to redirect wireless event log messages or FortiAPs to send UTM log messages to a syslog server (default = disable).	option	-	disable
	Option	Description		
	enable	Enable AP log server.		
	disable	Disable AP log server.		
ap-log-server-ip	IP address that FortiGate or FortiAPs send log messages to.	ipv4-address	Not Specified	0.0.0.0
ap-log-server-port	Port that FortiGate or FortiAPs send log messages to.	integer	Minimum value: 0 Maximum value: 65535	0

Parameter	Description	Type	Size	Default																				
control-message-offload	Configure CAPWAP control message data channel offload.	option	-	ebp-frame aeroscout-tag ap-list sta-list sta-cap-list stats aeroscout-mu sta-health spectral-analysis																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ebp-frame</td><td>Ekahau blink protocol (EBP) frames.</td></tr><tr><td>aeroscout-tag</td><td>AeroScout tag.</td></tr><tr><td>ap-list</td><td>Rogue AP list.</td></tr><tr><td>sta-list</td><td>Rogue STA list.</td></tr><tr><td>sta-cap-list</td><td>STA capability list.</td></tr><tr><td>stats</td><td>WTP, radio, VAP, and STA statistics.</td></tr><tr><td>aeroscout-mu</td><td>AeroScout Mobile Unit (MU) report.</td></tr><tr><td>sta-health</td><td>STA health log.</td></tr><tr><td>spectral-analysis</td><td>Spectral analysis report.</td></tr></table>				Option	Description	ebp-frame	Ekahau blink protocol (EBP) frames.	aeroscout-tag	AeroScout tag.	ap-list	Rogue AP list.	sta-list	Rogue STA list.	sta-cap-list	STA capability list.	stats	WTP, radio, VAP, and STA statistics.	aeroscout-mu	AeroScout Mobile Unit (MU) report.	sta-health	STA health log.	spectral-analysis	Spectral analysis report.
Option	Description																							
ebp-frame	Ekahau blink protocol (EBP) frames.																							
aeroscout-tag	AeroScout tag.																							
ap-list	Rogue AP list.																							
sta-list	Rogue STA list.																							
sta-cap-list	STA capability list.																							
stats	WTP, radio, VAP, and STA statistics.																							
aeroscout-mu	AeroScout Mobile Unit (MU) report.																							
sta-health	STA health log.																							
spectral-analysis	Spectral analysis report.																							
data-ethernet-II	Configure the wireless controller to use Ethernet II or 802.3 frames with 802.3 data tunnel mode (default = enable).	option	-	enable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Use Ethernet II frames with 802.3 data tunnel mode.</td></tr><tr><td>disable</td><td>Use 802.3 Ethernet frames with 802.3 data tunnel mode.</td></tr></table>				Option	Description	enable	Use Ethernet II frames with 802.3 data tunnel mode.	disable	Use 802.3 Ethernet frames with 802.3 data tunnel mode.														
Option	Description																							
enable	Use Ethernet II frames with 802.3 data tunnel mode.																							
disable	Use 802.3 Ethernet frames with 802.3 data tunnel mode.																							
dfs-lab-test	Enable/disable DFS certificate lab test mode.	option	-	disable																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable DFS certificate lab test mode.</td></tr><tr><td>disable</td><td>Disable DFS certificate lab test mode.</td></tr></table>				Option	Description	enable	Enable DFS certificate lab test mode.	disable	Disable DFS certificate lab test mode.														
Option	Description																							
enable	Enable DFS certificate lab test mode.																							
disable	Disable DFS certificate lab test mode.																							
discovery-mc-addr	Multicast IP address for AP discovery (default = 244.0.1.140).	ipv4-address-multicast	Not Specified	224.0.1.140																				

Parameter	Description	Type	Size	Default						
fiapp-eth-type	Ethernet type for Fortinet Inter-Access Point Protocol (IAPP), or IEEE 802.11f, packets (0 - 65535, default = 5252).	integer	Minimum value: 0 Maximum value: 65535	5252						
image-download	Enable/disable WTP image download at join time.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WTP image download at join time.</td></tr><tr><td>disable</td><td>Disable WTP image download at join time.</td></tr></table>				Option	Description	enable	Enable WTP image download at join time.	disable	Disable WTP image download at join time.
	Option	Description								
	enable	Enable WTP image download at join time.								
disable	Disable WTP image download at join time.									
ipsec-base-ip	Base IP address for IPsec VPN tunnels between the access points and the wireless controller (default = 169.254.0.1).	ipv4-address	Not Specified	169.254.0.1						
link-aggregation	Enable/disable calculating the CAPWAP transmit hash to load balance sessions to link aggregation nodes (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable calculating the CAPWAP transmit hash.</td></tr><tr><td>disable</td><td>Disable calculating the CAPWAP transmit hash.</td></tr></table>				Option	Description	enable	Enable calculating the CAPWAP transmit hash.	disable	Disable calculating the CAPWAP transmit hash.
	Option	Description								
	enable	Enable calculating the CAPWAP transmit hash.								
disable	Disable calculating the CAPWAP transmit hash.									
local-radio-vdom *	Assign local radio's virtual domain.	string	Maximum length: 31	root						
location	Description of the location of the wireless controller.	string	Maximum length: 35							
max-ble-device	Maximum number of BLE devices stored on the controller (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0						
max-clients	Maximum number of clients that can connect simultaneously (default = 0, meaning no limitation).	integer	Minimum value: 0 Maximum value: 4294967295	0						
max-retransmit	Maximum number of tunnel packet retransmissions (0 - 64, default = 3).	integer	Minimum value: 0 Maximum value: 64	3						
max-rogue-ap	Maximum number of rogue APs stored on the controller (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0						

Parameter	Description	Type	Size	Default
max-rogue-ap-wtp	Maximum number of rogue AP's wtp info stored on the controller (1 - 16, default = 16).	integer	Minimum value: 1 Maximum value: 16	16
max-rogue-sta	Maximum number of rogue stations stored on the controller (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
max-sta-cap	Maximum number of station cap stored on the controller (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
max-sta-cap-wtp	Maximum number of station cap's wtp info stored on the controller (1 - 16, default = 8).	integer	Minimum value: 1 Maximum value: 8	8
max-sta-offline	Maximum number of station offline stored on the controller (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
max-sta-offline-ip2mac	Maximum number of station offline ip2mac stored on the controller (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
max-wids-entry	Maximum number of wids entries stored on the controller (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
mesh-eth-type	Mesh Ethernet identifier included in backhaul packets (0 - 65535, default = 8755).	integer	Minimum value: 0 Maximum value: 65535	8755
nac-interval	Interval in seconds between two WiFi network access control (NAC) checks (10 - 600, default = 120).	integer	Minimum value: 10 Maximum value: 600	120
name	Name of the wireless controller.	string	Maximum length: 35	
rogue-scan-mac-adjacency	Maximum numerical difference between an AP's Ethernet and wireless MAC values to match for rogue detection (0 - 31, default = 7).	integer	Minimum value: 0 Maximum value: 31	7
rolling-wtp-upgrade	Enable/disable rolling WTP upgrade (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable rolling WTP upgrade.		
	<i>disable</i>	Disable rolling WTP upgrade.		
rolling-wtp-upgrade-threshold	Minimum signal level/threshold in dBm required for the managed WTP to be included in rolling WTP upgrade (-95 to -20, default = -80).	string	Maximum length: 7	-80
tunnel-mode	Compatible/strict tunnel mode.	option	-	compatible
	Option	Description		
	<i>compatible</i>	Allow for backward compatible ciphers(3DES+SHA1+Strong list).		
	<i>strict</i>	Follow system level strong-crypto ciphers.		
wpad-process-count	Wpad daemon process count for multi-core CPU support.	integer	Minimum value: 0 0 Maximum value: 255	0
wtp-share	Enable/disable sharing of WTPs between VDOMs.	option	-	disable
	Option	Description		
	<i>enable</i>	WTP can be shared between all VDOMs.		
	<i>disable</i>	WTP can be used only in its own VDOM.		

* This parameter may not exist in some models.

config wireless-controller hotspot20 anqp-3gpp-cellular

Configure 3GPP public land mobile network (PLMN).

```

config wireless-controller hotspot20 anqp-3gpp-cellular
  Description: Configure 3GPP public land mobile network (PLMN).
  edit <name>
    config mcc-mnc-list
      Description: Mobile Country Code and Mobile Network Code configuration.
      edit <id>
        set mcc {string}
        set mnc {string}
      next
    end
  next
end

```

config wireless-controller hotspot20 anqp-3gpp-cellular

Parameter	Description	Type	Size	Default
name	3GPP PLMN name.	string	Maximum length: 35	

config mcc-mnc-list

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 1 Maximum value: 6	0
mcc	Mobile country code.	string	Maximum length: 3	
mnc	Mobile network code.	string	Maximum length: 3	

config wireless-controller hotspot20 anqp-ip-address-type

Configure IP address type availability.

```
config wireless-controller hotspot20 anqp-ip-address-type
  Description: Configure IP address type availability.
  edit <name>
    set ipv4-address-type [not-available|public|...]
    set ipv6-address-type [not-available|available|...]
  next
end
```

	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable wireless network management (WNM) sleep mode.</td></tr><tr><td>disable</td><td>Disable wireless network management (WNM) sleep mode.</td></tr></table>				Option	Description	enable	Enable wireless network management (WNM) sleep mode.	disable	Disable wireless network management (WNM) sleep mode.
Option	Description									
enable	Enable wireless network management (WNM) sleep mode.									
disable	Disable wireless network management (WNM) sleep mode.									

config wireless-controller hotspot20 icon

Configure OSU provider icon.

```

config wireless-controller hotspot20 icon
  Description: Configure OSU provider icon.
  edit <name>
    config icon-list
      Description: Icon list.
      edit <name>
        set file {string}
        set height {integer}
        set lang {string}
        set type [bmp|gif|...]
        set width {integer}
      next
    end
  next
end

```

config wireless-controller hotspot20 icon

Parameter	Description	Type	Size	Default
name	Icon list ID.	string	Maximum length: 35	

config icon-list

Parameter	Description	Type	Size	Default
file	Icon file.	string	Maximum length: 255	
height	Icon height.	integer	Minimum value: 1 Maximum value: 65535	0
lang	Language code.	string	Maximum length: 3	eng
name	Icon name.	string	Maximum length: 255	
type	Icon type.	option	-	png
	Option Description			
	bmp BMP image.			
	gif GIF image.			
	jpeg JPEG image.			
	png PNG image.			
	tiff TIFF image.			
width	Icon width.	integer	Minimum value: 1 Maximum value: 65535	0

config wireless-controller hotspot20 qos-map

Configure QoS map set.

```

config wireless-controller hotspot20 qos-map
  Description: Configure QoS map set.
  edit <name>
    config dscp-except
      Description: Differentiated Services Code Point (DSCP) exceptions.
      edit <index>
        set dscp {integer}
        set up {integer}
      next
    end
  config dscp-range
    Description: Differentiated Services Code Point (DSCP) ranges.
    edit <index>
      set high {integer}
      set low {integer}
      set up {integer}
    next
  end
next
end

```

config wireless-controller hotspot20 qos-map

Parameter	Description	Type	Size	Default
name	QOS-MAP name.	string	Maximum length: 35	

config dscp-except

Parameter	Description	Type	Size	Default
dscp	DSCP value.	integer	Minimum value: 0 Maximum value: 63	0
index	DSCP exception index.	integer	Minimum value: 1 Maximum value: 21	0
up	User priority.	integer	Minimum value: 0 Maximum value: 7	0

config dscp-range

Parameter	Description	Type	Size	Default
high	DSCP high value.	integer	Minimum value: 0 Maximum value: 63	255
index	DSCP range index.	integer	Minimum value: 1 Maximum value: 8	0
low	DSCP low value.	integer	Minimum value: 0 Maximum value: 63	255
up	User priority.	integer	Minimum value: 0 Maximum value: 7	0

config wireless-controller inter-controller

Configure inter wireless controller operation.

```
config wireless-controller inter-controller
  Description: Configure inter wireless controller operation.
  set fast-failover-max {integer}
  set fast-failover-wait {integer}
  set inter-controller-key {password}
  set inter-controller-mode [disable|l2-roaming|...]
  config inter-controller-peer
    Description: Fast failover peer wireless controller list.
    edit <id>
      set peer-ip {ipv4-address}
      set peer-port {integer}
      set peer-priority [primary|secondary]
    next
  end
  set inter-controller-pri [primary|secondary]
  set l3-roaming [enable|disable]
end
```

config wireless-controller inter-controller

Parameter	Description	Type	Size	Default								
fast-failover-max	Maximum number of retransmissions for fast failover HA messages between peer wireless controllers (3 - 64, default = 10).	integer	Minimum value: 3 Maximum value: 64	10								
fast-failover-wait	Minimum wait time before an AP transitions from secondary controller to primary controller (10 - 86400 sec, default = 10).	integer	Minimum value: 10 Maximum value: 86400	10								
inter-controller-key	Secret key for inter-controller communications.	password	Not Specified									
inter-controller-mode	Configure inter-controller mode (disable, l2-roaming, 1+1, default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable inter-controller mode.</td></tr><tr><td>l2-roaming</td><td>Enable layer 2 roaming support between inter-controllers.</td></tr><tr><td>1+1</td><td>Enable 1+1 fast failover mode.</td></tr></table>	Option	Description	disable	Disable inter-controller mode.	l2-roaming	Enable layer 2 roaming support between inter-controllers.	1+1	Enable 1+1 fast failover mode.			
Option	Description											
disable	Disable inter-controller mode.											
l2-roaming	Enable layer 2 roaming support between inter-controllers.											
1+1	Enable 1+1 fast failover mode.											
inter-controller-pri	Configure inter-controller's priority (primary or secondary, default = primary).	option	-	primary								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>primary</td><td>Primary fast failover mode.</td></tr><tr><td>secondary</td><td>Secondary fast failover mode.</td></tr></table>	Option	Description	primary	Primary fast failover mode.	secondary	Secondary fast failover mode.					
Option	Description											
primary	Primary fast failover mode.											
secondary	Secondary fast failover mode.											
l3-roaming	Enable/disable layer 3 roaming (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable layer 3 roaming.</td></tr><tr><td>disable</td><td>Disable layer 3 roaming.</td></tr></table>	Option	Description	enable	Enable layer 3 roaming.	disable	Disable layer 3 roaming.					
Option	Description											
enable	Enable layer 3 roaming.											
disable	Disable layer 3 roaming.											

config inter-controller-peer

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
peer-ip	Peer wireless controller's IP address.	ipv4-address	Not Specified	0.0.0.0
peer-port	Port used by the wireless controller's for inter-controller communications (1024 - 49150, default = 5246).	integer	Minimum value: 1024 Maximum value: 49150	5246
peer-priority	Peer wireless controller's priority (primary or secondary, default = primary).	option	-	primary
		Option	Description	
		primary	Primary fast failover mode.	
		secondary	Secondary fast failover mode.	

config wireless-controller log

Configure wireless controller event log filters.

```
config wireless-controller log
  Description: Configure wireless controller event log filters.
  set addrgrp-log [emergency|alert|...]
  set ble-log [emergency|alert|...]
  set clb-log [emergency|alert|...]
  set dhcp-starv-log [emergency|alert|...]

  set vlan-type [no-vlan|fixed-vlan]
next
end
set mpsk-type [wpa2-personal|wpa3-sae|...]
next
end

```

config wireless-controller mpsk-profile

Parameter	Description	Type	Size	Default						
mpsk-concurrent-clients	Maximum number of concurrent clients that connect using the same passphrase in multiple PSK authentication (0 - 65535, default = 0, meaning no limitation).	integer	Minimum value: 0 Maximum value: 65535	0						
mpsk-external-server	RADIUS server to be used to authenticate MPSK users.	string	Maximum length: 35							
mpsk-external-server-auth	Enable/Disable MPSK external server authentication (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable MPSK external server authentication.</td></tr><tr><td><i>disable</i></td><td>Disable MPSK external server authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable MPSK external server authentication.	<i>disable</i>	Disable MPSK external server authentication.
Option	Description									
<i>enable</i>	Enable MPSK external server authentication.									
<i>disable</i>	Disable MPSK external server authentication.									
mpsk-type	Select the security type of keys for this profile.	option	-	wpa2-personal						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>wpa2-personal</i>	WPA2 personal.		
	<i>wpa3-sae</i>	WPA3 SAE.		
	<i>wpa3-sae-transition</i>	WPA3 SAE transition.		
name	MPSK profile name.	string	Maximum length: 35	

config mpsk-group

Parameter	Description	Type	Size	Default
name	MPSK group name.	string	Maximum length: 35	
vlan-id	Optional VLAN ID.	integer	Minimum value: 1 Maximum value: 4094	0
vlan-type	MPSK group VLAN options.	option	-	no-vlan
	Option	Description		
	<i>no-vlan</i>	No VLAN.		
	<i>fixed-vlan</i>	Fixed VLAN ID.		

config mpsk-key

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
concurrent-client-limit-type	MPSK client limit type options.	option	-	default
	Option	Description		
	<i>default</i>	Using the value in profile configuration.		
	<i>unlimited</i>	Unlimited.		
	<i>specified</i>	Specified value.		

Parameter	Description	Type	Size	Default						
concurrent-clients	Number of clients that can connect using this pre-shared key (1 - 65535, default is 256).	integer	Minimum value: 1 Maximum value: 65535	256						
key-type	Select the type of the key.	option	-	wpa2-personal						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>wpa2-personal</td><td>WPA2 personal.</td></tr><tr><td>wpa3-sae</td><td>WPA3 SAE.</td></tr></table>	Option	Description	wpa2-personal	WPA2 personal.	wpa3-sae	WPA3 SAE.			
Option	Description									
wpa2-personal	WPA2 personal.									
wpa3-sae	WPA3 SAE.									
mac	MAC address.	mac-address	Not Specified	00:00:00:00:00:00						
mpsk-schedules <name>	Firewall schedule for MPSK passphrase. The passphrase will be effective only when at least one schedule is valid. Schedule name.	string	Maximum length: 35							
name	Pre-shared key name.	string	Maximum length: 35							
passphrase	WPA Pre-shared key.	password	Not Specified							
sae-password	WPA3 SAE password.	password	Not Specified							
sae-pk	Enable/disable WPA3 SAE-PK (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WPA3 SAE-PK.</td></tr><tr><td>disable</td><td>Disable WPA3 SAE-PK.</td></tr></table>	Option	Description	enable	Enable WPA3 SAE-PK.	disable	Disable WPA3 SAE-PK.			
Option	Description									
enable	Enable WPA3 SAE-PK.									
disable	Disable WPA3 SAE-PK.									
sae-private-key	Private key used for WPA3 SAE-PK authentication.	string	Maximum length: 359

<i>disable</i>	Disable WMM call admission control.									
call-capacity	Maximum number of Voice over WLAN (VoWLAN) phones allowed (0 - 60, default = 10).	integer	Minimum value: 0 Maximum value: 60	10						
comment	Comment.	string	Maximum length: 63							
downlink	Maximum downlink bandwidth for Virtual Access Points (VAPs) (0 - 2097152 Kbps, default = 0, 0 means no limit).	integer	Minimum value: 0 Maximum value: 2097152	0						

Parameter	Description	Type	Size	Default						
downlink-sta	Maximum downlink bandwidth for clients (0 - 2097152 Kbps, default = 0, 0 means no limit).	integer	Minimum value: 0 Maximum value: 2097152	0						
dscp-wmm-be <id>	DSCP mapping for best effort access (default = 0 24). DSCP WMM mapping numbers (0 - 63).	integer	Minimum value: 0 Maximum value: 63							
dscp-wmm-bk <id>	DSCP mapping for background access (default = 8 16). DSCP WMM mapping numbers (0 - 63).	integer	Minimum value: 0 Maximum value: 63							
dscp-wmm-mapping	Enable/disable Differentiated Services Code Point (DSCP) mapping.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable Differentiated Services Code Point (DSCP) mapping.</td></tr><tr><td>disable</td><td>Disable Differentiated Services Code Point (DSCP) mapping.</td></tr></table>				Option	Description	enable	Enable Differentiated Services Code Point (DSCP) mapping.	disable	Disable Differentiated Services Code Point (DSCP) mapping.
Option	Description									
enable	Enable Differentiated Services Code Point (DSCP) mapping.									
disable	Disable Differentiated Services Code Point (DSCP) mapping.									
dscp-wmm-vi <id>	DSCP mapping for video access (default = 32 40). DSCP WMM mapping numbers (0 - 63).	integer	Minimum value: 0 Maximum value: 63							
dscp-wmm-vo <id>	DSCP mapping for voice access (default = 48 56). DSCP WMM mapping numbers (0 - 63).	integer	Minimum value: 0 Maximum value: 63							
name	WiFi QoS profile name.	string	Maximum length: 35							
uplink	Maximum uplink bandwidth for Virtual Access Points (VAPs) (0 - 2097152 Kbps, default = 0, 0 means no limit).	integer	Minimum value: 0 Maximum value: 2097152	0						
uplink-sta	Maximum uplink bandwidth for clients (0 - 2097152 Kbps, default = 0, 0 means no limit).	integer	Minimum value: 0 Maximum value: 2097152	0						
wmm	Enable/disable WiFi multi-media (WMM) control.	option	-	enable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WiFi multi-media (WMM) control.</td></tr><tr><td><i>disable</i></td><td>Disable WiFi multi-media (WMM) control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WiFi multi-media (WMM) control.	<i>disable</i>	Disable WiFi multi-media (WMM) control.			
Option	Description									
<i>enable</i>	Enable WiFi multi-media (WMM) control.									
<i>disable</i>	Disable WiFi multi-media (WMM) control.									
wmm-be-dscp	DSCP marking for best effort access (default = 0).	integer	Minimum value: 0 Maximum value: 63	0						
wmm-bk-dscp	DSCP marking for background access (default = 8).	integer	Minimum value: 0 Maximum value: 63	8						
wmm-dscp-marking	Enable/disable WMM Differentiated Services Code Point (DSCP) marking.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM Differentiated Services Code Point (DSCP) marking.</td></tr><tr><td><i>disable</i></td><td>Disable WMM Differentiated Services Code Point (DSCP) marking.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM Differentiated Services Code Point (DSCP) marking.	<i>disable</i>	Disable WMM Differentiated Services Code Point (DSCP) marking.			
Option	Description									
<i>enable</i>	Enable WMM Differentiated Services Code Point (DSCP) marking.									
<i>disable</i>	Disable WMM Differentiated Services Code Point (DSCP) marking.									
wmm-uapsd	Enable/disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.</td></tr><tr><td><i>disable</i></td><td>Disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.	<i>disable</i>	Disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.			
Option	Description									
<i>enable</i>	Enable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.									
<i>disable</i>	Disable WMM Unscheduled Automatic Power Save Delivery (U-APSD) power save mode.									
wmm-vi-dscp	DSCP marking for video access (default = 32).	integer	Minimum value: 0 Maximum value: 63	32						
wmm-vo-dscp	DSCP marking for voice access (default = 48).	integer	Minimum value: 0 Maximum value: 63	48						

config wireless-controller region

Configure FortiAP regions (for floor plans and maps).

```

config wireless-controller region
  Description: Configure FortiAP regions (for floor plans and maps).
  edit <name>
    set comments {string}
    set grayscale [enable|disable]
    set opacity {integer}
  next
end

```

config wireless-controller region

Parameter	Description	Type	Size	Default						
comments	Comments.	string	Maximum length: 1027							
grayscale	Region image grayscale.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable region image grayscale.</td></tr><tr><td><i>disable</i></td><td>Disable region image grayscale.</td></tr></table>				Option	Description	<i>enable</i>	Enable region image grayscale.	<i>disable</i>	Disable region image grayscale.
	Option	Description								
	<i>enable</i>	Enable region image grayscale.								
<i>disable</i>	Disable region image grayscale.									
name	FortiAP region name.	string	Maximum length: 35							
opacity	Region image opacity (0 - 100).	integer	Minimum value: 0 Maximum value: 100	100						

config wireless-controller setting

VDOM wireless controller configuration.

```

config wireless-controller setting
  Description: VDOM wireless controller configuration.
  set account-id {string}
  set country [--|AF|...]
  set darrp-optimize {integer}
  set darrp-optimize-schedules <name1>, <name2>, ...
  set device-holdoff {integer}
  set device-idle {integer}
  set device-weight {integer}
  set duplicate-ssid [enable|disable]
  set fake-ssid-action {option1}, {option2}, ...
  set fapc-compatibility [enable|disable]

```

```

set firmware-provision-on-authorization [enable|disable]
config offending-ssid
    Description: Configure offending SSID.
    edit <id>
        set action {option1}, {option2}, ...
        set ssid-pattern {string}
    next
end
set phishing-ssid-detect [enable|disable]
set rolling-wtp-upgrade [enable|disable]
set wfa-compatibility [enable|disable]
end

```

darrp-optimize	Time for running Distributed Automatic Radio Resource Provisioning (DARRP) optimizations (0 - 86400 sec, default = 86400, 0 = disable).	integer	Minimum value: 0 Maximum value: 86400	86400																		
darrp-optimize-schedules <name>	Firewall schedules for DARRP running time. DARRP will run periodically based on darrp-optimize within the schedules. Separate multiple schedule names with a space. Schedule name.	string	Maximum length: 35																			
device-holdoff	Lower limit of creation time of device for identification in minutes (0 - 60, default = 5).	integer	Minimum value: 0 Maximum value: 60	5																		
device-idle	Upper limit of idle time of device for identification in minutes (0 - 14400, default = 1440).	integer	Minimum value: 0 Maximum value: 14400	1440																		
device-weight	Upper limit of confidence of device for identification (0 - 255, default = 1, 0 = disable).	integer	Minimum value: 0 Maximum value: 255	1																		
duplicate-ssid	Enable/disable allowing Virtual Access Points (VAPs) to use the same SSID name in the same VDOM.	option	-	disable																		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Allow VAPs to use the same SSID name in the same VDOM.		
	<i>disable</i>	Do not allow VAPs to use the same SSID name in the same VDOM.		
fake-ssid-action	Actions taken for detected fake SSID.	option	-	log
	Option	Description		
	<i>log</i>	Write logs for detected fake SSID.		
	<i>suppress</i>	Suppress detected fake SSID.		
fapc-compatibility	Enable/disable FAP-C series compatibility.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable FAP-C series compatibility.		
	<i>disable</i>	Disable FAP-C series compatibility.		
firmware-provision-on-authorization	Enable/disable automatic provisioning of latest firmware on authorization.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable firmware provision on authorization.		
	<i>disable</i>	Disable firmware provision on authorization.		
phishing-ssid-detect	Enable/disable phishing SSID detection.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable phishing SSID detection.		
	<i>disable</i>	Disable phishing SSID detection.		
rolling-wtp-upgrade	Enable/disable rolling WTP upgrade (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable rolling WTP upgrade.		
	<i>disable</i>	Disable rolling WTP upgrade.		

Parameter	Description	Type	Size	Default
wfa-compatibility	Enable/disable WFA compatibility.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Wi-Fi Alliance Certification compatibility.		
	<i>disable</i>	Disable Wi-Fi Alliance Certification compatibility.		

config offending-ssid

Parameter	Description	Type	Size	Default
action	Actions taken for detected offending SSID.	option	-	log
	Option	Description		
	<i>log</i>	Generate logs for detected offending SSID.		
	<i>suppress</i>	Suppress detected offending SSID.		
id	ID.	integer	Minimum value: 0 Maximum value: 65535	0
ssid-pattern	Define offending SSID pattern (case insensitive). For example, word, word*, *word, wo*rd.	string	Maximum length: 33	

config wireless-controller snmp

Configure SNMP.

```

  set sta-stats-interval {integer}
  set vap-stats-interval {integer}
  set wids-entry-cleanup {integer}
end
```

config wireless-controller timers

Parameter	Description	Type	Size	Default
ap-reboot-wait-interval1	Time in minutes to wait before AP reboots when there is no controller detected (5 - 65535, default = 0, 0 for no reboot).	integer	Minimum value: 5 Maximum value: 65535	0
ap-reboot-wait-interval2	Time in minutes to wait before AP reboots when there is no controller detected and standalone SSIDs are pushed to the AP in the previous session (5 - 65535, default = 0, 0 for no reboot).	integer	Minimum value: 5 Maximum value: 65535	0

Parameter	Description	Type	Size	Default
ap-reboot-wait-time	Time to reboot the AP when there is no controller detected and standalone SSIDs are pushed to the AP in the previous session, format hh:mm.	string	Maximum length: 7	
auth-timeout	Time after which a client is considered failed in RADIUS authentication and times out (5 - 30 sec, default = 5).	integer	Minimum value: 5 Maximum value: 30	5
ble-device-cleanup	Time period in minutes to keep BLE device after it is gone (default = 60).	integer	Minimum value: 0 Maximum value: 4294967295	60
ble-scan-report-intv	Time between running Bluetooth Low Energy (BLE) reports (10 - 3600 sec, default = 30).	integer	Minimum value: 10 Maximum value: 3600	30
client-idle-rehome-timeout	Time after which a client is considered idle and disconnected from the home controller (2 - 3600 sec, default = 20, 0 for no timeout).	integer	Minimum value: 2 Maximum value: 3600	20
client-idle-timeout	Time after which a client is considered idle and times out (20 - 3600 sec, default = 300, 0 for no timeout).	integer	Minimum value: 20 Maximum value: 3600	300
discovery-interval	Time between discovery requests (2 - 180 sec, default = 5).	integer	Minimum value: 2 Maximum value: 180	5
drma-interval	Dynamic radio mode assignment (DRMA) schedule interval in minutes (1 - 1440, default = 60).	integer	Minimum value: 1 Maximum value: 1440	60
echo-interval	Time between echo requests sent by the managed WTP, AP, or FortiAP (1 - 255 sec, default = 30).	integer	Minimum value: 1 Maximum value: 255	30
fake-ap-log	Time between recording logs about fake APs if periodic fake AP logging is configured (1 - 1440 min, default = 1).	integer	Minimum value: 1 Maximum value: 1440	1
ipsec-intf-cleanup	Time period to keep IPsec VPN interfaces up after WTP sessions are disconnected (30 - 3600 sec, default = 120).	integer	Minimum value: 30 Maximum value: 3600	120
nat-session-keep-alive	Maximal time in seconds between control requests sent by the managed WTP, AP, or FortiAP (0 - 255 sec, default = 0).	integer	Minimum value: 0 Maximum value: 255	0

Parameter	Description	Type	Size	Default
radio-stats-interval	Time between running radio reports (1 - 255 sec, default = 15).	integer	Minimum value: 1 Maximum value: 255	15
rogue-ap-cleanup	Time period in minutes to keep rogue AP after it is gone (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
rogue-ap-log	Time between logging rogue AP messages if periodic rogue AP logging is configured (0 - 1440 min, default = 0).	integer	Minimum value: 0 Maximum value: 1440	0
rogue-sta-cleanup	Time period in minutes to keep rogue station after it is gone (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
sta-cap-cleanup	Time period in minutes to keep station capability data after it is gone (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0
sta-capability-interval	Time between running station capability reports (1 - 255 sec, default = 30).	integer	Minimum value: 1 Maximum value: 255	30
sta-locate-timer	Time between running client presence flushes to remove clients that are listed but no longer present (0 - 86400 sec, default = 1800).	integer	Minimum value: 0 Maximum value: 86400	1800
sta-offline-cleanup	Time period in seconds to keep station offline data after it is gone (default = 300).	integer	Minimum value: 0 Maximum value: 4294967295	300
sta-offline-ip2mac-cleanup	Time period in seconds to keep station offline ip2mac data after it is gone (default = 300).	integer	Minimum value: 0 Maximum value: 4294967295	300
sta-stats-interval	Time between running client (station) reports (1 - 255 sec, default = 10).	integer	Minimum value: 1 Maximum value: 255	10
vap-stats-interval	Time between running Virtual Access Point (VAP) reports (1 - 255 sec, default = 15).	integer	Minimum value: 1 Maximum value: 255	15
wids-entry-cleanup	Time period in minutes to keep wids entry after it is gone (default = 0).	integer	Minimum value: 0 Maximum value: 4294967295	0

<i>enable</i>	Enable 802.11ax partial BSS color.											
<i>disable</i>	Disable 802.11ax partial BSS color.											
bstm-disassociation-imminent	Enable/disable forcing of disassociation after the BSTM request timer has been reached (default = enable).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable BSTM disassociation imminent.</td></tr><tr><td><i>disable</i></td><td>Disable BSTM disassociation imminent.</td></tr></table>	Option	Description	<i>enable</i>	Enable BSTM disassociation imminent.	<i>disable</i>	Disable BSTM disassociation imminent.					
Option	Description											
<i>enable</i>	Enable BSTM disassociation imminent.											
<i>disable</i>	Disable BSTM disassociation imminent.											
bstm-load-balancing-disassoc-timer	Time interval for client to voluntarily leave AP before forcing a disassociation due to AP load-balancing (0 to 30, default = 10).	integer	Minimum value: 10 Maximum value: 30									
bstm-rssi-disassoc-timer	Time interval for client to voluntarily leave AP before forcing a disassociation due to low RSSI (0 to 2000, default = 200).	integer	Minimum value: 200 Maximum value: 2000									
called-station-id-type	The format type of RADIUS attribute Called-Station-Id (default = mac).	option	-	mac								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>mac</i></td><td>Use MAC:SSID format.</td></tr><tr><td><i>ip</i></td><td>Use IP:SSID format.</td></tr><tr><td><i>apname</i></td><td>Use APName:SSID format.</td></tr></table>	Option	Description	<i>mac</i>	Use MAC:SSID format.	<i>ip</i>	Use IP:SSID format.	<i>apname</i>	Use APName:SSID format.			
Option	Description											
<i>mac</i>	Use MAC:SSID format.											
<i>ip</i>	Use IP:SSID format.											
<i>apname</i>	Use APName:SSID format.											
captive-portal	Enable/disable captive portal.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable captive portal.</td></tr><tr><td><i>disable</i></td><td>Disable captive portal.</td></tr></table>	Option	Description	<i>enable</i>	Enable captive portal.	<i>disable</i>	Disable captive portal.					
Option	Description											
<i>enable</i>	Enable captive portal.											
<i>disable</i>	Disable captive portal.											
captive-portal-ac-name	Local-bridging captive portal ac-name.	string	Maximum length: 35									

Parameter	Description	Type	Size	Default						
captive-portal-auth-timeout	Hard timeout - AP will always clear the session after timeout regardless of traffic (0 - 864000 sec, default = 0).	integer	Minimum value: 0 Maximum value: 864000	0						
captive-portal-fw-accounting	Enable/disable RADIUS accounting for captive portal firewall authentication session.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable RADIUS accounting for captive portal firewall authentication session.</td></tr><tr><td>disable</td><td>Disable RADIUS accounting for captive portal firewall authentication session.</td></tr></table>	Option	Description	enable	Enable RADIUS accounting for captive portal firewall authentication session.	disable	Disable RADIUS accounting for captive portal firewall authentication session.			
Option	Description									
enable	Enable RADIUS accounting for captive portal firewall authentication session.									
disable	Disable RADIUS accounting for captive portal firewall authentication session.									
dhcp-address-enforcement	Enable/disable DHCP address enforcement (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable DHCP enforcement, data from clients that have not completed the DHCP process will be blocked.</td></tr><tr><td>disable</td><td>Disable DHCP enforcement, clients can access the network without DHCP process.</td></tr></table>	Option	Description	enable	Enable DHCP enforcement, data from clients that have not completed the DHCP process will be blocked.	disable	Disable DHCP enforcement, clients can access the network without DHCP process.			
Option	Description									
enable	Enable DHCP enforcement, data from clients that have not completed the DHCP process will be blocked.									
disable	Disable DHCP enforcement, clients can access the network without DHCP process.									
dhcp-lease-time	DHCP lease time in seconds for NAT IP address.	integer	Minimum value: 300 Maximum value: 8640000	2400						
dhcp-option43-insertion	Enable/disable insertion of DHCP option 43 (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable insertion of DHCP option 43.</td></tr><tr><td>disable</td><td>Disable insertion of DHCP option 43.</td></tr></table>	Option	Description	enable	Enable insertion of DHCP option 43.	disable	Disable insertion of DHCP option 43.			
Option	Description									
enable	Enable insertion of DHCP option 43.									
disable	Disable insertion of DHCP option 43.									
dhcp-option82-circuit-id-insertion	Enable/disable DHCP option 82 circuit-id insert (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>style-1</td><td>ASCII string composed of AP-MAC;SSID;SSID-TYPE. For example, "xx:xx:xx:xx:xx:xx;wifi;s".</td></tr><tr><td>style-2</td><td>ASCII string composed of AP-MAC. For example, "xx:xx:xx:xx:xx:xx".</td></tr></table>	Option	Description	style-1	ASCII string composed of AP-MAC;SSID;SSID-TYPE. For example, "xx:xx:xx:xx:xx:xx;wifi;s".	style-2	ASCII string composed of AP-MAC. For example, "xx:xx:xx:xx:xx:xx".			
Option	Description									
style-1	ASCII string composed of AP-MAC;SSID;SSID-TYPE. For example, "xx:xx:xx:xx:xx:xx;wifi;s".									
style-2	ASCII string composed of AP-MAC. For example, "xx:xx:xx:xx:xx:xx".									

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>style-3</td><td>ASCII string composed of NETWORK-TYPE:WTPPROF-NAME:VLAN:SSID:AP-MODEL:AP-HOSTNAME:AP-MAC. For example, "WLAN:FAPS221E-default:100:wifi:PS221E:FortiAP-S221E:xx:xx:xx:xx:xx:xx".</td></tr><tr><td>disable</td><td>Disable DHCP option 82 circuit-id insert.</td></tr></table>	Option	Description	style-3	ASCII string composed of NETWORK-TYPE:WTPPROF-NAME:VLAN:SSID:AP-MODEL:AP-HOSTNAME:AP-MAC. For example, "WLAN:FAPS221E-default:100:wifi:PS221E:FortiAP-S221E:xx:xx:xx:xx:xx:xx".	disable	Disable DHCP option 82 circuit-id insert.			
	Option	Description								
	style-3	ASCII string composed of NETWORK-TYPE:WTPPROF-NAME:VLAN:SSID:AP-MODEL:AP-HOSTNAME:AP-MAC. For example, "WLAN:FAPS221E-default:100:wifi:PS221E:FortiAP-S221E:xx:xx:xx:xx:xx:xx".								
disable	Disable DHCP option 82 circuit-id insert.									
dhcp-option82-insertion	Enable/disable DHCP option 82 insert (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable DHCP option 82 insert.</td></tr><tr><td>disable</td><td>Disable DHCP option 82 insert.</td></tr></table>	Option	Description	enable	Enable DHCP option 82 insert.	disable	Disable DHCP option 82 insert.			
	Option	Description								
	enable	Enable DHCP option 82 insert.								
disable	Disable DHCP option 82 insert.									
dhcp-option82-remote-id-insertion	Enable/disable DHCP option 82 remote-id insert (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>style-1</td><td>ASCII string in the format "xx:xx:xx:xx:xx:xx" containing MAC address of client device.</td></tr><tr><td>disable</td><td>Disable DHCP option 82 remote-id insert.</td></tr></table>	Option	Description	style-1	ASCII string in the format "xx:xx:xx:xx:xx:xx" containing MAC address of client device.	disable	Disable DHCP option 82 remote-id insert.			
	Option	Description								
	style-1	ASCII string in the format "xx:xx:xx:xx:xx:xx" containing MAC address of client device.								
disable	Disable DHCP option 82 remote-id insert.									
domain-name-stripping	Enable/disable stripping domain name from identity (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable stripping domain name from identity.</td></tr><tr><td>enable</td><td>Enable stripping domain name from identity.</td></tr></table>	Option	Description	disable	Disable stripping domain name from identity.	enable	Enable stripping domain name from identity.			
	Option	Description								
	disable	Disable stripping domain name from identity.								
enable	Enable stripping domain name from identity.									
dynamic-vlan	Enable/disable dynamic VLAN assignment.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable dynamic VLAN assignment.</td></tr><tr><td>disable</td><td>Disable dynamic VLAN assignment.</td></tr></table>	Option	Description	enable	Enable dynamic VLAN assignment.	disable	Disable dynamic VLAN assignment.			
	Option	Description								
	enable	Enable dynamic VLAN assignment.								
disable	Disable dynamic VLAN assignment.									
eap-reauth	Enable/disable EAP re-authentication for WPA-Enterprise security.	option	-	disable						

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAP re-authentication for WPA-Enterprise security.</td></tr><tr><td><i>disable</i></td><td>Disable EAP re-authentication for WPA-Enterprise security.</td></tr></table>	Option	Description	<i>enable</i>	Enable EAP re-authentication for WPA-Enterprise security.	<i>disable</i>	Disable EAP re-authentication for WPA-Enterprise security.					
	Option	Description										
	<i>enable</i>	Enable EAP re-authentication for WPA-Enterprise security.										
<i>disable</i>	Disable EAP re-authentication for WPA-Enterprise security.											
eap-reauth-intv	EAP re-authentication interval (1800 - 864000 sec, default = 86400).	integer	Minimum value: 1800 Maximum value: 864000	86400								
eapol-key-retries	Enable/disable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2) (default = enable).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).</td></tr><tr><td><i>enable</i></td><td>Enable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).</td></tr></table>	Option	Description	<i>disable</i>	Disable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).	<i>enable</i>	Enable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).					
	Option	Description										
	<i>disable</i>	Disable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).										
<i>enable</i>	Enable retransmission of EAPOL-Key frames (message 3/4 and group message 1/2).											
encrypt	Encryption protocol to use (only available when security is set to a WPA type).	option	-	AES								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>TKIP</i></td><td>Use TKIP encryption.</td></tr><tr><td><i>AES</i></td><td>Use AES encryption.</td></tr><tr><td><i>TKIP-AES</i></td><td>Use TKIP and AES encryption.</td></tr></table>	Option	Description	<i>TKIP</i>	Use TKIP encryption.	<i>AES</i>	Use AES encryption.	<i>TKIP-AES</i>	Use TKIP and AES encryption.			
	Option	Description										
	<i>TKIP</i>	Use TKIP encryption.										
	<i>AES</i>	Use AES encryption.										
<i>TKIP-AES</i>	Use TKIP and AES encryption.											
external-logout	URL of external authentication logout server.	string	Maximum length: 127									
external-pre-auth	Enable/disable pre-authentication with external APs not managed by the FortiGate (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable pre-authentication with external APs.</td></tr><tr><td><i>disable</i></td><td>Disable pre-authentication with external APs.</td></tr></table>	Option	Description	<i>enable</i>	Enable pre-authentication with external APs.	<i>disable</i>	Disable pre-authentication with external APs.					
	Option	Description										
	<i>enable</i>	Enable pre-authentication with external APs.										
<i>disable</i>	Disable pre-authentication with external APs.											
external-web	URL of external authentication web server.	var-string	Maximum length: 1023									
external-web-format	URL query parameter detection (default = auto-detect).	option	-	auto-detect								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>auto-detect</i>	Automatically detect if "external-web" URL has any query parameter.		
	<i>no-query-string</i>	"external-web" URL does not have any query parameter.		
	<i>partial-query-string</i>	"external-web" URL has some query parameters.		
fast-bss-transition	Enable/disable 802.11r Fast BSS Transition (FT) (default = disable).	option	-	disable
	Option	Description		
	<i>disable</i>	Disable 802.11r Fast BSS Transition (FT).		
	<i>enable</i>	Enable 802.11r Fast BSS Transition (FT).		
ft-mobility-domain	Mobility domain identifier in FT (1 - 65535, default = 1000).	integer	Minimum value: 1 Maximum value: 65535	1000
ft-over-ds	Enable/disable FT over the Distribution System (DS).	option	-	disable
	Option	Description		
	<i>disable</i>	Disable FT over the Distribution System (DS).		
	<i>enable</i>	Enable FT over the Distribution System (DS).		
ft-r0-key-lifetime	Lifetime of the PMK-R0 key in FT, 1-65535 minutes.	integer	Minimum value: 1 Maximum value: 65535	480
gas-comeback-delay	GAS comeback delay (0 or 100 - 10000 milliseconds, default = 500).	integer	Minimum value: 100 Maximum value: 10000	500
gas-fragmentation-limit	GAS fragmentation limit (512 - 4096, default = 1024).	integer	Minimum value: 512 Maximum value: 4096	1024
gtk-rekey	Enable/disable GTK rekey for WPA security.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable GTK rekey for WPA security.		
	<i>disable</i>	Disable GTK rekey for WPA security.		

Parameter	Description	Type	Size	Default
gtk-rekey-intv	GTK rekey interval (600 - 864000 sec, default = 86400).	integer	Minimum value: 600 Maximum value: 864000	86400
high-efficiency	Enable/disable 802.11ax high efficiency (default = enable).	option	-	enable
	Option	Description		
	enable	Enable 802.11ax high efficiency.		
	disable	Disable 802.11ax high efficiency.		
hotspot20-profile	Hotspot 2.0 profile name.	string	Maximum length: 35	
igmp-snooping	Enable/disable IGMP snooping.	option	-	disable
	Option	Description		
	enable	Enable IGMP snooping.		
	disable	Disable IGMP snooping.		
intra-vap-privacy	Enable/disable blocking communication between clients on the same SSID (called intra-SSID privacy) (default = disable).	option	-	disable
	Option	Description		
	enable	Enable intra-SSID privacy.		
	disable	Disable intra-SSID privacy.		
ip	IP address and subnet mask for the local standalone NAT subnet.	ipv4-classnet-host	Not Specified	0.0.0.0 0.0.0.0
ips-sensor	IPS sensor name.	string	Maximum length: 47	

Parameter	Description	Type	Size	Default																				
ipv6-rules	Optional rules of IPv6 packets. For example, you can keep RA, RS and so on off of the wireless network.	option	-	drop-icmp6ra drop-icmp6rs drop-llmnr6 drop-icmp6mld2 drop-dhcp6s drop-dhcp6c ndp-proxy drop-ns-dad																				
<table><tr><th>Option</th><th>Description</th></tr><tr><td>drop-icmp6ra</td><td>Drop ICMP6 Router Advertisement (RA) packets that originate from wireless clients.</td></tr><tr><td>drop-icmp6rs</td><td>Drop ICMP6 Router Solicitation (RS) packets to be sent to wireless clients.</td></tr><tr><td>drop-llmnr6</td><td>Drop Link-Local Multicast Name Resolution (LLMNR) packets</td></tr><tr><td>drop-icmp6mld2</td><td>Drop ICMP6 Multicast Listener Report V2 (MLD2) packets</td></tr><tr><td>drop-dhcp6s</td><td>Drop DHCP6 server generated packets that originate from wireless clients.</td></tr><tr><td>drop-dhcp6c</td><td>Drop DHCP6 client generated packets to be sent to wireless clients.</td></tr><tr><td>ndp-proxy</td><td>Enable IPv6 ndp proxy - send back na on behalf of the client and drop the ns.</td></tr><tr><td>drop-ns-dad</td><td>Drop ICMP6 NS-DAD when target address is not found in ndp proxy cache.</td></tr><tr><td>drop-ns-nondad</td><td>Drop ICMP6 NS-NonDAD when target address is not found in ndp proxy cache.</td></tr></table>					Option	Description	drop-icmp6ra	Drop ICMP6 Router Advertisement (RA) packets that originate from wireless clients.	drop-icmp6rs	Drop ICMP6 Router Solicitation (RS) packets to be sent to wireless clients.	drop-llmnr6	Drop Link-Local Multicast Name Resolution (LLMNR) packets	drop-icmp6mld2	Drop ICMP6 Multicast Listener Report V2 (MLD2) packets	drop-dhcp6s	Drop DHCP6 server generated packets that originate from wireless clients.	drop-dhcp6c	Drop DHCP6 client generated packets to be sent to wireless clients.	ndp-proxy	Enable IPv6 ndp proxy - send back na on behalf of the client and drop the ns.	drop-ns-dad	Drop ICMP6 NS-DAD when target address is not found in ndp proxy cache.	drop-ns-nondad	Drop ICMP6 NS-NonDAD when target address is not found in ndp proxy cache.
Option	Description																							
drop-icmp6ra	Drop ICMP6 Router Advertisement (RA) packets that originate from wireless clients.																							
drop-icmp6rs	Drop ICMP6 Router Solicitation (RS) packets to be sent to wireless clients.																							
drop-llmnr6	Drop Link-Local Multicast Name Resolution (LLMNR) packets																							
drop-icmp6mld2	Drop ICMP6 Multicast Listener Report V2 (MLD2) packets																							
drop-dhcp6s	Drop DHCP6 server generated packets that originate from wireless clients.																							
drop-dhcp6c	Drop DHCP6 client generated packets to be sent to wireless clients.																							
ndp-proxy	Enable IPv6 ndp proxy - send back na on behalf of the client and drop the ns.																							
drop-ns-dad	Drop ICMP6 NS-DAD when target address is not found in ndp proxy cache.																							
drop-ns-nondad	Drop ICMP6 NS-NonDAD when target address is not found in ndp proxy cache.																							
key	WEP Key.	password	Not Specified																					
keyindex	WEP key index (1 - 4).	integer	Minimum value: 1 1 Maximum value: 4																					
l3-roaming	Enable/disable layer 3 roaming (default = disable).	option	-	disable																				
<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable layer 3 roaming.</td></tr><tr><td>disable</td><td>Disable layer 3 roaming.</td></tr></table>					Option	Description	enable	Enable layer 3 roaming.	disable	Disable layer 3 roaming.														
Option	Description																							
enable	Enable layer 3 roaming.																							
disable	Disable layer 3 roaming.																							

Parameter	Description	Type	Size	Default										
l3-roaming-mode	Select the way that layer 3 roaming traffic is passed (default = direct).	option	-	direct										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>direct</td><td>Layer 3 roaming traffic is passed between home AP and guest AP directly.</td></tr><tr><td>indirect</td><td>Layer 3 roaming traffic is passed between home AP and guest AP through controllers.</td></tr></table>	Option	Description	direct	Layer 3 roaming traffic is passed between home AP and guest AP directly.	indirect	Layer 3 roaming traffic is passed between home AP and guest AP through controllers.							
Option	Description													
direct	Layer 3 roaming traffic is passed between home AP and guest AP directly.													
indirect	Layer 3 roaming traffic is passed between home AP and guest AP through controllers.													
ldpc	VAP low-density parity-check (LDPC) coding configuration.	option	-	rxtx										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable LDPC.</td></tr><tr><td>rx</td><td>Enable LDPC when receiving traffic.</td></tr><tr><td>tx</td><td>Enable LDPC when transmitting traffic.</td></tr><tr><td>rxtx</td><td>Enable LDPC when both receiving and transmitting traffic.</td></tr></table>	Option	Description	disable	Disable LDPC.	rx	Enable LDPC when receiving traffic.	tx	Enable LDPC when transmitting traffic.	rxtx	Enable LDPC when both receiving and transmitting traffic.			
Option	Description													
disable	Disable LDPC.													
rx	Enable LDPC when receiving traffic.													
tx	Enable LDPC when transmitting traffic.													
rxtx	Enable LDPC when both receiving and transmitting traffic.													
local-authentication	Enable/disable AP local authentication.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable AP local authentication.</td></tr><tr><td>disable</td><td>Disable AP local authentication.</td></tr></table>	Option	Description	enable	Enable AP local authentication.	disable	Disable AP local authentication.							
Option	Description													
enable	Enable AP local authentication.													
disable	Disable AP local authentication.													
local-bridging	Enable/disable bridging of wireless and Ethernet interfaces on the FortiAP (default = disable).	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable AP local VAP to Ethernet bridging.</td></tr><tr><td>disable</td><td>Disable AP local VAP to Ethernet bridging.</td></tr></table>	Option	Description	enable	Enable AP local VAP to Ethernet bridging.	disable	Disable AP local VAP to Ethernet bridging.							
Option	Description													
enable	Enable AP local VAP to Ethernet bridging.													
disable	Disable AP local VAP to Ethernet bridging.													
local-lan	Allow/deny traffic destined for a Class A, B, or C private IP address (default = allow).	option	-	allow										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>allow</td><td>Allow traffic destined for a Class A, B, or C private IP address.</td></tr><tr><td>deny</td><td>Deny traffic destined for a Class A, B, or C private IP address.</td></tr></table>	Option	Description	allow	Allow traffic destined for a Class A, B, or C private IP address.	deny	Deny traffic destined for a Class A, B, or C private IP address.							
Option	Description													
allow	Allow traffic destined for a Class A, B, or C private IP address.													
deny	Deny traffic destined for a Class A, B, or C private IP address.													

Parameter	Description	Type	Size	Default						
local-lan-partition	Enable/disable segregating client traffic to local LAN side (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable AP local LAN segregation.</td></tr><tr><td>disable</td><td>Disable AP local LAN segregation.</td></tr></table>	Option	Description	enable	Enable AP local LAN segregation.	disable	Disable AP local LAN segregation.			
Option	Description									
enable	Enable AP local LAN segregation.									
disable	Disable AP local LAN segregation.									
local-standalone	Enable/disable AP local standalone (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable AP local standalone.</td></tr><tr><td>disable</td><td>Disable AP local standalone.</td></tr></table>	Option	Description	enable	Enable AP local standalone.	disable	Disable AP local standalone.			
Option	Description									
enable	Enable AP local standalone.									
disable	Disable AP local standalone.									
local-standalone-dns	Enable/disable AP local standalone DNS.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable AP local standalone DNS.</td></tr><tr><td>disable</td><td>Disable AP local standalone DNS.</td></tr></table>	Option	Description	enable	Enable AP local standalone DNS.	disable	Disable AP local standalone DNS.			
Option	Description									
enable	Enable AP local standalone DNS.									
disable	Disable AP local standalone DNS.									
local-standalone-dns-ip	IPv4 addresses for the local standalone DNS.	ipv4-address	Not Specified							
local-standalone-nat	Enable/disable AP local standalone NAT mode.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable AP local standalone NAT mode.</td></tr><tr><td>disable</td><td>Disable AP local standalone NAT mode.</td></tr></table>	Option	Description	enable	Enable AP local standalone NAT mode.	disable	Disable AP local standalone NAT mode.			
Option	Description									
enable	Enable AP local standalone NAT mode.									
disable	Disable AP local standalone NAT mode.									
mac-auth-bypass	Enable/disable MAC authentication bypass.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable MAC authentication bypass.</td></tr><tr><td>disable</td><td>Disable MAC authentication bypass.</td></tr></table>	Option	Description	enable	Enable MAC authentication bypass.	disable	Disable MAC authentication bypass.			
Option	Description									
enable	Enable MAC authentication bypass.									
disable	Disable MAC authentication bypass.									
mac-called-station-delimiter	MAC called station delimiter (default = hyphen).	option	-	hyphen						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>hyphen</i>	Use hyphen as delimiter for called station.		
	<i>single-hyphen</i>	Use single hyphen as delimiter for called station.		
	<i>colon</i>	Use colon as delimiter for called station.		
	<i>none</i>	No delimiter for called station.		
mac-calling-station-delimiter	MAC calling station delimiter (default = hyphen).	option	-	hyphen
	Option Description			
	<i>hyphen</i>	Use hyphen as delimiter for calling station.		
	<i>single-hyphen</i>	Use single hyphen as delimiter for calling station.		
	<i>colon</i>	Use colon as delimiter for calling station.		
	<i>none</i>	No delimiter for calling station.		
mac-case	MAC case (default = uppercase).	option	-	uppercase
	Option Description			
	<i>uppercase</i>	Use uppercase MAC.		
	<i>lowercase</i>	Use lowercase MAC.		
mac-password-delimiter	MAC authentication password delimiter (default = hyphen).	option	-	hyphen
	Option Description			
	<i>hyphen</i>	Use hyphen as delimiter for MAC auth password.		
	<i>single-hyphen</i>	Use single hyphen as delimiter for MAC auth password.		
	<i>colon</i>	Use colon as delimiter for MAC auth password.		
	<i>none</i>	No delimiter for MAC auth password.		
mac-username-delimiter	MAC authentication username delimiter (default = hyphen).	option	-	hyphen
	Option Description			
	<i>hyphen</i>	Use hyphen as delimiter for MAC auth username.		
	<i>single-hyphen</i>	Use single hyphen as delimiter for MAC auth username.		
	<i>colon</i>	Use colon as delimiter for MAC auth username.		

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No delimiter for MAC auth username.</td></tr></table>	Option	Description	<i>none</i>	No delimiter for MAC auth username.							
Option	Description											
<i>none</i>	No delimiter for MAC auth username.											
max-clients	Maximum number of clients that can connect simultaneously to the VAP (default = 0, meaning no limitation).	integer	Minimum value: 0 Maximum value: 4294967295	0								
max-clients-ap	Maximum number of clients that can connect simultaneously to the VAP per AP radio (default = 0, meaning no limitation).	integer	Minimum value: 0 Maximum value: 4294967295	0								
mbo	Enable/disable Multiband Operation (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable Multiband Operation (MBO).</td></tr><tr><td><i>enable</i></td><td>Enable Multiband Operation (MBO).</td></tr></table>	Option	Description	<i>disable</i>	Disable Multiband Operation (MBO).	<i>enable</i>	Enable Multiband Operation (MBO).					
Option	Description											
<i>disable</i>	Disable Multiband Operation (MBO).											
<i>enable</i>	Enable Multiband Operation (MBO).											
mbo-cell-data-conn-pref	MBO cell data connection preference (0, 1, or 255, default = 1).	option	-	prefer-not								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>excluded</i></td><td>Wi-Fi Agile Multiband AP does not want the Wi-Fi Agile Multiband STA to use the cellular data connection.</td></tr><tr><td><i>prefer-not</i></td><td>Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should not use cellular data connection.</td></tr><tr><td><i>prefer-use</i></td><td>Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should use cellular data connection.</td></tr></table>	Option	Description	<i>excluded</i>	Wi-Fi Agile Multiband AP does not want the Wi-Fi Agile Multiband STA to use the cellular data connection.	<i>prefer-not</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should not use cellular data connection.	<i>prefer-use</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should use cellular data connection.			
Option	Description											
<i>excluded</i>	Wi-Fi Agile Multiband AP does not want the Wi-Fi Agile Multiband STA to use the cellular data connection.											
<i>prefer-not</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should not use cellular data connection.											
<i>prefer-use</i>	Wi-Fi Agile Multiband AP prefers the Wi-Fi Agile Multiband STA should use cellular data connection.											
me-disable-thresh	Disable multicast enhancement when this many clients are receiving multicast traffic.	integer	Minimum value: 32 Maximum value: 256	32								
mesh-backhaul	Enable/disable using this VAP as a WiFi mesh backhaul (default = disable). This entry is only available when security is set to a WPA type or open.	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable mesh backhaul.</td></tr><tr><td><i>disable</i></td><td>Disable mesh backhaul.</td></tr></table>	Option	Description	<i>enable</i>	Enable mesh backhaul.	<i>disable</i>	Disable mesh backhaul.					
Option	Description											
<i>enable</i>	Enable mesh backhaul.											
<i>disable</i>	Disable mesh backhaul.											

Parameter	Description	Type	Size	Default										
mpsk-profile	MPSK profile name.	string	Maximum length: 35											
mu-mimo	Enable/disable Multi-user MIMO (default = enable).	option	-	enable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Multi-user MIMO.</td></tr><tr><td><i>disable</i></td><td>Disable Multi-user MIMO.</td></tr></table>	Option	Description	<i>enable</i>	Enable Multi-user MIMO.	<i>disable</i>	Disable Multi-user MIMO.							
Option	Description													
<i>enable</i>	Enable Multi-user MIMO.													
<i>disable</i>	Disable Multi-user MIMO.													
multicast-enhance	Enable/disable converting multicast to unicast to improve performance (default = disable).	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable multicast enhancement.</td></tr><tr><td><i>disable</i></td><td>Disable multicast enhancement.</td></tr></table>	Option	Description	<i>enable</i>	Enable multicast enhancement.	<i>disable</i>	Disable multicast enhancement.							
Option	Description													
<i>enable</i>	Enable multicast enhancement.													
<i>disable</i>	Disable multicast enhancement.													
multicast-rate	Multicast rate (0, 6000, 12000, or 24000 kbps, default = 0).	option	-	0										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>0</i></td><td>Use the default multicast rate.</td></tr><tr><td><i>6000</i></td><td>6 Mbps.</td></tr><tr><td><i>12000</i></td><td>12 Mbps.</td></tr><tr><td><i>24000</i></td><td>24 Mbps.</td></tr></table>	Option	Description	<i>0</i>	Use the default multicast rate.	<i>6000</i>	6 Mbps.	<i>12000</i>	12 Mbps.	<i>24000</i>	24 Mbps.			
Option	Description													
<i>0</i>	Use the default multicast rate.													
<i>6000</i>	6 Mbps.													
<i>12000</i>	12 Mbps.													
<i>24000</i>	24 Mbps.													
nac	Enable/disable network access control.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable network access control.</td></tr><tr><td><i>disable</i></td><td>Disable network access control.</td></tr></table>	Option	Description	<i>enable</i>	Enable network access control.	<i>disable</i>	Disable network access control.							
Option	Description													
<i>enable</i>	Enable network access control.													
<i>disable</i>	Disable network access control.													
nac-profile	NAC profile name.	string	Maximum length: 35											
name	Virtual AP name.	string	Maximum length: 15											
nas-filter-rule	Enable/disable NAS filter rule support (default = disable).	option	-	disable										

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable NAS filter rule for RADIUS server.		
	<i>disable</i>	Disable NAS filter rule for RADIUS server.		
neighbor-report-dual-band	Enable/disable dual-band neighbor report (default = disable).	option	-	disable
	Option	Description		
	<i>disable</i>	Disable dual-band neighbor report.		
	<i>enable</i>	Enable dual-band neighbor report.		
okc	Enable/disable Opportunistic Key Caching (OKC) (default = enable).	option	-	enable
	Option	Description		
	<i>disable</i>	Disable Opportunistic Key Caching (OKC).		
	<i>enable</i>	Enable Opportunistic Key Caching (OKC).		
osen	Enable/disable OSEN as part of key management (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable OSEN auth.		
	<i>disable</i>	Disable OSEN auth.		
owe-groups	OWE-Groups.	option	-	
	Option	Description		
	19	DH Group 19.		
	20	DH Group 20.		
	21	DH Group 21.		
owe-transition	Enable/disable OWE transition mode support.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable OWE transition mode support.		
	<i>enable</i>	Enable OWE transition mode support.		

Parameter	Description	Type	Size	Default								
owe-transition-ssid	OWE transition mode peer SSID.	string	Maximum length: 32									
passphrase	WPA pre-shared key (PSK) to be used to authenticate WiFi users.	password	Not Specified									
pmf	Protected Management Frames (PMF) support (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable PMF completely.</td></tr><tr><td>enable</td><td>Enable PMF but deny clients without PMF.</td></tr><tr><td>optional</td><td>Enable PMF and allow clients without PMF.</td></tr></table>				Option	Description	disable	Disable PMF completely.	enable	Enable PMF but deny clients without PMF.	optional	Enable PMF and allow clients without PMF.
Option	Description											
disable	Disable PMF completely.											
enable	Enable PMF but deny clients without PMF.											
optional	Enable PMF and allow clients without PMF.											
pmf-assoc-comeback-timeout	Protected Management Frames (PMF) comeback maximum timeout (1-20 sec).	integer	Minimum value: 1 1 Maximum value: 20									
pmf-sa-query-retry-timeout	Protected Management Frames (PMF) SA query retry timeout interval (1 - 5 100s of msec).	integer	Minimum value: 2 1 Maximum value: 5									
port-macauth	Enable/disable LAN port MAC authentication (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable LAN port MAC authentication.</td></tr><tr><td>radius</td><td>Enable LAN port RADIUS-based MAC authentication.</td></tr><tr><td>address-group</td><td>Enable LAN port address-group based MAC authentication.</td></tr></table>				Option	Description	disable	Disable LAN port MAC authentication.	radius	Enable LAN port RADIUS-based MAC authentication.	address-group	Enable LAN port address-group based MAC authentication.
Option	Description											
disable	Disable LAN port MAC authentication.											
radius	Enable LAN port RADIUS-based MAC authentication.											
address-group	Enable LAN port address-group based MAC authentication.											
port-macauth-reauth-timeout	LAN port MAC authentication re-authentication timeout value (default = 7200 sec).	integer	Minimum value: 7200 120 Maximum value: 65535									
port-macauth-timeout	LAN port MAC authentication idle timeout value (default = 600 sec).	integer	Minimum value: 600 60 Maximum value: 65535									
portal-message-override-group	Replacement message group for this VAP (only available when security is set to a captive portal type).	string	Maximum length: 35									
portal-type	Captive portal functionality. Configure how the captive portal authenticates users and whether it includes a disclaimer.	option	-	auth								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>auth</i>	Portal for authentication.		
	<i>auth+disclaimer</i>	Portal for authentication and disclaimer.		
	<i>disclaimer</i>	Portal for disclaimer.		
	<i>email-collect</i>	Portal for email collection.		
	<i>cmcc</i>	Portal for CMCC.		
	<i>cmcc-macauth</i>	Portal for CMCC and MAC authentication.		
	<i>auth-mac</i>	Portal for authentication and MAC authentication.		
	<i>external-auth</i>	Portal for external portal authentication.		
	<i>external-macauth</i>	Portal for external portal MAC authentication.		
pre-auth	Enable/disable pre-authentication, where supported by clients (default = enable).	option	-	enable
	Option	Description		
	<i>enable</i>	Enable pre-authentication.		
	<i>disable</i>	Disable pre-authentication.		
primary-wag-profile	Primary wireless access gateway profile name.	string	Maximum length: 35	
probe-resp-suppression	Enable/disable probe response suppression (to ignore weak signals) (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable probe response suppression.		
	<i>disable</i>	Disable probe response suppression.		
probe-resp-threshold	Minimum signal level/threshold in dBm required for the AP response to probe requests (-95 to -20, default = -80).	string	Maximum length: 7	-80
ptk-rekey	Enable/disable PTK rekey for WPA-Enterprise security.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable PTK rekey for WPA-Enterprise security.		
	<i>disable</i>	Disable PTK rekey for WPA-Enterprise security.		

Parameter	Description	Type	Size	Default						
ptk-rekey-intv	PTK rekey interval (600 - 864000 sec, default = 86400).	integer	Minimum value: 600 Maximum value: 864000	86400						
qos-profile	Quality of service profile name.	string	Maximum length: 35							
quarantine	Enable/disable station quarantine (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable station quarantine.</td></tr><tr><td>disable</td><td>Disable station quarantine.</td></tr></table>				Option	Description	enable	Enable station quarantine.	disable	Disable station quarantine.
Option	Description									
enable	Enable station quarantine.									
disable	Disable station quarantine.									
radio-2g-threshold	Minimum signal level/threshold in dBm required for the AP response to receive a packet in 2.4G band (-95 to -20, default = -79).	string	Maximum length: 7	-79						
radio-5g-threshold	Minimum signal level/threshold in dBm required for the AP response to receive a packet in 5G band(-95 to -20, default = -76).	string	Maximum length: 7	-76						
radio-sensitivity	Enable/disable software radio sensitivity (to ignore weak signals) (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable software radio sensitivity.</td></tr><tr><td>disable</td><td>Disable software radio sensitivity.</td></tr></table>				Option	Description	enable	Enable software radio sensitivity.	disable	Disable software radio sensitivity.
Option	Description									
enable	Enable software radio sensitivity.									
disable	Disable software radio sensitivity.									
radius-mac-auth	Enable/disable RADIUS-based MAC authentication of clients (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable RADIUS-based MAC authentication.</td></tr><tr><td>disable</td><td>Disable RADIUS-based MAC authentication.</td></tr></table>				Option	Description	enable	Enable RADIUS-based MAC authentication.	disable	Disable RADIUS-based MAC authentication.
Option	Description									
enable	Enable RADIUS-based MAC authentication.									
disable	Disable RADIUS-based MAC authentication.									
radius-mac-auth-block-interval	Don't send RADIUS MAC auth request again if the client has been rejected within specific interval (0 or 30 - 864000 seconds, default = 0, 0 to disable blocking).	integer	Minimum value: 30 Maximum value: 864000	0						

Parameter	Description	Type	Size	Default																														
radius-mac-auth-server	RADIUS-based MAC authentication server.	string	Maximum length: 35																															
radius-mac-auth-usergroups <name>	Selective user groups that are permitted for RADIUS mac authentication. User group name.	string	Maximum length: 79																															
radius-mac-mpsk-auth	Enable/disable RADIUS-based MAC authentication of clients for MPSK authentication (default = disable).	option	-	disable																														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable RADIUS-based MAC authentication for MPSK authentication.</td></tr><tr><td><i>disable</i></td><td>Disable RADIUS-based MAC authentication for MPSK authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable RADIUS-based MAC authentication for MPSK authentication.	<i>disable</i>	Disable RADIUS-based MAC authentication for MPSK authentication.																								
Option	Description																																	
<i>enable</i>	Enable RADIUS-based MAC authentication for MPSK authentication.																																	
<i>disable</i>	Disable RADIUS-based MAC authentication for MPSK authentication.																																	
radius-mac-mpsk-timeout	RADIUS MAC MPSK cache timeout interval (0 or 300 - 864000, default = 86400, 0 to disable caching).	integer	Minimum value: 300 Maximum value: 864000	86400																														
radius-server	RADIUS server to be used to authenticate WiFi users.	string	Maximum length: 35																															
rates-11a	Allowed data rates for 802.11a.	option	-																															
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>6</td><td>6 Mbps supported rate.</td></tr><tr><td>6-basic</td><td>6 Mbps BSS basic rate.</td></tr><tr><td>9</td><td>9 Mbps supported rate.</td></tr><tr><td>9-basic</td><td>9 Mbps BSS basic rate.</td></tr><tr><td>12</td><td>12 Mbps supported rate.</td></tr><tr><td>12-basic</td><td>12 Mbps BSS basic rate.</td></tr><tr><td>18</td><td>18 Mbps supported rate.</td></tr><tr><td>18-basic</td><td>18 Mbps BSS basic rate.</td></tr><tr><td>24</td><td>24 Mbps supported rate.</td></tr><tr><td>24-basic</td><td>24 Mbps BSS basic rate.</td></tr><tr><td>36</td><td>36 Mbps supported rate.</td></tr><tr><td>36-basic</td><td>36 Mbps BSS basic rate.</td></tr><tr><td>48</td><td>48 Mbps supported rate.</td></tr><tr><td>48-basic</td><td>48 Mbps BSS basic rate.</td></tr></table>				Option	Description	6	6 Mbps supported rate.	6-basic	6 Mbps BSS basic rate.	9	9 Mbps supported rate.	9-basic	9 Mbps BSS basic rate.	12	12 Mbps supported rate.	12-basic	12 Mbps BSS basic rate.	18	18 Mbps supported rate.	18-basic	18 Mbps BSS basic rate.	24	24 Mbps supported rate.	24-basic	24 Mbps BSS basic rate.	36	36 Mbps supported rate.	36-basic	36 Mbps BSS basic rate.	48	48 Mbps supported rate.	48-basic	48 Mbps BSS basic rate.

	enable	Enable using accounting interim update on roaming for WPA-Enterprise security.																																				
disable	Disable using accounting interim update on roaming for WPA-Enterprise security.																																					
sae-groups	SAE-Groups.	option	-																																			

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>19</td><td>DH Group 19.</td></tr><tr><td>20</td><td>DH Group 20.</td></tr><tr><td>21</td><td>DH Group 21.</td></tr></table>	Option	Description	19	DH Group 19.	20	DH Group 20.	21	DH Group 21.			
	Option	Description										
	19	DH Group 19.										
	20	DH Group 20.										
21	DH Group 21.											
sae-h2e-only	Use hash-to-element-only mechanism for PWE derivation (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WPA3 SAE-H2E-only.</td></tr><tr><td>disable</td><td>Disable WPA3 SAE-H2E-only.</td></tr></table>	Option	Description	enable	Enable WPA3 SAE-H2E-only.	disable	Disable WPA3 SAE-H2E-only.					
	Option	Description										
	enable	Enable WPA3 SAE-H2E-only.										
disable	Disable WPA3 SAE-H2E-only.											
sae-hnp-only	Use hunting-and-pecking-only mechanism for PWE derivation (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WPA3 SAE-HNP-only.</td></tr><tr><td>disable</td><td>Disable WPA3 SAE-HNP-only.</td></tr></table>	Option	Description	enable	Enable WPA3 SAE-HNP-only.	disable	Disable WPA3 SAE-HNP-only.					
	Option	Description										
	enable	Enable WPA3 SAE-HNP-only.										
disable	Disable WPA3 SAE-HNP-only.											
sae-password	WPA3 SAE password to be used to authenticate WiFi users.	password	Not Specified									
sae-pk	Enable/disable WPA3 SAE-PK (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WPA3 SAE-PK.</td></tr><tr><td>disable</td><td>Disable WPA3 SAE-PK.</td></tr></table>	Option	Description	enable	Enable WPA3 SAE-PK.	disable	Disable WPA3 SAE-PK.					
	Option	Description										
	enable	Enable WPA3 SAE-PK.										
disable	Disable WPA3 SAE-PK.											
sae-private-key	Private key used for WPA3 SAE-PK authentication.	string	Maximum length: 359									
scan-botnet-connections	Block or monitor connections to Botnet servers or disable Botnet scanning.	option	-	monitor								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not scan connections to botnet servers.</td></tr><tr><td>monitor</td><td>Log connections to botnet servers.</td></tr><tr><td>block</td><td>Block connections to botnet servers.</td></tr></table>	Option	Description	disable	Do not scan connections to botnet servers.	monitor	Log connections to botnet servers.	block	Block connections to botnet servers.			
	Option	Description										
	disable	Do not scan connections to botnet servers.										
	monitor	Log connections to botnet servers.										
block	Block connections to botnet servers.											

Parameter	Description	Type	Size	Default
schedule <name>	Firewall schedules for enabling this VAP on the FortiAP. This VAP will be enabled when at least one of the schedules is valid. Separate multiple schedule names with a space. Schedule name.	string	Maximum length: 35	
secondary-wag-profile	Secondary wireless access gateway profile name.	string	Maximum length: 35	
security	Security mode for the wireless interface (default = wpa2-only-personal).	option	-	wpa2-only-personal

Option	Description
<i>open</i>	Open.
<i>wep64</i>	WEP 64-bit.
<i>wep128</i>	WEP 128-bit.
<i>wpa-personal</i>	WPA/WPA2 personal.
<i>wpa-enterprise</i>	WPA/WPA2 enterprise.
<i>wpa-only-personal</i>	WPA personal.
<i>wpa-only-enterprise</i>	WPA enterprise.
<i>wpa2-only-personal</i>	WPA2 personal.
<i>wpa2-only-enterprise</i>	WPA2 enterprise.
<i>wpa3-enterprise</i>	WPA3 enterprise with 192-bit encryption and PMF mandatory.
<i>wpa3-only-enterprise</i>	WPA3 enterprise with PMF mandatory.
<i>wpa3-enterprise-transition</i>	WPA3 enterprise with PMF optional.
<i>wpa3-sae</i>	WPA3 SAE.
<i>wpa3-sae-transition</i>	WPA3 SAE transition.
<i>owe</i>	Opportunistic wireless encryption.
<i>osen</i>	OSEN.

Parameter	Description	Type	Size	Default						
security-exempt-list	Optional security exempt list for captive portal authentication.	string	Maximum length: 35							
security-redirect-url	Optional URL for redirecting users after they pass captive portal authentication.	var-string	Maximum length: 1023							
selected-usergroups<name>	Selective user groups that are permitted to authenticate. User group name.	string	Maximum length: 79							
split-tunneling	Enable/disable split tunneling (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable split tunneling.</td></tr><tr><td>disable</td><td>Disable split tunneling.</td></tr></table>	Option	Description	enable	Enable split tunneling.	disable	Disable split tunneling.			
Option	Description									
enable	Enable split tunneling.									
disable	Disable split tunneling.									
ssid	IEEE 802.11 service set identifier (SSID) for the wireless interface. Users who wish to use the wireless network must configure their computers to access this SSID name.	string	Maximum length: 32	fortinet						
sticky-client-remove	Enable/disable sticky client remove to maintain good signal level clients in SSID (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable sticky client remove.</td></tr><tr><td>disable</td><td>Disable sticky client remove.</td></tr></table>	Option	Description	enable	Enable sticky client remove.	disable	Disable sticky client remove.			
Option	Description									
enable	Enable sticky client remove.									
disable	Disable sticky client remove.									
sticky-client-threshold-2g	Minimum signal level/threshold in dBm required for the 2G client to be serviced by the AP (-95 to -20, default = -79).	string	Maximum length: 7	-79						
sticky-client-threshold-5g	Minimum signal level/threshold in dBm required for the 5G client to be serviced by the AP (-95 to -20, default = -76).	string	Maximum length: 7	-76						
sticky-client-threshold-6g	Minimum signal level/threshold in dBm required for the 6G client to be serviced by the AP (-95 to -20, default = -76).	string	Maximum length: 7	-76						
target-wake-time	Enable/disable 802.11ax target wake time (default = enable).	option	-	enable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable 802.11ax target wake time.		
	<i>disable</i>	Disable 802.11ax target wake time.		
tkip-counter-measure	Enable/disable TKIP counter measure.	option	-	enable
	Option Description			
	<i>enable</i>	Enable TKIP counter measure.		
	<i>disable</i>	Disable TKIP counter measure.		
tunnel-echo-interval	The time interval to send echo to both primary and secondary tunnel peers (1 - 65535 sec, default = 300).	integer	Minimum value: 300 1 Maximum value: 65535	
tunnel-fallback-interval	The time interval for secondary tunnel to fall back to primary tunnel (0 - 65535 sec, default = 7200).	integer	Minimum value: 7200 0 Maximum value: 65535	
usergroup <name>	Firewall user group to be used to authenticate WiFi users. User group name.	string	Maximum length: 79	
utm-log	Enable/disable UTM logging.	option	-	enable
	Option Description			
	<i>enable</i>	Enable UTM logging.		
	<i>disable</i>	Disable UTM logging.		
utm-profile	UTM profile name.	string	Maximum length: 35	
utm-status	Enable to add one or more security profiles (AV, IPS, etc.) to the VAP.	option	-	disable
	Option Description			
	<i>enable</i>	Enable setting.		
	<i>disable</i>	Disable setting.		
vlan-auto	Enable/disable automatic management of SSID VLAN interface.	option	-	disable

Parameter	Description	Type	Size	Default										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic management of SSID VLAN interface.</td></tr><tr><td><i>disable</i></td><td>Disable automatic management of SSID VLAN interface.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic management of SSID VLAN interface.	<i>disable</i>	Disable automatic management of SSID VLAN interface.							
	Option	Description												
	<i>enable</i>	Enable automatic management of SSID VLAN interface.												
<i>disable</i>	Disable automatic management of SSID VLAN interface.													
vlan-pooling	Enable/disable VLAN pooling, to allow grouping of multiple wireless controller VLANs into VLAN pools (default = disable). When set to wtp-group, VLAN pooling occurs with VLAN assignment by wtp-group.	option	-	disable										
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>wtp-group</i></td><td>Enable VLAN pooling with VLAN assignment by wtp-group.</td></tr><tr><td><i>round-robin</i></td><td>Enable VLAN pooling with round-robin VLAN assignment.</td></tr><tr><td><i>hash</i></td><td>Enable VLAN pooling with hash-based VLAN assignment.</td></tr><tr><td><i>disable</i></td><td>Disable VLAN pooling.</td></tr></table>	Option	Description	<i>wtp-group</i>	Enable VLAN pooling with VLAN assignment by wtp-group.	<i>round-robin</i>	Enable VLAN pooling with round-robin VLAN assignment.	<i>hash</i>	Enable VLAN pooling with hash-based VLAN assignment.	<i>disable</i>	Disable VLAN pooling.			
	Option	Description												
	<i>wtp-group</i>	Enable VLAN pooling with VLAN assignment by wtp-group.												
	<i>round-robin</i>	Enable VLAN pooling with round-robin VLAN assignment.												
	<i>hash</i>	Enable VLAN pooling with hash-based VLAN assignment.												
<i>disable</i>	Disable VLAN pooling.													
vlanid	Optional VLAN ID.	integer	Minimum value: 0 Maximum value: 4094											
webfilter-profile	WebFilter profile name.	string	Maximum length: 47											

config portal-message-overrides

Parameter	Description	Type	Size	Default
auth-disclaimer-page	Override auth-disclaimer-page message with message from portal-message-overrides group.	string	Maximum length: 35	
auth-login-failed-page	Override auth-login-failed-page message with message from portal-message-overrides group.	string	Maximum length: 35	
auth-login-page	Override auth-login-page message with message from portal-message-overrides group.	string	Maximum length: 35	
auth-reject-page	Override auth-reject-page message with message from portal-message-overrides group.	string	Maximum length: 35	

config vlan-name

Parameter	Description	Type	Size	Default
name	VLAN name.	string	Maximum length: 35	
vlan-id	VLAN IDs (maximum 8 VLAN IDs).	integer	Minimum value: 0 Maximum value: 4094	

config vlan-pool

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4094	0
wtp-group	WTP group name.	string	Maximum length: 35	

config wireless-controller vap-group

Configure virtual Access Point (VAP) groups.

```
config wireless-controller vap-group
  Description: Configure virtual Access Point (VAP) groups.
  edit <name>
    set comment {var-string}
    set vaps <name1>, <name2>, ...
  next
end
```

config wireless-controller vap-group

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
name	Group Name.	string	Maximum length: 35	
vaps <name>	List of SSIDs to be included in the VAP group. VAP name.	string	Maximum length: 35	

config wireless-controller wag-profile

Configure wireless access gateway (WAG) profiles used for tunnels on AP.

```
config wireless-controller wag-profile
  Description: Configure wireless access gateway (WAG) profiles used for tunnels on AP.
  edit <name>
    set comment {var-string}
    set dhcp-ip-addr {ipv4-address}
    set ping-interval {integer}
    set ping-number {integer}
    set return-packet-timeout {integer}
    set tunnel-type [l2tpv3|gre]
    set wag-ip {ipv4-address}
    set wag-port {integer}
  next
end
```

config wireless-controller wag-profile

Parameter	Description	Type	Size	Default
comment	Comment.	var-string	Maximum length: 255	
dhcp-ip-addr	IP address of the monitoring DHCP request packet sent through the tunnel.	ipv4-address	Not Specified	0.0.0.0
name	Tunnel profile name.	string	Maximum length: 35	
ping-interval	Interval between two tunnel monitoring echo packets (1 - 65535 sec, default = 1).	integer	Minimum value: 1 Maximum value: 65535	1
ping-number	Number of the tunnel monitoring echo packets (1 - 65535, default = 5).	integer	Minimum value: 1 Maximum value: 65535	5
return-packet-timeout	Window of time for the return packets from the tunnel's remote end (1 - 65535 sec, default = 160).	integer	Minimum value: 1 Maximum value: 65535	160
tunnel-type	Tunnel type.	option	-	l2tpv3

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>l2tpv3</i>	L2TPV3 Ethernet Pseudowire.		
	<i>gre</i>	GRE Ethernet tunnel.		
wag-ip	IP Address of the wireless access gateway.	ipv4-address	Not Specified	0.0.0.0
wag-port	UDP port of the wireless access gateway.	integer	Minimum value: 0 Maximum value: 65535	1701

config wireless-controller wids-profile

Configure wireless intrusion detection system (WIDS) profiles.

```

config wireless-controller wids-profile
  Description: Configure wireless intrusion detection system (WIDS) profiles.

config wireless-controller wids-profile

Parameter	Description	Type	Size	Default
adhoc-network	Enable/disable adhoc network detection (default = disable).	option	-	disable
	Option	Description		
	enable	Enable adhoc network detection.		
	disable	Disable adhoc network detection.		
adhoc-valid-ssid	Enable/disable adhoc using valid SSID detection (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable adhoc using valid SSID detection.</td></tr><tr><td><i>disable</i></td><td>Disable adhoc using valid SSID detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable adhoc using valid SSID detection.	<i>disable</i>	Disable adhoc using valid SSID detection.			
	Option	Description								
	<i>enable</i>	Enable adhoc using valid SSID detection.								
<i>disable</i>	Disable adhoc using valid SSID detection.									
air-jack	Enable/disable AirJack detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AirJack detection.</td></tr><tr><td><i>disable</i></td><td>Disable AirJack detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable AirJack detection.	<i>disable</i>	Disable AirJack detection.			
	Option	Description								
	<i>enable</i>	Enable AirJack detection.								
<i>disable</i>	Disable AirJack detection.									
ap-auto-suppress	Enable/disable on-wire rogue AP auto-suppression (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable on-wire rogue AP auto-suppression.</td></tr><tr><td><i>disable</i></td><td>Disable on-wire rogue AP auto-suppression.</td></tr></table>	Option	Description	<i>enable</i>	Enable on-wire rogue AP auto-suppression.	<i>disable</i>	Disable on-wire rogue AP auto-suppression.			
	Option	Description								
	<i>enable</i>	Enable on-wire rogue AP auto-suppression.								
<i>disable</i>	Disable on-wire rogue AP auto-suppression.									
ap-bgscan-disable-schedules <name>	Firewall schedules for turning off FortiAP radio background scan. Background scan will be disabled when at least one of the schedules is valid. Separate multiple schedule names with a space. Schedule name.	string	Maximum length: 35							
ap-bgscan-duration	Listen time on scanning a channel (10 - 1000 msec, default = 30).	integer	Minimum value: 10 Maximum value: 1000	30						
ap-bgscan-idle	Wait time for channel inactivity before scanning this channel (0 - 1000 msec, default = 20).	integer	Minimum value: 0 Maximum value: 1000	20						
ap-bgscan-intv	Period between successive channel scans (1 - 600 sec, default = 3).	integer	Minimum value: 1 Maximum value: 600	3						
ap-bgscan-period	Period between background scans (10 - 3600 sec, default = 600).	integer	Minimum value: 10 Maximum value: 3600	600						

Parameter	Description	Type	Size	Default						
ap-bgscan-report-intv	Period between background scan reports (15 - 600 sec, default = 30).	integer	Minimum value: 15 Maximum value: 600	30						
ap-fgscan-report-intv	Period between foreground scan reports (15 - 600 sec, default = 15).	integer	Minimum value: 15 Maximum value: 600	15						
ap-impersonation	Enable/disable AP impersonation detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AP impersonation detection.</td></tr><tr><td><i>disable</i></td><td>Disable AP impersonation detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable AP impersonation detection.	<i>disable</i>	Disable AP impersonation detection.			
Option	Description									
<i>enable</i>	Enable AP impersonation detection.									
<i>disable</i>	Disable AP impersonation detection.									
ap-scan	Enable/disable rogue AP detection.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable rogue AP detection.</td></tr><tr><td><i>enable</i></td><td>Enable rogue AP detection.</td></tr></table>	Option	Description	<i>disable</i>	Disable rogue AP detection.	<i>enable</i>	Enable rogue AP detection.			
Option	Description									
<i>disable</i>	Disable rogue AP detection.									
<i>enable</i>	Enable rogue AP detection.									
ap-scan-channel-list-2G-5G <chan>	Selected ap scan channel list for 2.4G and 5G bands. Channel number.	string	Maximum length: 3							
ap-scan-channel-list-6G <chan>	Selected ap scan channel list for 6G band. Channel 6g number.	string	Maximum length: 3							
ap-scan-passive	Enable/disable passive scanning. Enable means do not send probe request on any channels (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Passive scanning on all channels.</td></tr><tr><td><i>disable</i></td><td>Passive scanning only on DFS channels.</td></tr></table>	Option	Description	<i>enable</i>	Passive scanning on all channels.	<i>disable</i>	Passive scanning only on DFS channels.			
Option	Description									
<i>enable</i>	Passive scanning on all channels.									
<i>disable</i>	Passive scanning only on DFS channels.									
ap-scan-threshold	Minimum signal level/threshold in dBm required for the AP to report detected rogue AP (-95 to -20, default = -90).	string	Maximum length: 7	-90						
ap-spoofing	Enable/disable AP spoofing detection (default = disable).	option	-	disable						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable AP spoofing detection.		
	<i>disable</i>	Disable AP spoofing detection.		
asleep-attack	Enable/disable asleep attack detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable asleep attack detection.		
	<i>disable</i>	Disable asleep attack detection.		
assoc-flood-thresh	The threshold value for association frame flooding.	integer	Minimum value: 1 Maximum value: 100	30
assoc-flood-time	Number of seconds after which a station is considered not connected.	integer	Minimum value: 5 Maximum value: 120	10
assoc-frame-flood	Enable/disable association frame flooding detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable association frame flooding detection.		
	<i>disable</i>	Disable association frame flooding detection.		
auth-flood-thresh	The threshold value for authentication frame flooding.	integer	Minimum value: 1 Maximum value: 100	30
auth-flood-time	Number of seconds after which a station is considered not connected.	integer	Minimum value: 5 Maximum value: 120	10
auth-frame-flood	Enable/disable authentication frame flooding detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable authentication frame flooding detection.		
	<i>disable</i>	Disable authentication frame flooding detection.		

Parameter	Description	Type	Size	Default
bcn-flood	Enable/disable bcn flood detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable bcn flood detection.		
	<i>disable</i>	Disable bcn flood detection.		
bcn-flood-thresh	The threshold value for bcn flood.	integer	Minimum value: 1 Maximum value: 65100	15
bcn-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	1
beacon-wrong-channel	Enable/disable beacon wrong channel detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable beacon wrong channel detection.		
	<i>disable</i>	Disable beacon wrong channel detection.		
block_ack-flood	Enable/disable block_ack flood detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable block_ack flood detection.		
	<i>disable</i>	Disable block_ack flood detection.		
block_ack-flood-thresh	The threshold value for block_ack flood.	integer	Minimum value: 1 Maximum value: 65100	50
block_ack-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	1
chan-based-mitm	Enable/disable channel based mitm detection (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable channel based mitm detection.</td></tr><tr><td><i>disable</i></td><td>Disable channel based mitm detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable channel based mitm detection.	<i>disable</i>	Disable channel based mitm detection.			
	Option	Description								
	<i>enable</i>	Enable channel based mitm detection.								
<i>disable</i>	Disable channel based mitm detection.									
client-flood	Enable/disable client flood detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable client flood detection.</td></tr><tr><td><i>disable</i></td><td>Disable client flood detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable client flood detection.	<i>disable</i>	Disable client flood detection.			
	Option	Description								
	<i>enable</i>	Enable client flood detection.								
<i>disable</i>	Disable client flood detection.									
client-flood-thresh	The threshold value for client flood.	integer	Minimum value: 1 Maximum value: 65100	30						
client-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	10						
comment	Comment.	string	Maximum length: 63							
cts-flood	Enable/disable cts flood detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable cts flood detection.</td></tr><tr><td><i>disable</i></td><td>Disable cts flood detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable cts flood detection.	<i>disable</i>	Disable cts flood detection.			
	Option	Description								
	<i>enable</i>	Enable cts flood detection.								
<i>disable</i>	Disable cts flood detection.									
cts-flood-thresh	The threshold value for cts flood.	integer	Minimum value: 1 Maximum value: 65100	30						
cts-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	10						
death-broadcast	Enable/disable broadcasting de-authentication detection (default = disable).	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable broadcast de-authentication detection.</td></tr><tr><td><i>disable</i></td><td>Disable broadcast de-authentication detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable broadcast de-authentication detection.	<i>disable</i>	Disable broadcast de-authentication detection.			
	Option	Description								
	<i>enable</i>	Enable broadcast de-authentication detection.								
<i>disable</i>	Disable broadcast de-authentication detection.									
deauth-unknown-src-thresh	Threshold value per second to deauth unknown src for DoS attack (0: no limit).	integer	Minimum value: 0 Maximum value: 65535	10						
disassoc-broadcast	Enable/disable broadcast dis-association detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable broadcast dis-association detection.</td></tr><tr><td><i>disable</i></td><td>Disable broadcast dis-association detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable broadcast dis-association detection.	<i>disable</i>	Disable broadcast dis-association detection.			
	Option	Description								
	<i>enable</i>	Enable broadcast dis-association detection.								
<i>disable</i>	Disable broadcast dis-association detection.									
disconnect-station	Enable/disable disconnect station detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable disconnect station detection.</td></tr><tr><td><i>disable</i></td><td>Disable disconnect station detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable disconnect station detection.	<i>disable</i>	Disable disconnect station detection.			
	Option	Description								
	<i>enable</i>	Enable disconnect station detection.								
<i>disable</i>	Disable disconnect station detection.									
eapol-fail-flood	Enable/disable EAPOL-Failure flooding (to AP) detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAPOL-Failure flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable EAPOL-Failure flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable EAPOL-Failure flooding detection.	<i>disable</i>	Disable EAPOL-Failure flooding detection.			
	Option	Description								
	<i>enable</i>	Enable EAPOL-Failure flooding detection.								
<i>disable</i>	Disable EAPOL-Failure flooding detection.									
eapol-fail-intv	The detection interval for EAPOL-Failure flooding (1 - 3600 sec).	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-fail-thresh	The threshold value for EAPOL-Failure flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
eapol-key-overflow	Enable/disable overflow EAPOL key detection (default = disable).	option	-	disable						

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable overflow EAPOL key detection.</td></tr><tr><td><i>disable</i></td><td>Disable overflow EAPOL key detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable overflow EAPOL key detection.	<i>disable</i>	Disable overflow EAPOL key detection.			
	Option	Description								
	<i>enable</i>	Enable overflow EAPOL key detection.								
<i>disable</i>	Disable overflow EAPOL key detection.									
eapol-logoff-flood	Enable/disable EAPOL-Logoff flooding (to AP) detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable EAPOL-Logoff flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable EAPOL-Logoff flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable EAPOL-Logoff flooding detection.	<i>disable</i>	Disable EAPOL-Logoff flooding detection.			
	Option	Description								
	<i>enable</i>	Enable EAPOL-Logoff flooding detection.								
<i>disable</i>	Disable EAPOL-Logoff flooding detection.									
eapol-logoff-intv	The detection interval for EAPOL-Logoff flooding (1 - 3600 sec).	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-logoff-thresh	The threshold value for EAPOL-Logoff flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
eapol-pre-fail-flood	Enable/disable premature EAPOL-Failure flooding (to STA) detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable premature EAPOL-Failure flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable premature EAPOL-Failure flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable premature EAPOL-Failure flooding detection.	<i>disable</i>	Disable premature EAPOL-Failure flooding detection.			
	Option	Description								
	<i>enable</i>	Enable premature EAPOL-Failure flooding detection.								
<i>disable</i>	Disable premature EAPOL-Failure flooding detection.									
eapol-pre-fail-intv	The detection interval for premature EAPOL-Failure flooding (1 - 3600 sec).	integer	Minimum value: 1 Maximum value: 3600	1						
eapol-pre-fail-thresh	The threshold value for premature EAPOL-Failure flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10						
eapol-pre-succ-flood	Enable/disable premature EAPOL-Success flooding (to STA) detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable premature EAPOL-Success flooding detection.</td></tr><tr><td><i>disable</i></td><td>Disable premature EAPOL-Success flooding detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable premature EAPOL-Success flooding detection.	<i>disable</i>	Disable premature EAPOL-Success flooding detection.			
	Option	Description								
	<i>enable</i>	Enable premature EAPOL-Success flooding detection.								
<i>disable</i>	Disable premature EAPOL-Success flooding detection.									

Parameter	Description	Type	Size	Default
eapol-pre-succ-intv	The detection interval for premature EAPOL-Success flooding (1 - 3600 sec).	integer	Minimum value: 1 Maximum value: 3600	1
eapol-pre-succ-thresh	The threshold value for premature EAPOL-Success flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10
eapol-start-flood	Enable/disable EAPOL-Start flooding (to AP) detection (default = disable).	option	-	disable
	Option	Description		
	enable	Enable EAPOL-Start flooding detection.		
	disable	Disable EAPOL-Start flooding detection.		
eapol-start-intv	The detection interval for EAPOL-Start flooding (1 - 3600 sec).	integer	Minimum value: 1 Maximum value: 3600	1
eapol-start-thresh	The threshold value for EAPOL-Start flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10
eapol-succ-flood	Enable/disable EAPOL-Success flooding (to AP) detection (default = disable).	option	-	disable
	Option	Description		
	enable	Enable EAPOL-Success flooding detection.		
	disable	Disable EAPOL-Success flooding detection.		
eapol-succ-intv	The detection interval for EAPOL-Success flooding (1 - 3600 sec).	integer	Minimum value: 1 Maximum value: 3600	1
eapol-succ-thresh	The threshold value for EAPOL-Success flooding in specified interval.	integer	Minimum value: 2 Maximum value: 100	10
fata-jack	Enable/disable FATA-Jack detection (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable FATA-Jack detection.		
	<i>disable</i>	Disable FATA-Jack detection.		
fuzzed-beacon	Enable/disable fuzzed beacon detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable fuzzed beacon detection.		
	<i>disable</i>	Disable fuzzed beacon detection.		
fuzzed-probe-request	Enable/disable fuzzed probe request detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable fuzzed probe request detection.		
	<i>disable</i>	Disable fuzzed probe request detection.		
fuzzed-probe-response	Enable/disable fuzzed probe response detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable fuzzed probe response detection.		
	<i>disable</i>	Disable fuzzed probe response detection.		
hotspotter-attack	Enable/disable hotspotter attack detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable hotspotter attack detection.		
	<i>disable</i>	Disable hotspotter attack detection.		
ht-40mhz-intolerance	Enable/disable HT 40 MHz intolerance detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable HT 40 MHz intolerance detection.		
	<i>disable</i>	Disable HT 40 MHz intolerance detection.		
ht-greenfield	Enable/disable HT greenfield detection (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable HT greenfield detection.</td></tr><tr><td><i>disable</i></td><td>Disable HT greenfield detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable HT greenfield detection.	<i>disable</i>	Disable HT greenfield detection.			
	Option	Description								
	<i>enable</i>	Enable HT greenfield detection.								
<i>disable</i>	Disable HT greenfield detection.									
invalid-addr-combination	Enable/disable invalid address combination detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable invalid address combination detection.</td></tr><tr><td><i>disable</i></td><td>Disable invalid address combination detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable invalid address combination detection.	<i>disable</i>	Disable invalid address combination detection.			
	Option	Description								
	<i>enable</i>	Enable invalid address combination detection.								
<i>disable</i>	Disable invalid address combination detection.									
invalid-mac-oui	Enable/disable invalid MAC OUI detection.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable invalid MAC OUI detection.</td></tr><tr><td><i>disable</i></td><td>Disable invalid MAC OUI detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable invalid MAC OUI detection.	<i>disable</i>	Disable invalid MAC OUI detection.			
	Option	Description								
	<i>enable</i>	Enable invalid MAC OUI detection.								
<i>disable</i>	Disable invalid MAC OUI detection.									
long-duration-attack	Enable/disable long duration attack detection based on user configured threshold (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable long duration attack detection.</td></tr><tr><td><i>disable</i></td><td>Disable long duration attack detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable long duration attack detection.	<i>disable</i>	Disable long duration attack detection.			
	Option	Description								
	<i>enable</i>	Enable long duration attack detection.								
<i>disable</i>	Disable long duration attack detection.									
long-duration-thresh	Threshold value for long duration attack detection (1000 - 32767 usec, default = 8200).	integer	Minimum value: 1000 Maximum value: 32767	8200						
malformed-association	Enable/disable malformed association request detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable malformed association request detection.</td></tr><tr><td><i>disable</i></td><td>Disable malformed association request detection.</td></tr></table>	Option	Description	<i>enable</i>	Enable malformed association request detection.	<i>disable</i>	Disable malformed association request detection.			
	Option	Description								
	<i>enable</i>	Enable malformed association request detection.								
<i>disable</i>	Disable malformed association request detection.									
malformed-auth	Enable/disable malformed auth frame detection (default = disable).	option	-	disable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable malformed auth frame detection.		
	<i>disable</i>	Disable malformed auth frame detection.		
malformed-ht-ie	Enable/disable malformed HT IE detection (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>	Enable malformed HT IE detection.		
	<i>disable</i>	Disable malformed HT IE detection.		
name	WIDS profile name.	string	Maximum length: 35	
netstumbler	Enable/disable netstumbler detection (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>	Enable netstumbler detection.		
	<i>disable</i>	Disable netstumbler detection.		
netstumbler-thresh	The threshold value for netstumbler.	integer	Minimum value: 1 Maximum value: 65100	5
netstumbler-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	30
null-ssid-probe-resp	Enable/disable null SSID probe response detection (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>	Enable null SSID probe resp detection.		
	<i>disable</i>	Disable null SSID probe resp detection.		
omerta-attack	Enable/disable omerta attack detection (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable omerta attack detection.		
	<i>disable</i>	Disable omerta attack detection.		
overflow-ie	Enable/disable overflow IE detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable overflow IE detection.		
	<i>disable</i>	Disable overflow IE detection.		
probe-flood	Enable/disable probe flood detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable probe flood detection.		
	<i>disable</i>	Disable probe flood detection.		
probe-flood-thresh	The threshold value for probe flood.	integer	Minimum value: 1 Maximum value: 65100	30
probe-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	1
pspoll-flood	Enable/disable pspoll flood detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable pspoll flood detection.		
	<i>disable</i>	Disable pspoll flood detection.		
pspoll-flood-thresh	The threshold value for pspoll flood.	integer	Minimum value: 1 Maximum value: 65100	30

Parameter	Description	Type	Size	Default						
pspoll-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	1						
pwsave-dos-attack	Enable/disable power save DOS attack detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable power save DOS attack detection.</td></tr><tr><td>disable</td><td>Disable power save DOS attack detection.</td></tr></table>	Option	Description	enable	Enable power save DOS attack detection.	disable	Disable power save DOS attack detection.			
Option	Description									
enable	Enable power save DOS attack detection.									
disable	Disable power save DOS attack detection.									
reassoc-flood	Enable/disable reassociation flood detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable reassociation flood detection.</td></tr><tr><td>disable</td><td>Disable reassociation flood detection.</td></tr></table>	Option	Description	enable	Enable reassociation flood detection.	disable	Disable reassociation flood detection.			
Option	Description									
enable	Enable reassociation flood detection.									
disable	Disable reassociation flood detection.									
reassoc-flood-thresh	The threshold value for reassociation flood.	integer	Minimum value: 1 Maximum value: 65100	30						
reassoc-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	10						
risky-encryption	Enable/disable Risky Encryption detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable Risky Encryption detection.</td></tr><tr><td>disable</td><td>Disable Risky Encryption detection.</td></tr></table>	Option	Description	enable	Enable Risky Encryption detection.	disable	Disable Risky Encryption detection.			
Option	Description									
enable	Enable Risky Encryption detection.									
disable	Disable Risky Encryption detection.									
rts-flood	Enable/disable rts flood detection (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable rts flood detection.</td></tr><tr><td>disable</td><td>Disable rts flood detection.</td></tr></table>	Option	Description	enable	Enable rts flood detection.	disable	Disable rts flood detection.			
Option	Description									
enable	Enable rts flood detection.									
disable	Disable rts flood detection.									

Parameter	Description	Type	Size	Default
rts-flood-thresh	The threshold value for rts flood.	integer	Minimum value: 1 Maximum value: 65100	30
rts-flood-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	10
sensor-mode	Scan nearby WiFi stations (default = disable).	option	-	disable
	Option Description			
	<i>disable</i>	Disable the scan.		
	<i>foreign</i>	Enable the scan and monitor foreign channels. Foreign channels are all other available channels than the current operating channel.		
	<i>both</i>	Enable the scan and monitor both foreign and home channels. Select this option to monitor all WiFi channels.		
spoofed-deauth	Enable/disable spoofed de-authentication attack detection (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>	Enable spoofed de-authentication attack detection.		
	<i>disable</i>	Disable spoofed de-authentication attack detection.		
unencrypted-valid	Enable/disable unencrypted valid detection (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>	Enable unencrypted valid detection.		
	<i>disable</i>	Disable unencrypted valid detection.		
valid-client-misassociation	Enable/disable valid client misassociation detection (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>	Enable valid client misassociation detection.		
	<i>disable</i>	Disable valid client misassociation detection.		
valid-ssid-misuse	Enable/disable valid SSID misuse detection (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable valid SSID misuse detection.		
	<i>disable</i>	Disable valid SSID misuse detection.		
weak-wep-iv	Enable/disable weak WEP IV (Initialization Vector) detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable weak WEP IV detection.		
	<i>disable</i>	Disable weak WEP IV detection.		
wellenreiter	Enable/disable wellenreiter detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable wellenreiter detection.		
	<i>disable</i>	Disable wellenreiter detection.		
wellenreiter-thresh	The threshold value for wellenreiter.	integer	Minimum value: 1 Maximum value: 65100	5
wellenreiter-time	Detection Window Period.	integer	Minimum value: 1 Maximum value: 120	30
windows-bridge	Enable/disable windows bridge detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable windows bridge detection.		
	<i>disable</i>	Disable windows bridge detection.		
wireless-bridge	Enable/disable wireless bridge detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable wireless bridge detection.		
	<i>disable</i>	Disable wireless bridge detection.		

Parameter	Description	Type	Size	Default
wpa-ft-attack	Enable/disable WPA FT attack detection (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable WPA FT attack detection.		
	<i>disable</i>	Disable WPA FT attack detection.		

config wireless-controller wtp

Configure Wireless Termination Points (WTPs), that is, FortiAPs or APs to be managed by FortiGate.

```
config wireless-controller wtp
  Description: Configure Wireless Termination Points (WTPs), that is, FortiAPs or APs to be
  managed by FortiGate.

ble-major-id	Override BLE Major ID.	integer	Minimum value: 0 0 Maximum value: 65535									
ble-minor-id	Override BLE Minor ID.	integer	Minimum value: 0 0 Maximum value: 65535									

Parameter	Description	Type	Size	Default						
bonjour-profile	Bonjour profile name.	string	Maximum length: 35							
comment	Comment.	var-string	Maximum length: 255							
coordinate-latitude	WTP latitude coordinate.	string	Maximum length: 19							
coordinate-longitude	WTP longitude coordinate.	string	Maximum length: 19							
firmware-provision	Firmware version to provision to this FortiAP on bootup (major.minor.build, i.e. 6.2.1234).	string	Maximum length: 35							
firmware-provision-latest	Enable/disable one-time automatic provisioning of the latest firmware version.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Do not automatically provision the latest available firmware.</td></tr><tr><td>once</td><td>Automatically attempt a one-time upgrade to the latest available firmware version.</td></tr></table>				Option	Description	disable	Do not automatically provision the latest available firmware.	once	Automatically attempt a one-time upgrade to the latest available firmware version.
Option	Description									
disable	Do not automatically provision the latest available firmware.									
once	Automatically attempt a one-time upgrade to the latest available firmware version.									
image-download	Enable/disable WTP image download.	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable WTP image download at join time.</td></tr><tr><td>disable</td><td>Disable WTP image download at join time.</td></tr></table>				Option	Description	enable	Enable WTP image download at join time.	disable	Disable WTP image download at join time.
Option	Description									
enable	Enable WTP image download at join time.									
disable	Disable WTP image download at join time.									
index	Index (0 - 4294967295). Read-only.	integer	Minimum value: 0 0 Maximum value: 4294967295							
ip-fragment-preventing	Method(s) by which IP fragmentation is prevented for control and data packets through CAPWAP tunnel (default = tcp-mss-adjust).	option	-	tcp-mss-adjust						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tcp-mss-adjust</td><td>TCP maximum segment size adjustment.</td></tr><tr><td>icmp-unreachable</td><td>Drop packet and send ICMP Destination Unreachable</td></tr></table>				Option	Description	tcp-mss-adjust	TCP maximum segment size adjustment.	icmp-unreachable	Drop packet and send ICMP Destination Unreachable
Option	Description									
tcp-mss-adjust	TCP maximum segment size adjustment.									
icmp-unreachable	Drop packet and send ICMP Destination Unreachable									

Parameter	Description	Type	Size	Default								
led-state	Enable to allow the FortiAPs LEDs to light. Disable to keep the LEDs off. You may want to keep the LEDs off so they are not distracting in low light areas etc.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Allow the LEDs on this FortiAP to light.</td></tr><tr><td>disable</td><td>Keep the LEDs on this FortiAP off.</td></tr></table>	Option	Description	enable	Allow the LEDs on this FortiAP to light.	disable	Keep the LEDs on this FortiAP off.					
Option	Description											
enable	Allow the LEDs on this FortiAP to light.											
disable	Keep the LEDs on this FortiAP off.											
location	Field for describing the physical location of the WTP, AP or FortiAP.	string	Maximum length: 35									
login-passwd	Set the managed WTP, FortiAP, or AP's administrator password.	password	Not Specified									
login-passwd-change	Change or reset the administrator password of a managed WTP, FortiAP or AP (yes, default, or no, default = no).	option	-	no								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>yes</td><td>Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.</td></tr><tr><td>default</td><td>Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.</td></tr><tr><td>no</td><td>Do not change the managed WTP, FortiAP or AP's administrator password.</td></tr></table>	Option	Description	yes	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.	default	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.	no	Do not change the managed WTP, FortiAP or AP's administrator password.			
Option	Description											
yes	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.											
default	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.											
no	Do not change the managed WTP, FortiAP or AP's administrator password.											
mesh-bridge-enable	Enable/disable mesh Ethernet bridge when WTP is configured as a mesh branch/leaf AP.	option	-	default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Use mesh Ethernet bridge local setting on the WTP.</td></tr><tr><td>enable</td><td>Turn on mesh Ethernet bridge on the WTP.</td></tr><tr><td>disable</td><td>Turn off mesh Ethernet bridge on the WTP.</td></tr></table>	Option	Description	default	Use mesh Ethernet bridge local setting on the WTP.	enable	Turn on mesh Ethernet bridge on the WTP.	disable	Turn off mesh Ethernet bridge on the WTP.			
Option	Description											
default	Use mesh Ethernet bridge local setting on the WTP.											
enable	Turn on mesh Ethernet bridge on the WTP.											
disable	Turn off mesh Ethernet bridge on the WTP.											
name	WTP, AP or FortiAP configuration name.	string	Maximum length: 35									
override-allowaccess	Enable to override the WTP profile management access configuration.	option	-	disable								

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Override the WTP profile management access configuration.		
	<i>disable</i>	Use the WTP profile management access configuration.		
override-ip-fragment	Enable/disable overriding the WTP profile IP fragment prevention setting.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the WTP profile IP fragment prevention setting.		
	<i>disable</i>	Use the WTP profile IP fragment prevention setting.		
override-lan	Enable to override the WTP profile LAN port setting.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the WTP profile LAN port setting.		
	<i>disable</i>	Use the WTP profile LAN port setting.		
override-led-state	Enable to override the profile LED state setting for this FortiAP. You must enable this option to use the led-state command to turn off the FortiAP's LEDs.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the WTP profile LED state.		
	<i>disable</i>	Use the WTP profile LED state.		
override-login-passwd-change	Enable to override the WTP profile login-password (administrator password) setting.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the WTP profile login-password (administrator password) setting.		
	<i>disable</i>	Use the the WTP profile login-password (administrator password) setting.		
override-split-tunnel	Enable/disable overriding the WTP profile split tunneling setting.	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Override the WTP profile split tunneling setting.		
	<i>disable</i>	Use the WTP profile split tunneling setting.		
override-wan-port-mode	Enable/disable overriding the wan-port-mode in the WTP profile.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the WTP profile wan-port-mode.		
	<i>disable</i>	Use the wan-port-mode in the WTP profile.		
purdue-level	Purdue Level of this WTP.	option	-	3
	Option	Description		
	1	Level 1 - Basic Control		
	1.5	Level 1.5		
	2	Level 2 - Area Supervisory Control		
	2.5	Level 2.5		
	3	Level 3 - Operations & Control		
	3.5	Level 3.5		
	4	Level 4 - Business Planning & Logistics		
	5	Level 5 - Enterprise Network		
5.5	Level 5.5			
region	Region name WTP is associated with.	string	Maximum length: 35	
region-x	Relative horizontal region coordinate (between 0 and 1).	string	Maximum length: 15	0
region-y	Relative vertical region coordinate (between 0 and 1).	string	Maximum length: 15	0
split-tunneling-acl-local-ap-subnet	Enable/disable automatically adding local subnetwork of FortiAP to split-tunneling ACL (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.		
	<i>disable</i>	Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.		
split-tunneling-acl-path	Split tunneling ACL path is local/tunnel.	option	-	local
	Option	Description		
	<i>tunnel</i>	Split tunneling ACL list traffic will be tunnel.		
	<i>local</i>	Split tunneling ACL list traffic will be local NATed.		
tun-mtu-downlink	The MTU of downlink CAPWAP tunnel (576 - 1500 bytes or 0; 0 means the local MTU of FortiAP; default = 0).	integer	Minimum value: 576 Maximum value: 1500	0
tun-mtu-uplink	The maximum transmission unit (MTU) of uplink CAPWAP tunnel (576 - 1500 bytes or 0; 0 means the local MTU of FortiAP; default = 0).	integer	Minimum value: 576 Maximum value: 1500	0
uuid	Universally Unique Identifier (UUID; automatically assigned but can be manually reset).	uuid	Not Specified	00000000-0000-0000-0000-000000000000
wan-port-mode	Enable/disable using the FortiAP WAN port as a LAN port.	option	-	wan-only
	Option	Description		
	<i>wan-lan</i>	Use the FortiAP WAN port as a LAN port.		
	<i>wan-only</i>	Do not use the WAN port as a LAN port.		
wtp-id	WTP ID.	string	Maximum length: 35	
wtp-profile	WTP profile name to apply to this WTP, AP or FortiAP.	string	Maximum length: 35	

config lan

Parameter	Description	Type	Size	Default
port-esl-mode	ESL port mode.	option	-	offline
	Option	Description		
	offline	Offline.		
	nat-to-wan	NAT WTP ESL port to WTP WAN port.		
	bridge-to-wan	Bridge WTP ESL port to WTP WAN port.		
	bridge-to-ssid	Bridge WTP ESL port to SSID.		
port-esl-ssid	Bridge ESL port to SSID.	string	Maximum length: 15	
port-mode	LAN port mode.	option	-	offline
	Option	Description		
	offline	Offline.		
	nat-to-wan	NAT WTP LAN port to WTP WAN port.		
	bridge-to-wan	Bridge WTP LAN port to WTP WAN port.		
	bridge-to-ssid	Bridge WTP LAN port to SSID.		
port-ssid	Bridge LAN port to SSID.	string	Maximum length: 15	
port1-mode	LAN port 1 mode.	option	-	offline
	Option	Description		
	offline	Offline.		
	nat-to-wan	NAT WTP LAN port to WTP WAN port.		
	bridge-to-wan	Bridge WTP LAN port to WTP WAN port.		
	bridge-to-ssid	Bridge WTP LAN port to SSID.		
port1-ssid	Bridge LAN port 1 to SSID.	string	Maximum length: 15	
port2-mode	LAN port 2 mode.	option	-	offline
	Option	Description		
	offline	Offline.		
	nat-to-wan	NAT WTP LAN port to WTP WAN port.

channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3																													
drma-manual-mode	Radio mode to be used for DRMA manual mode (default = ncf).	option	-	ncf																												

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>ap</i>	Set the radio to AP mode.		
	<i>monitor</i>	Set the radio to monitor mode		
	<i>ncf</i>	Select and set the radio mode based on NCF score.		
	<i>ncf-peek</i>	Select the radio mode based on NCF score, but do not apply.		
override-band	Enable to override the WTP profile band setting.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the WTP profile band setting.		
	<i>disable</i>	Use the WTP profile band setting.		
override-channel	Enable to override WTP profile channel settings.	option	-	disable
	Option	Description		
	<i>enable</i>	Override WTP profile channel settings.		
	<i>disable</i>	Use WTP profile channel settings.		
override-tpower	Enable to override the WTP profile power level configuration.	option	-	disable
	Option	Description		
	<i>enable</i>	Override the WTP profile power level configuration.		
	<i>disable</i>	Use the WTP profile power level configuration.		
override-vaps	Enable to override WTP profile Virtual Access Point (VAP) settings.	option	-	disable
	Option	Description		
	<i>enable</i>	Override WTP profile VAP settings.		
	<i>disable</i>	Use WTP profile VAP settings.		
power-level	Radio EIRP power level as a percentage of the maximum EIRP power (0 - 100, default = 100).	integer	Minimum value: 0 Maximum value: 100	100

Parameter	Description	Type	Size	Default								
power-mode	Set radio effective isotropic radiated power (EIRP) in dBm or by a percentage of the maximum EIRP (default = percentage). This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.					
Option	Description											
<i>dBm</i>	Set radio EIRP power in dBm.											
<i>percentage</i>	Set radio EIRP power by percentage.											
power-value	Radio EIRP power in dBm (1 - 33, default = 27).	integer	Minimum value: 1 Maximum value: 33	27								
vap-all	Configure method for assigning SSIDs to this FortiAP (default = automatically assign tunnel SSIDs).	option	-	tunnel

drma-manual-mode	Radio mode to be used for DRMA manual mode (default = ncf).	option	-	ncf
	Option	Description		
	<i>ap</i>	Set the radio to AP mode.		
	<i>monitor</i>	Set the radio to monitor mode		

Parameter	Description	Type	Size	Default
	Option Description			
	<i>ncf</i>	Select and set the radio mode based on NCF score.		
	<i>ncf-peek</i>	Select the radio mode based on NCF score, but do not apply.		
override-band	Enable to override the WTP profile band setting.	option	-	disable
	Option Description			
	<i>enable</i>	Override the WTP profile band setting.		
	<i>disable</i>	Use the WTP profile band setting.		
override-channel	Enable to override WTP profile channel settings.	option	-	disable
	Option Description			
	<i>enable</i>	Override WTP profile channel settings.		
	<i>disable</i>	Use WTP profile channel settings.		
override-txpower	Enable to override the WTP profile power level configuration.	option	-	disable
	Option Description			
	<i>enable</i>	Override the WTP profile power level configuration.		
	<i>disable</i>	Use the WTP profile power level configuration.		
override-vaps	Enable to override WTP profile Virtual Access Point (VAP) settings.	option	-	disable
	Option Description			
	<i>enable</i>	Override WTP profile VAP settings.		
	<i>disable</i>	Use WTP profile VAP settings.		
power-level	Radio EIRP power level as a percentage of the maximum EIRP power (0 - 100, default = 100).	integer	Minimum value: 0 Maximum value: 100	100

Parameter	Description	Type	Size	Default								
power-mode	Set radio effective isotropic radiated power (EIRP) in dBm or by a percentage of the maximum EIRP (default = percentage). This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.					
Option	Description											
<i>dBm</i>	Set radio EIRP power in dBm.											
<i>percentage</i>	Set radio EIRP power by percentage.											
power-value	Radio EIRP power in dBm (1 - 33, default = 27).	integer	Minimum value: 1 Maximum value: 33	27								
vap-all	Configure method for assigning SSIDs to this FortiAP (default = automatically assign tunnel SSIDs).	option	-	tunnel								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tunnel</i></td><td>Automatically select tunnel SSIDs.</td></tr><tr><td><i>bridge</i></td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td><i>manual</i></td><td>Manually select SSIDs.</td></tr></table>	Option	Description	<i>tunnel</i>	Automatically select tunnel SSIDs.	<i>bridge</i>	Automatically select local-bridging SSIDs.	<i>manual</i>	Manually select SSIDs.			
Option	Description											
<i>tunnel</i>	Automatically select tunnel SSIDs.											
<i>bridge</i>	Automatically select local-bridging SSIDs.											
<i>manual</i>	Manually select SSIDs.											
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35									

config radio-3

Parameter	Description	Type	Size	Default				
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	17				
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference (default = enable).	option	-	disable				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic transmit power adjustment.</td></tr></table>				Option	Description	<i>enable</i>	Enable automatic transmit power adjustment.
Option	Description							
<i>enable</i>	Enable automatic transmit power adjustment.							

Parameter	Description	Type	Size	Default																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	<i>disable</i>	Disable automatic transmit power adjustment.																											
Option	Description																															
<i>disable</i>	Disable automatic transmit power adjustment.																															
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 0 Maximum value: 4294967295	10																												
auto-power-target	Target of automatic transmit power adjustment in dBm (-95 to -20, default = -70).	string	Maximum length: 7	-70

ap-handoff	Enable/disable AP handoff of clients to other APs (default = disable).	option	-	disable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable AP handoff.		
	<i>disable</i>	Disable AP handoff.		
apcfg-profile	AP local configuration profile name.	string	Maximum length: 35	
ble-profile	Bluetooth Low Energy profile name.	string	Maximum length: 35	
bonjour-profile	Bonjour profile name.	string	Maximum length: 35	
comment	Comment.	var-string	Maximum length: 255	
console-login	Enable/disable FortiAP console login access (default = enable).	option	-	enable
	Option	Description		
	<i>enable</i>	Enable FAP console login access.		
	<i>disable</i>	Disable FAP console login access.		
control-message-offload	Enable/disable CAPWAP control message data channel offload.	option	-	ebp-frame aeroscout-tag ap-list sta-list sta-cap-list stats aeroscout-mu sta-health spectral-analysis
	Option	Description		
	<i>ebp-frame</i>	Ekahau blink protocol (EBP) frames.		
	<i>aeroscout-tag</i>	AeroScout tag.		
	<i>ap-list</i>	Rogue AP list.		
	<i>sta-list</i>	Rogue STA list.		
	<i>sta-cap-list</i>	STA capability list.		
	<i>stats</i>	WTP, radio, VAP, and STA statistics.		
	<i>aeroscout-mu</i>	AeroScout Mobile Unit (MU) report.		
	<i>sta-health</i>	STA health log.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>spectral-analysis</i>	Spectral analysis report.		
dtls-in-kernel	Enable/disable data channel DTLS in kernel.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable data channel DTLS in kernel.		
	<i>disable</i>	Disable data channel DTLS in kernel.		
dtls-policy	WTP data channel DTLS policy (default = clear-text).	option	-	clear-text
	Option	Description		
	<i>clear-text</i>	Clear Text Data Channel.		
	<i>dtls-enabled</i>	DTLS Enabled Data Channel.		
	<i>ipsec-vpn</i>	IPsec VPN Data Channel.		
	<i>ipsec-sn-vpn</i>	IPsec VPN Data Channel with FortiAP's SN in the first IKE messages.		
energy-efficient-ethernet	Enable/disable use of energy efficient Ethernet on WTP.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable use of energy efficient Ethernet on WTP.		
	<i>disable</i>	Disable use of energy efficient Ethernet on WTP.		
ext-info-enable	Enable/disable station/VAP/radio extension information.	option	-	enable
	Option	Description		
	<i>enable</i>	Enable station/VAP/radio extension information.		
	<i>disable</i>	Disable station/VAP/radio extension information.		
frequency-handoff	Enable/disable frequency handoff of clients to other channels (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable frequency handoff.		
	<i>disable</i>	Disable frequency handoff.		

Parameter	Description	Type	Size	Default								
handoff-roaming	Enable/disable client load balancing during roaming to avoid roaming delay (default = disable).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable handoff roaming.</td></tr><tr><td><i>disable</i></td><td>Disable handoff roaming.</td></tr></table>	Option	Description	<i>enable</i>	Enable handoff roaming.	<i>disable</i>	Disable handoff roaming.					
Option	Description											
<i>enable</i>	Enable handoff roaming.											
<i>disable</i>	Disable handoff roaming.											
handoff-rssi	Minimum received signal strength indicator (RSSI) value for handoff (20 - 30, default = 25).	integer	Minimum value: 20 Maximum value: 30	25								
handoff-sta-thresh	Threshold value for AP handoff.	integer	Minimum value: 5 Maximum value: 60	0								
indoor-outdoor-deployment	Set to allow indoor/outdoor-only channels under regulatory rules (default = platform-determined).	option	-	platform-determined								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>platform-determined</i></td><td>Set AP deployment type based on its platform.</td></tr><tr><td><i>outdoor</i></td><td>Set AP deployment type to outdoor.</td></tr><tr><td><i>indoor</i></td><td>Set AP deployment type to indoor.</td></tr></table>	Option	Description	<i>platform-determined</i>	Set AP deployment type based on its platform.	<i>outdoor</i>	Set AP deployment type to outdoor.	<i>indoor</i>	Set AP deployment type to indoor.			
Option	Description											
<i>platform-determined</i>	Set AP deployment type based on its platform.											
<i>outdoor</i>	Set AP deployment type to outdoor.											
<i>indoor</i>	Set AP deployment type to indoor.											
ip-fragment-preventing	Method(s) by which IP fragmentation is prevented for control and data packets through CAPWAP tunnel (default = tcp-mss-adjust).	option	-	tcp-mss-adjust								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tcp-mss-adjust</i></td><td>TCP maximum segment size adjustment.</td></tr><tr><td><i>icmp-unreachable</i></td><td>Drop packet and send ICMP Destination Unreachable</td></tr></table>	Option	Description	<i>tcp-mss-adjust</i>	TCP maximum segment size adjustment.	<i>icmp-unreachable</i>	Drop packet and send ICMP Destination Unreachable					
Option	Description											
<i>tcp-mss-adjust</i>	TCP maximum segment size adjustment.											
<i>icmp-unreachable</i>	Drop packet and send ICMP Destination Unreachable											
led-schedules <name>	Recurring firewall schedules for illuminating LEDs on the FortiAP. If led-state is enabled, LEDs will be visible when at least one of the schedules is valid. Separate multiple schedule names with a space. Schedule name.	string	Maximum length: 35									

Parameter	Description	Type	Size	Default								
led-state	Enable/disable use of LEDs on WTP (default = disable).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable use of LEDs on WTP.</td></tr><tr><td>disable</td><td>Disable use of LEDs on WTP.</td></tr></table>	Option	Description	enable	Enable use of LEDs on WTP.	disable	Disable use of LEDs on WTP.					
Option	Description											
enable	Enable use of LEDs on WTP.											
disable	Disable use of LEDs on WTP.											
lldp	Enable/disable Link Layer Discovery Protocol (LLDP) for the WTP, FortiAP, or AP (default = enable).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable LLDP.</td></tr><tr><td>disable</td><td>Disable LLDP.</td></tr></table>	Option	Description	enable	Enable LLDP.	disable	Disable LLDP.					
Option	Description											
enable	Enable LLDP.											
disable	Disable LLDP.											
login-passwd	Set the managed WTP, FortiAP, or AP's administrator password.	password	Not Specified									
login-passwd-change	Change or reset the administrator password of a managed WTP, FortiAP or AP (yes, default, or no, default = no).	option	-	no								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>yes</td><td>Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.</td></tr><tr><td>default</td><td>Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.</td></tr><tr><td>no</td><td>Do not change the managed WTP, FortiAP or AP's administrator password.</td></tr></table>	Option	Description	yes	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.	default	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.	no	Do not change the managed WTP, FortiAP or AP's administrator password.			
Option	Description											
yes	Change the managed WTP, FortiAP or AP's administrator password. Use the login-password option to set the password.											
default	Keep the managed WTP, FortiAP or AP's administrator password set to the factory default.											
no	Do not change the managed WTP, FortiAP or AP's administrator password.											
max-clients	Maximum number of stations (STAs) supported by the WTP (default = 0, meaning no client limitation).	integer	Minimum value: 0 Maximum value: 4294967295									
name	WTP (or FortiAP or AP) profile name.	string	Maximum length: 35									
poe-mode	Set the WTP, FortiAP, or AP's PoE mode.	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Automatically detect the PoE mode.</td></tr><tr><td>8023af</td><td>Use 802.3af PoE mode.</td></tr></table>	Option	Description	auto	Automatically detect the PoE mode.	8023af	Use 802.3af PoE mode.					
Option	Description											
auto	Automatically detect the PoE mode.											
8023af	Use 802.3af PoE mode.											

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>8023at</td><td>Use 802.3at PoE mode.</td></tr><tr><td>power-adapter</td><td>Use the power adapter to control the PoE mode.</td></tr><tr><td>full</td><td>Use full power mode.</td></tr><tr><td>high</td><td>Use high power mode.</td></tr><tr><td>low</td><td>Use low power mode.</td></tr></table>	Option	Description	8023at	Use 802.3at PoE mode.	power-adapter	Use the power adapter to control the PoE mode.	full	Use full power mode.	high	Use high power mode.	low	Use low power mode.			
	Option	Description														
	8023at	Use 802.3at PoE mode.														
	power-adapter	Use the power adapter to control the PoE mode.														
	full	Use full power mode.														
	high	Use high power mode.														
low	Use low power mode.															
split-tunneling-acl-local-ap-subnet	Enable/disable automatically adding local subnetwork of FortiAP to split-tunneling ACL (default = disable).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.</td></tr><tr><td>disable</td><td>Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.</td></tr></table>	Option	Description	enable	Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.	disable	Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.									
	Option	Description														
	enable	Enable automatically adding local subnetwork of FortiAP to split-tunneling ACL.														
disable	Disable automatically adding local subnetwork of FortiAP to split-tunneling ACL.															
split-tunneling-acl-path	Split tunneling ACL path is local/tunnel.	option	-	local												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tunnel</td><td>Split tunneling ACL list traffic will be tunnel.</td></tr><tr><td>local</td><td>Split tunneling ACL list traffic will be local NATed.</td></tr></table>	Option	Description	tunnel	Split tunneling ACL list traffic will be tunnel.	local	Split tunneling ACL list traffic will be local NATed.									
	Option	Description														
	tunnel	Split tunneling ACL list traffic will be tunnel.														
local	Split tunneling ACL list traffic will be local NATed.															
syslog-profile	System log server configuration profile name.	string	Maximum length: 35													
tun-mtu-downlink	The MTU of downlink CAPWAP tunnel (576 - 1500 bytes or 0; 0 means the local MTU of FortiAP; default = 0).	integer	Minimum value: 0 576 Maximum value: 1500													
tun-mtu-uplink	The maximum transmission unit (MTU) of uplink CAPWAP tunnel (576 - 1500 bytes or 0; 0 means the local MTU of FortiAP; default = 0).	integer	Minimum value: 0 576 Maximum value: 1500													
unii-4-5ghz-band	Enable/disable UNII-4 5Ghz band channels (default = disable).	option	-	disable												

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable UNII-4 5Ghz band channels.		
	<i>disable</i>	Disable UNII-4 5Ghz band channels.		
usb-port	Enable/disable USB port of the WTP (default = enable).	option	-	enable
	Option Description			
	<i>enable</i>	Enable USB port.		
	<i>disable</i>	Disable USB port.		
wan-port-auth	Set WAN port authentication mode (default = none).	option	-	none
	Option Description			
	<i>none</i>	Disable WAN port authentication.		
	<i>802.1x</i>	Enable WAN port 802.1x authentication.		
wan-port-auth-macsec	Enable/disable WAN port 802.1x supplicant MACsec policy (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>	Enable WAN port 802.1x supplicant MACsec policy.		
	<i>disable</i>	Disable WAN port 802.1x supplicant MACsec policy.		
wan-port-auth-methods	WAN port 802.1x supplicant EAP methods (default = all).	option	-	all
	Option Description			
	<i>all</i>	Do not specify any EAP methods.		
	<i>EAP-FAST</i>	Enable EAP-FAST.		
	<i>EAP-TLS</i>	Enable EAP-TLS.		
	<i>EAP-PEAP</i>	Enable EAP-PEAP.		
wan-port-auth-password	Set WAN port 802.1x supplicant password.	password	Not Specified	
wan-port-auth-username	Set WAN port 802.1x supplicant user name.	string	Maximum length: 63	

Parameter	Description	Type	Size	Default						
wan-port-mode	Enable/disable using a WAN port as a LAN port.	option	-	wan-only						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>wan-lan</td><td>Enable using a WAN port as a LAN port.</td></tr><tr><td>wan-only</td><td>Disable using a WAN port as a LAN port.</td></tr></table>				Option	Description	wan-lan	Enable using a WAN port as a LAN port.	wan-only	Disable using a WAN port as a LAN port.
Option	Description									
wan-lan	Enable using a WAN port as a LAN port.									
wan-only	Disable using a WAN port as a LAN port.									

config deny-mac-list

Parameter	Description	Type	Size	Default
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0
mac	A WiFi device with this MAC address is denied access to this WTP, FortiAP or AP.	mac-address	Not Specified	00:00:00:00:00:00

config esl-ses-dongle

Parameter	Description	Type	Size	Default
apc-addr-type	ESL SES-imagotag APC address type (default = fqdn).	option	-	fqdn
	Option	Description		
	fqdn	Fully Qualified Domain Name address.		
	ip	IPv4 address.		
apc-fqdn	FQDN of ESL SES-imagotag Access Point Controller (APC).	string	Maximum length: 63	
apc-ip	IP address of ESL SES-imagotag Access Point Controller (APC).	ipv4-address	Not Specified	0.0.0.0
apc-port	Port of ESL SES-imagotag Access Point Controller (APC).	integer	Minimum value: 0 Maximum value: 65535	0
coex-level	ESL SES-imagotag dongle coexistence level (default = none).	option	-	none

Parameter	Description	Type	Size	Default																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>No support for coexistence of USB-Dongle with WiFi AP.</td></tr></table>	Option	Description	<i>none</i>	No support for coexistence of USB-Dongle with WiFi AP.																											
Option	Description																															
<i>none</i>	No support for coexistence of USB-Dongle with WiFi AP.																															
compliance-level	Compliance levels for the ESL solution integration (default = compliance-level-2).	option	-	compliance-level-2																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>compliance-level-2</i></td><td>Compliance Level 2 - Full Cloud Support, IoT and Fast-Response.</td></tr></table>	Option	Description	<i>compliance-level-2</i>	Compliance Level 2 - Full Cloud Support, IoT and Fast-Response.																											
Option	Description																															
<i>compliance-level-2</i>	Compliance Level 2 - Full Cloud Support, IoT and Fast-Response.

	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.												
<i>bridge-to-ssid</i>	Bridge WTP LAN port to SSID.													
port2-ssid	Bridge LAN port 2 to SSID.	string	Maximum length: 15											
port3-mode	LAN port 3 mode.	option	-	offline										

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>offline</i>	Offline.		
	<i>nat-to-wan</i>	NAT WTP LAN port to WTP WAN port.		
	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.		
	<i>bridge-to-ssid</i>	Bridge WTP LAN port to SSID.		
port3-ssid	Bridge LAN port 3 to SSID.	string	Maximum length: 15	
port4-mode	LAN port 4 mode.	option	-	offline
	Option	Description		
	<i>offline</i>	Offline.		
	<i>nat-to-wan</i>	NAT WTP LAN port to WTP WAN port.		
	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.		
	<i>bridge-to-ssid</i>	Bridge WTP LAN port to SSID.		
port4-ssid	Bridge LAN port 4 to SSID.	string	Maximum length: 15	
port5-mode	LAN port 5 mode.	option	-	offline
	Option	Description		
	<i>offline</i>	Offline.		
	<i>nat-to-wan</i>	NAT WTP LAN port to WTP WAN port.		
	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.		
	<i>bridge-to-ssid</i>	Bridge WTP LAN port to SSID.		
port5-ssid	Bridge LAN port 5 to SSID.	string	Maximum length: 15	
port6-mode	LAN port 6 mode.	option	-	offline
	Option	Description		
	<i>offline</i>	Offline.		
	<i>nat-to-wan</i>	NAT WTP LAN port to WTP WAN port.		
	<i>bridge-to-wan</i>	Bridge WTP LAN port to WTP WAN port.		
	<i>bridge-to-ssid</i>	Bridge WTP LAN port to SSID.		

Parameter	Description	Type	Size	Default
port6-ssid	Bridge LAN port 6 to SSID.	string	Maximum length: 15	
port7-mode	LAN port 7 mode.	option	-	offline
	Option	Description		
	offline	Offline.		
	nat-to-wan	NAT WTP LAN port to WTP WAN port.		
	bridge-to-wan	Bridge WTP LAN port to WTP WAN port.		
	bridge-to-ssid	Bridge WTP LAN port to SSID.		
port7-ssid	Bridge LAN port 7 to SSID.	string	Maximum length: 15	
port8-mode	LAN port 8 mode.	option	-	offline
	Option	Description		
	offline	Offline.		
	nat-to-wan	NAT WTP LAN port to WTP WAN port.		
	bridge-to-wan	Bridge WTP LAN port to WTP WAN port.		
	bridge-to-ssid	Bridge WTP LAN port to SSID.		
port8-ssid	Bridge LAN port 8 to SSID.	string	Maximum length: 15	

config lbs

Parameter	Description	Type	Size	Default						
aeroscout	Enable/disable AeroScout Real Time Location Service (RTLS) support (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable AeroScout support.</td></tr><tr><td><i>disable</i></td><td>Disable AeroScout support.</td></tr></table>	Option	Description	<i>enable</i>	Enable AeroScout support.	<i>disable</i>	Disable AeroScout support.			
Option	Description									
<i>enable</i>	Enable AeroScout support.									
<i>disable</i>	Disable AeroScout support.									
aeroscout-ap-mac	Use BSSID or board MAC address as AP MAC address in AeroScout AP messages (default = bssid).	option	-	bssid						

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>bssid</i>	Use BSSID as AP MAC address in AeroScout AP messages.		
	<i>board-mac</i>	Use board MAC address as AP MAC address in AeroScout AP messages.		
aeroscout-mmureport	Enable/disable compounded AeroScout tag and MU report (default = enable).	option	-	enable
	Option	Description		
	<i>enable</i>	Enable compounded AeroScout tag and MU report.		
	<i>disable</i>	Disable compounded AeroScout tag and MU report.		
aeroscout-mu	Enable/disable AeroScout Mobile Unit (MU) support (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable AeroScout MU mode support.		
	<i>disable</i>	Disable AeroScout MU mode support.		
aeroscout-mu-factor	AeroScout MU mode dilution factor (default = 20).	integer	Minimum value: 20 0 Maximum value: 4294967295	
aeroscout-mu-timeout	AeroScout MU mode timeout (0 - 65535 sec, default = 5).	integer	Minimum value: 5 0 Maximum value: 65535	
aeroscout-server-ip	IP address of AeroScout server.	ipv4-address-any	Not Specified	0.0.0.0
aeroscout-server-port	AeroScout server UDP listening port.	integer	Minimum value: 0 1024 Maximum value: 65535	
ble-rtls	Set BLE Real Time Location Service (RTLS) support (default = none).	option	-	none
	Option	Description		
	<i>none</i>	Set BLE RTLS to none (default = none).		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>polestar</i>	Set BLE RTLS to PoleStar.		
	<i>evresys</i>	Set BLE RTLS to Evresys.		
ble-rtls-accumulation-interval	Time that measurements should be accumulated in seconds (default = 2).	integer	Minimum value: 2 1 Maximum value: 60	
ble-rtls-asset-addrgrp-list	Tags and asset addrgrp list to be reported.	string	Maximum length: 79	
ble-rtls-asset-uuid-list1	Tags and asset UUID list 1 to be reported (string in the format of 'XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX').	string	Maximum length: 36	
ble-rtls-asset-uuid-list2	Tags and asset UUID list 2 to be reported (string in the format of 'XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX').	string	Maximum length: 36	
ble-rtls-asset-uuid-list3	Tags and asset UUID list 3 to be reported (string in the format of 'XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX').	string	Maximum length: 36	
ble-rtls-asset-uuid-list4	Tags and asset UUID list 4 to be reported (string in the format of 'XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX').	string	Maximum length: 36	
ble-rtls-protocol	Select the protocol to report Measurements, Advertising Data, or Location Data to Cloud Server (default = WSS).	option	-	WSS
	Option	Description		
	WSS	Use WebSocket protocol to report Measurements, Advertising Data, or Location Data to Cloud Server.		
ble-rtls-reporting-interval	Time between reporting accumulated measurements in seconds (default = 2).	integer	Minimum value: 2 1 Maximum value: 600	
ble-rtls-server-fqdn	FQDN of BLE Real Time Location Service (RTLS) Server.	string	Maximum length: 255	

Parameter	Description	Type	Size	Default
ble-rtls-server-path	Path of BLE Real Time Location Service (RTLS) Server.	string	Maximum length: 255	
ble-rtls-server-port	Port of BLE Real Time Location Service (RTLS) Server (default = 443).	integer	Minimum value: 1 Maximum value: 65535	443
ble-rtls-server-token	Access Token of BLE Real Time Location Service (RTLS) Server.	string	Maximum length: 31	
ekahau-blink-mode	Enable/disable Ekahau blink mode (now known as AiRISTA Flow) to track and locate WiFi tags (default = disable).	option	-	disable
	Option		Description	
	<i>enable</i>		Enable Ekahau blink mode.	
	<i>disable</i>		Disable Ekahau blink mode.	
ekahau-tag	WiFi frame MAC address or WiFi Tag.	mac-address	Not Specified	01:18:8e:00:00:00
erc-server-ip	IP address of Ekahau RTLS Controller (ERC).	ipv4-address-any	Not Specified	0.0.0.0
erc-server-port	Ekahau RTLS Controller (ERC) UDP listening port.	integer	Minimum value: 1024 Maximum value: 65535	8569
fortipresence	Enable/disable FortiPresence to monitor the location and activity of WiFi clients even if they don't connect to this WiFi network (default = disable).	option	-	disable
	Option		Description	
	<i>foreign</i>		FortiPresence monitors foreign channels only. Foreign channels mean all other available channels than the current operating channel of the WTP, AP, or FortiAP.	
	<i>both</i>		Enable FortiPresence on both foreign and home channels. Select this option to have FortiPresence monitor all WiFi channels.	
	<i>disable</i>		Disable FortiPresence.	
fortipresence-ble	Enable/disable FortiPresence finding and reporting BLE devices.	option	-	enable

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable FortiPresence finding and reporting BLE devices.		
	<i>disable</i>	Disable FortiPresence finding and reporting BLE devices.		
fortipresence-frequency	FortiPresence report transmit frequency (5 - 65535 sec, default = 30).	integer	Minimum value: 30 5 Maximum value: 65535	
fortipresence-port	UDP listening port of FortiPresence server (default = 3000).	integer	Minimum value: 3000 300 Maximum value: 65535	
fortipresence-project	FortiPresence project name (max. 16 characters, default = fortipresence).	string	Maximum length: 16	fortipresence
fortipresence-rogue	Enable/disable FortiPresence finding and reporting rogue APs.	option	-	disable
	Option Description			
	<i>enable</i>	Enable FortiPresence finding and reporting rogue APs.		
	<i>disable</i>	Disable FortiPresence finding and reporting rogue APs.		
fortipresence-secret	FortiPresence secret password (max. 16 characters).	password	Not Specified	
fortipresence-server	IP address of FortiPresence server.	ipv4-address-any	Not Specified	0.0.0.0
fortipresence-server-addr-type	FortiPresence server address type (default = ipv4).	option	-	ipv4
	Option Description			
	<i>ipv4</i>	IPv4 address.		
	<i>fqdn</i>	Fully Qualified Domain Name address.		
fortipresence-server-fqdn	FQDN of FortiPresence server.	string	Maximum length: 255	
fortipresence-unassoc	Enable/disable FortiPresence finding and reporting unassociated stations.	option	-	enable

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable FortiPresence finding and reporting unassociated stations.		
	<i>disable</i>	Disable FortiPresence finding and reporting unassociated stations.		
station-locate	Enable/disable client station locating services for all clients, whether associated or not (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable station locating service.		
	<i>disable</i>	Disable station locating service.		

config platform

Parameter	Description	Type	Size	Default
ddscan	Enable/disable use of one radio for dedicated full-band scanning to detect RF characterization and wireless threat management.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable dedicated full-band scan mode.		
	<i>disable</i>	Disable dedicated full-band scan mode.		
mode	Configure operation mode of 5G radios (default = single-5G).	option	-	single-5G
	Option	Description		
	<i>single-5G</i>	Configure radios as one 5GHz band, one 2.4GHz band, and one dedicated monitor or sniffer.		
	<i>dual-5G</i>	Configure radios as one lower 5GHz band, one higher 5GHz band and one 2.4GHz band respectively.		
type	WTP, FortiAP or AP platform type. There are built-in WTP profiles for all supported FortiAP models. You can select a built-in profile and customize it or create a new profile.	option	-	221E
	Option	Description		
	<i>AP-11N</i>	Default 11n AP.		

Parameter	Description	Type	Size	Default
	Option	Description

enable	Enable WMM bandwidth admission control.											
disable	Disable WMM bandwidth admission control.											
bandwidth-capacity	Maximum bandwidth capacity allowed (1 - 600000 Kbps, default = 2000).	integer	Minimum value: 1 Maximum value: 600000	2000								
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type (default = 100).	integer	Minimum value: 0 Maximum value: 65535	100								
bss-color	BSS color value for this 11ax radio (0 - 63, disable = 0, default = 0).	integer	Minimum value: 0 Maximum value: 63	0								
bss-color-mode	BSS color mode for this 11ax radio (default = auto).	option	-	auto								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>auto</td><td>Automatically select BSS color value on AP.</td></tr><tr><td>static</td><td>Set BSS color value on this radio based on 'bss-color' CLI.</td></tr></table>	Option	Description	auto	Automatically select BSS color value on AP.	static	Set BSS color value on this radio based on 'bss-color' CLI.					
Option	Description											
auto	Automatically select BSS color value on AP.											
static	Set BSS color value on this radio based on 'bss-color' CLI.											

Parameter	Description	Type	Size	Default														
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM call admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM call admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM call admission control.	<i>disable</i>	Disable WMM call admission control.											
Option	Description																	
<i>enable</i>	Enable WMM call admission control.																	
<i>disable</i>	Disable WMM call admission control.																	
call-capacity	Maximum number of Voice over WLAN (VoWLAN) phones supported by the radio (0 - 60, default = 10).	integer	Minimum value: 10 0 Maximum value: 60															
channel<chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3															
channel-bonding	Channel bandwidth: 320, 240, 160, 80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>320MHz</i></td><td>320 MHz channel width.</td></tr><tr><td><i>240MHz</i></td><td>240 MHz channel width.</td></tr><tr><td><i>160MHz</i></td><td>160 MHz channel width.</td></tr><tr><td><i>80MHz</i></td><td>80 MHz channel width.</td></tr><tr><td><i>40MHz</i></td><td>40 MHz channel width.</td></tr><tr><td><i>20MHz</i></td><td>20 MHz channel width.</td></tr></table>	Option	Description	<i>320MHz</i>	320 MHz channel width.	<i>240MHz</i>	240 MHz channel width.	<i>160MHz</i>	160 MHz channel width.	<i>80MHz</i>	80 MHz channel width.	<i>40MHz</i>	40 MHz channel width.	<i>20MHz</i>	20 MHz channel width.			
Option	Description																	
<i>320MHz</i>	320 MHz channel width.																	
<i>240MHz</i>	240 MHz channel width.																	
<i>160MHz</i>	160 MHz channel width.																	
<i>80MHz</i>	80 MHz channel width.																	
<i>40MHz</i>	40 MHz channel width.																	
<i>20MHz</i>	20 MHz channel width.																	
channel-bonding-ext	Channel bandwidth extension: 320 MHz-1 and 320 MHz-2 (default = 320 MHz-2).	option	-	320MHz-2														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>320MHz-1</i></td><td>320 MHz channel with channel center frequency numbered 31, 95, and 159.</td></tr><tr><td><i>320MHz-2</i></td><td>320 MHz channel with channel center frequency numbered 63, 127, and 191.</td></tr></table>	Option	Description	<i>320MHz-1</i>	320 MHz channel with channel center frequency numbered 31, 95, and 159.	<i>320MHz-2</i>	320 MHz channel with channel center frequency numbered 63, 127, and 191.											
Option	Description																	
<i>320MHz-1</i>	320 MHz channel with channel center frequency numbered 31, 95, and 159.																	
<i>320MHz-2</i>	320 MHz channel with channel center frequency numbered 63, 127, and 191.																	

Parameter	Description	Type	Size	Default								
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable measuring channel utilization.</td></tr><tr><td><i>disable</i></td><td>Disable measuring channel utilization.</td></tr></table>	Option	Description	<i>enable</i>	Enable measuring channel utilization.	<i>disable</i>	Disable measuring channel utilization.					
Option	Description											
<i>enable</i>	Enable measuring channel utilization.											
<i>disable</i>	Disable measuring channel utilization.											
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio (default = enable).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable support for both HT20 and HT40 on the same radio.</td></tr><tr><td><i>disable</i></td><td>Disable support for both HT20 and HT40 on the same radio.</td></tr></table>	Option	Description	<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.	<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.					
Option	Description											
<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.											
<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.											
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning (DARRP) to make sure the radio is always using the most optimal channel (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable distributed automatic radio resource provisioning.</td></tr><tr><td><i>disable</i></td><td>Disable distributed automatic radio resource provisioning.</td></tr></table>	Option	Description	<i>enable</i>	Enable distributed automatic radio resource provisioning.	<i>disable</i>	Disable distributed automatic radio resource provisioning.					
Option	Description											
<i>enable</i>	Enable distributed automatic radio resource provisioning.											
<i>disable</i>	Disable distributed automatic radio resource provisioning.											
drma	Enable/disable dynamic radio mode assignment (DRMA) (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable dynamic radio mode assignment (DRMA).</td></tr><tr><td><i>enable</i></td><td>Enable dynamic radio mode assignment (DRMA).</td></tr></table>	Option	Description	<i>disable</i>	Disable dynamic radio mode assignment (DRMA).	<i>enable</i>	Enable dynamic radio mode assignment (DRMA).					
Option	Description											
<i>disable</i>	Disable dynamic radio mode assignment (DRMA).											
<i>enable</i>	Enable dynamic radio mode assignment (DRMA).											
drma-sensitivity	Network Coverage Factor (NCF) percentage required to consider a radio as redundant (default = low).	option	-	low								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>low</i></td><td>Consider a radio as redundant when its NCF is 100%.</td></tr><tr><td><i>medium</i></td><td>Consider a radio as redundant when its NCF is 95%.</td></tr><tr><td><i>high</i></td><td>Consider a radio as redundant when its NCF is 90%.</td></tr></table>	Option	Description	<i>low</i>	Consider a radio as redundant when its NCF is 100%.	<i>medium</i>	Consider a radio as redundant when its NCF is 95%.	<i>high</i>	Consider a radio as redundant when its NCF is 90%.			
Option	Description											
<i>low</i>	Consider a radio as redundant when its NCF is 100%.											
<i>medium</i>	Consider a radio as redundant when its NCF is 95%.											
<i>high</i>	Consider a radio as redundant when its NCF is 90%.											

Parameter	Description	Type	Size	Default														
dtim	Delivery Traffic Indication Map (DTIM) period (1 - 255, default = 1). Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255															
frag-threshold	Maximum packet size that can be sent without fragmentation (800 - 2346 bytes, default = 2346).	integer	Minimum value: 800 Maximum value: 2346	2346														
iperf-protocol	Iperf test protocol (default = "UDP").	option	-	udp														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>udp</td><td>UDP.</td></tr><tr><td>tcp</td><td>TCP.</td></tr></table>				Option	Description	udp	UDP.	tcp	TCP.								
Option	Description																	
udp	UDP.																	
tcp	TCP.																	
iperf-server-port	Iperf service port number.	integer	Minimum value: 5001 Maximum value: 65535															
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 Maximum value: 4294967295															
max-distance	Maximum expected distance between the AP and clients (0 - 54000 m, default = 0).	integer	Minimum value: 0 Maximum value: 54000															
mimo-mode	Configure radio MIMO mode (default = default).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Default radio MIMO mode.</td></tr><tr><td>1x1</td><td>1x1 radio MIMO mode.</td></tr><tr><td>2x2</td><td>2x2 radio MIMO mode.</td></tr><tr><td>3x3</td><td>3x3 radio MIMO mode.</td></tr><tr><td>4x4</td><td>4x4 radio MIMO mode.</td></tr><tr><td>8x8</td><td>8x8 radio MIMO mode.</td></tr></table>				Option	Description	default	Default radio MIMO mode.	1x1	1x1 radio MIMO mode.	2x2	2x2 radio MIMO mode.	3x3	3x3 radio MIMO mode.	4x4	4x4 radio MIMO mode.	8x8	8x8 radio MIMO mode.
Option	Description																	
default	Default radio MIMO mode.																	
1x1	1x1 radio MIMO mode.																	
2x2	2x2 radio MIMO mode.																	
3x3	3x3 radio MIMO mode.																	
4x4	4x4 radio MIMO mode.																	
8x8	8x8 radio MIMO mode.																	
mode	Mode of radio 1. Radio 1 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap														

Parameter	Description	Type	Size	Default

Option		Description		
<i>disabled</i>		Radio 1 is disabled.		
<i>ap</i>		Radio 1 operates as an access point that allows WiFi clients to connect to your network.		
<i>monitor</i>		Radio 1 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.		
<i>sniffer</i>		Radio 1 operates as a sniffer capturing WiFi frames on air.		
<i>sam</i>		Radio 1 operates as a station that can connect to a neighboring AP for connectivity and health check.		

optional-antenna	Optional antenna used on FAP (default = none).	option	-	none

Option		Description		
<i>none</i>		None.		
<i>custom</i>		Customize optional antenna gain.		
<i>FANT-04ABGN-0606-O-N</i>		6 dBi(2.4GHz) and 6 dBi(5GHz).		
<i>FANT-04ABGN-1414-P-N</i>		14 dBi(2.4GHz) and 14 dBi(5GHz).		
<i>FANT-04ABGN-8065-P-N</i>		8 dBi(2.4GHz) and 6.5 dBi(5GHz).		
<i>FANT-04ABGN-0606-O-R</i>		6 dBi(2.4GHz) and 6 dBi(5GHz).		
<i>FANT-04ABGN-0606-P-R</i>		6 dBi(2.4GHz) and 6 dBi(5GHz).		
<i>FANT-10ACAX-1213-D-N</i>		12 dBi(2.4GHz) and 13 dBi(5GHz).		
<i>FANT-08ABGN-1213-D-R</i>		12 dBi(2.4GHz) and 13 dBi(5GHz).		

Parameter	Description	Type	Size	Default												
optional-antenna-gain	Optional antenna gain in dBi (0 to 20, default = 0).	string	Maximum length: 7	0												
power-level	Radio EIRP power level as a percentage of the maximum EIRP power (0 - 100, default = 100).	integer	Minimum value: 0 Maximum value: 100	100												
power-mode	Set radio effective isotropic radiated power (EIRP) in dBm or by a percentage of the maximum EIRP (default = percentage). This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>				Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.						
Option	Description															
<i>dBm</i>	Set radio EIRP power in dBm.															
<i>percentage</i>	Set radio EIRP power by percentage.															
power-value	Radio EIRP power in dBm (1 - 33, default = 27).	integer	Minimum value: 1 Maximum value: 33	27												
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tim</i></td><td>TIM bit for client in power save mode.</td></tr><tr><td><i>ac-vo</i></td><td>Use AC VO priority to send out packets in the power save queue.</td></tr><tr><td><i>no-obss-scan</i></td><td>Do not put OBSS scan IE into beacon and probe response frames.</td></tr><tr><td><i>no-11b-rate</i></td><td>Do not send frame using 11b data rate.</td></tr><tr><td><i>client-rate-follow</i></td><td>Adapt transmitting PHY rate with receiving PHY rate from a client.</td></tr></table>				Option	Description	<i>tim</i>	TIM bit for client in power save mode.	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.	<i>no-11b-rate</i>	Do not send frame using 11b data rate.	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.
Option	Description															
<i>tim</i>	TIM bit for client in power save mode.															
<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.															
<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.															
<i>no-11b-rate</i>	Do not send frame using 11b data rate.															
<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.															
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rtscts</i></td><td>Enable 802.11g protection RTS/CTS mode.</td></tr></table>				Option	Description	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.								
Option	Description															
<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.															

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.		
	<i>disable</i>	Disable 802.11g protection mode.		
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS (256 - 2346 bytes, default = 2346).	integer	Minimum value: 256 Maximum value: 2346	2346
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00
sam-ca-certificate	CA certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 79	
sam-captive-portal	Enable/disable Captive Portal Authentication (default = disable).	option	-	disable
	Option	Description		
	<i>enable</i>	Enable Captive Portal Authentication.		
	<i>disable</i>	Disable Captive Portal Authentication.		
sam-client-certificate	Client certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35	
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64	
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64	
sam-cwp-password	Password for captive portal authentication.	password	Not Specified	
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64	
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255	
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35	
sam-eap-method	Select WPA2/WPA3-ENTERPRISE EAP Method (default = PEAP).	option	-	peap

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>both</i></td><td>EAP PEAP and TLS. (Not applicable in FIPS mode)</td></tr><tr><td><i>tls</i></td><td>EAP TLS.</td></tr><tr><td><i>peap</i></td><td>EAP PEAP. (Not applicable in FIPS mode)</td></tr></table>	Option	Description	<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)	<i>tls</i>	EAP TLS.	<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)							
	Option	Description														
	<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)														
	<i>tls</i>	EAP TLS.														
<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)															
sam-password	Passphrase for WiFi network connection.	password	Not Specified													
sam-private-key	Private key for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35													
sam-private-key-password	Password for private key file for WPA2/WPA3-ENTERPRISE.	password	Not Specified													
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 0 60 Maximum value: 864000													
sam-security-type	Select WiFi network security type (default = "wpa-personal" for 2.4/5G radio, "wpa3-sae" for 6G radio).	option	-	wpa-personal												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>open</i></td><td>Open.</td></tr><tr><td><i>wpa-personal</i></td><td>WPA/WPA2 personal.</td></tr><tr><td><i>wpa-enterprise</i></td><td>WPA2/WPA3 enterprise.</td></tr><tr><td><i>wpa3-sae</i></td><td>WPA3 SAE.</td></tr><tr><td><i>owe</i></td><td>OWE.</td></tr></table>	Option	Description	<i>open</i>	Open.	<i>wpa-personal</i>	WPA/WPA2 personal.	<i>wpa-enterprise</i>	WPA2/WPA3 enterprise.	<i>wpa3-sae</i>	WPA3 SAE.	<i>owe</i>	OWE.			
	Option	Description														
	<i>open</i>	Open.														
	<i>wpa-personal</i>	WPA/WPA2 personal.														
	<i>wpa-enterprise</i>	WPA2/WPA3 enterprise.														
	<i>wpa3-sae</i>	WPA3 SAE.														
<i>owe</i>	OWE.															
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255													
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0												
sam-server-type	Select SAM server type (default = "IP").	option	-	ip												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ip</i></td><td>IPv4 address.</td></tr><tr><td><i>fqdn</i></td><td>Fully Qualified Domain Name address.</td></tr></table>	Option	Description	<i>ip</i>	IPv4 address.	<i>fqdn</i>	Fully Qualified Domain Name address.									
	Option	Description														
	<i>ip</i>	IPv4 address.														
<i>fqdn</i>	Fully Qualified Domain Name address.															
sam-ssid	SSID for WiFi network.	string	Maximum length: 32													

Parameter	Description	Type	Size	Default												
sam-test	Select SAM test type (default = "PING").	option	-	ping												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ping</td><td>PING test.</td></tr><tr><td>iperf</td><td>IPERF test.</td></tr></table>	Option	Description	ping	PING test.	iperf	IPERF test.									
Option	Description															
ping	PING test.															
iperf	IPERF test.															
sam-username	Username for WiFi network connection.	string	Maximum length: 35													
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Select the 400 ns short guard interval (Short GI).</td></tr><tr><td>disable</td><td>Select the 800 ns long guard interval (Long GI).</td></tr></table>	Option	Description	enable	Select the 400 ns short guard interval (Short GI).	disable	Select the 800 ns long guard interval (Long GI).									
Option	Description															
enable	Select the 400 ns short guard interval (Short GI).															
disable	Select the 800 ns long guard interval (Long GI).															
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable packet transmission optimization.</td></tr><tr><td>power-save</td><td>Tag client as operating in power save mode if excessive transmit retries occur.</td></tr><tr><td>aggr-limit</td><td>Set aggregation limit to a lower value when data rate is low.</td></tr><tr><td>retry-limit</td><td>Set software retry limit to a lower value when data rate is low.</td></tr><tr><td>send-bar</td><td>Limit transmission of BAR frames.</td></tr></table>	Option	Description	disable	Disable packet transmission optimization.	power-save	Tag client as operating in power save mode if excessive transmit retries occur.	aggr-limit	Set aggregation limit to a lower value when data rate is low.	retry-limit	Set software retry limit to a lower value when data rate is low.	send-bar	Limit transmission of BAR frames.			
Option	Description															
disable	Disable packet transmission optimization.															
power-save	Tag client as operating in power save mode if excessive transmit retries occur.															
aggr-limit	Set aggregation limit to a lower value when data rate is low.															
retry-limit	Set software retry limit to a lower value when data rate is low.															
send-bar	Limit transmission of BAR frames.															
vap-all	Configure method for assigning SSIDs to this FortiAP (default = automatically assign tunnel SSIDs).	option	-	tunnel												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tunnel</td><td>Automatically select tunnel SSIDs.</td></tr><tr><td>bridge</td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td>manual</td><td>Manually select SSIDs.</td></tr></table>	Option	Description	tunnel	Automatically select tunnel SSIDs.	bridge	Automatically select local-bridging SSIDs.	manual	Manually select SSIDs.							
Option	Description															
tunnel	Automatically select tunnel SSIDs.															
bridge	Automatically select local-bridging SSIDs.															
manual	Manually select SSIDs.															
vaps <name>	Manually selected list of Virtual Access Points (VAPs).	string	Maximum length: 35													

Parameter	Description	Type	Size	Default						
	Virtual Access Point (VAP) name.									
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35							
zero-wait-dfs	Enable/disable zero wait DFS on radio (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable zero wait DFS</td></tr><tr><td><i>disable</i></td><td>Disable zero wait DFS</td></tr></table>	Option	Description	<i>enable</i>	Enable zero wait DFS	<i>disable</i>	Disable zero wait DFS			
Option	Description									
<i>enable</i>	Enable zero wait DFS									
<i>disable</i>	Disable zero wait DFS									

config radio-2

Parameter	Description	Type	Size	Default						
80211d	Enable/disable 802.11d countryie (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11d countryie.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11d countryie.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11d countryie.	<i>disable</i>	Disable 802.11d countryie.			
Option	Description									
<i>enable</i>	Enable 802.11d countryie.									
<i>disable</i>	Disable 802.11d countryie.									
80211mc	Enable/disable 802.11mc responder mode (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11mc responder mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11mc responder mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11mc responder mode.	<i>disable</i>	Disable 802.11mc responder mode.			
Option	Description									
<i>enable</i>	Enable 802.11mc responder mode.									
<i>disable</i>	Disable 802.11mc responder mode.									
airtime-fairness	Enable/disable airtime fairness (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable airtime fairness (ATF) support.</td></tr><tr><td><i>disable</i></td><td>Disable airtime fairness (ATF) support.</td></tr></table>	Option	Description	<i>enable</i>	Enable airtime fairness (ATF) support.	<i>disable</i>	Disable airtime fairness (ATF) support.			
Option	Description									
<i>enable</i>	Enable airtime fairness (ATF) support.									
<i>disable</i>	Disable airtime fairness (ATF) support.									
amsdu	Enable/disable 802.11n AMSDU support. AMSDU can improve performance if supported by your WiFi clients (default = enable).	option	-	enable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable AMSDU support.		
	<i>disable</i>	Disable AMSDU support.		
ap-sniffer-addr	MAC address to monitor.	mac-address	Not Specified	00:00:00:00:00:00
ap-sniffer-bufsize	Sniffer buffer size (1 - 32 MB, default = 16).	integer	Minimum value: 1 Maximum value: 32	16
ap-sniffer-chan	Channel on which to operate the sniffer (default = 6).	integer	Minimum value: 0 Maximum value: 4294967295	6
ap-sniffer-chan-width	Channel bandwidth for sniffer.	option	-	20MHz
	Option Description			
	<i>320MHz</i>	320 MHz channel width.		
	<i>240MHz</i>	240 MHz channel width.		
	<i>160MHz</i>	160 MHz channel width.		
	<i>80MHz</i>	80 MHz channel width.		
	<i>40MHz</i>	40 MHz channel width.		
	<i>20MHz</i>	20 MHz channel width.		
ap-sniffer-ctl	Enable/disable sniffer on WiFi control frame (default = enable).	option	-	enable
	Option Description			
	<i>enable</i>	Enable sniffer on WiFi control frame.		
	<i>disable</i>	Disable sniffer on WiFi control frame.		
ap-sniffer-data	Enable/disable sniffer on WiFi data frame (default = enable).	option	-	enable
	Option Description			
	<i>enable</i>	Enable sniffer on WiFi data frame		
	<i>disable</i>	Disable sniffer on WiFi data frame		

Parameter	Description	Type	Size	Default						
ap-sniffer-mgmt-beacon	Enable/disable sniffer on WiFi management Beacon frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management beacon frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management beacon frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management beacon frame.	<i>disable</i>	Disable sniffer on WiFi management beacon frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management beacon frame.									
<i>disable</i>	Disable sniffer on WiFi management beacon frame.									
ap-sniffer-mgmt-other	Enable/disable sniffer on WiFi management other frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management other frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management other frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management other frame.	<i>disable</i>	Disable sniffer on WiFi management other frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management other frame.									
<i>disable</i>	Disable sniffer on WiFi management other frame.									
ap-sniffer-mgmt-probe	Enable/disable sniffer on WiFi management probe frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr><tr><td><i>disable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management probe frame.	<i>disable</i>	Enable sniffer on WiFi management probe frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management probe frame.									
<i>disable</i>	Enable sniffer on WiFi management probe frame.									
arrp-profile	Distributed Automatic Radio Resource Provisioning (DARRP) profile name to assign to the radio.	string	Maximum length: 35							
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 17 0 Maximum value: 4294967295							
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference (default = enable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic transmit power adjustment.</td></tr><tr><td><i>disable</i></td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic transmit power adjustment.	<i>disable</i>	Disable automatic transmit power adjustment.			
Option	Description									
<i>enable</i>	Enable automatic transmit power adjustment.									
<i>disable</i>	Disable automatic transmit power adjustment.									

Parameter	Description	Type	Size	Default																												
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 10 0 Maximum value: 4294967295																													
auto-power-target	Target of automatic transmit power adjustment in dBm (-95 to -20, default = -70).	string	Maximum length: 7	-70																												
band	WiFi band that Radio 2 operates on.	option	-

	<table><tr><th>Option</th><th>Description</th></tr><tr><td>5g-full</td><td>Full 5G band.</td></tr><tr><td>5g-high</td><td>High 5G band.</td></tr><tr><td>5g-low</td><td>Low 5G band.</td></tr></table>	Option	Description	5g-full	Full 5G band.	5g-high	High 5G band.	5g-low	Low 5G band.																							
Option	Description																															
5g-full	Full 5G band.																															
5g-high	High 5G band.																															
5g-low	Low 5G band.																															

Parameter	Description	Type	Size	Default						
bandwidth-admission-control	Enable/disable WiFi multimedia (WMM) bandwidth admission control to optimize WiFi bandwidth use. A request to join the wireless network is only allowed if the access point has enough bandwidth to support it.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM bandwidth admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM bandwidth admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM bandwidth admission control.	<i>disable</i>	Disable WMM bandwidth admission control.			
Option	Description									
<i>enable</i>	Enable WMM bandwidth admission control.									
<i>disable</i>	Disable WMM bandwidth admission control.									
bandwidth-capacity	Maximum bandwidth capacity allowed (1 - 600000 Kbps, default = 2000).	integer	Minimum value: 2000 1 Maximum value: 600000							
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type (default = 100).	integer	Minimum value: 100 0 Maximum value: 65535							
bss-color	BSS color value for this 11ax radio (0 - 63, disable = 0, default = 0).	integer	Minimum value: 0 0 Maximum value: 63							
bss-color-mode	BSS color mode for this 11ax radio (default = auto).	option	-	auto						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically select BSS color value on AP.</td></tr><tr><td><i>static</i></td><td>Set BSS color value on this radio based on 'bss-color' CLI.</td></tr></table>	Option	Description	<i>auto</i>	Automatically select BSS color value on AP.	<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.			
Option	Description									
<i>auto</i>	Automatically select BSS color value on AP.									
<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.									
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM call admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM call admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM call admission control.	<i>disable</i>	Disable WMM call admission control.			
Option	Description									
<i>enable</i>	Enable WMM call admission control.									
<i>disable</i>	Disable WMM call admission control.									

Parameter	Description	Type	Size	Default														
call-capacity	Maximum number of Voice over WLAN (VoWLAN) phones supported by the radio (0 - 60, default = 10).	integer	Minimum value: 0 Maximum value: 60	10														
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3															
channel-bonding	Channel bandwidth: 320, 240, 160, 80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>320MHz</td><td>320 MHz channel width.</td></tr><tr><td>240MHz</td><td>240 MHz channel width.</td></tr><tr><td>160MHz</td><td>160 MHz channel width.</td></tr><tr><td>80MHz</td><td>80 MHz channel width.</td></tr><tr><td>40MHz</td><td>40 MHz channel width.</td></tr><tr><td>20MHz</td><td>20 MHz channel width.</td></tr></table>				Option	Description	320MHz	320 MHz channel width.	240MHz	240 MHz channel width.	160MHz	160 MHz channel width.	80MHz	80 MHz channel width.	40MHz	40 MHz channel width.	20MHz	20 MHz channel width.
Option	Description																	
320MHz	320 MHz channel width.																	
240MHz	240 MHz channel width.																	
160MHz	160 MHz channel width.																	
80MHz	80 MHz channel width.																	
40MHz	40 MHz channel width.																	
20MHz	20 MHz channel width.																	
channel-bonding-ext	Channel bandwidth extension: 320 MHz-1 and 320 MHz-2 (default = 320 MHz-2).	option	-	320MHz-2														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>320MHz-1</td><td>320 MHz channel with channel center frequency numbered 31, 95, and 159.</td></tr><tr><td>320MHz-2</td><td>320 MHz channel with channel center frequency numbered 63, 127, and 191.</td></tr></table>				Option	Description	320MHz-1	320 MHz channel with channel center frequency numbered 31, 95, and 159.	320MHz-2	320 MHz channel with channel center frequency numbered 63, 127, and 191.								
Option	Description																	
320MHz-1	320 MHz channel with channel center frequency numbered 31, 95, and 159.																	
320MHz-2	320 MHz channel with channel center frequency numbered 63, 127, and 191.																	
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable measuring channel utilization.</td></tr><tr><td>disable</td><td>Disable measuring channel utilization.</td></tr></table>				Option	Description	enable	Enable measuring channel utilization.	disable	Disable measuring channel utilization.								
Option	Description																	
enable	Enable measuring channel utilization.																	
disable	Disable measuring channel utilization.																	
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio (default = enable).	option	-	enable														

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>			Enable support for both HT20 and HT40 on the same radio.
	<i>disable</i>			Disable support for both HT20 and HT40 on the same radio.
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning (DARRP) to make sure the radio is always using the most optimal channel (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>			Enable distributed automatic radio resource provisioning.
	<i>disable</i>			Disable distributed automatic radio resource provisioning.
drma	Enable/disable dynamic radio mode assignment (DRMA) (default = disable).	option	-	disable
	Option Description			
	<i>disable</i>			Disable dynamic radio mode assignment (DRMA).
	<i>enable</i>			Enable dynamic radio mode assignment (DRMA).
drma-sensitivity	Network Coverage Factor (NCF) percentage required to consider a radio as redundant (default = low).	option	-	low
	Option Description			
	<i>low</i>			Consider a radio as redundant when its NCF is 100%.
	<i>medium</i>			Consider a radio as redundant when its NCF is 95%.
	<i>high</i>			Consider a radio as redundant when its NCF is 90%.
dtim	Delivery Traffic Indication Map (DTIM) period (1 - 255, default = 1). Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255	
frag-threshold	Maximum packet size that can be sent without fragmentation (800 - 2346 bytes, default = 2346).	integer	Minimum value: 800 Maximum value: 2346	
iperf-protocol	Iperf test protocol (default = "UDP").	option	-	udp

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>udp</td><td>UDP.</td></tr><tr><td>tcp</td><td>TCP.</td></tr></table>	Option	Description	udp	UDP.	tcp	TCP.											
	Option	Description																
	udp	UDP.																
tcp	TCP.																	
iperf-server-port	Iperf service port number.	integer	Minimum value: 5001 0 Maximum value: 65535															
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 0 Maximum value: 4294967295															
max-distance	Maximum expected distance between the AP and clients (0 - 54000 m, default = 0).	integer	Minimum value: 0 0 Maximum value: 54000															
mimo-mode	Configure radio MIMO mode (default = default).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Default radio MIMO mode.</td></tr><tr><td>1x1</td><td>1x1 radio MIMO mode.</td></tr><tr><td>2x2</td><td>2x2 radio MIMO mode.</td></tr><tr><td>3x3</td><td>3x3 radio MIMO mode.</td></tr><tr><td>4x4</td><td>4x4 radio MIMO mode.</td></tr><tr><td>8x8</td><td>8x8 radio MIMO mode.</td></tr></table>	Option	Description	default	Default radio MIMO mode.	1x1	1x1 radio MIMO mode.	2x2	2x2 radio MIMO mode.	3x3	3x3 radio MIMO mode.	4x4	4x4 radio MIMO mode.	8x8	8x8 radio MIMO mode.			
	Option	Description																
	default	Default radio MIMO mode.																
	1x1	1x1 radio MIMO mode.																
	2x2	2x2 radio MIMO mode.																
	3x3	3x3 radio MIMO mode.																
	4x4	4x4 radio MIMO mode.																
8x8	8x8 radio MIMO mode.																	
mode	Mode of radio 2. Radio 2 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disabled</td><td>Radio 2 is disabled.</td></tr><tr><td>ap</td><td>Radio 2 operates as an access point that allows WiFi clients to connect to your network.</td></tr><tr><td>monitor</td><td>Radio 2 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.</td></tr></table>	Option	Description	disabled	Radio 2 is disabled.	ap	Radio 2 operates as an access point that allows WiFi clients to connect to your network.	monitor	Radio 2 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.									
	Option	Description																
	disabled	Radio 2 is disabled.																
ap	Radio 2 operates as an access point that allows WiFi clients to connect to your network.																	
monitor	Radio 2 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.																	

Parameter	Description	Type	Size	Default																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sniffer</i></td><td>Radio 2 operates as a sniffer capturing WiFi frames on air.</td></tr><tr><td><i>sam</i></td><td>Radio 2 operates as a station that can connect to a neighboring AP for connectivity and health check.</td></tr></table>	Option	Description	<i>sniffer</i>	Radio 2 operates as a sniffer capturing WiFi frames on air.	<i>sam</i>	Radio 2 operates as a station that can connect to a neighboring AP for connectivity and health check.																	
	Option	Description																						
	<i>sniffer</i>	Radio 2 operates as a sniffer capturing WiFi frames on air.																						
<i>sam</i>	Radio 2 operates as a station that can connect to a neighboring AP for connectivity and health check.																							
optional-antenna	Optional antenna used on FAP (default = none).	option	-	none																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>custom</i></td><td>Customize optional antenna gain.</td></tr><tr><td><i>FANT-04ABGN-0606-O-N</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-1414-P-N</i></td><td>14 dBi(2.4GHz) and 14 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-8065-P-N</i></td><td>8 dBi(2.4GHz) and 6.5 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-O-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-P-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-10ACAX-1213-D-N</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr><tr><td><i>FANT-08ABGN-1213-D-R</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr></table>	Option	Description	<i>none</i>	None.	<i>custom</i>	Customize optional antenna gain.	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).	<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).			
	Option	Description																						
	<i>none</i>	None.																						
	<i>custom</i>	Customize optional antenna gain.																						
	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).																						
	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).																						
	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																						
<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																							
optional-antenna-gain	Optional antenna gain in dBi (0 to 20, default = 0).	string	Maximum length: 7	0																				
power-level	Radio EIRP power level as a percentage of the maximum EIRP power (0 - 100, default = 100).	integer	Minimum value: 0 Maximum value: 100	100																				

Parameter	Description	Type	Size	Default												
power-mode	Set radio effective isotropic radiated power (EIRP) in dBm or by a percentage of the maximum EIRP (default = percentage). This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.									
Option	Description															
<i>dBm</i>	Set radio EIRP power in dBm.															
<i>percentage</i>	Set radio EIRP power by percentage.															
power-value	Radio EIRP power in dBm (1 - 33, default = 27).	integer	Minimum value: 27 1 Maximum value: 33													
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tim</i></td><td>TIM bit for client in power save mode.</td></tr><tr><td><i>ac-vo</i></td><td>Use AC VO priority to send out packets in the power save queue.</td></tr><tr><td><i>no-obss-scan</i></td><td>Do not put OBSS scan IE into beacon and probe response frames.</td></tr><tr><td><i>no-11b-rate</i></td><td>Do not send frame using 11b data rate.</td></tr><tr><td><i>client-rate-follow</i></td><td>Adapt transmitting PHY rate with receiving PHY rate from a client.</td></tr></table>	Option	Description	<i>tim</i>	TIM bit for client in power save mode.	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.	<i>no-11b-rate</i>	Do not send frame using 11b data rate.	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.			
Option	Description															
<i>tim</i>	TIM bit for client in power save mode.															
<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.															
<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.															
<i>no-11b-rate</i>	Do not send frame using 11b data rate.															
<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.															
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rtscts</i></td><td>Enable 802.11g protection RTS/CTS mode.</td></tr><tr><td><i>ctsonly</i></td><td>Enable 802.11g protection CTS only mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11g protection mode.</td></tr></table>	Option	Description	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.	<i>disable</i>	Disable 802.11g protection mode.							
Option	Description															
<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.															
<i>ctsonly</i>	Enable 802.11g protection CTS only mode.															
<i>disable</i>	Disable 802.11g protection mode.															

Parameter	Description	Type	Size	Default								
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS (256 - 2346 bytes, default = 2346).	integer	Minimum value: 256 Maximum value: 2346	2346								
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00								
sam-ca-certificate	CA certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 79									
sam-captive-portal	Enable/disable Captive Portal Authentication (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Captive Portal Authentication.</td></tr><tr><td><i>disable</i></td><td>Disable Captive Portal Authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable Captive Portal Authentication.	<i>disable</i>	Disable Captive Portal Authentication.		
Option	Description											
<i>enable</i>	Enable Captive Portal Authentication.											
<i>disable</i>	Disable Captive Portal Authentication.											
sam-client-certificate	Client certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35									
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64									
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64									
sam-cwp-password	Password for captive portal authentication.	password	Not Specified									
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64									
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255									
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35									
sam-eap-method	Select WPA2/WPA3-ENTERPRISE EAP Method (default = PEAP).	option	-	peap								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>both</i></td><td>EAP PEAP and TLS. (Not applicable in FIPS mode)</td></tr><tr><td><i>tls</i></td><td>EAP TLS.</td></tr><tr><td><i>peap</i></td><td>EAP PEAP. (Not applicable in FIPS mode)</td></tr></table>				Option	Description	<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)	<i>tls</i>	EAP TLS.	<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)
Option	Description											
<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)											
<i>tls</i>	EAP TLS.											
<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)											

Parameter	Description	Type	Size	Default												
sam-password	Passphrase for WiFi network connection.	password	Not Specified													
sam-private-key	Private key for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35													
sam-private-key-password	Password for private key file for WPA2/WPA3-ENTERPRISE.	password	Not Specified													
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 60 Maximum value: 864000	0												
sam-security-type	Select WiFi network security type (default = "wpa-personal" for 2.4/5G radio, "wpa3-sae" for 6G radio).	option	-	wpa-personal												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>open</td><td>Open.</td></tr><tr><td>wpa-personal</td><td>WPA/WPA2 personal.</td></tr><tr><td>wpa-enterprise</td><td>WPA2/WPA3 enterprise.</td></tr><tr><td>wpa3-sae</td><td>WPA3 SAE.</td></tr><tr><td>owe</td><td>OWE.</td></tr></table>				Option	Description	open	Open.	wpa-personal	WPA/WPA2 personal.	wpa-enterprise	WPA2/WPA3 enterprise.	wpa3-sae	WPA3 SAE.	owe	OWE.
Option	Description															
open	Open.															
wpa-personal	WPA/WPA2 personal.															
wpa-enterprise	WPA2/WPA3 enterprise.															
wpa3-sae	WPA3 SAE.															
owe	OWE.															
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255													
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0												
sam-server-type	Select SAM server type (default = "IP").	option	-	ip												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ip</td><td>IPv4 address.</td></tr><tr><td>fqdn</td><td>Fully Qualified Domain Name address.</td></tr></table>				Option	Description	ip	IPv4 address.	fqdn	Fully Qualified Domain Name address.						
Option	Description															
ip	IPv4 address.															
fqdn	Fully Qualified Domain Name address.															
sam-ssid	SSID for WiFi network.	string	Maximum length: 32													
sam-test	Select SAM test type (default = "PING").	option	-	ping												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ping</td><td>PING test.</td></tr></table>				Option	Description	ping	PING test.								
Option	Description															
ping	PING test.															

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>iperf</i></td><td>IPERF test.</td></tr></table>	Option	Description	<i>iperf</i>	IPERF test.											
Option	Description															
<i>iperf</i>	IPERF test.															
sam-username	Username for WiFi network connection.	string	Maximum length: 35													
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Select the 400 ns short guard interval (Short GI).</td></tr><tr><td><i>disable</i></td><td>Select the 800 ns long guard interval (Long GI).</td></tr></table>	Option	Description	<i>enable</i>	Select the 400 ns short guard interval (Short GI).	<i>disable</i>	Select the 800 ns long guard interval (Long GI).									
Option	Description															
<i>enable</i>	Select the 400 ns short guard interval (Short GI).															
<i>disable</i>	Select the 800 ns long guard interval (Long GI).															
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable packet transmission optimization.</td></tr><tr><td><i>power-save</i></td><td>Tag client as operating in power save mode if excessive transmit retries occur.</td></tr><tr><td><i>aggr-limit</i></td><td>Set aggregation limit to a lower value when data rate is low.</td></tr><tr><td><i>retry-limit</i></td><td>Set software retry limit to a lower value when data rate is low.</td></tr><tr><td><i>send-bar</i></td><td>Limit transmission of BAR frames.</td></tr></table>	Option	Description	<i>disable</i>	Disable packet transmission optimization.	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.	<i>send-bar</i>	Limit transmission of BAR frames.			
Option	Description															
<i>disable</i>	Disable packet transmission optimization.															
<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.															
<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.															
<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.															
<i>send-bar</i>	Limit transmission of BAR frames.															
vap-all	Configure method for assigning SSIDs to this FortiAP (default = automatically assign tunnel SSIDs).	option	-	tunnel												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tunnel</i></td><td>Automatically select tunnel SSIDs.</td></tr><tr><td><i>bridge</i></td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td><i>manual</i></td><td>Manually select SSIDs.</td></tr></table>	Option	Description	<i>tunnel</i>	Automatically select tunnel SSIDs.	<i>bridge</i>	Automatically select local-bridging SSIDs.	<i>manual</i>	Manually select SSIDs.							
Option	Description															
<i>tunnel</i>	Automatically select tunnel SSIDs.															
<i>bridge</i>	Automatically select local-bridging SSIDs.															
<i>manual</i>	Manually select SSIDs.															
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35													

Parameter	Description	Type	Size	Default						
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35							
zero-wait-dfs	Enable/disable zero wait DFS on radio (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable zero wait DFS</td></tr><tr><td><i>disable</i></td><td>Disable zero wait DFS</td></tr></table>				Option	Description	<i>enable</i>	Enable zero wait DFS	<i>disable</i>	Disable zero wait DFS
Option	Description									
<i>enable</i>	Enable zero wait DFS									
<i>disable</i>	Disable zero wait DFS									

config radio-3

Parameter	Description	Type	Size	Default						
80211d	Enable/disable 802.11d countryie (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11d countryie.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11d countryie.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11d countryie.	<i>disable</i>	Disable 802.11d countryie.			
Option	Description									
<i>enable</i>	Enable 802.11d countryie.									
<i>disable</i>	Disable 802.11d countryie.									
80211mc	Enable/disable 802.11mc responder mode (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11mc responder mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11mc responder mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11mc responder mode.	<i>disable</i>	Disable 802.11mc responder mode.			
Option	Description									
<i>enable</i>	Enable 802.11mc responder mode.									
<i>disable</i>	Disable 802.11mc responder mode.									
airtime-fairness	Enable/disable airtime fairness (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable airtime fairness (ATF) support.</td></tr><tr><td><i>disable</i></td><td>Disable airtime fairness (ATF) support.</td></tr></table>	Option	Description	<i>enable</i>	Enable airtime fairness (ATF) support.	<i>disable</i>	Disable airtime fairness (ATF) support.			
Option	Description									
<i>enable</i>	Enable airtime fairness (ATF) support.									
<i>disable</i>	Disable airtime fairness (ATF) support.									
amsdu	Enable/disable 802.11n AMSDU support. AMSDU can improve performance if supported by your WiFi clients (default = enable).	option	-	enable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable AMSDU support.		
	<i>disable</i>	Disable AMSDU support.		
ap-sniffer-addr	MAC address to monitor.	mac-address	Not Specified	00:00:00:00:00:00
ap-sniffer-bufsize	Sniffer buffer size (1 - 32 MB, default = 16).	integer	Minimum value: 1 Maximum value: 32	16
ap-sniffer-chan	Channel on which to operate the sniffer (default = 6).	integer	Minimum value: 0 Maximum value: 4294967295	37
ap-sniffer-chan-width	Channel bandwidth for sniffer.	option	-	20MHz
	Option Description			
	<i>320MHz</i>	320 MHz channel width.		
	<i>240MHz</i>	240 MHz channel width.		
	<i>160MHz</i>	160 MHz channel width.		
	<i>80MHz</i>	80 MHz channel width.		
	<i>40MHz</i>	40 MHz channel width.		
	<i>20MHz</i>	20 MHz channel width.		
ap-sniffer-ctl	Enable/disable sniffer on WiFi control frame (default = enable).	option	-	enable
	Option Description			
	<i>enable</i>	Enable sniffer on WiFi control frame.		
	<i>disable</i>	Disable sniffer on WiFi control frame.		
ap-sniffer-data	Enable/disable sniffer on WiFi data frame (default = enable).	option	-	enable
	Option Description			
	<i>enable</i>	Enable sniffer on WiFi data frame		
	<i>disable</i>	Disable sniffer on WiFi data frame		

Parameter	Description	Type	Size	Default						
ap-sniffer-mgmt-beacon	Enable/disable sniffer on WiFi management Beacon frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management beacon frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management beacon frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management beacon frame.	<i>disable</i>	Disable sniffer on WiFi management beacon frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management beacon frame.									
<i>disable</i>	Disable sniffer on WiFi management beacon frame.									
ap-sniffer-mgmt-other	Enable/disable sniffer on WiFi management other frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management other frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management other frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management other frame.	<i>disable</i>	Disable sniffer on WiFi management other frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management other frame.									
<i>disable</i>	Disable sniffer on WiFi management other frame.									
ap-sniffer-mgmt-probe	Enable/disable sniffer on WiFi management probe frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr><tr><td><i>disable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management probe frame.	<i>disable</i>	Enable sniffer on WiFi management probe frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management probe frame.									
<i>disable</i>	Enable sniffer on WiFi management probe frame.									
arrp-profile	Distributed Automatic Radio Resource Provisioning (DARRP) profile name to assign to the radio.	string	Maximum length: 35							
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 17 0 Maximum value: 4294967295							
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference (default = enable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic transmit power adjustment.</td></tr><tr><td><i>disable</i></td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic transmit power adjustment.	<i>disable</i>	Disable automatic transmit power adjustment.			
Option	Description									
<i>enable</i>	Enable automatic transmit power adjustment.									
<i>disable</i>	Disable automatic transmit power adjustment.									

Parameter	Description	Type	Size	Default																												
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 10 0 Maximum value: 4294967295																													
auto-power-target	Target of automatic transmit power adjustment in dBm (-95 to -20, default = -70).	string	Maximum length: 7	-70																												
band	WiFi band that Radio 3 operates on.	option	-																													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>802.11a</td><td>802.11a.</td></tr><tr><td>802.11b</td><td>802.11b.</td></tr><tr><td>802.11g</td><td>802.11g.</td></tr><tr><td>802.11n-2G</td><td>802.11n (WiFi 4) at 2.4GHz.</td></tr><tr><td>802.11n-5G</td><td>802.11n (WiFi 4) at 5GHz.</td></tr><tr><td>802.11ac-2G</td><td>802.11ac (WiFi 5) at 2.4GHz.</td></tr><tr><td>802.11ac-5G</td><td>802.11ac (WiFi 5) at 5GHz.</td></tr><tr><td>802.11ax-2G</td><td>802.11ax (WiFi 6) at 2.4GHz.</td></tr><tr><td>802.11ax-5G</td><td>802.11ax (WiFi 6) at 5GHz.</td></tr><tr><td>802.11ax-6G</td><td>802.11ax (WiFi 6) at 6GHz.</td></tr><tr><td>802.11be-2G</td><td>802.11be (WiFi 7) at 2.4GHz.</td></tr><tr><td>802.11be-5G</td><td>802.11be (WiFi 7) at 5GHz.</td></tr><tr><td>802.11be-6G</td><td>802.11be (WiFi 7) at 6GHz.</td></tr></table>	Option	Description	802.11a	802.11a.	802.11b	802.11b.	802.11g	802.11g.	802.11n-2G	802.11n (WiFi 4) at 2.4GHz.	802.11n-5G	802.11n (WiFi 4) at 5GHz.	802.11ac-2G	802.11ac (WiFi 5) at 2.4GHz.	802.11ac-5G	802.11ac (WiFi 5) at 5GHz.	802.11ax-2G	802.11ax (WiFi 6) at 2.4GHz.	802.11ax-5G	802.11ax (WiFi 6) at 5GHz.	802.11ax-6G	802.11ax (WiFi 6) at 6GHz.	802.11be-2G	802.11be (WiFi 7) at 2.4GHz.	802.11be-5G	802.11be (WiFi 7) at 5GHz.	802.11be-6G	802.11be (WiFi 7) at 6GHz.			
Option	Description																															
802.11a	802.11a.																															
802.11b	802.11b.																															
802.11g	802.11g.																															
802.11n-2G	802.11n (WiFi 4) at 2.4GHz.																															
802.11n-5G	802.11n (WiFi 4) at 5GHz.																															
802.11ac-2G	802.11ac (WiFi 5) at 2.4GHz.																															
802.11ac-5G	802.11ac (WiFi 5) at 5GHz.																															
802.11ax-2G	802.11ax (WiFi 6) at 2.4GHz.

802.11be-6G	802.11be (WiFi 7) at 6GHz.																															
band-5g-type	WiFi 5G band type.	option	-	5g-full																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>5g-full</td><td>Full 5G band.</td></tr><tr><td>5g-high</td><td>High 5G band.</td></tr><tr><td>5g-low</td><td>Low 5G band.</td></tr></table>	Option	Description	5g-full	Full 5G band.	5g-high	High 5G band.	5g-low	Low 5G band.																							
Option	Description																															
5g-full	Full 5G band.																															
5g-high	High 5G band.																															
5g-low	Low 5G band.																															

Parameter	Description	Type	Size	Default						
bandwidth-admission-control	Enable/disable WiFi multimedia (WMM) bandwidth admission control to optimize WiFi bandwidth use. A request to join the wireless network is only allowed if the access point has enough bandwidth to support it.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM bandwidth admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM bandwidth admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM bandwidth admission control.	<i>disable</i>	Disable WMM bandwidth admission control.			
Option	Description									
<i>enable</i>	Enable WMM bandwidth admission control.									
<i>disable</i>	Disable WMM bandwidth admission control.									
bandwidth-capacity	Maximum bandwidth capacity allowed (1 - 600000 Kbps, default = 2000).	integer	Minimum value: 2000 1 Maximum value: 600000							
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type (default = 100).	integer	Minimum value: 100 0 Maximum value: 65535							
bss-color	BSS color value for this 11ax radio (0 - 63, disable = 0, default = 0).	integer	Minimum value: 0 0 Maximum value: 63							
bss-color-mode	BSS color mode for this 11ax radio (default = auto).	option	-	auto						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically select BSS color value on AP.</td></tr><tr><td><i>static</i></td><td>Set BSS color value on this radio based on 'bss-color' CLI.</td></tr></table>	Option	Description	<i>auto</i>	Automatically select BSS color value on AP.	<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.			
Option	Description									
<i>auto</i>	Automatically select BSS color value on AP.									
<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.									
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM call admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM call admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM call admission control.	<i>disable</i>	Disable WMM call admission control.			
Option	Description									
<i>enable</i>	Enable WMM call admission control.									
<i>disable</i>	Disable WMM call admission control.									

Parameter	Description	Type	Size	Default														
call-capacity	Maximum number of Voice over WLAN (VoWLAN) phones supported by the radio (0 - 60, default = 10).	integer	Minimum value: 0 Maximum value: 60	10														
channel <chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3															
channel-bonding	Channel bandwidth: 320, 240, 160, 80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>320MHz</td><td>320 MHz channel width.</td></tr><tr><td>240MHz</td><td>240 MHz channel width.</td></tr><tr><td>160MHz</td><td>160 MHz channel width.</td></tr><tr><td>80MHz</td><td>80 MHz channel width.</td></tr><tr><td>40MHz</td><td>40 MHz channel width.</td></tr><tr><td>20MHz</td><td>20 MHz channel width.</td></tr></table>				Option	Description	320MHz	320 MHz channel width.	240MHz	240 MHz channel width.	160MHz	160 MHz channel width.	80MHz	80 MHz channel width.	40MHz	40 MHz channel width.	20MHz	20 MHz channel width.
Option	Description																	
320MHz	320 MHz channel width.																	
240MHz	240 MHz channel width.																	
160MHz	160 MHz channel width.																	
80MHz	80 MHz channel width.																	
40MHz	40 MHz channel width.																	
20MHz	20 MHz channel width.																	
channel-bonding-ext	Channel bandwidth extension: 320 MHz-1 and 320 MHz-2 (default = 320 MHz-2).	option	-	320MHz-2														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>320MHz-1</td><td>320 MHz channel with channel center frequency numbered 31, 95, and 159.</td></tr><tr><td>320MHz-2</td><td>320 MHz channel with channel center frequency numbered 63, 127, and 191.</td></tr></table>				Option	Description	320MHz-1	320 MHz channel with channel center frequency numbered 31, 95, and 159.	320MHz-2	320 MHz channel with channel center frequency numbered 63, 127, and 191.								
Option	Description																	
320MHz-1	320 MHz channel with channel center frequency numbered 31, 95, and 159.																	
320MHz-2	320 MHz channel with channel center frequency numbered 63, 127, and 191.																	
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable measuring channel utilization.</td></tr><tr><td>disable</td><td>Disable measuring channel utilization.</td></tr></table>				Option	Description	enable	Enable measuring channel utilization.	disable	Disable measuring channel utilization.								
Option	Description																	
enable	Enable measuring channel utilization.																	
disable	Disable measuring channel utilization.																	
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio (default = enable).	option	-	enable														

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>			Enable support for both HT20 and HT40 on the same radio.
	<i>disable</i>			Disable support for both HT20 and HT40 on the same radio.
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning (DARRP) to make sure the radio is always using the most optimal channel (default = disable).	option	-	disable
	Option Description			
	<i>enable</i>			Enable distributed automatic radio resource provisioning.
	<i>disable</i>			Disable distributed automatic radio resource provisioning.
drma	Enable/disable dynamic radio mode assignment (DRMA) (default = disable).	option	-	disable
	Option Description			
	<i>disable</i>			Disable dynamic radio mode assignment (DRMA).
	<i>enable</i>			Enable dynamic radio mode assignment (DRMA).
drma-sensitivity	Network Coverage Factor (NCF) percentage required to consider a radio as redundant (default = low).	option	-	low
	Option Description			
	<i>low</i>			Consider a radio as redundant when its NCF is 100%.
	<i>medium</i>			Consider a radio as redundant when its NCF is 95%.
	<i>high</i>			Consider a radio as redundant when its NCF is 90%.
dtim	Delivery Traffic Indication Map (DTIM) period (1 - 255, default = 1). Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255	
frag-threshold	Maximum packet size that can be sent without fragmentation (800 - 2346 bytes, default = 2346).	integer	Minimum value: 800 Maximum value: 2346	
iperf-protocol	Iperf test protocol (default = "UDP").	option	-	udp

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>udp</td><td>UDP.</td></tr><tr><td>tcp</td><td>TCP.</td></tr></table>	Option	Description	udp	UDP.	tcp	TCP.											
	Option	Description																
	udp	UDP.																
tcp	TCP.																	
iperf-server-port	Iperf service port number.	integer	Minimum value: 5001 0 Maximum value: 65535															
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 0 Maximum value: 4294967295															
max-distance	Maximum expected distance between the AP and clients (0 - 54000 m, default = 0).	integer	Minimum value: 0 0 Maximum value: 54000															
mimo-mode	Configure radio MIMO mode (default = default).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Default radio MIMO mode.</td></tr><tr><td>1x1</td><td>1x1 radio MIMO mode.</td></tr><tr><td>2x2</td><td>2x2 radio MIMO mode.</td></tr><tr><td>3x3</td><td>3x3 radio MIMO mode.</td></tr><tr><td>4x4</td><td>4x4 radio MIMO mode.</td></tr><tr><td>8x8</td><td>8x8 radio MIMO mode.</td></tr></table>	Option	Description	default	Default radio MIMO mode.	1x1	1x1 radio MIMO mode.	2x2	2x2 radio MIMO mode.	3x3	3x3 radio MIMO mode.	4x4	4x4 radio MIMO mode.	8x8	8x8 radio MIMO mode.			
	Option	Description																
	default	Default radio MIMO mode.																
	1x1	1x1 radio MIMO mode.																
	2x2	2x2 radio MIMO mode.																
	3x3	3x3 radio MIMO mode.																
	4x4	4x4 radio MIMO mode.																
8x8	8x8 radio MIMO mode.																	
mode	Mode of radio 3. Radio 3 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disabled</td><td>Radio 3 is disabled.</td></tr><tr><td>ap</td><td>Radio 3 operates as an access point that allows WiFi clients to connect to your network.</td></tr><tr><td>monitor</td><td>Radio 3 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.</td></tr></table>	Option	Description	disabled	Radio 3 is disabled.	ap	Radio 3 operates as an access point that allows WiFi clients to connect to your network.	monitor	Radio 3 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.									
	Option	Description																
	disabled	Radio 3 is disabled.																
ap	Radio 3 operates as an access point that allows WiFi clients to connect to your network.																	
monitor	Radio 3 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.																	

Parameter	Description	Type	Size	Default																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sniffer</i></td><td>Radio 3 operates as a sniffer capturing WiFi frames on air.</td></tr><tr><td><i>sam</i></td><td>Radio 3 operates as a station that can connect to a neighboring AP for connectivity and health check.</td></tr></table>	Option	Description	<i>sniffer</i>	Radio 3 operates as a sniffer capturing WiFi frames on air.	<i>sam</i>	Radio 3 operates as a station that can connect to a neighboring AP for connectivity and health check.																	
	Option	Description																						
	<i>sniffer</i>	Radio 3 operates as a sniffer capturing WiFi frames on air.																						
<i>sam</i>	Radio 3 operates as a station that can connect to a neighboring AP for connectivity and health check.																							
optional-antenna	Optional antenna used on FAP (default = none).	option	-	none																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>custom</i></td><td>Customize optional antenna gain.</td></tr><tr><td><i>FANT-04ABGN-0606-O-N</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-1414-P-N</i></td><td>14 dBi(2.4GHz) and 14 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-8065-P-N</i></td><td>8 dBi(2.4GHz) and 6.5 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-O-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-P-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-10ACAX-1213-D-N</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr><tr><td><i>FANT-08ABGN-1213-D-R</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr></table>	Option	Description	<i>none</i>	None.	<i>custom</i>	Customize optional antenna gain.	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).	<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).			
	Option	Description																						
	<i>none</i>	None.																						
	<i>custom</i>	Customize optional antenna gain.																						
	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).																						
	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).																						
	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																						
<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																							
optional-antenna-gain	Optional antenna gain in dBi (0 to 20, default = 0).	string	Maximum length: 7	0																				
power-level	Radio EIRP power level as a percentage of the maximum EIRP power (0 - 100, default = 100).	integer	Minimum value: 0 Maximum value: 100	100																				

Parameter	Description	Type	Size	Default												
power-mode	Set radio effective isotropic radiated power (EIRP) in dBm or by a percentage of the maximum EIRP (default = percentage). This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.									
Option	Description															
<i>dBm</i>	Set radio EIRP power in dBm.															
<i>percentage</i>	Set radio EIRP power by percentage.															
power-value	Radio EIRP power in dBm (1 - 33, default = 27).	integer	Minimum value: 27 1 Maximum value: 33													
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tim</i></td><td>TIM bit for client in power save mode.</td></tr><tr><td><i>ac-vo</i></td><td>Use AC VO priority to send out packets in the power save queue.</td></tr><tr><td><i>no-obss-scan</i></td><td>Do not put OBSS scan IE into beacon and probe response frames.</td></tr><tr><td><i>no-11b-rate</i></td><td>Do not send frame using 11b data rate.</td></tr><tr><td><i>client-rate-follow</i></td><td>Adapt transmitting PHY rate with receiving PHY rate from a client.</td></tr></table>	Option	Description	<i>tim</i>	TIM bit for client in power save mode.	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.	<i>no-11b-rate</i>	Do not send frame using 11b data rate.	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.			
Option	Description															
<i>tim</i>	TIM bit for client in power save mode.															
<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.															
<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.															
<i>no-11b-rate</i>	Do not send frame using 11b data rate.															
<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.															
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rtscts</i></td><td>Enable 802.11g protection RTS/CTS mode.</td></tr><tr><td><i>ctsonly</i></td><td>Enable 802.11g protection CTS only mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11g protection mode.</td></tr></table>	Option	Description	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.	<i>disable</i>	Disable 802.11g protection mode.							
Option	Description															
<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.															
<i>ctsonly</i>	Enable 802.11g protection CTS only mode.															
<i>disable</i>	Disable 802.11g protection mode.															

Parameter	Description	Type	Size	Default								
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS (256 - 2346 bytes, default = 2346).	integer	Minimum value: 256 Maximum value: 2346	2346								
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00								
sam-ca-certificate	CA certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 79									
sam-captive-portal	Enable/disable Captive Portal Authentication (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Captive Portal Authentication.</td></tr><tr><td><i>disable</i></td><td>Disable Captive Portal Authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable Captive Portal Authentication.	<i>disable</i>	Disable Captive Portal Authentication.		
Option	Description											
<i>enable</i>	Enable Captive Portal Authentication.											
<i>disable</i>	Disable Captive Portal Authentication.											
sam-client-certificate	Client certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35									
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64									
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64									
sam-cwp-password	Password for captive portal authentication.	password	Not Specified									
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64									
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255									
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35									
sam-eap-method	Select WPA2/WPA3-ENTERPRISE EAP Method (default = PEAP).	option	-	peap								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>both</i></td><td>EAP PEAP and TLS. (Not applicable in FIPS mode)</td></tr><tr><td><i>tls</i></td><td>EAP TLS.</td></tr><tr><td><i>peap</i></td><td>EAP PEAP. (Not applicable in FIPS mode)</td></tr></table>				Option	Description	<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)	<i>tls</i>	EAP TLS.	<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)
Option	Description											
<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)											
<i>tls</i>	EAP TLS.											
<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)											

Parameter	Description	Type	Size	Default												
sam-password	Passphrase for WiFi network connection.	password	Not Specified													
sam-private-key	Private key for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35													
sam-private-key-password	Password for private key file for WPA2/WPA3-ENTERPRISE.	password	Not Specified													
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 60 Maximum value: 864000	0												
sam-security-type	Select WiFi network security type (default = "wpa-personal" for 2.4/5G radio, "wpa3-sae" for 6G radio).	option	-	wpa-personal												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>open</td><td>Open.</td></tr><tr><td>wpa-personal</td><td>WPA/WPA2 personal.</td></tr><tr><td>wpa-enterprise</td><td>WPA2/WPA3 enterprise.</td></tr><tr><td>wpa3-sae</td><td>WPA3 SAE.</td></tr><tr><td>owe</td><td>OWE.</td></tr></table>				Option	Description	open	Open.	wpa-personal	WPA/WPA2 personal.	wpa-enterprise	WPA2/WPA3 enterprise.	wpa3-sae	WPA3 SAE.	owe	OWE.
Option	Description															
open	Open.															
wpa-personal	WPA/WPA2 personal.															
wpa-enterprise	WPA2/WPA3 enterprise.															
wpa3-sae	WPA3 SAE.															
owe	OWE.															
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255													
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0												
sam-server-type	Select SAM server type (default = "IP").	option	-	ip												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ip</td><td>IPv4 address.</td></tr><tr><td>fqdn</td><td>Fully Qualified Domain Name address.</td></tr></table>				Option	Description	ip	IPv4 address.	fqdn	Fully Qualified Domain Name address.						
Option	Description															
ip	IPv4 address.															
fqdn	Fully Qualified Domain Name address.															
sam-ssid	SSID for WiFi network.	string	Maximum length: 32													
sam-test	Select SAM test type (default = "PING").	option	-	ping												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ping</td><td>PING test.</td></tr></table>				Option	Description	ping	PING test.								
Option	Description															
ping	PING test.															

Parameter	Description	Type	Size	Default
	Option Description			
	<i>iperf</i>	IPERF test.		
sam-username	Username for WiFi network connection.	string	Maximum length: 35	
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable
	Option Description			
	<i>enable</i>	Select the 400 ns short guard interval (Short GI).		
	<i>disable</i>	Select the 800 ns long guard interval (Long GI).		
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar
	Option Description			
	<i>disable</i>	Disable packet transmission optimization.		
	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.		
	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.		
	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.		
	<i>send-bar</i>	Limit transmission of BAR frames.		
vap-all	Configure method for assigning SSIDs to this FortiAP (default = automatically assign tunnel SSIDs).	option	-	tunnel
	Option Description			
	<i>tunnel</i>	Automatically select tunnel SSIDs.		
	<i>bridge</i>	Automatically select local-bridging SSIDs.		
	<i>manual</i>	Manually select SSIDs.		
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35	

Parameter	Description	Type	Size	Default						
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35							
zero-wait-dfs	Enable/disable zero wait DFS on radio (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable zero wait DFS</td></tr><tr><td><i>disable</i></td><td>Disable zero wait DFS</td></tr></table>				Option	Description	<i>enable</i>	Enable zero wait DFS	<i>disable</i>	Disable zero wait DFS
Option	Description									
<i>enable</i>	Enable zero wait DFS									
<i>disable</i>	Disable zero wait DFS									

config radio-4

Parameter	Description	Type	Size	Default						
80211d	Enable/disable 802.11d countryie (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11d countryie.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11d countryie.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11d countryie.	<i>disable</i>	Disable 802.11d countryie.			
Option	Description									
<i>enable</i>	Enable 802.11d countryie.									
<i>disable</i>	Disable 802.11d countryie.									
80211mc	Enable/disable 802.11mc responder mode (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable 802.11mc responder mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11mc responder mode.</td></tr></table>	Option	Description	<i>enable</i>	Enable 802.11mc responder mode.	<i>disable</i>	Disable 802.11mc responder mode.			
Option	Description									
<i>enable</i>	Enable 802.11mc responder mode.									
<i>disable</i>	Disable 802.11mc responder mode.									
airtime-fairness	Enable/disable airtime fairness (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable airtime fairness (ATF) support.</td></tr><tr><td><i>disable</i></td><td>Disable airtime fairness (ATF) support.</td></tr></table>	Option	Description	<i>enable</i>	Enable airtime fairness (ATF) support.	<i>disable</i>	Disable airtime fairness (ATF) support.			
Option	Description									
<i>enable</i>	Enable airtime fairness (ATF) support.									
<i>disable</i>	Disable airtime fairness (ATF) support.									
amsdu	Enable/disable 802.11n AMSDU support. AMSDU can improve performance if supported by your WiFi clients (default = enable).	option	-	enable						

Parameter	Description	Type	Size	Default
	Option Description			
	<i>enable</i>	Enable AMSDU support.		
	<i>disable</i>	Disable AMSDU support.		
ap-sniffer-addr	MAC address to monitor.	mac-address	Not Specified	00:00:00:00:00:00
ap-sniffer-bufsize	Sniffer buffer size (1 - 32 MB, default = 16).	integer	Minimum value: 1 Maximum value: 32	16
ap-sniffer-chan	Channel on which to operate the sniffer (default = 6).	integer	Minimum value: 0 Maximum value: 4294967295	6
ap-sniffer-chan-width	Channel bandwidth for sniffer.	option	-	20MHz
	Option Description			
	<i>320MHz</i>	320 MHz channel width.		
	<i>240MHz</i>	240 MHz channel width.		
	<i>160MHz</i>	160 MHz channel width.		
	<i>80MHz</i>	80 MHz channel width.		
	<i>40MHz</i>	40 MHz channel width.		
	<i>20MHz</i>	20 MHz channel width.		
ap-sniffer-ctl	Enable/disable sniffer on WiFi control frame (default = enable).	option	-	enable
	Option Description			
	<i>enable</i>	Enable sniffer on WiFi control frame.		
	<i>disable</i>	Disable sniffer on WiFi control frame.		
ap-sniffer-data	Enable/disable sniffer on WiFi data frame (default = enable).	option	-	enable
	Option Description			
	<i>enable</i>	Enable sniffer on WiFi data frame		
	<i>disable</i>	Disable sniffer on WiFi data frame		

Parameter	Description	Type	Size	Default						
ap-sniffer-mgmt-beacon	Enable/disable sniffer on WiFi management Beacon frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management beacon frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management beacon frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management beacon frame.	<i>disable</i>	Disable sniffer on WiFi management beacon frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management beacon frame.									
<i>disable</i>	Disable sniffer on WiFi management beacon frame.									
ap-sniffer-mgmt-other	Enable/disable sniffer on WiFi management other frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management other frame.</td></tr><tr><td><i>disable</i></td><td>Disable sniffer on WiFi management other frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management other frame.	<i>disable</i>	Disable sniffer on WiFi management other frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management other frame.									
<i>disable</i>	Disable sniffer on WiFi management other frame.									
ap-sniffer-mgmt-probe	Enable/disable sniffer on WiFi management probe frames (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr><tr><td><i>disable</i></td><td>Enable sniffer on WiFi management probe frame.</td></tr></table>	Option	Description	<i>enable</i>	Enable sniffer on WiFi management probe frame.	<i>disable</i>	Enable sniffer on WiFi management probe frame.			
Option	Description									
<i>enable</i>	Enable sniffer on WiFi management probe frame.									
<i>disable</i>	Enable sniffer on WiFi management probe frame.									
arrp-profile	Distributed Automatic Radio Resource Provisioning (DARRP) profile name to assign to the radio.	string	Maximum length: 35							
auto-power-high	The upper bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 17 0 Maximum value: 4294967295							
auto-power-level	Enable/disable automatic power-level adjustment to prevent co-channel interference (default = enable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable automatic transmit power adjustment.</td></tr><tr><td><i>disable</i></td><td>Disable automatic transmit power adjustment.</td></tr></table>	Option	Description	<i>enable</i>	Enable automatic transmit power adjustment.	<i>disable</i>	Disable automatic transmit power adjustment.			
Option	Description									
<i>enable</i>	Enable automatic transmit power adjustment.									
<i>disable</i>	Disable automatic transmit power adjustment.									

Parameter	Description	Type	Size	Default																												
auto-power-low	The lower bound of automatic transmit power adjustment in dBm (the actual range of transmit power depends on the AP platform type).	integer	Minimum value: 10 0 Maximum value: 4294967295																													
auto-power-target	Target of automatic transmit power adjustment in dBm (-95 to -20, default = -70).	string	Maximum length: 7	-70																												
band	WiFi band that Radio 4 operates on.	option	-																													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>802.11a</td><td>802.11a.</td></tr><tr><td>802.11b</td><td>802.11b.</td></tr><tr><td>802.11g</td><td>802.11g.</td></tr><tr><td>802.11n-2G</td><td>802.11n (WiFi 4) at 2.4GHz.</td></tr><tr><td>802.11n-5G</td><td>802.11n (WiFi 4) at 5GHz.</td></tr><tr><td>802.11ac-2G</td><td>802.11ac (WiFi 5) at 2.4GHz.</td></tr><tr><td>802.11ac-5G</td><td>802.11ac (WiFi 5) at 5GHz.</td></tr><tr><td>802.11ax-2G</td><td>802.11ax (WiFi 6) at 2.4GHz.</td></tr><tr><td>802.11ax-5G</td><td>802.11ax (WiFi 6) at 5GHz.</td></tr><tr><td>802.11ax-6G</td><td>802.11ax (WiFi 6) at 6GHz.</td></tr><tr><td>802.11be-2G</td><td>802.11be (WiFi 7) at 2.4GHz.</td></tr><tr><td>802.11be-5G</td><td>802.11be (WiFi 7) at 5GHz.</td></tr><tr><td>802.11be-6G</td><td>802.11be (WiFi 7) at 6GHz.</td></tr></table>	Option	Description	802.11a	802.11a.	802.11b	802.11b.	802.11g	802.11g.	802.11n-2G	802.11n (WiFi 4) at 2.4GHz.	802.11n-5G	802.11n (WiFi 4) at 5GHz.	802.11ac-2G	802.11ac (WiFi 5) at 2.4GHz.	802.11ac-5G	802.11ac (WiFi 5) at 5GHz.	802.11ax-2G	802.11ax (WiFi 6) at 2.4GHz.	802.11ax-5G	802.11ax (WiFi 6) at 5GHz.	802.11ax-6G	802.11ax (WiFi 6) at 6GHz.	802.11be-2G	802.11be (WiFi 7) at 2.4GHz.	802.11be-5G	802.11be (WiFi 7) at 5GHz.	802.11be-6G	802.11be (WiFi 7) at 6GHz.			
Option	Description																															
802.11a	802.11a.																															
802.11b	802.11b.																															
802.11g	802.11g.																															
802.11n-2G	802.11n (WiFi 4) at 2.4GHz.																															
802.11n-5G	802.11n (WiFi 4) at 5GHz.																															
802.11ac-2G	802.11ac (WiFi 5) at 2.4GHz.																															
802.11ac-5G	802.11ac (WiFi 5) at 5GHz.																															
802.11ax-2G	802.11ax (WiFi 6) at 2.4GHz.

802.11be-5G	802.11be (WiFi 7) at 5GHz.																															
802.11be-6G	802.11be (WiFi 7) at 6GHz.																															
band-5g-type	WiFi 5G band type.	option	-	5g-full																												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>5g-full</td><td>Full 5G band.</td></tr><tr><td>5g-high</td><td>High 5G band.</td></tr><tr><td>5g-low</td><td>Low 5G band.</td></tr></table>	Option	Description	5g-full	Full 5G band.	5g-high	High 5G band.	5g-low	Low 5G band.																							
Option	Description																															
5g-full	Full 5G band.																															
5g-high	High 5G band.																															
5g-low	Low 5G band.																															

Parameter	Description	Type	Size	Default						
bandwidth-admission-control	Enable/disable WiFi multimedia (WMM) bandwidth admission control to optimize WiFi bandwidth use. A request to join the wireless network is only allowed if the access point has enough bandwidth to support it.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM bandwidth admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM bandwidth admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM bandwidth admission control.	<i>disable</i>	Disable WMM bandwidth admission control.			
Option	Description									
<i>enable</i>	Enable WMM bandwidth admission control.									
<i>disable</i>	Disable WMM bandwidth admission control.									
bandwidth-capacity	Maximum bandwidth capacity allowed (1 - 600000 Kbps, default = 2000).	integer	Minimum value: 2000 1 Maximum value: 600000							
beacon-interval	Beacon interval. The time between beacon frames in milliseconds. Actual range of beacon interval depends on the AP platform type (default = 100).	integer	Minimum value: 100 0 Maximum value: 65535							
bss-color	BSS color value for this 11ax radio (0 - 63, disable = 0, default = 0).	integer	Minimum value: 0 0 Maximum value: 63							
bss-color-mode	BSS color mode for this 11ax radio (default = auto).	option	-	auto						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>auto</i></td><td>Automatically select BSS color value on AP.</td></tr><tr><td><i>static</i></td><td>Set BSS color value on this radio based on 'bss-color' CLI.</td></tr></table>	Option	Description	<i>auto</i>	Automatically select BSS color value on AP.	<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.			
Option	Description									
<i>auto</i>	Automatically select BSS color value on AP.									
<i>static</i>	Set BSS color value on this radio based on 'bss-color' CLI.									
call-admission-control	Enable/disable WiFi multimedia (WMM) call admission control to optimize WiFi bandwidth use for VoIP calls. New VoIP calls are only accepted if there is enough bandwidth available to support them.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable WMM call admission control.</td></tr><tr><td><i>disable</i></td><td>Disable WMM call admission control.</td></tr></table>	Option	Description	<i>enable</i>	Enable WMM call admission control.	<i>disable</i>	Disable WMM call admission control.			
Option	Description									
<i>enable</i>	Enable WMM call admission control.									
<i>disable</i>	Disable WMM call admission control.									

Parameter	Description	Type	Size	Default														
call-capacity	Maximum number of Voice over WLAN (VoWLAN) phones supported by the radio (0 - 60, default = 10).	integer	Minimum value: 0 Maximum value: 60	10														
channel<chan>	Selected list of wireless radio channels. Channel number.	string	Maximum length: 3															
channel-bonding	Channel bandwidth: 320, 240, 160, 80, 40, or 20MHz. Channels may use both 20 and 40 by enabling coexistence.	option	-	20MHz														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>320MHz</td><td>320 MHz channel width.</td></tr><tr><td>240MHz</td><td>240 MHz channel width.</td></tr><tr><td>160MHz</td><td>160 MHz channel width.</td></tr><tr><td>80MHz</td><td>80 MHz channel width.</td></tr><tr><td>40MHz</td><td>40 MHz channel width.</td></tr><tr><td>20MHz</td><td>20 MHz channel width.</td></tr></table>	Option	Description	320MHz	320 MHz channel width.	240MHz	240 MHz channel width.	160MHz	160 MHz channel width.	80MHz	80 MHz channel width.	40MHz	40 MHz channel width.	20MHz	20 MHz channel width.			
Option	Description																	
320MHz	320 MHz channel width.																	
240MHz	240 MHz channel width.																	
160MHz	160 MHz channel width.																	
80MHz	80 MHz channel width.																	
40MHz	40 MHz channel width.																	
20MHz	20 MHz channel width.																	
channel-bonding-ext	Channel bandwidth extension: 320 MHz-1 and 320 MHz-2 (default = 320 MHz-2).	option	-	320MHz-2														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>320MHz-1</td><td>320 MHz channel with channel center frequency numbered 31, 95, and 159.</td></tr><tr><td>320MHz-2</td><td>320 MHz channel with channel center frequency numbered 63, 127, and 191.</td></tr></table>	Option	Description	320MHz-1	320 MHz channel with channel center frequency numbered 31, 95, and 159.	320MHz-2	320 MHz channel with channel center frequency numbered 63, 127, and 191.											
Option	Description																	
320MHz-1	320 MHz channel with channel center frequency numbered 31, 95, and 159.																	
320MHz-2	320 MHz channel with channel center frequency numbered 63, 127, and 191.																	
channel-utilization	Enable/disable measuring channel utilization.	option	-	enable														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable measuring channel utilization.</td></tr><tr><td>disable</td><td>Disable measuring channel utilization.</td></tr></table>	Option	Description	enable	Enable measuring channel utilization.	disable	Disable measuring channel utilization.											
Option	Description																	
enable	Enable measuring channel utilization.																	
disable	Disable measuring channel utilization.																	
coexistence	Enable/disable allowing both HT20 and HT40 on the same radio (default = enable).	option	-	enable														

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable support for both HT20 and HT40 on the same radio.</td></tr><tr><td><i>disable</i></td><td>Disable support for both HT20 and HT40 on the same radio.</td></tr></table>	Option	Description	<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.	<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.					
Option	Description											
<i>enable</i>	Enable support for both HT20 and HT40 on the same radio.											
<i>disable</i>	Disable support for both HT20 and HT40 on the same radio.											
darrp	Enable/disable Distributed Automatic Radio Resource Provisioning (DARRP) to make sure the radio is always using the most optimal channel (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable distributed automatic radio resource provisioning.</td></tr><tr><td><i>disable</i></td><td>Disable distributed automatic radio resource provisioning.</td></tr></table>	Option	Description	<i>enable</i>	Enable distributed automatic radio resource provisioning.	<i>disable</i>	Disable distributed automatic radio resource provisioning.					
Option	Description											
<i>enable</i>	Enable distributed automatic radio resource provisioning.											
<i>disable</i>	Disable distributed automatic radio resource provisioning.											
drma	Enable/disable dynamic radio mode assignment (DRMA) (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable dynamic radio mode assignment (DRMA).</td></tr><tr><td><i>enable</i></td><td>Enable dynamic radio mode assignment (DRMA).</td></tr></table>	Option	Description	<i>disable</i>	Disable dynamic radio mode assignment (DRMA).	<i>enable</i>	Enable dynamic radio mode assignment (DRMA).					
Option	Description											
<i>disable</i>	Disable dynamic radio mode assignment (DRMA).											
<i>enable</i>	Enable dynamic radio mode assignment (DRMA).											
drma-sensitivity	Network Coverage Factor (NCF) percentage required to consider a radio as redundant (default = low).	option	-	low								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>low</i></td><td>Consider a radio as redundant when its NCF is 100%.</td></tr><tr><td><i>medium</i></td><td>Consider a radio as redundant when its NCF is 95%.</td></tr><tr><td><i>high</i></td><td>Consider a radio as redundant when its NCF is 90%.</td></tr></table>	Option	Description	<i>low</i>	Consider a radio as redundant when its NCF is 100%.	<i>medium</i>	Consider a radio as redundant when its NCF is 95%.	<i>high</i>	Consider a radio as redundant when its NCF is 90%.			
Option	Description											
<i>low</i>	Consider a radio as redundant when its NCF is 100%.											
<i>medium</i>	Consider a radio as redundant when its NCF is 95%.											
<i>high</i>	Consider a radio as redundant when its NCF is 90%.											
dtim	Delivery Traffic Indication Map (DTIM) period (1 - 255, default = 1). Set higher to save battery life of WiFi client in power-save mode.	integer	Minimum value: 1 Maximum value: 255									
frag-threshold	Maximum packet size that can be sent without fragmentation (800 - 2346 bytes, default = 2346).	integer	Minimum value: 800 Maximum value: 2346	2346								
iperf-protocol	Iperf test protocol (default = "UDP").	option	-	udp								

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>udp</td><td>UDP.</td></tr><tr><td>tcp</td><td>TCP.</td></tr></table>	Option	Description	udp	UDP.	tcp	TCP.											
	Option	Description																
	udp	UDP.																
tcp	TCP.																	
iperf-server-port	Iperf service port number.	integer	Minimum value: 5001 0 Maximum value: 65535															
max-clients	Maximum number of stations (STAs) or WiFi clients supported by the radio. Range depends on the hardware.	integer	Minimum value: 0 0 Maximum value: 4294967295															
max-distance	Maximum expected distance between the AP and clients (0 - 54000 m, default = 0).	integer	Minimum value: 0 0 Maximum value: 54000															
mimo-mode	Configure radio MIMO mode (default = default).	option	-	default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>default</td><td>Default radio MIMO mode.</td></tr><tr><td>1x1</td><td>1x1 radio MIMO mode.</td></tr><tr><td>2x2</td><td>2x2 radio MIMO mode.</td></tr><tr><td>3x3</td><td>3x3 radio MIMO mode.</td></tr><tr><td>4x4</td><td>4x4 radio MIMO mode.</td></tr><tr><td>8x8</td><td>8x8 radio MIMO mode.</td></tr></table>	Option	Description	default	Default radio MIMO mode.	1x1	1x1 radio MIMO mode.	2x2	2x2 radio MIMO mode.	3x3	3x3 radio MIMO mode.	4x4	4x4 radio MIMO mode.	8x8	8x8 radio MIMO mode.			
	Option	Description																
	default	Default radio MIMO mode.																
	1x1	1x1 radio MIMO mode.																
	2x2	2x2 radio MIMO mode.																
	3x3	3x3 radio MIMO mode.																
	4x4	4x4 radio MIMO mode.																
8x8	8x8 radio MIMO mode.																	
mode	Mode of radio 4. Radio 4 can be disabled, configured as an access point, a rogue AP monitor, a sniffer, or a station.	option	-	ap														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disabled</td><td>Radio 4 is disabled.</td></tr><tr><td>ap</td><td>Radio 4 operates as an access point that allows WiFi clients to connect to your network.</td></tr><tr><td>monitor</td><td>Radio 4 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.</td></tr></table>	Option	Description	disabled	Radio 4 is disabled.	ap	Radio 4 operates as an access point that allows WiFi clients to connect to your network.	monitor	Radio 4 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.									
	Option	Description																
	disabled	Radio 4 is disabled.																
ap	Radio 4 operates as an access point that allows WiFi clients to connect to your network.																	
monitor	Radio 4 operates as a dedicated monitor. As a monitor, the radio scans for other WiFi access points and adds them to the Rogue AP monitor list.																	

Parameter	Description	Type	Size	Default																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>sniffer</i></td><td>Radio 4 operates as a sniffer capturing WiFi frames on air.</td></tr><tr><td><i>sam</i></td><td>Radio 4 operates as a station that can connect to a neighboring AP for connectivity and health check.</td></tr></table>	Option	Description	<i>sniffer</i>	Radio 4 operates as a sniffer capturing WiFi frames on air.	<i>sam</i>	Radio 4 operates as a station that can connect to a neighboring AP for connectivity and health check.																	
	Option	Description																						
	<i>sniffer</i>	Radio 4 operates as a sniffer capturing WiFi frames on air.																						
<i>sam</i>	Radio 4 operates as a station that can connect to a neighboring AP for connectivity and health check.																							
optional-antenna	Optional antenna used on FAP (default = none).	option	-	none																				
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>custom</i></td><td>Customize optional antenna gain.</td></tr><tr><td><i>FANT-04ABGN-0606-O-N</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-1414-P-N</i></td><td>14 dBi(2.4GHz) and 14 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-8065-P-N</i></td><td>8 dBi(2.4GHz) and 6.5 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-O-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-04ABGN-0606-P-R</i></td><td>6 dBi(2.4GHz) and 6 dBi(5GHz).</td></tr><tr><td><i>FANT-10ACAX-1213-D-N</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr><tr><td><i>FANT-08ABGN-1213-D-R</i></td><td>12 dBi(2.4GHz) and 13 dBi(5GHz).</td></tr></table>	Option	Description	<i>none</i>	None.	<i>custom</i>	Customize optional antenna gain.	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).	<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).			
	Option	Description																						
	<i>none</i>	None.																						
	<i>custom</i>	Customize optional antenna gain.																						
	<i>FANT-04ABGN-0606-O-N</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-04ABGN-1414-P-N</i>	14 dBi(2.4GHz) and 14 dBi(5GHz).																						
	<i>FANT-04ABGN-8065-P-N</i>	8 dBi(2.4GHz) and 6.5 dBi(5GHz).																						
	<i>FANT-04ABGN-0606-O-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-04ABGN-0606-P-R</i>	6 dBi(2.4GHz) and 6 dBi(5GHz).																						
	<i>FANT-10ACAX-1213-D-N</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																						
<i>FANT-08ABGN-1213-D-R</i>	12 dBi(2.4GHz) and 13 dBi(5GHz).																							
optional-antenna-gain	Optional antenna gain in dBi (0 to 20, default = 0).	string	Maximum length: 7	0																				
power-level	Radio EIRP power level as a percentage of the maximum EIRP power (0 - 100, default = 100).	integer	Minimum value: 0 Maximum value: 100	100																				

Parameter	Description	Type	Size	Default												
power-mode	Set radio effective isotropic radiated power (EIRP) in dBm or by a percentage of the maximum EIRP (default = percentage). This power takes into account both radio transmit power and antenna gain. Higher power level settings may be constrained by local regulatory requirements and AP capabilities.	option	-	percentage												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>dBm</i></td><td>Set radio EIRP power in dBm.</td></tr><tr><td><i>percentage</i></td><td>Set radio EIRP power by percentage.</td></tr></table>	Option	Description	<i>dBm</i>	Set radio EIRP power in dBm.	<i>percentage</i>	Set radio EIRP power by percentage.									
Option	Description															
<i>dBm</i>	Set radio EIRP power in dBm.															
<i>percentage</i>	Set radio EIRP power by percentage.															
power-value	Radio EIRP power in dBm (1 - 33, default = 27).	integer	Minimum value: 27 1 Maximum value: 33													
powersave-optimize	Enable client power-saving features such as TIM, AC VO, and OBSS etc.	option	-													
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tim</i></td><td>TIM bit for client in power save mode.</td></tr><tr><td><i>ac-vo</i></td><td>Use AC VO priority to send out packets in the power save queue.</td></tr><tr><td><i>no-obss-scan</i></td><td>Do not put OBSS scan IE into beacon and probe response frames.</td></tr><tr><td><i>no-11b-rate</i></td><td>Do not send frame using 11b data rate.</td></tr><tr><td><i>client-rate-follow</i></td><td>Adapt transmitting PHY rate with receiving PHY rate from a client.</td></tr></table>	Option	Description	<i>tim</i>	TIM bit for client in power save mode.	<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.	<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.	<i>no-11b-rate</i>	Do not send frame using 11b data rate.	<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.			
Option	Description															
<i>tim</i>	TIM bit for client in power save mode.															
<i>ac-vo</i>	Use AC VO priority to send out packets in the power save queue.															
<i>no-obss-scan</i>	Do not put OBSS scan IE into beacon and probe response frames.															
<i>no-11b-rate</i>	Do not send frame using 11b data rate.															
<i>client-rate-follow</i>	Adapt transmitting PHY rate with receiving PHY rate from a client.															
protection-mode	Enable/disable 802.11g protection modes to support backwards compatibility with older clients (rtscts, ctsonly, disable).	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>rtscts</i></td><td>Enable 802.11g protection RTS/CTS mode.</td></tr><tr><td><i>ctsonly</i></td><td>Enable 802.11g protection CTS only mode.</td></tr><tr><td><i>disable</i></td><td>Disable 802.11g protection mode.</td></tr></table>	Option	Description	<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.	<i>ctsonly</i>	Enable 802.11g protection CTS only mode.	<i>disable</i>	Disable 802.11g protection mode.							
Option	Description															
<i>rtscts</i>	Enable 802.11g protection RTS/CTS mode.															
<i>ctsonly</i>	Enable 802.11g protection CTS only mode.															
<i>disable</i>	Disable 802.11g protection mode.															

Parameter	Description	Type	Size	Default								
rts-threshold	Maximum packet size for RTS transmissions, specifying the maximum size of a data packet before RTS/CTS (256 - 2346 bytes, default = 2346).	integer	Minimum value: 256 Maximum value: 2346	2346								
sam-bssid	BSSID for WiFi network.	mac-address	Not Specified	00:00:00:00:00:00								
sam-ca-certificate	CA certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 79									
sam-captive-portal	Enable/disable Captive Portal Authentication (default = disable).	option	-	disable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable Captive Portal Authentication.</td></tr><tr><td><i>disable</i></td><td>Disable Captive Portal Authentication.</td></tr></table>				Option	Description	<i>enable</i>	Enable Captive Portal Authentication.	<i>disable</i>	Disable Captive Portal Authentication.		
Option	Description											
<i>enable</i>	Enable Captive Portal Authentication.											
<i>disable</i>	Disable Captive Portal Authentication.											
sam-client-certificate	Client certificate for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35									
sam-cwp-failure-string	Failure identification on the page after an incorrect login.	string	Maximum length: 64									
sam-cwp-match-string	Identification string from the captive portal login form.	string	Maximum length: 64									
sam-cwp-password	Password for captive portal authentication.	password	Not Specified									
sam-cwp-success-string	Success identification on the page after a successful login.	string	Maximum length: 64									
sam-cwp-test-url	Website the client is trying to access.	string	Maximum length: 255									
sam-cwp-username	Username for captive portal authentication.	string	Maximum length: 35									
sam-eap-method	Select WPA2/WPA3-ENTERPRISE EAP Method (default = PEAP).	option	-	peap								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>both</i></td><td>EAP PEAP and TLS. (Not applicable in FIPS mode)</td></tr><tr><td><i>tls</i></td><td>EAP TLS.</td></tr><tr><td><i>peap</i></td><td>EAP PEAP. (Not applicable in FIPS mode)</td></tr></table>				Option	Description	<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)	<i>tls</i>	EAP TLS.	<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)
Option	Description											
<i>both</i>	EAP PEAP and TLS. (Not applicable in FIPS mode)											
<i>tls</i>	EAP TLS.											
<i>peap</i>	EAP PEAP. (Not applicable in FIPS mode)											

Parameter	Description	Type	Size	Default												
sam-password	Passphrase for WiFi network connection.	password	Not Specified													
sam-private-key	Private key for WPA2/WPA3-ENTERPRISE.	string	Maximum length: 35													
sam-private-key-password	Password for private key file for WPA2/WPA3-ENTERPRISE.	password	Not Specified													
sam-report-intv	SAM report interval (sec), 0 for a one-time report.	integer	Minimum value: 60 Maximum value: 864000	0												
sam-security-type	Select WiFi network security type (default = "wpa-personal" for 2.4/5G radio, "wpa3-sae" for 6G radio).	option	-	wpa-personal												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>open</td><td>Open.</td></tr><tr><td>wpa-personal</td><td>WPA/WPA2 personal.</td></tr><tr><td>wpa-enterprise</td><td>WPA2/WPA3 enterprise.</td></tr><tr><td>wpa3-sae</td><td>WPA3 SAE.</td></tr><tr><td>owe</td><td>OWE.</td></tr></table>				Option	Description	open	Open.	wpa-personal	WPA/WPA2 personal.	wpa-enterprise	WPA2/WPA3 enterprise.	wpa3-sae	WPA3 SAE.	owe	OWE.
Option	Description															
open	Open.															
wpa-personal	WPA/WPA2 personal.															
wpa-enterprise	WPA2/WPA3 enterprise.															
wpa3-sae	WPA3 SAE.															
owe	OWE.															
sam-server-fqdn	SAM test server domain name.	string	Maximum length: 255													
sam-server-ip	SAM test server IP address.	ipv4-address	Not Specified	0.0.0.0												
sam-server-type	Select SAM server type (default = "IP").	option	-	ip												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ip</td><td>IPv4 address.</td></tr><tr><td>fqdn</td><td>Fully Qualified Domain Name address.</td></tr></table>				Option	Description	ip	IPv4 address.	fqdn	Fully Qualified Domain Name address.						
Option	Description															
ip	IPv4 address.															
fqdn	Fully Qualified Domain Name address.															
sam-ssid	SSID for WiFi network.	string	Maximum length: 32													
sam-test	Select SAM test type (default = "PING").	option	-	ping												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>ping</td><td>PING test.</td></tr></table>				Option	Description	ping	PING test.								
Option	Description															
ping	PING test.															

Parameter	Description	Type	Size	Default												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>iperf</i></td><td>IPERF test.</td></tr></table>		Option	Description	<i>iperf</i>	IPERF test.										
	Option	Description														
<i>iperf</i>	IPERF test.															
sam-username	Username for WiFi network connection.	string	Maximum length: 35													
short-guard-interval	Use either the short guard interval (Short GI) of 400 ns or the long guard interval (Long GI) of 800 ns.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Select the 400 ns short guard interval (Short GI).</td></tr><tr><td><i>disable</i></td><td>Select the 800 ns long guard interval (Long GI).</td></tr></table>		Option	Description	<i>enable</i>	Select the 400 ns short guard interval (Short GI).	<i>disable</i>	Select the 800 ns long guard interval (Long GI).								
	Option	Description														
	<i>enable</i>	Select the 400 ns short guard interval (Short GI).														
<i>disable</i>	Select the 800 ns long guard interval (Long GI).															
transmit-optimize	Packet transmission optimization options including power saving, aggregation limiting, retry limiting, etc. All are enabled by default.	option	-	power-save aggr-limit retry-limit send-bar												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable packet transmission optimization.</td></tr><tr><td><i>power-save</i></td><td>Tag client as operating in power save mode if excessive transmit retries occur.</td></tr><tr><td><i>aggr-limit</i></td><td>Set aggregation limit to a lower value when data rate is low.</td></tr><tr><td><i>retry-limit</i></td><td>Set software retry limit to a lower value when data rate is low.</td></tr><tr><td><i>send-bar</i></td><td>Limit transmission of BAR frames.</td></tr></table>		Option	Description	<i>disable</i>	Disable packet transmission optimization.	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.	<i>send-bar</i>	Limit transmission of BAR frames.		
	Option	Description														
	<i>disable</i>	Disable packet transmission optimization.														
	<i>power-save</i>	Tag client as operating in power save mode if excessive transmit retries occur.														
	<i>aggr-limit</i>	Set aggregation limit to a lower value when data rate is low.														
	<i>retry-limit</i>	Set software retry limit to a lower value when data rate is low.														
<i>send-bar</i>	Limit transmission of BAR frames.															
vap-all	Configure method for assigning SSIDs to this FortiAP (default = automatically assign tunnel SSIDs).	option	-	tunnel												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tunnel</i></td><td>Automatically select tunnel SSIDs.</td></tr><tr><td><i>bridge</i></td><td>Automatically select local-bridging SSIDs.</td></tr><tr><td><i>manual</i></td><td>Manually select SSIDs.</td></tr></table>		Option	Description	<i>tunnel</i>	Automatically select tunnel SSIDs.	<i>bridge</i>	Automatically select local-bridging SSIDs.	<i>manual</i>	Manually select SSIDs.						
	Option	Description														
	<i>tunnel</i>	Automatically select tunnel SSIDs.														
	<i>bridge</i>	Automatically select local-bridging SSIDs.														
<i>manual</i>	Manually select SSIDs.															
vaps <name>	Manually selected list of Virtual Access Points (VAPs). Virtual Access Point (VAP) name.	string	Maximum length: 35													

Parameter	Description	Type	Size	Default
wids-profile	Wireless Intrusion Detection System (WIDS) profile name to assign to the radio.	string	Maximum length: 35	
zero-wait-dfs	Enable/disable zero wait DFS on radio (default = enable).	option	-	enable
	Option	Description		
	enable	Enable zero wait DFS		
	disable	Disable zero wait DFS		

config split-tunneling-acl

Parameter	Description	Type	Size	Default
dest-ip	Destination IP and mask for the split-tunneling subnet.	ipv4-classnet	Not Specified	0.0.0.0 0.0.0.0
id	ID.	integer	Minimum value: 0 Maximum value: 4294967295	0

ztna

This section includes syntax for the following commands:

- [config ztna reverse-connector on page 2662](#)
- [config ztna traffic-forward-proxy on page 2663](#)
- [config ztna web-portal-bookmark on page 2668](#)
- [config ztna web-portal on page 2664](#)
- [config ztna web-proxy on page 2675](#)

config ztna reverse-connector

Configure ZTNA Reverse-Connector.

```
config ztna reverse-connector
  Description: Configure ZTNA Reverse-Connector.
  edit <name>
    set address {string}
    set certificate {string}
    set health-check-interval {integer}
    set port {integer}
    set ssl-max-version [tls-1.1|tls-1.2|...]
    set status [enable|disable]
    set trusted-server-ca {string}
  next
end
```

config ztna reverse-connector

Parameter	Description	Type	Size	Default
address	Connector service edge adress(IP or FQDN).	string	Maximum length: 255	
certificate	The name of the certificate to use for SSL handshake.	string	Maximum length: 35	
health-check-interval	Health check interval in seconds (0 - 600, default = 60, 0 = disable).	integer	Minimum value: 0 Maximum value: 600	60

Parameter	Description	Type	Size	Default								
name	Reverse-Connector name	string	Maximum length: 35									
port	Port number that traffic uses to connect to connector service edge(0 - 65535;).	integer	Minimum value: 0 Maximum value: 65535	0								
ssl-max-version	Highest TLS version acceptable from a server.	option	-	tls-1.3								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>tls-1.1</td><td>TLS 1.1.</td></tr><tr><td>tls-1.2</td><td>TLS 1.2.</td></tr><tr><td>tls-1.3</td><td>TLS 1.3.</td></tr></table>				Option	Description	tls-1.1	TLS 1.1.	tls-1.2	TLS 1.2.	tls-1.3	TLS 1.3.
Option	Description											
tls-1.1	TLS 1.1.											
tls-1.2	TLS 1.2.											
tls-1.3	TLS 1.3.											
status	Reverse-Connector status.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable the reverse-connector.</td></tr><tr><td>disable</td><td>Disable the reverse-connector.</td></tr></table>				Option	Description	enable	Enable the reverse-connector.	disable	Disable the reverse-connector.		
Option	Description											
enable	Enable the reverse-connector.											
disable	Disable the reverse-connector.											
trusted-server-ca	Trusted Server CA certificate used by SSL connection.	string	Maximum length: 79									

config ztna traffic-forward-proxy

Configure ZTNA traffic forward proxy.

```

config ztna traffic-forward-proxy
  Description: Configure ZTNA traffic forward proxy.
  edit <name>
    set auth-portal [disable|enable]
    set auth-virtual-host {string}
    set decrypted-traffic-mirror {string}
    set host {string}
    set log-blocked-traffic [disable|enable]
    set vip {string}
    set vip6 {string}
  next
end

```

config ztna traffic-forward-proxy

Parameter	Description	Type	Size	Default
auth-portal	Enable/disable authentication portal.	option	-	disable
	Option	Description		
	<i>disable</i>	Disable authentication portal.		
	<i>enable</i>	Enable authentication portal.		
auth-virtual-host	Virtual host for authentication portal.	string	Maximum length: 79	
decrypted-traffic-mirror	Decrypted traffic mirror.	string	Maximum length: 35	
host	Virtual or real host name.	string	Maximum length: 79	
log-blocked-traffic	Enable/disable logging of blocked traffic.	option	-	enable
	Option	Description		
	<i>disable</i>	Do not log all traffic denied by this ZTNA web-proxy.		
	<i>enable</i>	Log all traffic denied by this ZTNA web-proxy.		
name	ZTNA proxy name.	string	Maximum length: 79	
vip	Virtual IP name.	string	Maximum length: 79	
vip6	Virtual IPv6 name.	string	Maximum length: 79	

config ztna web-portal

Configure ztna web-portal.

```
config ztna web-portal
  Description: Configure ztna web-portal.
  edit <name>
    set auth-portal [disable|enable]
    set auth-rule {string}
    set auth-virtual-host {string}
    set clipboard [enable|disable]
    set cookie-age {integer}
    set customize-forticlient-download-url [enable|disable]
```

```

set decrypted-traffic-mirror {string}
set default-window-height {integer}
set default-window-width {integer}
set display-bookmark [enable|disable]
set display-history [enable|disable]
set display-status [enable|disable]
set focus-bookmark [enable|disable]
set forticlient-download [enable|disable]
set forticlient-download-method [direct|ssl-vpn]
set heading {string}
set host {string}
set log-blocked-traffic [disable|enable]
set macos-forticlient-download-url {var-string}
set policy-auth-sso [enable|disable]
set theme [jade|neutrino|...]
set vip {string}
set vip6 {string}
set windows-forticlient-download-url {var-string}
next
end

```

config ztna web-portal

Parameter	Description	Type	Size	Default						
auth-portal	Enable/disable authentication portal.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>disable</td><td>Disable authentication portal.</td></tr><tr><td>enable</td><td>Enable authentication portal.</td></tr></table>	Option	Description	disable	Disable authentication portal.	enable	Enable authentication portal.			
	Option	Description								
	disable	Disable authentication portal.								
enable	Enable authentication portal.									
auth-rule	Authentication Rule.	string	Maximum length: 35							
auth-virtual-host	Virtual host for authentication portal.	string	Maximum length: 79							
clipboard	Enable to support RDP/VPC clipboard functionality.	option	-	enable

Do not share connected server.
Option	Description									
enable	Enable server pool multiplexing. Share connected server.									
disable	Disable server pool multiplexing. Do not share connected server.									
svr-pool-server-max-concurrent-request	Maximum number of concurrent requests that servers in the server pool could handle (default = unlimited).	integer	Minimum value: 0 Maximum value: 2147483647	0						
svr-pool-server-max-request	Maximum number of requests that servers in the server pool handle before disconnecting (default = unlimited).	integer	Minimum value: 0 Maximum value: 2147483647	0						
svr-pool-ttl	Time-to-live in the server pool for idle connections to servers.	integer	Minimum value: 0 Maximum value: 2147483647	15						
vip	Virtual IP name.	string	Maximum length: 79							
vip6	Virtual IPv6 name.	string	Maximum length: 79							

config api-gateway

Parameter	Description	Type	Size	Default
h2-support	HTTP2 support, default=Enable.	option	-	enable
	Option Description			
	<i>enable</i>	Enable HTTP2 support.		
	<i>disable</i>	Disable HTTP2 support.		
h3-support	HTTP3/QUIC support, default=Disable.	option	-	disable
	Option Description			
	<i>enable</i>	Enable HTTP3/QUIC support.		
	<i>disable</i>	Disable HTTP3/QUIC support.		
http-cookie-age	Time in minutes that client web browsers should keep a cookie. Default is 60 minutes. 0 = no time limit.	integer	Minimum value: 0 Maximum value: 525600	60
http-cookie-domain	Domain that HTTP cookie persistence should apply to.	string	Maximum length: 35	
http-cookie-domain-from-host	Enable/disable use of HTTP cookie domain from host field in HTTP.	option	-	disable
	Option Description			
	<i>disable</i>	Disable use of HTTP cookie domain from the host field in HTTP (use http-cooke-domain setting).		
	<i>enable</i>	Enable use of HTTP cookie domain from the host field in HTTP.		
http-cookie-generation	Generation of HTTP cookie to be accepted. Changing invalidates all existing cookies.	integer	Minimum value: 0 Maximum value: 4294967295	0
http-cookie-path	Limit HTTP cookie persistence to the specified path.	string	Maximum length: 35	
http-cookie-share	Control sharing of cookies across API Gateway. Use of same-ip means a cookie from one virtual server can be used by another. Disable stops cookie sharing.	option	-	same-ip
	Option Description			
	<i>disable</i>	Only allow HTTP cookie to match this API Gateway.		
	<i>same-ip</i>	Allow HTTP cookie to match any API Gateway with the same IP.		

Parameter	Description	Type	Size	Default												
https-cookie-secure	Enable/disable verification that inserted HTTPS cookies are secure.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not mark the cookie as secure. Allows sharing the cookie between HTTP and HTTPS connections.</td></tr><tr><td><i>enable</i></td><td>Mark the inserted cookie as secure. The cookie can only be used for HTTPS connections.</td></tr></table>	Option	Description	<i>disable</i>	Do not mark the cookie as secure. Allows sharing the cookie between HTTP and HTTPS connections.	<i>enable</i>	Mark the inserted cookie as secure. The cookie can only be used for HTTPS connections.									
Option	Description															
<i>disable</i>	Do not mark the cookie as secure. Allows sharing the cookie between HTTP and HTTPS connections.															
<i>enable</i>	Mark the inserted cookie as secure. The cookie can only be used for HTTPS connections.															
id	API Gateway ID.	integer	Minimum value: 0 0 Maximum value: 4294967295													
ldb-method	Method used to distribute sessions to real servers.	option	-	static												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Distribute to servers based on source IP.</td></tr><tr><td><i>round-robin</i></td><td>Distribute to servers based on round-robin order.</td></tr><tr><td><i>weighted</i></td><td>Distribute to servers based on weight.</td></tr><tr><td><i>first-alive</i></td><td>Distribute to the first server that is alive.</td></tr><tr><td><i>http-host</i></td><td>Distribute to servers based on the host field in HTTP header.</td></tr></table>	Option	Description	<i>static</i>	Distribute to servers based on source IP.	<i>round-robin</i>	Distribute to servers based on round-robin order.	<i>weighted</i>	Distribute to servers based on weight.	<i>first-alive</i>	Distribute to the first server that is alive.	<i>http-host</i>	Distribute to servers based on the host field in HTTP header.			
Option	Description															
<i>static</i>	Distribute to servers based on source IP.															
<i>round-robin</i>	Distribute to servers based on round-robin order.															
<i>weighted</i>	Distribute to servers based on weight.															
<i>first-alive</i>	Distribute to the first server that is alive.															
<i>http-host</i>	Distribute to servers based on the host field in HTTP header.															
persistence	Configure how to make sure that clients connect to the same server every time they make a request that is part of the same session.	option	-	none												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>http-cookie</i></td><td>HTTP cookie.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>http-cookie</i>	HTTP cookie.									
Option	Description															
<i>none</i>	None.															
<i>http-cookie</i>	HTTP cookie.															
service	Service.	option	-	https												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>http</i></td><td>HTTP.</td></tr><tr><td><i>https</i></td><td>HTTPS.</td></tr></table>	Option	Description	<i>http</i>	HTTP.	<i>https</i>	HTTPS.									
Option	Description															
<i>http</i>	HTTP.															
<i>https</i>	HTTPS.															
ssl-algorithm	Permitted encryption algorithms for the server side of SSL full mode sessions according to encryption strength.	option	-	high												

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>high</i></td><td>High encryption. Allow only AES and ChaCha.</td></tr><tr><td><i>medium</i></td><td>Medium encryption. Allow AES, ChaCha, 3DES, and RC4.</td></tr><tr><td><i>low</i></td><td>Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.</td></tr></table>	Option	Description	<i>high</i>	High encryption. Allow only AES and ChaCha.	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.									
	Option	Description																
	<i>high</i>	High encryption. Allow only AES and ChaCha.																
	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.																
<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.																	
ssl-dh-bits	Number of bits to use in the Diffie-Hellman exchange for RSA encryption of SSL sessions.	option	-	2048														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>768</td><td>768-bit Diffie-Hellman prime.</td></tr><tr><td>1024</td><td>1024-bit Diffie-Hellman prime.</td></tr><tr><td>1536</td><td>1536-bit Diffie-Hellman prime.</td></tr><tr><td>2048</td><td>2048-bit Diffie-Hellman prime.</td></tr><tr><td>3072</td><td>3072-bit Diffie-Hellman prime.</td></tr><tr><td>4096</td><td>4096-bit Diffie-Hellman prime.</td></tr></table>	Option	Description	768	768-bit Diffie-Hellman prime.	1024	1024-bit Diffie-Hellman prime.	1536	1536-bit Diffie-Hellman prime.	2048	2048-bit Diffie-Hellman prime.	3072	3072-bit Diffie-Hellman prime.	4096	4096-bit Diffie-Hellman prime.			
	Option	Description																
	768	768-bit Diffie-Hellman prime.																
	1024	1024-bit Diffie-Hellman prime.																
	1536	1536-bit Diffie-Hellman prime.																
	2048	2048-bit Diffie-Hellman prime.																
	3072	3072-bit Diffie-Hellman prime.																
4096	4096-bit Diffie-Hellman prime.																	
ssl-max-version	Highest SSL/TLS version acceptable from a server.	option	-	tls-1.3														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls-1.0</i></td><td>TLS 1.0.</td></tr><tr><td><i>tls-1.1</i></td><td>TLS 1.1.</td></tr><tr><td><i>tls-1.2</i></td><td>TLS 1.2.</td></tr><tr><td><i>tls-1.3</i></td><td>TLS 1.3.</td></tr></table>	Option	Description	<i>tls-1.0</i>	TLS 1.0.	<i>tls-1.1</i>	TLS 1.1.	<i>tls-1.2</i>	TLS 1.2.	<i>tls-1.3</i>	TLS 1.3.							
	Option	Description																
	<i>tls-1.0</i>	TLS 1.0.																
	<i>tls-1.1</i>	TLS 1.1.																
	<i>tls-1.2</i>	TLS 1.2.																
<i>tls-1.3</i>	TLS 1.3.																	
ssl-min-version	Lowest SSL/TLS version acceptable from a server.	option	-	tls-1.1														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls-1.0</i></td><td>TLS 1.0.</td></tr><tr><td><i>tls-1.1</i></td><td>TLS 1.1.</td></tr><tr><td><i>tls-1.2</i></td><td>TLS 1.2.</td></tr><tr><td><i>tls-1.3</i></td><td>TLS 1.3.</td></tr></table>	Option	Description	<i>tls-1.0</i>	TLS 1.0.	<i>tls-1.1</i>	TLS 1.1.	<i>tls-1.2</i>	TLS 1.2.	<i>tls-1.3</i>	TLS 1.3.							
	Option	Description																
	<i>tls-1.0</i>	TLS 1.0.																
	<i>tls-1.1</i>	TLS 1.1.																
	<i>tls-1.2</i>	TLS 1.2.																
<i>tls-1.3</i>	TLS 1.3.																	
ssl-renegotiation	Enable/disable secure renegotiation to comply with RFC 5746.	option	-	enable														

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable secure renegotiation.		
	<i>disable</i>	Disable secure renegotiation.		
url-map	URL pattern to match.	string	Maximum length: 511	/
url-map-type	Type of url-map.	option	-	sub-string
	Option	Description		
	<i>sub-string</i>	Match the pattern if a string contains the sub-string.		
	<i>wildcard</i>	Match the pattern with wildcards.		
	<i>regex</i>	Match the pattern with a regular expression.		

config quic

Parameter	Description	Type	Size	Default						
ack-delay-exponent	ACK delay exponent (1 - 20, default = 3).	integer	Minimum value: 1 Maximum value: 20	3						
active-connection-id-limit	Active connection ID limit (1 - 8, default = 2).	integer	Minimum value: 1 Maximum value: 8	2						
active-migration	Enable/disable active migration (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable active migration.</td></tr><tr><td>disable</td><td>Disable active migration.</td></tr></table>				Option	Description	enable	Enable active migration.	disable	Disable active migration.
Option	Description									
enable	Enable active migration.									
disable	Disable active migration.									
grease-quic-bit	Enable/disable grease QUIC bit (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable grease QUIC bit.</td></tr><tr><td>disable</td><td>Disable grease QUIC bit.</td></tr></table>				Option	Description	enable	Enable grease QUIC bit.	disable	Disable grease QUIC bit.
Option	Description									
enable	Enable grease QUIC bit.									
disable	Disable grease QUIC bit.									

Parameter	Description	Type	Size	Default
max-ack-delay	Maximum ACK delay in milliseconds (1 - 16383, default = 25).	integer	Minimum value: 1 Maximum value: 16383	25
max-datagram-frame-size	Maximum datagram frame size in bytes (1 - 1500, default = 1500).	integer	Minimum value: 1 Maximum value: 1500	1500
max-idle-timeout	Maximum idle timeout milliseconds (1 - 60000, default = 30000).	integer	Minimum value: 1 Maximum value: 60000	30000
max-udp-payload-size	Maximum UDP payload size in bytes (1200 - 1500, default = 1500).	integer	Minimum value: 1200 Maximum value: 1500	1500

config realservers

Parameter	Description	Type	Size	Default						
addr-type	Type of address.	option	-	ip						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ip</i></td><td>Standard IPv4 address.</td></tr><tr><td><i>fqdn</i></td><td>Non-wildcard FQDN address object.</td></tr></table>	Option	Description	<i>ip</i>	Standard IPv4 address.	<i>fqdn</i>	Non-wildcard FQDN address object.			
Option	Description									
<i>ip</i>	Standard IPv4 address.									
<i>fqdn</i>	Non-wildcard FQDN address object.									
address	Address or address group of the real server.	string	Maximum length: 79							
health-check	Enable to check the responsiveness of the real server before forwarding traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable per server health check.</td></tr><tr><td><i>enable</i></td><td>Enable per server health check.</td></tr></table>	Option	Description	<i>disable</i>	Disable per server health check.	<i>enable</i>	Enable per server health check.			
Option	Description									
<i>disable</i>	Disable per server health check.									
<i>enable</i>	Enable per server health check.									
health-check-proto	Protocol of the health check monitor to use when polling to determine server's connectivity status.	option	-	ping						

Parameter	Description	Type	Size	Default								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>Use PING to test the link with the server.</td></tr><tr><td><i>http</i></td><td>Use HTTP-GET to test the link with the server.</td></tr><tr><td><i>tcp-connect</i></td><td>Use a full TCP connection to test the link with the server.</td></tr></table>	Option	Description	<i>ping</i>	Use PING to test the link with the server.	<i>http</i>	Use HTTP-GET to test the link with the server.	<i>tcp-connect</i>	Use a full TCP connection to test the link with the server.			
	Option	Description										
	<i>ping</i>	Use PING to test the link with the server.										
	<i>http</i>	Use HTTP-GET to test the link with the server.										
<i>tcp-connect</i>	Use a full TCP connection to test the link with the server.											
holddown-interval	Enable/disable holddown timer. Server will be considered active and reachable once the holddown period has expired (30 seconds).	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable per server holddown.</td></tr><tr><td><i>disable</i></td><td>Disable per server holddown.</td></tr></table>	Option	Description	<i>enable</i>	Enable per server holddown.	<i>disable</i>	Disable per server holddown.					
	Option	Description										
	<i>enable</i>	Enable per server holddown.										
<i>disable</i>	Disable per server holddown.											
http-host	HTTP server domain name in HTTP header.	string	Maximum length: 63									
id	Real server ID.	integer	Minimum value: 0 Maximum value: 4294967295									
ip	IP address of the real server.	ipv4-address-any	Not Specified	0.0.0.0								
port	Port for communicating with the real server.	integer	Minimum value: 1 Maximum value: 65535	443								
status	Set the status of the real server to active so that it can accept traffic, or on standby or disabled so no traffic is sent.	option	-	active								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>active</i></td><td>Server status active.</td></tr><tr><td><i>standby</i></td><td>Server status standby.</td></tr><tr><td><i>disable</i></td><td>Server status disable.</td></tr></table>	Option	Description	<i>active</i>	Server status active.	<i>standby</i>	Server status standby.	<i>disable</i>	Server status disable.			
	Option	Description										
	<i>active</i>	Server status active.										
	<i>standby</i>	Server status standby.										
<i>disable</i>	Server status disable.											
translate-host	Enable/disable translation of hostname/IP from virtual server to real server.	option	-	enable								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable virtual hostname/IP translation.</td></tr></table>	Option	Description	<i>enable</i>	Enable virtual hostname/IP translation.							
	Option	Description										
<i>enable</i>	Enable virtual hostname/IP translation.											

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>disable</i>	Disable virtual hostname/IP translation.		
verify-cert	Enable/disable certificate verification of the real server.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable certificate verification.		
	<i>disable</i>	Disable certificate verification.		
weight	Weight of the real server. If weighted load balancing is enabled, the server with the highest weight gets more connections.	integer	Minimum value: 1 Maximum value: 255	

config ssl-cipher-suites

Parameter	Description	Type	Size	Default
cipher	Cipher suite name.	option	-	
	Option	Description		
	<i>TLS-AES-128-GCM-SHA256</i>	Cipher suite TLS-AES-128-GCM-SHA256.		
	<i>TLS-AES-256-GCM-SHA384</i>	Cipher suite TLS-AES-256-GCM-SHA384.		
	<i>TLS-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-CHACHA20-POLY1305-SHA256.		
	<i>TLS-ECDHE-RSA-WITH-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-ECDHE-RSA-WITH-CHACHA20-POLY1305-SHA256.		
	<i>TLS-ECDHE-ECDSA-WITH-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-ECDHE-ECDSA-WITH-CHACHA20-POLY1305-SHA256.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>TLS-DHE-RSA-WITH-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-DHE-RSA-WITH-CHACHA20-POLY1305-SHA256.		
	<i>TLS-DHE-RSA-WITH-AES-128-CBC-SHA</i>	Cipher suite TLS-DHE-RSA-WITH-AES-128-CBC-SHA.		
	<i>TLS-DHE-RSA-WITH-AES-256-CBC-SHA</i>	Cipher suite TLS-DHE-RSA-WITH-AES-256-CBC-SHA.		
	<i>TLS-DHE-RSA-WITH-AES-128-CBC-SHA256</i>	Cipher suite TLS-DHE-RSA-WITH-AES-128-CBC-SHA256.		
	<i>TLS-DHE-RSA-WITH-AES-128-GCM-SHA256</i>	Cipher suite TLS-DHE-RSA-WITH-AES-128-GCM-SHA256.		
	<i>TLS-DHE-RSA-WITH-AES-256-CBC-SHA256</i>	Cipher suite TLS-DHE-RSA-WITH-AES-256-CBC-SHA256.		
	<i>TLS-DHE-RSA-WITH-AES-256-GCM-SHA384</i>	Cipher suite TLS-DHE-RSA-WITH-AES-256-GCM-SHA384.		
	<i>TLS-DHE-DSS-WITH-AES-128-CBC-SHA</i>	Cipher suite TLS-DHE-DSS-WITH-AES-128-CBC-SHA.		
	<i>TLS-DHE-DSS-WITH-AES-256-CBC-SHA</i>	Cipher suite TLS-DHE-DSS-WITH-AES-256-CBC-SHA.		
	<i>TLS-DHE-DSS-WITH-AES-128-CBC-SHA256</i>	Cipher suite TLS-DHE-DSS-WITH-AES-128-CBC-SHA256.		
	<i>TLS-DHE-DSS-WITH-AES-128-GCM-SHA256</i>	Cipher suite TLS-DHE-DSS-WITH-AES-128-GCM-SHA256.		

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>TLS-DHE-DSS-WITH-AES-256-CBC-SHA256</i>	Cipher suite TLS-DHE-DSS-WITH-AES-256-CBC-SHA256.		
	<i>TLS-DHE-DSS-WITH-AES-256-GCM-SHA384</i>	Cipher suite TLS-DHE-DSS-WITH-AES-256-GCM-SHA384.		
	<i>TLS-ECDHE-RSA-WITH-AES-128-CBC-SHA</i>	Cipher suite TLS-ECDHE-RSA-WITH-AES-128-CBC-SHA.		
	<i>TLS-ECDHE-RSA-WITH-AES-128-CBC-SHA256</i>	Cipher suite TLS-ECDHE-RSA-WITH-AES-128-CBC-SHA256.		
	<i>TLS-ECDHE-RSA-WITH-AES-128-GCM-SHA256</i>	Cipher suite TLS-ECDHE-RSA-WITH-AES-128-GCM-SHA256.		
	<i>TLS-ECDHE-RSA-WITH-AES-256-CBC-SHA</i>	Cipher suite TLS-ECDHE-RSA-WITH-AES-256-CBC-SHA.		
	<i>TLS-ECDHE-RSA-WITH-AES-256-CBC-SHA384</i>	Cipher suite TLS-ECDHE-RSA-WITH-AES-256-CBC-SHA384.		
	<i>TLS-ECDHE-RSA-WITH-AES-256-GCM-SHA384</i>	Cipher suite TLS-ECDHE-RSA-WITH-AES-256-GCM-SHA384.		
	<i>TLS-ECDHE-ECDSA-WITH-AES-128-CBC-SHA</i>	Cipher suite TLS-ECDHE-ECDSA-WITH-AES-128-CBC-SHA.		

Parameter	Description	Type	Size	Default
	Option	Description		
	TLS-ECDHE-ECDSA-WITH-AES-128-CBC-SHA256	Cipher suite TLS-ECDHE-ECDSA-WITH-AES-128-CBC-SHA256.		
	TLS-ECDHE-ECDSA-WITH-AES-128-GCM-SHA256	Cipher suite TLS-ECDHE-ECDSA-WITH-AES-128-GCM-SHA256.		
	TLS-ECDHE-ECDSA-WITH-AES-256-CBC-SHA	Cipher suite TLS-ECDHE-ECDSA-WITH-AES-256-CBC-SHA.		
	TLS-ECDHE-ECDSA-WITH-AES-256-CBC-SHA384	Cipher suite TLS-ECDHE-ECDSA-WITH-AES-256-CBC-SHA384.		
	TLS-ECDHE-ECDSA-WITH-AES-256-GCM-SHA384	Cipher suite TLS-ECDHE-ECDSA-WITH-AES-256-GCM-SHA384.		
	TLS-RSA-WITH-AES-128-CBC-SHA	Cipher suite TLS-RSA-WITH-AES-128-CBC-SHA.		
	TLS-RSA-WITH-AES-256-CBC-SHA	Cipher suite TLS-RSA-WITH-AES-256-CBC-SHA.		
	TLS-RSA-WITH-AES-128-CBC-SHA256	Cipher suite TLS-RSA-WITH-AES-128-CBC-SHA256.		
	TLS-RSA-WITH-AES-128-GCM-SHA256	Cipher suite TLS-RSA-WITH-AES-128-GCM-SHA256.		
TLS-RSA-WITH-AES-256-CBC-SHA256	Cipher suite TLS-RSA-WITH-AES-256-CBC-SHA256.			

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>TLS-RSA-WITH-AES-256-GCM-SHA384</i>	Cipher suite TLS-RSA-WITH-AES-256-GCM-SHA384.		
	<i>TLS-RSA-WITH-CAMELLIA-128-CBC-SHA</i>	Cipher suite TLS-RSA-WITH-CAMELLIA-128-CBC-SHA.		
	<i>TLS-RSA-WITH-CAMELLIA-256-CBC-SHA</i>	Cipher suite TLS-RSA-WITH-CAMELLIA-256-CBC-SHA.		
	<i>TLS-RSA-WITH-CAMELLIA-128-CBC-SHA256</i>	Cipher suite TLS-RSA-WITH-CAMELLIA-128-CBC-SHA256.		
	<i>TLS-RSA-WITH-CAMELLIA-256-CBC-SHA256</i>	Cipher suite TLS-RSA-WITH-CAMELLIA-256-CBC-SHA256.		
	<i>TLS-DHE-RSA-WITH-3DES-EDE-CBC-SHA</i>	Cipher suite TLS-DHE-RSA-WITH-3DES-EDE-CBC-SHA.		
	<i>TLS-DHE-RSA-WITH-CAMELLIA-128-CBC-SHA</i>	Cipher suite TLS-DHE-RSA-WITH-CAMELLIA-128-CBC-SHA.		
	<i>TLS-DHE-DSS-WITH-CAMELLIA-128-CBC-SHA</i>	Cipher suite TLS-DSS-RSA-WITH-CAMELLIA-128-CBC-SHA.		
	<i>TLS-DHE-RSA-WITH-CAMELLIA-256-CBC-SHA</i>	Cipher suite TLS-DHE-RSA-WITH-CAMELLIA-256-CBC-SHA.		

Parameter	Description	Type	Size	Default
	Option	Description		
	TLS-DHE-DSS-WITH-CAMELLIA-256-CBC-SHA	Cipher suite TLS-DHE-DSS-WITH-CAMELLIA-256-CBC-SHA.		
	TLS-DHE-RSA-WITH-CAMELLIA-128-CBC-SHA256	Cipher suite TLS-DHE-RSA-WITH-CAMELLIA-128-CBC-SHA256.		
	TLS-DHE-DSS-WITH-CAMELLIA-128-CBC-SHA256	Cipher suite TLS-DHE-DSS-WITH-CAMELLIA-128-CBC-SHA256.		
	TLS-DHE-RSA-WITH-CAMELLIA-256-CBC-SHA256	Cipher suite TLS-DHE-RSA-WITH-CAMELLIA-256-CBC-SHA256.		
	TLS-DHE-DSS-WITH-CAMELLIA-256-CBC-SHA256	Cipher suite TLS-DHE-DSS-WITH-CAMELLIA-256-CBC-SHA256.		
	TLS-DHE-RSA-WITH-SEED-CBC-SHA	Cipher suite TLS-DHE-RSA-WITH-SEED-CBC-SHA.		
	TLS-DHE-DSS-WITH-SEED-CBC-SHA	Cipher suite TLS-DHE-DSS-WITH-SEED-CBC-SHA.		
	TLS-DHE-RSA-WITH-ARIA-128-CBC-SHA256	Cipher suite TLS-DHE-RSA-WITH-ARIA-128-CBC-SHA256.		
	TLS-DHE-RSA-WITH-ARIA-256-CBC-SHA384	Cipher suite TLS-DHE-RSA-WITH-ARIA-256-CBC-SHA384.		

Parameter	Description	Type	Size	Default
	Option	Description		
	TLS-DHE-DSS-WITH-ARIA-128-CBC-SHA256	Cipher suite TLS-DHE-DSS-WITH-ARIA-128-CBC-SHA256.		
	TLS-DHE-DSS-WITH-ARIA-256-CBC-SHA384	Cipher suite TLS-DHE-DSS-WITH-ARIA-256-CBC-SHA384.		
	TLS-RSA-WITH-SEED-CBC-SHA	Cipher suite TLS-RSA-WITH-SEED-CBC-SHA.		
	TLS-RSA-WITH-ARIA-128-CBC-SHA256	Cipher suite TLS-RSA-WITH-ARIA-128-CBC-SHA256.		
	TLS-RSA-WITH-ARIA-256-CBC-SHA384	Cipher suite TLS-RSA-WITH-ARIA-256-CBC-SHA384.		
	TLS-ECDHE-RSA-WITH-ARIA-128-CBC-SHA256	Cipher suite TLS-ECDHE-RSA-WITH-ARIA-128-CBC-SHA256.		
	TLS-ECDHE-RSA-WITH-ARIA-256-CBC-SHA384	Cipher suite TLS-ECDHE-RSA-WITH-ARIA-256-CBC-SHA384.		
	TLS-ECDHE-ECDSA-WITH-ARIA-128-CBC-SHA256	Cipher suite TLS-ECDHE-ECDSA-WITH-ARIA-128-CBC_SHA256.		
	TLS-ECDHE-ECDSA-WITH-ARIA-256-CBC-SHA384	Cipher suite TLS-ECDHE-ECDSA-WITH-ARIA-256-CBC_SHA384.		
TLS-ECDHE-RSA-WITH-RC4-128-SHA	Cipher suite TLS-ECDHE-RSA-WITH-RC4-128-SHA.			

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>TLS-ECDHE-RSA-WITH-3DES-EDE-CBC-SHA</i>	Cipher suite TLS-ECDHE-RSA-WITH-3DES-EDE-CBC-SHA.		
	<i>TLS-DHE-DSS-WITH-3DES-EDE-CBC-SHA</i>	Cipher suite TLS-DHE-DSS-WITH-3DES-EDE-CBC-SHA.		
	<i>TLS-RSA-WITH-3DES-EDE-CBC-SHA</i>	Cipher suite TLS-RSA-WITH-3DES-EDE-CBC-SHA.		
	<i>TLS-RSA-WITH-RC4-128-MD5</i>	Cipher suite TLS-RSA-WITH-RC4-128-MD5.		
	<i>TLS-RSA-WITH-RC4-128-SHA</i>	Cipher suite TLS-RSA-WITH-RC4-128-SHA.		
	<i>TLS-DHE-RSA-WITH-DES-CBC-SHA</i>	Cipher suite TLS-DHE-RSA-WITH-DES-CBC-SHA.		
	<i>TLS-DHE-DSS-WITH-DES-CBC-SHA</i>	Cipher suite TLS-DHE-DSS-WITH-DES-CBC-SHA.		
	<i>TLS-RSA-WITH-DES-CBC-SHA</i>	Cipher suite TLS-RSA-WITH-DES-CBC-SHA.		
priority	SSL/TLS cipher suites priority.	integer	Minimum value: 0 0 Maximum value: 4294967295	0
versions	SSL/TLS versions that the cipher suite can be used with.	option	-	tls-1.0 tls-1.1 tls-1.2 tls-1.3
	Option	Description		
	<i>tls-1.0</i>	TLS 1.0.		
	<i>tls-1.1</i>	TLS 1.1.		
	<i>tls-1.2</i>	TLS 1.2.		
	<i>tls-1.3</i>	TLS 1.3.		

config api-gateway6

Parameter	Description	Type	Size	Default
h2-support	HTTP2 support, default=Enable.	option	-	enable
	Option Description			
	enable Enable HTTP2 support.			
	disable Disable HTTP2 support.			
h3-support	HTTP3/QUIC support, default=Disable.	option	-	disable
	Option Description			
	enable Enable HTTP3/QUIC support.			
	disable Disable HTTP3/QUIC support.			
http-cookie-age	Time in minutes that client web browsers should keep a cookie. Default is 60 minutes. 0 = no time limit.	integer	Minimum value: 0 Maximum value: 525600	60
http-cookie-domain	Domain that HTTP cookie persistence should apply to.	string	Maximum length: 35	
http-cookie-domain-from-host	Enable/disable use of HTTP cookie domain from host field in HTTP.	option	-	disable
	Option Description			
	disable Disable use of HTTP cookie domain from the host field in HTTP (use http-cooke-domain setting).			
	enable Enable use of HTTP cookie domain from the host field in HTTP.			
http-cookie-generation	Generation of HTTP cookie to be accepted. Changing invalidates all existing cookies.	integer	Minimum value: 0 Maximum value: 4294967295	0
http-cookie-path	Limit HTTP cookie persistence to the specified path.	string	Maximum length: 35	
http-cookie-share	Control sharing of cookies across API Gateway. Use of same-ip means a cookie from one virtual server can be used by another. Disable stops cookie sharing.	option	-	same-ip
	Option Description			
	disable Only allow HTTP cookie to match this API Gateway.			
	same-ip Allow HTTP cookie to match any API Gateway with the same IP.			

Parameter	Description	Type	Size	Default												
https-cookie-secure	Enable/disable verification that inserted HTTPS cookies are secure.	option	-	disable												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Do not mark the cookie as secure. Allows sharing the cookie between HTTP and HTTPS connections.</td></tr><tr><td><i>enable</i></td><td>Mark the inserted cookie as secure. The cookie can only be used for HTTPS connections.</td></tr></table>	Option	Description	<i>disable</i>	Do not mark the cookie as secure. Allows sharing the cookie between HTTP and HTTPS connections.	<i>enable</i>	Mark the inserted cookie as secure. The cookie can only be used for HTTPS connections.									
Option	Description															
<i>disable</i>	Do not mark the cookie as secure. Allows sharing the cookie between HTTP and HTTPS connections.															
<i>enable</i>	Mark the inserted cookie as secure. The cookie can only be used for HTTPS connections.															
id	API Gateway ID.	integer	Minimum value: 0 0 Maximum value: 4294967295													
ldb-method	Method used to distribute sessions to real servers.	option	-	static												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>static</i></td><td>Distribute to servers based on source IP.</td></tr><tr><td><i>round-robin</i></td><td>Distribute to servers based on round-robin order.</td></tr><tr><td><i>weighted</i></td><td>Distribute to servers based on weight.</td></tr><tr><td><i>first-alive</i></td><td>Distribute to the first server that is alive.</td></tr><tr><td><i>http-host</i></td><td>Distribute to servers based on the host field in HTTP header.</td></tr></table>	Option	Description	<i>static</i>	Distribute to servers based on source IP.	<i>round-robin</i>	Distribute to servers based on round-robin order.	<i>weighted</i>	Distribute to servers based on weight.	<i>first-alive</i>	Distribute to the first server that is alive.	<i>http-host</i>	Distribute to servers based on the host field in HTTP header.			
Option	Description															
<i>static</i>	Distribute to servers based on source IP.															
<i>round-robin</i>	Distribute to servers based on round-robin order.															
<i>weighted</i>	Distribute to servers based on weight.															
<i>first-alive</i>	Distribute to the first server that is alive.															
<i>http-host</i>	Distribute to servers based on the host field in HTTP header.															
persistence	Configure how to make sure that clients connect to the same server every time they make a request that is part of the same session.	option	-	none												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>none</i></td><td>None.</td></tr><tr><td><i>http-cookie</i></td><td>HTTP cookie.</td></tr></table>	Option	Description	<i>none</i>	None.	<i>http-cookie</i>	HTTP cookie.									
Option	Description															
<i>none</i>	None.															
<i>http-cookie</i>	HTTP cookie.															
service	Service.	option	-	https												
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>http</i></td><td>HTTP.</td></tr><tr><td><i>https</i></td><td>HTTPS.</td></tr></table>	Option	Description	<i>http</i>	HTTP.	<i>https</i>	HTTPS.									
Option	Description															
<i>http</i>	HTTP.															
<i>https</i>	HTTPS.															
ssl-algorithm	Permitted encryption algorithms for the server side of SSL full mode sessions according to encryption strength.	option	-	high												

Parameter	Description	Type	Size	Default														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>high</i></td><td>High encryption. Allow only AES and ChaCha.</td></tr><tr><td><i>medium</i></td><td>Medium encryption. Allow AES, ChaCha, 3DES, and RC4.</td></tr><tr><td><i>low</i></td><td>Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.</td></tr></table>	Option	Description	<i>high</i>	High encryption. Allow only AES and ChaCha.	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.	<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.									
	Option	Description																
	<i>high</i>	High encryption. Allow only AES and ChaCha.																
	<i>medium</i>	Medium encryption. Allow AES, ChaCha, 3DES, and RC4.																
<i>low</i>	Low encryption. Allow AES, ChaCha, 3DES, RC4, and DES.																	
ssl-dh-bits	Number of bits to use in the Diffie-Hellman exchange for RSA encryption of SSL sessions.	option	-	2048														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>768</i></td><td>768-bit Diffie-Hellman prime.</td></tr><tr><td><i>1024</i></td><td>1024-bit Diffie-Hellman prime.</td></tr><tr><td><i>1536</i></td><td>1536-bit Diffie-Hellman prime.</td></tr><tr><td><i>2048</i></td><td>2048-bit Diffie-Hellman prime.</td></tr><tr><td><i>3072</i></td><td>3072-bit Diffie-Hellman prime.</td></tr><tr><td><i>4096</i></td><td>4096-bit Diffie-Hellman prime.</td></tr></table>	Option	Description	<i>768</i>	768-bit Diffie-Hellman prime.	<i>1024</i>	1024-bit Diffie-Hellman prime.	<i>1536</i>	1536-bit Diffie-Hellman prime.	<i>2048</i>	2048-bit Diffie-Hellman prime.	<i>3072</i>	3072-bit Diffie-Hellman prime.	<i>4096</i>	4096-bit Diffie-Hellman prime.			
	Option	Description																
	<i>768</i>	768-bit Diffie-Hellman prime.																
	<i>1024</i>	1024-bit Diffie-Hellman prime.																
	<i>1536</i>	1536-bit Diffie-Hellman prime.																
	<i>2048</i>	2048-bit Diffie-Hellman prime.																
	<i>3072</i>	3072-bit Diffie-Hellman prime.																
<i>4096</i>	4096-bit Diffie-Hellman prime.																	
ssl-max-version	Highest SSL/TLS version acceptable from a server.	option	-	tls-1.3														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls-1.0</i></td><td>TLS 1.0.</td></tr><tr><td><i>tls-1.1</i></td><td>TLS 1.1.</td></tr><tr><td><i>tls-1.2</i></td><td>TLS 1.2.</td></tr><tr><td><i>tls-1.3</i></td><td>TLS 1.3.</td></tr></table>	Option	Description	<i>tls-1.0</i>	TLS 1.0.	<i>tls-1.1</i>	TLS 1.1.	<i>tls-1.2</i>	TLS 1.2.	<i>tls-1.3</i>	TLS 1.3.							
	Option	Description																
	<i>tls-1.0</i>	TLS 1.0.																
	<i>tls-1.1</i>	TLS 1.1.																
	<i>tls-1.2</i>	TLS 1.2.																
<i>tls-1.3</i>	TLS 1.3.																	
ssl-min-version	Lowest SSL/TLS version acceptable from a server.	option	-	tls-1.1														
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>tls-1.0</i></td><td>TLS 1.0.</td></tr><tr><td><i>tls-1.1</i></td><td>TLS 1.1.</td></tr><tr><td><i>tls-1.2</i></td><td>TLS 1.2.</td></tr><tr><td><i>tls-1.3</i></td><td>TLS 1.3.</td></tr></table>	Option	Description	<i>tls-1.0</i>	TLS 1.0.	<i>tls-1.1</i>	TLS 1.1.	<i>tls-1.2</i>	TLS 1.2.	<i>tls-1.3</i>	TLS 1.3.							
	Option	Description																
	<i>tls-1.0</i>	TLS 1.0.																
	<i>tls-1.1</i>	TLS 1.1.																
	<i>tls-1.2</i>	TLS 1.2.																
<i>tls-1.3</i>	TLS 1.3.																	
ssl-renegotiation	Enable/disable secure renegotiation to comply with RFC 5746.	option	-	enable														

Parameter	Description	Type	Size	Default
	Option	Description		
	<i>enable</i>	Enable secure renegotiation.		
	<i>disable</i>	Disable secure renegotiation.		
url-map	URL pattern to match.	string	Maximum length: 511	/
url-map-type	Type of url-map.	option	-	sub-string
	Option	Description		
	<i>sub-string</i>	Match the pattern if a string contains the sub-string.		
	<i>wildcard</i>	Match the pattern with wildcards.		
	<i>regex</i>	Match the pattern with a regular expression.		

config quic

Parameter	Description	Type	Size	Default						
ack-delay-exponent	ACK delay exponent (1 - 20, default = 3).	integer	Minimum value: 1 Maximum value: 20	3						
active-connection-id-limit	Active connection ID limit (1 - 8, default = 2).	integer	Minimum value: 1 Maximum value: 8	2						
active-migration	Enable/disable active migration (default = disable).	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable active migration.</td></tr><tr><td>disable</td><td>Disable active migration.</td></tr></table>				Option	Description	enable	Enable active migration.	disable	Disable active migration.
Option	Description									
enable	Enable active migration.									
disable	Disable active migration.									
grease-quic-bit	Enable/disable grease QUIC bit (default = enable).	option	-	enable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>enable</td><td>Enable grease QUIC bit.</td></tr><tr><td>disable</td><td>Disable grease QUIC bit.</td></tr></table>				Option	Description	enable	Enable grease QUIC bit.	disable	Disable grease QUIC bit.
Option	Description									
enable	Enable grease QUIC bit.									
disable	Disable grease QUIC bit.									

Parameter	Description	Type	Size	Default
max-ack-delay	Maximum ACK delay in milliseconds (1 - 16383, default = 25).	integer	Minimum value: 1 Maximum value: 16383	25
max-datagram-frame-size	Maximum datagram frame size in bytes (1 - 1500, default = 1500).	integer	Minimum value: 1 Maximum value: 1500	1500
max-idle-timeout	Maximum idle timeout milliseconds (1 - 60000, default = 30000).	integer	Minimum value: 1 Maximum value: 60000	30000
max-udp-payload-size	Maximum UDP payload size in bytes (1200 - 1500, default = 1500).	integer	Minimum value: 1200 Maximum value: 1500	1500

config realservers

Parameter	Description	Type	Size	Default						
addr-type	Type of address.	option	-	ip						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ip</i></td><td>Standard IPv4 address.</td></tr><tr><td><i>fqdn</i></td><td>Non-wildcard FQDN address object.</td></tr></table>	Option	Description	<i>ip</i>	Standard IPv4 address.	<i>fqdn</i>	Non-wildcard FQDN address object.			
Option	Description									
<i>ip</i>	Standard IPv4 address.									
<i>fqdn</i>	Non-wildcard FQDN address object.									
address	Address or address group of the real server.	string	Maximum length: 79							
health-check	Enable to check the responsiveness of the real server before forwarding traffic.	option	-	disable						
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>disable</i></td><td>Disable per server health check.</td></tr><tr><td><i>enable</i></td><td>Enable per server health check.</td></tr></table>	Option	Description	<i>disable</i>	Disable per server health check.	<i>enable</i>	Enable per server health check.			
Option	Description									
<i>disable</i>	Disable per server health check.									
<i>enable</i>	Enable per server health check.									
health-check-proto	Protocol of the health check monitor to use when polling to determine server's connectivity status.	option	-	ping						

Parameter	Description	Type	Size	Default									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>ping</i></td><td>Use PING to test the link with the server.</td></tr><tr><td><i>http</i></td><td>Use HTTP-GET to test the link with the server.</td></tr><tr><td><i>tcp-connect</i></td><td>Use a full TCP connection to test the link with the server.</td></tr></table>		Option	Description	<i>ping</i>	Use PING to test the link with the server.	<i>http</i>	Use HTTP-GET to test the link with the server.	<i>tcp-connect</i>	Use a full TCP connection to test the link with the server.			
	Option	Description											
	<i>ping</i>	Use PING to test the link with the server.											
	<i>http</i>	Use HTTP-GET to test the link with the server.											
<i>tcp-connect</i>	Use a full TCP connection to test the link with the server.												
holddown-interval	Enable/disable holddown timer. Server will be considered active and reachable once the holddown period has expired (30 seconds).	option	-	enable									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable per server holddown.</td></tr><tr><td><i>disable</i></td><td>Disable per server holddown.</td></tr></table>		Option	Description	<i>enable</i>	Enable per server holddown.	<i>disable</i>	Disable per server holddown.					
	Option	Description											
	<i>enable</i>	Enable per server holddown.											
<i>disable</i>	Disable per server holddown.												
http-host	HTTP server domain name in HTTP header.	string	Maximum length: 63										
id	Real server ID.	integer	Minimum value: 0 Maximum value: 4294967295	0									
ip	IPv6 address of the real server.	ipv6-address	Not Specified	::									
port	Port for communicating with the real server.	integer	Minimum value: 1 Maximum value: 65535	443									
status	Set the status of the real server to active so that it can accept traffic, or on standby or disabled so no traffic is sent.	option	-	active									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>active</i></td><td>Server status active.</td></tr><tr><td><i>standby</i></td><td>Server status standby.</td></tr><tr><td><i>disable</i></td><td>Server status disable.</td></tr></table>		Option	Description	<i>active</i>	Server status active.	<i>standby</i>	Server status standby.	<i>disable</i>	Server status disable.			
	Option	Description											
	<i>active</i>	Server status active.											
	<i>standby</i>	Server status standby.											
<i>disable</i>	Server status disable.												
translate-host	Enable/disable translation of hostname/IP from virtual server to real server.	option	-	enable									
	<table><tr><th>Option</th><th>Description</th></tr><tr><td><i>enable</i></td><td>Enable virtual hostname/IP translation.</td></tr><tr><td><i>disable</i></td><td>Disable virtual hostname/IP translation.</td></tr></table>		Option	Description	<i>enable</i>	Enable virtual hostname/IP translation.	<i>disable</i>	Disable virtual hostname/IP translation.					
	Option	Description											
	<i>enable</i>	Enable virtual hostname/IP translation.											
<i>disable</i>	Disable virtual hostname/IP translation.												

Parameter	Description	Type	Size	Default
verify-cert	Enable/disable certificate verification of the real server.	option	-	disable
	Option	Description		
	<i>enable</i>	Enable certificate verification.		
	<i>disable</i>	Disable certificate verification.		
weight	Weight of the real server. If weighted load balancing is enabled, the server with the highest weight gets more connections.	integer	Minimum value: 1 Maximum value: 255	1

config ssl-cipher-suites

Parameter	Description	Type	Size	Default
cipher	Cipher suite name.	option	-	
	Option	Description		
	<i>TLS-AES-128-GCM-SHA256</i>	Cipher suite TLS-AES-128-GCM-SHA256.		
	<i>TLS-AES-256-GCM-SHA384</i>	Cipher suite TLS-AES-256-GCM-SHA384.		
	<i>TLS-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-CHACHA20-POLY1305-SHA256.		
	<i>TLS-ECDHE-RSA-WITH-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-ECDHE-RSA-WITH-CHACHA20-POLY1305-SHA256.		
	<i>TLS-ECDHE-ECDSA-WITH-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-ECDHE-ECDSA-WITH-CHACHA20-POLY1305-SHA256.		
	<i>TLS-DHE-RSA-WITH-CHACHA20-POLY1305-SHA256</i>	Cipher suite TLS-DHE-RSA-WITH-CHACHA20-POLY1305-SHA256.		

Parameter	Description	Type	Size	Default																								
	<table><tr><th>Option</th><th>Description</th></tr><tr><td>TLS-DHE-RSA-WITH-AES-128-CBC-SHA</td><td>Cipher suite TLS-DHE-RSA-WITH-AES-128-CBC-SHA.</td></tr><tr><td>TLS-DHE-RSA-WITH-AES-256-CBC-SHA</td><td>Cipher suite TLS-DHE-RSA-WITH-AES-256-CBC-SHA.</td></tr><tr><td>TLS-DHE-RSA-WITH-AES-128-CBC-SHA256</td><td>Cipher suite TLS-DHE-RSA-WITH-AES-128-CBC-SHA256.</td></tr><tr><td>TLS-DHE-RSA-WITH-AES-128-GCM-SHA256</td><td>Cipher suite TLS-DHE-RSA-WITH-AES-128-GCM-SHA256.</td></tr><tr><td>TLS-DHE-RSA-WITH-AES-256-CBC-SHA256</td><td>Cipher suite TLS-DHE-RSA-WITH-AES-256-CBC-SHA256.</td></tr><tr><td>TLS-DHE-RSA-WITH-AES-256-GCM-SHA384</td><td>Cipher suite TLS-DHE-RSA-WITH-AES-256-GCM-SHA384.</td></tr><tr><td>TLS-DHE-DSS-WITH-AES-128-CBC-SHA</td><td>Cipher suite TLS-DHE-DSS-WITH-AES-128-CBC-SHA.</td></tr><tr><td>TLS-DHE-DSS-WITH-AES-256-CBC-SHA</td><td>Cipher suite TLS-DHE-DSS-WITH-AES-256-CBC-SHA.</td></tr><tr><td>TLS-DHE-DSS-WITH-AES-128-CBC-SHA256</td><td>Cipher suite TLS-DHE-DSS-WITH-AES-128-CBC-SHA256.</td></tr><tr><td>TLS-DHE-DSS-WITH-AES-128-GCM-SHA256</td><td>Cipher suite TLS-DHE-DSS-WITH-AES-128-GCM-SHA256.</td></tr><tr><td>TLS-DHE-DSS-WITH-AES-256-CBC-SHA256</td><td>Cipher suite TLS-DHE-DSS-WITH-AES-256-CBC-SHA256.</td></tr></table>	Option	Description	TLS-DHE-RSA-WITH-AES-128-CBC-SHA	Cipher suite TLS-DHE-RSA-WITH-AES-128-CBC-SHA. CLI diagnose commands

Use diagnose commands to run debugging commands.

This section includes syntax for the following commands:

- [diagnose alertconsole on page 2711](#)
- [diagnose antivirus on page 2712](#)
- [diagnose automation on page 2714](#)
- [diagnose autoupdate on page 2714](#)
- [diagnose azure events on page 2715](#)
- [diagnose casb on page 2716](#)
- [diagnose central-mgmt on page 2719](#)
- [diagnose cid on page 2720](#)
- [diagnose clearpass on page 2724](#)
- [diagnose debug on page 2726](#)
- [diagnose disktest on page 2802](#)
- [diagnose dpdk config on page 2804](#)
- [diagnose dpdk log clear on page 2804](#)
- [diagnose dpdk log show on page 2805](#)
- [diagnose dpdk performance on page 2805](#)
- [diagnose dpdk statistics clear on page 2805](#)
- [diagnose dpdk statistics show on page 2806](#)
- [diagnose dpdk version on page 2807](#)
- [diagnose emailfilter on page 2807](#)
- [diagnose endpoint on page 2809](#)
- [diagnose extender on page 2829](#)
- [diagnose fdsm on page 2830](#)
- [diagnose ffdb-fqdn on page 2837](#)
- [diagnose firewall on page 2838](#)
- [diagnose forticare on page 2895](#)
- [diagnose fortiguard-resources on page 2897](#)
- [diagnose fortimq on page 2911](#)
- [diagnose fortism on page 2912](#)
- [diagnose fortitoken-cloud on page 2914](#)
- [diagnose fortitoken on page 2912](#)
- [diagnose fortiview on page 2917](#)
- [diagnose geoip on page 2918](#)
- [diagnose hardware on page 2919](#)
- [diagnose internet-service-name on page 2927](#)
- [diagnose internet-service on page 2924](#)

- [diagnose internet-service6 on page 2926](#)
- [diagnose ip address on page 2928](#)
- [diagnose ip arp on page 2929](#)
- [diagnose ip gre-tunnel on page 2930](#)
- [diagnose ip ipip-tunnel on page 2930](#)
- [diagnose ip multicast on page 2931](#)
- [diagnose ip parp on page 2933](#)
- [diagnose ip proute on page 2933](#)
- [diagnose ip route on page 2934](#)
- [diagnose ip router bfd on page 2936](#)
- [diagnose ip router bgp on page 2938](#)
- [diagnose ip router command on page 2941](#)
- [diagnose ip router igmp on page 2942](#)
- [diagnose ip router isis on page 2944](#)
- [diagnose ip router ospf on page 2947](#)
- [diagnose ip router pim-dm on page 2950](#)
- [diagnose ip router pim-sm on page 2953](#)
- [diagnose ip router rip on page 2961](#)
- [diagnose ip router zl on page 2964](#)
- [diagnose ip rtcache on page 2964](#)
- [diagnose ip tcp on page 2965](#)
- [diagnose ip udp on page 2965](#)
- [diagnose ips anomaly on page 2965](#)
- [diagnose ips anomaly6 on page 2968](#)
- [diagnose ips av avengine on page 2970](#)
- [diagnose ips av cache on page 2971](#)
- [diagnose ips av mode on page 2972](#)
- [diagnose ips av query on page 2973](#)
- [diagnose ips av stats on page 2973](#)
- [diagnose ips av timeout on page 2974](#)
- [diagnose ips config disable on page 2974](#)
- [diagnose ips config enable on page 2975](#)
- [diagnose ips dac on page 2975](#)
- [diagnose ips debug disable on page 2976](#)
- [diagnose ips debug enable on page 2983](#)
- [diagnose ips debug level on page 2990](#)
- [diagnose ips debug status on page 2990](#)
- [diagnose ips debug timelimit on page 2991](#)
- [diagnose ips dissector on page 2991](#)
- [diagnose ips filter on page 2992](#)
- [diagnose ips global rule on page 2993](#)
- [diagnose ips gtp on page 2994](#)
- [diagnose ips ipsa on page 2995](#)

- [diagnose ips l2ips on page 2995](#)

- [diagnose webfilter bword on page 3573](#)
- [diagnose webfilter fortiguard on page 3573](#)
- [diagnose webfilter quota on page 3576](#)
- [diagnose webfilter stats on page 3577](#)
- [diagnose wireless-controller on page 3582](#)
- [diagnose wpa on page 3583](#)

diagnose alertconsole

alertconsole

This topic includes the following commands:

- [diagnose alertconsole clear on page 2711](#)
- [diagnose alertconsole fgd-retrieve on page 2711](#)
- [diagnose alertconsole list on page 2711](#)
- [diagnose alertconsole test on page 2712](#)

diagnose alertconsole clear

Clear alert messages.

```
diagnose alertconsole clear
```

diagnose alertconsole fgd-retrieve

Retrieve FortiGuard alerts.

```
diagnose alertconsole fgd-retrieve
```

diagnose alertconsole list

List current alert messages.

```
diagnose alertconsole list
```

diagnose alertconsole test

Generate alert messages.

```
diagnose alertconsole test
```

diagnose antivirus

antivirus

This topic includes the following commands:

- [diagnose antivirus database-info on page 2712](#)
- [diagnose antivirus outbreak-prevention on page 2712](#)
- [diagnose antivirus outbreak-prevention statistics on page 2712](#)
- [diagnose antivirus outbreak-prevention statistics flush on page 2713](#)
- [diagnose antivirus outbreak-prevention statistics list on page 2713](#)
- [diagnose antivirus quarantine on page 2713](#)
- [diagnose antivirus quarantine delete on page 2713](#)
- [diagnose antivirus quarantine list on page 2713](#)
- [diagnose antivirus quarantine purge on page 2714](#)
- [diagnose antivirus test on page 2714](#)

diagnose antivirus database-info

AntiVirus database info.

```
diagnose antivirus database-info
```

diagnose antivirus outbreak-prevention

FortiGuard - Virus Outbreak Prevention statistics and reporting.

```
diagnose antivirus outbreak-prevention
```

diagnose antivirus outbreak-prevention statistics

Cache and daemon statistics.

```
diagnose antivirus outbreak-prevention statistics
```

diagnose antivirus outbreak-prevention statistics flush

Flush daemon and cache statistics.

```
diagnose antivirus outbreak-prevention statistics flush
```

diagnose antivirus outbreak-prevention statistics list

Display cache and daemon statistics.

```
diagnose antivirus outbreak-prevention statistics list
```

diagnose antivirus quarantine

Quarantine functions.

```
diagnose antivirus quarantine
```

diagnose antivirus quarantine delete

Delete a file in quarantine.

```
diagnose antivirus quarantine delete <checksum>
```

Parameter	Description	Type	Size
<checksum>	Checksum of the file to delete.	string	

diagnose antivirus quarantine list

List the files in quarantine.

```
diagnose antivirus quarantine list <value>
```

Parameter	Description	Type	Size
<value>	service: http, https, ftp, smtp, smtps, pop3, pop3s, imap, imaps, im, nntp status: infected, machine-learning, blocked (optional)	string	

diagnose antivirus quarantine purge

Delete all quarantined files.

```
diagnose antivirus quarantine purge
```

diagnose antivirus test

AV Engine diagnostics.

```
diagnose antivirus test <command>
```

Parameter	Description	Type	Size
<command>	Command to pass into AV engine. Please double quote the command.	string	

diagnose automation

Diagnose commands for automation stitches.

This topic includes the following commands:

- [diagnose automation test on page 2714](#)

diagnose automation test

Test automation stitches.

```
diagnose automation test
```

diagnose autoupdate

Automatic updates.

This topic includes the following commands:

- [diagnose autoupdate downgrade on page 2715](#)
- [diagnose autoupdate downgrade disable on page 2715](#)
- [diagnose autoupdate downgrade enable on page 2715](#)

- [diagnose autoupdate status on page 2715](#)
- [diagnose autoupdate versions on page 2715](#)

diagnose autoupdate downgrade

Update object downgrade status.

```
diagnose autoupdate downgrade
```

diagnose autoupdate downgrade disable

Disable Update object downgrade.

```
diagnose autoupdate downgrade disable
```

diagnose autoupdate downgrade enable

Enable Update object downgrade.

```
diagnose autoupdate downgrade enable
```

diagnose autoupdate status

Status of automatic updates.

```
diagnose autoupdate status
```

diagnose autoupdate versions

Update object versions.

```
diagnose autoupdate versions
```

diagnose azure events

Show azure scheduled events

This topic includes the following commands:

- [diagnose azure events migration on page 2716](#)

diagnose azure events migration

Show migration events.

```
diagnose azure events migration
```

diagnose casb

CASB diagnose commands.

This topic includes the following commands:

- [diagnose casb build on page 2716](#)
- [diagnose casb show on page 2716](#)
- [diagnose casb show app-attributes on page 2717](#)
- [diagnose casb show app-details on page 2717](#)
- [diagnose casb show app-domains on page 2717](#)
- [diagnose casb show applications on page 2717](#)
- [diagnose casb show apps on page 2717](#)
- [diagnose casb show domains on page 2717](#)
- [diagnose casb show isdb on page 2718](#)
- [diagnose casb show isdb-all on page 2718](#)
- [diagnose casb show isdb-name on page 2718](#)
- [diagnose casb show isdb-uuid on page 2718](#)
- [diagnose casb verify on page 2718](#)
- [diagnose casb verify casb-isdb on page 2718](#)

diagnose casb build

Test to build the CASB database.

```
diagnose casb build
```

diagnose casb show

Show CASB database.

```
diagnose casb show
```

diagnose casb show app-attributes

Show built-in CASB application attributes by name.

```
diagnose casb show app-attributes
```

diagnose casb show app-details

Show built-in CASB application details by name.

```
diagnose casb show app-details
```

diagnose casb show app-domains

Show built-in CASB application domains by name.

```
diagnose casb show app-domains
```

diagnose casb show applications

Show all built-in CASB application details.

```
diagnose casb show applications
```

diagnose casb show apps

Show built-in CASB application list.

```
diagnose casb show apps
```

diagnose casb show domains

Show all built-in CASB domains.

```
diagnose casb show domains
```

diagnose casb show isdb

Show built-in CASB-ISDB mapping database.

```
diagnose casb show isdb
```

diagnose casb show isdb-all

Show all built-in CASB-ISDB mappings.

```
diagnose casb show isdb-all
```

diagnose casb show isdb-name

Show built-in CASB-ISDB mapping by application name.

```
diagnose casb show isdb-name
```

diagnose casb show isdb-uuid

Show built-in CASB-ISDB mapping by application UUID.

```
diagnose casb show isdb-uuid
```

diagnose casb verify

Verify databases.

```
diagnose casb verify
```

diagnose casb verify casb-isdb

Verify the CASB database with CASB-ISDB mapping database.

```
diagnose casb verify casb-isdb
```

diagnose central-mgmt

Central management.

This topic includes the following commands:

- [diagnose central-mgmt script-history on page 2719](#)
- [diagnose central-mgmt script-history clear on page 2719](#)
- [diagnose central-mgmt script-history del on page 2719](#)
- [diagnose central-mgmt script-history list on page 2719](#)
- [diagnose central-mgmt script-history test on page 2720](#)

diagnose central-mgmt script-history

Script execution history.

```
diagnose central-mgmt script-history
```

diagnose central-mgmt script-history clear

Clear script execution history.

```
diagnose central-mgmt script-history clear
```

diagnose central-mgmt script-history del

Delete one script execution record.

```
diagnose central-mgmt script-history del <id>
```

Parameter	Description	Type	Size
<id>	Record ID.	string	

diagnose central-mgmt script-history list

List script execution history.

```
diagnose central-mgmt script-history list
```

diagnose central-mgmt script-history test

Generate sample script execution records.

```
diagnose central-mgmt script-history test
```

diagnose cid

Device Identification diagnostics.

This topic includes the following commands:

- [diagnose cid debug on page 2720](#)
- [diagnose cid debug filter on page 2721](#)
- [diagnose cid debug filter clear on page 2721](#)
- [diagnose cid debug filter clear mac on page 2721](#)
- [diagnose cid debug filter mac on page 2721](#)
- [diagnose cid debug start on page 2721](#)

diagnose cid debug

Control debug log for cid.

```
diagnose cid debug
```

diagnose cid debug filter

Show the filter for this console.

```
diagnose cid debug filter
```

diagnose cid debug filter clear

Clear the filter.

```
diagnose cid debug filter clear
```

diagnose cid debug filter clear mac

Clear the MAC filter.

```
diagnose cid debug filter clear mac
```

diagnose cid debug filter mac

Source or destination MAC address to match.

```
diagnose cid debug filter mac
```

diagnose cid debug start

Start logging cid debug on this console.

```
diagnose cid debug start
```

diagnose cid debug stop

Stop logging cid debug on this console.

```
diagnose cid debug stop
```

diagnose cid restart

Restart cid.

```
diagnose cid restart
```

diagnose cid scan

Scan something

```
diagnose cid scan
```

diagnose cid scan csf

Scan Fortinet serial number (SN) as if it came from CSF

```
diagnose cid scan csf <interface> <ip4-address> <serial-number>
```

Parameter	Description	Type	Size
<interface>	Interface the device is connected to.	string	
<ip4-address>	IPv4 address of the device	string	
<serial-number>	Fortinet device serial number (SN)	string	

diagnose cid scan ethernet

Scan a hex-encoded ethernet packet

```
diagnose cid scan ethernet <hex-encoded-ethernet-packet>
```

Parameter	Description	Type	Size
<hex-encoded-ethernet-packet>	Hex encoded Ethernet packet.	string	

diagnose cid scan lldp

Scan LLDP

```
diagnose cid scan lldp <mac> <ipv4-address> <system-name> <system-description> <model>
```

Parameter	Description	Type	Size
<mac>	MAC address	string	
<ipv4-address>	LLDP IPv4 Management address	string	
<system-name>	LLDP System Name	string	
<system-description>	LLDP System Description	string	
<model>	LLDP Model	string	

diagnose cid stats

Device Identification statistics.

```
diagnose cid stats
```

diagnose cid stats config

Device Identification statistics for the configuration handling.

```
diagnose cid stats config
```

diagnose cid stats crash

Device Identification statistics for the crash log.

```
diagnose cid stats crash
```

diagnose cid stats debug

Device Identification statistics for the debug log.

```
diagnose cid stats debug
```

diagnose cid stats manager

Device Identification statistics for the manager.

```
diagnose cid stats manager
```

diagnose cid stats scan

Device Identification statistics for the traffic scanner.

```
diagnose cid stats scan
```

diagnose cid stats trap

Device Identification statistics for the SNMP trap generator.

```
diagnose cid stats trap
```

diagnose cid stats unpack

Device Identification statistics for the signature unpacker.

```
diagnose cid stats unpack
```

diagnose clearpass

ClearPass service SPT (System Posture Token) information.

This topic includes the following commands:

- [diagnose clearpass delete on page 2725](#)
- [diagnose clearpass flush on page 2725](#)
- [diagnose clearpass list on page 2725](#)
- [diagnose clearpass list address on page 2725](#)
- [diagnose clearpass list spt on page 2725](#)
- [diagnose clearpass list summary on page 2726](#)

diagnose clearpass delete

Delete ClearPass database by IP address.

```
diagnose clearpass delete <IP>
```

Parameter	Description	Type	Size
<IP>	IP address	string	

diagnose clearpass flush

Delete ClearPass database.

```
diagnose clearpass flush
```

diagnose clearpass list

List ClearPass database.

```
diagnose clearpass list
```

diagnose clearpass list address

List by IP address.

```
diagnose clearpass list address <IP>
```

Parameter	Description	Type	Size
<IP>	IP address	string	

diagnose clearpass list spt

List by SPT value.

```
diagnose clearpass list spt <spt-value>
```

Parameter	Description	Type	Size
<spt-value>	SPT value	string	

diagnose clearpass list summary

List summary of the ClearPass database.

```
diagnose clearpass list summary
```

diagnose debug

debug

diagnose debug admin

Admin user.

```
diagnose debug admin
```

diagnose debug admin error-log

Last failed admin user login details.

```
diagnose debug admin error-log
```

diagnose debug application

application

```
diagnose debug application
```

diagnose debug application acd

Aggregate Controller

```
diagnose debug application acd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application acid

Cisco Application Centric Infrastructure (Direct Connection) daemon

```
diagnose debug application acid <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application alarmd

Alarmd daemon.

```
diagnose debug application alarmd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application alertmail

Alert mail daemon.

```
diagnose debug application alertmail <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application alicloud-ha

AliCloud HA controller

```
diagnose debug application alicloud-ha <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application alicloud-sdn

AliCloud SDN controller

```
diagnose debug application alicloud-sdn <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application authd

Auth daemon.

```
diagnose debug application authd <Integer> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	
<xxx.xxx.xxx.xxx>	Specific source IP to debug some modules (e.g.fsso).	string	

diagnose debug application autod

Automation daemon.

```
diagnose debug application autod <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application awsd

Amazon Web Services (AWS) daemon.

```
diagnose debug application awsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application azd

Microsoft Azure daemon.

```
diagnose debug application azd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application azd-ha

Microsoft Azure daemon.

```
diagnose debug application azd-ha <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application bfdd

BFD daemon.

```
diagnose debug application bfdd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cert-update

Certificate update in forticron daemon.

```
diagnose debug application cert-update <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application chassis

Chassis daemon.

```
diagnose debug application chassis <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application clearpass

ClearPass daemon.

```
diagnose debug application clearpass <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cloudapid

Cloud service communication daemon.

```
diagnose debug application cloudapid <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cloudinitd

cloudinitd daemon.

```
diagnose debug application cloudinitd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cmp

CMPv2.

```
diagnose debug application cmp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application crl-update

CRL update in forticron daemon.

```
diagnose debug application crl-update <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application csfd

Security Fabric daemon.

```
diagnose debug application csfd <Integer> <serial <serialnum>|ip <ip>|direction <up|down>> <serial  
<serialnum>|ip <ip>|direction <up|down>> <enter>|negate
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	
<serial <serialnum> ip <ip> direction <up down>>	Filter by serial number, IP, or stream direction.	string	
<serial <serialnum> ip <ip> direction <up down>>	Filter by serial number, IP, or stream direction.	string	
<enter> negate	If negate, inverse filter.	string	

diagnose debug application cu_acd

caputp AC daemon

```
diagnose debug application cu_acd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cw_acd

Capwap AC daemon.

```
diagnose debug application cw_acd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cw_acd_helper

Capwap AC helper daemon.

```
diagnose debug application cw_acd_helper <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cw_acd_wlev

CAPWAP AC daemon wireless event notification.

```
diagnose debug application cw_acd_wlev <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application cw_acd_wpad

CAPWAP AC and WPA daemon (wpad).

```
diagnose debug application cw_acd_wpad <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ddnsd

DDNS client daemon.

```
diagnose debug application ddnsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dhcp6c

DHCPv6 client.

```
diagnose debug application dhcp6c <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dhcp6r

DHCPv6 relay.

```
diagnose debug application dhcp6r <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dhcp6s

DHCPv6 server.

```
diagnose debug application dhcp6s <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dhcpc

DHCP client module.

```
diagnose debug application dhcpc <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dhcprelay

DHCP relay daemon.

```
diagnose debug application dhcprelay <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dhcps

DHCP server.

```
diagnose debug application dhcps <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dlpfingerprint

DLP fingerprint daemon.

```
diagnose debug application dlpfingerprint <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dnp

DNP proxy daemon.

```
diagnose debug application dnp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application dnsproxy

DNS proxy module.

```
diagnose debug application dnsproxy <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	
<Integer>	Daemon index.	string	

diagnose debug application eap_proxy

EAP proxy daemon.

```
diagnose debug application eap_proxy <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application eap_supp

EAP supplicant daemon.

```
diagnose debug application eap_supp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application est

Enrollment over Secure Transport

```
diagnose debug application est <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application evpnd

EVPN daemon.

```
diagnose debug application evpnd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application extenderd

Extender Wan daemon.

```
diagnose debug application extenderd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fclfd

Fclfd daemon.

```
diagnose debug application fclfd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fcnacd

FortiClient NAC daemon.

```
diagnose debug application fcnacd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fds_notify

Update notification daemon.

```
diagnose debug application fds_notify <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fgd_alert

FortiGuard alert message.

```
diagnose debug application fgd_alert <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fgfmd

FortiGate/FortiManager communication daemon.

```
diagnose debug application fgfmd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fgtlogd

fgtlogd daemon.

```
diagnose debug application fgtlogd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application flcfgd

fortilink configuration daemon

```
diagnose debug application flcfgd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application flpold

FortiLink policy daemon.

```
diagnose debug application flpold <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fltund

FortiLink tunnel daemon.

```
diagnose debug application fltund <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fnbamd

FortiGate non-blocking auth daemon.

```
diagnose debug application fnbamd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application foauthd

FortiGuardOverride auth daemon.

```
diagnose debug application foauthd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application forticldd

FortiCloud daemon.

```
diagnose debug application forticldd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application forticron

Forticron daemon.

```
diagnose debug application forticron <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fortinkd

fortinkd daemon

```
diagnose debug application fortinkd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fortimq

Fortimq daemon.

```
diagnose debug application fortimq <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fsso_ldap

FSSO LDAP daemon.

```
diagnose debug application fsso_ldap <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fssod

FSSO daemon.

```
diagnose debug application fssod <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application fsvrd

FortiService daemon.

```
diagnose debug application fsvrd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ftm-push

FTM-Push daemon.

```
diagnose debug application ftm-push <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application garpd

VIP gratuitous ARP daemon.

```
diagnose debug application garpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application gcpd

Google Cloud Platform daemon.

```
diagnose debug application gcpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application hamonitord

HA monitor module.

```
diagnose debug application hamonitord <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application harelay

HA relay module.

```
diagnose debug application harelay <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application hasync

HA synchronization module.

```
diagnose debug application hasync <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application hatalk

HA protocol module.

```
diagnose debug application hatalk <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application httpsd

HTTPS daemon.

```
diagnose debug application httpsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level. (Info = 0x01, Warning = 0x02, Error = 0x04, Critical = 0x08, All = -1, Warning/Error/Critical = 0x0E)	string	

diagnose debug application ibmd

IBM Cloud Infrastructure daemon.

```
diagnose debug application ibmd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application icond

Industrial Connectivity daemon.

```
diagnose debug application icond <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ike

IKE daemon.

```
diagnose debug application ike <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ikecrypt

Multi-process IKE crypto daemon.

```
diagnose debug application ikecrypt <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application imap

IMAP proxy.

```
diagnose debug application imap <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application init

System init process.

```
diagnose debug application init <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application iotd

IoT device info daemon.

```
diagnose debug application iotd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ipamd

IP Address Management daemon.

```
diagnose debug application ipamd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ipamsd

IPAM server daemon.

```
diagnose debug application ipamsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ipldbd

Ipldbd daemon.

```
diagnose debug application ipldbd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ipsengine

IPS sensor.

```
diagnose debug application ipsengine <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ipsmonitor

IPS monitor.

```
diagnose debug application ipsmonitor <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ipsufd

IPS URL filter resolver daemon.

```
diagnose debug application ipsufd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application kmiglogd

Kernel Log daemon.

```
diagnose debug application kmiglogd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application kmipd

KMIP daemon

```
diagnose debug application kmipd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application kubed

Kubernetes daemon.

```
diagnose debug application kubed <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application l2tp

L2TP daemon.

```
diagnose debug application l2tp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application link-monitor

Link monitor daemon.

```
diagnose debug application link-monitor <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application link-monitor-passive

Link monitor daemon.

```
diagnose debug application link-monitor-passive <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application locallogd

locallogd daemon.

```
diagnose debug application locallogd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application lpmd

LPM daemon.

```
diagnose debug application lpmd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application miglogd

Log daemon.

```
diagnose debug application miglogd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application mrd

Mobile router daemon.

```
diagnose debug application mrd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application netxd

NetX REST API daemon.

```
diagnose debug application netxd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application nntp

NNTP proxy.

```
diagnose debug application nntp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application nodejs

Node.js daemon.

```
diagnose debug application nodejs <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level. (Info = 0x01, Warning = 0x02, Error = 0x04, All = -1, Warning/Error = 0x06)	string	

diagnose debug application npd

NP7 daemon.

```
diagnose debug application npd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ntnxd

Nutanix Prism Central daemon.

```
diagnose debug application ntnxd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ntpd

NTPd daemon.

```
diagnose debug application ntpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application oaas_agent

OaaS agent daemon.

```
diagnose debug application oaas_agent <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ocid

Oracle Cloud Infrastructure (OCI) daemon

```
diagnose debug application ocid <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application openstackd

OpenStack SDN connector daemon.

```
diagnose debug application openstackd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ovrd

Override daemon.

```
diagnose debug application ovrd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application pcpd

PCP server daemon.

```
diagnose debug application pcpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application pop3

POP3 proxy.

```
diagnose debug application pop3 <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ppp

PPP daemon.

```
diagnose debug application ppp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application pppoe

PPPoE client Daemon.

```
diagnose debug application pppoe <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application pptp

PPTP daemon.

```
diagnose debug application pptp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application pptpc

PPTP client.

```
diagnose debug application pptpc <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application proxy

Proxy.

```
diagnose debug application proxy <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application ptpd

Precision Time Protocol daemon.

```
diagnose debug application ptpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application quarantine

Quarantine daemon.

```
diagnose debug application quarantine <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application radius-das

RADIUS DAS daemon.

```
diagnose debug application radius-das <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application radiusd

RADIUS daemon.

```
diagnose debug application radiusd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application radvd

Router adv daemon.

```
diagnose debug application radvd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application reportd

report daemon

```
diagnose debug application reportd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application route-tag

route-tag daemon.

```
diagnose debug application route-tag <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application samld

SAML SSO daemon.

```
diagnose debug application samld <Integer> <verbose>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	
<verbose>	Verbose output during process. (v, vv, vvv)	string	

diagnose debug application sapd

SAP Control daemon.

```
diagnose debug application sapd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sccp

SCCP ALG.

```
diagnose debug application sccp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application scep

SCEP

```
diagnose debug application scep <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application scimd

SCIM server daemon.

```
diagnose debug application scimd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sdncd

SDN Connector daemon.

```
diagnose debug application sdncd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sdnvpnd

Public Cloud VPN daemon.

```
diagnose debug application sdnvpnd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sdwan

SD-WAN daemon.

```
diagnose debug application sdwan <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sepmd

Symantec EPM daemon.

```
diagnose debug application sepmd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application server-probe

Server probe daemon.

```
diagnose debug application server-probe <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sessionsync

Session sync daemon.

```
diagnose debug application sessionsync <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sflowd

sFlow protocol module.

```
diagnose debug application sflowd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sfupgraded

Security Fabric Upgrade daemon.

```
diagnose debug application sfupgraded <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sip

SIP ALG.

```
diagnose debug application sip <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application smbcd

SMB client daemon.

```
diagnose debug application smbcd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application smtp

SMTP proxy.

```
diagnose debug application smtp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application snmpd

SNMP daemon.

```
diagnose debug application snmpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application spareblock

Set debug spare block count.

```
diagnose debug application spareblock <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application speedtest

Speed test execution daemon.

```
diagnose debug application speedtest <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application speedtestd

Speed test server daemon.

```
diagnose debug application speedtestd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sshd

Sshd daemon.

```
diagnose debug application sshd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application sslvpn

Agentless VPN proxy daemon

```
diagnose debug application sslvpn <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application syslogd

syslogd daemon.

```
diagnose debug application syslogd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application update

Update daemon.

```
diagnose debug application update <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application uploadd

Upload daemon.

```
diagnose debug application uploadd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application urlfilter

Urlfilter daemon.

```
diagnose debug application urlfilter <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application vmwd

VMware vSphere daemon

```
diagnose debug application vmwd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application vned

Virtual network enabler daemon.

```
diagnose debug application vned <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application vrrpd

VRRP daemon.

```
diagnose debug application vrrpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wabcs

WAN acceleration byte cache storage.

```
diagnose debug application wabcs <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application waocs

WAN acceleration object cache storage.

```
diagnose debug application waocs <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wccpd

WCCP daemon.

```
diagnose debug application wccpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wf_monitor

WF monitor, parent of urlfilter daemon.

```
diagnose debug application wf_monitor <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wifi

WiFi setting.

```
diagnose debug application wifi <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wpa-show-keys

Dump keys in wpad or wpas log.

```
diagnose debug application wpa-show-keys <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wpa-timestamp

Dump timestamp in wpad or wpas log.

```
diagnose debug application wpa-timestamp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wpad

Port access entity daemon.

```
diagnose debug application wpad <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application wpad-crash-hexdump

Dump wpad crash in hexadecimal format.

```
diagnose debug application wpad-crash-hexdump <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application zebos

ZebOS

```
diagnose debug application zebos <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug application zebos-launcher

ZebOS launcher daemon.

```
diagnose debug application zebos-launcher <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level.	string	

diagnose debug authd

Authentication daemon.

```
diagnose debug authd
```

diagnose debug authd clear

Clear internal data structures and keep alive sessions.

```
diagnose debug authd clear
```

diagnose debug authd fsso

FSSO client module.

```
diagnose debug authd fsso
```

diagnose debug authd fsso add-address

Add FSAE dynamic addresses.

```
diagnose debug authd fsso add-address <adgrp1+adgrp2+...*adgrpn> <xxx.xxx.xxx.xxx>  
<xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<adgrp1+adgrp2+...*adgrpn>	AD groups.	string	
<xxx.xxx.xxx.xxx>	IP start address.	string	
<xxx.xxx.xxx.xxx>	IP end address.	string	

diagnose debug authd fsso clear-logons

Clear logon information.

```
diagnose debug authd fsso clear-logons
```

diagnose debug authd fsso del-address

Delete FSAE dynamic addresses.

```
diagnose debug authd fsso del-address <adgrp1+adgrp2+...*adgrpn> <xxx.xxx.xxx.xxx>  
<xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<adgrp1+adgrp2+...*adgrpn>	AD groups.	string	
<xxx.xxx.xxx.xxx>	IP start address.	string	
<xxx.xxx.xxx.xxx>	IP end address.	string	

diagnose debug authd fsso filter

Filters used for list or clear logons.

```
diagnose debug authd fsso filter
```

diagnose debug authd fsso filter clear

Clear all filters.

```
diagnose debug authd fsso filter clear
```

diagnose debug authd fsso filter group

Group name.

```
diagnose debug authd fsso filter group <name>
```

Parameter	Description	Type	Size
<name>	Group name.	string	

diagnose debug authd fsso filter server

FSSO agent name.

```
diagnose debug authd fsso filter server <name>
```

Parameter	Description	Type	Size
<name>	FSSO agent name.	string	

diagnose debug authd fsso filter source

Source IP address.

```
diagnose debug authd fsso filter source <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP (range from).	string	
<xxx.xxx.xxx.xxx>	Source IP (range to).	string	

diagnose debug authd fsso filter user

User name.

```
diagnose debug authd fsso filter user <name>
```

Parameter	Description	Type	Size
<name>	User name.	string	

diagnose debug authd fsso flush-address

Flush FSAE dynamic addresse.

```
diagnose debug authd fsso flush-address <name>
```

Parameter	Description	Type	Size
<name>	FSSO address name.	string	

diagnose debug authd fsso flush-address-all

Flush all of FSAE dynamic addresses.

```
diagnose debug authd fsso flush-address-all
```

diagnose debug authd fsso list

List current logons.

```
diagnose debug authd fsso list
```

diagnose debug authd fsso refresh-groups

Refresh group mappings.

```
diagnose debug authd fsso refresh-groups
```

diagnose debug authd fsso refresh-logons

Resync logon database.

```
diagnose debug authd fsso refresh-logons
```

diagnose debug authd fsso server-status

Show FSSO agent connection status.

```
diagnose debug authd fsso server-status
```

diagnose debug authd fsso show-address

Show FSAE dynamic addresses.

```
diagnose debug authd fsso show-address
```

diagnose debug authd fsso summary

Summary of current logons.

```
diagnose debug authd fsso summary
```

diagnose debug authd memory

Show authd memory usage information.

```
diagnose debug authd memory
```

diagnose debug aws-vpce

Print kernel aws vpce info.

```
diagnose debug aws-vpce
```

diagnose debug backtrace

Generate backtrace with <type>

```
diagnose debug backtrace
```

diagnose debug cli

Debug CLI.

```
diagnose debug cli <Integer>
```

Parameter	Description	Type	Size
<Integer>	Debug level (0 - 8).	string	

diagnose debug cloudinit

Cloudinit info.

```
diagnose debug cloudinit
```

diagnose debug cloudinit clear

Clear cloudinit log info.

```
diagnose debug cloudinit clear
```

diagnose debug cloudinit show

Show cloudinit log info.

```
diagnose debug cloudinit show
```

diagnose debug cmdb-trace

Trace CLI.

```
diagnose debug cmdb-trace <Integer>
```

Parameter	Description	Type	Size
<Integer>	Trace level (0 - 2).	string	

diagnose debug cmdb-walk

enable/disable cmdb-walk.

```
diagnose debug cmdb-walk <Integer>
```

Parameter	Description	Type	Size
<Integer>	walk value (0 - 1).	string	

diagnose debug config-error-log

Configure error log info.

```
diagnose debug config-error-log
```

diagnose debug config-error-log clear

Clear config error log.

```
diagnose debug config-error-log clear
```

diagnose debug config-error-log read

Display config error on console.

```
diagnose debug config-error-log read
```

diagnose debug console

console

```
diagnose debug console
```

diagnose debug console no-user-log-msg

Console does not show user log messages.

```
diagnose debug console no-user-log-msg
```

diagnose debug console no-user-log-msg disable

Disable console no user log message.

```
diagnose debug console no-user-log-msg disable
```

diagnose debug console no-user-log-msg enable

Enable console no user log message.

```
diagnose debug console no-user-log-msg enable
```

diagnose debug console retry-log-msg

Console does not drop user log messages.

```
diagnose debug console retry-log-msg
```

diagnose debug console retry-log-msg disable

Disable console resend of user log message.

```
diagnose debug console retry-log-msg disable
```

diagnose debug console retry-log-msg enable

Enable console resend of user log message.

```
diagnose debug console retry-log-msg enable
```

diagnose debug console send

Send out MODEM AT command.

```
diagnose debug console send <AT command> <character> <integer>
```

Parameter	Description	Type	Size
<AT command>	MODEM AT command to send.	string	
<character>	escape character (optional, default is '+')	string	
<integer>	Escape guard time in milli-second (1 - 10000, optional, default = 1000ms).	string	

diagnose debug console timestamp

timestamp

```
diagnose debug console timestamp
```

diagnose debug console timestamp disable

Disable timestamp.

```
diagnose debug console timestamp disable
```

diagnose debug console timestamp enable

Enable timestamp.

```
diagnose debug console timestamp enable
```

diagnose debug crashlog

Crash log info.

```
diagnose debug crashlog
```

diagnose debug crashlog clear

Clear crash log.

```
diagnose debug crashlog clear
```

diagnose debug crashlog get

Get crashlog.

```
diagnose debug crashlog get
```

diagnose debug crashlog history

Show process crash history.

```
diagnose debug crashlog history
```

diagnose debug crashlog interval

Change crash log interval in seconds.

```
diagnose debug crashlog interval <interval>
```

Parameter	Description	Type	Size
<interval>	Interval at which process crashes are written to storage (0 - 2147483647 sec, default = 3600, 0 = log all crashes).	string	

diagnose debug disable

Disable debug output.

```
diagnose debug disable
```

diagnose debug duration

Set duration of debug activities.

```
diagnose debug duration <Integer>
```

Parameter	Description	Type	Size
<Integer>	Duration in minutes, min = 1, max = 99999, 0 means unlimited.	string	

diagnose debug enable

Enable debug output.

```
diagnose debug enable
```

diagnose debug flow

Trace packet flow in kernel.

```
diagnose debug flow
```

diagnose debug flow filter

Trace packet with filter.

```
diagnose debug flow filter
```

diagnose debug flow filter addr

IP address.

```
diagnose debug flow filter addr <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx> <Enter> | or/and
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Host IP (ip1/from).	string	
<xxx.xxx.xxx.xxx>	Host IP (ip2/to).	string	
<Enter> or/and	If or/and is specific, filter base on ip1 or/and ip2.	string	

diagnose debug flow filter clear

Clear filter.

```
diagnose debug flow filter clear
```

diagnose debug flow filter daddr

Destination IP address.

```
diagnose debug flow filter daddr <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Destination IP (from).	string	
<xxx.xxx.xxx.xxx>	Destination IP (to).	string	

diagnose debug flow filter dport

Destination port.

```
diagnose debug flow filter dport <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Destination port (from).	string	
<xxx>	Destination port (to).	string	

diagnose debug flow filter negate

Inverse filter.

```
diagnose debug flow filter negate
```

diagnose debug flow filter negate addr

Inverse host IP.

```
diagnose debug flow filter negate addr
```

diagnose debug flow filter negate daddr

Inverse dest IP.

```
diagnose debug flow filter negate daddr
```

diagnose debug flow filter negate dport

Inverse dest port.

```
diagnose debug flow filter negate dport
```

diagnose debug flow filter negate port

Inverse port.

```
diagnose debug flow filter negate port
```

diagnose debug flow filter negate proto

Inverse protocol.

```
diagnose debug flow filter negate proto
```

diagnose debug flow filter negate saddr

Inverse source IP.

```
diagnose debug flow filter negate saddr
```

diagnose debug flow filter negate sport

Inverse source port.

```
diagnose debug flow filter negate sport
```

diagnose debug flow filter negate vd

Inverse virtual domain.

```
diagnose debug flow filter negate vd
```

diagnose debug flow filter port

port

```
diagnose debug flow filter port <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Port (from).	string	
<xxx>	Port (to).	string	

diagnose debug flow filter proto

Protocol number.

```
diagnose debug flow filter proto <xxx>
```

Parameter	Description	Type	Size
<xxx>	Protocol number.	string	

diagnose debug flow filter saddr

Source IP address.

```
diagnose debug flow filter saddr <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP (from).	string	
<xxx.xxx.xxx.xxx>	Source IP (to).	string	

diagnose debug flow filter sport

Source port.

```
diagnose debug flow filter sport <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Source port (from).	string	
<xxx>	Source port (to).	string	

diagnose debug flow filter vd

Index of virtual domain.

```
diagnose debug flow filter vd <xxx>
```

Parameter	Description	Type	Size
<xxx>	Index of virtual domain.	string	

diagnose debug flow filter vd-name

Name of virtual domain.

```
diagnose debug flow filter vd-name <...>
```

Parameter	Description	Type	Size
<...>	Name of virtual domain.	string	

diagnose debug flow filter6

Trace packet with IPv6 filter.

```
diagnose debug flow filter6
```

diagnose debug flow filter6 addr

IPv6 address.

```
diagnose debug flow filter6 addr <xxx:xxx::xxx:xxx> <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Host IPv6 (from).	string	
<xxx:xxx::xxx:xxx>	Host IPv6 (to).	string	

diagnose debug flow filter6 clear

Clear IPv6 filter.

```
diagnose debug flow filter6 clear
```

diagnose debug flow filter6 daddr

Destination IP address.

```
diagnose debug flow filter6 daddr <xxx:xxx::xxx:xxx> <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Destination IP (from).	string	
<xxx:xxx::xxx:xxx>	Destination IP (to).	string	

diagnose debug flow filter6 dport

Destination port.

```
diagnose debug flow filter6 dport <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Destination port (from).	string	
<xxx>	Destination port (to).	string	

diagnose debug flow filter6 negate

Inverse IPv6 filter.

```
diagnose debug flow filter6 negate
```

diagnose debug flow filter6 negate addr

Inverse host IP.

```
diagnose debug flow filter6 negate addr
```

diagnose debug flow filter6 negate daddr

Inverse dest IP.

```
diagnose debug flow filter6 negate daddr
```

diagnose debug flow filter6 negate dport

Inverse dest port.

```
diagnose debug flow filter6 negate dport
```

diagnose debug flow filter6 negate port

Inverse port.

```
diagnose debug flow filter6 negate port
```

diagnose debug flow filter6 negate proto

Inverse protocol.

```
diagnose debug flow filter6 negate proto
```

diagnose debug flow filter6 negate saddr

Inverse source IP.

```
diagnose debug flow filter6 negate saddr
```

diagnose debug flow filter6 negate sport

Inverse source port.

```
diagnose debug flow filter6 negate sport
```

diagnose debug flow filter6 negate vd

Inverse virtual domain.

```
diagnose debug flow filter6 negate vd
```

diagnose debug flow filter6 port

port

```
diagnose debug flow filter6 port <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Port (from).	string	
<xxx>	Port (to).	string	

diagnose debug flow filter6 proto

Protocol number.

```
diagnose debug flow filter6 proto <xxx>
```

Parameter	Description	Type	Size
<xxx>	Protocol number.	string	

diagnose debug flow filter6 saddr

Source IP address.

```
diagnose debug flow filter6 saddr <xxx:xxx::xxx:xxx> <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Source IP (from).	string	
<xxx:xxx::xxx:xxx>	Source IP (to).	string	

diagnose debug flow filter6 sport

Source port.

```
diagnose debug flow filter6 sport <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Source port (from).	string	
<xxx>	Source port (to).	string	

diagnose debug flow filter6 vd

Index of virtual domain.

```
diagnose debug flow filter6 vd <xxx>
```

Parameter	Description	Type	Size
<xxx>	Index of virtual domain.	string	

diagnose debug flow filter6 vd-name

Name of virtual domain.

```
diagnose debug flow filter6 vd-name <...>
```

Parameter	Description	Type	Size
<...>	Name of virtual domain.	string	

diagnose debug flow show

Enable/disable display of trace on console.

```
diagnose debug flow show
```

diagnose debug flow show function-name

Enable/disable display function name.

```
diagnose debug flow show function-name
```

diagnose debug flow show function-name disable

Disable display of function name.

```
diagnose debug flow show function-name disable
```

diagnose debug flow show function-name enable

Enable display of function name.

```
diagnose debug flow show function-name enable
```

diagnose debug flow show iprope

Enable/disable trace iprope match.

```
diagnose debug flow show iprope
```

diagnose debug flow show iprope disable

Disable trace iprope match.

```
diagnose debug flow show iprope disable
```

diagnose debug flow show iprope enable

Enable trace iprope match.

```
diagnose debug flow show iprope enable
```

diagnose debug flow trace

Start/stop trace.

```
diagnose debug flow trace
```

diagnose debug flow trace start

Start trace.

```
diagnose debug flow trace start <xxx>
```

Parameter	Description	Type	Size
<xxx>	Repeat number.	string	

diagnose debug flow trace start6

Start IPv6 trace.

```
diagnose debug flow trace start6 <xxx>
```

Parameter	Description	Type	Size
<xxx>	Repeat number.	string	

diagnose debug flow trace stop

Stop trace.

```
diagnose debug flow trace stop
```

diagnose debug flow trace stop6

Stop IPv6 trace.

```
diagnose debug flow trace stop6
```

diagnose debug fortilink-report

Generate FortiLink debug report.

```
diagnose debug fortilink-report
```

diagnose debug fortilink-report all

Generate FortiLink debug report for all switches.

```
diagnose debug fortilink-report all
```

diagnose debug fortilink-report switch-group

Generate FortiLink debug report for switch group.

```
diagnose debug fortilink-report switch-group <switch-group>
```

Parameter	Description	Type	Size
<switch-group>	Switch group name.	string	

diagnose debug fortilink-report switch-id

Generate FortiLink debug report for switch by specific switch ID.

```
diagnose debug fortilink-report switch-id <switch-id>
```

Parameter	Description	Type	Size
<switch-id>	Switch ID.	string	

diagnose debug fortism

Fortinet security module.

```
diagnose debug fortism
```

diagnose debug fortism enable

Enable Fortinet security module for test purpose.

```
diagnose debug fortism enable
```

diagnose debug fsso-polling

FSSO active directory poll module.

```
diagnose debug fsso-polling
```

diagnose debug fsso-polling client

Show FSSO AD Server Clients.

```
diagnose debug fsso-polling client
```

diagnose debug fsso-polling detail

Show FSSO AD Server Detail.

```
diagnose debug fsso-polling detail <id>
```

Parameter	Description	Type	Size
<id>	AD Server Entry ID.	string	

diagnose debug fsso-polling group

Show FSSO LDAP groups for AD users.

```
diagnose debug fsso-polling group <id> <name>
```

Parameter	Description	Type	Size
<id>	AD Server Entry ID.	string	
<name>	AD Server user.	string	

diagnose debug fsso-polling refresh-user

Refresh FSSO AD Server users.

```
diagnose debug fsso-polling refresh-user <id>
```

Parameter	Description	Type	Size
<id>	AD Server Entry ID.	string	

diagnose debug fsso-polling set-log-source

Source of event log.

```
diagnose debug fsso-polling set-log-source <id> <src>
```

Parameter	Description	Type	Size
<id>	AD Server Entry ID.	string	
<src>	0: security, 1:application.	string	

diagnose debug fsso-polling summary

Show FSSO AD Server Summary.

```
diagnose debug fsso-polling summary
```

diagnose debug fsso-polling user

Show FSSO AD Server users.

```
diagnose debug fsso-polling user <id>
```

Parameter	Description	Type	Size
<id>	AD Server Entry ID.	string	

diagnose debug info

Show active debug level settings.

```
diagnose debug info
```

diagnose debug kernel

kernel

```
diagnose debug kernel
```

diagnose debug kernel ha

Debug kernel HA level.

```
diagnose debug kernel ha <Integer>
```

Parameter	Description	Type	Size
<Integer>	Kernel HA level (0 = disable, 1-7 = higher level).	string	

diagnose debug kernel level

Debug kernel level.

```
diagnose debug kernel level <Integer>
```

Parameter	Description	Type	Size
<Integer>	Kernel level.	string	

diagnose debug kernel sysrq

Magic SysRq.

```
diagnose debug kernel sysrq
```

diagnose debug kernel sysrq command

Magic SysRq command.

```
diagnose debug kernel sysrq command
```

diagnose debug kernel sysrq command crash

Perform a system crash.

```
diagnose debug kernel sysrq command crash
```

diagnose debug kernel sysrq disable

Disable magic SysRq.

```
diagnose debug kernel sysrq disable
```

diagnose debug kernel sysrq enable

Enable magic SysRq.

```
diagnose debug kernel sysrq enable
```

diagnose debug kernel sysrq status

Show the status of magic SysRq.

```
diagnose debug kernel sysrq status
```

diagnose debug rating

Display rating info.

```
diagnose debug rating <refresh-rate>
```

Parameter	Description	Type	Size
<refresh-rate>	Frequency to refresh server list (sec).	string	

diagnose debug report

Report for tech support.

```
diagnose debug report
```

diagnose debug report reset

Reset debug report.

```
diagnose debug report reset
```

diagnose debug reset

Reset all debug level to default.

```
diagnose debug reset
```

diagnose debug sdnc

sdnc

```
diagnose debug sdnc
```

diagnose debug sdnc valgrind

Valgrind analysis.

```
diagnose debug sdnc valgrind
```

diagnose debug sdnc valgrind disable

Force daemon to restart.

```
diagnose debug sdnc valgrind disable
```

diagnose debug sdnc valgrind enable

Force daemon to restart.

```
diagnose debug sdnc valgrind enable
```

diagnose debug sdnc valgrind log

Valgrind logs.

```
diagnose debug sdnc valgrind log
```

diagnose debug sdnc valgrind log clear

Clear logs.

```
diagnose debug sdnc valgrind log clear
```

diagnose debug sdnc valgrind log show

Show logs.

```
diagnose debug sdnc valgrind log show
```

diagnose debug sdnc valgrind memcheck

Force daemon to restart.

```
diagnose debug sdnc valgrind memcheck
```

diagnose debug sdnc valgrind memcheck_less

Force daemon to restart.

```
diagnose debug sdnc valgrind memcheck_less
```

diagnose debug sdnc valgrind status

Show valgrind status.

```
diagnose debug sdnc valgrind status
```

diagnose debug sql-log-error

SQL log database error info

```
diagnose debug sql-log-error
```

diagnose debug sql-log-error clear

clear sql log database error log

```
diagnose debug sql-log-error clear
```

diagnose debug sql-log-error read

display sql log database error on console

```
diagnose debug sql-log-error read
```

diagnose debug sql-log-error status

show sql log database error status

```
diagnose debug sql-log-error status
```

diagnose debug traffic

Traffic statistic data

```
diagnose debug traffic
```

diagnose debug traffic dump-debug

Dump debug info for interface traffic history.

```
diagnose debug traffic dump-debug
```

diagnose debug traffic error

Show error counter of interface bandwidth.

```
diagnose debug traffic error
```

diagnose debug traffic history

Dump interface traffic history data.

```
diagnose debug traffic history <String> <Integer>
```

Parameter	Description	Type	Size
<String>	Interface name	string	
<Integer>	Period, hour=0, day=1, week=2.	string	

diagnose debug traffic interface

List traffic monitor interface.

```
diagnose debug traffic interface
```

diagnose debug traffic peek

Display interface traffic real-time data.

```
diagnose debug traffic peek <String> <Integer>
```

Parameter	Description	Type	Size
<String>	Interface name	string	
<Integer>	Disable or enable, disable=0, enable=1.	string	

diagnose debug urlfilter

urlfilter

```
diagnose debug urlfilter
```

diagnose debug urlfilter src-addr

Enable debug messages for selected source IP address.

```
diagnose debug urlfilter src-addr <IP address>
```

Parameter	Description	Type	Size
<IP address>	dot delimited IP address or "stop"	string	

diagnose debug urlfilter test-url

Find the result returned from the URL filter cache for a URL.

```
diagnose debug urlfilter test-url <url>
```

Parameter	Description	Type	Size
<url>	URL to test.	string	

diagnose debug urlfilter valgrind

Valgrind analysis.

```
diagnose debug urlfilter valgrind
```

diagnose debug urlfilter valgrind disable

Force daemon to restart.

```
diagnose debug urlfilter valgrind disable
```

diagnose debug urlfilter valgrind enable

Force daemon to restart.

```
diagnose debug urlfilter valgrind enable
```

diagnose debug urlfilter valgrind log

Valgrind logs.

```
diagnose debug urlfilter valgrind log
```

diagnose debug urlfilter valgrind log clear

Clear logs.

```
diagnose debug urlfilter valgrind log clear
```

diagnose debug urlfilter valgrind log show

Show logs.

```
diagnose debug urlfilter valgrind log show
```

diagnose debug urlfilter valgrind memcheck

Force daemon to restart.

```
diagnose debug urlfilter valgrind memcheck
```

diagnose debug urlfilter valgrind memcheck_less

Force daemon to restart.

```
diagnose debug urlfilter valgrind memcheck_less
```

diagnose debug urlfilter valgrind status

Show valgrind status.

```
diagnose debug urlfilter valgrind status
```

diagnose debug user

Local/admin user name

```
diagnose debug user
```

diagnose debug user hash

Display hashed user name.

```
diagnose debug user hash <String>
```

Parameter	Description	Type	Size
<String>	user name	string	

diagnose debug user list

List local/admin user name.

```
diagnose debug user list
```

diagnose debug vm-print-license

Print license info

```
diagnose debug vm-print-license
```

diagnose debug vpce

Print kernel vpce info.

```
diagnose debug vpce
```

diagnose disktest

Disk test

This topic includes the following commands:

- [diagnose disktest block on page 2802](#)
- [diagnose disktest block 1 on page 2802](#)
- [diagnose disktest block 16 on page 2802](#)
- [diagnose disktest block 256 on page 2802](#)
- [diagnose disktest block 4 on page 2803](#)
- [diagnose disktest block 64 on page 2803](#)
- [diagnose disktest device on page 2803](#)
- [diagnose disktest run on page 2803](#)
- [diagnose disktest size on page 2803](#)
- [diagnose disktest time on page 2804](#)

diagnose disktest block

Block size of each read/write operation.

```
diagnose disktest block
```

diagnose disktest block 1

1M

```
diagnose disktest block 1
```

diagnose disktest block 16

16M

```
diagnose disktest block 16
```

diagnose disktest block 256

256M

```
diagnose disktest block 256
```

diagnose disktest block 4

4M

```
diagnose disktest block 4
```

diagnose disktest block 64

64M

```
diagnose disktest block 64
```

diagnose disktest device

Device to test.

```
diagnose disktest device
```

diagnose disktest run

Run test with specified cycles (default = no limit).

```
diagnose disktest run <Integer>
```

Parameter	Description	Type	Size
<Integer>	Enter test cycles (default = no limit).	string	

diagnose disktest size

Test size limit for each cycle (default = no limit).

```
diagnose disktest size <Integer>
```

Parameter	Description	Type	Size
<Integer>	Enter test size limit for each cycle in MB (default = no limit).	string	

diagnose disktest time

Test time limit for each cycle (default = no limit).

```
diagnose disktest time <Integer>
```

Parameter	Description	Type	Size
<Integer>	Enter test time limit for each cycle in seconds (default = no limit).	string	

diagnose dpdk config

DPDK config.

This topic includes the following commands:

- [diagnose dpdk config show on page 2804](#)

diagnose dpdk config show

Show DPDK configs.

```
diagnose dpdk config show
```

diagnose dpdk log clear

Clear DPDK system logs - please select which log to clear.

This topic includes the following commands:

- [diagnose dpdk log clear early-init on page 2804](#)

diagnose dpdk log clear early-init

Clear DPDK early init logs.

```
diagnose dpdk log clear early-init
```

diagnose dpdk log show

Show DPDK system logs - please select which log to show.

This topic includes the following commands:

- [diagnose dpdk log show early-init on page 2805](#)

diagnose dpdk log show early-init

DPDK early init logs.

```
diagnose dpdk log show early-init
```

diagnose dpdk performance

DPDK performance status, e.g. CPU usage.

This topic includes the following commands:

- [diagnose dpdk performance show on page 2805](#)

diagnose dpdk performance show

Show DPDK performance status.

```
diagnose dpdk performance show
```

diagnose dpdk statistics clear

Clear all DPDK statistics.

This topic includes the following commands:

- [diagnose dpdk statistics clear all on page 2805](#)

diagnose dpdk statistics clear all

Clear all DPDK statistics.

```
diagnose dpdk statistics clear all
```

diagnose dpdk statistics show

Show DPDK statistics - please select which stats to show.

This topic includes the following commands:

- [diagnose dpdk statistics show engine on page 2806](#)
- [diagnose dpdk statistics show ipsec on page 2806](#)
- [diagnose dpdk statistics show memory on page 2806](#)
- [diagnose dpdk statistics show port on page 2806](#)
- [diagnose dpdk statistics show vnp on page 2807](#)

diagnose dpdk statistics show engine

Show per-engine DPDK statistics.

```
diagnose dpdk statistics show engine
```

diagnose dpdk statistics show ipsec

Show IPSec SA table and SPI session table statistics.

```
diagnose dpdk statistics show ipsec
```

diagnose dpdk statistics show memory

Show DPDK hugepage memory statistics.

```
diagnose dpdk statistics show memory
```

diagnose dpdk statistics show port

Show per-port DPDK statistics.

```
diagnose dpdk statistics show port
```

diagnose dpdk statistics show vnp

Show per-VNP engine DPDK statistics.

```
diagnose dpdk statistics show vnp
```

diagnose dpdk version

DPDK version.

This topic includes the following commands:

- [diagnose dpdk version show on page 2807](#)

diagnose dpdk version show

Show DPDK version.

```
diagnose dpdk version show
```

diagnose emailfilter

emailfilter

This topic includes the following commands:

- [diagnose emailfilter bword on page 2807](#)
- [diagnose emailfilter bword matchfilter on page 2808](#)
- [diagnose emailfilter fortishield on page 2808](#)
- [diagnose emailfilter fortishield servers on page 2808](#)
- [diagnose emailfilter fortishield statistics on page 2808](#)
- [diagnose emailfilter fortishield statistics flush on page 2808](#)
- [diagnose emailfilter fortishield statistics list on page 2809](#)

diagnose emailfilter bword

Spam banned word match filter.

```
diagnose emailfilter bword
```

diagnose emailfilter bword matchfilter

Filtered list display.

```
diagnose emailfilter bword matchfilter <filter string>
```

Parameter	Description	Type	Size
<filter string>	Filter string from end of spam filter banned word log line. For example: '1-n8 4 0 1 4 10 nC 4'	string	

diagnose emailfilter fortishield

FortiGuard

```
diagnose emailfilter fortishield
```

diagnose emailfilter fortishield servers

FortiGuard-AntiSpam server status.

```
diagnose emailfilter fortishield servers <refresh-rate>
```

Parameter	Description	Type	Size
<refresh-rate>	Frequency to refresh server list (sec).	string	

diagnose emailfilter fortishield statistics

FortiGuard-AntiSpam cache and daemon statistics.

```
diagnose emailfilter fortishield statistics
```

diagnose emailfilter fortishield statistics flush

Flush cache and daemon statistics.

```
diagnose emailfilter fortishield statistics flush
```

diagnose emailfilter fortishield statistics list

Display server status, cache and daemon statistics.

```
diagnose emailfilter fortishield statistics list
```

diagnose endpoint

Endpoint compliance diagnostics.

This topic includes the following commands:

- [diagnose endpoint avatar on page 2811](#)
- [diagnose endpoint avatar allow-nodisk on page 2811](#)

diagnose endpoint avatar

FortiClient avatar.

```
diagnose endpoint avatar
```

diagnose endpoint avatar allow-nodisk

Allow no disk for avatar

```
diagnose endpoint avatar allow-nodisk [enable|disable]
```

Parameter	Description	Type	Size
[enable disable]	Allow saving avatars on non-harddisk storage.	string	

diagnose endpoint avatar cleanup

Purge all inactive avatars

```
diagnose endpoint avatar cleanup
```

diagnose endpoint avatar find

Find avatar location

```
diagnose endpoint avatar find
```

diagnose endpoint avatar find fingerprint

Find avatar by fingerprint

```
diagnose endpoint avatar find fingerprint <fingerprint>
```

Parameter	Description	Type	Size
<fingerprint>	Avatar fingerprint	string	

diagnose endpoint avatar find uid

Find avatar by uid/user/domain

```
diagnose endpoint avatar find uid <ftcl-uid> <user-name> <domain>
```

Parameter	Description	Type	Size
<ftcl-uid>	FortiClient UID	string	
<user-name>	User name	string	
<domain>	User domain	string	

diagnose endpoint avatar list

Display avatars

```
diagnose endpoint avatar list
```

diagnose endpoint avatar list active

Display active avatars

```
diagnose endpoint avatar list active <number>
```

Parameter	Description	Type	Size
<number>	Number of files to display per page.	string	

diagnose endpoint avatar list all

Display all avatars

```
diagnose endpoint avatar list all <number>
```

Parameter	Description	Type	Size
<number>	Number of files to display per page.	string	

diagnose endpoint avatar list inactive

Display inactive avatars

```
diagnose endpoint avatar list inactive <number>
```

Parameter	Description	Type	Size
<number>	Number of files to display per page.	string	

diagnose endpoint avatar purge-all

Purge ALL avatars

```
diagnose endpoint avatar purge-all
```

diagnose endpoint debug-zone

Debug Zone.

```
diagnose endpoint debug-zone
```

diagnose endpoint debug-zone background-debug

Background Debugs.

```
diagnose endpoint debug-zone background-debug <val>
```

Parameter	Description	Type	Size
<val>	Value (enable disable)	string	

diagnose endpoint debug-zone dump

Dump all debug zone info.

```
diagnose endpoint debug-zone dump
```

diagnose endpoint debug-zone set-lls-quota

Set send quota for each socket

```
diagnose endpoint debug-zone set-lls-quota <quota>
```

Parameter	Description	Type	Size
<quota>	Quota in bytes	string	

diagnose endpoint ec-shm

Endpoint record.

```
diagnose endpoint ec-shm
```

diagnose endpoint ec-shm delete

Delete endpoint records.

```
diagnose endpoint ec-shm delete <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Source IPv4 address.	string	

diagnose endpoint ec-shm find-by-ipvd

Display record by IP and vdom.

```
diagnose endpoint ec-shm find-by-ipvd <ipv4-address> <vdom-name>
```

Parameter	Description	Type	Size
<ipv4-address>	Endpoint IPv4 address.	string	
<vdom-name>	VDOM name of the client.	string	

diagnose endpoint ec-shm find-by-uid

Display record by Client UID.

```
diagnose endpoint ec-shm find-by-uid <ftct-uid> <emssn> <ems-tenant-id>
```

Parameter	Description	Type	Size
<ftct-uid>	Client UID	string	
<emssn>	EMS Serial Number	string	
<ems-tenant-id>	EMS Tenant ID	string	

diagnose endpoint ec-shm list

Display all records for one EMS.

```
diagnose endpoint ec-shm list <ipv4-address> <mac-address> <emssn> <ems-tenant-id>
```

Parameter	Description	Type	Size
<ipv4-address>	Source IPv4 address ("" for all IP addresses).	string	
<mac-address>	Source MAC address ("" for all MAC addresses).	string	
<emssn>	EMS Serial Number	string	
<ems-tenant-id>	EMS Tenant ID	string	

diagnose endpoint ec-shm summary

List summary of endpoint records.

```
diagnose endpoint ec-shm summary
```

diagnose endpoint ec-shm update-by-json

Add endpoint record by JSON.

```
diagnose endpoint ec-shm update-by-json <uid> <ems-sn> <ems-tenant-id> <json>
```

Parameter	Description	Type	Size
<uid>	FortiClient UID.	string	
<ems-sn>	FortiClient EMS serial number.	string	
<ems-tenant-id>	FortiClient EMS tenant ID.	string	
<json>	JSON string.	string	

diagnose endpoint fctems

FortiClient EMS.

```
diagnose endpoint fctems
```

diagnose endpoint fctems api-status

Tools to diagnose EMS API status.

```
diagnose endpoint fctems api-status
```

diagnose endpoint fctems api-status clear

Clear EMS API status.

```
diagnose endpoint fctems api-status clear <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry name in CMDB.	string	

diagnose endpoint fctems cloud-server

cloud server type.

```
diagnose endpoint fctems cloud-server <type>
```

Parameter	Description	Type	Size
<type>	FortiClient EMS cloud server type(0, 1 or 2), 0-Production, 1-Development and 2-Beta.	string	

diagnose endpoint fctems custom

Custom API.

```
diagnose endpoint fctems custom <ems-id> <entry-point> <method> <data-param-type> <data>
```

Parameter	Description	Type	Size
<ems-id>	ems id.	string	
<entry-point>	entry point.	string	
<method>	HTTP method.	string	
<data-param-type>	data parameter type.	string	
<data>	data	string	

diagnose endpoint fctems ec-shm-dump

Dump endpoint record shm.

```
diagnose endpoint fctems ec-shm-dump <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry id in CMDB.	string	

diagnose endpoint fctems get-pub-addr

Get FortiClient EMS public address.

```
diagnose endpoint fctems get-pub-addr <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry id in CMDB.	string	

diagnose endpoint fctems info

Get info from FortiClient EMS calls.

```
diagnose endpoint fctems info
```

diagnose endpoint fctems info pause

Pause getting info.

```
diagnose endpoint fctems info pause
```

diagnose endpoint fctems info pre-master-key

Pre-master Key.

```
diagnose endpoint fctems info pre-master-key [enable|disable]
```

Parameter	Description	Type	Size
[enable disable]	enable/disable	string	

diagnose endpoint fctems info protocol

Protocol.

```
diagnose endpoint fctems info protocol [none|https|wss|all]
```

Parameter	Description	Type	Size
[none https wss all]	none/https/wss/all	string	

diagnose endpoint fctems info repeat

Get/Set repetitions for each infotype.

```
diagnose endpoint fctems info repeat
```

diagnose endpoint fctems info repeat data-in

data in.

```
diagnose endpoint fctems info repeat data-in <num>
```

Parameter	Description	Type	Size
<num>	Integer in the range of [0, 255].	string	

diagnose endpoint fctems info repeat data-out

data out.

```
diagnose endpoint fctems info repeat data-out <num>
```

Parameter	Description	Type	Size
<num>	Integer in the range of [0, 255].	string	

diagnose endpoint fctems info repeat header-in

header in.

```
diagnose endpoint fctems info repeat header-in <num>
```

Parameter	Description	Type	Size
<num>	Integer in the range of [0, 255].	string	

diagnose endpoint fctems info repeat header-out

header out.

```
diagnose endpoint fctems info repeat header-out <num>
```

Parameter	Description	Type	Size
<num>	Integer in the range of [0, 255].	string	

diagnose endpoint fctems info repeat ssl-data-in

SSL data in.

```
diagnose endpoint fctems info repeat ssl-data-in <num>
```

Parameter	Description	Type	Size
<num>	Integer in the range of [0, 255].	string	

diagnose endpoint fctems info repeat ssl-data-out

SSL data out.

```
diagnose endpoint fctems info repeat ssl-data-out <num>
```

Parameter	Description	Type	Size
<num>	Integer in the range of [0, 255].	string	

diagnose endpoint fctems info repeat textinfo

text info.

```
diagnose endpoint fctems info repeat textinfo <num>
```

Parameter	Description	Type	Size
<num>	Integer in the range of [0, 255].	string	

diagnose endpoint fctems info reset

Reset fctems info.

```
diagnose endpoint fctems info reset
```

diagnose endpoint fctems info resume

Resume/Start getting info.

```
diagnose endpoint fctems info resume
```

diagnose endpoint fctems json

FortiClient EMS REST-API JSON test.

```
diagnose endpoint fctems json
```

diagnose endpoint fctems json deep-inspect-cert-sync

Print deep inspection certificate sync json.

```
diagnose endpoint fctems json deep-inspect-cert-sync
```

diagnose endpoint fctems json gateway-mac-request

Print gateway-info json.

```
diagnose endpoint fctems json gateway-mac-request
```

diagnose endpoint fctems queue-complete-calls

Add complete (un)quarantine call(s) to FCEMSD queue.

```
diagnose endpoint fctems queue-complete-calls <call>[,<call>[,...]]
```

Parameter	Description	Type	Size
<call>[,<call>[,...]]	Comma separated list of calls. Run without the argument for more help.	string	

diagnose endpoint fctems test-authorization

Authorization test for FortiClient EMS.

```
diagnose endpoint fctems test-authorization <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry id in CMDB.	string	

diagnose endpoint fctems test-connectivity

Connectivity test for FortiClient EMS.

```
diagnose endpoint fctems test-connectivity <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry id in CMDB.	string	

diagnose endpoint fctems wss-cert-skip-check

Skip WebSocketSecure server certificate check.

```
diagnose endpoint fctems wss-cert-skip-check [yes|no]
```

Parameter	Description	Type	Size
[yes no]	yes/no	string	

diagnose endpoint filter

Debug filter for fcnacd.

```
diagnose endpoint filter
```

diagnose endpoint filter avatar-fingerprint

Avatar fingerprint to filter by.

```
diagnose endpoint filter avatar-fingerprint <avatar-fingerprint>
```

Parameter	Description	Type	Size
<avatar-fingerprint>	Avatar fingerprint.	string	

diagnose endpoint filter clear

Erase the current filter.

```
diagnose endpoint filter clear
```

diagnose endpoint filter ems-sn

FortiClient EMS serial-number to filter by.

```
diagnose endpoint filter ems-sn <ems-sn>
```

Parameter	Description	Type	Size
<ems-sn>	EMS serial-number.	string	

diagnose endpoint filter ftcl-uid

FortiClient UID to filter by.

```
diagnose endpoint filter ftcl-uid <ftcl-uid>
```

Parameter	Description	Type	Size
<ftcl-uid>	FortiClient UID.	string	

diagnose endpoint filter list

Display the current filter.

```
diagnose endpoint filter list
```

diagnose endpoint filter record-debug-log

Record debug log.

```
diagnose endpoint filter record-debug-log [enable/disable]
```

Parameter	Description	Type	Size
[enable/disable]	Enable or disable.	string	

diagnose endpoint filter show-large-data

Show large data.

```
diagnose endpoint filter show-large-data [yes/no]
```

Parameter	Description	Type	Size
[yes/no]	Yes or no.	string	

diagnose endpoint lls-comm

Long-Lived Socket Communication.

```
diagnose endpoint lls-comm
```

diagnose endpoint lls-comm connect

Connect.

```
diagnose endpoint lls-comm connect
```

diagnose endpoint lls-comm disconnect

Disconnect.

```
diagnose endpoint lls-comm disconnect
```

diagnose endpoint lls-comm recv

Receive Messages.

```
diagnose endpoint lls-comm recv <repeat>
```

Parameter	Description	Type	Size
<repeat>	Repeat number of receives	string	

diagnose endpoint lls-comm send

Send Message.

```
diagnose endpoint lls-comm send
```

diagnose endpoint lls-comm send echo

Echo long-lived socket channel

```
diagnose endpoint lls-comm send echo
```

diagnose endpoint lls-comm send echo echo

Echo

```
diagnose endpoint lls-comm send echo echo <msg>
```

Parameter	Description	Type	Size
<msg>	Message to echo	string	

diagnose endpoint lls-comm send general

General long-lived socket channel

```
diagnose endpoint lls-comm send general
```

diagnose endpoint lls-comm send general get-index

Get Long-lived socket channel index.

```
diagnose endpoint lls-comm send general get-index
```

diagnose endpoint lls-comm send general register

Register to Long-lived Socket channel(s)

```
diagnose endpoint lls-comm send general register <channel-mask>
```

Parameter	Description	Type	Size
<channel-mask>	Channel Mask in decimal, octal or hexadecimal	string	

diagnose endpoint lls-comm send general unregister

Unregister from Long-lived Socket channel(s)

```
diagnose endpoint lls-comm send general unregister <channel-mask>
```

Parameter	Description	Type	Size
<channel-mask>	Channel Mask in decimal, octal or hexadecimal	string	

diagnose endpoint lls-comm send ping

Ping long-lived socket channel

```
diagnose endpoint lls-comm send ping
```

diagnose endpoint lls-comm send ping set-interval

Set interval

```
diagnose endpoint lls-comm send ping set-interval <interval>
```

Parameter	Description	Type	Size
<interval>	Period in units of 1/100 seconds	string	

diagnose endpoint lls-comm send ztna

ZTNA long-lived socket channel

```
diagnose endpoint lls-comm send ztna
```

diagnose endpoint lls-comm send ztna find-ip-vdom

Find by IP and VDOM

```
diagnose endpoint lls-comm send ztna find-ip-vdom <ip> <vdom>
```

Parameter	Description	Type	Size
<ip>	IPv4 or IPv6 address of client	string	
<vdom>	VDOM name	string	

diagnose endpoint lls-comm send ztna find-uid

Find by FortiClient UID and EMS SN

```
diagnose endpoint lls-comm send ztna find-uid <ftct-uid> <emssn> <ems-tenant-id>
```

Parameter	Description	Type	Size
<ftct-uid>	Client UID	string	
<emssn>	EMS Serial Number	string	
<ems-tenant-id>	EMS Tenant ID	string	

diagnose endpoint lls-comm send ztna message-format

Select if wad header is sent

```
diagnose endpoint lls-comm send ztna message-format <index>
```

Parameter	Description	Type	Size
<index>	0: standard 1: wad informer 2: diag wad informer	string	

diagnose endpoint lls-comm send ztna subscribe-all

Subscribe to all FortiClients on selected LLS bits

```
diagnose endpoint lls-comm send ztna subscribe-all <mask>
```

Parameter	Description	Type	Size
<mask>	Bit mask	string	

diagnose endpoint lls-comm send ztna unsubscribe-all

Unsubscribe to all FortiClients on issuing LLS

```
diagnose endpoint lls-comm send ztna unsubscribe-all
```

diagnose endpoint lls-comm send ztna unsubscribe-uid

Unsubscribe from FortiClient UID

```
diagnose endpoint lls-comm send ztna unsubscribe-uid <ftct-uid> <emssn> <ems-tenant-id>
```

Parameter	Description	Type	Size
<ftct-uid>	Client UID	string	
<emssn>	EMS Serial Number	string	
<ems-tenant-id>	EMS_Tenant ID	string	

diagnose endpoint lls-comm status

Status.

```
diagnose endpoint lls-comm status
```

diagnose endpoint tags

Tags.

```
diagnose endpoint tags
```

diagnose endpoint tags remove-by-id

Remove Dynamic address tags by EMS ID.

```
diagnose endpoint tags remove-by-id <EMS-ID>
```

Parameter	Description	Type	Size
<EMS-ID>	EMS ID.	string	

diagnose endpoint tags remove-by-name

Remove specific tag by EMS ID and name.

```
diagnose endpoint tags remove-by-name <TAG-Name> <EMS-ID>
```

Parameter	Description	Type	Size
<TAG-Name>	Tag name.	string	
<EMS-ID>	EMS ID.	string	

diagnose endpoint tags remove-by-name-legacy

Remove specific tag by Serial Number and name (LEGACY).

```
diagnose endpoint tags remove-by-name-legacy <TAG-Name> <SN>
```

Parameter	Description	Type	Size
<TAG-Name>	Tag name.	string	
<SN>	Serial Number.	string	

diagnose endpoint tags remove-by-sn

Remove Dynamic address tags by Serial Number (LEGACY).

```
diagnose endpoint tags remove-by-sn <SN>
```

Parameter	Description	Type	Size
<SN>	Serial Number.	string	

diagnose endpoint tags test-common-tag-update

Test update tags for FortiClient EMS

```
diagnose endpoint tags test-common-tag-update <TAG-INFO-JSON>
```

Parameter	Description	Type	Size
<TAG-INFO-JSON>	JSON string for commands.	string	

diagnose extender

Diagnostics command of extender

This topic includes the following commands:

- [diagnose extender atcmd on page 2829](#)
- [diagnose extender cmd on page 2830](#)
- [diagnose extender modem-list on page 2830](#)

diagnose extender atcmd

AT Command.

```
diagnose extender atcmd <at-command> <mark> <sn> [1|2]
```

Parameter	Description	Type	Size
<at-command>	AT command.	string	
<mark>	Change mark to '?' in AT command.	string	
<sn>	Serial number of FortiExtender.	string	
[1 2]	modem ID.	string	

diagnose extender cmd

Generic AT command.

```
diagnose extender cmd <Integer> <sn> [1|2]
```

Parameter	Description	Type	Size
<Integer>	A number mapping a generic AT command.	string	
<sn>	Serial number of FortiExtender.	string	
[1 2]	modem ID.	string	

diagnose extender modem-list

List of supported modems for FortiExtender.

```
diagnose extender modem-list
```

diagnose fdsm

FortiCloud/FortiManager Service.

This topic includes the following commands:

- [diagnose fdsm account-info on page 2831](#)
- [diagnose fdsm central-mgmt-status on page 2831](#)
- [diagnose fdsm cfg-diff on page 2831](#)
- [diagnose fdsm cfg-download on page 2832](#)
- [diagnose fdsm cfg-list on page 2832](#)
- [diagnose fdsm cfg-upload on page 2832](#)
- [diagnose fdsm contract-controller-update on page 2832](#)
- [diagnose fdsm fap-fsw-fext-contract-download on page 2833](#)

- [diagnose fdsm fc-installer-download on page 2833](#)
- [diagnose fdsm fds-update on page 2833](#)
- [diagnose fdsm fmg-auto-discovery-status on page 2833](#)
- [diagnose fdsm fortiap-download on page 2833](#)
- [diagnose fdsm fortiap-latest-ver on page 2834](#)
- [diagnose fdsm forticlient-net-info on page 2834](#)
- [diagnose fdsm forticlient-update on page 2834](#)
- [diagnose fdsm fortiex-download on page 2834](#)
- [diagnose fdsm fortiex-latest-ver on page 2834](#)

diagnose fdsm account-info

FortiCloud account information.

```
diagnose fdsm account-info
```

diagnose fdsm central-mgmt-status

Central management registration status.

```
diagnose fdsm central-mgmt-status
```

diagnose fdsm cfg-diff

Configuration difference.

```
diagnose fdsm cfg-diff <revision1> <revision2>
```

Parameter	Description	Type	Size
<revision1>	Revision	string	
<revision2>	Revision	string	

diagnose fdsm cfg-download

Download configuration.

```
diagnose fdsm cfg-download <type> <revision>
```

Parameter	Description	Type	Size
<type>	Configuration type (normal, template, script).	string	
<revision>	Revision	string	

diagnose fdsm cfg-list

Download configuration list.

```
diagnose fdsm cfg-list <type>
```

Parameter	Description	Type	Size
<type>	Configuration type (normal, template, script).	string	

diagnose fdsm cfg-upload

Upload configuration.

```
diagnose fdsm cfg-upload <comments>
```

Parameter	Description	Type	Size
<comments>	Comments	string	

diagnose fdsm contract-controller-update

Update contract controller.

```
diagnose fdsm contract-controller-update
```

diagnose fdsm fap-fsw-fext-contract-download

FAP/FSW/FEX contract information.

```
diagnose fdsm fap-fsw-fext-contract-download <serial1*serial2*...> <cache>
```

Parameter	Description	Type	Size
<serial1*serial2*...>	Serial numbers of FAP/FSW/FEX devices	string	
<cache>	[yes/no]	string	

diagnose fdsm fc-installer-download

Download FortiClient installer.

```
diagnose fdsm fc-installer-download <id>
```

Parameter	Description	Type	Size
<id>	Installer ID.	string	

diagnose fdsm fds-update

Perform FortiGuard update.

```
diagnose fdsm fds-update
```

diagnose fdsm fmg-auto-discovery-status

FortiManager auto-discovery status.

```
diagnose fdsm fmg-auto-discovery-status
```

diagnose fdsm fortiap-download

Download FortiAP image.

```
diagnose fdsm fortiap-download <id>
```

Parameter	Description	Type	Size
<id>	Image ID	string	

diagnose fdsm fortiap-latest-ver

Get most recent FortiAP build information.

```
diagnose fdsm fortiap-latest-ver <model> <version>
```

Parameter	Description	Type	Size
<model>	Model name or "" to get all models	string	
<version>	FortiOS version, in the format of major.minor.patch, e.g. 6.4.2	string	

diagnose fdsm forticlient-net-info

FortiClient net information.

```
diagnose fdsm forticlient-net-info
```

diagnose fdsm forticlient-update

FortiClient update.

```
diagnose fdsm forticlient-update
```

diagnose fdsm fortiox-download

Download FortiExtender image.

```
diagnose fdsm fortiox-download <id>
```

Parameter	Description	Type	Size
<id>	Image ID	string	

diagnose fdsm fortiox-latest-ver

Get most recent FortiExtender build information.

```
diagnose fdsm fortiox-latest-ver <model> <version>
```

Parameter	Description	Type	Size
<model>	Model name or "" to get all models	string	
<version>	FortiOS version, in the format of major.minor.patch, e.g. 6.4.2	string	

diagnose fdsm fortisw-download

Download FortiSwitch image.

```
diagnose fdsm fortisw-download <id>
```

Parameter	Description	Type	Size
<id>	Image ID	string	

diagnose fdsm fortisw-latest-ver

Get most recent FortiSwitch build information.

```
diagnose fdsm fortisw-latest-ver <model> <version>
```

Parameter	Description	Type	Size
<model>	Model name or "" to get all models	string	
<version>	FortiOS version, in the format of major.minor.patch, e.g. 6.4.2	string	

diagnose fdsm ftk-activate

FortiToken activation.

```
diagnose fdsm ftk-activate
```

diagnose fdsm image-download

Download image.

```
diagnose fdsm image-download <id>
```

Parameter	Description	Type	Size
<id>	Image ID.	string	

diagnose fdsm image-list

Download image list.

```
diagnose fdsm image-list
```

diagnose fdsm image-upgrade-matrix

Download image upgrade matrix.

```
diagnose fdsm image-upgrade-matrix
```

diagnose fdsm log-controller-update

Perform log update.

```
diagnose fdsm log-controller-update
```

diagnose fdsm message-update

Perform message update.

```
diagnose fdsm message-update
```

diagnose fdsm modem-list

MODEM list.

```
diagnose fdsm modem-list
```

diagnose fdsm report-download

Download report.

```
diagnose fdsm report-download <oid>
```

Parameter	Description	Type	Size
<oid>	OID	string	

diagnose fdsm report-list

Download report list.

```
diagnose fdsm report-list <vdom>
```

Parameter	Description	Type	Size
<vdom>	VDOM Name.	string	

diagnose fdsm sslvpn-man-upgrade-package-download

Download Agentless VPN manual upgrade package.

```
diagnose fdsm sslvpn-man-upgrade-package-download <id>
```

Parameter	Description	Type	Size
<id>	Package ID.	string	

diagnose fdsm sslvpn-package-download

Download Agentless VPN package.

```
diagnose fdsm sslvpn-package-download <id>
```

Parameter	Description	Type	Size
<id>	Package ID.	string	

diagnose ffdb-fqdn

Internet service FQDN database.

This topic includes the following commands:

- [diagnose ffdb-fqdn custom-get on page 2838](#)
- [diagnose ffdb-fqdn custom-list on page 2838](#)

diagnose ffdb-fqdn custom-get

Get built-in custom name based on given FQDN.

```
diagnose ffdb-fqdn custom-get <BuiltIn FQDN-name>
```

Parameter	Description	Type	Size
<BuiltIn FQDN-name>	Built-in FQDN name	string	

diagnose ffdb-fqdn custom-list

List all built-in Internet service database (FFDB) FQDNs

```
diagnose ffdb-fqdn custom-list <BuiltIn-custom-name>
```

Parameter	Description	Type	Size
<BuiltIn-custom-name>	Show custom FQDN list for the given built-in Internet service.	string	

diagnose firewall

Firewall

This topic includes the following commands:

- [diagnose firewall auth on page 2845](#)

diagnose firewall auth

Authenticated users.

```
diagnose firewall auth
```

diagnose firewall auth clear

Clear authenticated IPv4 users.

```
diagnose firewall auth clear
```

diagnose firewall auth filter

Filters used to list entries.

```
diagnose firewall auth filter
```

diagnose firewall auth filter clear

Clear all filters.

```
diagnose firewall auth filter clear
```

diagnose firewall auth filter group

Group name.

```
diagnose firewall auth filter group <name>
```

Parameter	Description	Type	Size
<name>	Group name.	string	

diagnose firewall auth filter mac

MAC address.

```
diagnose firewall auth filter mac <xx:xx:xx:xx:xx:xx>
```

Parameter	Description	Type	Size
<xx:xx:xx:xx:xx:xx>	MAC address.	string	

diagnose firewall auth filter method

method

```
diagnose firewall auth filter method <method> <method> <method> <method> <method> <method>
```

Parameter	Description	Type	Size
<method>	Valid method name: fsso, rsso, ntlm, fw, wsso, disclaimer, fsso_citrix, sso_guest.	string	
<method>	Valid method name: fsso, rsso, ntlm, fw, wsso, email, disclaimer, fsso_citrix, sso_guest.	string	
<method>	Valid method name: fsso, rsso, ntlm, fw, wsso, email, disclaimer, fsso_citrix, sso_guest.	string	
<method>	Valid method name: fsso, rsso, ntlm, fw, wsso, email, disclaimer, fsso_citrix, sso_guest.	string	
<method>	Valid method name: fsso, rsso, ntlm, fw, wsso, email, disclaimer, fsso_citrix, sso_guest.	string	
<method>	Valid method name: fsso, rsso, ntlm, fw, wsso, email, disclaimer, fsso_citrix, sso_guest.	string	

diagnose firewall auth filter policy

Policy ID.

```
diagnose firewall auth filter policy <xxx>
```

Parameter	Description	Type	Size
<xxx>	Policy ID.	string	

diagnose firewall auth filter source

IPv4 source address.

```
diagnose firewall auth filter source <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	IPv4 source (range from).	string	
<xxx.xxx.xxx.xxx>	IPv4 source (range to).	string	

diagnose firewall auth filter source6

IPv6 source address.

```
diagnose firewall auth filter source6 <xxxx::xxx> <xxxx::xxx>
```

Parameter	Description	Type	Size
<xxxx::xxx>	IPv6 source (range from).	string	
<xxxx::xxx>	IPv6 source (range to).	string	

diagnose firewall auth filter user

User name.

```
diagnose firewall auth filter user <name>
```

Parameter	Description	Type	Size
<name>	User name.	string	

diagnose firewall auth ipv6

Authenticated IPv6 users.

```
diagnose firewall auth ipv6
```

diagnose firewall auth ipv6 clear

Clear authenticated IPv6 users.

```
diagnose firewall auth ipv6 clear
```

diagnose firewall auth ipv6 list

List authenticated IPv6 users.

```
diagnose firewall auth ipv6 list
```

diagnose firewall auth list

List authenticated IPv4 users.

```
diagnose firewall auth list
```

diagnose firewall auth mac

Authenticated MAC users.

```
diagnose firewall auth mac
```

diagnose firewall auth mac clear

Clear authenticated MAC users.

```
diagnose firewall auth mac clear
```

diagnose firewall auth mac list

List authenticated MAC users.

```
diagnose firewall auth mac list
```

diagnose firewall blocking

Blocking information.

```
diagnose firewall blocking
```

diagnose firewall blocking list

List information.

```
diagnose firewall blocking list <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP.	string	

diagnose firewall dns-xlate

DNS translation.

```
diagnose firewall dns-xlate
```

diagnose firewall dns-xlate mapping

DNS translation mapping.

```
diagnose firewall dns-xlate mapping
```

diagnose firewall dns-xlate mapping list

List dynamic DNS mapping.

```
diagnose firewall dns-xlate mapping list
```

diagnose firewall dns-xlate pool

DNS translation pool.

```
diagnose firewall dns-xlate pool
```

diagnose firewall dns-xlate pool list

List DNS translation pool.

```
diagnose firewall dns-xlate pool list
```

diagnose firewall dynamic

Show dynamic addresses.

```
diagnose firewall dynamic
```

diagnose firewall dynamic address

Get summary of one or all dynamic addresses.

```
diagnose firewall dynamic address <name>
```

Parameter	Description	Type	Size
<name>	Dynamic address name. (Optional)	string	

diagnose firewall dynamic list

Get list of one or all dynamic addresses.

```
diagnose firewall dynamic list <name>
```

Parameter	Description	Type	Size
<name>	Dynamic address name. (Optional)	string	

diagnose firewall dynamic test-common-tag-update

Test update tags API for dynamic addresses.

```
diagnose firewall dynamic test-common-tag-update <TAG-INFO-JSON>
```

Parameter	Description	Type	Size
<TAG-INFO-JSON>	JSON string for commands.	string	

diagnose firewall dynamic6

Show IPv6 dynamic addresses.

```
diagnose firewall dynamic6
```

diagnose firewall dynamic6 address

Get summary of IPv6 dynamic addresses.

```
diagnose firewall dynamic6 address <name>
```

Parameter	Description	Type	Size
<name>	Dynamic address name.	string	

diagnose firewall dynamic6 list

List all IPv6 dynamic addresses.

```
diagnose firewall dynamic6 list <name>
```

Parameter	Description	Type	Size
<name>	Dynamic address name.	string	

diagnose firewall fqdn

fqdn

```
diagnose firewall fqdn
```

diagnose firewall fqdn get-ip

Get and display one IP FQDN address.

```
diagnose firewall fqdn get-ip <name>
```

Parameter	Description	Type	Size
<name>	Address Name	string	

diagnose firewall fqdn get-mac

Get and display one MAC FQDN address.

```
diagnose firewall fqdn get-mac <name>
```

Parameter	Description	Type	Size
<name>	Address Name	string	

diagnose firewall fqdn getinfo-ip

Get info of IP FQDN address

```
diagnose firewall fqdn getinfo-ip <name>
```

Parameter	Description	Type	Size
<name>	name	string	

diagnose firewall fqdn getinfo-mac

Get info of MAC FQDN address

```
diagnose firewall fqdn getinfo-mac <name>
```

Parameter	Description	Type	Size
<name>	name	string	

diagnose firewall fqdn list-all

List FQDN.

```
diagnose firewall fqdn list-all
```

diagnose firewall fqdn list-ip

List IP FQDN.

```
diagnose firewall fqdn list-ip
```

diagnose firewall fqdn list-mac

List MAC FQDN.

```
diagnose firewall fqdn list-mac
```

diagnose firewall fqdn6

IPv6 FQDN.

```
diagnose firewall fqdn6
```

diagnose firewall fqdn6 list

List all IPv6 FQDN.

```
diagnose firewall fqdn6 list
```

diagnose firewall internet-service

Internet service in the kernel.

```
diagnose firewall internet-service
```

diagnose firewall internet-service list

List Internet Service.

```
diagnose firewall internet-service list <section>
```

Parameter	Description	Type	Size
<section>	Internet Service table section.(0: entry, 1: index, <integer>: singularity)	string	

diagnose firewall internet-service-app-ctrl

Application control internet service in the kernel.

```
diagnose firewall internet-service-app-ctrl
```

diagnose firewall internet-service-app-ctrl list

List application control entries in the kernel.

```
diagnose firewall internet-service-app-ctrl list <ID>
```

Parameter	Description	Type	Size
<ID>	Application Control ID.	string	

diagnose firewall internet-service-app-ctrl6

Application control internet service for IPv6 in the kernel.

```
diagnose firewall internet-service-app-ctrl6
```

diagnose firewall internet-service-app-ctrl6 list

List IPv6 application control entries in the kernel.

```
diagnose firewall internet-service-app-ctrl6 list <ID>
```

Parameter	Description	Type	Size
<ID>	Application Control ID.	string	

diagnose firewall internet-service-cache

Internet Service database cache entries in the kernel.

```
diagnose firewall internet-service-cache
```

diagnose firewall internet-service-cache list

List Internet Service database cache entries in the kernel.

```
diagnose firewall internet-service-cache list
```

diagnose firewall internet-service-custom

Custom Internet Service in the kernel.

```
diagnose firewall internet-service-custom
```

diagnose firewall internet-service-custom list

List Custom Internet Service.

```
diagnose firewall internet-service-custom list <name>
```

Parameter	Description	Type	Size
<name>	Custom Internet Service name.	string	

diagnose firewall internet-service-disable

Internet Service disable entries in the kernel.

```
diagnose firewall internet-service-disable
```

diagnose firewall internet-service-disable list

List Internet Service disable entries.

```
diagnose firewall internet-service-disable list <ID>
```

Parameter	Description	Type	Size
<ID>	Internet Service ID.	string	

diagnose firewall internet-service-extension

Internet Service extension in the kernel.

```
diagnose firewall internet-service-extension
```

diagnose firewall internet-service-extension list

List Internet Service extension.

```
diagnose firewall internet-service-extension list <ID>
```

Parameter	Description	Type	Size
<ID>	Internet Service ID.	string	

diagnose firewall internet-service-prio-id

Internet service ID in firewall policy, shaping policy, SD-WAN rule, static route, and router policy.

```
diagnose firewall internet-service-prio-id
```

diagnose firewall internet-service-prio-id list

List Internet Service Priority ID.

```
diagnose firewall internet-service-prio-id list
```

diagnose firewall internet-service6

Internet service6 in the kernel.

```
diagnose firewall internet-service6
```

diagnose firewall internet-service6 list

List Internet Service6.

```
diagnose firewall internet-service6 list <section>
```

Parameter	Description	Type	Size
<section>	Internet Service6 table section.(0: entry, 1: index, <integer>: singularity)	string	

diagnose firewall internet-service6-cache

Internet Service database cache entries for IPv6 in the kernel.

```
diagnose firewall internet-service6-cache
```

diagnose firewall internet-service6-cache list

List Internet Service database cache entries for IPv6 in the kernel.

```
diagnose firewall internet-service6-cache list
```

diagnose firewall internet-service6-custom

Custom Internet Service6 in the kernel.

```
diagnose firewall internet-service6-custom
```

diagnose firewall internet-service6-custom list

List Custom Internet Service.

```
diagnose firewall internet-service6-custom list <name>
```

Parameter	Description	Type	Size
<name>	Custom Internet Service name.	string	

diagnose firewall internet-service6-disable

Internet Service6 disable entries in the kernel.

```
diagnose firewall internet-service6-disable
```

diagnose firewall internet-service6-disable list

List Internet Service6 disable entries.

```
diagnose firewall internet-service6-disable list <ID>
```

Parameter	Description	Type	Size
<ID>	Internet Service6 ID.	string	

diagnose firewall internet-service6-extension

Internet Service6 extension in the kernel.

```
diagnose firewall internet-service6-extension
```

diagnose firewall internet-service6-extension list

List Internet Service6 extension.

```
diagnose firewall internet-service6-extension list <ID>
```

Parameter	Description	Type	Size
<ID>	Internet Service6 ID.	string	

diagnose firewall internet-service6-prio-id

Internet service ID in firewall policy, SD-WAN rule, and router policy.

```
diagnose firewall internet-service6-prio-id
```

diagnose firewall internet-service6-prio-id list

List Internet Service6 Priority ID.

```
diagnose firewall internet-service6-prio-id list
```

diagnose firewall ip-translation

IP translation.

```
diagnose firewall ip-translation
```

diagnose firewall ip-translation list

List IP translation table.

```
diagnose firewall ip-translation list
```

diagnose firewall ipgeo

IP geolocation.

```
diagnose firewall ipgeo
```

diagnose firewall ipgeo copyright-notice

Copyright note.

```
diagnose firewall ipgeo copyright-notice
```

diagnose firewall ipgeo country-list

List all countries.

```
diagnose firewall ipgeo country-list
```

diagnose firewall ipgeo ip-list

List IP info of country.

```
diagnose firewall ipgeo ip-list <name>
```

Parameter	Description	Type	Size
<name>	Country ID.	string	

diagnose firewall ipgeo ip2country

Get country info for the IP.

```
diagnose firewall ipgeo ip2country <ip>
```

Parameter	Description	Type	Size
<ip>	IPv4/IPv6 address.	string	

diagnose firewall ipgeo ip6-list

List IPv6 info of country.

```
diagnose firewall ipgeo ip6-list <name>
```

Parameter	Description	Type	Size
<name>	Country ID.	string	

diagnose firewall ipgeo override

Print out all user defined IP geolocation data.

```
diagnose firewall ipgeo override
```

diagnose firewall iplist

IP list.

```
diagnose firewall iplist
```

diagnose firewall iplist list

list

```
diagnose firewall iplist list
```

diagnose firewall iplist list optimized

List optimized iplist.

```
diagnose firewall iplist list optimized
```

diagnose firewall iplist6

IPv6 list.

```
diagnose firewall iplist6
```

diagnose firewall iplist6 list

list

```
diagnose firewall iplist6 list
```

diagnose firewall iplist6 list optimized

List optimized iplist6.

```
diagnose firewall iplist6 list optimized
```

diagnose firewall ipmac

ipmac

```
diagnose firewall ipmac
```

diagnose firewall ipmac add

add

```
diagnose firewall ipmac add <xxx.xxx.xxx.xxx> <xx:xx:xx:xx:xx:xx> <drop|accept>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	IP address.	string	
<xx:xx:xx:xx:xx:xx>	MAC address.	string	
<drop accept>	action	string	

diagnose firewall ipmac delete

delete

```
diagnose firewall ipmac delete <xxx.xxx.xxx.xxx> <xx:xx:xx:xx:xx:xx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	IP address.	string	
<xx:xx:xx:xx:xx:xx>	MAC address.	string	

diagnose firewall ipmac list

list

```
diagnose firewall ipmac list
```

diagnose firewall ipmac status

status

```
diagnose firewall ipmac status
```

diagnose firewall ippool

One-to-one/PBA IP pool.

```
diagnose firewall ippool
```

diagnose firewall ippool filter

Diag ippool list with filters.

```
diagnose firewall ippool filter
```

diagnose firewall ippool filter clear

Clear diag ippool filter.

```
diagnose firewall ippool filter clear
```

diagnose firewall ippool filter name

Ippool pool name.

```
diagnose firewall ippool filter name
```

diagnose firewall ippool list

list

```
diagnose firewall ippool list
```

diagnose firewall ippool list nat-ip

List allocated IP in ippool. Take ippool names as arguments.

```
diagnose firewall ippool list nat-ip
```

diagnose firewall ippool list pba

List PBA in ippool. Take ippool names as arguments.

```
diagnose firewall ippool list pba
```

diagnose firewall ippool list user

List users of ippool. Take ippool names as arguments.

```
diagnose firewall ippool list user
```

diagnose firewall ippool reset-log-stats

reset log statistics

```
diagnose firewall ippool reset-log-stats
```

diagnose firewall ippool stats

statistics

```
diagnose firewall ippool stats
```

diagnose firewall ippool-all

Any IP pool.

```
diagnose firewall ippool-all
```

diagnose firewall ippool-all list

list

```
diagnose firewall ippool-all list
```

diagnose firewall ippool-all stats

statistics

```
diagnose firewall ippool-all stats <name>
```

Parameter	Description	Type	Size
<name>	pool name	string	

diagnose firewall ippool-fixed-range

Fixed range IP pool.

```
diagnose firewall ippool-fixed-range
```

diagnose firewall ippool-fixed-range list

list

```
diagnose firewall ippool-fixed-range list
```

diagnose firewall ippool-fixed-range list natip

NAT IP.

```
diagnose firewall ippool-fixed-range list natip <xxx.xxx.xxx.xxx>[-<xxx.xxx.xxx.xxx>]  
<Enter>|<port>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>[-<xxx.xxx.xxx.xxx>]	NAT IP/IP range NAT IP/IP Range + port.	string	
<Enter> <port>	port	string	

diagnose firewall ippool-nptv6

NPTv6 IP pool.

```
diagnose firewall ippool-nptv6
```

diagnose firewall ippool-nptv6 natip

NAT IPV6.

```
diagnose firewall ippool-nptv6 natip <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>
```

Parameter	Description	Type	Size
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>	NAT IPV6.	string	

diagnose firewall iprope

iprope

```
diagnose firewall iprope
```

diagnose firewall iprope appctrl

List application control lists.

```
diagnose firewall iprope appctrl
```

diagnose firewall iprope appctrl list

List application control lists.

```
diagnose firewall iprope appctrl list
```

diagnose firewall iprope appctrl shaper

application control app shapers.

```
diagnose firewall iprope appctrl shaper
```

diagnose firewall iprope appctrl shaper list

List application control app shapers.

```
diagnose firewall iprope appctrl shaper list
```

diagnose firewall iprope appctrl stats

Application control app statistics.

```
diagnose firewall iprope appctrl stats
```

diagnose firewall iprope appctrl stats clear

Clear application control app statistics.

```
diagnose firewall iprope appctrl stats clear
```

diagnose firewall iprope appctrl stats list

List application control app statistics.

```
diagnose firewall iprope appctrl stats list
```

diagnose firewall iprope appctrl status

Application control list status.

```
diagnose firewall iprope appctrl status
```

diagnose firewall iprope clear

Clear policy statistic.

```
diagnose firewall iprope clear
```

diagnose firewall iprope list

List.

```
diagnose firewall iprope list <No.>
```

Parameter	Description	Type	Size
<No.>	Number, hexadecimal.	string	

diagnose firewall iprope lookup

Lookup firewall policy that matches provided criteria.

```
diagnose firewall iprope lookup <src_ip> <src_port> <dst_ip> <dst_port> <protocol> <device> <pol_type> [  
<auth type>] [  
<user/group>] [  
<server>] [  
<user-db>] [  
<group-attr-type>]
```

Parameter	Description	Type	Size
<src_ip>	Source IP address.	string	
<src_port>	Source port.	string	
<dst_ip>	Destination IP address.	string	
<dst_port>	Destination port.	string	
<protocol>	Protocol.	string	
<device>	Source interface.	string	
<pol_type>	Firewall policy type: policy, proxy.	string	
[<auth type>]	Authentication type: ldap, saml, local, group.	string	
[<user/group>]	Username or name of matching user/group on remote authentication server.	string	
[<server>]	Name of auth server.	string	
[<user-db>]	Name of user-database.	string	
[<group-attr-type>]	Group attr type: name, id.	string	

diagnose firewall iprope show

Show policy statistic.

```
diagnose firewall iprope show
```

diagnose firewall iprope state

state

```
diagnose firewall iprope state
```

diagnose firewall iprope top

Show top N policy statistics within a group.

```
diagnose firewall iprope top <No.> <String> <Integer> <Integer> <Integer>
```

Parameter	Description	Type	Size
<No.>	Policy group ID	string	
<String>	Sort by pkts[-rate]/asic-pkts[-rate]/hit-count[-rate]/tcp-ses[-rate]/udp-ses[-rate]/sctp-ses[-rate]/all-ses[-rate].	string	
<Integer>	Delay in seconds (default: 5).	string	
<Integer>	Number of policy statistics to display (default: 10).	string	
<Integer>	Iterations to run (default: unlimited).	string	

diagnose firewall iprope6

iprope6

```
diagnose firewall iprope6
```

diagnose firewall iprope6 clear

Clear policy statistic.

```
diagnose firewall iprope6 clear
```

diagnose firewall iprope6 list

list

```
diagnose firewall iprope6 list <No.>
```

Parameter	Description	Type	Size
<No.>	Number, hexadecimal.	string	

diagnose firewall iprope6 lookup

Lookup firewall policy that matches provided criteria.

```
diagnose firewall iprope6 lookup <src_ip> <src_port> <dst_ip> <dst_port> <protocol> <device> <pol_type> [  
<auth type>] [<user/group>] [<server>]
```

Parameter	Description	Type	Size
<src_ip>	Source IP address.	string	
<src_port>	Source port.	string	
<dst_ip>	Destination IP address.	string	
<dst_port>	Destination port.	string	
<protocol>	Protocol.	string	
<device>	Source interface.	string	
<pol_type>	Firewall policy type: policy, proxy.	string	
[<auth type>]	Authentication type: user, group.	string	
[<user/group>]	Username or name of matching user/group on remote authentication server.	string	
[<server>]	Name of auth server.	string	

diagnose firewall iprope6 show

Show policy statistic.

```
diagnose firewall iprope6 show
```

diagnose firewall iprope6 state

state

```
diagnose firewall iprope6 state
```

diagnose firewall iprope6 top

Show top N policy statistics within a group.

```
diagnose firewall iprope6 top <No.> <String> <Integer> <Integer> <Integer>
```

Parameter	Description	Type	Size
<No.>	Policy group ID	string	
<String>	Sort by pkts[-rate]/asic-pkts[-rate]/hit-count[-rate]/tcp-ses[-rate]/udp-ses[-rate]/sctp-ses[-rate]/all-ses[-rate].	string	
<Integer>	Delay in seconds (default: 5).	string	
<Integer>	Number of policy statistics to display (default: 10, maximum: 50).	string	
<Integer>	Iterations to run (default: unlimited).	string	

diagnose firewall ipv6-ehf

IPv6 extension header filter.

```
diagnose firewall ipv6-ehf
```

diagnose firewall ipv6-ehf list

List ipv6-eh-filter.

```
diagnose firewall ipv6-ehf list
```

diagnose firewall network-service-dynamic

Dynamic Network Service in the kernel.

```
diagnose firewall network-service-dynamic
```

diagnose firewall network-service-dynamic list

List Dynamic Network Service.

```
diagnose firewall network-service-dynamic list <name>
```

Parameter	Description	Type	Size
<name>	Dynamic Network Service name.	string	

diagnose firewall ngfw-fix-application

Next Generation Firewall (NGFW) Applications handled by Kernel.

```
diagnose firewall ngfw-fix-application
```

diagnose firewall ngfw-fix-application list

List Kernel-handled NGFW applications.

```
diagnose firewall ngfw-fix-application list
```

diagnose firewall packet

Packet statistics.

```
diagnose firewall packet
```

diagnose firewall packet distribution

Show distribution statistics.

```
diagnose firewall packet distribution
```

diagnose firewall pcp-mapping

PCP mapping list.

```
diagnose firewall pcp-mapping
```

diagnose firewall pcp-mapping filter

List/flush mapping with filters.

```
diagnose firewall pcp-mapping filter
```

diagnose firewall pcp-mapping filter clear

Clear PCP mapping filter.

```
diagnose firewall pcp-mapping filter clear
```

diagnose firewall pcp-mapping filter client-ip

Client IP address.

```
diagnose firewall pcp-mapping filter client-ip <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	client IP address (from).	string	
<xxx.xxx.xxx.xxx>	Client IP address IP (to).	string	

diagnose firewall pcp-mapping filter ext-ip

External IP address.

```
diagnose firewall pcp-mapping filter ext-ip <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	External IP address (from).	string	
<xxx.xxx.xxx.xxx>	External IP address IP (to).	string	

diagnose firewall pcp-mapping filter ext-port

External port.

```
diagnose firewall pcp-mapping filter ext-port <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose firewall pcp-mapping filter intl-ip

Internal IP address.

```
diagnose firewall pcp-mapping filter intl-ip <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Internal IP address (from).	string	
<xxx.xxx.xxx.xxx>	Internal IP address IP (to).	string	

diagnose firewall pcp-mapping filter intl-port

Internal port.

```
diagnose firewall pcp-mapping filter intl-port <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose firewall pcp-mapping filter pool

Pool ID.

```
diagnose firewall pcp-mapping filter pool <xx>
```

Parameter	Description	Type	Size
<xx>	Pool ID.	string	

diagnose firewall pcp-mapping filter protocol

Protocol number.

```
diagnose firewall pcp-mapping filter protocol <xx>
```

Parameter	Description	Type	Size
<xx>	<0-255>.	string	

diagnose firewall pcp-mapping filter remote-ip

Remote IP address.

```
diagnose firewall pcp-mapping filter remote-ip <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Remote IP address (from).	string	
<xxx.xxx.xxx.xxx>	Remote IP address IP (to).	string	

diagnose firewall pcp-mapping filter remote-port

Remote port.

```
diagnose firewall pcp-mapping filter remote-port <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose firewall pcp-mapping flush

flush

```
diagnose firewall pcp-mapping flush
```

diagnose firewall pcp-mapping flush inbound

Flush PCP MAP mapping.

```
diagnose firewall pcp-mapping flush inbound
```

diagnose firewall pcp-mapping flush outbound

Flush PCP PEER mapping.

```
diagnose firewall pcp-mapping flush outbound
```

diagnose firewall pcp-mapping list

list

```
diagnose firewall pcp-mapping list
```

diagnose firewall pcp-mapping list inbound

List PCP MAP mapping.

```
diagnose firewall pcp-mapping list inbound
```

diagnose firewall pcp-mapping list outbound

List PCP PEER mapping.

```
diagnose firewall pcp-mapping list outbound
```

diagnose firewall proute

Policy route.

```
diagnose firewall proute
```

diagnose firewall proute clear

Clear policy routing stats.

```
diagnose firewall proute clear <number>
```

Parameter	Description	Type	Size
<number>	Policy route ID.	string	

diagnose firewall proute list

List policy routing.

```
diagnose firewall proute list <number>
```

Parameter	Description	Type	Size
<number>	Policy route ID.	string	

diagnose firewall proute show

Show policy routing stats.

```
diagnose firewall proute show <number>
```

Parameter	Description	Type	Size
<number>	Policy route ID.	string	

diagnose firewall proute6

IPv6 policy route.

```
diagnose firewall proute6
```

diagnose firewall proute6 clear

Clear IPv6 policy routing stats.

```
diagnose firewall proute6 clear <number>
```

Parameter	Description	Type	Size
<number>	Policy route ID.	string	

diagnose firewall proute6 list

List IPv6 policy routing.

```
diagnose firewall proute6 list
```

diagnose firewall proute6 show

Show IPv6 policy routing stats.

```
diagnose firewall proute6 show <number>
```

Parameter	Description	Type	Size
<number>	Policy route ID.	string	

diagnose firewall route_tag

Route tag.

```
diagnose firewall route_tag
```

diagnose firewall route_tag list

List Route tag address.

```
diagnose firewall route_tag list <number>
```

Parameter	Description	Type	Size
<number>	Router tag ID.	string	

diagnose firewall route_tag_v6

route_tag_v6.

```
diagnose firewall route_tag_v6
```

diagnose firewall route_tag_v6 list

List Route tag address v6.

```
diagnose firewall route_tag_v6 list <number>
```

Parameter	Description	Type	Size
<number>	Router tag ID.	string	

diagnose firewall schedule

schedule

```
diagnose firewall schedule
```

diagnose firewall schedule debug

Set policy schedule debug level.

```
diagnose firewall schedule debug <level>
```

Parameter	Description	Type	Size
<level>	debug level (0-2)	string	

diagnose firewall schedule list

List schedule.

```
diagnose firewall schedule list
```

diagnose firewall schedule reload

Reload schedule.

```
diagnose firewall schedule reload
```

diagnose firewall sf-addresses

Security Fabric device addresses.

```
diagnose firewall sf-addresses
```

diagnose firewall sf-addresses list

List IP addresses of Fortinet devices configured in the Security Fabric.

```
diagnose firewall sf-addresses list
```

diagnose firewall shaper

shapers

```
diagnose firewall shaper
```

diagnose firewall shaper dynamic-shaper

Dynamic shapers.

```
diagnose firewall shaper dynamic-shaper
```

diagnose firewall shaper dynamic-shaper flush

Flush all dynamic shapers.

```
diagnose firewall shaper dynamic-shaper flush
```

diagnose firewall shaper dynamic-shaper list

List Dynamic shapers.

```
diagnose firewall shaper dynamic-shaper list
```

diagnose firewall shaper dynamic-shaper list ip

IPv4 address.

```
diagnose firewall shaper dynamic-shaper list ip <IP addr>
```

Parameter	Description	Type	Size
<IP addr>	IPv4 Adress xxx.xxx.xxx.xxx.	string	

diagnose firewall shaper dynamic-shaper list ipv6

IPv6 address.

```
diagnose firewall shaper dynamic-shaper list ipv6 <IPv6 addr>
```

Parameter	Description	Type	Size
<IPv6 addr>	IPv6 Adress xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx	string	

diagnose firewall shaper dynamic-shaper list user

User name.

```
diagnose firewall shaper dynamic-shaper list user <string>
```

Parameter	Description	Type	Size
<string>	User name.	string	

diagnose firewall shaper dynamic-shaper stats

Dynamic shapers statistic.

```
diagnose firewall shaper dynamic-shaper stats
```

diagnose firewall shaper per-ip-shaper

Traffic shapers.

```
diagnose firewall shaper per-ip-shaper
```

diagnose firewall shaper per-ip-shaper clear

Per-IP clear statistic data.

```
diagnose firewall shaper per-ip-shaper clear
```

diagnose firewall shaper per-ip-shaper list

List per-IP shapers.

```
diagnose firewall shaper per-ip-shaper list
```

diagnose firewall shaper per-ip-shaper state

Per-IP shapers state.

```
diagnose firewall shaper per-ip-shaper state
```

diagnose firewall shaper per-ip-shaper stats

Per-IP shapers statistic.

```
diagnose firewall shaper per-ip-shaper stats
```

diagnose firewall shaper traffic-shaper

Traffic shapers.

```
diagnose firewall shaper traffic-shaper
```

diagnose firewall shaper traffic-shaper list

List traffic shapers.

```
diagnose firewall shaper traffic-shaper list
```

diagnose firewall shaper traffic-shaper state

Global traffic shaper state.

```
diagnose firewall shaper traffic-shaper state
```

diagnose firewall shaper traffic-shaper stats

Traffic shaper statistics.

```
diagnose firewall shaper traffic-shaper stats
```

diagnose firewall shaper traffic-shaper stats clear

Clear traffic shaper statistics.

```
diagnose firewall shaper traffic-shaper stats clear <name>
```

Parameter	Description	Type	Size
<name>	Name of traffic shaper to clear.	string	

diagnose firewall shaper traffic-shaper stats list

List traffic shaper statistics.

```
diagnose firewall shaper traffic-shaper stats list
```

diagnose firewall uuid

UUID list.

```
diagnose firewall uuid
```

diagnose firewall uuid list

list

```
diagnose firewall uuid list <type>
```

Parameter	Description	Type	Size
<type>	UUID category.	string	

diagnose firewall vendor-mac

Vendor MAC in the kernel.

```
diagnose firewall vendor-mac
```

diagnose firewall vendor-mac list

List Vendor MAC Entries.

```
diagnose firewall vendor-mac list
```

diagnose firewall vip

VIP diagnostics.

```
diagnose firewall vip
```

diagnose firewall vip realserver

Load balance real servers.

```
diagnose firewall vip realserver
```

diagnose firewall vip realserver clear

Clear firewall VIP, VIP6 real server statistics.

```
diagnose firewall vip realserver clear
```

diagnose firewall vip realserver clear vip

Clear VIP real server statistics.

```
diagnose firewall vip realserver clear vip <name> <IPv4|IPv6|all>
```

Parameter	Description	Type	Size
<name>	firewall VIP name.	string	
<IPv4 IPv6 all>	IPv4 address x.x.x.x or IPv6 address x:x:x:x:x:x of the real server, use "all" to clear statistics of all real servers of this VIP.	string	

diagnose firewall vip realserver clear vip6

Clear VIP6 real server statistics.

```
diagnose firewall vip realserver clear vip6 <name> <IPv4|IPv6|all>
```

Parameter	Description	Type	Size
<name>	Firewall VIP6 name.	string	
<IPv4 IPv6 all>	IPv4 address x.x.x.x or IPv6 address x:x:x:x:x:x of the real server, use "all" to clear statistics of all real servers of this VIP6.	string	

diagnose firewall vip realserver down

Change address down.

```
diagnose firewall vip realserver down <name> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<name>	IP address.	string	
<xxx.xxx.xxx.xxx>	IP address.	string	

diagnose firewall vip realserver healthcheck

Server health check.

```
diagnose firewall vip realserver healthcheck
```

diagnose firewall vip realserver healthcheck stats

Health check statistics.

```
diagnose firewall vip realserver healthcheck stats
```

diagnose firewall vip realserver healthcheck stats clear

Clear health check statistics.

```
diagnose firewall vip realserver healthcheck stats clear
```

diagnose firewall vip realserver healthcheck stats show

Show health check statistics.

```
diagnose firewall vip realserver healthcheck stats show
```

diagnose firewall vip realserver list

list

```
diagnose firewall vip realserver list
```

diagnose firewall vip realserver up

Change address up.

```
diagnose firewall vip realserver up <name> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<name>	IP address.	string	
<xxx.xxx.xxx.xxx>	IP address.	string	

diagnose firewall vip virtual-server

Virtual-server diagnostics.

```
diagnose firewall vip virtual-server
```

diagnose firewall vip virtual-server filter

Filter for various virtual server diagnostics.

```
diagnose firewall vip virtual-server filter
```

diagnose firewall vip virtual-server filter clear

Erase the current filter.

```
diagnose firewall vip virtual-server filter clear
```

diagnose firewall vip virtual-server filter dst

Destination address range to filter by.

```
diagnose firewall vip virtual-server filter dst <ip-address> <ip-address>
```

Parameter	Description	Type	Size
<ip-address>	Destination IP address (from).	string	
<ip-address>	Destination IP address (to).	string	

diagnose firewall vip virtual-server filter dst-port

Destination port range to filter by.

```
diagnose firewall vip virtual-server filter dst-port <port> <port>
```

Parameter	Description	Type	Size
<port>	Destination port (from).	string	
<port>	Destination port (to).	string	

diagnose firewall vip virtual-server filter list

Display the current filter.

```
diagnose firewall vip virtual-server filter list
```

diagnose firewall vip virtual-server filter name

VIP name to filter by.

```
diagnose firewall vip virtual-server filter name <name>
```

Parameter	Description	Type	Size
<name>	Name to filter by.	string	

diagnose firewall vip virtual-server filter negate

Negate the specified filter parameter.

```
diagnose firewall vip virtual-server filter negate
```

diagnose firewall vip virtual-server filter negate dst-addr

Negate IPv4 destination address.

```
diagnose firewall vip virtual-server filter negate dst-addr
```

diagnose firewall vip virtual-server filter negate dst-port

Negate destination port.

```
diagnose firewall vip virtual-server filter negate dst-port
```

diagnose firewall vip virtual-server filter negate name

Negate name.

```
diagnose firewall vip virtual-server filter negate name
```

diagnose firewall vip virtual-server filter negate src-addr

Negate IPv4 source address.

```
diagnose firewall vip virtual-server filter negate src-addr
```

diagnose firewall vip virtual-server filter negate src-port

Negate source port.

```
diagnose firewall vip virtual-server filter negate src-port
```

diagnose firewall vip virtual-server filter negate vd

Negate virtual domain.

```
diagnose firewall vip virtual-server filter negate vd
```

diagnose firewall vip virtual-server filter negate worker

Negate worker index.

```
diagnose firewall vip virtual-server filter negate worker
```

diagnose firewall vip virtual-server filter src

Source address range to filter by.

```
diagnose firewall vip virtual-server filter src <ip-address> <ip-address>
```

Parameter	Description	Type	Size
<ip-address>	Source IP address (from).	string	
<ip-address>	Source IP address (to).	string	

diagnose firewall vip virtual-server filter src-port

Source port range to filter by.

```
diagnose firewall vip virtual-server filter src-port <port> <port>
```

Parameter	Description	Type	Size
<port>	Source port (from).	string	
<port>	Source port (to).	string	

diagnose firewall vip virtual-server filter vd

Index of virtual domain. -1 matches all.

```
diagnose firewall vip virtual-server filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose firewall vip virtual-server filter worker

Index of worker. -1 matches all.

```
diagnose firewall vip virtual-server filter worker <index>
```

Parameter	Description	Type	Size
<index>	Index of worker. -1 matches all.	string	

diagnose firewall vip virtual-server real-server

Real-server diagnostics.

```
diagnose firewall vip virtual-server real-server
```

diagnose firewall vip virtual-server real-server list

List servers.

```
diagnose firewall vip virtual-server real-server list
```

diagnose firewall vip virtual-server stats

Statistics.

```
diagnose firewall vip virtual-server stats
```

diagnose firewall vip virtual-server stats clear

Clear all statistics.

```
diagnose firewall vip virtual-server stats clear
```

diagnose firewall vip virtual-server stats crypto-clear

Clear SSL crypto statistics.

```
diagnose firewall vip virtual-server stats crypto-clear
```

diagnose firewall vip virtual-server stats http

HTTP statistics.

```
diagnose firewall vip virtual-server stats http
```

diagnose firewall vip virtual-server stats http all

Per-process HTTP statistics.

```
diagnose firewall vip virtual-server stats http all
```

diagnose firewall vip virtual-server stats http clear

Clear HTTP statistics.

```
diagnose firewall vip virtual-server stats http clear
```

diagnose firewall vip virtual-server stats http list

List HTTP statistics.

```
diagnose firewall vip virtual-server stats http list
```

diagnose firewall vip virtual-server stats list

List all statistics.

```
diagnose firewall vip virtual-server stats list
```

diagnose firewall vip virtual-server stats operational

Operational info and statistics.

```
diagnose firewall vip virtual-server stats operational
```

diagnose firewall vip virtual-server stats operational all

Display per-process operational info and statistics.

```
diagnose firewall vip virtual-server stats operational all
```

diagnose firewall vip virtual-server stats operational list

Display operational info and statistics.

```
diagnose firewall vip virtual-server stats operational list
```

diagnose firewall vip virtual-server stats ssl

SSL statistics.

```
diagnose firewall vip virtual-server stats ssl
```

diagnose firewall vip virtual-server stats ssl all

Per-process SSL statistics.

```
diagnose firewall vip virtual-server stats ssl all
```

diagnose firewall vip virtual-server stats ssl clear

Clear SSL statistics.

```
diagnose firewall vip virtual-server stats ssl clear
```

diagnose firewall vip virtual-server stats ssl list

List SSL statistics.

```
diagnose firewall vip virtual-server stats ssl list
```

diagnose firewall vip virtual-server stats summary

Summary statistics.

```
diagnose firewall vip virtual-server stats summary
```

diagnose firewall vip virtual-server stats summary all

Per-process summary statistics.

```
diagnose firewall vip virtual-server stats summary all
```

diagnose firewall vip virtual-server stats summary clear

Clear summary statistics.

```
diagnose firewall vip virtual-server stats summary clear
```

diagnose firewall vip virtual-server stats summary list

List summary statistics.

```
diagnose firewall vip virtual-server stats summary list
```

diagnose firewall vip virtual-server test

Tests for internal use.

```
diagnose firewall vip virtual-server test
```

diagnose firewall vip virtual-server test benchmark

Crypto performance tests.

```
diagnose firewall vip virtual-server test benchmark
```

diagnose firewall vip virtual-server test benchmark dh-make-key

DH make-key.

```
diagnose firewall vip virtual-server test benchmark dh-make-key
```

diagnose firewall vip virtual-server test benchmark dh-make-secret

DH make-key & make-secret.

```
diagnose firewall vip virtual-server test benchmark dh-make-secret
```

diagnose firewall vip virtual-server test benchmark rand

RAND.

```
diagnose firewall vip virtual-server test benchmark rand
```

diagnose firewall vip virtual-server test benchmark rsa

RSA decryption.

```
diagnose firewall vip virtual-server test benchmark rsa
```

diagnose firewall vip virtual-server test benchmark rsa-mskb

RSA decrypt & MSKB.

```
diagnose firewall vip virtual-server test benchmark rsa-mskb
```

diagnose firewall vip virtual-server test key-exchange

Use synchronous/asynchronous key-exchange.

```
diagnose firewall vip virtual-server test key-exchange
```

diagnose firewall vip virtual-server test key-exchange async

Asynchronous key-exchange.

```
diagnose firewall vip virtual-server test key-exchange async
```

diagnose firewall vip virtual-server test key-exchange sync

Synchronous key-exchange (default).

```
diagnose firewall vip virtual-server test key-exchange sync
```

diagnose firewall vip virtual-server test next-proto

Enable/disable next-proto negotiation.

```
diagnose firewall vip virtual-server test next-proto
```

diagnose firewall vip virtual-server test next-proto disable

Disable next-proto negotiation.

```
diagnose firewall vip virtual-server test next-proto disable
```

diagnose firewall vip virtual-server test next-proto enable

Enable next-proto negotiation.

```
diagnose firewall vip virtual-server test next-proto enable
```

diagnose firewall vip virtual-server test rsa-blinding

Enable/disable RSA blinding.

```
diagnose firewall vip virtual-server test rsa-blinding
```

diagnose firewall vip virtual-server test rsa-blinding disable

Disable RSA blinding.

```
diagnose firewall vip virtual-server test rsa-blinding disable
```

diagnose firewall vip virtual-server test rsa-blinding enable

Enable RSA blinding (default).

```
diagnose firewall vip virtual-server test rsa-blinding enable
```

diagnose firewall vip virtual-server test ssl

SSL.

```
diagnose firewall vip virtual-server test ssl
```

diagnose firewall vip virtual-server test ssl async

Asynchronous SSL (default).

```
diagnose firewall vip virtual-server test ssl async
```

diagnose firewall vip virtual-server test ssl sync

Synchronous SSL.

```
diagnose firewall vip virtual-server test ssl sync
```

diagnose forticare

FortiCare Service.

This topic includes the following commands:

- [diagnose forticare cnreg-code-list on page 2896](#)
- [diagnose forticare direct-registration on page 2896](#)
- [diagnose forticare direct-registration country-data on page 2896](#)
- [diagnose forticare direct-registration organization-list on page 2896](#)
- [diagnose forticare direct-registration product-deregister on page 2896](#)
- [diagnose forticare direct-registration product-registration on page 2897](#)
- [diagnose forticare direct-registration product-transfer on page 2897](#)
- [diagnose forticare direct-registration reseller-list on page 2897](#)

diagnose forticare cnreg-code-list

List known ISO 3166-1 numeric country/region codes.

```
diagnose forticare cnreg-code-list
```

diagnose forticare direct-registration

Direct registration port.

```
diagnose forticare direct-registration
```

diagnose forticare direct-registration country-data

Country data operation.

```
diagnose forticare direct-registration country-data <cnreg-code>
```

Parameter	Description	Type	Size
<cnreg-code>	ISO 3166-1 numeric country/region code.	string	

diagnose forticare direct-registration organization-list

Organization list operation.

```
diagnose forticare direct-registration organization-list
```

diagnose forticare direct-registration product-deregister

Unit deregistration operation.

```
diagnose forticare direct-registration product-deregister <accountID> <password>
```

Parameter	Description	Type	Size
<accountID>	FortiCare user account ID.	string	
<password>	FortiCare user account password.	string	

diagnose forticare direct-registration product-registration

Product registration operation.

```
diagnose forticare direct-registration product-registration
```

diagnose forticare direct-registration product-transfer

Product transfer operation.

```
diagnose forticare direct-registration product-transfer <old-accountID> <password> <new-accountID>  
<password> <is-government>
```

Parameter	Description	Type	Size
<old-accountID>	Old user account ID.	string	
<password>	Old user account password.	string	
<new-accountID>	New user account ID.	string	
<password>	New user account password.	string	
<is-government>	[yes/no]	string	

diagnose forticare direct-registration reseller-list

Reseller list operation.

```
diagnose forticare direct-registration reseller-list <cnreg-code>
```

Parameter	Description	Type	Size
<cnreg-code>	ISO 3166-1 numeric country/region code.	string	

diagnose fortiguard-resources

FortiGuard resources.

This topic includes the following commands:

- [diagnose fortiguard-resources delete on page 2899](#)
- [diagnose fortiguard-resources delete app-categories on page 2899](#)
- [diagnose fortiguard-resources delete app-info on page 2899](#)

diagnose fortiguard-resources delete

Deletes all downloaded files for a FortiGuard resource, restores the original copy if available.

```
diagnose fortiguard-resources delete
```

diagnose fortiguard-resources delete app-categories

Application categories.

```
diagnose fortiguard-resources delete app-categories
```

diagnose fortiguard-resources delete app-info

Application info for a given ID. If no ID given, deletes all application info resources.

```
diagnose fortiguard-resources delete app-info <id>
```

Parameter	Description	Type	Size
<id>	ID of application to be deleted.	string	

diagnose fortiguard-resources delete dlp-object

DLP object info for a given ID. If no ID given, deletes all DLP object info resources.

```
diagnose fortiguard-resources delete dlp-object <id>
```

Parameter	Description	Type	Size
<id>	ID of DLP object to be deleted.	string	

diagnose fortiguard-resources delete fortiap-end-of-support

FortiAP product life cycle information.

```
diagnose fortiguard-resources delete fortiap-end-of-support
```

diagnose fortiguard-resources delete fortiextender-end-of-support

FortiExtender product life cycle information.

```
diagnose fortiguard-resources delete fortiextender-end-of-support
```

diagnose fortiguard-resources delete fortigate-end-of-support

FortiGate product life cycle information.

```
diagnose fortiguard-resources delete fortigate-end-of-support
```

diagnose fortiguard-resources delete fortiswitch-end-of-support

FortiSwitch product life cycle information.

```
diagnose fortiguard-resources delete fortiswitch-end-of-support
```

diagnose fortiguard-resources delete ips-information

IPS information for a given ID. If no ID given, deletes all IPS info resources.

```
diagnose fortiguard-resources delete ips-information <id>
```

Parameter	Description	Type	Size
<id>	ID of IPS to be deleted.	string	

diagnose fortiguard-resources delete prefix-links

Prefix links.

```
diagnose fortiguard-resources delete prefix-links
```

diagnose fortiguard-resources delete sprite-casb

Application icon sprite CASB (CSS & PNG).

```
diagnose fortiguard-resources delete sprite-casb
```

diagnose fortiguard-resources delete sprite-isdb

Application icon sprite ISDB (CSS & PNG).

```
diagnose fortiguard-resources delete sprite-isdb
```

diagnose fortiguard-resources delete sprite-map

Application icon sprite map (CSS & PNG).

```
diagnose fortiguard-resources delete sprite-map
```

diagnose fortiguard-resources delete static-links

Static links.

```
diagnose fortiguard-resources delete static-links
```

diagnose fortiguard-resources delete wf-categories

Web filter categories.

```
diagnose fortiguard-resources delete wf-categories
```

diagnose fortiguard-resources delete-all

Deletes all downloaded FortiGuard resource files (debug image only).

```
diagnose fortiguard-resources delete-all
```

diagnose fortiguard-resources downloads

Settings for download of FortiGuard resources.

```
diagnose fortiguard-resources downloads
```

diagnose fortiguard-resources downloads disable

Disable GUI downloading of resources from FortiGuard.

```
diagnose fortiguard-resources downloads disable
```

diagnose fortiguard-resources downloads enable

Enable GUI downloading of resources from FortiGuard.

```
diagnose fortiguard-resources downloads enable
```

diagnose fortiguard-resources info

View file information of a downloaded FortiGuard resource.

```
diagnose fortiguard-resources info
```

diagnose fortiguard-resources info app-categories

Application categories.

```
diagnose fortiguard-resources info app-categories
```

diagnose fortiguard-resources info app-info

Application info for a given ID.

```
diagnose fortiguard-resources info app-info <id>
```

Parameter	Description	Type	Size
<id>	ID of application to be retrieved.	string	

diagnose fortiguard-resources info dlp-object

DLP object info for a given ID.

```
diagnose fortiguard-resources info dlp-object <id>
```

Parameter	Description	Type	Size
<id>	ID of DLP object to be retrieved.	string	

diagnose fortiguard-resources info fortiap-end-of-support

FortiAP product life cycle information.

```
diagnose fortiguard-resources info fortiap-end-of-support
```

diagnose fortiguard-resources info fortiextender-end-of-support

FortiExtender product life cycle information.

```
diagnose fortiguard-resources info fortiextender-end-of-support
```

diagnose fortiguard-resources info fortigate-end-of-support

FortiGate product life cycle information.

```
diagnose fortiguard-resources info fortigate-end-of-support
```

diagnose fortiguard-resources info fortiswitch-end-of-support

FortiSwitch product life cycle information.

```
diagnose fortiguard-resources info fortiswitch-end-of-support
```

diagnose fortiguard-resources info ips-information

IPS information for a given ID.

```
diagnose fortiguard-resources info ips-information <id>
```

Parameter	Description	Type	Size
<id>	ID of IPS to be retrieved.	string	

diagnose fortiguard-resources info prefix-links

Prefix links.

```
diagnose fortiguard-resources info prefix-links
```

diagnose fortiguard-resources info sprite-casb.css

Application icon sprite CASB (CSS).

```
diagnose fortiguard-resources info sprite-casb.css
```

diagnose fortiguard-resources info sprite-casb.png

Application icon sprite CASB (PNG).

```
diagnose fortiguard-resources info sprite-casb.png
```

diagnose fortiguard-resources info sprite-isdb.css

Application icon sprite ISDB (CSS).

```
diagnose fortiguard-resources info sprite-isdb.css
```

diagnose fortiguard-resources info sprite-isdb.png

Application icon sprite ISDB (PNG).

```
diagnose fortiguard-resources info sprite-isdb.png
```

diagnose fortiguard-resources info sprite-map.css

Application icon sprite map (CSS).

```
diagnose fortiguard-resources info sprite-map.css
```

diagnose fortiguard-resources info sprite-map.png

Application icon sprite map (PNG).

```
diagnose fortiguard-resources info sprite-map.png
```

diagnose fortiguard-resources info static-links

Static links.

```
diagnose fortiguard-resources info static-links
```

diagnose fortiguard-resources info wf-categories

Web filter categories.

```
diagnose fortiguard-resources info wf-categories
```

diagnose fortiguard-resources log

Shows logs for FortiGuard resource prefetch.

```
diagnose fortiguard-resources log
```

diagnose fortiguard-resources log all

All FortiGuard resources.

```
diagnose fortiguard-resources log all
```

diagnose fortiguard-resources log app-categories

Application categories.

```
diagnose fortiguard-resources log app-categories
```

diagnose fortiguard-resources log app-info

Application info for a given ID.

```
diagnose fortiguard-resources log app-info
```

diagnose fortiguard-resources log fortiap-end-of-support

FortiAP product life cycle information.

```
diagnose fortiguard-resources log fortiap-end-of-support
```

diagnose fortiguard-resources log fortiextender-end-of-support

FortiExtender product life cycle information.

```
diagnose fortiguard-resources log fortiextender-end-of-support
```

diagnose fortiguard-resources log fortigate-end-of-support

FortiGate product life cycle information.

```
diagnose fortiguard-resources log fortigate-end-of-support
```

diagnose fortiguard-resources log fortiswitch-end-of-support

FortiSwitch product life cycle information.

```
diagnose fortiguard-resources log fortiswitch-end-of-support
```

diagnose fortiguard-resources log ips-information

IPS information for a given ID.

```
diagnose fortiguard-resources log ips-information
```

diagnose fortiguard-resources log maintainer

FortiGuard resource maintainer log.

```
diagnose fortiguard-resources log maintainer
```

diagnose fortiguard-resources log prefix-links

Prefix links.

```
diagnose fortiguard-resources log prefix-links
```

diagnose fortiguard-resources log sprite-casb

Application icon sprite CASB (CSS & PNG).

```
diagnose fortiguard-resources log sprite-casb
```

diagnose fortiguard-resources log sprite-isdb

Application icon sprite ISDB (CSS & PNG).

```
diagnose fortiguard-resources log sprite-isdb
```

diagnose fortiguard-resources log sprite-map

Application icon sprite map (CSS & PNG).

```
diagnose fortiguard-resources log sprite-map
```

diagnose fortiguard-resources log static-links

Static links.

```
diagnose fortiguard-resources log static-links
```

diagnose fortiguard-resources log wf-categories

Web filter categories.

```
diagnose fortiguard-resources log wf-categories
```

diagnose fortiguard-resources update

Deletes cached files and force downloads the FortiGuard resource (ignores GUI enable/disable).

```
diagnose fortiguard-resources update
```

diagnose fortiguard-resources update app-categories

Application categories.

```
diagnose fortiguard-resources update app-categories
```

diagnose fortiguard-resources update app-info

Application info for a given ID.

```
diagnose fortiguard-resources update app-info <id>
```

Parameter	Description	Type	Size
<id>	ID of application to be retrieved.	string	

diagnose fortiguard-resources update dlp-object

DLP object info for a given ID.

```
diagnose fortiguard-resources update dlp-object <id>
```

Parameter	Description	Type	Size
<id>	ID of DLP object to be retrieved.	string	

diagnose fortiguard-resources update fortiap-end-of-support

FortiAP product life cycle information.

```
diagnose fortiguard-resources update fortiap-end-of-support
```

diagnose fortiguard-resources update fortiextender-end-of-support

FortiExtender product life cycle information.

```
diagnose fortiguard-resources update fortiextender-end-of-support
```

diagnose fortiguard-resources update fortigate-end-of-support

FortiGate product life cycle information.

```
diagnose fortiguard-resources update fortigate-end-of-support
```

diagnose fortiguard-resources update fortiswitch-end-of-support

FortiSwitch product life cycle information.

```
diagnose fortiguard-resources update fortiswitch-end-of-support
```

diagnose fortiguard-resources update ips-information

IPS information for a given ID.

```
diagnose fortiguard-resources update ips-information <id>
```

Parameter	Description	Type	Size
<id>	ID of IPS to be retrieved.	string	

diagnose fortiguard-resources update prefix-links

Prefix links.

```
diagnose fortiguard-resources update prefix-links
```

diagnose fortiguard-resources update sprite-casb

Application icon sprite CASB (CSS & PNG).

```
diagnose fortiguard-resources update sprite-casb
```

diagnose fortiguard-resources update sprite-isdb

Application icon sprite ISDB (CSS & PNG).

```
diagnose fortiguard-resources update sprite-isdb
```

diagnose fortiguard-resources update sprite-map

Application icon sprite map (CSS & PNG).

```
diagnose fortiguard-resources update sprite-map
```

diagnose fortiguard-resources update static-links

Static links.

```
diagnose fortiguard-resources update static-links
```

diagnose fortiguard-resources update wf-categories

Web filter categories.

```
diagnose fortiguard-resources update wf-categories
```

diagnose fortimq

fortimq daemon diagnostics

This topic includes the following commands:

- [diagnose fortimq test on page 2912](#)

diagnose fortimq test

Test fortimq ipc and rabbitmq client

```
diagnose fortimq test
```

diagnose fortism

Forti Security Module

This topic includes the following commands:

- [diagnose fortism domain on page 2912](#)
- [diagnose fortism domain list on page 2912](#)

diagnose fortism domain

Daemon Domain and PID.

```
diagnose fortism domain
```

diagnose fortism domain list

List Daemon App-Pid.

```
diagnose fortism domain list <pid>
```

Parameter	Description	Type	Size
<pid>	Application Process ID.	string	

diagnose fortitoken

FortiToken

This topic includes the following commands:

- [diagnose fortitoken debug on page 2913](#)
- [diagnose fortitoken debug disable on page 2913](#)
- [diagnose fortitoken debug enable on page 2913](#)

- [diagnose fortitoken info on page 2913](#)
- [diagnose fortitoken test on page 2913](#)

diagnose fortitoken debug

Debug enable/disable.

```
diagnose fortitoken debug
```

diagnose fortitoken debug disable

Disable debug output.

```
diagnose fortitoken debug disable
```

diagnose fortitoken debug enable

Enable debug output.

```
diagnose fortitoken debug enable
```

diagnose fortitoken info

Show current drift and status for each FortiToken.

```
diagnose fortitoken info <id>
```

Parameter	Description	Type	Size
<id>	FortiToken ID.	string	

diagnose fortitoken test

Test FortiToken with screen setting for drift of internal clock.

```
diagnose fortitoken test <id> <code> <next code> <screen size>
```

Parameter	Description	Type	Size
<id>	FortiToken ID.	string	

Parameter	Description	Type	Size
<code>	FortiToken code.	string	
<next code>	Next FortiToken code.	string	
<screen size>	Screen size for drift of internal clock.	string	

diagnose fortitoken-cloud

FortiToken Cloud Service.

This topic includes the following commands:

- [diagnose fortitoken-cloud clear on page 2914](#)
- [diagnose fortitoken-cloud debug on page 2914](#)
- [diagnose fortitoken-cloud debug disable on page 2915](#)
- [diagnose fortitoken-cloud debug enable on page 2915](#)
- [diagnose fortitoken-cloud debug info on page 2915](#)
- [diagnose fortitoken-cloud delete on page 2915](#)
- [diagnose fortitoken-cloud migrate-ftm on page 2915](#)
- [diagnose fortitoken-cloud server on page 2916](#)
- [diagnose fortitoken-cloud set-http on page 2916](#)
- [diagnose fortitoken-cloud show on page 2916](#)
- [diagnose fortitoken-cloud sync on page 2916](#)
- [diagnose fortitoken-cloud update on page 2917](#)

diagnose fortitoken-cloud clear

Clear server connection settings for diagnostics.

```
diagnose fortitoken-cloud clear
```

diagnose fortitoken-cloud debug

Enable/disable debug output.

```
diagnose fortitoken-cloud debug
```

diagnose fortitoken-cloud debug disable

Disable debug output.

```
diagnose fortitoken-cloud debug disable
```

diagnose fortitoken-cloud debug enable

Enable debug output.

```
diagnose fortitoken-cloud debug enable
```

diagnose fortitoken-cloud debug info

Debug status.

```
diagnose fortitoken-cloud debug info
```

diagnose fortitoken-cloud delete

Command to delete a user.

```
diagnose fortitoken-cloud delete <string> <string>
```

Parameter	Description	Type	Size
<string>	User name.	string	
<string>	VDOM name.	string	

diagnose fortitoken-cloud migrate-ftm

Perform FTM license migration.

```
diagnose fortitoken-cloud migrate-ftm <string> <string> <string>
```

Parameter	Description	Type	Size
<string>	Enter command: show, start, abort, add-users, delete-users, ftm2ftc.	string	
<string>	FTM license number.	string	

Parameter	Description	Type	Size
<string>	<return> or VDOM name if add-users delete-users and ftm2ftc.	string	

diagnose fortitoken-cloud server

IP address port number and https.

```
diagnose fortitoken-cloud server <xxx.xxx.xxx.xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	IP address.	string	
<xxx>	Port number <0-65535>.	string	

diagnose fortitoken-cloud set-http

Set HTTP status return code for diagnostics only.

```
diagnose fortitoken-cloud set-http <number>
```

Parameter	Description	Type	Size
<number>	Status code (value < 300 clears the error diagnostics).	string	

diagnose fortitoken-cloud show

Display diagnostics information.

```
diagnose fortitoken-cloud show <string> <string> <string>
```

Parameter	Description	Type	Size
<string>	Enter <server service users user>.	string	
<string>	Enter username to get user information otherwise enter return.	string	
<string>	Enter VDOM name if getting user information.	string	

diagnose fortitoken-cloud sync

Synchronize user information with FortiToken Cloud.

```
diagnose fortitoken-cloud sync <user type>
```

Parameter	Description	Type	Size
<user type>	Enter <return>, all, local, or remote.	string	

diagnose fortitoken-cloud update

Update cache data manually.

```
diagnose fortitoken-cloud update <string> <number>
```

Parameter	Description	Type	Size
<string>	Enter <balance count>.	string	
<number>	argument.	string	

diagnose fortiview

Fortiview backend diagnostic

This topic includes the following commands:

- [diagnose fortiview device on page 2917](#)
- [diagnose fortiview result on page 2917](#)
- [diagnose fortiview sortby on page 2918](#)
- [diagnose fortiview time on page 2918](#)
- [diagnose fortiview view on page 2918](#)

diagnose fortiview device

device

```
diagnose fortiview device
```

diagnose fortiview result

result

```
diagnose fortiview result
```

diagnose fortiview sortby

sortby

```
diagnose fortiview sortby
```

diagnose fortiview time

time

```
diagnose fortiview time
```

diagnose fortiview view

view

```
diagnose fortiview view
```

diagnose geoip

Diagnose geography IP database and service.

This topic includes the following commands:

- [diagnose geoip delete-geoip-db on page 2918](#)
- [diagnose geoip geoip-query on page 2918](#)
- [diagnose geoip ip2country on page 2919](#)
- [diagnose geoip iprange on page 2919](#)
- [diagnose geoip iprange6 on page 2919](#)

diagnose geoip delete-geoip-db

Delete geography IP database currently saved on this FortiGate unit.

```
diagnose geoip delete-geoip-db
```

diagnose geoip geoip-query

Query FortiGuard service for geography information based on IP address.

```
diagnose geoip geoip-query <ip>
```

Parameter	Description	Type	Size
<ip>	IPv4 address.	string	

diagnose geoip ip2country

Query local geography IP database for country information based on IP address.

```
diagnose geoip ip2country <ip>
```

Parameter	Description	Type	Size
<ip>	IPv4/IPv6 address.	string	

diagnose geoip iprange

List IP ranges of specified country.

```
diagnose geoip iprange
```

diagnose geoip iprange6

List IPv6 ranges of specified country.

```
diagnose geoip iprange6
```

diagnose hardware

hardware

This topic includes the following commands:

- [diagnose hardware certificate on page 2920](#)
- [diagnose hardware deviceinfo on page 2920](#)
- [diagnose hardware deviceinfo disk on page 2920](#)
- [diagnose hardware deviceinfo nic on page 2920](#)
- [diagnose hardware deviceinfo nic-channel on page 2921](#)
- [diagnose hardware deviceinfo nic-stats on page 2921](#)
- [diagnose hardware getcbp on page 2921](#)

- [diagnose hardware ioport on page 2921](#)
- [diagnose hardware ioport byte on page 2921](#)
- [diagnose hardware ioport long on page 2921](#)
- [diagnose hardware ioport word on page 2922](#)
- [diagnose hardware lspci on page 2922](#)
- [diagnose hardware mii on page 2922](#)
- [diagnose hardware setcbp on page 2922](#)
- [diagnose hardware setpci on page 2922](#)
- [diagnose hardware sysinfo on page 2922](#)
- [diagnose hardware sysinfo conserve on page 2923](#)
- [diagnose hardware sysinfo cpu on page 2923](#)
- [diagnose hardware sysinfo interrupts on page 2923](#)
- [diagnose hardware sysinfo iomem on page 2923](#)
- [diagnose hardware sysinfo ioports on page 2923](#)
- [diagnose hardware sysinfo memory on page 2923](#)
- [diagnose hardware sysinfo mtrr on page 2924](#)
- [diagnose hardware sysinfo slab on page 2924](#)

diagnose hardware certificate

Verify certificates.

```
diagnose hardware certificate
```

diagnose hardware deviceinfo

Get device information.

```
diagnose hardware deviceinfo
```

diagnose hardware deviceinfo disk

Display information of all disks.

```
diagnose hardware deviceinfo disk
```

diagnose hardware deviceinfo nic

Display NIC information.

```
diagnose hardware deviceinfo nic
```

diagnose hardware deviceinfo nic-channel

Display NIC channels.

```
diagnose hardware deviceinfo nic-channel
```

diagnose hardware deviceinfo nic-stats

Display NIC statistics.

```
diagnose hardware deviceinfo nic-stats
```

diagnose hardware getcbp

Get current CBP mode state.

```
diagnose hardware getcbp
```

diagnose hardware ioport

Read/write data via IO port.

```
diagnose hardware ioport
```

diagnose hardware ioport byte

Read/write byte via IO port.

```
diagnose hardware ioport byte
```

diagnose hardware ioport long

Read/write long via IO port.

```
diagnose hardware ioport long
```

diagnose hardware ioport word

Read/write word via IO port.

```
diagnose hardware ioport word
```

diagnose hardware lspci

List PCI parameters.

```
diagnose hardware lspci
```

diagnose hardware mii

Access mii registers.

```
diagnose hardware mii
```

diagnose hardware setcbp

Set CBP mode before CBP tests.

```
diagnose hardware setcbp
```

diagnose hardware setpci

Set PCI parameters.

```
diagnose hardware setpci
```

diagnose hardware sysinfo

Get system information.

```
diagnose hardware sysinfo
```

diagnose hardware sysinfo conserve

Display information about memory conservation status.

```
diagnose hardware sysinfo conserve
```

diagnose hardware sysinfo cpu

Display detailed information for all installed CPU(s).

```
diagnose hardware sysinfo cpu
```

diagnose hardware sysinfo interrupts

Display system interrupts information.

```
diagnose hardware sysinfo interrupts
```

diagnose hardware sysinfo iomem

Display memory map of I/O ports.

```
diagnose hardware sysinfo iomem
```

diagnose hardware sysinfo ioports

Display address list of I/O ports.

```
diagnose hardware sysinfo ioports
```

diagnose hardware sysinfo memory

Display system memory information.

```
diagnose hardware sysinfo memory
```

diagnose hardware sysinfo mtrr

Display memory type range register.

```
diagnose hardware sysinfo mtrr
```

diagnose hardware sysinfo slab

Display memory allocation information.

```
diagnose hardware sysinfo slab
```

diagnose internet-service

Internet Service Database.

This topic includes the following commands:

- [diagnose internet-service id on page 2924](#)
- [diagnose internet-service id-summary on page 2924](#)
- [diagnose internet-service info on page 2925](#)
- [diagnose internet-service match on page 2925](#)
- [diagnose internet-service sld on page 2925](#)
- [diagnose internet-service status-read on page 2926](#)

diagnose internet-service id

Internet Service ID.

```
diagnose internet-service id <id>
```

Parameter	Description	Type	Size
<id>	Internet Service ID(a nonzero integer).	string	

diagnose internet-service id-summary

Internet Service ID summary.

```
diagnose internet-service id-summary <id>
```

Parameter	Description	Type	Size
<id>	Internet Service ID(a nonzero integer)	string	

diagnose internet-service info

VD and 3T information, include vdomname, protocol, port and IP address

```
diagnose internet-service info <vdomname> <proto> <port> <ip> <priority-id-list>
```

Parameter	Description	Type	Size
<vdomname>	VDOM name	string	
<proto>	Service protocol(0-255) for instance: tcp is 6	string	
<port>	Service port(0-65535).	string	
<ip>	Service IP address.	string	
<priority-id-list>	List of Internet Service ID as priority match.	string	

diagnose internet-service match

Find all matched Internet Services for a specific IP address and netmask.

```
diagnose internet-service match <vdomname> <ip> <netmask>
```

Parameter	Description	Type	Size
<vdomname>	VDOM name.	string	
<ip>	IP address.	string	
<netmask>	Netmask (x.x.x.x).	string	

diagnose internet-service sld

Find second level domain for a specific IP address in the ISDB.

```
diagnose internet-service sld <vdomname> <ip>
```

Parameter	Description	Type	Size
<vdomname>	VDOM name.	string	
<ip>	IP address.	string	

diagnose internet-service status-read

read internet service loading status

```
diagnose internet-service status-read
```

diagnose internet-service6

Internet Service Database.

This topic includes the following commands:

- [diagnose internet-service6 id on page 2926](#)
- [diagnose internet-service6 id-summary on page 2926](#)
- [diagnose internet-service6 info on page 2926](#)
- [diagnose internet-service6 match on page 2927](#)

diagnose internet-service6 id

Internet Service ID.

```
diagnose internet-service6 id <id>
```

Parameter	Description	Type	Size
<id>	Internet Service ID(a nonzero integer).	string	

diagnose internet-service6 id-summary

Internet Service ID summary.

```
diagnose internet-service6 id-summary <id>
```

Parameter	Description	Type	Size
<id>	Internet Service ID(a nonzero integer)	string	

diagnose internet-service6 info

VD and 3T information, include vdname, protocol, port and IP address

```
diagnose internet-service6 info <vdname> <proto> <port> <ip> <priority-id-list>
```

Parameter	Description	Type	Size
<vdname>	VDOM name	string	
<proto>	Service protocol(0-255) for instance: tcp is 6	string	
<port>	Service port(0-65535).	string	
<ip>	Service IP address.	string	
<priority-id-list>	List of Internet Service ID as priority match.	string	

diagnose internet-service6 match

Find all matched Internet Services for a specific IP address and prefix.

```
diagnose internet-service6 match <vdname> <ip> <prefix>
```

Parameter	Description	Type	Size
<vdname>	VDOM name.	string	
<ip>	IP address.	string	
<prefix>	prefix(0-128).	string	

diagnose internet-service-name

Internet Service Name diagnose commands.

This topic includes the following commands:

- [diagnose internet-service-name check-duplicate on page 2927](#)
- [diagnose internet-service-name cleanup on page 2928](#)
- [diagnose internet-service-name list on page 2928](#)

diagnose internet-service-name check-duplicate

Check duplicate name for same Internet Service information.

```
diagnose internet-service-name check-duplicate
```

diagnose internet-service-name cleanup

Clean up unused obsolete Internet Service name.

```
diagnose internet-service-name cleanup
```

diagnose internet-service-name list

Search Internet Service name by detailed information.

```
diagnose internet-service-name list <internet-service-id> <country/aread-id> <region-id> <city-id>
```

Parameter	Description	Type	Size
<internet-service-id>	Internet Service ID to be checked.	string	
<country/aread-id>	Country ID of Internet Service location.	string	
<region-id>	Region ID of Internet Service location.	string	
<city-id>	City ID of Internet Service location.	string	

diagnose ip address

IP addresses.

This topic includes the following commands:

- [diagnose ip address add on page 2928](#)
- [diagnose ip address delete on page 2929](#)
- [diagnose ip address list on page 2929](#)

diagnose ip address add

Add IP address.

```
diagnose ip address add <intf-name> <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<XXX.XXX.XXX.XXX>	IP address.	string	
<XXX.XXX.XXX.XXX>	IP network mask.	string	

diagnose ip address delete

Delete IP address.

```
diagnose ip address delete <intf-name> <XXX.XXX.XXX.XXX>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<XXX.XXX.XXX.XXX>	IP address.	string	

diagnose ip address list

List IP addresses.

```
diagnose ip address list
```

diagnose ip arp

ARP table.

This topic includes the following commands:

- [diagnose ip arp add on page 2929](#)
- [diagnose ip arp delete on page 2930](#)
- [diagnose ip arp list on page 2930](#)

diagnose ip arp add

Add an ARP entry.

```
diagnose ip arp add <intf-name> <XXX.XXX.XXX.XXX> <XX:XX:XX:XX:XX:XX>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<XXX.XXX.XXX.XXX>	IP address.	string	
<XX:XX:XX:XX:XX:XX>	MAC address.	string	

diagnose ip arp delete

Delete an ARP entry.

```
diagnose ip arp delete <intf-name> <XXX.XXX.XXX.XXX>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<XXX.XXX.XXX.XXX>	IP address.	string	

diagnose ip arp list

Show ARP table.

```
diagnose ip arp list
```

diagnose ip gre-tunnel

tunnels

This topic includes the following commands:

- [diagnose ip gre-tunnel list on page 2930](#)

diagnose ip gre-tunnel list

Show tunnels.

```
diagnose ip gre-tunnel list
```

diagnose ip ipip-tunnel

tunnels

This topic includes the following commands:

- [diagnose ip ipip-tunnel list on page 2931](#)

diagnose ip ipip-tunnel list

Show tunnels.

```
diagnose ip ipip-tunnel list
```

diagnose ip multicast

Multicast information.

This topic includes the following commands:

- [diagnose ip multicast get-igmp-limit on page 2931](#)
- [diagnose ip multicast group-membership on page 2931](#)
- [diagnose ip multicast mac on page 2931](#)
- [diagnose ip multicast mfc-add on page 2932](#)
- [diagnose ip multicast mfc-del on page 2932](#)
- [diagnose ip multicast mfc-flush on page 2932](#)
- [diagnose ip multicast mroute on page 2932](#)
- [diagnose ip multicast status on page 2933](#)
- [diagnose ip multicast vif on page 2933](#)

diagnose ip multicast get-igmp-limit

Get max IGMP states.

```
diagnose ip multicast get-igmp-limit
```

diagnose ip multicast group-membership

Multicast group membership.

```
diagnose ip multicast group-membership
```

diagnose ip multicast mac

Multicast MAC listing.

```
diagnose ip multicast mac
```

diagnose ip multicast mfc-add

add multicast forwarding cache

```
diagnose ip multicast mfc-add <in-port> <src-ip> <group-ip> <out-ports-map> <vrf>
```

Parameter	Description	Type	Size
<in-port>	vif index of ingress	string	
<src-ip>	Source IP.	string	
<group-ip>	multicast group IP	string	
<out-ports-map>	vif index map of egress ports, e.g. 0xff	string	
<vrf>	VRF ID	string	

diagnose ip multicast mfc-del

delete multicast forwarding cache

```
diagnose ip multicast mfc-del <src-ip> <group-ip> <vrf>
```

Parameter	Description	Type	Size
<src-ip>	Source IP.	string	
<group-ip>	multicast group IP	string	
<vrf>	VRF ID	string	

diagnose ip multicast mfc-flush

Flush multicast routes.

```
diagnose ip multicast mfc-flush
```

diagnose ip multicast mroute

Multicast FIB.

```
diagnose ip multicast mroute
```

diagnose ip multicast status

Multicast status.

```
diagnose ip multicast status
```

diagnose ip multicast vif

Multicast VIF device info.

```
diagnose ip multicast vif
```

diagnose ip parp

Proxy-ARP table.

This topic includes the following commands:

- [diagnose ip parp list on page 2933](#)

diagnose ip parp list

Show Proxy-ARP table.

```
diagnose ip parp list
```

diagnose ip proute

Policy routing.

This topic includes the following commands:

- [diagnose ip proute match on page 2933](#)

diagnose ip proute match

Match policy route.

```
diagnose ip proute match <XXX.XXX.XXX.XXX> <address string> <intf-name> <1-255> <0-65535> <0-65535> <0-511>
```

Parameter	Description	Type	Size
<XXX.XXX.XXX.XXX>	Destination IP address.	string	
<address string>	Source IP or MAC address.	string	
<intf-name>	Interface Name.	string	
<1-255>	Protocol.	string	
<0-65535>	Destination port.	string	
<0-65535>	Source port.	string	
<0-511>	VRF.	string	

diagnose ip route

Routing table.

This topic includes the following commands:

- [diagnose ip route add on page 2934](#)
- [diagnose ip route delete on page 2935](#)
- [diagnose ip route list on page 2935](#)
- [diagnose ip route match on page 2935](#)
- [diagnose ip route verify on page 2936](#)

diagnose ip route add

Add static route.

```
diagnose ip route add <intf-name> <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX> <1-255> <0-4294967295> <verify> <ha>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<XXX.XXX.XXX.XXX>	IP address.	string	
<XXX.XXX.XXX.XXX>	IP network mask.	string	
<XXX.XXX.XXX.XXX>	Nextthop IP address.	string	
<1-255>	Route distance.	string	

Parameter	Description	Type	Size
<0-4294967295>	Route priority.	string	
<verify>	Verify operation.	string	
<ha>	HA protocol	string	

diagnose ip route delete

Delete static route.

```
diagnose ip route delete <intf-name> <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX> <1-255> <0-4294967295> <verify> <ha>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<XXX.XXX.XXX.XXX>	IP address.	string	
<XXX.XXX.XXX.XXX>	IP network mask.	string	
<XXX.XXX.XXX.XXX>	Nexthop IP address.	string	
<1-255>	Route distance.	string	
<0-4294967295>	Route priority.	string	
<verify>	Verify operation.	string	
<ha>	HA protocol	string	

diagnose ip route list

List routing table.

```
diagnose ip route list
```

diagnose ip route match

Match kernel route.

```
diagnose ip route match <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX> <intf-name> <intf-name> <0-511>
```

Parameter	Description	Type	Size
<XXX.XXX.XXX.XXX>	Destination address.	string	

Parameter	Description	Type	Size
<XXX.XXX.XXX.XXX>	Source address.	string	
<intf-name>	Outgoing interface.	string	
<intf-name>	Incoming interface.	string	
<0-511>	VRF.	string	

diagnose ip route verify

Verify static route.

```
diagnose ip route verify <intf-name> <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX> <XXX.XXX.XXX.XXX> <1-255>  
<0-4294967295>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<XXX.XXX.XXX.XXX>	IP address.	string	
<XXX.XXX.XXX.XXX>	IP network mask.	string	
<XXX.XXX.XXX.XXX>	Nexthop IP address.	string	
<1-255>	Route distance.	string	
<0-4294967295>	Route priority.	string	

diagnose ip router bfd

BFD debug.

This topic includes the following commands:

- [diagnose ip router bfd all on page 2937](#)
- [diagnose ip router bfd cmdb on page 2937](#)
- [diagnose ip router bfd events on page 2937](#)
- [diagnose ip router bfd filter on page 2937](#)
- [diagnose ip router bfd fsm on page 2937](#)
- [diagnose ip router bfd nl on page 2937](#)
- [diagnose ip router bfd packet on page 2938](#)
- [diagnose ip router bfd show on page 2938](#)

diagnose ip router bfd all

Enable/disable all debugging.

```
diagnose ip router bfd all
```

diagnose ip router bfd cmdb

Enable/disable BFD CMDDB debug.

```
diagnose ip router bfd cmdb
```

diagnose ip router bfd events

Enable/disable BFD events debug.

```
diagnose ip router bfd events
```

diagnose ip router bfd filter

Destination/neighbor IP to filter debug, or "clear".

```
diagnose ip router bfd filter
```

diagnose ip router bfd fsm

Enable/disable BFD finite state machine debug.

```
diagnose ip router bfd fsm
```

diagnose ip router bfd nl

Enable/disable BFD ZebOS debug.

```
diagnose ip router bfd nl
```

diagnose ip router bfd packet

Enable/disable BFD packets debug.

```
diagnose ip router bfd packet
```

diagnose ip router bfd show

Show status of BFD debug.

```
diagnose ip router bfd show
```

diagnose ip router bgp

BGP protocol.

This topic includes the following commands:

- [diagnose ip router bgp all on page 2938](#)
- [diagnose ip router bgp dampening on page 2939](#)
- [diagnose ip router bgp events on page 2939](#)
- [diagnose ip router bgp filters on page 2939](#)
- [diagnose ip router bgp fsm on page 2939](#)
- [diagnose ip router bgp keepalives on page 2939](#)
- [diagnose ip router bgp level on page 2939](#)
- [diagnose ip router bgp level critical on page 2940](#)
- [diagnose ip router bgp level error on page 2940](#)
- [diagnose ip router bgp level info on page 2940](#)
- [diagnose ip router bgp level none on page 2940](#)
- [diagnose ip router bgp level warn on page 2940](#)
- [diagnose ip router bgp nsm on page 2940](#)
- [diagnose ip router bgp set-filter on page 2941](#)
- [diagnose ip router bgp show on page 2941](#)
- [diagnose ip router bgp updates on page 2941](#)

diagnose ip router bgp all

Enable all debugging.

```
diagnose ip router bgp all
```

diagnose ip router bgp dampening

BGP dampening.

```
diagnose ip router bgp dampening
```

diagnose ip router bgp events

BGP events.

```
diagnose ip router bgp events
```

diagnose ip router bgp filters

BGP filters.

```
diagnose ip router bgp filters
```

diagnose ip router bgp fsm

BGP finite state machine.

```
diagnose ip router bgp fsm
```

diagnose ip router bgp keepalives

BGP keep alive messages.

```
diagnose ip router bgp keepalives
```

diagnose ip router bgp level

Debug level.

```
diagnose ip router bgp level
```

diagnose ip router bgp level critical

Critical level.

```
diagnose ip router bgp level critical
```

diagnose ip router bgp level error

Error level.

```
diagnose ip router bgp level error
```

diagnose ip router bgp level info

Information level.

```
diagnose ip router bgp level info
```

diagnose ip router bgp level none

None level.

```
diagnose ip router bgp level none
```

diagnose ip router bgp level warn

Warning level.

```
diagnose ip router bgp level warn
```

diagnose ip router bgp nsm

BGP NSM information.

```
diagnose ip router bgp nsm
```

diagnose ip router bgp set-filter

Set BGP debug output filter.

```
diagnose ip router bgp set-filter
```

diagnose ip router bgp show

Show status of BGP debugging.

```
diagnose ip router bgp show
```

diagnose ip router bgp updates

BGP updates.

```
diagnose ip router bgp updates
```

diagnose ip router command

Send command to routing daemon.

This topic includes the following commands:

- [diagnose ip router command show on page 2941](#)
- [diagnose ip router command show-vrf on page 2941](#)

diagnose ip router command show

Send show command to imi.

```
diagnose ip router command show
```

diagnose ip router command show-vrf

Send show command to imi (in virtual router).

```
diagnose ip router command show-vrf
```

diagnose ip router igmp

IGMP debug.

This topic includes the following commands:

- [diagnose ip router igmp all on page 2942](#)
- [diagnose ip router igmp decode on page 2942](#)
- [diagnose ip router igmp encode on page 2942](#)
- [diagnose ip router igmp events on page 2943](#)
- [diagnose ip router igmp fsm on page 2943](#)
- [diagnose ip router igmp level on page 2943](#)
- [diagnose ip router igmp level critical on page 2943](#)
- [diagnose ip router igmp level error on page 2943](#)
- [diagnose ip router igmp level info on page 2943](#)
- [diagnose ip router igmp level none on page 2944](#)
- [diagnose ip router igmp level warn on page 2944](#)
- [diagnose ip router igmp show on page 2944](#)
- [diagnose ip router igmp tib on page 2944](#)

diagnose ip router igmp all

All debugging.

```
diagnose ip router igmp all
```

diagnose ip router igmp decode

Decode debugging.

```
diagnose ip router igmp decode
```

diagnose ip router igmp encode

Encode debugging.

```
diagnose ip router igmp encode
```

diagnose ip router igmp events

Events debugging.

```
diagnose ip router igmp events
```

diagnose ip router igmp fsm

FSM debugging.

```
diagnose ip router igmp fsm
```

diagnose ip router igmp level

Debug level.

```
diagnose ip router igmp level
```

diagnose ip router igmp level critical

Critical level.

```
diagnose ip router igmp level critical
```

diagnose ip router igmp level error

Error level.

```
diagnose ip router igmp level error
```

diagnose ip router igmp level info

Information level.

```
diagnose ip router igmp level info
```

diagnose ip router igmp level none

None level.

```
diagnose ip router igmp level none
```

diagnose ip router igmp level warn

Warning level.

```
diagnose ip router igmp level warn
```

diagnose ip router igmp show

Show status of IGMP debugging.

```
diagnose ip router igmp show
```

diagnose ip router igmp tib

TIB (tree-info-base) debugging.

```
diagnose ip router igmp tib
```

diagnose ip router isis

IS-IS protocol.

This topic includes the following commands:

- [diagnose ip router isis all on page 2945](#)
- [diagnose ip router isis events on page 2945](#)
- [diagnose ip router isis ifsm on page 2945](#)
- [diagnose ip router isis level on page 2945](#)
- [diagnose ip router isis level critical on page 2945](#)
- [diagnose ip router isis level error on page 2945](#)
- [diagnose ip router isis level info on page 2946](#)
- [diagnose ip router isis level none on page 2946](#)
- [diagnose ip router isis level warn on page 2946](#)
- [diagnose ip router isis lsp on page 2946](#)

- [diagnose ip router isis nfsm on page 2946](#)
- [diagnose ip router isis nsm on page 2946](#)
- [diagnose ip router isis pdu on page 2947](#)
- [diagnose ip router isis show on page 2947](#)
- [diagnose ip router isis spf on page 2947](#)

diagnose ip router isis all

Enable all debugging.

```
diagnose ip router isis all
```

diagnose ip router isis events

IS-IS Events.

```
diagnose ip router isis events
```

diagnose ip router isis ifsm

IS-IS Interface State Machine.

```
diagnose ip router isis ifsm
```

diagnose ip router isis level

Debug level.

```
diagnose ip router isis level
```

diagnose ip router isis level critical

Critical level.

```
diagnose ip router isis level critical
```

diagnose ip router isis level error

Error level.

```
diagnose ip router isis level error
```

diagnose ip router isis level info

Information level.

```
diagnose ip router isis level info
```

diagnose ip router isis level none

None level.

```
diagnose ip router isis level none
```

diagnose ip router isis level warn

Warning level.

```
diagnose ip router isis level warn
```

diagnose ip router isis lsp

IS-IS Link State PDU.

```
diagnose ip router isis lsp
```

diagnose ip router isis nfsm

IS-IS Neighbor State Machine.

```
diagnose ip router isis nfsm
```

diagnose ip router isis nsm

IS-IS NSM information.

```
diagnose ip router isis nsm
```

diagnose ip router isis pdu

IS-IS Protocol Data Unit.

```
diagnose ip router isis pdu
```

diagnose ip router isis show

Show IS-IS debugging.

```
diagnose ip router isis show
```

diagnose ip router isis spf

IS-IS SPF Calculation.

```
diagnose ip router isis spf
```

diagnose ip router ospf

OSPF protocol.

This topic includes the following commands:

- [diagnose ip router ospf all on page 2948](#)
- [diagnose ip router ospf events on page 2948](#)
- [diagnose ip router ospf ifsm on page 2948](#)
- [diagnose ip router ospf level on page 2948](#)
- [diagnose ip router ospf level critical on page 2948](#)
- [diagnose ip router ospf level error on page 2948](#)
- [diagnose ip router ospf level info on page 2949](#)
- [diagnose ip router ospf level none on page 2949](#)
- [diagnose ip router ospf level warn on page 2949](#)
- [diagnose ip router ospf lsa on page 2949](#)
- [diagnose ip router ospf n fsm on page 2949](#)
- [diagnose ip router ospf nsm on page 2949](#)
- [diagnose ip router ospf packet on page 2950](#)
- [diagnose ip router ospf route on page 2950](#)
- [diagnose ip router ospf show on page 2950](#)

diagnose ip router ospf all

Enable all debugging.

```
diagnose ip router ospf all
```

diagnose ip router ospf events

OSPF events.

```
diagnose ip router ospf events
```

diagnose ip router ospf ifsm

OSPF Interface State Machine.

```
diagnose ip router ospf ifsm
```

diagnose ip router ospf level

Debug level.

```
diagnose ip router ospf level
```

diagnose ip router ospf level critical

Critical level.

```
diagnose ip router ospf level critical
```

diagnose ip router ospf level error

Error level.

```
diagnose ip router ospf level error
```

diagnose ip router ospf level info

Information level.

```
diagnose ip router ospf level info
```

diagnose ip router ospf level none

None level.

```
diagnose ip router ospf level none
```

diagnose ip router ospf level warn

Warning level.

```
diagnose ip router ospf level warn
```

diagnose ip router ospf lsa

OSPF Link State Advertisement.

```
diagnose ip router ospf lsa
```

diagnose ip router ospf nfsm

OSPF Neighbor State Machine.

```
diagnose ip router ospf nfsm
```

diagnose ip router ospf nsm

OSPF NSM interface.

```
diagnose ip router ospf nsm
```

diagnose ip router ospf packet

OSPF Packets.

```
diagnose ip router ospf packet
```

diagnose ip router ospf route

OSPF route information.

```
diagnose ip router ospf route
```

diagnose ip router ospf show

Show status of OSPF debugging.

```
diagnose ip router ospf show
```

diagnose ip router pim-dm

PIM dense-mode.

This topic includes the following commands:

- [diagnose ip router pim-dm all on page 2951](#)
- [diagnose ip router pim-dm context on page 2951](#)
- [diagnose ip router pim-dm decode on page 2951](#)
- [diagnose ip router pim-dm encode on page 2951](#)
- [diagnose ip router pim-dm fsm on page 2951](#)
- [diagnose ip router pim-dm level on page 2951](#)
- [diagnose ip router pim-dm level critical on page 2952](#)
- [diagnose ip router pim-dm level error on page 2952](#)
- [diagnose ip router pim-dm level info on page 2952](#)
- [diagnose ip router pim-dm level none on page 2952](#)
- [diagnose ip router pim-dm level warn on page 2952](#)
- [diagnose ip router pim-dm mrt on page 2952](#)
- [diagnose ip router pim-dm nexthop on page 2953](#)
- [diagnose ip router pim-dm nsm on page 2953](#)
- [diagnose ip router pim-dm show on page 2953](#)
- [diagnose ip router pim-dm vif on page 2953](#)

diagnose ip router pim-dm all

All debugging.

```
diagnose ip router pim-dm all
```

diagnose ip router pim-dm context

VF-VRF context debugging.

```
diagnose ip router pim-dm context
```

diagnose ip router pim-dm decode

Message decode debugging.

```
diagnose ip router pim-dm decode
```

diagnose ip router pim-dm encode

Message encode debugging.

```
diagnose ip router pim-dm encode
```

diagnose ip router pim-dm fsm

FSM debugging.

```
diagnose ip router pim-dm fsm
```

diagnose ip router pim-dm level

Debug level.

```
diagnose ip router pim-dm level
```

diagnose ip router pim-dm level critical

Critical level.

```
diagnose ip router pim-dm level critical
```

diagnose ip router pim-dm level error

Error level.

```
diagnose ip router pim-dm level error
```

diagnose ip router pim-dm level info

Information level.

```
diagnose ip router pim-dm level info
```

diagnose ip router pim-dm level none

None level.

```
diagnose ip router pim-dm level none
```

diagnose ip router pim-dm level warn

Warning level.

```
diagnose ip router pim-dm level warn
```

diagnose ip router pim-dm mrt

Multicast-route-table debugging.

```
diagnose ip router pim-dm mrt
```

diagnose ip router pim-dm nexthop

Nexthop debugging.

```
diagnose ip router pim-dm nexthop
```

diagnose ip router pim-dm nsm

NSM interaction debugging.

```
diagnose ip router pim-dm nsm
```

diagnose ip router pim-dm show

Show status of PIM dense-mode debugging.

```
diagnose ip router pim-dm show
```

diagnose ip router pim-dm vif

Multicast VI debugging.

```
diagnose ip router pim-dm vif
```

diagnose ip router pim-sm

PIM sparse-mode.

This topic includes the following commands:

- [diagnose ip router pim-sm all on page 2954](#)
- [diagnose ip router pim-sm events on page 2955](#)
- [diagnose ip router pim-sm level on page 2955](#)
- [diagnose ip router pim-sm level critical on page 2955](#)
- [diagnose ip router pim-sm level error on page 2955](#)
- [diagnose ip router pim-sm level info on page 2955](#)
- [diagnose ip router pim-sm level none on page 2955](#)
- [diagnose ip router pim-sm level warn on page 2956](#)

diagnose ip router pim-sm all

All debugging.

```
diagnose ip router pim-sm all
```

diagnose ip router pim-sm events

Events debugging.

```
diagnose ip router pim-sm events
```

diagnose ip router pim-sm level

Debug level.

```
diagnose ip router pim-sm level
```

diagnose ip router pim-sm level critical

Critical level.

```
diagnose ip router pim-sm level critical
```

diagnose ip router pim-sm level error

Error level.

```
diagnose ip router pim-sm level error
```

diagnose ip router pim-sm level info

Information level.

```
diagnose ip router pim-sm level info
```

diagnose ip router pim-sm level none

None level.

```
diagnose ip router pim-sm level none
```

diagnose ip router pim-sm level warn

Warning level.

```
diagnose ip router pim-sm level warn
```

diagnose ip router pim-sm mfc

MFC debugging.

```
diagnose ip router pim-sm mfc
```

diagnose ip router pim-sm mib

MIB debugging.

```
diagnose ip router pim-sm mib
```

diagnose ip router pim-sm nexthop

Nexthop debugging.

```
diagnose ip router pim-sm nexthop
```

diagnose ip router pim-sm nsm

NSM debugging.

```
diagnose ip router pim-sm nsm
```

diagnose ip router pim-sm packet

Packet debugging.

```
diagnose ip router pim-sm packet
```

diagnose ip router pim-sm packet all

All packet debugging.

```
diagnose ip router pim-sm packet all
```

diagnose ip router pim-sm packet in

Incoming packet debugging.

```
diagnose ip router pim-sm packet in
```

diagnose ip router pim-sm packet out

Outgoing packet debugging.

```
diagnose ip router pim-sm packet out
```

diagnose ip router pim-sm show

Show status of PIM sparse-mode debugging.

```
diagnose ip router pim-sm show
```

diagnose ip router pim-sm state

State debugging.

```
diagnose ip router pim-sm state
```

diagnose ip router pim-sm timer

Timer debugging.

```
diagnose ip router pim-sm timer
```

diagnose ip router pim-sm timer all

All timer debugging.

```
diagnose ip router pim-sm timer all
```

diagnose ip router pim-sm timer assert

Assert timer debugging.

```
diagnose ip router pim-sm timer assert
```

diagnose ip router pim-sm timer assert all

All assert timers.

```
diagnose ip router pim-sm timer assert all
```

diagnose ip router pim-sm timer assert at

Assert timer.

```
diagnose ip router pim-sm timer assert at
```

diagnose ip router pim-sm timer bsr

BSR timer debugging.

```
diagnose ip router pim-sm timer bsr
```

diagnose ip router pim-sm timer bsr all

All BSR timers.

```
diagnose ip router pim-sm timer bsr all
```

diagnose ip router pim-sm timer bsr bst

Bootstrap timer.

```
diagnose ip router pim-sm timer bsr bst
```

diagnose ip router pim-sm timer bsr crp

Candidate-RP timer.

```
diagnose ip router pim-sm timer bsr crp
```

diagnose ip router pim-sm timer hello

Hello timer debugging.

```
diagnose ip router pim-sm timer hello
```

diagnose ip router pim-sm timer hello all

All hello-related timers.

```
diagnose ip router pim-sm timer hello all
```

diagnose ip router pim-sm timer hello ht

Hello timer.

```
diagnose ip router pim-sm timer hello ht
```

diagnose ip router pim-sm timer hello nlt

Neighbor liveliness timer.

```
diagnose ip router pim-sm timer hello nlt
```

diagnose ip router pim-sm timer hello tht

Triggered hello timer.

```
diagnose ip router pim-sm timer hello tht
```

diagnose ip router pim-sm timer joinprune

Join prune timer debugging.

```
diagnose ip router pim-sm timer joinprune
```

diagnose ip router pim-sm timer joinprune all

All join prune timers.

```
diagnose ip router pim-sm timer joinprune all
```

diagnose ip router pim-sm timer joinprune et

Expiry timer.

```
diagnose ip router pim-sm timer joinprune et
```

diagnose ip router pim-sm timer joinprune jt

Join prune timer.

```
diagnose ip router pim-sm timer joinprune jt
```

diagnose ip router pim-sm timer joinprune kat

Keep alive timer.

```
diagnose ip router pim-sm timer joinprune kat
```

diagnose ip router pim-sm timer joinprune ot

Override timer.

```
diagnose ip router pim-sm timer joinprune ot
```

diagnose ip router pim-sm timer joinprune ppt

Prune pending timer.

```
diagnose ip router pim-sm timer joinprune ppt
```

diagnose ip router pim-sm timer register

Register timer debugging.

```
diagnose ip router pim-sm timer register
```

diagnose ip router pim-sm timer register all

All register timers.

```
diagnose ip router pim-sm timer register all
```

diagnose ip router pim-sm timer register rst

Register stop timer.

```
diagnose ip router pim-sm timer register rst
```

diagnose ip router rip

RIP protocol.

This topic includes the following commands:

- [diagnose ip router rip all on page 2962](#)
- [diagnose ip router rip events on page 2962](#)
- [diagnose ip router rip level on page 2962](#)

- [diagnose ip router rip level critical on page 2962](#)
- [diagnose ip router rip level error on page 2962](#)
- [diagnose ip router rip level info on page 2963](#)
- [diagnose ip router rip level none on page 2963](#)
- [diagnose ip router rip level warn on page 2963](#)
- [diagnose ip router rip nsm on page 2963](#)
- [diagnose ip router rip packet on page 2963](#)
- [diagnose ip router rip show on page 2963](#)

diagnose ip router rip all

Enable all debugging.

```
diagnose ip router rip all
```

diagnose ip router rip events

RIP events.

```
diagnose ip router rip events
```

diagnose ip router rip level

Debug level.

```
diagnose ip router rip level
```

diagnose ip router rip level critical

Critical level.

```
diagnose ip router rip level critical
```

diagnose ip router rip level error

Error level.

```
diagnose ip router rip level error
```

diagnose ip router rip level info

Information level.

```
diagnose ip router rip level info
```

diagnose ip router rip level none

None level.

```
diagnose ip router rip level none
```

diagnose ip router rip level warn

Warning level.

```
diagnose ip router rip level warn
```

diagnose ip router rip nsm

RIP NSM interface

```
diagnose ip router rip nsm
```

diagnose ip router rip packet

RIP packets

```
diagnose ip router rip packet
```

diagnose ip router rip show

Show status of RIP debugging.

```
diagnose ip router rip show
```

diagnose ip router zl

Set flag to make diag ip router commands persist after router restart.

This topic includes the following commands:

- [diagnose ip router zl disable on page 2964](#)
- [diagnose ip router zl enable on page 2964](#)
- [diagnose ip router zl show on page 2964](#)

diagnose ip router zl disable

Debug events/level will reset to default after restart.

```
diagnose ip router zl disable
```

diagnose ip router zl enable

Newly enabled debug events/level will persist after router restart.

```
diagnose ip router zl enable
```

diagnose ip router zl show

Show whether flag is set.

```
diagnose ip router zl show
```

diagnose ip rtcache

Routing cache.

This topic includes the following commands:

- [diagnose ip rtcache stats on page 2964](#)

diagnose ip rtcache stats

Get routing cache statistics.

```
diagnose ip rtcache stats
```

diagnose ip tcp

TCP sockets.

This topic includes the following commands:

- [diagnose ip tcp list on page 2965](#)

diagnose ip tcp list

List TCP sockets.

```
diagnose ip tcp list
```

diagnose ip udp

UDP sockets.

This topic includes the following commands:

- [diagnose ip udp list on page 2965](#)

diagnose ip udp list

List UDP sockets.

```
diagnose ip udp list
```

diagnose ips anomaly

IPS anomaly.

This topic includes the following commands:

- [diagnose ips anomaly clear on page 2966](#)
- [diagnose ips anomaly config on page 2966](#)
- [diagnose ips anomaly filter on page 2966](#)

- [diagnose ips anomaly filter clear on page 2966](#)
- [diagnose ips anomaly filter freq on page 2966](#)
- [diagnose ips anomaly filter id on page 2967](#)
- [diagnose ips anomaly filter ip on page 2967](#)
- [diagnose ips anomaly filter pps on page 2967](#)
- [diagnose ips anomaly list on page 2967](#)
- [diagnose ips anomaly status on page 2968](#)

diagnose ips anomaly clear

Clear anomaly meters.

```
diagnose ips anomaly clear
```

diagnose ips anomaly config

List DoS-sensor.

```
diagnose ips anomaly config
```

diagnose ips anomaly filter

List anomaly with filters.

```
diagnose ips anomaly filter
```

diagnose ips anomaly filter clear

Clear anomaly filter.

```
diagnose ips anomaly filter clear
```

diagnose ips anomaly filter freq

frequency

```
diagnose ips anomaly filter freq <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	Frequency from.	string	
<xx>	Frequency to.	string	

diagnose ips anomaly filter id

Anomaly ID.

```
diagnose ips anomaly filter id <xx>
```

Parameter	Description	Type	Size
<xx>	<0-11>	string	

diagnose ips anomaly filter ip

IP and subnet mask.

```
diagnose ips anomaly filter ip <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	ip	string	
<xxx.xxx.xxx.xxx>	mask	string	

diagnose ips anomaly filter pps

pps

```
diagnose ips anomaly filter pps <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	PPS from.	string	
<xx>	PPS to.	string	

diagnose ips anomaly list

List anomaly meters.

```
diagnose ips anomaly list
```

diagnose ips anomaly status

List anomaly status.

```
diagnose ips anomaly status
```

diagnose ips anomaly6

IPS6 anomaly.

This topic includes the following commands:

- [diagnose ips anomaly6 clear on page 2968](#)
- [diagnose ips anomaly6 config on page 2968](#)
- [diagnose ips anomaly6 filter on page 2968](#)
- [diagnose ips anomaly6 filter clear on page 2969](#)
- [diagnose ips anomaly6 filter freq on page 2969](#)
- [diagnose ips anomaly6 filter id on page 2969](#)
- [diagnose ips anomaly6 filter ip on page 2969](#)
- [diagnose ips anomaly6 filter pps on page 2969](#)
- [diagnose ips anomaly6 list on page 2970](#)
- [diagnose ips anomaly6 status on page 2970](#)

diagnose ips anomaly6 clear

Clear anomaly meters.

```
diagnose ips anomaly6 clear
```

diagnose ips anomaly6 config

List DoS-sensor.

```
diagnose ips anomaly6 config
```

diagnose ips anomaly6 filter

List anomaly with filters.

```
diagnose ips anomaly6 filter
```

diagnose ips anomaly6 filter clear

Clear anomaly filter.

```
diagnose ips anomaly6 filter clear
```

diagnose ips anomaly6 filter freq

frequency

```
diagnose ips anomaly6 filter freq <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	Frequency from.	string	
<xx>	Frequency to.	string	

diagnose ips anomaly6 filter id

Anomaly ID.

```
diagnose ips anomaly6 filter id <xx>
```

Parameter	Description	Type	Size
<xx>	<0-11>	string	

diagnose ips anomaly6 filter ip

IP and subnet mask.

```
diagnose ips anomaly6 filter ip <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>
```

Parameter	Description	Type	Size
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>	ip	string	

diagnose ips anomaly6 filter pps

pps

```
diagnose ips anomaly6 filter pps <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	PPS from.	string	
<xx>	PPS to.	string	

diagnose ips anomaly6 list

List anomaly meters.

```
diagnose ips anomaly6 list
```

diagnose ips anomaly6 status

List anomaly status.

```
diagnose ips anomaly6 status
```

diagnose ips av avengine

Diagnose commands for AV engine.

This topic includes the following commands:

- [diagnose ips av avengine bypass-disable on page 2970](#)
- [diagnose ips av avengine bypass-enable on page 2970](#)
- [diagnose ips av avengine run-diagnose on page 2971](#)

diagnose ips av avengine bypass-disable

Disable AV engine scan bypass.

```
diagnose ips av avengine bypass-disable
```

diagnose ips av avengine bypass-enable

Enable AV engine scan bypass.

```
diagnose ips av avengine bypass-enable
```

diagnose ips av avengine run-diagnose

Run AV engine diagnose commands.

```
diagnose ips av avengine run-diagnose <command>
```

Parameter	Description	Type	Size
<command>	AV engine diagnostic command.	string	

diagnose ips av cache

This topic includes the following commands:

- [diagnose ips av cache clear on page 2971](#)
- [diagnose ips av cache delete on page 2971](#)
- [diagnose ips av cache list on page 2971](#)
- [diagnose ips av cache set-age on page 2972](#)
- [diagnose ips av cache status on page 2972](#)

diagnose ips av cache clear

clear

```
diagnose ips av cache clear
```

diagnose ips av cache delete

delete

```
diagnose ips av cache delete <ID>
```

Parameter	Description	Type	Size
<ID>	<ID>	string	

diagnose ips av cache list

list

```
diagnose ips av cache list
```

diagnose ips av cache set-age

set-age

```
diagnose ips av cache set-age <ID> <age>
```

Parameter	Description	Type	Size
<ID>	<ID>	string	
<age>	<age>	string	

diagnose ips av cache status

status

```
diagnose ips av cache status
```

diagnose ips av mode

Flow-based AV scan mode.

This topic includes the following commands:

- [diagnose ips av mode show on page 2972](#)

Flow-based AV scan mode.

```
diagnose ips av mode hybrid
```

Parameter	Description	Type	Size
hybrid	Enable/disable hybrid scan mode.	option	

diagnose ips av mode show

Show status of hybrid scan mode.

```
diagnose ips av mode show
```

diagnose ips av query

This topic includes the following commands:

- [diagnose ips av query stats on page 2973](#)
- [diagnose ips av query stats-clear on page 2973](#)

diagnose ips av query stats

stats

```
diagnose ips av query stats
```

diagnose ips av query stats-clear

stats-clear

```
diagnose ips av query stats-clear
```

diagnose ips av stats

AntiVirus statistics.

This topic includes the following commands:

- [diagnose ips av stats clear on page 2973](#)
- [diagnose ips av stats show on page 2973](#)

diagnose ips av stats clear

Clear AntiVirus statistics.

```
diagnose ips av stats clear
```

diagnose ips av stats show

Show AntiVirus statistics.

```
diagnose ips av stats show
```

diagnose ips av timeout

Flowav timeout.

This topic includes the following commands:

- [diagnose ips av timeout set on page 2974](#)
- [diagnose ips av timeout show on page 2974](#)

diagnose ips av timeout set

Set av timeout for diagnosis.

```
diagnose ips av timeout set <Integer>
```

Parameter	Description	Type	Size
<Integer>	Timeout range: 5 - 60.	string	

diagnose ips av timeout show

Show current timeout.

```
diagnose ips av timeout show
```

diagnose ips config disable

This topic includes the following commands:

- [diagnose ips config disable log-verbose on page 2974](#)

diagnose ips config disable log-verbose

log-verbose

```
diagnose ips config disable log-verbose
```

diagnose ips config enable

This topic includes the following commands:

- [diagnose ips config enable log-verbose on page 2975](#)

diagnose ips config enable log-verbose

log-verbose

```
diagnose ips config enable log-verbose
```

diagnose ips dac

This topic includes the following commands:

- [diagnose ips dac clear on page 2975](#)
- [diagnose ips dac info on page 2975](#)

diagnose ips dac clear

clear

```
diagnose ips dac clear <age>
```

Parameter	Description	Type	Size
<age>	<age>	string	

diagnose ips dac info

info

```
diagnose ips dac info
```

diagnose ips debug disable

This topic includes the following commands:

- [diagnose ips debug disable all on page 2977](#)
- [diagnose ips debug disable av on page 2977](#)
- [diagnose ips debug disable content on page 2977](#)
- [diagnose ips debug disable content_detail on page 2977](#)
- [diagnose ips debug disable dac on page 2977](#)
- [diagnose ips debug disable detect on page 2977](#)
- [diagnose ips debug disable diameter on page 2978](#)
- [diagnose ips debug disable dissector on page 2978](#)
- [diagnose ips debug disable dns on page 2978](#)
- [diagnose ips debug disable error on page 2978](#)
- [diagnose ips debug disable http on page 2978](#)
- [diagnose ips debug disable im on page 2978](#)
- [diagnose ips debug disable init on page 2979](#)
- [diagnose ips debug disable ipsa on page 2979](#)
- [diagnose ips debug disable log on page 2979](#)
- [diagnose ips debug disable mail on page 2979](#)
- [diagnose ips debug disable mime on page 2979](#)
- [diagnose ips debug disable p2p on page 2979](#)
- [diagnose ips debug disable packet on page 2980](#)
- [diagnose ips debug disable packet_detail on page 2980](#)
- [diagnose ips debug disable packet_dump on page 2980](#)
- [diagnose ips debug disable parse on page 2980](#)
- [diagnose ips debug disable proxy on page 2980](#)
- [diagnose ips debug disable quic on page 2980](#)
- [diagnose ips debug disable rpc on page 2981](#)
- [diagnose ips debug disable sctp on page 2981](#)
- [diagnose ips debug disable session on page 2981](#)
- [diagnose ips debug disable smb on page 2981](#)
- [diagnose ips debug disable ssh on page 2981](#)
- [diagnose ips debug disable ssl on page 2981](#)
- [diagnose ips debug disable state on page 2982](#)
- [diagnose ips debug disable tcp on page 2982](#)
- [diagnose ips debug disable timeout on page 2982](#)
- [diagnose ips debug disable urlfilter on page 2982](#)
- [diagnose ips debug disable voip on page 2982](#)
- [diagnose ips debug disable warn on page 2982](#)

diagnose ips debug disable all

all

```
diagnose ips debug disable all

voip

```
diagnose ips debug enable voip
```

diagnose ips debug enable warn

warn

```
diagnose ips debug enable warn
```

diagnose ips debug level

This topic includes the following commands:

- [diagnose ips debug level reset on page 2990](#)
- [diagnose ips debug level save on page 2990](#)

diagnose ips debug level reset

reset

```
diagnose ips debug level reset
```

diagnose ips debug level save

save

```
diagnose ips debug level save
```

diagnose ips debug status

This topic includes the following commands:

- [diagnose ips debug status show on page 2990](#)

diagnose ips debug status show

show

```
diagnose ips debug status show
```

diagnose ips debug timelimit

This topic includes the following commands:

- [diagnose ips debug timelimit set on page 2991](#)

diagnose ips debug timelimit set

set

```
diagnose ips debug timelimit set <seconds>
```

Parameter	Description	Type	Size
<seconds>	<seconds>	string	

diagnose ips dissector

This topic includes the following commands:

- [diagnose ips dissector bypass on page 2991](#)
- [diagnose ips dissector dump on page 2991](#)
- [diagnose ips dissector list on page 2992](#)
- [diagnose ips dissector status on page 2992](#)

diagnose ips dissector bypass

bypass

```
diagnose ips dissector bypass <reset | <dissector>> <enable | disable>
```

Parameter	Description	Type	Size
<reset <dissector>>	reset <dissector>	string	
<enable disable>	<enable disable>	string	

diagnose ips dissector dump

dump

```
diagnose ips dissector dump
```

diagnose ips dissector list

list

```
diagnose ips dissector list
```

diagnose ips dissector status

status

```
diagnose ips dissector status
```

diagnose ips filter

This topic includes the following commands:

- [diagnose ips filter clear on page 2992](#)
- [diagnose ips filter process_id on page 2992](#)
- [diagnose ips filter set on page 2993](#)
- [diagnose ips filter status on page 2993](#)
- [diagnose ips filter timelimit on page 2993](#)

diagnose ips filter clear

clear

```
diagnose ips filter clear
```

diagnose ips filter process_id

process_id

```
diagnose ips filter process_id <process id>
```

Parameter	Description	Type	Size
<process id>	<process id>	string	

diagnose ips filter set

set

```
diagnose ips filter set <bpf filter>
```

Parameter	Description	Type	Size
<bpf filter>	bpf filter	string	

diagnose ips filter status

status

```
diagnose ips filter status
```

diagnose ips filter timelimit

timelimit

```
diagnose ips filter timelimit <seconds>
```

Parameter	Description	Type	Size
<seconds>	<seconds>	string	

diagnose ips global rule

Rule file operation.

This topic includes the following commands:

- [diagnose ips global rule reload on page 2993](#)

diagnose ips global rule reload

Reload rule file.

```
diagnose ips global rule reload
```

diagnose ips gtp

This topic includes the following commands:

- [diagnose ips gtp clear on page 2994](#)
- [diagnose ips gtp list on page 2994](#)
- [diagnose ips gtp stats on page 2994](#)
- [diagnose ips gtp stats-clear on page 2995](#)

diagnose ips gtp clear

clear

```
diagnose ips gtp clear [vdom]
```

Parameter	Description	Type	Size
[vdom]	[vdom]	string	

diagnose ips gtp list

list

```
diagnose ips gtp list [vdom]
```

Parameter	Description	Type	Size
[vdom]	[vdom]	string	

diagnose ips gtp stats

stats

```
diagnose ips gtp stats [vdom]
```

Parameter	Description	Type	Size
[vdom]	[vdom]	string	

diagnose ips gtp stats-clear

stats-clear

```
diagnose ips gtp stats-clear
```

diagnose ips ipsa

This topic includes the following commands:

- [diagnose ips ipsa info on page 2995](#)
- [diagnose ips ipsa read-ridmap on page 2995](#)

diagnose ips ipsa info

info

```
diagnose ips ipsa info
```

diagnose ips ipsa read-ridmap

read-ridmap

```
diagnose ips ipsa read-ridmap
```

diagnose ips l2ips

Layer 2 IPS information.

This topic includes the following commands:

- [diagnose ips l2ips stats on page 2995](#)

diagnose ips l2ips stats

Statistics.

```
diagnose ips l2ips stats
```

diagnose ips memory

This topic includes the following commands:

- [diagnose ips memory compact on page 2996](#)
- [diagnose ips memory profiling on page 2996](#)
- [diagnose ips memory status on page 2996](#)
- [diagnose ips memory track on page 2996](#)
- [diagnose ips memory track-glibc on page 2997](#)
- [diagnose ips memory track-print on page 2997](#)
- [diagnose ips memory track-size on page 2997](#)

diagnose ips memory compact

compact

```
diagnose ips memory compact
```

diagnose ips memory profiling

profiling

```
diagnose ips memory profiling <enable/disable/dump>
```

Parameter	Description	Type	Size
<enable/disable/dump>	<enable/disable/dump>	string	

diagnose ips memory status

status

```
diagnose ips memory status
```

diagnose ips memory track

track

```
diagnose ips memory track <enable/disable/clear>
```

Parameter	Description	Type	Size
<enable/disable/clear>	enable/disable/clear	string	

diagnose ips memory track-glibc

track-glibc

```
diagnose ips memory track-glibc <status/enable/disable/dump>
```

Parameter	Description	Type	Size
<status/enable/disable/dump>	<status/enable/disable/dump>	string	

diagnose ips memory track-print

track-print

```
diagnose ips memory track-print <record count>
```

Parameter	Description	Type	Size
<record count>	<record count>	string	

diagnose ips memory track-size

track-size

```
diagnose ips memory track-size <min size> <max size>
```

Parameter	Description	Type	Size
<min size>	<min size>	string	
<max size>	<max size>	string	

diagnose ips packet

This topic includes the following commands:

- [diagnose ips packet clear on page 2998](#)
- [diagnose ips packet status on page 2998](#)

diagnose ips packet clear

clear

```
diagnose ips packet clear
```

diagnose ips packet status

status

```
diagnose ips packet status
```

diagnose ips pme debug

This topic includes the following commands:

- [diagnose ips pme debug disable on page 2998](#)
- [diagnose ips pme debug enable on page 2998](#)
- [diagnose ips pme debug status on page 2999](#)
- [diagnose ips pme debug verbose on page 2999](#)

diagnose ips pme debug disable

disable

```
diagnose ips pme debug disable
```

diagnose ips pme debug enable

enable

```
diagnose ips pme debug enable
```

diagnose ips pme debug status

status

```
diagnose ips pme debug status
```

diagnose ips pme debug verbose

verbose

```
diagnose ips pme debug verbose
```

diagnose ips pme detail

This topic includes the following commands:

- [diagnose ips pme detail addr on page 2999](#)
- [diagnose ips pme detail all on page 2999](#)
- [diagnose ips pme detail auth on page 3000](#)
- [diagnose ips pme detail def_port on page 3000](#)
- [diagnose ips pme detail intf on page 3000](#)
- [diagnose ips pme detail isdb on page 3000](#)
- [diagnose ips pme detail none on page 3000](#)
- [diagnose ips pme detail sched on page 3000](#)
- [diagnose ips pme detail service on page 3001](#)

diagnose ips pme detail addr

addr

```
diagnose ips pme detail addr
```

diagnose ips pme detail all

all

```
diagnose ips pme detail all
```

diagnose ips pme detail auth

auth

```
diagnose ips pme detail auth
```

diagnose ips pme detail def_port

def_port

```
diagnose ips pme detail def_port
```

diagnose ips pme detail intf

intf

```
diagnose ips pme detail intf
```

diagnose ips pme detail isdb

isdb

```
diagnose ips pme detail isdb
```

diagnose ips pme detail none

none

```
diagnose ips pme detail none
```

diagnose ips pme detail sched

sched

```
diagnose ips pme detail sched
```

diagnose ips pme detail service

service

```
diagnose ips pme detail service
```

diagnose ips pme dynamic-address

This topic includes the following commands:

- [diagnose ips pme dynamic-address list on page 3001](#)

diagnose ips pme dynamic-address list

list

```
diagnose ips pme dynamic-address list [vdom]
```

Parameter	Description	Type	Size
[vdom]	[vdom]	string	

diagnose ips pme fabric-address

This topic includes the following commands:

- [diagnose ips pme fabric-address list on page 3001](#)

diagnose ips pme fabric-address list

list

```
diagnose ips pme fabric-address list [vdom]
```

Parameter	Description	Type	Size
[vdom]	[vdom]	string	

diagnose ips pme policy

This topic includes the following commands:

- [diagnose ips pme policy clear-stats](#) on page 3002
- [diagnose ips pme policy def_port](#) on page 3002
- [diagnose ips pme policy list](#) on page 3002
- [diagnose ips pme policy stats](#) on page 3002

diagnose ips pme policy clear-stats

clear-stats

```
diagnose ips pme policy clear-stats [vdom] [polid]
```

Parameter	Description	Type	Size
[vdom]	[vdom]	string	
[polid]	[polid]	string	

diagnose ips pme policy def_port

def_port

```
diagnose ips pme policy def_port
```

diagnose ips pme policy list

list

```
diagnose ips pme policy list
```

diagnose ips pme policy stats

stats

```
diagnose ips pme policy stats
```

diagnose ips raw

Raw socket.

This topic includes the following commands:

- [diagnose ips raw clear on page 3003](#)
- [diagnose ips raw status on page 3003](#)

diagnose ips raw clear

Clear status.

```
diagnose ips raw clear
```

diagnose ips raw status

Show status.

```
diagnose ips raw status
```

diagnose ips session

This topic includes the following commands:

- [diagnose ips session clear on page 3003](#)
- [diagnose ips session content on page 3004](#)
- [diagnose ips session list on page 3004](#)
- [diagnose ips session performance on page 3004](#)
- [diagnose ips session status on page 3004](#)

diagnose ips session clear

clear

```
diagnose ips session clear [vdom]
```

Parameter	Description	Type	Size
[vdom]	[vdom]	string	

diagnose ips session content

content

```
diagnose ips session content
```

diagnose ips session list

list

```
diagnose ips session list <by-mem> <number>
```

Parameter	Description	Type	Size
<by-mem>	by-mem	string	
<number>	<number>	string	

diagnose ips session performance

performance

```
diagnose ips session performance
```

diagnose ips session status

status

```
diagnose ips session status
```

diagnose ips share

This topic includes the following commands:

- [diagnose ips share clear on page 3005](#)
- [diagnose ips share list on page 3005](#)
- [diagnose ips share pool on page 3005](#)

diagnose ips share clear

clear

```
diagnose ips share clear <pool>
```

Parameter	Description	Type	Size
<pool>	<pool>	string	

diagnose ips share list

list

```
diagnose ips share list <pool>
```

Parameter	Description	Type	Size
<pool>	<pool>	string	

diagnose ips share pool

pool

```
diagnose ips share pool
```

diagnose ips shmopts

This topic includes the following commands:

- [diagnose ips shmopts disable on page 3005](#)
- [diagnose ips shmopts list on page 3006](#)
- [diagnose ips shmopts reset on page 3006](#)
- [diagnose ips shmopts status on page 3006](#)

diagnose ips shmopts disable

disable

```
diagnose ips shmopts disable
```

diagnose ips shmopts list

list

```
diagnose ips shmopts list
```

diagnose ips shmopts reset

reset

```
diagnose ips shmopts reset
```

diagnose ips shmopts status

status

```
diagnose ips shmopts status
```

diagnose ips signature

This topic includes the following commands:

- [diagnose ips signature cycle on page 3006](#)
- [diagnose ips signature hit on page 3007](#)
- [diagnose ips signature on-hold on page 3007](#)
- [diagnose ips signature status on page 3007](#)

diagnose ips signature cycle

cycle

```
diagnose ips signature cycle <top N>
```

Parameter	Description	Type	Size
<top N>	<top N>	string	

diagnose ips signature hit

hit

```
diagnose ips signature hit <top N>
```

Parameter	Description	Type	Size
<top N>	<top N>	string	

diagnose ips signature on-hold

on-hold

```
diagnose ips signature on-hold <vdom> <rule id>
```

Parameter	Description	Type	Size
<vdom>	<vdom>	string	
<rule id>	<rule id>	string	

diagnose ips signature status

status

```
diagnose ips signature status <severity mask>
```

Parameter	Description	Type	Size
<severity mask>	<severity mask>	string	

diagnose ips ssl

This topic includes the following commands:

- [diagnose ips ssl bypass on page 3008](#)
- [diagnose ips ssl cc-alg on page 3008](#)
- [diagnose ips ssl ciphers on page 3008](#)
- [diagnose ips ssl clear on page 3008](#)
- [diagnose ips ssl debug on page 3008](#)

- [diagnose ips ssl debug-status on page 3009](#)
- [diagnose ips ssl noscan on page 3009](#)
- [diagnose ips ssl resume on page 3009](#)
- [diagnose ips ssl status on page 3009](#)

diagnose ips ssl bypass

bypass

```
diagnose ips ssl bypass <enable | disable>
```

Parameter	Description	Type	Size
<enable disable>	enable disable	string	

diagnose ips ssl cc-alg

cc-alg

```
diagnose ips ssl cc-alg <bic|cubic>
```

Parameter	Description	Type	Size
<bic cubic>	bic cubic	string	

diagnose ips ssl ciphers

ciphers

```
diagnose ips ssl ciphers
```

diagnose ips ssl clear

clear

```
diagnose ips ssl clear
```

diagnose ips ssl debug

debug

```
diagnose ips ssl debug <none|err|warn|info|dbg|noise>
```

Parameter	Description	Type	Size
<none err warn info dbg noise>	none err warn info dbg noise	string	

diagnose ips ssl debug-status

debug-status

```
diagnose ips ssl debug-status
```

diagnose ips ssl noscan

noscan

```
diagnose ips ssl noscan <enable | disable>
```

Parameter	Description	Type	Size
<enable disable>	enable disable	string	

diagnose ips ssl resume

resume

```
diagnose ips ssl resume <enable | disable>
```

Parameter	Description	Type	Size
<enable disable>	enable disable	string	

diagnose ips ssl status

status

```
diagnose ips ssl status
```

diagnose ips tcp

This topic includes the following commands:

- [diagnose ips tcp clear on page 3010](#)
- [diagnose ips tcp stats on page 3010](#)

diagnose ips tcp clear

clear

```
diagnose ips tcp clear
```

diagnose ips tcp stats

stats

```
diagnose ips tcp stats
```

diagnose ips test

This topic includes the following commands:

- [diagnose ips test cmd on page 3010](#)

diagnose ips test cmd

cmd

```
diagnose ips test cmd <cmd1;cmd2;cmd3>
```

Parameter	Description	Type	Size
<cmd1;cmd2;cmd3>	cmd1;cmd2;cmd3	string	

diagnose ips urlfilter

This topic includes the following commands:

- [diagnose ips urlfilter clear on page 3011](#)
- [diagnose ips urlfilter status on page 3011](#)

diagnose ips urlfilter clear

clear

```
diagnose ips urlfilter clear
```

diagnose ips urlfilter status

status

```
diagnose ips urlfilter status
```

diagnose ips vpatch

This topic includes the following commands:

- [diagnose ips vpatch fmwp-enable-all on page 3011](#)
- [diagnose ips vpatch fmwp-reset on page 3012](#)
- [diagnose ips vpatch fmwp-status on page 3012](#)
- [diagnose ips vpatch ot-status on page 3012](#)
- [diagnose ips vpatch query on page 3012](#)

diagnose ips vpatch fmwp-enable-all

fmwp-enable-all

```
diagnose ips vpatch fmwp-enable-all
```

diagnose ips vpatch fmwp-reset

fmwp-reset

```
diagnose ips vpatch fmwp-reset
```

diagnose ips vpatch fmwp-status

fmwp-status

```
diagnose ips vpatch fmwp-status
```

diagnose ips vpatch ot-status

ot-status

```
diagnose ips vpatch ot-status
```

diagnose ips vpatch query

query

```
diagnose ips vpatch query <device> <MAC>,<IP>
```

Parameter	Description	Type	Size
<device>	<device>	string	
<MAC>,<IP>	<MAC>,<IP>	string	

diagnose ipv6 address

IPv6 addresses.

This topic includes the following commands:

- [diagnose ipv6 address add on page 3013](#)
- [diagnose ipv6 address anycast on page 3013](#)
- [diagnose ipv6 address delete on page 3013](#)
- [diagnose ipv6 address list on page 3013](#)
- [diagnose ipv6 address multicast on page 3013](#)

diagnose ipv6 address add

Add IPv6 address.

```
diagnose ipv6 address add <intf-name> <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>	IPv6 prefix.	string	

diagnose ipv6 address anycast

Add IPv6 anycast address.

```
diagnose ipv6 address anycast
```

diagnose ipv6 address delete

Delete IPv6 address.

```
diagnose ipv6 address delete <intf-name> <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>	IPv6 prefix.	string	

diagnose ipv6 address list

List IPv6 addresses.

```
diagnose ipv6 address list
```

diagnose ipv6 address multicast

Add IPv6 multicast address.

```
diagnose ipv6 address multicast <intf-name> <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx/xxx>	IPv6 prefix.	string	

diagnose ipv6 devconf

IPv6 device config.

This topic includes the following commands:

- [diagnose ipv6 devconf accept-dad](#) on page 3014
- [diagnose ipv6 devconf disable_ipv6](#) on page 3014

diagnose ipv6 devconf accept-dad

IPv6 Duplicate Address Detection.

```
diagnose ipv6 devconf accept-dad <0, 1 or 2>
```

Parameter	Description	Type	Size
<0, 1 or 2>	0: disable DAD; 1: enable DAD; 2: enable DAD, and disable IPv6 operation if MAC-based duplicate link-local address has been found	string	

diagnose ipv6 devconf disable_ipv6

Disable/enable IPv6 operation.

```
diagnose ipv6 devconf disable_ipv6 <0 or 1>
```

Parameter	Description	Type	Size
<0 or 1>	0: enabling IPv6 operation; 1: disabling.	string	

diagnose ipv6 gre-tunnel

tunnels

This topic includes the following commands:

- [diagnose ipv6 gre-tunnel list on page 3015](#)

diagnose ipv6 gre-tunnel list

Show GRE tunnels.

```
diagnose ipv6 gre-tunnel list
```

diagnose ipv6 ipv6-tunnel

tunnels

This topic includes the following commands:

- [diagnose ipv6 ipv6-tunnel list on page 3015](#)

diagnose ipv6 ipv6-tunnel list

Show tunnels.

```
diagnose ipv6 ipv6-tunnel list
```

diagnose ipv6 multicast

Multicast information.

This topic includes the following commands:

- [diagnose ipv6 multicast mroute on page 3015](#)
- [diagnose ipv6 multicast status on page 3016](#)
- [diagnose ipv6 multicast vif on page 3016](#)

diagnose ipv6 multicast mroute

Multicast FIB.

```
diagnose ipv6 multicast mroute
```

diagnose ipv6 multicast status

Multicast status.

```
diagnose ipv6 multicast status
```

diagnose ipv6 multicast vif

Multicast VIF device info.

```
diagnose ipv6 multicast vif
```

diagnose ipv6 neighbor-cache

IPv6 neighbor-cache table.

This topic includes the following commands:

- [diagnose ipv6 neighbor-cache add on page 3016](#)
- [diagnose ipv6 neighbor-cache delete on page 3016](#)
- [diagnose ipv6 neighbor-cache flush on page 3017](#)
- [diagnose ipv6 neighbor-cache list on page 3017](#)

diagnose ipv6 neighbor-cache add

Add an IPv6 neighbor cache entry.

```
diagnose ipv6 neighbor-cache add <intf-name> <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>  
<XX:XX:XX:XX:XX:XX>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>	IPv6 address.	string	
<XX:XX:XX:XX:XX:XX>	MAC address.	string	

diagnose ipv6 neighbor-cache delete

Delete an IPv6 neighbor cache entry.

```
diagnose ipv6 neighbor-cache delete <intf-name> <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>	IPv6 address.	string	

diagnose ipv6 neighbor-cache flush

Flush IPv6 neighbor cache table.

```
diagnose ipv6 neighbor-cache flush <intf-name>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	

diagnose ipv6 neighbor-cache list

Show IPv6 neighbor cache table.

```
diagnose ipv6 neighbor-cache list
```

diagnose ipv6 proute

IPv6 policy routing.

This topic includes the following commands:

- [diagnose ipv6 proute match on page 3017](#)

diagnose ipv6 proute match

Match IPv6 route to policy routes.

```
diagnose ipv6 proute match <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx> <intf-name> <0-255> <0-65535> <0-65535> <0-511>
```

Parameter	Description	Type	Size
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>	IPv6 destination address.	string	

Parameter	Description	Type	Size
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>	Source IP or MAC address.	string	
<intf-name>	Interface Name.	string	
<0-255>	Protocol.	string	
<0-65535>	Destination port.	string	
<0-65535>	Source port.	string	
<0-511>	VRF.	string	

diagnose ipv6 route

IPv6 routing table.

This topic includes the following commands:

- [diagnose ipv6 route list on page 3018](#)

diagnose ipv6 route list

List IPv6 routing table.

```
diagnose ipv6 route list
```

diagnose ipv6 router ospf

OSPFv3 protocol.

This topic includes the following commands:

- [diagnose ipv6 router ospf all on page 3019](#)
- [diagnose ipv6 router ospf events on page 3019](#)
- [diagnose ipv6 router ospf ifsm on page 3019](#)
- [diagnose ipv6 router ospf level on page 3019](#)
- [diagnose ipv6 router ospf level critical on page 3019](#)
- [diagnose ipv6 router ospf level error on page 3019](#)
- [diagnose ipv6 router ospf level info on page 3020](#)
- [diagnose ipv6 router ospf level none on page 3020](#)
- [diagnose ipv6 router ospf level warn on page 3020](#)
- [diagnose ipv6 router ospf lsa on page 3020](#)

- [diagnose ipv6 router ospf nfsm on page 3020](#)
- [diagnose ipv6 router ospf nsm on page 3020](#)
- [diagnose ipv6 router ospf packet on page 3021](#)
- [diagnose ipv6 router ospf route on page 3021](#)
- [diagnose ipv6 router ospf show on page 3021](#)

diagnose ipv6 router ospf all

All OSPFv3 debug.

```
diagnose ipv6 router ospf all
```

diagnose ipv6 router ospf events

OSPFv3 events.

```
diagnose ipv6 router ospf events
```

diagnose ipv6 router ospf ifsm

OSPFv3 Interface State Machine.

```
diagnose ipv6 router ospf ifsm
```

diagnose ipv6 router ospf level

Debug level.

```
diagnose ipv6 router ospf level
```

diagnose ipv6 router ospf level critical

Critical level.

```
diagnose ipv6 router ospf level critical
```

diagnose ipv6 router ospf level error

Error level.

```
diagnose ipv6 router ospf level error
```

diagnose ipv6 router ospf level info

Information level.

```
diagnose ipv6 router ospf level info
```

diagnose ipv6 router ospf level none

None level.

```
diagnose ipv6 router ospf level none
```

diagnose ipv6 router ospf level warn

Warning level.

```
diagnose ipv6 router ospf level warn
```

diagnose ipv6 router ospf lsa

OSPFv3 Link State Advertisement.

```
diagnose ipv6 router ospf lsa
```

diagnose ipv6 router ospf nfsm

OSPFv3 Neighbor State Machine.

```
diagnose ipv6 router ospf nfsm
```

diagnose ipv6 router ospf nsm

OSPFv3 NSM information.

```
diagnose ipv6 router ospf nsm
```

diagnose ipv6 router ospf packet

OSPFv3 packets.

```
diagnose ipv6 router ospf packet
```

diagnose ipv6 router ospf route

OSPFv3 route information.

```
diagnose ipv6 router ospf route
```

diagnose ipv6 router ospf show

Show status of OSPFv3 debugging.

```
diagnose ipv6 router ospf show
```

diagnose ipv6 router pim-sm

PIM sparse-mode.

This topic includes the following commands:

- [diagnose ipv6 router pim-sm all on page 3022](#)
- [diagnose ipv6 router pim-sm events on page 3022](#)
- [diagnose ipv6 router pim-sm level on page 3023](#)
- [diagnose ipv6 router pim-sm level critical on page 3023](#)
- [diagnose ipv6 router pim-sm level error on page 3023](#)
- [diagnose ipv6 router pim-sm level info on page 3023](#)
- [diagnose ipv6 router pim-sm level none on page 3023](#)
- [diagnose ipv6 router pim-sm level warn on page 3023](#)
- [diagnose ipv6 router pim-sm mfc on page 3024](#)
- [diagnose ipv6 router pim-sm mib on page 3024](#)
- [diagnose ipv6 router pim-sm nexthop on page 3024](#)
- [diagnose ipv6 router pim-sm nsm on page 3024](#)
- [diagnose ipv6 router pim-sm packet on page 3024](#)
- [diagnose ipv6 router pim-sm packet all on page 3024](#)
- [diagnose ipv6 router pim-sm packet in on page 3025](#)
- [diagnose ipv6 router pim-sm packet out on page 3025](#)

- [diagnose ipv6 router pim-sm show on page 3025](#)
- [diagnose ipv6 router pim-sm state on page 3025](#)
- [diagnose ipv6 router pim-sm timer on page 3025](#)
- [diagnose ipv6 router pim-sm timer all on page 3025](#)
- [diagnose ipv6 router pim-sm timer assert on page 3026](#)
- [diagnose ipv6 router pim-sm timer assert all on page 3026](#)
- [diagnose ipv6 router pim-sm timer assert at on page 3026](#)
- [diagnose ipv6 router pim-sm timer bsr on page 3026](#)
- [diagnose ipv6 router pim-sm timer bsr all on page 3026](#)
- [diagnose ipv6 router pim-sm timer bsr bst on page 3026](#)
- [diagnose ipv6 router pim-sm timer bsr crp on page 3027](#)
- [diagnose ipv6 router pim-sm timer hello on page 3027](#)
- [diagnose ipv6 router pim-sm timer hello all on page 3027](#)
- [diagnose ipv6 router pim-sm timer hello ht on page 3027](#)
- [diagnose ipv6 router pim-sm timer hello nlt on page 3027](#)
- [diagnose ipv6 router pim-sm timer hello tht on page 3027](#)
- [diagnose ipv6 router pim-sm timer joinprune on page 3028](#)
- [diagnose ipv6 router pim-sm timer joinprune all on page 3028](#)
- [diagnose ipv6 router pim-sm timer joinprune et on page 3028](#)
- [diagnose ipv6 router pim-sm timer joinprune jt on page 3028](#)
- [diagnose ipv6 router pim-sm timer joinprune kat on page 3028](#)
- [diagnose ipv6 router pim-sm timer joinprune ot on page 3028](#)
- [diagnose ipv6 router pim-sm timer joinprune ppt on page 3029](#)
- [diagnose ipv6 router pim-sm timer register on page 3029](#)
- [diagnose ipv6 router pim-sm timer register all on page 3029](#)
- [diagnose ipv6 router pim-sm timer register rst on page 3029](#)

diagnose ipv6 router pim-sm all

All debugging.

```
diagnose ipv6 router pim-sm all
```

diagnose ipv6 router pim-sm events

Events debugging.

```
diagnose ipv6 router pim-sm events
```

diagnose ipv6 router pim-sm level

Debug level.

```
diagnose ipv6 router pim-sm level
```

diagnose ipv6 router pim-sm level critical

Critical level.

```
diagnose ipv6 router pim-sm level critical
```

diagnose ipv6 router pim-sm level error

Error level.

```
diagnose ipv6 router pim-sm level error
```

diagnose ipv6 router pim-sm level info

Information level.

```
diagnose ipv6 router pim-sm level info
```

diagnose ipv6 router pim-sm level none

None level.

```
diagnose ipv6 router pim-sm level none
```

diagnose ipv6 router pim-sm level warn

Warning level.

```
diagnose ipv6 router pim-sm level warn
```

diagnose ipv6 router pim-sm mfc

MFC debugging.

```
diagnose ipv6 router pim-sm mfc
```

diagnose ipv6 router pim-sm mib

MIB debugging.

```
diagnose ipv6 router pim-sm mib
```

diagnose ipv6 router pim-sm nexthop

Nexthop debugging.

```
diagnose ipv6 router pim-sm nexthop
```

diagnose ipv6 router pim-sm nsm

NSM debugging.

```
diagnose ipv6 router pim-sm nsm
```

diagnose ipv6 router pim-sm packet

Packet debugging.

```
diagnose ipv6 router pim-sm packet
```

diagnose ipv6 router pim-sm packet all

All packet debugging.

```
diagnose ipv6 router pim-sm packet all
```

diagnose ipv6 router pim-sm packet in

Incoming packet debugging.

```
diagnose ipv6 router pim-sm packet in
```

diagnose ipv6 router pim-sm packet out

Outgoing packet debugging.

```
diagnose ipv6 router pim-sm packet out
```

diagnose ipv6 router pim-sm show

Show status of PIM sparse-mode debugging.

```
diagnose ipv6 router pim-sm show
```

diagnose ipv6 router pim-sm state

State debugging.

```
diagnose ipv6 router pim-sm state
```

diagnose ipv6 router pim-sm timer

Timer debugging.

```
diagnose ipv6 router pim-sm timer
```

diagnose ipv6 router pim-sm timer all

All timer debugging.

```
diagnose ipv6 router pim-sm timer all
```

diagnose ipv6 router pim-sm timer assert

Assert timer debugging.

```
diagnose ipv6 router pim-sm timer assert
```

diagnose ipv6 router pim-sm timer assert all

All assert timers.

```
diagnose ipv6 router pim-sm timer assert all
```

diagnose ipv6 router pim-sm timer assert at

Assert timer.

```
diagnose ipv6 router pim-sm timer assert at
```

diagnose ipv6 router pim-sm timer bsr

BSR timer debugging.

```
diagnose ipv6 router pim-sm timer bsr
```

diagnose ipv6 router pim-sm timer bsr all

All BSR timers.

```
diagnose ipv6 router pim-sm timer bsr all
```

diagnose ipv6 router pim-sm timer bsr bst

Bootstrap timer.

```
diagnose ipv6 router pim-sm timer bsr bst
```

diagnose ipv6 router pim-sm timer bsr crp

Candidate-RP timer.

```
diagnose ipv6 router pim-sm timer bsr crp
```

diagnose ipv6 router pim-sm timer hello

Hello timer debugging.

```
diagnose ipv6 router pim-sm timer hello
```

diagnose ipv6 router pim-sm timer hello all

All hello-related timers.

```
diagnose ipv6 router pim-sm timer hello all
```

diagnose ipv6 router pim-sm timer hello ht

Hello timer.

```
diagnose ipv6 router pim-sm timer hello ht
```

diagnose ipv6 router pim-sm timer hello nlt

Neighbor liveliness timer.

```
diagnose ipv6 router pim-sm timer hello nlt
```

diagnose ipv6 router pim-sm timer hello tht

Triggered hello timer.

```
diagnose ipv6 router pim-sm timer hello tht
```

diagnose ipv6 router pim-sm timer joinprune

Join prune timer debugging.

```
diagnose ipv6 router pim-sm timer joinprune
```

diagnose ipv6 router pim-sm timer joinprune all

All join prune timers.

```
diagnose ipv6 router pim-sm timer joinprune all
```

diagnose ipv6 router pim-sm timer joinprune et

Expiry timer.

```
diagnose ipv6 router pim-sm timer joinprune et
```

diagnose ipv6 router pim-sm timer joinprune jt

Join prune timer.

```
diagnose ipv6 router pim-sm timer joinprune jt
```

diagnose ipv6 router pim-sm timer joinprune kat

Keep alive timer.

```
diagnose ipv6 router pim-sm timer joinprune kat
```

diagnose ipv6 router pim-sm timer joinprune ot

Override timer.

```
diagnose ipv6 router pim-sm timer joinprune ot
```

diagnose ipv6 router pim-sm timer joinprune ppt

Prune pending timer.

```
diagnose ipv6 router pim-sm timer joinprune ppt
```

diagnose ipv6 router pim-sm timer register

Register timer debugging.

```
diagnose ipv6 router pim-sm timer register
```

diagnose ipv6 router pim-sm timer register all

All register timers.

```
diagnose ipv6 router pim-sm timer register all
```

diagnose ipv6 router pim-sm timer register rst

Register stop timer.

```
diagnose ipv6 router pim-sm timer register rst
```

diagnose ipv6 router rip

RIPng protocol.

This topic includes the following commands:

- [diagnose ipv6 router rip all on page 3030](#)
- [diagnose ipv6 router rip events on page 3030](#)
- [diagnose ipv6 router rip level on page 3030](#)
- [diagnose ipv6 router rip level critical on page 3030](#)
- [diagnose ipv6 router rip level error on page 3030](#)
- [diagnose ipv6 router rip level info on page 3030](#)
- [diagnose ipv6 router rip level none on page 3031](#)
- [diagnose ipv6 router rip level warn on page 3031](#)
- [diagnose ipv6 router rip nsm on page 3031](#)
- [diagnose ipv6 router rip packet on page 3031](#)

- [diagnose ipv6 router rip show on page 3031](#)

diagnose ipv6 router rip all

Enable all debugging.

```
diagnose ipv6 router rip all
```

diagnose ipv6 router rip events

RIPng events.

```
diagnose ipv6 router rip events
```

diagnose ipv6 router rip level

Debug level.

```
diagnose ipv6 router rip level
```

diagnose ipv6 router rip level critical

Critical level.

```
diagnose ipv6 router rip level critical
```

diagnose ipv6 router rip level error

Error level.

```
diagnose ipv6 router rip level error
```

diagnose ipv6 router rip level info

Information level.

```
diagnose ipv6 router rip level info
```

diagnose ipv6 router rip level none

None level.

```
diagnose ipv6 router rip level none
```

diagnose ipv6 router rip level warn

Warning level.

```
diagnose ipv6 router rip level warn
```

diagnose ipv6 router rip nsm

RIPng NSM interface

```
diagnose ipv6 router rip nsm
```

diagnose ipv6 router rip packet

RIPng packets

```
diagnose ipv6 router rip packet
```

diagnose ipv6 router rip show

Show status of RIPng debugging.

```
diagnose ipv6 router rip show
```

diagnose ipv6 router zl6

Set flag to make diag ipv6 router commands persist after router restart.

This topic includes the following commands:

- [diagnose ipv6 router zl6 disable on page 3032](#)
- [diagnose ipv6 router zl6 enable on page 3032](#)
- [diagnose ipv6 router zl6 show on page 3032](#)

diagnose ipv6 router zl6 disable

Debug events/level will reset to default after restart.

```
diagnose ipv6 router zl6 disable
```

diagnose ipv6 router zl6 enable

Newly enabled debug events/level will persist after router restart.

```
diagnose ipv6 router zl6 enable
```

diagnose ipv6 router zl6 show

Show whether flag is set.

```
diagnose ipv6 router zl6 show
```

diagnose ipv6 sit-tunnel

tunnels

This topic includes the following commands:

- [diagnose ipv6 sit-tunnel list on page 3032](#)

diagnose ipv6 sit-tunnel list

Show tunnels.

```
diagnose ipv6 sit-tunnel list
```

diagnose l2vpn evpn

EVPN debug.

This topic includes the following commands:

- [diagnose l2vpn evpn all on page 3033](#)
- [diagnose l2vpn evpn cmdb on page 3033](#)
- [diagnose l2vpn evpn events on page 3033](#)
- [diagnose l2vpn evpn fdb on page 3033](#)
- [diagnose l2vpn evpn flush on page 3033](#)
- [diagnose l2vpn evpn ha on page 3034](#)
- [diagnose l2vpn evpn macip on page 3034](#)
- [diagnose l2vpn evpn nl on page 3034](#)
- [diagnose l2vpn evpn resync on page 3034](#)
- [diagnose l2vpn evpn show on page 3034](#)
- [diagnose l2vpn evpn zebos on page 3034](#)

diagnose l2vpn evpn all

Enable/disable all EVPN debugging.

```
diagnose l2vpn evpn all
```

diagnose l2vpn evpn cmdb

Enable/disable EVPN CMDB debugging.

```
diagnose l2vpn evpn cmdb
```

diagnose l2vpn evpn events

Enable/disable EVPN events debugging.

```
diagnose l2vpn evpn events
```

diagnose l2vpn evpn fdb

Enable/disable EVPN FDB debugging.

```
diagnose l2vpn evpn fdb
```

diagnose l2vpn evpn flush

Flush EVPN local IP or MAC tables.

```
diagnose l2vpn evpn flush
```

diagnose l2vpn evpn ha

Enable/disable EVPN HA debugging.

```
diagnose l2vpn evpn ha
```

diagnose l2vpn evpn macip

Enable/disable EVPN MAC/IP debugging.

```
diagnose l2vpn evpn macip
```

diagnose l2vpn evpn nl

Enable/disable EVPN NETLINK debugging.

```
diagnose l2vpn evpn nl
```

diagnose l2vpn evpn resync

Resync EVPN local MAC tables from switch FDB.

```
diagnose l2vpn evpn resync
```

diagnose l2vpn evpn show

Show status of EVPN debugging.

```
diagnose l2vpn evpn show
```

diagnose l2vpn evpn zebos

Enable/disable EVPN ZebOS debugging.

```
diagnose l2vpn evpn zebos
```

diagnose lldp

Link Layer Description Protocol (LLDP) diagnostics.

This topic includes the following commands:

- [diagnose lldp config on page 3035](#)
- [diagnose lldp restart on page 3035](#)
- [diagnose lldp rx on page 3036](#)
- [diagnose lldp rx neighbor on page 3036](#)
- [diagnose lldp rx neighbor clear on page 3036](#)
- [diagnose lldp rx neighbor details on page 3036](#)
- [diagnose lldp rx neighbor summary on page 3036](#)
- [diagnose lldp rx port on page 3036](#)
- [diagnose lldp rx port details on page 3037](#)
- [diagnose lldp rx port neighbor on page 3037](#)
- [diagnose lldp rx port neighbor clear on page 3037](#)
- [diagnose lldp rx port neighbor details on page 3037](#)
- [diagnose lldp rx port neighbor summary on page 3037](#)
- [diagnose lldp rx port summary on page 3037](#)
- [diagnose lldp stats on page 3038](#)
- [diagnose lldp stats config on page 3038](#)
- [diagnose lldp stats crash on page 3038](#)
- [diagnose lldp stats manager on page 3038](#)
- [diagnose lldp stats rxtx on page 3038](#)
- [diagnose lldp tx on page 3038](#)
- [diagnose lldp tx port on page 3039](#)
- [diagnose lldp tx port details on page 3039](#)
- [diagnose lldp tx port summary on page 3039](#)

diagnose lldp config

Display LLDP configuration.

```
diagnose lldp config
```

diagnose lldp restart

Restart the LLDP process

```
diagnose lldp restart
```

diagnose lldp rx

Link Layer Description Protocol (LLDP) Receiver diagnostics.

```
diagnose lldp rx
```

diagnose lldp rx neighbor

Display LLDP neighbors.

```
diagnose lldp rx neighbor
```

diagnose lldp rx neighbor clear

Clear the LLDP from all ports.

```
diagnose lldp rx neighbor clear
```

diagnose lldp rx neighbor details

Display details of each LLDP neighbor.

```
diagnose lldp rx neighbor details
```

diagnose lldp rx neighbor summary

Display summary of each LLDP neighbor.

```
diagnose lldp rx neighbor summary
```

diagnose lldp rx port

Display summary information about each port with LLDP reception enabled.

```
diagnose lldp rx port
```

diagnose lldp rx port details

Display details of the LLDP enabled ports.

```
diagnose lldp rx port details
```

diagnose lldp rx port neighbor

Display information about each LLDP neighbor for one or more ports.

```
diagnose lldp rx port neighbor
```

diagnose lldp rx port neighbor clear

Clear the LLDP neighbor information for one or more ports.

```
diagnose lldp rx port neighbor clear
```

diagnose lldp rx port neighbor details

Display details of each LLDP neighbor for one or more ports.

```
diagnose lldp rx port neighbor details
```

diagnose lldp rx port neighbor summary

Display summary of each LLDP neighbor for one or more ports.

```
diagnose lldp rx port neighbor summary
```

diagnose lldp rx port summary

Display summary of the LLDP enabled ports.

```
diagnose lldp rx port summary
```

diagnose lldp stats

Display LLDP statistics.

```
diagnose lldp stats
```

diagnose lldp stats config

Display LLDP statistics for the configuration handling process.

```
diagnose lldp stats config
```

diagnose lldp stats crash

Display LLDP statistics for the crash log generating process.

```
diagnose lldp stats crash
```

diagnose lldp stats manager

Display LLDP statistics for the manager process.

```
diagnose lldp stats manager
```

diagnose lldp stats rxtx

Display LLDP statistics for the receiving and transmission process.

```
diagnose lldp stats rxtx
```

diagnose lldp tx

Link Layer Description Protocol (LLDP) Transmission diagnostics.

```
diagnose lldp tx
```

diagnose lldp tx port

Link Layer Description Protocol (LLDP) Port diagnostics.

```
diagnose lldp tx port
```

diagnose lldp tx port details

Display details of the LLDP transmission ports.

```
diagnose lldp tx port details
```

diagnose lldp tx port summary

Display summary of the LLDP transmission ports.

```
diagnose lldp tx port summary
```

diagnose log

log

This topic includes the following commands:

- [diagnose log alertmail on page 3040](#)
- [diagnose log alertmail authcode on page 3040](#)
- [diagnose log alertmail test on page 3040](#)
- [diagnose log check-empty on page 3040](#)
- [diagnose log clear-kernel-stats on page 3040](#)
- [diagnose log dummy-log on page 3041](#)
- [diagnose log dummy-log fill on page 3041](#)
- [diagnose log dummy-log remove on page 3041](#)
- [diagnose log field-enum on page 3041](#)
- [diagnose log field-list on page 3041](#)
- [diagnose log kernel-stats on page 3041](#)
- [diagnose log severity on page 3042](#)
- [diagnose log show on page 3042](#)
- [diagnose log stress-test on page 3042](#)
- [diagnose log sub-category on page 3042](#)
- [diagnose log test on page 3042](#)

- [diagnose log test-text on page 3042](#)
- [diagnose log wireless-controller on page 3043](#)

diagnose log alertmail

alertmail

```
diagnose log alertmail
```

diagnose log alertmail authcode

Send a test authentication code.

```
diagnose log alertmail authcode <recipient>
```

Parameter	Description	Type	Size
<recipient>	recipient's email address	string	

diagnose log alertmail test

Send a test alert mail.

```
diagnose log alertmail test <level> <number>
```

Parameter	Description	Type	Size
<level>	Log level number.	string	
<number>	Number of messages.	string	

diagnose log check-empty

check-empty

```
diagnose log check-empty
```

diagnose log clear-kernel-stats

Clear logging statistics.

```
diagnose log clear-kernel-stats
```

diagnose log dummy-log

dummy-log

```
diagnose log dummy-log
```

diagnose log dummy-log fill

Fill up log disk with dummy logs.

```
diagnose log dummy-log fill
```

diagnose log dummy-log remove

Remove dummy logs from log disk.

```
diagnose log dummy-log remove
```

diagnose log field-enum

field-enum

```
diagnose log field-enum
```

diagnose log field-list

field-list

```
diagnose log field-list
```

diagnose log kernel-stats

Query logging statistics.

```
diagnose log kernel-stats
```

diagnose log severity

severity

```
diagnose log severity
```

diagnose log show

Display the contents of a log file.

```
diagnose log show
```

diagnose log stress-test

stress-test

```
diagnose log stress-test
```

diagnose log sub-category

sub-category

```
diagnose log sub-category
```

diagnose log test

Test miglog.

```
diagnose log test
```

diagnose log test-text

Test miglog.

```
diagnose log test-text
```

diagnose log wireless-controller

Test wireless event log.

```
diagnose log wireless-controller
```

diagnose netlink aggregate

802.3ad link aggregation

This topic includes the following commands:

- [diagnose netlink aggregate list on page 3043](#)
- [diagnose netlink aggregate list-active on page 3043](#)
- [diagnose netlink aggregate name on page 3043](#)
- [diagnose netlink aggregate port on page 3044](#)

diagnose netlink aggregate list

list of 802.3ad link aggregation interfaces

```
diagnose netlink aggregate list
```

diagnose netlink aggregate list-active

list active 802.3ad link aggregation interfaces

```
diagnose netlink aggregate list-active <name>
```

Parameter	Description	Type	Size
<name>	aggregate name	string	

diagnose netlink aggregate name

details of a specific 802.3ad link aggregate

```
diagnose netlink aggregate name <name> <action>
```

Parameter	Description	Type	Size
<name>	aggregate name	string	
<action>	{0 s show}: Show details of a specific 802.3ad link aggregate, {1 c clear}: Clear LACPDU counters	string	

diagnose netlink aggregate port

determine which physical port a packet will exit on

```
diagnose netlink aggregate port
```

diagnose netlink backlog

UDP sockets.

This topic includes the following commands:

- [diagnose netlink backlog get on page 3044](#)
- [diagnose netlink backlog set on page 3044](#)

diagnose netlink backlog get

Show backlog.

```
diagnose netlink backlog get
```

diagnose netlink backlog set

Backlog.

```
diagnose netlink backlog set <backlog>
```

Parameter	Description	Type	Size
<backlog>	Backlog value.	string	

diagnose netlink brctl

brctl

This topic includes the following commands:

- [diagnose netlink brctl domain on page 3045](#)
- [diagnose netlink brctl list on page 3045](#)
- [diagnose netlink brctl name on page 3045](#)

diagnose netlink brctl domain

domain

```
diagnose netlink brctl domain <name> <id>
```

Parameter	Description	Type	Size
<name>	Bridge name domain_id ...	string	
<id>	id	string	

diagnose netlink brctl list

list

```
diagnose netlink brctl list
```

diagnose netlink brctl name

name

```
diagnose netlink brctl name <type> <name>
```

Parameter	Description	Type	Size
<type>	"host" or "port"	string	
<name>	name	string	

diagnose netlink device

devices

This topic includes the following commands:

- [diagnose netlink device list on page 3046](#)

diagnose netlink device list

List devices.

```
diagnose netlink device list
```

diagnose netlink dstmac

Destination MAC substitution.

This topic includes the following commands:

- [diagnose netlink dstmac flush on page 3046](#)
- [diagnose netlink dstmac list on page 3046](#)

diagnose netlink dstmac flush

flush

```
diagnose netlink dstmac flush
```

diagnose netlink dstmac list

list

```
diagnose netlink dstmac list [name]
```

Parameter	Description	Type	Size
[name]	Interface name.	string	

diagnose netlink interface

Network interfaces.

This topic includes the following commands:

- [diagnose netlink interface clear on page 3047](#)
- [diagnose netlink interface list on page 3047](#)
- [diagnose netlink interface packet-rate on page 3047](#)
- [diagnose netlink interface speed-test on page 3047](#)
- [diagnose netlink interface speed-test-result on page 3048](#)
- [diagnose netlink interface speed-test-result-clear on page 3048](#)
- [diagnose netlink interface speed-test-tunnel on page 3048](#)

diagnose netlink interface clear

Clear interface counters.

```
diagnose netlink interface clear
```

diagnose netlink interface list

List interfaces.

```
diagnose netlink interface list
```

diagnose netlink interface packet-rate

Show send/receive rate of interfaces.

```
diagnose netlink interface packet-rate
```

diagnose netlink interface speed-test

Execute speed-test on the interface.

```
diagnose netlink interface speed-test <intf-name> <server> <mode> <dry-run>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<server>	server name.	string	
<mode>	Optional. Auto(default), TCP or UDP.	string	
<dry-run>	Optional. <0> execute speed-test; <1> dry run to verify routing etc.	string	

diagnose netlink interface speed-test-result

Get speed-test result for a specific test ID.

```
diagnose netlink interface speed-test-result <test-id>
```

Parameter	Description	Type	Size
<test-id>	Test ID from executing speed-test.	string	

diagnose netlink interface speed-test-result-clear

Remove speed test results from disk.

```
diagnose netlink interface speed-test-result-clear
```

diagnose netlink interface speed-test-tunnel

Request speed-test on tunnels' underlay interfaces.

```
diagnose netlink interface speed-test-tunnel <ipsec-phase1-interface> <all | a tunnel name>
```

Parameter	Description	Type	Size
<ipsec-phase1-interface>	Interface Name.	string	
<all a tunnel name>	Specify tunnel's name or 'all'	string	

diagnose netlink intf-class

Network interface class.

This topic includes the following commands:

- [diagnose netlink intf-class list on page 3049](#)

diagnose netlink intf-class list

list

```
diagnose netlink intf-class list <string>
```

Parameter	Description	Type	Size
<string>	Interface name.	string	

diagnose netlink intf-qdisc

Network interface qdisc.

This topic includes the following commands:

- [diagnose netlink intf-qdisc list on page 3049](#)

diagnose netlink intf-qdisc list

list

```
diagnose netlink intf-qdisc list <string>
```

Parameter	Description	Type	Size
<string>	Interface name.	string	

diagnose netlink qlen

Interface queue length.

This topic includes the following commands:

- [diagnose netlink qlen get on page 3050](#)
- [diagnose netlink qlen set on page 3050](#)

diagnose netlink qlen get

Get queue length.

```
diagnose netlink qlen get <intf-name>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	

diagnose netlink qlen set

Queue length.

```
diagnose netlink qlen set <intf-name> <len_integer>
```

Parameter	Description	Type	Size
<intf-name>	Interface Name.	string	
<len_integer>	Length value.	string	

diagnose netlink redundant

redundant interfaces

This topic includes the following commands:

- [diagnose netlink redundant list on page 3050](#)
- [diagnose netlink redundant name on page 3051](#)

diagnose netlink redundant list

list of redundant interfaces

```
diagnose netlink redundant list
```

diagnose netlink redundant name

details of a specific redundant interface

```
diagnose netlink redundant name <name>
```

Parameter	Description	Type	Size
<name>	redundant interface name	string	

diagnose nodejs

Node.JS web server diagnostics.

This topic includes the following commands:

- [diagnose nodejs health-check on page 3051](#)
- [diagnose nodejs health-check ping on page 3051](#)
- [diagnose nodejs logs on page 3052](#)
- [diagnose nodejs logs delete on page 3052](#)
- [diagnose nodejs logs list on page 3052](#)
- [diagnose nodejs logs show on page 3052](#)
- [diagnose nodejs logs show-all on page 3052](#)
- [diagnose nodejs performance on page 3053](#)
- [diagnose nodejs performance mass-ztna-event-logs on page 3053](#)
- [diagnose nodejs process on page 3053](#)
- [diagnose nodejs process restart on page 3053](#)

diagnose nodejs health-check

Node.JS health check commands.

```
diagnose nodejs health-check
```

diagnose nodejs health-check ping

Send HTTP request to Node.JS, and check if Node.JS can handle HTTP request.

```
diagnose nodejs health-check ping
```

diagnose nodejs logs

Show/List Node.JS debug log.

```
diagnose nodejs logs
```

diagnose nodejs logs delete

Delete one of the Node.JS debug log files. Use log sequence number as an argument.

```
diagnose nodejs logs delete <log sequence number>
```

Parameter	Description	Type	Size
<log sequence number>	Log sequence number.	string	

diagnose nodejs logs list

List all of the Node.JS debug log files.

```
diagnose nodejs logs list
```

diagnose nodejs logs show

Show one of the Node.JS debug logs files. Use log sequence number as an argument.

```
diagnose nodejs logs show <log sequence number>
```

Parameter	Description	Type	Size
<log sequence number>	Log sequence number.	string	

diagnose nodejs logs show-all

Show all of the Node.JS debug log files.

```
diagnose nodejs logs show-all
```

diagnose nodejs performance

Performance testing for Node.js.

```
diagnose nodejs performance
```

diagnose nodejs performance mass-ztna-event-logs

Generate thousands of ZTNA tag update events.

```
diagnose nodejs performance mass-ztna-event-logs
```

diagnose nodejs process

Actions to Node.JS process.

```
diagnose nodejs process
```

diagnose nodejs process restart

Send SIGKILL and restart Node.JS.

```
diagnose nodejs process restart
```

diagnose oci

Oracle Cloud Infrastructure platform diagnose commands.

This topic includes the following commands:

- [diagnose oci pubkey on page 3053](#)

diagnose oci pubkey

Display OCI public key information.

```
diagnose oci pubkey <name>
```

Parameter	Description	Type	Size
<name>	OCI SDN connector name	string	

diagnose on-demand-sniffer

On-demand sniffer command.

This topic includes the following commands:

- [diagnose on-demand-sniffer delete-results](#) on page 3054
- [diagnose on-demand-sniffer list](#) on page 3054
- [diagnose on-demand-sniffer start](#) on page 3054
- [diagnose on-demand-sniffer stop](#) on page 3055

diagnose on-demand-sniffer delete-results

Delete files associated with an on-demand sniffer. Does not delete the config entry.

```
diagnose on-demand-sniffer delete-results <mkey/name>
```

Parameter	Description	Type	Size
<mkey/name>	Mkey/name of on-demand sniffer.	string	

diagnose on-demand-sniffer list

List on-demand sniffers and its info.

```
diagnose on-demand-sniffer list <mkey/name>
```

Parameter	Description	Type	Size
<mkey/name>	Mkey/name of on-demand sniffer.	string	

diagnose on-demand-sniffer start

Start an on-demand sniffer.

```
diagnose on-demand-sniffer start <mkey/name>
```

Parameter	Description	Type	Size
<mkey/name>	Mkey/name of on-demand sniffer.	string	

diagnose on-demand-sniffer stop

Stop an on-demand sniffer.

```
diagnose on-demand-sniffer stop <mkey/name>
```

Parameter	Description	Type	Size
<mkey/name>	Mkey/name of on-demand sniffer.	string	

diagnose radiusd

RADIUS daemon diagnostic commands.

This topic includes the following commands:

- [diagnose radiusd test on page 3055](#)

diagnose radiusd test

Send test command to RADIUS daemon.

```
diagnose radiusd test <level>
```

Parameter	Description	Type	Size
<level>	Test level (integer).	string	

diagnose report

report

This topic includes the following commands:

- [diagnose report clear-filter on page 3056](#)
- [diagnose report dataset on page 3056](#)
- [diagnose report filter on page 3056](#)

- [diagnose report min-points on page 3056](#)
- [diagnose report ondemand-table on page 3056](#)
- [diagnose report sql on page 3056](#)
- [diagnose report time on page 3057](#)
- [diagnose report top-n on page 3057](#)

diagnose report clear-filter

clear-filter

```
diagnose report clear-filter
```

diagnose report dataset

dataset

```
diagnose report dataset
```

diagnose report filter

filter

```
diagnose report filter
```

diagnose report min-points

min-points

```
diagnose report min-points
```

diagnose report ondemand-table

ondemand-table

```
diagnose report ondemand-table
```

diagnose report sql

sql

```
diagnose report sql
```

diagnose report time

time

```
diagnose report time
```

diagnose report top-n

top-n

```
diagnose report top-n
```

diagnose report-runner

Report Runner service.

This topic includes the following commands:

- [diagnose report-runner clean on page 3057](#)
- [diagnose report-runner trigger on page 3057](#)
- [diagnose report-runner trigger security-rating-reports on page 3058](#)
- [diagnose report-runner vuln-clean on page 3058](#)
- [diagnose report-runner vuln-read on page 3058](#)

diagnose report-runner clean

Delete all Report Runner results.

```
diagnose report-runner clean
```

diagnose report-runner trigger

Execute a report.

```
diagnose report-runner trigger
```

diagnose report-runner trigger security-rating-reports

Execute the Security Rating reports (Security Posture, Fabric Coverage, Optimization).

```
diagnose report-runner trigger security-rating-reports
```

diagnose report-runner vuln-clean

Delete critical vulnerability results.

```
diagnose report-runner vuln-clean
```

diagnose report-runner vuln-read

View critical vulnerability results.

```
diagnose report-runner vuln-read
```

diagnose report-runner-v2

Report Runner v2 service.

This topic includes the following commands:

- [diagnose report-runner-v2 clean on page 3058](#)
- [diagnose report-runner-v2 security-rating on page 3059](#)
- [diagnose report-runner-v2 security-rating clean on page 3059](#)
- [diagnose report-runner-v2 security-rating reset-trigger on page 3059](#)
- [diagnose report-runner-v2 security-rating trigger on page 3059](#)
- [diagnose report-runner-v2 security-rating trigger-check on page 3059](#)

diagnose report-runner-v2 clean

Clean all Report Runner V2 results.

```
diagnose report-runner-v2 clean
```

diagnose report-runner-v2 security-rating

Security Rating.

```
diagnose report-runner-v2 security-rating
```

diagnose report-runner-v2 security-rating clean

Delete all Security Rating v2 results.

```
diagnose report-runner-v2 security-rating clean
```

diagnose report-runner-v2 security-rating reset-trigger

Reset the automatic trigger timeout.

```
diagnose report-runner-v2 security-rating reset-trigger
```

diagnose report-runner-v2 security-rating trigger

Force trigger a full run.

```
diagnose report-runner-v2 security-rating trigger
```

diagnose report-runner-v2 security-rating trigger-check

Trigger a specific check.

```
diagnose report-runner-v2 security-rating trigger-check <check>
```

Parameter	Description	Type	Size
<check>	Check to trigger.	string	

diagnose rssso

RSSO diagnostic commands.

This topic includes the following commands:

- [diagnose rso delete on page 3060](#)
- [diagnose rso delete ip on page 3060](#)
- [diagnose rso delete ip6 on page 3060](#)
- [diagnose rso query on page 3060](#)
- [diagnose rso query carrier-endpoint on page 3061](#)
- [diagnose rso query ip on page 3061](#)
- [diagnose rso query ip6 on page 3061](#)
- [diagnose rso query rso-key on page 3061](#)
- [diagnose rso resync on page 3062](#)
- [diagnose rso resync fgcp on page 3062](#)
- [diagnose rso resync fgsp on page 3062](#)

diagnose rso delete

Delete entries in RSSO database.

```
diagnose rso delete
```

diagnose rso delete ip

delete by IP address.

```
diagnose rso delete ip <ip>
```

Parameter	Description	Type	Size
<ip>	IP address to delete.	string	

diagnose rso delete ip6

delete by IP6 address.

```
diagnose rso delete ip6 <ip6>
```

Parameter	Description	Type	Size
<ip6>	IP6 address to delete.	string	

diagnose rso query

Query RSSO database.

```
diagnose rso query
```

diagnose rso query carrier-endpoint

Query by End Point.

```
diagnose rso query carrier-endpoint <endpoint> <ip>
```

Parameter	Description	Type	Size
<endpoint>	End Point to query.	string	
<ip>	IP address of TFTP server to upload results (optional).	string	

diagnose rso query ip

Query by IP address.

```
diagnose rso query ip <ip> <ip>
```

Parameter	Description	Type	Size
<ip>	IP address to query.	string	
<ip>	IP address of TFTP server to upload results (optional).	string	

diagnose rso query ip6

Query by IP6 address.

```
diagnose rso query ip6 <ip6> <ip>
```

Parameter	Description	Type	Size
<ip6>	IP6 address to query.	string	
<ip>	IP address of TFTP server to upload results (optional).	string	

diagnose rso query rso-key

Query by RSSO key.

```
diagnose rso query rso-key <name> <ip>
```

Parameter	Description	Type	Size
<name>	RSSO key to query.	string	
<ip>	IP address of TFTP server to upload results (optional).	string	

diagnose rso resync

Resync RSSO database in the vdom from its peer.

```
diagnose rso resync
```

diagnose rso resync fgcp

Resync from FGCP peer.

```
diagnose rso resync fgcp
```

diagnose rso resync fgsp

Resync from FGSP peer.

```
diagnose rso resync fgsp <vdom>
```

Parameter	Description	Type	Size
<vdom>	Vdom name.	string	

diagnose saas

SaaS diagnose commands.

This topic includes the following commands:

- [diagnose saas reload on page 3063](#)
- [diagnose saas show on page 3063](#)
- [diagnose saas show apps on page 3063](#)
- [diagnose saas show details on page 3063](#)
- [diagnose saas show status on page 3063](#)

diagnose saas reload

Reload SaaS database.

```
diagnose saas reload
```

diagnose saas show

Show SaaS database.

```
diagnose saas show
```

diagnose saas show apps

Show SaaS database application list.

```
diagnose saas show apps
```

diagnose saas show details

Show SaaS database details.

```
diagnose saas show details
```

diagnose saas show status

Show SaaS database status.

```
diagnose saas show status
```

diagnose settings

settings

This topic includes the following commands:

- [diagnose settings info on page 3064](#)
- [diagnose settings reset on page 3064](#)

diagnose settings info

Show all diagnose settings.

```
diagnose settings info
```

diagnose settings reset

Reset all diagnose settings.

```
diagnose settings reset
```

diagnose sladb

Service Level Agreement Database.

This topic includes the following commands:

- [diagnose sladb domain-list on page 3064](#)
- [diagnose sladb protocol-list on page 3064](#)
- [diagnose sladb target-list on page 3065](#)

diagnose sladb domain-list

List all domains under a specific target predefined by FortiGuard.

```
diagnose sladb domain-list <target-name>
```

Parameter	Description	Type	Size
<target-name>	Target-Name	string	

diagnose sladb protocol-list

List all protocols under specific target and domain predefined by FortiGuard.

```
diagnose sladb protocol-list <target-name> <domain-name>
```

Parameter	Description	Type	Size
<target-name>	Target-Name	string	
<domain-name>	Domain-Name	string	

diagnose sladb target-list

List all targets predefined by FortiGuard.

```
diagnose sladb target-list
```

diagnose sniffer

Sniffer command.

This topic includes the following commands:

- [diagnose sniffer dpdk on page 3065](#)
- [diagnose sniffer migsock on page 3066](#)
- [diagnose sniffer migsock debug-trace on page 3066](#)
- [diagnose sniffer migsock debug-trace disable on page 3066](#)
- [diagnose sniffer migsock debug-trace enable on page 3067](#)
- [diagnose sniffer migsock filter on page 3067](#)
- [diagnose sniffer migsock ssl-trace on page 3067](#)
- [diagnose sniffer migsock ssl-trace disable on page 3067](#)
- [diagnose sniffer migsock ssl-trace enable on page 3067](#)
- [diagnose sniffer migsock start on page 3067](#)
- [diagnose sniffer migsock timestamp on page 3068](#)
- [diagnose sniffer migsock timestamp disable on page 3068](#)
- [diagnose sniffer migsock timestamp enable on page 3068](#)
- [diagnose sniffer packet on page 3068](#)

diagnose sniffer dpdk

Sniff packets on Rx/Tx of DPDK interfaces. (DPDK Sniffing Mode)

```
diagnose sniffer dpdk <interface> <filter> <verbose> <count> <tsformat> <frame size>
```

Parameter	Description	Type	Size
<interface>	Network interface to sniff (or "any").	string	
<filter>	Flexible logical filters for sniffer (or "none"). For example: To print UDP 1812 traffic between forti1 and either forti2 or forti3 'udp and port 1812 and host forti1 and (forti2 or forti3)'	string	
<verbose>	1: print header of packets 2: print header and data from ip of packets 3: print header and data from ethernet of packets (if available) 4: print header of packets with interface name 5: print header and data from ip of packets with interface name 6: print header and data from ethernet of packets (if available) with intf name	string	
<count>	Sniffer count.	string	
<tsformat>	Format of timestamp. a: absolute UTC time, yyyy-mm-dd hh:mm:ss.ms l: absolute LOCAL time, yyyy-mm-dd hh:mm:ss.ms otherwise: relative to the start of sniffing, ss.ms	string	
<frame size>	Set the frame size that is printed before truncation. Defaults to the interface MTU.	string	

diagnose sniffer migsock

Sniff migsock packets.

```
diagnose sniffer migsock
```

diagnose sniffer migsock debug-trace

Enable/disable debug trace.

```
diagnose sniffer migsock debug-trace
```

diagnose sniffer migsock debug-trace disable

Disable debug trace.

```
diagnose sniffer migsock debug-trace disable
```

diagnose sniffer migsock debug-trace enable

Enable debug trace.

```
diagnose sniffer migsock debug-trace enable
```

diagnose sniffer migsock filter

Filter flow.

```
diagnose sniffer migsock filter <filter>
```

Parameter	Description	Type	Size
<filter>	Filter string.	string	

diagnose sniffer migsock ssl-trace

Enable/disable SSL trace.

```
diagnose sniffer migsock ssl-trace
```

diagnose sniffer migsock ssl-trace disable

Disable SSL trace.

```
diagnose sniffer migsock ssl-trace disable
```

diagnose sniffer migsock ssl-trace enable

Enable SSL trace.

```
diagnose sniffer migsock ssl-trace enable
```

diagnose sniffer migsock start

Start sniffer.

```
diagnose sniffer migsock start
```

diagnose sniffer migsock timestamp

Enable/disable timestamp trace.

```
diagnose sniffer migsock timestamp
```

diagnose sniffer migsock timestamp disable

Disable timestamp trace.

```
diagnose sniffer migsock timestamp disable
```

diagnose sniffer migsock timestamp enable

Enable timestamp trace.

```
diagnose sniffer migsock timestamp enable
```

diagnose sniffer packet

Sniff packets.

```
diagnose sniffer packet <interface> <filter> <verbose> <count> <tsformat> <frame size>
```

Parameter	Description	Type	Size
<interface>	Network interface to sniff (or "any").	string	
<filter>	Flexible logical filters for sniffer (or "none"). For example: To print UDP 1812 traffic between forti1 and either forti2 or forti3 'udp and port 1812 and host forti1 and (forti2 or forti3)'	string	
<verbose>	1: print header of packets 2: print header and data from ip of packets 3: print header and data from ethernet of packets (if available) 4: print header of packets with interface name 5: print header and data from ip of packets with interface name 6: print header and data from ethernet of packets (if available) with intf name	string	
<count>	Sniffer count.	string	

Parameter	Description	Type	Size
<tsformat>	Format of timestamp. a: absolute UTC time, yyyy-mm-dd hh:mm:ss.ms l: absolute LOCAL time, yyyy-mm-dd hh:mm:ss.ms otherwise: relative to the start of sniffing, ss.ms	string	
<frame size>	Set the frame size that is printed before truncation. Defaults to the interface MTU.	string	

diagnose snmp ip

Some IP stats.

This topic includes the following commands:

- [diagnose snmp ip frags on page 3069](#)
- [diagnose snmp ip icmp on page 3069](#)
- [diagnose snmp ip ip on page 3070](#)
- [diagnose snmp ip tcp on page 3070](#)
- [diagnose snmp ip udp on page 3070](#)

diagnose snmp ip frags

Fragmentation and reassembly info.

```
diagnose snmp ip frags <rate>
```

Parameter	Description	Type	Size
<rate>	Fragmentation and reassembly info per second	string	

diagnose snmp ip icmp

ICMP related statistics info.

```
diagnose snmp ip icmp <rate>
```

Parameter	Description	Type	Size
<rate>	ICMP related statistics per second	string	

diagnose snmp ip ip

IP related statistics info.

```
diagnose snmp ip ip <rate>
```

Parameter	Description	Type	Size
<rate>	IP related statistics per second	string	

diagnose snmp ip tcp

TCP related statistics info.

```
diagnose snmp ip tcp
```

diagnose snmp ip udp

UDP related statistics info.

```
diagnose snmp ip udp <rate>
```

Parameter	Description	Type	Size
<rate>	UDP related statistics per second	string	

diagnose snmp ip6

Some IPv6 stats.

This topic includes the following commands:

- [diagnose snmp ip6 frags on page 3070](#)
- [diagnose snmp ip6 icmp6 on page 3071](#)
- [diagnose snmp ip6 ip6 on page 3071](#)
- [diagnose snmp ip6 udp6 on page 3071](#)

diagnose snmp ip6 frags

Fragmentation and reassembly info.

```
diagnose snmp ip6 frags <rate>
```

Parameter	Description	Type	Size
<rate>	Fragmentation and reassembly info per second	string	

diagnose snmp ip6 icmp6

ICMP related statistics info.

```
diagnose snmp ip6 icmp6 <rate>
```

Parameter	Description	Type	Size
<rate>	ICMP related statistics per second	string	

diagnose snmp ip6 ip6

IP related statistics info.

```
diagnose snmp ip6 ip6 <rate>
```

Parameter	Description	Type	Size
<rate>	IPv6 related statistics per second	string	

diagnose snmp ip6 udp6

UDP related statistics info.

```
diagnose snmp ip6 udp6 <rate>
```

Parameter	Description	Type	Size
<rate>	UDP related statistics per second	string	

diagnose snmp net

Some network statistics.

This topic includes the following commands:

- [diagnose snmp net stat on page 3072](#)

diagnose snmp net stat

Network statistics.

```
diagnose snmp net stat
```

diagnose snmp trap

SNMP trap diagnostics.

This topic includes the following commands:

- [diagnose snmp trap send on page 3072](#)

diagnose snmp trap send

Generate a trap event.

```
diagnose snmp trap send
```

diagnose switch-controller

Fortiswitch controller.

This topic includes the following commands:

- [diagnose switch-controller flow-collector on page 3076](#)
- [diagnose switch-controller flow-collector status on page 3076](#)
- [diagnose switch-controller mac-cache on page 3076](#)
- [diagnose switch-controller mac-cache filter on page 3076](#)
- [diagnose switch-controller mac-cache filter clear on page 3076](#)
- [diagnose switch-controller mac-cache filter intf-name on page 3076](#)
- [diagnose switch-controller mac-cache filter mac on page 3077](#)
- [diagnose switch-controller mac-cache filter vlan-id on page 3077](#)
- [diagnose switch-controller mac-cache show on page 3077](#)
- [diagnose switch-controller mac-device on page 3077](#)
- [diagnose switch-controller mac-device cache on page 3077](#)
- [diagnose switch-controller mac-device dynamic on page 3078](#)
- [diagnose switch-controller mac-device nac on page 3078](#)
- [diagnose switch-controller mac-device nac known on page 3078](#)

- [diagnose switch-controller mac-device nac onboarding on page 3078](#)
- [diagnose switch-controller nac-tag on page 3078](#)
- [diagnose switch-controller nac-tag add on page 3078](#)
- [diagnose switch-controller nac-tag delete on page 3079](#)
- [diagnose switch-controller nac-tag get on page 3079](#)
- [diagnose switch-controller restart-daemon on page 3079](#)
- [diagnose switch-controller restart-daemon acd on page 3079](#)
- [diagnose switch-controller restart-daemon swtpd on page 3079](#)
- [diagnose switch-controller switch-info on page 3080](#)
- [diagnose switch-controller switch-info 802.1X on page 3080](#)
- [diagnose switch-controller switch-info 802.1X-dacl on page 3080](#)
- [diagnose switch-controller switch-info acl-counters on page 3080](#)
- [diagnose switch-controller switch-info arp-inspection on page 3081](#)
- [diagnose switch-controller switch-info arp-inspection stats on page 3081](#)
- [diagnose switch-controller switch-info arp-inspection stats-clear on page 3081](#)
- [diagnose switch-controller switch-info bpdu-guard-status on page 3081](#)
- [diagnose switch-controller switch-info dhcp-snooping on page 3082](#)
- [diagnose switch-controller switch-info dhcp-snooping database on page 3082](#)
- [diagnose switch-controller switch-info dhcp-snooping status on page 3082](#)
- [diagnose switch-controller switch-info fan on page 3082](#)
- [diagnose switch-controller switch-info flapguard on page 3082](#)
- [diagnose switch-controller switch-info flapguard status on page 3083](#)
- [diagnose switch-controller switch-info flow-tracking on page 3083](#)
- [diagnose switch-controller switch-info flow-tracking flows on page 3083](#)
- [diagnose switch-controller switch-info flow-tracking flows-raw on page 3083](#)
- [diagnose switch-controller switch-info flow-tracking statistics on page 3084](#)
- [diagnose switch-controller switch-info igmp-snooping on page 3084](#)
- [diagnose switch-controller switch-info igmp-snooping group on page 3084](#)
- [diagnose switch-controller switch-info igmp-snooping status on page 3084](#)
- [diagnose switch-controller switch-info ip-source-guard on page 3085](#)
- [diagnose switch-controller switch-info ip-source-guard hardware on page 3085](#)
- [diagnose switch-controller switch-info lldp on page 3085](#)
- [diagnose switch-controller switch-info lldp neighbors-detail on page 3085](#)
- [diagnose switch-controller switch-info lldp neighbors-summary on page 3086](#)
- [diagnose switch-controller switch-info lldp stats on page 3086](#)
- [diagnose switch-controller switch-info loop-guard on page 3086](#)
- [diagnose switch-controller switch-info mac-limit-violations on page 3086](#)
- [diagnose switch-controller switch-info mac-limit-violations all on page 3087](#)
- [diagnose switch-controller switch-info mac-limit-violations interface on page 3087](#)
- [diagnose switch-controller switch-info mac-limit-violations vlan on page 3087](#)
- [diagnose switch-controller switch-info mac-table on page 3087](#)
- [diagnose switch-controller switch-info mclag on page 3088](#)
- [diagnose switch-controller switch-info mclag icl on page 3088](#)

- [diagnose switch-controller switch-info mclag list on page 3088](#)
- [diagnose switch-controller switch-info mclag peer-consistency-check on page 3088](#)
- [diagnose switch-controller switch-info mirror on page 3089](#)
- [diagnose switch-controller switch-info mirror status on page 3089](#)
- [diagnose switch-controller switch-info modules on page 3089](#)
- [diagnose switch-controller switch-info modules detail on page 3089](#)
- [diagnose switch-controller switch-info modules limits on page 3090](#)
- [diagnose switch-controller switch-info modules status on page 3090](#)
- [diagnose switch-controller switch-info modules summary on page 3090](#)
- [diagnose switch-controller switch-info option82-mapping on page 3090](#)
- [diagnose switch-controller switch-info option82-mapping snooping on page 3091](#)
- [diagnose switch-controller switch-info option82-mapping snooping ascii on page 3091](#)
- [diagnose switch-controller switch-info option82-mapping snooping hex on page 3091](#)
- [diagnose switch-controller switch-info pdu-counters-list on page 3091](#)
- [diagnose switch-controller switch-info poe on page 3092](#)
- [diagnose switch-controller switch-info poe detail on page 3092](#)
- [diagnose switch-controller switch-info poe summary on page 3092](#)
- [diagnose switch-controller switch-info port-properties on page 3092](#)
- [diagnose switch-controller switch-info port-stats on page 3093](#)
- [diagnose switch-controller switch-info qos-stats on page 3093](#)
- [diagnose switch-controller switch-info rpvst on page 3093](#)
- [diagnose switch-controller switch-info status on page 3093](#)

diagnose switch-controller flow-collector

Flow collector.

```
diagnose switch-controller flow-collector
```

diagnose switch-controller flow-collector status

Display flow collector status.

```
diagnose switch-controller flow-collector status
```

diagnose switch-controller mac-cache

Mac cache.

```
diagnose switch-controller mac-cache
```

diagnose switch-controller mac-cache filter

Filter to dump devices connected to managed FortiSwitch.

```
diagnose switch-controller mac-cache filter
```

diagnose switch-controller mac-cache filter clear

Clear the configured device filter.

```
diagnose switch-controller mac-cache filter clear
```

diagnose switch-controller mac-cache filter intf-name

Device filter interface name.

```
diagnose switch-controller mac-cache filter intf-name <intf-name>
```

Parameter	Description	Type	Size
<intf-name>	Managed FortiSwitch interface name on which the device is connected.	string	

diagnose switch-controller mac-cache filter mac

Device filter MAC Address.

```
diagnose switch-controller mac-cache filter mac <mac>
```

Parameter	Description	Type	Size
<mac>	MAC Address of device(XX:XX:XX:XX:XX:XX).	string	

diagnose switch-controller mac-cache filter vlan-id

Device filter VLAN ID.

```
diagnose switch-controller mac-cache filter vlan-id <vlan-id>
```

Parameter	Description	Type	Size
<vlan-id>	Managed FortiSwitch VLAN of device.	string	

diagnose switch-controller mac-cache show

Show running clients.

```
diagnose switch-controller mac-cache show <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller mac-device

MAC devices.

```
diagnose switch-controller mac-device
```

diagnose switch-controller mac-device cache

Event cached MAC address.

```
diagnose switch-controller mac-device cache
```

diagnose switch-controller mac-device dynamic

Display detected DPP devices which matches dynamic port policy.

```
diagnose switch-controller mac-device dynamic
```

diagnose switch-controller mac-device nac

Display NAC devices.

```
diagnose switch-controller mac-device nac
```

diagnose switch-controller mac-device nac known

Display detected NAC devices which matches NAC policy.

```
diagnose switch-controller mac-device nac known
```

diagnose switch-controller mac-device nac onboarding

Display onboarding NAC devices with no matching NAC policy.

```
diagnose switch-controller mac-device nac onboarding
```

diagnose switch-controller nac-tag

Add, remove, or show MAC from NAC dynamic firewall tag.

```
diagnose switch-controller nac-tag
```

diagnose switch-controller nac-tag add

Add MAC to dynamic NAC tag.

```
diagnose switch-controller nac-tag add <tag> <mac>
```

Parameter	Description	Type	Size
<tag>	Firewall tag.	string	
<mac>	MAC address	string	

diagnose switch-controller nac-tag delete

Delete MAC from dynamic NAC tag.

```
diagnose switch-controller nac-tag delete <tag> <mac>
```

Parameter	Description	Type	Size
<tag>	Firewall tag.	string	
<mac>	MAC address	string	

diagnose switch-controller nac-tag get

Show all MACs associated with dynamic NAC tag.

```
diagnose switch-controller nac-tag get <tag>
```

Parameter	Description	Type	Size
<tag>	Firewall tag.	string	

diagnose switch-controller restart-daemon

Restart switch controller daemons.

```
diagnose switch-controller restart-daemon
```

diagnose switch-controller restart-daemon acd

Restart switch-controller daemon.

```
diagnose switch-controller restart-daemon acd
```

diagnose switch-controller restart-daemon swtpd

Restart switch-controller daemon in FortiSwitch device.

```
diagnose switch-controller restart-daemon swtpd <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info

Switch information.

```
diagnose switch-controller switch-info
```

diagnose switch-controller switch-info 802.1X

Managed FortiSwitch port 802.1X status.

```
diagnose switch-controller switch-info 802.1X <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for 802.1X status.	string	

diagnose switch-controller switch-info 802.1X-dacl

Managed FortiSwitch port 802.1X dynamic ACL status.

```
diagnose switch-controller switch-info 802.1X-dacl <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for 802.1X dacl status.	string	

diagnose switch-controller switch-info acl-counters

Managed FortiSwitch port ACL counters.

```
diagnose switch-controller switch-info acl-counters <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller switch-info arp-inspection

Managed FortiSwitch ARP inspection interface list.

```
diagnose switch-controller switch-info arp-inspection
```

diagnose switch-controller switch-info arp-inspection stats

Show ARP inspection statistics.

```
diagnose switch-controller switch-info arp-inspection stats <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info arp-inspection stats-clear

Clear ARP inspection statistics.

```
diagnose switch-controller switch-info arp-inspection stats-clear <vlan-id> <switch>
```

Parameter	Description	Type	Size
<vlan-id>	Managed FortiSwitch VLAN of interest for MAC address list.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info bpdu-guard-status

Managed FortiSwitch STP BPDU guard status.

```
diagnose switch-controller switch-info bpdu-guard-status <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info dhcp-snooping

Managed FortiSwitch DHCP snooping interface list.

```
diagnose switch-controller switch-info dhcp-snooping
```

diagnose switch-controller switch-info dhcp-snooping database

DHCP snooping database details.

```
diagnose switch-controller switch-info dhcp-snooping database <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info dhcp-snooping status

DHCP snooping status.

```
diagnose switch-controller switch-info dhcp-snooping status <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info fan

List fan status.

```
diagnose switch-controller switch-info fan <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info flapguard

Managed FortiSwitch flap guard.

```
diagnose switch-controller switch-info flapguard
```

diagnose switch-controller switch-info flapguard status

List flapguard status.

```
diagnose switch-controller switch-info flapguard status <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info flow-tracking

Managed FortiSwitch flow information.

```
diagnose switch-controller switch-info flow-tracking
```

diagnose switch-controller switch-info flow-tracking flows

Flow record data.

```
diagnose switch-controller switch-info flow-tracking flows <count> <ip/subnet> <switch> <port>
```

Parameter	Description	Type	Size
<count>	Specify record count or all for query response.	string	
<ip/subnet>	Specify IP address/Subnet(Class IP/Netmask) or all.	string	
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port.	string	

diagnose switch-controller switch-info flow-tracking flows-raw

Flow raw record data.

```
diagnose switch-controller switch-info flow-tracking flows-raw <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info flow-tracking statistics

Flow statistics data.

```
diagnose switch-controller switch-info flow-tracking statistics <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info igmp-snooping

IGMP snooping information.

```
diagnose switch-controller switch-info igmp-snooping
```

diagnose switch-controller switch-info igmp-snooping group

Managed FortiSwitch IGMP snooping learned groups list.

```
diagnose switch-controller switch-info igmp-snooping group <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info igmp-snooping status

Managed FortiSwitch IGMP snooping status.

```
diagnose switch-controller switch-info igmp-snooping status <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info ip-source-guard

Managed FortiSwitch source guard information in hardware.

```
diagnose switch-controller switch-info ip-source-guard
```

diagnose switch-controller switch-info ip-source-guard hardware

Managed FortiSwitch IP source guard information in hardware.

```
diagnose switch-controller switch-info ip-source-guard hardware <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info lldp

LLDP-related information.

```
diagnose switch-controller switch-info lldp
```

diagnose switch-controller switch-info lldp neighbors-detail

LLDP neighbor detail.

```
diagnose switch-controller switch-info lldp neighbors-detail <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller switch-info lldp neighbors-summary

LLDP neighbor summary.

```
diagnose switch-controller switch-info lldp neighbors-summary <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info lldp stats

LLDP port statistics.

```
diagnose switch-controller switch-info lldp stats <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller switch-info loop-guard

Managed FortiSwitch loop-guard status.

```
diagnose switch-controller switch-info loop-guard <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info mac-limit-violations

Managed FortiSwitch violated MACs.

```
diagnose switch-controller switch-info mac-limit-violations
```

diagnose switch-controller switch-info mac-limit-violations all

FortiSwitch all violations.

```
diagnose switch-controller switch-info mac-limit-violations all <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info mac-limit-violations interface

FortiSwitch port specific violations.

```
diagnose switch-controller switch-info mac-limit-violations interface <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port.	string	

diagnose switch-controller switch-info mac-limit-violations vlan

FortiSwitch VLAN specific violations.

```
diagnose switch-controller switch-info mac-limit-violations vlan <switch> <vlan-id>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<vlan-id>	Managed FortiSwitch VLAN ID.	string	

diagnose switch-controller switch-info mac-table

Managed FortiSwitch MAC address list.

```
diagnose switch-controller switch-info mac-table <switch> <vlan-id>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<vlan-id>	Managed FortiSwitch VLAN of interest for MAC address list.	string	

diagnose switch-controller switch-info mclag

Dumps MCLAG related information from FortiSwitch.

```
diagnose switch-controller switch-info mclag
```

diagnose switch-controller switch-info mclag icl

Dumps MCLAG inter-chassis-link(ICL).

```
diagnose switch-controller switch-info mclag icl <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info mclag list

Dumps MCLAG list.

```
diagnose switch-controller switch-info mclag list <switch> <mclag-trunk-name>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<mclag-trunk-name>	MCLAG's trunk name.	string	

diagnose switch-controller switch-info mclag peer-consistency-check

Checks MCLAG peer consistency.

```
diagnose switch-controller switch-info mclag peer-consistency-check <switch> <mclag-trunk-name>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<mclag-trunk-name>	MCLAG's trunk name.	string	

diagnose switch-controller switch-info mirror

Managed FortiSwitch mirror information.

```
diagnose switch-controller switch-info mirror
```

diagnose switch-controller switch-info mirror status

Mirror session status.

```
diagnose switch-controller switch-info mirror status <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info modules

Dumps modules related information from FortiSwitch.

```
diagnose switch-controller switch-info modules
```

diagnose switch-controller switch-info modules detail

Managed FortiSwitch module details.

```
diagnose switch-controller switch-info modules detail <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for statistics.	string	

diagnose switch-controller switch-info modules limits

Managed FortiSwitch module limits.

```
diagnose switch-controller switch-info modules limits <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for statistics.	string	

diagnose switch-controller switch-info modules status

Managed FortiSwitch module status.

```
diagnose switch-controller switch-info modules status <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for statistics.	string	

diagnose switch-controller switch-info modules summary

Managed FortiSwitch module summary.

```
diagnose switch-controller switch-info modules summary <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for statistics.	string	

diagnose switch-controller switch-info option82-mapping

Managed FortiSwitch DHCP option 82 mapping.

```
diagnose switch-controller switch-info option82-mapping
```

diagnose switch-controller switch-info option82-mapping snooping

Show DHCP option 82 mapping for snooping configuration.

```
diagnose switch-controller switch-info option82-mapping snooping
```

diagnose switch-controller switch-info option82-mapping snooping ascii

Display DHCP option 82 string in ascii format.

```
diagnose switch-controller switch-info option82-mapping snooping ascii <switch> <vlan> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<vlan>	Managed FortiSwitch VLAN.	string	
<port>	Managed FortiSwitch interface.	string	

diagnose switch-controller switch-info option82-mapping snooping hex

Display DHCP option 82 string in hex format.

```
diagnose switch-controller switch-info option82-mapping snooping hex <switch> <vlan> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<vlan>	Managed FortiSwitch VLAN.	string	
<port>	Managed FortiSwitch interface.	string	

diagnose switch-controller switch-info pdu-counters-list

Managed FortiSwitch pdu-counters.

```
diagnose switch-controller switch-info pdu-counters-list <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info poe

PoE-related information.

```
diagnose switch-controller switch-info poe
```

diagnose switch-controller switch-info poe detail

PoE detail.

```
diagnose switch-controller switch-info poe detail <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller switch-info poe summary

PoE summary.

```
diagnose switch-controller switch-info poe summary <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info port-properties

Managed FortiSwitch port properties.

```
diagnose switch-controller switch-info port-properties <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller switch-info port-stats

Managed FortiSwitch port statistics.

```
diagnose switch-controller switch-info port-stats <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for statistics.	string	

diagnose switch-controller switch-info qos-stats

Managed FortiSwitch QoS statistics.

```
diagnose switch-controller switch-info qos-stats <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for statistics.	string	

diagnose switch-controller switch-info rpvt

Managed FortiSwitch STP port information are inter-operating with rapid PVST network.

```
diagnose switch-controller switch-info rpvt <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller switch-info status

System status.

```
diagnose switch-controller switch-info status <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info stp

Managed FortiSwitch STP instance status.

```
diagnose switch-controller switch-info stp <switch> <instance-id>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<instance-id>	Managed FortiSwitch STP instance of interest for statistics.	string	

diagnose switch-controller switch-info trunk

Trunk information.

```
diagnose switch-controller switch-info trunk
```

diagnose switch-controller switch-info trunk config

Managed FortiSwitch trunk config information.

```
diagnose switch-controller switch-info trunk config <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-info trunk status

Managed FortiSwitch trunk status.

```
diagnose switch-controller switch-info trunk status <switch> <trunk-port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<trunk-port>	Managed FortiSwitch trunk-port of interest for state.	string	

diagnose switch-controller switch-recommendation

Recommendations for FortiLink topology and configuration.

```
diagnose switch-controller switch-recommendation
```

diagnose switch-controller switch-recommendation bios-compatibility-check

FortiSwitch BIOS compatibility check.

```
diagnose switch-controller switch-recommendation bios-compatibility-check <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation check-fortilink-link-redundancy

Check if FortiLink trunk has redundant links.

```
diagnose switch-controller switch-recommendation check-fortilink-link-redundancy <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation check-isl-icl-link-redundancy

Check if ISL/ICL trunk has redundant links.

```
diagnose switch-controller switch-recommendation check-isl-icl-link-redundancy <fortilink interface> <switch> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch #1 device ID.	string	
<switch>	Managed FortiSwitch #2 device ID.	string	

diagnose switch-controller switch-recommendation check-isl-link-redundancy

Check if ISL trunk has redundant links.

```
diagnose switch-controller switch-recommendation check-isl-link-redundancy <fortilink interface> <switch> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch #1 device ID.	string	
<switch>	Managed FortiSwitch #2 device ID.	string	

diagnose switch-controller switch-recommendation clear-dhcp-opt43-key

Clear DHCP option43 key in topology.

```
diagnose switch-controller switch-recommendation clear-dhcp-opt43-key <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation config-dhcp-opt43-key

Config DHCP option43 key in topology.

```
diagnose switch-controller switch-recommendation config-dhcp-opt43-key <fortilink interface> <option 43 key>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<option 43 key>	DHCP option 43 key.	string	

diagnose switch-controller switch-recommendation disable-auto-config-poe-status

Disable PoE status of auto-config default policy.

```
diagnose switch-controller switch-recommendation disable-auto-config-poe-status
```

diagnose switch-controller switch-recommendation disable-bounce-quarantine-link

Disable bounce quarantine link.

```
diagnose switch-controller switch-recommendation disable-bounce-quarantine-link
```

diagnose switch-controller switch-recommendation disable-poe-pre-standard-detection

Disable PoE pre-standard detection for all user ports.

```
diagnose switch-controller switch-recommendation disable-poe-pre-standard-detection <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation disable-stp-state-topology

Disable STP state for all user ports.

```
diagnose switch-controller switch-recommendation disable-stp-state-topology <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation enable-auto-config-poe-status

Enable PoE status of auto-config default policy.

```
diagnose switch-controller switch-recommendation enable-auto-config-poe-status
```

diagnose switch-controller switch-recommendation enable-bounce-quarantine-link

Enable bounce quarantine link.

```
diagnose switch-controller switch-recommendation enable-bounce-quarantine-link
```

diagnose switch-controller switch-recommendation enable-poe-pre-standard-detection

Enable PoE pre-standard detection for all user ports.

```
diagnose switch-controller switch-recommendation enable-poe-pre-standard-detection <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation enable-stp-state-topology

Enable STP state for all user ports.

```
diagnose switch-controller switch-recommendation enable-stp-state-topology <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation fabric-lockdown-check

Get fabric lockdown status.

```
diagnose switch-controller switch-recommendation fabric-lockdown-check <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation fabric-lockdown-disable

Disable fabric lockdown.

```
diagnose switch-controller switch-recommendation fabric-lockdown-disable <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation fabric-lockdown-enable

Enable fabric lockdown.

```
diagnose switch-controller switch-recommendation fabric-lockdown-enable <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation get-mclag-tier1-candidate

Get MCLAG tier1 candidate recommendation.

```
diagnose switch-controller switch-recommendation get-mclag-tier1-candidate <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation get-mclag-tier2-candidate

Get MCLAG tier2 candidate recommendation.

```
diagnose switch-controller switch-recommendation get-mclag-tier2-candidate <fortilink interface>  
<switch> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID for tier-1 MCLAG peer 1.	string	
<switch>	FortiSwitch device ID for tier-1 MCLAG peer 2.	string	

diagnose switch-controller switch-recommendation get-mclag-tier3-candidate

Get MCLAG tier3 candidate recommendation.

```
diagnose switch-controller switch-recommendation get-mclag-tier3-candidate <fortilink interface>  
<switch> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	FortiSwitch device ID for tier-2 MCLAG peer 1.	string	
<switch>	FortiSwitch device ID for tier-2 MCLAG peer 2.	string	

diagnose switch-controller switch-recommendation is-fortilink-capacity-exceeded

Check if FortiLink is almost at capacity.

```
diagnose switch-controller switch-recommendation is-fortilink-capacity-exceeded
```

diagnose switch-controller switch-recommendation is-switch-dual-homed

Check if switch is dual-homed.

```
diagnose switch-controller switch-recommendation is-switch-dual-homed <fortilink interface>  
<switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation lock-down-topo-lldp-profile

Lock down topology via LLDP profile.

```
diagnose switch-controller switch-recommendation lock-down-topo-lldp-profile <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller switch-recommendation pse-check

Get fabric PSE-PSE status.

```
diagnose switch-controller switch-recommendation pse-check <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation pse-config

Disable fabric POE-status to prevent PSE-PSE scenarios.

```
diagnose switch-controller switch-recommendation pse-config <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation set-tier-plus-mclag-icl

Configure tier-plus MCLAG-ICL.

```
diagnose switch-controller switch-recommendation set-tier-plus-mclag-icl <fortilink interface>
<switch> <switch> <switch> <switch> <isl-port-group-name>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	FortiSwitch device ID for parent MCLAG peer 1.	string	
<switch>	FortiSwitch device ID for parent MCLAG peer 2.	string	
<switch>	FortiSwitch device ID for child MCLAG peer 1.	string	
<switch>	FortiSwitch device ID for child MCLAG peer 2.	string	
<isl-port-group-name>	Unique ISL port group name.	string	

diagnose switch-controller switch-recommendation set-tier1-mclag-icl

Configure tier-1 MCLAG-ICL.

```
diagnose switch-controller switch-recommendation set-tier1-mclag-icl <fortilink interface>
<switch> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	FortiSwitch device ID for MCLAG peer 1.	string	
<switch>	FortiSwitch device ID for MCLAG peer 2.	string	

diagnose switch-controller switch-recommendation tunnel-mode-settings

Tunnel mode settings.

```
diagnose switch-controller switch-recommendation tunnel-mode-settings <fortilink interface>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	

diagnose switch-controller switch-recommendation unlock-topo-lldp-profile

Unlock topology via LLDP profile.

```
diagnose switch-controller switch-recommendation unlock-topo-lldp-profile <fortilink interface> <switch>
```

Parameter	Description	Type	Size
<fortilink interface>	FortiLink interface name.	string	
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller system-info

Switch-controller system information.

```
diagnose switch-controller system-info
```

diagnose switch-controller system-info show

Show switch-controller system info.

```
diagnose switch-controller system-info show
```

diagnose switch-controller telemetry

FortiSwitch telemetry.

```
diagnose switch-controller telemetry
```

diagnose switch-controller telemetry show

Show FortiSwitch telemetry.

```
diagnose switch-controller telemetry show
```

diagnose switch-controller telemetry show mac-stats

Show FortiSwitch MAC telemetry.

```
diagnose switch-controller telemetry show mac-stats
```

diagnose switch-controller telemetry show mac-stats switch

Show FortiSwitch telemetry.

```
diagnose switch-controller telemetry show mac-stats switch <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller telemetry show switch

Show FortiSwitch telemetry.

```
diagnose switch-controller telemetry show switch <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller telemetry show switch-port

Show FortiSwitch port telemetry.

```
diagnose switch-controller telemetry show switch-port <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port of interest for telemetry.	string	

diagnose switch-controller topology

Topology commands.

```
diagnose switch-controller topology
```

diagnose switch-controller topology reset

Topology reset commands.

```
diagnose switch-controller topology reset
```

diagnose switch-controller topology reset fortilink-flag

Reset FortiLink flag.

```
diagnose switch-controller topology reset fortilink-flag <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller topology reset isl-peer-flag

Reset isl peer flag.

```
diagnose switch-controller topology reset isl-peer-flag <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller topology set

Topology set commands.

```
diagnose switch-controller topology set
```

diagnose switch-controller topology set fortilink-flag

Set FortiLink flag.

```
diagnose switch-controller topology set fortilink-flag <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller topology set isl-peer-flag

Set isl peer flag.

```
diagnose switch-controller topology set isl-peer-flag <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port name.	string	

diagnose switch-controller traffic-capture

Traffic capture.

```
diagnose switch-controller traffic-capture
```

diagnose switch-controller traffic-capture show

Dump all sniffer sessions.

```
diagnose switch-controller traffic-capture show
```

diagnose switch-controller traffic-capture start

Start sniffer session.

```
diagnose switch-controller traffic-capture start <fortilink-interface> <mac>
```

Parameter	Description	Type	Size
<fortilink-interface>	FortiLink interface name.	string	
<mac>	Device MAC Address.	string	

diagnose switch-controller traffic-capture stop

Stop sniffer session and callback.

```
diagnose switch-controller traffic-capture stop <fortilink-interface> <mac>
```

Parameter	Description	Type	Size
<fortilink-interface>	FortiLink interface name.	string	
<mac>	Device MAC Address.	string	

diagnose switch-controller trigger

Trigger switch controller processing.

```
diagnose switch-controller trigger
```

diagnose switch-controller trigger config-sync

Triggers full configuration synchronization for FortiSwitch.

```
diagnose switch-controller trigger config-sync <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller trigger mac-sync

Trigger MAC sync for all managed FortiSwitches.

```
diagnose switch-controller trigger mac-sync
```

diagnose switch-controller trigger nac-mac-cache-sync

Triggers NAC MAC cache synchronization from FortiSwitch.

```
diagnose switch-controller trigger nac-mac-cache-sync <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose switch-controller trigger reset-hardware-counters

Triggers reset of port statistic counters for FortiSwitch.

```
diagnose switch-controller trigger reset-hardware-counters <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port list (range of ports separated by commas; eg 1,3,1-4,port6-7,port10-port11,internal).	string	

diagnose switch-controller trigger restore-hardware-counters

Triggers restoration of port statistic counters from FortiSwitch hardware.

```
diagnose switch-controller trigger restore-hardware-counters <switch> <port>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	
<port>	Managed FortiSwitch port list (range of ports separated by commas; eg 1,3,1-4,port6-7,port10-port11,internal).	string	

diagnose switch-controller tunnel-status

Switch-controller tunnel status.

```
diagnose switch-controller tunnel-status <switch>
```

Parameter	Description	Type	Size
<switch>	Managed FortiSwitch device ID.	string	

diagnose sys

system

This topic includes the following commands:

- [diagnose sys acme on page 3135](#)
- [diagnose sys acme add-account on page 3135](#)

diagnose sys acme

ACME client diagnostics.

```
diagnose sys acme
```

diagnose sys acme add-account

Import an ACME account to 'system acme.accounts'.

```
diagnose sys acme add-account <id> <url> <ca_url> <status> <contact> <privatekey> <passphrase>  
<eab-keyid> <eab-hmac>
```

Parameter	Description	Type	Size
<id>	Account ID.	string	
<url>	Account URL.	string	
<ca_url>	Account CA URL.	string	
<status>	Account Status.	string	
<contact>	Account Email.	string	
<privatekey>	Account PEM private key.	string	
<passphrase>	Account private key passphrase (optional).	string	
<eab-keyid>	Account External Account Binding Key ID (optional).	string	
<eab-hmac>	Account External Account Binding Key HMAC (optional).	string	

diagnose sys acme clear-staging

Force-delete the staging area of the ACME client for a given domain.

```
diagnose sys acme clear-staging <domain>
```

Parameter	Description	Type	Size
<domain>	Certificate's CN domain.	string	

diagnose sys acme debug

Debug output options for the ACME client.

```
diagnose sys acme debug
```

diagnose sys acme debug disable

Disable debug output.

```
diagnose sys acme debug disable
```

diagnose sys acme debug enable

Enable debug output options.

```
diagnose sys acme debug enable
```

diagnose sys acme debug enable level

Set debug level.

```
diagnose sys acme debug enable level
```

diagnose sys acme debug enable level debug

debug

```
diagnose sys acme debug enable level debug
```

diagnose sys acme debug enable level error

error

```
diagnose sys acme debug enable level error
```

diagnose sys acme debug enable level info

info

```
diagnose sys acme debug enable level info
```

diagnose sys acme debug enable level verbose

verbose

```
diagnose sys acme debug enable level verbose
```

diagnose sys acme debug enable level veryverbose

veryverbose

```
diagnose sys acme debug enable level veryverbose
```

diagnose sys acme debug enable level warning

warning

```
diagnose sys acme debug enable level warning
```

diagnose sys acme delete-cert

Delete certificate from the ACME cert store for a given domain.

```
diagnose sys acme delete-cert <domain>
```

Parameter	Description	Type	Size
<domain>	Certificate's CN domain.	string	

diagnose sys acme force-renew

Force the renewal of a certificate.

```
diagnose sys acme force-renew <domain>
```

Parameter	Description	Type	Size
<domain>	Certificate's CN domain. (Empty to clear all force renew flags)	string	

diagnose sys acme list-archive

List the certificate archive.

```
diagnose sys acme list-archive
```

diagnose sys acme list-domains

List certificates currently present in the ACME cert store by CN domain.

```
diagnose sys acme list-domains
```

diagnose sys acme purge-all

Delete the whole ACME cert store, including account data.

```
diagnose sys acme purge-all
```

diagnose sys acme purge-archive

Delete everything in the cert store archive.

```
diagnose sys acme purge-archive
```

diagnose sys acme purge-certs

Delete all certificates from the ACME cert store.

```
diagnose sys acme purge-certs
```

diagnose sys acme regenerate-client-config

Regenerate config for mod_md.

```
diagnose sys acme regenerate-client-config
```

diagnose sys acme regenerate-store

Regenerate store from config.

```
diagnose sys acme regenerate-store
```

diagnose sys acme restart

Gracefully restart Apache.

```
diagnose sys acme restart
```

diagnose sys acme show-archive

Show the certificate archive for a given CN domain.

```
diagnose sys acme show-archive <domain>
```

Parameter	Description	Type	Size
<domain>	Certificate's CN domain.	string	

diagnose sys acme show-client-config

Show config files for mod_md.

```
diagnose sys acme show-client-config
```

diagnose sys acme show-passphrase

Shows the plaintext passphrase of the ACME cert store.

```
diagnose sys acme show-passphrase
```

diagnose sys acme status-full

Fetch the ACME client full status log for a given CN domain.

```
diagnose sys acme status-full <domain>
```

Parameter	Description	Type	Size
<domain>	Certificate's CN domain.	string	

diagnose sys botnet-domain

Botnet domain diagnostics.

```
diagnose sys botnet-domain
```

diagnose sys botnet-domain hit

Botnet domain hits.

```
diagnose sys botnet-domain hit
```

diagnose sys botnet-domain list

List botnet domain entry.

```
diagnose sys botnet-domain list
```

diagnose sys botnet-ip

Botnet IP diagnostics.

```
diagnose sys botnet-ip
```

diagnose sys botnet-ip find

Find botnet IP entry.

```
diagnose sys botnet-ip find <ip> <port> <proto>
```

Parameter	Description	Type	Size
<ip>	IP address.	string	

Parameter	Description	Type	Size
<port>	Port number.	string	
<proto>	Protocol number.	string	

diagnose sys botnet-ip flush

Flush botnet IP entry hit count data.

```
diagnose sys botnet-ip flush
```

diagnose sys botnet-ip hit

Show botnet IP entry hit count data.

```
diagnose sys botnet-ip hit
```

diagnose sys botnet-ip list

List botnet IP entry.

```
diagnose sys botnet-ip list <offset> <number>
```

Parameter	Description	Type	Size
<offset>	Botnet IP entry offset.	string	
<number>	The number of botnet IP entries to display.	string	

diagnose sys certificate-blocklist

Certificate blocklist diagnostics.

```
diagnose sys certificate-blocklist
```

diagnose sys certificate-blocklist count

Get number of entries in malware certificate blocklist.

```
diagnose sys certificate-blocklist count
```

diagnose sys certificate-blocklist delete-mcdb

Delete malicious certificate database.

```
diagnose sys certificate-blocklist delete-mcdb
```

diagnose sys certificate-blocklist query

Query with a certificate hash.

```
diagnose sys certificate-blocklist query <value>
```

Parameter	Description	Type	Size
<value>	SHA1 hash	string	

diagnose sys certificate-blocklist read-range

List entries in malware certificate blocklist based on starting index and count.

```
diagnose sys certificate-blocklist read-range <start> <count>
```

Parameter	Description	Type	Size
<start>	Index of first element	string	
<count>	Number of elements	string	

diagnose sys certificate-blocklist status

Display certificate blocklist status.

```
diagnose sys certificate-blocklist status
```

diagnose sys cmdb

CMDB related information.

```
diagnose sys cmdb
```

diagnose sys cmdb buf-sz

Show cmdb buffer size.

```
diagnose sys cmdb buf-sz
```

diagnose sys cmdb dump

Dump cmdb internal data.

```
diagnose sys cmdb dump
```

diagnose sys cmdb dump vdom

Dump vdom data.

```
diagnose sys cmdb dump vdom <global/vdom-name>
```

Parameter	Description	Type	Size
<global/vdom-name>	Dump global or vdom-name data details.	string	

diagnose sys cmdb flag

CMDB related flags.

```
diagnose sys cmdb flag
```

diagnose sys cmdb flag info

CMDB related flags information.

```
diagnose sys cmdb flag info
```

diagnose sys cmdb flag reset

Reset CMDB related flags.

```
diagnose sys cmdb flag reset
```

diagnose sys cmdb flag reset script-running

Reset CMDB script-running flag.

```
diagnose sys cmdb flag reset script-running
```

diagnose sys cmdb info

CMDB information.

```
diagnose sys cmdb info
```

diagnose sys cmdb obj-verno

Display object version#.

```
diagnose sys cmdb obj-verno <global|vdom-name> <obj-path> <obj-name>
```

Parameter	Description	Type	Size
<global vdom-name>	global or vdom-name.	string	
<obj-path>	object path.	string	
<obj-name>	object name.	string	

diagnose sys cmdb refcnt

Datasource reference count.

```
diagnose sys cmdb refcnt
```

diagnose sys cmdb refcnt reset

Reset reference count to be consistent with real reference.

```
diagnose sys cmdb refcnt reset <path.object.mkey> <tablename>
```

Parameter	Description	Type	Size
<path.object.mkey>	Table.	string	
<tablename>	Entry.	string	

diagnose sys cmdb refcnt show

Show datasource reference details.

```
diagnose sys cmdb refcnt show <path.object.mkey> <tablename>
```

Parameter	Description	Type	Size
<path.object.mkey>	Table.	string	
<tablename>	Entry.	string	

diagnose sys cmdb set-readlock

Set CMDB read lock.

```
diagnose sys cmdb set-readlock
```

diagnose sys cmdb unset-readlock

Unset CMDB read lock.

```
diagnose sys cmdb unset-readlock
```

diagnose sys cmdb-profile

Get CMDB profile information.

```
diagnose sys cmdb-profile
```

diagnose sys cmdb-profile info

Get CMDB profile shm info.

```
diagnose sys cmdb-profile info
```

diagnose sys cmdb-profile node

Get CMDB profile by node.

```
diagnose sys cmdb-profile node <path.object[.attribute]>
```

Parameter	Description	Type	Size
<path.object[.attribute]>	Path to object/attribute.	string	

diagnose sys cmdb-profile reset

Reset CMDB profile shm info.

```
diagnose sys cmdb-profile reset
```

diagnose sys cmdb-profile top10

sort nodes by operator's time

```
diagnose sys cmdb-profile top10
```

diagnose sys cmdb-profile top10 average

sort nodes by operator's average time

```
diagnose sys cmdb-profile top10 average [n]
```

Parameter	Description	Type	Size
[n]	get n nodes' profile (optional, default is 10)	string	

diagnose sys cmdb-profile top10 total

sort nodes by operator's total time

```
diagnose sys cmdb-profile top10 total [n]
```

Parameter	Description	Type	Size
[n]	get n nodes' profile (optional, default is 10)	string	

diagnose sys config-transaction

Config transaction related information.

```
diagnose sys config-transaction
```

diagnose sys config-transaction show

Show config transaction information.

```
diagnose sys config-transaction show
```

diagnose sys config-transaction show entity-by-txn

Show configuration objects being configured by individual transactions.

```
diagnose sys config-transaction show entity-by-txn <txn-id>
```

Parameter	Description	Type	Size
<txn-id>	Transaction ID.	string	

diagnose sys config-transaction show mctx

Show mctx.

```
diagnose sys config-transaction show mctx
```

diagnose sys config-transaction show txn-cli-commands

Show CLI commands used in a given transaction.

```
diagnose sys config-transaction show txn-cli-commands <txn-id>
```

Parameter	Description	Type	Size
<txn-id>	Transaction ID.	string	

diagnose sys config-transaction show txn-entity

Show configuration objects being configured in transactions.

```
diagnose sys config-transaction show txn-entity
```

diagnose sys config-transaction show txn-info

Show config transaction details.

```
diagnose sys config-transaction show txn-info
```

diagnose sys config-transaction show txn-lock

Show transaction lock status.

```
diagnose sys config-transaction show txn-lock
```

diagnose sys config-transaction show txn-meta

Show config transaction meta information.

```
diagnose sys config-transaction show txn-meta
```

diagnose sys config-transaction status

Show config transaction status in current CLI.

```
diagnose sys config-transaction status
```

diagnose sys cpuset

cpuset

```
diagnose sys cpuset
```

diagnose sys cpuset interrupt

cpuset of interrupt

```
diagnose sys cpuset interrupt <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	id of an interrupt	string	
<xxx>	cpuset mask	string	

diagnose sys cpuset process

cpuset of process

```
diagnose sys cpuset process <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	pid of a process	string	
<xxx>	cpuset mask	string	

diagnose sys csf

Security Fabric diagnostics.

```
diagnose sys csf
```

diagnose sys csf authorization

Authorization requests and permits.

```
diagnose sys csf authorization
```

diagnose sys csf authorization accept

Authorize device to join CSF tree.

```
diagnose sys csf authorization accept <SN> [Name]
```

Parameter	Description	Type	Size
<SN>	Serial number.	string	
[Name]	Optional entry name (if not passed SN is used).	string	

diagnose sys csf authorization deny

Deny device from joining CSF tree.

```
diagnose sys csf authorization deny <SN> [Name]
```

Parameter	Description	Type	Size
<SN>	Serial number.	string	
[Name]	Optional entry name (if not passed SN is used).	string	

diagnose sys csf authorization pending-list

List of pending requests to join security fabric.

```
diagnose sys csf authorization pending-list
```

diagnose sys csf downstream

Show connected downstream FortiGates.

```
diagnose sys csf downstream [-x] [-a]
```

Parameter	Description	Type	Size
[-x]	Show encrypted tokens	string	
[-a]	Show all devices	string	

diagnose sys csf downstream-devices

Show downstream fabric device.

```
diagnose sys csf downstream-devices <device type> [vdom] [group]
```

Parameter	Description	Type	Size
<device type>	fabric device type (e.g. fortinac, fortimail, fortivoice, any).	string	
[vdom]	Connecting VDOM.	string	
[group]	CSF key group.	string	

diagnose sys csf dynamic-sync-read

Read incoming dynamic sync data updates

```
diagnose sys csf dynamic-sync-read <count>
```

Parameter	Description	Type	Size
<count>	Number of updates to read	string	

diagnose sys csf dynamic-sync-request

Get the current dynamic sync data from csfd

```
diagnose sys csf dynamic-sync-request
```

diagnose sys csf dynamic-sync-update

Change the dynamic sync update data

```
diagnose sys csf dynamic-sync-update <content> <count>
```

Parameter	Description	Type	Size
<content>	New data content string	string	
<count>	Number of times to repeat the content string line	string	

diagnose sys csf fabric-device

Debug fabric device handling.

```
diagnose sys csf fabric-device
```

diagnose sys csf fabric-device list

List all known fabric devices.

```
diagnose sys csf fabric-device list
```

diagnose sys csf file

csfd file management.

```
diagnose sys csf file
```

diagnose sys csf file cat

Dump file.

```
diagnose sys csf file cat <name>
```

Parameter	Description	Type	Size
<name>	Name of the file to be dumped.	string	

diagnose sys csf file top-mem

Display largest files.

```
diagnose sys csf file top-mem [count]
```

Parameter	Description	Type	Size
[count]	Number of files to be displayed ([1 - 20] default = 5).	string	

diagnose sys csf forticloud-id-list

List of FortiCloud IDs of downstreams.

```
diagnose sys csf forticloud-id-list
```

diagnose sys csf get-bulk-global-view

Request global view file

```
diagnose sys csf get-bulk-global-view [refresh seconds]
```

Parameter	Description	Type	Size
[refresh seconds]	Acceptable age for cached global file in seconds.	string	

diagnose sys csf global

Show a summary of all connected members in Security Fabric.

```
diagnose sys csf global
```

diagnose sys csf initialize-cmd

send an init command for merge.

```
diagnose sys csf initialize-cmd <path> <cmdb_path> <cmdb_table>
```

Parameter	Description	Type	Size
<path>	fabric path made of serial numbers e.g: SNCURRENT:SNMIDDLE:SNDestination.	string	
<cmdb_path>	path for cmdb table	string	
<cmdb_table>	cmdb table name	string	

diagnose sys csf merge-cmd

send a merge command to downstream.

```
diagnose sys csf merge-cmd <path> <cmdb_path> <cmdb_table> <key> <new_key>
```

Parameter	Description	Type	Size
<path>	fabric path made of serial numbers e.g: SNCURRENT:SNMIDDLE:SNDestination.	string	
<cmdb_path>	path for cmdb table	string	
<cmdb_table>	cmdb table name	string	
<key>	current entry name	string	
<new_key>	new entry name	string	

diagnose sys csf neighbor

CSF enabled devices in adjacency.

```
diagnose sys csf neighbor
```

diagnose sys csf neighbor flush

Clear discovered physical addresses of adjacent devices.

```
diagnose sys csf neighbor flush [interface]
```

Parameter	Description	Type	Size
[interface]	Receiving local interface name.	string	

diagnose sys csf neighbor list

List discovered physical addresses of adjacent devices.

```
diagnose sys csf neighbor list [interface]
```

Parameter	Description	Type	Size
[interface]	Receiving local interface name.	string	

diagnose sys csf query

Query through CSF.

```
diagnose sys csf query <path> [-pt]
```

Parameter	Description	Type	Size
<path>	FGT1(SN):FGT2(SN):...:FGTn(SN)	string	
[-pt]	-p:Partial process. -t:Send health check ping request.	string	

diagnose sys csf ratelimit-test-sender

Floods a socket tunnel to test rate limit behaviour.

```
diagnose sys csf ratelimit-test-sender <serial>
```

Parameter	Description	Type	Size
<serial>	Serial number of destination FortiGate.	string	

diagnose sys csf ratelimit-test-server

A dummy server for the unix tunnel rate limit testing to work against.

```
diagnose sys csf ratelimit-test-server <close-delay-seconds>
```

Parameter	Description	Type	Size
<close-delay-seconds>	Seconds to keep the client socket open after accepting it.	string	

diagnose sys csf send-test-log-upstream

Send a test log to upstream

```
diagnose sys csf send-test-log-upstream
```

diagnose sys csf seqpacket-message-listener

Read a line over a tunneled seqpacket socket.

```
diagnose sys csf seqpacket-message-listener <all|root|upstream|downstream>
```

Parameter	Description	Type	Size
<all root upstream downstream>	Client FortiGates to allow.	string	

diagnose sys csf seqpacket-message-sender

Read a line over a tunneled seqpacket socket.

```
diagnose sys csf seqpacket-message-sender <serial> <all|root|upstream|downstream>
```

Parameter	Description	Type	Size
<serial>	Serial number of destination FortiGate.	string	
<all root upstream downstream>	Allow mode of the destination.	string	

diagnose sys csf stream-message-listener

Read a line over a tunneled stream socket

```
diagnose sys csf stream-message-listener <all|root|upstream|downstream>
```

Parameter	Description	Type	Size
<all root upstream downstream>	Client FortiGates to allow.	string	

diagnose sys csf stream-message-sender

Read a line over a tunneled stream socket.

```
diagnose sys csf stream-message-sender <serial> <all|root|upstream|downstream>
```

Parameter	Description	Type	Size
<serial>	Serial number of destination FortiGate.	string	
<all root upstream downstream>	Allow mode of the destination.	string	

diagnose sys csf trigger-info-update

Trigger an info file update

```
diagnose sys csf trigger-info-update <groups>
```

Parameter	Description	Type	Size
<groups>	CSF key groups in hex	string	

diagnose sys csf tunnel-test-listener

Test the reliable tunnel, listener side

```
diagnose sys csf tunnel-test-listener
```

diagnose sys csf tunnel-test-sender

Test the reliable tunnel, sender side

```
diagnose sys csf tunnel-test-sender <target-sn> <msg-content> <repeats>
```

Parameter	Description	Type	Size
<target-sn>	SN to send the message to	string	
<msg-content>	Content of the message	string	
<repeats>	Number of times to repeat the message	string	

diagnose sys csf upstream

Show connected upstream FortiGates.

```
diagnose sys csf upstream
```

diagnose sys csf versions

get latest incremental version of CSF groups.

```
diagnose sys csf versions
```

diagnose sys csum

System checksum.

```
diagnose sys csum <file>
```

Parameter	Description	Type	Size
<file>	File name.	string	

diagnose sys dayst-info

Daylight saving time information.

```
diagnose sys dayst-info <timezone db name> [year]
```

Parameter	Description	Type	Size
<timezone db name>	Timezone Database Name.	string	
[year]	year	string	

diagnose sys device

Virtual domain device management.

```
diagnose sys device
```

diagnose sys device add

Add device to Virtual Domain.

```
diagnose sys device add <vdname> <devname>
```

Parameter	Description	Type	Size
<vdname>	Virtual Domain Name.	string	
<devname>	Device Name.	string	

diagnose sys device delete

Delete device from Virtual Domain.

```
diagnose sys device delete <vdname> <devname>
```

Parameter	Description	Type	Size
<vdname>	Virtual Domain Name.	string	
<devname>	Device Name.	string	

diagnose sys device list

List devices in Virtual Domain.

```
diagnose sys device list <vdname>
```

Parameter	Description	Type	Size
<vdname>	Virtual Domain Name.	string	

diagnose sys dump-conserve-info

Dump all conserve related info to disk.

```
diagnose sys dump-conserve-info
```

diagnose sys emac-vlan

EMAC VLAN diagnostics.

```
diagnose sys emac-vlan
```

diagnose sys emac-vlan fdb

EMAC VLAN forwarding DB.

```
diagnose sys emac-vlan fdb
```

diagnose sys emac-vlan fdb list

Display EMAC VLAN forwarding DB.

```
diagnose sys emac-vlan fdb list <string>
```

Parameter	Description	Type	Size
<string>	Interface name.	string	

diagnose sys emac-vlan stat

Statistics of EMAC VLAN interfaces.

```
diagnose sys emac-vlan stat <string>
```

Parameter	Description	Type	Size
<string>	Underlying interface name.	string	

diagnose sys external-address-resource

External address resource.

```
diagnose sys external-address-resource
```

diagnose sys external-address-resource list

list

```
diagnose sys external-address-resource list <name>
```

Parameter	Description	Type	Size
<name>	External address resource name.	string	

diagnose sys external-generic-address-resource

External generic address resource.

```
diagnose sys external-generic-address-resource
```

diagnose sys external-generic-address-resource remove-by-name

Remove specific external generic address entry.

```
diagnose sys external-generic-address-resource remove-by-name <name>
```

Parameter	Description	Type	Size
<name>	External generic address entry name.	string	

diagnose sys external-generic-address-resource remove-by-namespace

Remove external generic addresses by namespace.

```
diagnose sys external-generic-address-resource remove-by-namespace <name>
```

Parameter	Description	Type	Size
<name>	External generic address namespace.	string	

diagnose sys external-mac-resource

External mac resource.

```
diagnose sys external-mac-resource
```

diagnose sys external-mac-resource list

list

```
diagnose sys external-mac-resource list <name>
```

Parameter	Description	Type	Size
<name>	External mac resource name.	string	

diagnose sys external-resource

External resource.

```
diagnose sys external-resource
```

diagnose sys external-resource list

Dump external resource file by name.

```
diagnose sys external-resource list <name>
```

Parameter	Description	Type	Size
<name>	Name of external resource.	string	

diagnose sys external-resource push-add

Add entry to external resource set to push updates.

```
diagnose sys external-resource push-add
```

diagnose sys external-resource push-api-json-commands

Test push commands JSON API

```
diagnose sys external-resource push-api-json-commands <COMMANDS-JSON>
```

Parameter	Description	Type	Size
<COMMANDS-JSON>	JSON string for commands.	string	

diagnose sys external-resource push-remove

Remove entry to push external resource set to push updates.

```
diagnose sys external-resource push-remove
```

diagnose sys external-resource push-snapshot

Overwrite external resource set to push updates.

```
diagnose sys external-resource push-snapshot
```

diagnose sys external-resource stats

Display external resource file info.

```
diagnose sys external-resource stats <name>
```

Parameter	Description	Type	Size
<name>	Name of external resource.	string	

diagnose sys filesystem

File system.

```
diagnose sys filesystem
```

diagnose sys filesystem hash

Generate hash for files within the filesystem.

```
diagnose sys filesystem hash
```

diagnose sys filesystem last-modified-files

List the last modified files.

```
diagnose sys filesystem last-modified-files [path] [number]
```

Parameter	Description	Type	Size
[path]	Path for listing modified files (default = /data).	string	
[number]	Number of files to list (default = 10).	string	

diagnose sys filesystem lsof

List open files

```
diagnose sys filesystem lsof
```

diagnose sys filesystem open-files

List open files.

```
diagnose sys filesystem open-files [path]
```

Parameter	Description	Type	Size
[path]	Path of file or directory to check against.	string	

diagnose sys filesystem tree

List the top files/folders tree.

```
diagnose sys filesystem tree [path] [number]
```

Parameter	Description	Type	Size
[path]	Path for listing files/folder (default = /var/log).	string	
[number]	Number of files in each current folder and subfolder to be listed (default = 10).	string	

diagnose sys fips

FIPS mode.

```
diagnose sys fips
```

diagnose sys fips error-mode

Go to error mode.

```
diagnose sys fips error-mode
```

diagnose sys fips kat-error

Force test failure at next self-test.

```
diagnose sys fips kat-error <KAT>
```

Parameter	Description	Type	Size
<KAT>	KAT, empty to display available values.	string	

diagnose sys flash

Flash image.

```
diagnose sys flash
```

diagnose sys flash format

format shared data partition (flash partition #2)

```
diagnose sys flash format
```

diagnose sys flash list

List flash images.

```
diagnose sys flash list <file>
```

Parameter	Description	Type	Size
<file>	List files.	string	

diagnose sys forticonverter

FortiConverter config conversion service diagnostics.

```
diagnose sys forticonverter set-prompt-visibility
```

Parameter	Description	Type	Size
set-prompt-visibility	Set the visibility for the FortiConverter wizard on login.	option	

diagnose sys forticonverter available-source-devices

Retrieve known source device options for a ticket.

```
diagnose sys forticonverter available-source-devices <ticket-id>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to retrieve device information for.	string	

diagnose sys forticonverter create-ticket

Create a ticket for FortiConverter conversion services.

```
diagnose sys forticonverter create-ticket
```

diagnose sys forticonverter custom-create-ticket

Use the custom request API to create a ticket for FortiConverter conversion services.

```
diagnose sys forticonverter custom-create-ticket
```

diagnose sys forticonverter download-status

Get current download status.

```
diagnose sys forticonverter download-status <ticket-id> <extension>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to check for download status	string	
<extension>	Extension of the file to check.	string	

diagnose sys forticonverter eligibility-status

Show current FortiConverter eligibility status.

```
diagnose sys forticonverter eligibility-status
```

diagnose sys forticonverter get-prompt-visibility

Read the visibility status for the FortiConverter wizard on login.

```
diagnose sys forticonverter get-prompt-visibility
```

diagnose sys forticonverter result-availability

Retrieve result file availability status for a ticket.

```
diagnose sys forticonverter result-availability <ticket-id> <extension>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to retrieve result availability for.	string	
<extension>	File extension to retrieve availability for.	string	

diagnose sys forticonverter set-source-fortigate

Set the source FortiGate for a FortiConverter ticket.

```
diagnose sys forticonverter set-source-fortigate <ticket-id> <source-serial>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to set the source FortiGate for.	string	
<source-serial>	Serial number of the source FortiGate.	string	

diagnose sys forticonverter source-config-upload-status

Retrieve source config upload status for a draft ticket.

```
diagnose sys forticonverter source-config-upload-status <ticket-id>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to retrieve source config upload status info for.	string	

diagnose sys forticonverter source-interfaces

Retrieve source interface JSON for a draft ticket.

```
diagnose sys forticonverter source-interfaces <ticket-id>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to retrieve interface information for.	string	

diagnose sys forticonverter start-download

Start download of config from a ticket.

```
diagnose sys forticonverter start-download <ticket-id> <extension>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to download from.	string	
<extension>	Extension of the file to download.	string	

diagnose sys forticonverter submitted-info

Retrieve previously submitted info for a draft ticket.

```
diagnose sys forticonverter submitted-info <ticket-id>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to retrieve submitted info for.	string	

diagnose sys forticonverter update-eligibility

Request updated eligibility status from FortiConverter.

```
diagnose sys forticonverter update-eligibility
```

diagnose sys forticonverter update-result-availability

Request updated result availability from FortiConverter.

```
diagnose sys forticonverter update-result-availability
```

diagnose sys forticonverter upload-local-config

Upload local config to a ticket for this FGT. Debugging purposes only.

```
diagnose sys forticonverter upload-local-config <ticket-id>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to upload config to.	string	

diagnose sys forticonverter upload-status

Retrieve upload status for a ticket.

```
diagnose sys forticonverter upload-status <ticket-id>
```

Parameter	Description	Type	Size
<ticket-id>	Ticket ID to upload config to.	string	

diagnose sys frag-mem

Display memory usage of fragment processing.

```
diagnose sys frag-mem
```

diagnose sys fullcone

Fullcone diagnostics.

```
diagnose sys fullcone
```

diagnose sys geneve

GENEVE diagnostics.

```
diagnose sys geneve
```

diagnose sys geneve list

Display GENEVE devices.

```
diagnose sys geneve list
```

diagnose sys geneve stat

Display GENEVE statistics.

```
diagnose sys geneve stat
```

diagnose sys gre

GRE diagnostics.

```
diagnose sys gre
```

diagnose sys gre keepalive

Keepalive status in GRE tunnels.

```
diagnose sys gre keepalive <name | all>
```

Parameter	Description	Type	Size
<name all>	GRE tunnel name	string	

diagnose sys gre list

List GRE tunnels.

```
diagnose sys gre list
```

diagnose sys h323

H323 diagnostics.

```
diagnose sys h323
```

diagnose sys h323 call

H323 calls.

```
diagnose sys h323 call
```

diagnose sys h323 call list

List H323 calls.

```
diagnose sys h323 call list
```

diagnose sys h323 debug-mask

Mask for H323 kernel trace.

```
diagnose sys h323 debug-mask <mask>
```

Parameter	Description	Type	Size
<mask>	0-disable, 1-parser, 2-CS, 4-RAS, 8-h245.	string	

diagnose sys h323 peer

H323 peers.

```
diagnose sys h323 peer
```

diagnose sys h323 peer list

List H323 peers.

```
diagnose sys h323 peer list
```

diagnose sys h323 status

Display h323 status.

```
diagnose sys h323 status
```

diagnose sys ha

High availability.

```
diagnose sys ha
```

diagnose sys ha autoscale-peers

Show autoscale peers.

```
diagnose sys ha autoscale-peers <Enter> or <vdom-name>
```

Parameter	Description	Type	Size
<Enter> or <vdom-name>	<Enter> to show peers' information in management VDOM, <vdom-name> to show peers' information in specific VDOM.	string	

diagnose sys ha check-vc

check-vc

```
diagnose sys ha check-vc
```

diagnose sys ha checksum

checksum.

```
diagnose sys ha checksum
```

diagnose sys ha checksum autoscale-cluster

Show autoscale cluster checksum.

```
diagnose sys ha checksum autoscale-cluster
```

diagnose sys ha checksum cached

Show HA cached checksum.

```
diagnose sys ha checksum cached <global/vdom-name>
```

Parameter	Description	Type	Size
<global/vdom-name>	Show global or a specific vdom's cached HA checksum.	string	

diagnose sys ha checksum cluster

Show HA cluster checksum by serial number.

```
diagnose sys ha checksum cluster
```

diagnose sys ha checksum log

Enable/disable log.

```
diagnose sys ha checksum log
```

diagnose sys ha checksum log clear

Clear log.

```
diagnose sys ha checksum log clear
```

diagnose sys ha checksum log disable

Disable log.

```
diagnose sys ha checksum log disable
```

diagnose sys ha checksum log enable

Enable log.

```
diagnose sys ha checksum log enable
```

diagnose sys ha checksum recalculate

Re-calculate HA checksum.

```
diagnose sys ha checksum recalculate <Enter> or <global/vdom-name>
```

Parameter	Description	Type	Size
<Enter> or <global/vdom-name>	<Enter> to re-calculate all checksums, or global/vdom-name to re-calculate global or a specific vdom HA checksum.	string	

diagnose sys ha checksum show

Show HA checksum.

```
diagnose sys ha checksum show <Enter> or <global/vdom-name> <Enter> or <object-fullpath> <Enter> or <entry-name>
```

Parameter	Description	Type	Size
<Enter> or <global/vdom-name>	<Enter> to show system checksum; <global/vdom-name> to show global/vdom-name detail checksum.	string	
<Enter> or <object-fullpath>	<Enter> to show objects checksum; <object-fullpath> to show individual object's detail checksum.	string	
<Enter> or <entry-name>	<Enter> to show the specific object's detail checksum; <entry-name> to show a single entry's detail checksum.	string	

diagnose sys ha checksum show-nonsync

Show non-sync HA checksum.

```
diagnose sys ha checksum show-nonsync
```

diagnose sys ha checksum test

test.

```
diagnose sys ha checksum test
```

diagnose sys ha dump-by

Dump HA data by name.

```
diagnose sys ha dump-by
```

diagnose sys ha dump-by debug-zone

Dump HA debug zone.

```
diagnose sys ha dump-by debug-zone
```

diagnose sys ha dump-by device

Dump HA device.

```
diagnose sys ha dump-by device
```

diagnose sys ha dump-by group

Dump all group.

```
diagnose sys ha dump-by group
```

diagnose sys ha dump-by kernel

Dump HA kernel info.

```
diagnose sys ha dump-by kernel
```

diagnose sys ha dump-by rcache

Dump rcache.

```
diagnose sys ha dump-by rcache
```

diagnose sys ha dump-by vcluster

Dump all vcluster.

```
diagnose sys ha dump-by vcluster
```

diagnose sys ha dump-by vdom

Dump HA vdom info.

```
diagnose sys ha dump-by vdom
```

diagnose sys ha extfile-sig

Dump extfile's signature.

```
diagnose sys ha extfile-sig
```

diagnose sys ha fgsp-zone

FGSP zone information.

```
diagnose sys ha fgsp-zone
```

diagnose sys ha fib

FIB information.

```
diagnose sys ha fib
```

diagnose sys ha hactx-stats

HA context statistics

```
diagnose sys ha hactx-stats
```

diagnose sys ha hactx-stats clear

HA context statistics

```
diagnose sys ha hactx-stats clear
```

diagnose sys ha hadiff

HA diff debug.

```
diagnose sys ha hadiff
```

diagnose sys ha hadiff log

Enable/disable log.

```
diagnose sys ha hadiff log
```

diagnose sys ha hadiff log clear

Clear log.

```
diagnose sys ha hadiff log clear
```

diagnose sys ha hadiff log disable

Disable log.

```
diagnose sys ha hadiff log disable
```

diagnose sys ha hadiff log enable

Enable log.

```
diagnose sys ha hadiff log enable
```

diagnose sys ha hadiff max-sync-turns

Set/get max number of sync turns.

```
diagnose sys ha hadiff max-sync-turns <integer>
```

Parameter	Description	Type	Size
<integer>	Set/get max number of sync turns.	string	

diagnose sys ha hadiff max-unsync-wait

Set/get max unsync wait times.

```
diagnose sys ha hadiff max-unsync-wait <integer>
```

Parameter	Description	Type	Size
<integer>	Maximum unsync wait times.	string	

diagnose sys ha hadiff status

HA diff status.

```
diagnose sys ha hadiff status
```

diagnose sys ha hadiff sync-from-higher

enable/disable sync config from higher build.

```
diagnose sys ha hadiff sync-from-higher <Integer>
```

Parameter	Description	Type	Size
<Integer>	the value: 0(=disable), 1(=enable).	string	

diagnose sys ha hasync-conn-max-buf

Set the hasync connection maximum buffer number.

```
diagnose sys ha hasync-conn-max-buf <hasync-conn-max-buf>
```

Parameter	Description	Type	Size
<hasync-conn-max-buf>	Max number of buffers.	string	

diagnose sys ha hasync-stats

hasync daemon stats.

```
diagnose sys ha hasync-stats
```

diagnose sys ha hasync-stats all

Display hasync all objects' stats.

```
diagnose sys ha hasync-stats all
```

diagnose sys ha hasync-stats by-object

Display hasync stats by object.

```
diagnose sys ha hasync-stats by-object <integer>
```

Parameter	Description	Type	Size
<integer>	Object number.	string	

diagnose sys ha hasync-stats most-recent

Display hasync objects recent stats.

```
diagnose sys ha hasync-stats most-recent [integer]
```

Parameter	Description	Type	Size
[integer]	Most recent # of objects to display.	string	

diagnose sys ha hasync-stats most-time

Display hasync objects ranked by total time.

```
diagnose sys ha hasync-stats most-time [integer]
```

Parameter	Description	Type	Size
[integer]	# of top objects to display.	string	

diagnose sys ha heartbeat

Show kernel heartbeat stats.

```
diagnose sys ha heartbeat
```

diagnose sys ha history

Cluster history information.

```
diagnose sys ha history
```

diagnose sys ha history clear

Clear cluster history.

```
diagnose sys ha history clear
```

diagnose sys ha history read

Display cluster history.

```
diagnose sys ha history read
```

diagnose sys ha mac

Mac Information.

```
diagnose sys ha mac
```

diagnose sys ha pingsvr-secondary-force-reset

Reset HA up time.

```
diagnose sys ha pingsvr-secondary-force-reset
```

diagnose sys ha recalculate-extfile-signature

Recalculate external files signature in hasync daemon.

```
diagnose sys ha recalculate-extfile-signature
```

diagnose sys ha reset-health-status

Reset HA health status.

```
diagnose sys ha reset-health-status
```

diagnose sys ha reset-uptime

Reset HA up time.

```
diagnose sys ha reset-uptime
```

diagnose sys ha reset-uptime-primary-only

Reset HA up time (can take effect on primary unit only).

```
diagnose sys ha reset-uptime-primary-only
```

diagnose sys ha session-sync-dev

Session sync ports.

```
diagnose sys ha session-sync-dev
```

diagnose sys ha session-sync-dev clear

Clear session sync ports.

```
diagnose sys ha session-sync-dev clear
```

diagnose sys ha session-sync-dev set

Configure session sync ports.

```
diagnose sys ha session-sync-dev set
```

diagnose sys ha standalone-peers

Standalone peers on kernel.

```
diagnose sys ha standalone-peers
```

diagnose sys ha standalone-peers reset-stats

Reset standalone peers session/packet type counters in kernel.

```
diagnose sys ha standalone-peers reset-stats
```

diagnose sys ha stats

statistics

```
diagnose sys ha stats
```

diagnose sys ha status

status

```
diagnose sys ha status
```

diagnose sys ha sync-stats

Dump HA sync statistics.

```
diagnose sys ha sync-stats
```

diagnose sys ha sync-stats-reset

Reset HA sync statistics.

```
diagnose sys ha sync-stats-reset
```

diagnose sys ha vlan-hb-monitor

Dump vlan heartbeat monitor list.

```
diagnose sys ha vlan-hb-monitor
```

diagnose sys icap-remote-server

Display remote icap servers status.

```
diagnose sys icap-remote-server
```

diagnose sys icap-remote-server status

List remote icap servers status.

```
diagnose sys icap-remote-server status
```

diagnose sys icb

ICB diagnostics.

```
diagnose sys icb
```

diagnose sys icb debug

Debug settings.

```
diagnose sys icb debug
```

diagnose sys icb debug disable

Disable (reset) level setting.

```
diagnose sys icb debug disable
```

diagnose sys icb debug info

Enable info level setting.

```
diagnose sys icb debug info
```

diagnose sys icb debug show

Show current debug settings.

```
diagnose sys icb debug show
```

diagnose sys icb debug verbose

Enable verbose level setting.

```
diagnose sys icb debug verbose
```

diagnose sys icb stats

Statistics.

```
diagnose sys icb stats
```

diagnose sys icb stats list

List statistics.

```
diagnose sys icb stats list
```

diagnose sys icb status

ICB service status.

```
diagnose sys icb status
```

diagnose sys icb status current

Show ICB service status and current supported file-type list.

```
diagnose sys icb status current
```

diagnose sys iotop

Show disk-accessing processes.

```
diagnose sys iotop <interval>
```

Parameter	Description	Type	Size
<interval>	Print interval in seconds (default to 5). Accept value from 5 to 3600.	string	

diagnose sys ipam

IP Address Management diagnostics.

```
diagnose sys ipam
```

diagnose sys ipam delete

delete

```
diagnose sys ipam delete
```

diagnose sys ipam delete device

Delete device from IPAM server.

```
diagnose sys ipam delete device <sn>
```

Parameter	Description	Type	Size
<sn>	SN of device to delete from IPAM server.	string	

diagnose sys ipam largest-available-subnet

Get the largest currently available subnet size.

```
diagnose sys ipam largest-available-subnet
```

diagnose sys ipam list

list

```
diagnose sys ipam list
```

diagnose sys ipam list entries

List IPAM entries.

```
diagnose sys ipam list entries
```

diagnose sys ipam list free-subnets

List free IPAM subnets.

```
diagnose sys ipam list free-subnets
```

diagnose sys ipsec-aggregate

IPsec aggregate diagnostics.

```
diagnose sys ipsec-aggregate
```

diagnose sys ipsec-aggregate list

List IPsec aggregates.

```
diagnose sys ipsec-aggregate list <name>
```

Parameter	Description	Type	Size
<name>	IPsec aggregate name	string	

diagnose sys kill

Kill the process ID.

```
diagnose sys kill <signal> <pid>
```

Parameter	Description	Type	Size
<signal>	Signal number.	string	
<pid>	Process ID.	string	

diagnose sys link-monitor

Link Monitor.

```
diagnose sys link-monitor
```

diagnose sys link-monitor filter

Filter link-monitor

```
diagnose sys link-monitor filter
```

diagnose sys link-monitor filter clear

Clear all filters.

```
diagnose sys link-monitor filter clear
```

diagnose sys link-monitor filter name

Link monitor names <name>.

```
diagnose sys link-monitor filter name <name>
```

Parameter	Description	Type	Size
<name>	Link monitor name.	string	

diagnose sys link-monitor interface

interface quality.

```
diagnose sys link-monitor interface <name> <childname>
```

Parameter	Description	Type	Size
<name>	Show details of an interface entry.	string	
<childname>	Child interface name.	string	

diagnose sys link-monitor launch

Launching a link monitor entry manually.

```
diagnose sys link-monitor launch <entry name>
```

Parameter	Description	Type	Size
<entry name>	Entry.	string	

diagnose sys link-monitor reset-monitor

Reset link monitor statistics.

```
diagnose sys link-monitor reset-monitor <name>
```

Parameter	Description	Type	Size
<name>	Link monitor name.	string	

diagnose sys link-monitor sdwan-hc

SD-WAN health-check monitors.

```
diagnose sys link-monitor sdwan-hc <name> <seq>
```

Parameter	Description	Type	Size
<name>	Health check name.	string	
<seq>	Sequence number.	string	

diagnose sys link-monitor sdwan-service

SD-WAN rule monitors.

```
diagnose sys link-monitor sdwan-service <name> <seq>
```

Parameter	Description	Type	Size
<name>	Health check name.	string	
<seq>	Sequence number.	string	

diagnose sys link-monitor shm-band-stats

Read link bandwidth statistics in SHM.

```
diagnose sys link-monitor shm-band-stats <name>
```

Parameter	Description	Type	Size
<name>	Interface name.	string	

diagnose sys link-monitor shm-stats

Read link monitor statistics in SHM.

```
diagnose sys link-monitor shm-stats <name>
```

Parameter	Description	Type	Size
<name>	Link monitor name.	string	

diagnose sys link-monitor status

status

```
diagnose sys link-monitor status <name | all>
```

Parameter	Description	Type	Size
<name all>	Show details of monitor entry.	string	

diagnose sys link-monitor tunnel

tunnel

```
diagnose sys link-monitor tunnel <name | all> <child name>
```

Parameter	Description	Type	Size
<name all>	Show details of tunnel monitor entry.	string	
<child name>	Show details of child monitor for tunnel.	string	

diagnose sys link-monitor zone-intf

quality of interfaces in an SDWAN zone.

```
diagnose sys link-monitor zone-intf <zone name>
```

Parameter	Description	Type	Size
<zone name>	SD-WAN zone name.	string	

diagnose sys link-monitor-passive

Link Monitor passive.

```
diagnose sys link-monitor-passive
```

diagnose sys link-monitor-passive admin

Passive reports measured by the kernel.

```
diagnose sys link-monitor-passive admin
```

diagnose sys link-monitor-passive admin dbg-rpt

Mock kernel report.

```
diagnose sys link-monitor-passive admin dbg-rpt
```

diagnose sys link-monitor-passive admin dbg-rpt reset

reset

```
diagnose sys link-monitor-passive admin dbg-rpt reset <vf> <serial> <app_id> <intf> <origin>  
<reply>
```

Parameter	Description	Type	Size
<vf>	vfid	string	
<serial>	Session serial	string	
<app_id>	Application ID	string	
<intf>	Interface index	string	
<origin>	origin	string	
<reply>	reply	string	

diagnose sys link-monitor-passive admin dbg-rpt retrans

retrans

```
diagnose sys link-monitor-passive admin dbg-rpt retrans <vf> <serial> <app_id> <intf> <origin_cnt>
<origin_total> <reply_cnt> <reply_total>
```

Parameter	Description	Type	Size
<vf>	vfid	string	
<serial>	Session serial	string	
<app_id>	Application ID	string	
<intf>	Interface index	string	
<origin_cnt>	origin_cnt	string	
<origin_total>	origin_total	string	
<reply_cnt>	reply_cnt	string	
<reply_total>	reply_total	string	

diagnose sys link-monitor-passive admin dbg-rpt rtt

rtt

```
diagnose sys link-monitor-passive admin dbg-rpt rtt <vf> <serial> <app_id> <intf> <srt> <nrt>
```

Parameter	Description	Type	Size
<vf>	vfid	string	
<serial>	Session serial	string	
<app_id>	Application ID	string	
<intf>	Interface index	string	
<srt>	Server response time	string	
<nrt>	Network response time	string	

diagnose sys link-monitor-passive admin dbg-rpt syn-retrans

syn-retrans

```
diagnose sys link-monitor-passive admin dbg-rpt syn-retrans <vf> <serial> <app_id> <intf> <origin>
<reply>
```

Parameter	Description	Type	Size
<vf>	vfid	string	
<serial>	Session serial	string	
<app_id>	Application ID	string	
<intf>	Interface index	string	
<origin>	origin	string	
<reply>	reply	string	

diagnose sys link-monitor-passive admin delete

Delete a report.

```
diagnose sys link-monitor-passive admin delete <interface> <application>
```

Parameter	Description	Type	Size
<interface>	Interface device index.	string	
<application>	Internet service or application ID.	string	

diagnose sys link-monitor-passive admin flush

Flush all the reports.

```
diagnose sys link-monitor-passive admin flush
```

diagnose sys link-monitor-passive admin list

List one or all the collected passive reports.

```
diagnose sys link-monitor-passive admin list <interface> <application> <application>
```

Parameter	Description	Type	Size
<interface> <application>	List the passive report by the given interface and application.	string	
<application>	Set the application.	string	

diagnose sys link-monitor-passive admin list by-application

List passive reports and sort by application.

```
diagnose sys link-monitor-passive admin list by-application <application>
```

Parameter	Description	Type	Size
<application>	List reports of the given application.	string	

diagnose sys link-monitor-passive admin list by-interface

List passive reports and sort by interface.

```
diagnose sys link-monitor-passive admin list by-interface <interface>
```

Parameter	Description	Type	Size
<interface>	List reports of the given interface	string	

diagnose sys link-monitor-passive agent

Passive reports measured by agents.

```
diagnose sys link-monitor-passive agent
```

diagnose sys link-monitor-passive agent agent-oif-map

List agent and interface maps.

```
diagnose sys link-monitor-passive agent agent-oif-map
```

diagnose sys link-monitor-passive agent flush

Flush all the collected reports.

```
diagnose sys link-monitor-passive agent flush
```

diagnose sys link-monitor-passive agent flush-app

Flush details of all the applications.

```
diagnose sys link-monitor-passive agent flush-app
```

diagnose sys link-monitor-passive agent list

List all the collected reports.

```
diagnose sys link-monitor-passive agent list
```

diagnose sys link-monitor-passive agent list-app

List details of each application.

```
diagnose sys link-monitor-passive agent list-app
```

diagnose sys link-monitor-passive agent send-report

Mock an agent to send application performance.

```
diagnose sys link-monitor-passive agent send-report <src> <app_id> <app_name> <latency> <jitter>  
<pktloss> <ntt> <srt> <app_err>
```

Parameter	Description	Type	Size
<src>	Agent address.	string	
<app_id>	Application ID.	string	
<app_name>	Application name.	string	
<latency>	Collected latency.	string	
<jitter>	Collected jitter.	string	
<pktloss>	Collected pktloss	string	
<ntt>	Collected ntt.	string	
<srt>	Collected srt.	string	
<app_err>	Collected application errors	string	

diagnose sys link-monitor-passive remote

Passive reports measured by remote peer.

```
diagnose sys link-monitor-passive remote
```

diagnose sys link-monitor-passive remote list

List one or all the collected reports.

```
diagnose sys link-monitor-passive remote list
```

diagnose sys logdisk

Display log disk status.

```
diagnose sys logdisk
```

diagnose sys logdisk purge-log-data

Purge disk log data, including disk logs and FortiView data.

```
diagnose sys logdisk purge-log-data
```

diagnose sys logdisk quota

Show log disk quota info.

```
diagnose sys logdisk quota
```

diagnose sys logdisk smart

Show log disk S.M.A.R.T. info.

```
diagnose sys logdisk smart
```

diagnose sys logdisk status

Display log disk status.

```
diagnose sys logdisk status
```

diagnose sys logdisk status monitor

Monitor log disk status.

```
diagnose sys logdisk status monitor
```

diagnose sys logdisk usage

Show log disk stats.

```
diagnose sys logdisk usage
```

diagnose sys mcast-session

multicast session

```
diagnose sys mcast-session
```

diagnose sys mcast-session clear

Clear the sessions defined by filter.

```
diagnose sys mcast-session clear
```

diagnose sys mcast-session filter

List session with filters.

```
diagnose sys mcast-session filter
```

diagnose sys mcast-session filter clear

Clear session filter.

```
diagnose sys mcast-session filter clear
```

diagnose sys mcast-session filter clear dport

Clear destination port filter.

```
diagnose sys mcast-session filter clear dport
```

diagnose sys mcast-session filter clear dst

Clear destination IP filter.

```
diagnose sys mcast-session filter clear dst
```

diagnose sys mcast-session filter clear proto

Clear protocol filter.

```
diagnose sys mcast-session filter clear proto
```

diagnose sys mcast-session filter clear intf

Clear source interface filter.

```
diagnose sys mcast-session filter clear intf
```

diagnose sys mcast-session filter clear sport

Clear source port filter.

```
diagnose sys mcast-session filter clear sport
```

diagnose sys mcast-session filter clear src

Clear source IP filter.

```
diagnose sys mcast-session filter clear src
```

diagnose sys mcast-session filter clear vd

Clear virtual domain filter.

```
diagnose sys mcast-session filter clear vd
```

diagnose sys mcast-session filter dport

Destination port.

```
diagnose sys mcast-session filter dport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys mcast-session filter dst

Destination IP address.

```
diagnose sys mcast-session filter dst <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Destination IP (from).	string	
<xxx.xxx.xxx.xxx>	Destination IP (to).	string	

diagnose sys mcast-session filter negate

Inverse filter.

```
diagnose sys mcast-session filter negate
```

diagnose sys mcast-session filter negate dport

Inverse destination port.

```
diagnose sys mcast-session filter negate dport
```

diagnose sys mcast-session filter negate dst

Inverse destination IP.

```
diagnose sys mcast-session filter negate dst
```

diagnose sys mcast-session filter negate proto

Inverse protocol.

```
diagnose sys mcast-session filter negate proto
```

diagnose sys mcast-session filter negate intf

Inverse source interface.

```
diagnose sys mcast-session filter negate intf
```

diagnose sys mcast-session filter negate sport

Inverse source port.

```
diagnose sys mcast-session filter negate sport
```

diagnose sys mcast-session filter negate src

Inverse source IP.

```
diagnose sys mcast-session filter negate src
```

diagnose sys mcast-session filter negate vd

Inverse virtual domain.

```
diagnose sys mcast-session filter negate vd
```

diagnose sys mcast-session filter proto

Protocol number.

```
diagnose sys mcast-session filter proto <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	<0-255> (from).	string	
<xx>	<0-255> (to).	string	

diagnose sys mcast-session filter intf

Source interface.

```
diagnose sys mcast-session filter intf <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	Interface name.	string	

diagnose sys mcast-session filter sport

Source port.

```
diagnose sys mcast-session filter sport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys mcast-session filter src

Source IP address.

```
diagnose sys mcast-session filter src <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP (from).	string	
<xxx.xxx.xxx.xxx>	Source IP (to).	string	

diagnose sys mcast-session filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys mcast-session filter vd <xxx>
```

Parameter	Description	Type	Size
<xxx>	Index of virtual domain. -1 matches all.	string	

diagnose sys mcast-session list

List session.

```
diagnose sys mcast-session list
```

diagnose sys mcast-session stat

Stat session.

```
diagnose sys mcast-session stat
```

diagnose sys mcast-session6

IPv6 multicast session.

```
diagnose sys mcast-session6
```

diagnose sys mcast-session6 clear

Clear IPv6 multicast sessions defined by filter.

```
diagnose sys mcast-session6 clear
```

diagnose sys mcast-session6 filter

List IPv6 multicast session with filters.

```
diagnose sys mcast-session6 filter
```

diagnose sys mcast-session6 filter clear

Clear IPv6 multicast session filter.

```
diagnose sys mcast-session6 filter clear
```

diagnose sys mcast-session6 filter clear dport

Clear destination port filter.

```
diagnose sys mcast-session6 filter clear dport
```

diagnose sys mcast-session6 filter clear dst

Clear destination IP filter.

```
diagnose sys mcast-session6 filter clear dst
```

diagnose sys mcast-session6 filter clear proto

Clear protocol filter.

```
diagnose sys mcast-session6 filter clear proto
```

diagnose sys mcast-session6 filter clear intf

Clear source interface filter.

```
diagnose sys mcast-session6 filter clear intf
```

diagnose sys mcast-session6 filter clear sport

Clear source port filter.

```
diagnose sys mcast-session6 filter clear sport
```

diagnose sys mcast-session6 filter clear src

Clear source IP filter.

```
diagnose sys mcast-session6 filter clear src
```

diagnose sys mcast-session6 filter clear vd

Clear virtual domain filter.

```
diagnose sys mcast-session6 filter clear vd
```

diagnose sys mcast-session6 filter dport

Destination port.

```
diagnose sys mcast-session6 filter dport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys mcast-session6 filter dst

Destination IP address.

```
diagnose sys mcast-session6 filter dst <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Destination IP (from).	string	
<xxx.xxx.xxx.xxx>	Destination IP (to).	string	

diagnose sys mcast-session6 filter negate

Inverse filter.

```
diagnose sys mcast-session6 filter negate
```

diagnose sys mcast-session6 filter negate dport

Inverse destination port.

```
diagnose sys mcast-session6 filter negate dport
```

diagnose sys mcast-session6 filter negate dst

Inverse destination IP.

```
diagnose sys mcast-session6 filter negate dst
```

diagnose sys mcast-session6 filter negate proto

Inverse protocol.

```
diagnose sys mcast-session6 filter negate proto
```

diagnose sys mcast-session6 filter negate intf

Inverse source interface.

```
diagnose sys mcast-session6 filter negate intf
```

diagnose sys mcast-session6 filter negate sport

Inverse source port.

```
diagnose sys mcast-session6 filter negate sport
```

diagnose sys mcast-session6 filter negate src

Inverse source IP.

```
diagnose sys mcast-session6 filter negate src
```

diagnose sys mcast-session6 filter negate vd

Inverse virtual domain.

```
diagnose sys mcast-session6 filter negate vd
```

diagnose sys mcast-session6 filter proto

Protocol number.

```
diagnose sys mcast-session6 filter proto <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	<0-255> (from).	string	
<xx>	<0-255> (to).	string	

diagnose sys mcast-session6 filter intf

Source interface.

```
diagnose sys mcast-session6 filter intf <xxxxx>
```

Parameter	Description	Type	Size
<xxxxx>	Interface name.	string	

diagnose sys mcast-session6 filter sport

Source port.

```
diagnose sys mcast-session6 filter sport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys mcast-session6 filter src

Source IP address.

```
diagnose sys mcast-session6 filter src <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP (from).	string	
<xxx.xxx.xxx.xxx>	Source IP (to).	string	

diagnose sys mcast-session6 filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys mcast-session6 filter vd <xxx>
```

Parameter	Description	Type	Size
<xxx>	Index of virtual domain. -1 matches all.	string	

diagnose sys mcast-session6 list

List IPv6 multicast session.

```
diagnose sys mcast-session6 list
```

diagnose sys mcast-session6 stat

Stat IPv6 multicast session.

```
diagnose sys mcast-session6 stat
```

diagnose sys mpstat

mpstat

```
diagnose sys mpstat <value> <value>
```

Parameter	Description	Type	Size
<value>	Delay in seconds (default 5).	string	
<value>	Loop times (default = 1,000,000).	string	

diagnose sys ntp

NTP daemon command.

```
diagnose sys ntp
```

diagnose sys ntp status

List NTP servers information.

```
diagnose sys ntp status
```

diagnose sys pair

Pair device.

```
diagnose sys pair
```

diagnose sys platform

Platform information.

```
diagnose sys platform
```

diagnose sys platform info

Information.

```
diagnose sys platform info
```

diagnose sys print-conserve-info

Print all conserve related info.

```
diagnose sys print-conserve-info
```

diagnose sys process

Dump process stack.

```
diagnose sys process
```

diagnose sys process daemon-auto-restart

Set daemon respawn behaviour.

```
diagnose sys process daemon-auto-restart <action> <daemon>
```

Parameter	Description	Type	Size
<action>	(enable disable)	string	
<daemon>	Daemon name.	string	

diagnose sys process dump

Dump process kernel stack.

```
diagnose sys process dump <pid>
```

Parameter	Description	Type	Size
<pid>	PID of the process to dump.	string	

diagnose sys process nameof

List name of process with a specific PID.

```
diagnose sys process nameof <integer>
```

Parameter	Description	Type	Size
<integer>	PID to find the process name.	string	

diagnose sys process pidof

List PIDs of processes with a specific name.

```
diagnose sys process pidof <string>
```

Parameter	Description	Type	Size
<string>	Name to find PIDs for.	string	

diagnose sys process pstack

Dump process userspace stack.

```
diagnose sys process pstack <pid>
```

Parameter	Description	Type	Size
<pid>	PID of the process to dump.	string	

diagnose sys process sock-mem

Show process socket mem usage.

```
diagnose sys process sock-mem
```

diagnose sys process socket

Find PID of processes which owns the socket.

```
diagnose sys process socket <socket-inode>
```

Parameter	Description	Type	Size
<socket-inode>	Socket to find PID for.	string	

diagnose sys process trace

Sample process instructions.

```
diagnose sys process trace
```

diagnose sys profile

kernel profiling

```
diagnose sys profile
```

diagnose sys profile cpumask

profile which CPUs

```
diagnose sys profile cpumask
```

diagnose sys profile module

show kernel module

```
diagnose sys profile module
```

diagnose sys profile show

show kernel profiling result

```
diagnose sys profile show
```

diagnose sys profile show detail

show detail of kernel profiling

```
diagnose sys profile show detail
```

diagnose sys profile show order

order kernel profiling result

```
diagnose sys profile show order
```

diagnose sys profile start

start kernel profiling data

```
diagnose sys profile start
```

diagnose sys profile step

set profile step

```
diagnose sys profile step <Integer>
```

Parameter	Description	Type	Size
<Integer>	Profile step for CPU profiling. Argument should be a power of two between 2 to 32	string	

diagnose sys profile stop

copy kernel profiling data

```
diagnose sys profile stop
```

diagnose sys profile sysmap

show kernel sysmap

```
diagnose sys profile sysmap
```

diagnose sys proxy

Proxy diagnostics.

```
diagnose sys proxy
```

diagnose sys proxy bypass

Bypass setting.

```
diagnose sys proxy bypass
```

diagnose sys proxy bypass clear

Clear bypass settings.

```
diagnose sys proxy bypass clear
```

diagnose sys proxy bypass disable

Disable bypass settings.

```
diagnose sys proxy bypass disable
```

diagnose sys proxy bypass disable category

Disable category bypass.

```
diagnose sys proxy bypass disable category
```

diagnose sys proxy bypass disable category all

Bypass all.

```
diagnose sys proxy bypass disable category all
```

diagnose sys proxy bypass disable category scanunit-submission

Bypass scanunit submission.

```
diagnose sys proxy bypass disable category scanunit-submission
```

diagnose sys proxy bypass disable category ssl

Bypass SSL (no crypto, no utm).

```
diagnose sys proxy bypass disable category ssl
```

diagnose sys proxy bypass disable category utm

Bypass UTM (crypto, no utm).

```
diagnose sys proxy bypass disable category utm
```

diagnose sys proxy bypass disable protocol

Disable protocol bypass.

```
diagnose sys proxy bypass disable protocol
```

diagnose sys proxy bypass disable protocol all

All proxy protocols

```
diagnose sys proxy bypass disable protocol all
```

diagnose sys proxy bypass disable protocol ftp

FTP(S) protocol

```
diagnose sys proxy bypass disable protocol ftp
```

diagnose sys proxy bypass disable protocol imap

IMAP(S) protocol

```
diagnose sys proxy bypass disable protocol imap
```

diagnose sys proxy bypass disable protocol nntp

NNTP protocol

```
diagnose sys proxy bypass disable protocol nntp
```

diagnose sys proxy bypass disable protocol pop3

POP3(S) protocol

```
diagnose sys proxy bypass disable protocol pop3
```

diagnose sys proxy bypass disable protocol smtp

SMTP(S) protocol

```
diagnose sys proxy bypass disable protocol smtp
```

diagnose sys proxy bypass enable

Enable bypass settings.

```
diagnose sys proxy bypass enable
```

diagnose sys proxy bypass enable category

Enable category bypass.

```
diagnose sys proxy bypass enable category
```

diagnose sys proxy bypass enable category all

Bypass all.

```
diagnose sys proxy bypass enable category all
```

diagnose sys proxy bypass enable category scanunit-submission

Bypass scanunit submission.

```
diagnose sys proxy bypass enable category scanunit-submission
```

diagnose sys proxy bypass enable category ssl

Bypass SSL (no crypto, no utm).

```
diagnose sys proxy bypass enable category ssl
```

diagnose sys proxy bypass enable category utm

Bypass UTM (crypto, no utm).

```
diagnose sys proxy bypass enable category utm
```

diagnose sys proxy bypass enable protocol

Enable protocol bypass.

```
diagnose sys proxy bypass enable protocol
```

diagnose sys proxy bypass enable protocol all

All proxy protocols

```
diagnose sys proxy bypass enable protocol all
```

diagnose sys proxy bypass enable protocol ftp

FTP(S) protocol

```
diagnose sys proxy bypass enable protocol ftp
```

diagnose sys proxy bypass enable protocol imap

IMAP(S) protocol

```
diagnose sys proxy bypass enable protocol imap
```

diagnose sys proxy bypass enable protocol nntp

NNTP protocol

```
diagnose sys proxy bypass enable protocol nntp
```

diagnose sys proxy bypass enable protocol pop3

POP3(S) protocol

```
diagnose sys proxy bypass enable protocol pop3
```

diagnose sys proxy bypass enable protocol smtp

SMTP(S) protocol

```
diagnose sys proxy bypass enable protocol smtp
```

diagnose sys proxy bypass show

Show bypass settings.

```
diagnose sys proxy bypass show
```

diagnose sys proxy certificate-blocklist

Certificate blocklist diagnostics.

```
diagnose sys proxy certificate-blocklist
```

diagnose sys proxy certificate-blocklist flush

Flush certificate blocklist database.

```
diagnose sys proxy certificate-blocklist flush
```

diagnose sys proxy certificate-blocklist status

Display per worker certificate blocklist status.

```
diagnose sys proxy certificate-blocklist status
```

diagnose sys proxy debug-filter

Filter for displaying debug information.

```
diagnose sys proxy debug-filter
```

diagnose sys proxy debug-filter clear

Erase the current filter.

```
diagnose sys proxy debug-filter clear
```

diagnose sys proxy debug-filter list

Display the current filter.

```
diagnose sys proxy debug-filter list
```

diagnose sys proxy debug-filter src

Source address range to filter by.

```
diagnose sys proxy debug-filter src <ip-address> <ip-address>
```

Parameter	Description	Type	Size
<ip-address>	Source IP address (from).	string	
<ip-address>	Source IP address (to).	string	

diagnose sys proxy filter

Diagnostics filter.

```
diagnose sys proxy filter
```

diagnose sys proxy filter clear

Clear the current filter.

```
diagnose sys proxy filter clear
```

diagnose sys proxy filter list

Display the current filter.

```
diagnose sys proxy filter list
```

diagnose sys proxy filter negate

Negate the specified filter parameter.

```
diagnose sys proxy filter negate
```

diagnose sys proxy filter negate vd

Negate virtual domain.

```
diagnose sys proxy filter negate vd
```

diagnose sys proxy filter negate worker

Negate worker ID.

```
diagnose sys proxy filter negate worker
```

diagnose sys proxy filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys proxy filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose sys proxy filter worker

ID of worker or "m" for manager. Invalid ID matches all.

```
diagnose sys proxy filter worker <id>
```

Parameter	Description	Type	Size
<id>	ID of worker or "m" for manager. Invalid ID matches all.	string	

diagnose sys proxy log

Logging diagnostics.

```
diagnose sys proxy log
```

diagnose sys proxy log filter

Debug log filter.

```
diagnose sys proxy log filter
```

diagnose sys proxy log filter clear

Clear the current filter.

```
diagnose sys proxy log filter clear
```

diagnose sys proxy log filter list

Display the current filter.

```
diagnose sys proxy log filter list
```

diagnose sys proxy log filter negate

Negate the specified filter parameter.

```
diagnose sys proxy log filter negate
```

diagnose sys proxy log filter negate vd

Negate virtual domain.

```
diagnose sys proxy log filter negate vd
```

diagnose sys proxy log filter negate worker

Negate worker ID.

```
diagnose sys proxy log filter negate worker
```

diagnose sys proxy log filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys proxy log filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose sys proxy log filter worker

ID of worker or "m" for manager. Invalid ID matches all.

```
diagnose sys proxy log filter worker <id>
```

Parameter	Description	Type	Size
<id>	ID of worker or "m" for manager. Invalid ID matches all.	string	

diagnose sys proxy log-debug

Enable/disable sys proxy log on console.

```
diagnose sys proxy log-debug <integer>
```

Parameter	Description	Type	Size
<integer>	Enable/disable log on console, 0 off, otherwise, on.	string	

diagnose sys proxy memory

Memory configuration

```
diagnose sys proxy memory
```

diagnose sys proxy memory allocator

Show the current memory allocator

```
diagnose sys proxy memory allocator
```

diagnose sys proxy memory conserve

Enter/exit conserve mode.

```
diagnose sys proxy memory conserve
```

diagnose sys proxy memory conserve enter

Enter conserve mode.

```
diagnose sys proxy memory conserve enter
```

diagnose sys proxy memory conserve exit

Exit conserve mode.

```
diagnose sys proxy memory conserve exit
```

diagnose sys proxy memory jemalloc

Use jemalloc for memory allocation

```
diagnose sys proxy memory jemalloc
```

diagnose sys proxy memory malloc

Use malloc for memory allocation

```
diagnose sys proxy memory malloc
```

diagnose sys proxy memory usage

Per-worker memory allocation statistics

```
diagnose sys proxy memory usage
```

diagnose sys proxy restart

Restart proxy.

```
diagnose sys proxy restart
```

diagnose sys proxy simulate-error

Error test options.

```
diagnose sys proxy simulate-error
```

diagnose sys proxy simulate-error scan-drop

Enable/disable proxy error scan drop.

```
diagnose sys proxy simulate-error scan-drop
```

diagnose sys proxy simulate-error scan-drop disable

Disable scan-drop (default)

```
diagnose sys proxy simulate-error scan-drop disable
```

diagnose sys proxy simulate-error scan-drop enable

Enable scan-drop

```
diagnose sys proxy simulate-error scan-drop enable
```

diagnose sys proxy simulate-error status

Display per worker error test options.

```
diagnose sys proxy simulate-error status
```

diagnose sys proxy socket-options

Socket options configuration

```
diagnose sys proxy socket-options
```

diagnose sys proxy socket-options linger

SO_LINGER socket option

```
diagnose sys proxy socket-options linger
```

diagnose sys proxy socket-options linger disable

Disable SO_LINGER

```
diagnose sys proxy socket-options linger disable
```

diagnose sys proxy socket-options linger enable

Enable SO_LINGER

```
diagnose sys proxy socket-options linger enable
```

diagnose sys proxy socket-options nagle

SSL TCP_NODELAY socket option

```
diagnose sys proxy socket-options nagle
```

diagnose sys proxy socket-options nagle disable

Disable TCP_NODELAY for SSL connections (Default)

```
diagnose sys proxy socket-options nagle disable
```

diagnose sys proxy socket-options nagle enable

Enable TCP_NODELAY for SSL connections

```
diagnose sys proxy socket-options nagle enable
```

diagnose sys proxy socket-options status

Display per worker socket options

```
diagnose sys proxy socket-options status
```

diagnose sys proxy ssl

SSL options

```
diagnose sys proxy ssl
```

diagnose sys proxy ssl bypass

Ssl bypass cache

```
diagnose sys proxy ssl bypass
```

diagnose sys proxy ssl bypass flush

Flush ssl bypass cache

```
diagnose sys proxy ssl bypass flush
```

diagnose sys proxy ssl bypass list

List ssl bypass cache

```
diagnose sys proxy ssl bypass list
```

diagnose sys proxy ssl crypto

Set hardware crypto mode

```
diagnose sys proxy ssl crypto
```

diagnose sys proxy ssl crypto async

Asynchronous hardware crypto

```
diagnose sys proxy ssl crypto async
```

diagnose sys proxy ssl crypto sync

Synchronous hardware crypto

```
diagnose sys proxy ssl crypto sync
```

diagnose sys proxy ssl exempt

Ssl exempt cache

```
diagnose sys proxy ssl exempt
```

diagnose sys proxy ssl exempt flush

Flush ssl exempt cache

```
diagnose sys proxy ssl exempt flush
```

diagnose sys proxy ssl exempt list

List ssl exempt cache

```
diagnose sys proxy ssl exempt list
```

diagnose sys proxy ssl rsa-blinding

Set RSA blinding

```
diagnose sys proxy ssl rsa-blinding
```

diagnose sys proxy ssl rsa-blinding off

RSA blinding off

```
diagnose sys proxy ssl rsa-blinding off
```

diagnose sys proxy ssl rsa-blinding on

RSA blinding on

```
diagnose sys proxy ssl rsa-blinding on
```

diagnose sys proxy ssl session

List of current SSL sessions

```
diagnose sys proxy ssl session
```

diagnose sys proxy stats

Proxy statistics.

```
diagnose sys proxy stats
```

diagnose sys proxy stats all

Per-process proxy statistics.

```
diagnose sys proxy stats all
```

diagnose sys proxy stats clear

Clear proxy statistics.

```
diagnose sys proxy stats clear
```

diagnose sys proxy stats debug

Debug sink statistics

```
diagnose sys proxy stats debug
```

diagnose sys proxy stats list

Summarized proxy statistics.

```
diagnose sys proxy stats list
```

diagnose sys proxy stats protocol

Per-process proxy worker protocol statistics.

```
diagnose sys proxy stats protocol
```

diagnose sys proxy stats vdom

Proxy vdom statistics.

```
diagnose sys proxy stats vdom
```

diagnose sys proxy stats vdom all

Proxy per-vdom statistics.

```
diagnose sys proxy stats vdom all
```

diagnose sys proxy stats vdom list

List current vdoms.

```
diagnose sys proxy stats vdom list
```

diagnose sys proxy stats vdom summary

Summarized vdom proxy statistics.

```
diagnose sys proxy stats vdom summary
```

diagnose sys proxy valgrind

Valgrind analysis.

```
diagnose sys proxy valgrind
```

diagnose sys proxy valgrind disable

Force daemon to restart.

```
diagnose sys proxy valgrind disable
```

diagnose sys proxy valgrind enable

Force daemon to restart.

```
diagnose sys proxy valgrind enable
```

diagnose sys proxy valgrind log

Valgrind logs.

```
diagnose sys proxy valgrind log
```

diagnose sys proxy valgrind log clear

Clear logs.

```
diagnose sys proxy valgrind log clear
```

diagnose sys proxy valgrind log show

Show logs.

```
diagnose sys proxy valgrind log show
```

diagnose sys proxy valgrind memcheck

Force daemon to restart.

```
diagnose sys proxy valgrind memcheck
```

diagnose sys proxy valgrind memcheck_less

Force daemon to restart.

```
diagnose sys proxy valgrind memcheck_less
```

diagnose sys proxy valgrind status

Show valgrind status.

```
diagnose sys proxy valgrind status
```

diagnose sys ptp

PTP daemon command.

```
diagnose sys ptp
```

diagnose sys ptp status

List PTP information.

```
diagnose sys ptp status
```

diagnose sys route_tag

route-tag.

```
diagnose sys route_tag
```

diagnose sys route_tag flush

Flush route tag address.

```
diagnose sys route_tag flush <route-tag>
```

Parameter	Description	Type	Size
<route-tag>	Flush cache of route-tag address in SD-WAN.	string	

diagnose sys route_tag list

Show route tag address.

```
diagnose sys route_tag list <route-tag>
```

Parameter	Description	Type	Size
<route-tag>	Show details of route-tag address.	string	

diagnose sys route_tag summary

route tag address summary.

```
diagnose sys route_tag summary
```

diagnose sys saml

SAML diagnostics.

```
diagnose sys saml
```

diagnose sys saml metadata

Test metadata.

```
diagnose sys saml metadata
```

diagnose sys scanunit

Scanunit diagnostics.

```
diagnose sys scanunit
```

diagnose sys scanunit auto-restart

Auto-restart settings.

```
diagnose sys scanunit auto-restart
```

diagnose sys scanunit auto-restart requests

Number of scan requests before restarting.

```
diagnose sys scanunit auto-restart requests <Integer>
```

Parameter	Description	Type	Size
<Integer>	Number of requests before restarting (0 disables auto restart).	string	

diagnose sys scanunit auto-restart reset

Reset auto restart settings.

```
diagnose sys scanunit auto-restart reset
```

diagnose sys scanunit auto-restart status

Show auto restart settings.

```
diagnose sys scanunit auto-restart status
```

diagnose sys scanunit auto-restart time

Minimum interval in seconds between restarting workers.

```
diagnose sys scanunit auto-restart time <Integer>
```

Parameter	Description	Type	Size
<Integer>	Minimum interval in seconds between restarting workers.	string	

diagnose sys scanunit av

Configure scanunit av settings.

```
diagnose sys scanunit av
```

diagnose sys scanunit av filetype-reuse

Enable/disable AV filetype reuse.

```
diagnose sys scanunit av filetype-reuse
```

diagnose sys scanunit av filetype-reuse disable

Disable scanunit AV filetype reuse.

```
diagnose sys scanunit av filetype-reuse disable
```

diagnose sys scanunit av filetype-reuse enable

Enable scanunit AV filetype reuse.

```
diagnose sys scanunit av filetype-reuse enable
```

diagnose sys scanunit av reload-avdb

Reload AVDB.

```
diagnose sys scanunit av reload-avdb
```

diagnose sys scanunit av reload-aveng

Reload AV engine.

```
diagnose sys scanunit av reload-aveng
```

diagnose sys scanunit av reload-fsa-ext

Reload FSA extensions list.

```
diagnose sys scanunit av reload-fsa-ext
```

diagnose sys scanunit bypass

Bypass setting.

```
diagnose sys scanunit bypass
```

diagnose sys scanunit bypass clear

Clear bypass settings.

```
diagnose sys scanunit bypass clear
```

diagnose sys scanunit bypass disable

Disable bypass settings.

```
diagnose sys scanunit bypass disable
```

diagnose sys scanunit bypass disable category

Disable category bypass.

```
diagnose sys scanunit bypass disable category
```

diagnose sys scanunit bypass disable category all

Bypass all.

```
diagnose sys scanunit bypass disable category all
```

diagnose sys scanunit bypass disable category av-engine

Bypass AV engine.

```
diagnose sys scanunit bypass disable category av-engine
```

diagnose sys scanunit bypass disable category scanunit

Bypass scanunit.

```
diagnose sys scanunit bypass disable category scanunit
```

diagnose sys scanunit bypass disable protocol

Disable protocol bypass.

```
diagnose sys scanunit bypass disable protocol
```

diagnose sys scanunit bypass disable protocol all

All proxy protocols

```
diagnose sys scanunit bypass disable protocol all
```

diagnose sys scanunit bypass disable protocol cifs

CIFS protocol

```
diagnose sys scanunit bypass disable protocol cifs
```

diagnose sys scanunit bypass disable protocol ftp

FTP(S) protocol

```
diagnose sys scanunit bypass disable protocol ftp
```

diagnose sys scanunit bypass disable protocol http

HTTP(S) protocol

```
diagnose sys scanunit bypass disable protocol http
```

diagnose sys scanunit bypass disable protocol imap

IMAP(S) protocol

```
diagnose sys scanunit bypass disable protocol imap
```

diagnose sys scanunit bypass disable protocol nntp

NNTP protocol

```
diagnose sys scanunit bypass disable protocol nntp
```

diagnose sys scanunit bypass disable protocol pop3

POP3(S) protocol

```
diagnose sys scanunit bypass disable protocol pop3
```

diagnose sys scanunit bypass disable protocol smtp

SMTP(S) protocol

```
diagnose sys scanunit bypass disable protocol smtp
```

diagnose sys scanunit bypass enable

Enable bypass settings.

```
diagnose sys scanunit bypass enable
```

diagnose sys scanunit bypass enable category

Enable category bypass.

```
diagnose sys scanunit bypass enable category
```

diagnose sys scanunit bypass enable category all

Bypass all.

```
diagnose sys scanunit bypass enable category all
```

diagnose sys scanunit bypass enable category av-engine

Bypass AV engine.

```
diagnose sys scanunit bypass enable category av-engine
```

diagnose sys scanunit bypass enable category scanunit

Bypass scanunit.

```
diagnose sys scanunit bypass enable category scanunit
```

diagnose sys scanunit bypass enable protocol

Enable protocol bypass.

```
diagnose sys scanunit bypass enable protocol
```

diagnose sys scanunit bypass enable protocol all

All proxy protocols

```
diagnose sys scanunit bypass enable protocol all
```

diagnose sys scanunit bypass enable protocol cifs

CIFS protocol

```
diagnose sys scanunit bypass enable protocol cifs
```

diagnose sys scanunit bypass enable protocol ftp

FTP(S) protocol

```
diagnose sys scanunit bypass enable protocol ftp
```

diagnose sys scanunit bypass enable protocol http

HTTP(S) protocol

```
diagnose sys scanunit bypass enable protocol http
```

diagnose sys scanunit bypass enable protocol imap

IMAP(S) protocol

```
diagnose sys scanunit bypass enable protocol imap
```

diagnose sys scanunit bypass enable protocol nntp

NNTP protocol

```
diagnose sys scanunit bypass enable protocol nntp
```

diagnose sys scanunit bypass enable protocol pop3

POP3(S) protocol

```
diagnose sys scanunit bypass enable protocol pop3
```

diagnose sys scanunit bypass enable protocol smtp

SMTP(S) protocol

```
diagnose sys scanunit bypass enable protocol smtp
```

diagnose sys scanunit bypass show

Show bypass settings.

```
diagnose sys scanunit bypass show
```

diagnose sys scanunit cfg

Cached configuration.

```
diagnose sys scanunit cfg
```

diagnose sys scanunit cfg clear

Clear cached configuration.

```
diagnose sys scanunit cfg clear
```

diagnose sys scanunit cfg list

List the key for each cached configuration entry.

```
diagnose sys scanunit cfg list
```

diagnose sys scanunit crash-dump

Enable/disable crash dump.

```
diagnose sys scanunit crash-dump
```

diagnose sys scanunit crash-dump clear

Clear scanunit crash dump.

```
diagnose sys scanunit crash-dump clear
```

diagnose sys scanunit crash-dump disable

Disable scanunit crash dump.

```
diagnose sys scanunit crash-dump disable
```

diagnose sys scanunit crash-dump enable

Enable scanunit crash dump.

```
diagnose sys scanunit crash-dump enable
```

diagnose sys scanunit crash-dump read

Read the last crash dump.

```
diagnose sys scanunit crash-dump read
```

diagnose sys scanunit debug

Debug settings.

```
diagnose sys scanunit debug
```

diagnose sys scanunit debug all

Enable all debug categories.

```
diagnose sys scanunit debug all <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug analytics

Enable analytics category.

```
diagnose sys scanunit debug analytics <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug antispam

Enable antispam category.

```
diagnose sys scanunit debug antispam <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug daemon

Enable scanunit daemon category.

```
diagnose sys scanunit debug daemon <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug dlp

Enable DLP category.

```
diagnose sys scanunit debug dlp <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug fhl

Enable FHL category.

```
diagnose sys scanunit debug fhl <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug file-filter

Enable file filter category.

```
diagnose sys scanunit debug file-filter <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug icb

Enable ICB category.

```
diagnose sys scanunit debug icb <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug job

Enable scanunit job category.

```
diagnose sys scanunit debug job <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug level

Set debug level.

```
diagnose sys scanunit debug level
```

diagnose sys scanunit debug level error

Error level.

```
diagnose sys scanunit debug level error
```

diagnose sys scanunit debug level info

Info level.

```
diagnose sys scanunit debug level info
```

diagnose sys scanunit debug level verbose

Verbose level.

```
diagnose sys scanunit debug level verbose
```

diagnose sys scanunit debug level warning

Warning level.

```
diagnose sys scanunit debug level warning
```

diagnose sys scanunit debug outbreak-prevention

Enable outbreak prevention category.

```
diagnose sys scanunit debug outbreak-prevention <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug quarantine

Enable quarantine category.

```
diagnose sys scanunit debug quarantine <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug reset

Reset debug category and level.

```
diagnose sys scanunit debug reset
```

diagnose sys scanunit debug sane

Enable a sane group of categories.

```
diagnose sys scanunit debug sane <status>
```

Parameter	Description	Type	Size
<status>	Enable or disable debug category.	string	

diagnose sys scanunit debug show

Show current debug settings.

```
diagnose sys scanunit debug show
```

diagnose sys scanunit debug start

Force start scanunit debug connection.

```
diagnose sys scanunit debug start
```

diagnose sys scanunit debug stop

Force stop scanunit debug connection.

```
diagnose sys scanunit debug stop
```

diagnose sys scanunit dlp

DLP data size scanning threshold settings.

```
diagnose sys scanunit dlp
```

diagnose sys scanunit dlp config

Commands for building the dlp config.

```
diagnose sys scanunit dlp config
```

diagnose sys scanunit dlp config build

Rebuild the dlp config.

```
diagnose sys scanunit dlp config build
```

diagnose sys scanunit dlp config status

Show the current status of the dlp builder.

```
diagnose sys scanunit dlp config status
```

diagnose sys scanunit dlp config term

Terminate the dlp config builder process, if running.

```
diagnose sys scanunit dlp config term
```

diagnose sys scanunit dlp reset

Reset DLP data size scanning threshold value.

```
diagnose sys scanunit dlp reset
```

diagnose sys scanunit dlp status

Show DLP data size scanning threshold value.

```
diagnose sys scanunit dlp status
```

diagnose sys scanunit dlp threshold

Set DLP data size scanning threshold in bytes (0 = default).

```
diagnose sys scanunit dlp threshold <Integer>
```

Parameter	Description	Type	Size
<Integer>	DLP data size scanning threshold.	string	

diagnose sys scanunit file-hash

File hash list.

```
diagnose sys scanunit file-hash
```

diagnose sys scanunit file-hash list

List malware hashes.

```
diagnose sys scanunit file-hash list
```

diagnose sys scanunit file-hash list all

List all malware hashes.

```
diagnose sys scanunit file-hash list all
```

diagnose sys scanunit file-hash list md5

List md5 malware hashes.

```
diagnose sys scanunit file-hash list md5
```

diagnose sys scanunit file-hash list sha1

List sha1 malware hashes.

```
diagnose sys scanunit file-hash list sha1
```

diagnose sys scanunit file-hash list sha256

List sha256 malware hashes.

```
diagnose sys scanunit file-hash list sha256
```

diagnose sys scanunit file-hash query

Query a malware hash.

```
diagnose sys scanunit file-hash query
```

diagnose sys scanunit file-hash query md5

Query an md5 malware hash.

```
diagnose sys scanunit file-hash query md5 <value>
```

Parameter	Description	Type	Size
<value>	md5 hash	string	

diagnose sys scanunit file-hash query sha1

Query a sha1 malware hash.

```
diagnose sys scanunit file-hash query sha1 <value>
```

Parameter	Description	Type	Size
<value>	sha1 hash	string	

diagnose sys scanunit file-hash query sha256

Query a sha256 malware hash.

```
diagnose sys scanunit file-hash query sha256 <value>
```

Parameter	Description	Type	Size
<value>	sha256 hash	string	

diagnose sys scanunit file-hash status

File hash database status.

```
diagnose sys scanunit file-hash status
```

diagnose sys scanunit filter

Diagnostics filter.

```
diagnose sys scanunit filter
```

diagnose sys scanunit filter clear

Clear the current filter.

```
diagnose sys scanunit filter clear
```

diagnose sys scanunit filter list

Display the current filter.

```
diagnose sys scanunit filter list
```

diagnose sys scanunit filter negate

Negate the specified filter parameter.

```
diagnose sys scanunit filter negate
```

diagnose sys scanunit filter negate vd

Negate virtual domain.

```
diagnose sys scanunit filter negate vd
```

diagnose sys scanunit filter negate worker

Negate worker ID.

```
diagnose sys scanunit filter negate worker
```

diagnose sys scanunit filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys scanunit filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose sys scanunit filter worker

ID of worker or "m" for manager. Invalid ID matches all.

```
diagnose sys scanunit filter worker <id>
```

Parameter	Description	Type	Size
<id>	ID of worker or "m" for manager. Invalid ID matches all.	string	

diagnose sys scanunit info

Scanunit process info.

```
diagnose sys scanunit info
```

diagnose sys scanunit info shared_status

Print contents of shared status.

```
diagnose sys scanunit info shared_status
```

diagnose sys scanunit log

Logging diagnostics.

```
diagnose sys scanunit log
```

diagnose sys scanunit log filter

Debug log filter.

```
diagnose sys scanunit log filter
```

diagnose sys scanunit log filter clear

Clear the current filter.

```
diagnose sys scanunit log filter clear
```

diagnose sys scanunit log filter list

Display the current filter.

```
diagnose sys scanunit log filter list
```

diagnose sys scanunit log filter negate

Negate the specified filter parameter.

```
diagnose sys scanunit log filter negate
```

diagnose sys scanunit log filter negate vd

Negate virtual domain.

```
diagnose sys scanunit log filter negate vd
```

diagnose sys scanunit log filter negate worker

Negate worker ID.

```
diagnose sys scanunit log filter negate worker
```

diagnose sys scanunit log filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys scanunit log filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose sys scanunit log filter worker

ID of worker or "m" for manager. Invalid ID matches all.

```
diagnose sys scanunit log filter worker <id>
```

Parameter	Description	Type	Size
<id>	ID of worker or "m" for manager. Invalid ID matches all.	string	

diagnose sys scanunit memory

Memory configuration

```
diagnose sys scanunit memory
```

diagnose sys scanunit memory conserve

Enter/exit conserve mode.

```
diagnose sys scanunit memory conserve
```

diagnose sys scanunit memory conserve enter

Enter conserve mode.

```
diagnose sys scanunit memory conserve enter
```

diagnose sys scanunit memory conserve exit

Exit conserve mode.

```
diagnose sys scanunit memory conserve exit
```

diagnose sys scanunit restart

Restart scanunit.

```
diagnose sys scanunit restart <which>
```

Parameter	Description	Type	Size
<which>	Worker id to restart. Or 'all' for all processes.	string	

diagnose sys scanunit simulate-crash

Simulate scanunit crashes.

```
diagnose sys scanunit simulate-crash
```

diagnose sys scanunit simulate-crash lockup-workers

Simulate locked up scanunit workers.

```
diagnose sys scanunit simulate-crash lockup-workers
```

diagnose sys scanunit simulate-crash lockup-workers all

Lock up all workers.

```
diagnose sys scanunit simulate-crash lockup-workers all
```

diagnose sys scanunit simulate-crash lockup-workers worker

Lock up worker <id>.

```
diagnose sys scanunit simulate-crash lockup-workers worker <id>
```

Parameter	Description	Type	Size
<id>	ID of worker to lock up.	string	

diagnose sys scanunit simulate-error

Simulate scanunit errors.

```
diagnose sys scanunit simulate-error
```

diagnose sys scanunit simulate-error av-engine-delay

Add delay in AV engine filetype callback

```
diagnose sys scanunit simulate-error av-engine-delay <Integer>
```

Parameter	Description	Type	Size
<Integer>	Delay (in seconds) to introduce in AV engine filetype callback	string	

diagnose sys scanunit simulate-error av-error

Simulate AV engine error codes

```
diagnose sys scanunit simulate-error av-error <Integer>
```

Parameter	Description	Type	Size
<Integer>	AV engine error code, interpreted as bitmask.	string	

diagnose sys scanunit simulate-error av-status

Simulate AV engine status codes.

```
diagnose sys scanunit simulate-error av-status <Integer>
```

Parameter	Description	Type	Size
<Integer>	AV engine status code. (-1 == INFECTED_ERROR, 1 == INFECTED_VIRUS, etc.)	string	

diagnose sys scanunit simulate-error cdr-error

Simulate CDR engine internal error when active content detected.

```
diagnose sys scanunit simulate-error cdr-error
```

diagnose sys scanunit simulate-error reset

Reset all error simulation settings.

```
diagnose sys scanunit simulate-error reset
```

diagnose sys scanunit simulate-error scan-error-code

Simulate scanunit scan error.

```
diagnose sys scanunit simulate-error scan-error-code <Integer>
```

Parameter	Description	Type	Size
<Integer>	Scanunit error code (negated) (e.g., 0 = none, 3 = invalid infection pointer, 5 = scanunit crash).	string	

diagnose sys scanunit simulate-error status

Show error simulation settings.

```
diagnose sys scanunit simulate-error status
```

diagnose sys scanunit stats

Statistics.

```
diagnose sys scanunit stats
```

diagnose sys scanunit stats all

Per-process statistics.

```
diagnose sys scanunit stats all
```

diagnose sys scanunit stats builder

scanunit builder statistics.

```
diagnose sys scanunit stats builder
```

diagnose sys scanunit stats clear

Clear all statistics.

```
diagnose sys scanunit stats clear
```

diagnose sys scanunit stats crash

Crash process statistics.

```
diagnose sys scanunit stats crash
```

diagnose sys scanunit stats debug

Debug process statistics.

```
diagnose sys scanunit stats debug
```

diagnose sys scanunit stats list

List statistics.

```
diagnose sys scanunit stats list
```

diagnose sys scanunit stats manager

scanunit manager statistics.

```
diagnose sys scanunit stats manager
```

diagnose sys scanunit stats worker

scanunit worker statistics.

```
diagnose sys scanunit stats worker
```

diagnose sys scanunit valgrind

Valgrind analysis.

```
diagnose sys scanunit valgrind
```

diagnose sys scanunit valgrind disable

Force daemon to restart.

```
diagnose sys scanunit valgrind disable
```

diagnose sys scanunit valgrind enable

Force daemon to restart.

```
diagnose sys scanunit valgrind enable
```

diagnose sys scanunit valgrind log

Valgrind logs.

```
diagnose sys scanunit valgrind log
```

diagnose sys scanunit valgrind log clear

Clear logs.

```
diagnose sys scanunit valgrind log clear
```

diagnose sys scanunit valgrind log show

Show logs.

```
diagnose sys scanunit valgrind log show
```

diagnose sys scanunit valgrind memcheck

Force daemon to restart.

```
diagnose sys scanunit valgrind memcheck
```

diagnose sys scanunit valgrind memcheck_less

Force daemon to restart.

```
diagnose sys scanunit valgrind memcheck_less
```

diagnose sys scanunit valgrind status

Show valgrind status.

```
diagnose sys scanunit valgrind status
```

diagnose sys scanunit vdom-stats

Current VDOM statistics.

```
diagnose sys scanunit vdom-stats
```

diagnose sys scanunit vdom-stats all

List all VDOM statistics.

```
diagnose sys scanunit vdom-stats all
```

diagnose sys scanunit vdom-stats clear

Clear current VDOM statistics.

```
diagnose sys scanunit vdom-stats clear
```

diagnose sys scanunit vdom-stats clear-all

Clear all VDOM statistics.

```
diagnose sys scanunit vdom-stats clear-all
```

diagnose sys scanunit vdom-stats list

List current VDOM statistics.

```
diagnose sys scanunit vdom-stats list
```

diagnose sys scanunit watchdog-override

Configure scanunit manager watchdog override.

```
diagnose sys scanunit watchdog-override
```

diagnose sys scanunit watchdog-override disable

Disable watchdog override.

```
diagnose sys scanunit watchdog-override disable
```

diagnose sys scanunit watchdog-override enable

Enable watchdog override.

```
diagnose sys scanunit watchdog-override enable
```

diagnose sys scanunit watchdog-override interval

Set watchdog override interval.

```
diagnose sys scanunit watchdog-override interval <time>
```

Parameter	Description	Type	Size
<time>	Override interval (sec) for worker watchdog.	string	

diagnose sys sccp-proxy

SCCP proxy diagnostics.

```
diagnose sys sccp-proxy
```

diagnose sys sccp-proxy debug-console

Debug consoles.

```
diagnose sys sccp-proxy debug-console
```

diagnose sys sccp-proxy phone

SCCP phones.

```
diagnose sys sccp-proxy phone
```

diagnose sys sccp-proxy phone list

List SCCP phones.

```
diagnose sys sccp-proxy phone list
```

diagnose sys sccp-proxy redirect

Redirects

```
diagnose sys sccp-proxy redirect
```

diagnose sys sccp-proxy redirect list

List SIP redirects.

```
diagnose sys sccp-proxy redirect list
```

diagnose sys sccp-proxy restart

Restart SIP and SCCP.

```
diagnose sys sccp-proxy restart
```

diagnose sys sccp-proxy stats

SCCP statistics.

```
diagnose sys sccp-proxy stats
```

diagnose sys sccp-proxy stats clear

Clear SCCP statistics.

```
diagnose sys sccp-proxy stats clear
```

diagnose sys sccp-proxy stats list

List SCCP statistics.

```
diagnose sys sccp-proxy stats list
```

diagnose sys sccp-proxy stats mem

Memory usage.

```
diagnose sys sccp-proxy stats mem
```

diagnose sys sccp-proxy stats mem full

Memory usage details.

```
diagnose sys sccp-proxy stats mem full
```

diagnose sys sccp-proxy stats mem summary

Memory usage summary.

```
diagnose sys sccp-proxy stats mem summary
```

diagnose sys sccp-proxy stats proto

SCCP proxy general protocol statistics summary.

```
diagnose sys sccp-proxy stats proto
```

diagnose sys sccp-proxy valgrind

Valgrind analysis.

```
diagnose sys sccp-proxy valgrind
```

diagnose sys sccp-proxy valgrind disable

Force daemon to restart.

```
diagnose sys sccp-proxy valgrind disable
```

diagnose sys sccp-proxy valgrind enable

Force daemon to restart.

```
diagnose sys sccp-proxy valgrind enable
```

diagnose sys sccp-proxy valgrind log

Valgrind logs.

```
diagnose sys sccp-proxy valgrind log
```

diagnose sys sccp-proxy valgrind log clear

Clear logs.

```
diagnose sys sccp-proxy valgrind log clear
```

diagnose sys sccp-proxy valgrind log show

Show logs.

```
diagnose sys sccp-proxy valgrind log show
```

diagnose sys sccp-proxy valgrind memcheck

Force daemon to restart.

```
diagnose sys sccp-proxy valgrind memcheck
```

diagnose sys sccp-proxy valgrind memcheck_less

Force daemon to restart.

```
diagnose sys sccp-proxy valgrind memcheck_less
```

diagnose sys sccp-proxy valgrind status

Show valgrind status.

```
diagnose sys sccp-proxy valgrind status
```

diagnose sys sdn

SDN Connector diagnostics.

```
diagnose sys sdn
```

diagnose sys sdn cache

Show SDN Connector cache.

```
diagnose sys sdn cache <sdn-data-type> <sdn-connector-name>
```

Parameter	Description	Type	Size
<sdn-data-type>	Specify the data type of the SDN Connector: address/service.	string	
<sdn-connector-name>	Specify the name of the SDN connector.	string	

diagnose sys sdn status

Show SDN Connector status.

```
diagnose sys sdn status <sdn-connector-name> <server-ip-address>
```

Parameter	Description	Type	Size
<sdn-connector-name>	Specify the name of the SDN Connector.	string	
<server-ip-address>	Specify the IP address of the SDN connector.	string	

diagnose sys sdwan

SD-WAN.

```
diagnose sys sdwan
```

diagnose sys sdwan advpn

Show health check info of advpn in SD-WAN.

```
diagnose sys sdwan advpn <num-info>
```

Parameter	Description	Type	Size
<num-info>	num of SDWAN members.	string	

diagnose sys sdwan advpn-session

Show advpn session info.

```
diagnose sys sdwan advpn-session
```

diagnose sys sdwan health-check

Health Check.

```
diagnose sys sdwan health-check
```

diagnose sys sdwan health-check filter

Filter health-check

```
diagnose sys sdwan health-check filter
```

diagnose sys sdwan health-check filter clear

Clear all filters.

```
diagnose sys sdwan health-check filter clear
```

diagnose sys sdwan health-check filter member

Member sequence numbers <seq>.

```
diagnose sys sdwan health-check filter member <member>
```

Parameter	Description	Type	Size
<member>	Member sequence numbers.	string	

diagnose sys sdwan health-check filter name

Health Check names <name>.

```
diagnose sys sdwan health-check filter name <name>
```

Parameter	Description	Type	Size
<name>	Health Check name.	string	

diagnose sys sdwan health-check remote

Remote health check.

```
diagnose sys sdwan health-check remote <name> <seq-num>
```

Parameter	Description	Type	Size
<name>	Show status of the remote health check.	string	
<seq-num>	Sequence number of the member.	string	

diagnose sys sdwan health-check status

Health Check Status.

```
diagnose sys sdwan health-check status <name>
```

Parameter	Description	Type	Size
<name>	Show running status of the health check in SD-WAN.	string	

diagnose sys sdwan internet-service-app-ctrl-3t-set

Set application control Internet Service 3T Info: ctrl-app-id, IP address, protocol & port

```
diagnose sys sdwan internet-service-app-ctrl-3t-set <ctrl-app-id> <ip> <proto> <port>
```

Parameter	Description	Type	Size
<ctrl-app-id>	ctrl app id	string	
<ip>	Service IP address.	string	
<proto>	Service protocol(0-255) for instance: tcp is 6	string	
<port>	Service port(0-65535).	string	

diagnose sys sdwan internet-service-app-ctrl-3t-unset

Unset application control Internet Service 3T Info: ctrl-app-id, IP address, protocol & port

```
diagnose sys sdwan internet-service-app-ctrl-3t-unset <ctrl-app-id> <ip> <proto> <port>
```

Parameter	Description	Type	Size
<ctrl-app-id>	ctrl app id	string	
<ip>	Service IP address.	string	
<proto>	Service protocol(0-255) for instance: tcp is 6	string	
<port>	Service port(0-65535).	string	

diagnose sys sdwan internet-service-app-ctrl-flush

Flush application control Internet Service.

```
diagnose sys sdwan internet-service-app-ctrl-flush
```

diagnose sys sdwan internet-service-app-ctrl-list

Show application control Internet Service ID list.

```
diagnose sys sdwan internet-service-app-ctrl-list
```

diagnose sys sdwan internet-service-app-ctrl-list app-id

Show application control Internet Service ID info of one given application id.

```
diagnose sys sdwan internet-service-app-ctrl-list app-id <app-id>
```

Parameter	Description	Type	Size
<app-id>	application control id.	string	

diagnose sys sdwan internet-service-app-ctrl-list cat-id

Show application control Internet Service ID info of one given application category id.

```
diagnose sys sdwan internet-service-app-ctrl-list cat-id <cat-id>
```

Parameter	Description	Type	Size
<cat-id>	application category id.	string	

diagnose sys sdwan internet-service-app-ctrl6-3t-set

Set application control6 Internet Service 3T Info: ctrl-app-id, IP address, protocol & port

```
diagnose sys sdwan internet-service-app-ctrl6-3t-set <ctrl-app-id> <ip> <proto> <port>
```

Parameter	Description	Type	Size
<ctrl-app-id>	ctrl app id	string	
<ip>	Service IP address(Ipv6).	string	
<proto>	Service protocol(0-255) for instance: tcp is 6	string	
<port>	Service port(0-65535).	string	

diagnose sys sdwan internet-service-app-ctrl6-3t-unset

Unset application control6 Internet Service 3T Info: ctrl-app-id, IP address, protocol & port

```
diagnose sys sdwan internet-service-app-ctrl6-3t-unset <ctrl-app-id> <ip> <proto> <port>
```

Parameter	Description	Type	Size
<ctrl-app-id>	ctrl app id	string	
<ip>	Service IP address(Ipv6).	string	
<proto>	Service protocol(0-255) for instance: tcp is 6	string	
<port>	Service port(0-65535).	string	

diagnose sys sdwan internet-service-app-ctrl6-flush

Flush application control Internet Service6.

```
diagnose sys sdwan internet-service-app-ctrl6-flush
```

diagnose sys sdwan internet-service-app-ctrl6-list

Show application control Internet Service6 ID list.

```
diagnose sys sdwan internet-service-app-ctrl6-list
```

diagnose sys sdwan internet-service-app-ctrl6-list app-id

Show application control Internet Service6 ID info of one given application id.

```
diagnose sys sdwan internet-service-app-ctrl6-list app-id <app-id>
```

Parameter	Description	Type	Size
<app-id>	application control id.	string	

diagnose sys sdwan internet-service-app-ctrl6-list cat-id

Show application control Internet Service6 ID info of one given application category id.

```
diagnose sys sdwan internet-service-app-ctrl6-list cat-id <cat-id>
```

Parameter	Description	Type	Size
<cat-id>	application category id.	string	

diagnose sys sdwan intf-sla-log

Show details of interface quality information.

```
diagnose sys sdwan intf-sla-log <name>
```

Parameter	Description	Type	Size
<name>	Interface name.	string	

diagnose sys sdwan log

Log.

```
diagnose sys sdwan log <service-id>
```

Parameter	Description	Type	Size
<service-id>	Show details of traffic log on service in SD-WAN.	string	

diagnose sys sdwan member

Member.

```
diagnose sys sdwan member <seq-num>
```

Parameter	Description	Type	Size
<seq-num>	Show details of member in SD-WAN.	string	

diagnose sys sdwan neighbor

Neighbor.

```
diagnose sys sdwan neighbor <name>
```

Parameter	Description	Type	Size
<name>	Show running status of the neighbor in SD-WAN.	string	

diagnose sys sdwan reset

Reset SD-WAN.

```
diagnose sys sdwan reset
```

diagnose sys sdwan route

Dump SD-WAN routes.

```
diagnose sys sdwan route <seq-num>
```

Parameter	Description	Type	Size
<seq-num>	Show details of SD-WAN routes.	string	

diagnose sys sdwan route6

Dump IPv6 SD-WAN routes.

```
diagnose sys sdwan route6 <seq-num>
```

Parameter	Description	Type	Size
<seq-num>	Show details of IPv6 SD-WAN routes.	string	

diagnose sys sdwan service4

IPv4 Service.

```
diagnose sys sdwan service4 <id>
```

Parameter	Description	Type	Size
<id>	Show details of IPv4 service in SD-WAN.	string	

diagnose sys sdwan service6

IPv6 Service.

```
diagnose sys sdwan service6 <id>
```

Parameter	Description	Type	Size
<id>	Show details of IPv6 service in SD-WAN.	string	

diagnose sys sdwan sla-log

Show details of health-check quality information in last 10 minutes

```
diagnose sys sdwan sla-log <name> <seq-num> <childname>
```

Parameter	Description	Type	Size
<name>	Health check name.	string	
<seq-num>	Sequence number of the member.	string	
<childname>	Child interface name.	string	

diagnose sys sdwan zone

Dump sdwan zone info in kernel.

```
diagnose sys sdwan zone
```

diagnose sys server-probe

Server probe.

```
diagnose sys server-probe
```

diagnose sys server-probe response

Probe response.

```
diagnose sys server-probe response
```

diagnose sys service-communication

Show historical statistics for communication with FortiGuard services.

```
diagnose sys service-communication
```

diagnose sys session

IPv4 session.

```
diagnose sys session
```

diagnose sys session clear

Clear the sessions defined by filter.

```
diagnose sys session clear
```

diagnose sys session exp-stat

Expectation session statistics.

```
diagnose sys session exp-stat
```

diagnose sys session filter

List session with filters.

```
diagnose sys session filter
```

diagnose sys session filter clear

Clear session filter.

```
diagnose sys session filter clear
```

diagnose sys session filter clear dintf

Clear destination interface filter.

```
diagnose sys session filter clear dintf
```

diagnose sys session filter clear dport

Clear destination port filter.

```
diagnose sys session filter clear dport
```

diagnose sys session filter clear dst

Clear destination IP filter.

```
diagnose sys session filter clear dst
```

diagnose sys session filter clear duration

Clear duration filter.

```
diagnose sys session filter clear duration
```

diagnose sys session filter clear expire

Clear expire filter.

```
diagnose sys session filter clear expire
```

diagnose sys session filter clear nport

clear NAT'd source port filter

```
diagnose sys session filter clear nport
```

diagnose sys session filter clear nsrc

clear NAT'd source IP filter

```
diagnose sys session filter clear nsrc
```

diagnose sys session filter clear policy

Clear policy ID filter.

```
diagnose sys session filter clear policy
```

diagnose sys session filter clear proto

Clear protocol filter.

```
diagnose sys session filter clear proto
```

diagnose sys session filter clear proto-state

Clear protocol state filter.

```
diagnose sys session filter clear proto-state
```

diagnose sys session filter clear session-state1

Clear session-state1 filter.

```
diagnose sys session filter clear session-state1
```

diagnose sys session filter clear session-state2

Clear session-state2 filter.

```
diagnose sys session filter clear session-state2
```

diagnose sys session filter clear sintf

Clear source interface filter.

```
diagnose sys session filter clear sintf
```

diagnose sys session filter clear sport

Clear source port filter.

```
diagnose sys session filter clear sport
```

diagnose sys session filter clear src

Clear source IP filter.

```
diagnose sys session filter clear src
```

diagnose sys session filter clear vd

Clear virtual domain filter.

```
diagnose sys session filter clear vd
```

diagnose sys session filter dintf

Destination interface.

```
diagnose sys session filter dintf <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	Interface name.	string	

diagnose sys session filter dport

Destination port.

```
diagnose sys session filter dport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys session filter dst

Destination IP address.

```
diagnose sys session filter dst <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Destination IP (from).	string	
<xxx.xxx.xxx.xxx>	Destination IP (to).	string	

diagnose sys session filter duration

duration

```
diagnose sys session filter duration <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Duration (from).	string	
<xxx>	Duration (to).	string	

diagnose sys session filter expire

expire

```
diagnose sys session filter expire <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Expire (from).	string	
<xxx>	Expire (to).	string	

diagnose sys session filter ext-dst

Add a destination address to the extended match list.

```
diagnose sys session filter ext-dst <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Destination IP.	string	

diagnose sys session filter ext-dst-negate

Add a destination address to the negated extended match list.

```
diagnose sys session filter ext-dst-negate <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Destination IP.	string	

diagnose sys session filter ext-src

Add a source address to the extended match list.

```
diagnose sys session filter ext-src <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP.	string	

diagnose sys session filter ext-src-negate

Add a source address to the negated extended match list.

```
diagnose sys session filter ext-src-negate <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP.	string	

diagnose sys session filter negate

Inverse filter.

```
diagnose sys session filter negate
```

diagnose sys session filter negate dintf

Inverse destination interface.

```
diagnose sys session filter negate dintf
```

diagnose sys session filter negate dport

Inverse destination port.

```
diagnose sys session filter negate dport
```

diagnose sys session filter negate dst

Inverse destination IP.

```
diagnose sys session filter negate dst
```

diagnose sys session filter negate duration

Inverse duration.

```
diagnose sys session filter negate duration
```

diagnose sys session filter negate expire

Inverse expire.

```
diagnose sys session filter negate expire
```

diagnose sys session filter negate nport

inverse NAT'd source port

```
diagnose sys session filter negate nport
```

diagnose sys session filter negate nsrc

inverse NAT'd source IP

```
diagnose sys session filter negate nsrc
```

diagnose sys session filter negate policy

Inverse policy ID.

```
diagnose sys session filter negate policy
```

diagnose sys session filter negate proto

Inverse protocol.

```
diagnose sys session filter negate proto
```

diagnose sys session filter negate proto-state

Inverse protocol state.

```
diagnose sys session filter negate proto-state
```

diagnose sys session filter negate session-state1

Inverse session-state1.

```
diagnose sys session filter negate session-state1
```

diagnose sys session filter negate session-state2

Inverse session-state2.

```
diagnose sys session filter negate session-state2
```

diagnose sys session filter negate intf

Inverse source interface.

```
diagnose sys session filter negate intf
```

diagnose sys session filter negate sport

Inverse source port.

```
diagnose sys session filter negate sport
```

diagnose sys session filter negate src

Inverse source IP.

```
diagnose sys session filter negate src
```

diagnose sys session filter negate vd

Inverse virtual domain.

```
diagnose sys session filter negate vd
```

diagnose sys session filter nport

NAT'd source port

```
diagnose sys session filter nport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys session filter nsrc

NAT'd source ip address

```
diagnose sys session filter nsrc <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	NAT'd source ip (from)	string	
<xxx.xxx.xxx.xxx>	NAT'd source ip (to)	string	

diagnose sys session filter policy

Policy ID.

```
diagnose sys session filter policy <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Policy ID (from).	string	
<xxx>	Policy ID (to).	string	

diagnose sys session filter proto

Protocol number.

```
diagnose sys session filter proto <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	<0-255> (from).	string	
<xx>	<0-255> (to).	string	

diagnose sys session filter proto-state

Protocol state.

```
diagnose sys session filter proto-state <x> <x>
```

Parameter	Description	Type	Size
<x>	<0-9> (from). 0: ANY 1: TCP_S_ESTABLISHED, SCTP_S_ESTABLISHED 2: TCP_S_SYN_SENT, SCTP_S_CLOSED 3: TCP_S_SYN_RECV, SCTP_S_COOKIE_WAIT 4: TCP_S_FIN_WAIT, SCTP_S_COOKIE_ECHOED 5: TCP_S_TIME_WAIT, SCTP_S_SHUTDOWN_SENT 6: TCP_S_CLOSE, SCTP_S_SHUTDOWN_RECV 7: TCP_S_CLOSE_WAIT, SCTP_S_SHUTDOWN_ACK_SENT 8: TCP_S_LAST_ACK 9: TCP_S_LISTEN	string	
<x>	<0-9> (to). 0: ANY 1: TCP_S_ESTABLISHED, SCTP_S_ESTABLISHED 2: TCP_S_SYN_SENT, SCTP_S_CLOSED 3: TCP_S_SYN_RECV, SCTP_S_COOKIE_WAIT 4: TCP_S_FIN_WAIT, SCTP_S_COOKIE_ECHOED 5: TCP_S_TIME_WAIT, SCTP_S_SHUTDOWN_SENT 6: TCP_S_CLOSE, SCTP_S_SHUTDOWN_RECV 7: TCP_S_CLOSE_WAIT, SCTP_S_SHUTDOWN_ACK_SENT 8: TCP_S_LAST_ACK 9: TCP_S_LISTEN	string	

diagnose sys session filter session-state1

Session state1.

```
diagnose sys session filter session-state1 <x> <x>
```

Parameter	Description	Type	Size
<x>	<0-FFFFFFFF>, state bits.	string	
<x>	<0-FFFFFFFF>, state bit mask.	string	

diagnose sys session filter session-state2

Session state2.

```
diagnose sys session filter session-state2 <x> <x>
```

Parameter	Description	Type	Size
<x>	<0-FFFFFFFF>, state bits.	string	
<x>	<0-FFFFFFFF>, state bit mask.	string	

diagnose sys session filter sintf

Source interface.

```
diagnose sys session filter sintf <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	Interface name.	string	

diagnose sys session filter sport

Source port.

```
diagnose sys session filter sport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys session filter src

Source IP address.

```
diagnose sys session filter src <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP (from).	string	
<xxx.xxx.xxx.xxx>	Source IP (to).	string	

diagnose sys session filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys session filter vd <xxx>
```

Parameter	Description	Type	Size
<xxx>	Index of virtual domain. -1 matches all.	string	

diagnose sys session filter vd-name

Name of virtual domain. -1 or "any" matches all.

```
diagnose sys session filter vd-name <...>
```

Parameter	Description	Type	Size
<...>	Name of virtual domain. -1 or "any" matches all.	string	

diagnose sys session full-stat

Fully stat session.

```
diagnose sys session full-stat
```

diagnose sys session help

Session help.

```
diagnose sys session help
```

diagnose sys session help add

Add session help.

```
diagnose sys session help add <name> <protocol> <port>
```

Parameter	Description	Type	Size
<name>	Help name.	string	
<protocol>	Protocol number.	string	
<port>	Help port.	string	

diagnose sys session help delete

Delete session help.

```
diagnose sys session help delete <protocol> <port>
```

Parameter	Description	Type	Size
<protocol>	Protocol number.	string	
<port>	Help port.	string	

diagnose sys session help list

List session help.

```
diagnose sys session help list
```

diagnose sys session list

List session.

```
diagnose sys session list
```

diagnose sys session list expectation

List expectation session.

```
diagnose sys session list expectation
```

diagnose sys session stat

Stat session.

```
diagnose sys session stat
```

diagnose sys session sync

List session sync.

```
diagnose sys session sync
```

diagnose sys session sync reset

Reset session sync.

```
diagnose sys session sync reset
```

diagnose sys session ttl

TTL session.

```
diagnose sys session ttl
```

diagnose sys session6

IPv6 session.

```
diagnose sys session6
```

diagnose sys session6 clear

Clear IPv6 sessions defined by filter.

```
diagnose sys session6 clear
```

diagnose sys session6 exp-stat

Expectation session statistics.

```
diagnose sys session6 exp-stat
```

diagnose sys session6 filter

List IPv6 session with filters.

```
diagnose sys session6 filter
```

diagnose sys session6 filter clear

Clear IPv6 session filter.

```
diagnose sys session6 filter clear
```

diagnose sys session6 filter clear dintf

Clear destination interface filter.

```
diagnose sys session6 filter clear dintf
```

diagnose sys session6 filter clear dport

Clear destination port filter.

```
diagnose sys session6 filter clear dport
```

diagnose sys session6 filter clear dst

Clear destination IP filter.

```
diagnose sys session6 filter clear dst
```

diagnose sys session6 filter clear duration

Clear duration filter.

```
diagnose sys session6 filter clear duration
```

diagnose sys session6 filter clear expire

Clear expire filter.

```
diagnose sys session6 filter clear expire
```

diagnose sys session6 filter clear nport

Clear NAT'd source port filter.

```
diagnose sys session6 filter clear nport
```

diagnose sys session6 filter clear nsrc

Clear NAT'd source IP filter.

```
diagnose sys session6 filter clear nsrc
```

diagnose sys session6 filter clear policy

Clear policy ID filter.

```
diagnose sys session6 filter clear policy
```

diagnose sys session6 filter clear proto

Clear protocol filter.

```
diagnose sys session6 filter clear proto
```

diagnose sys session6 filter clear proto-state

Clear protocol state filter.

```
diagnose sys session6 filter clear proto-state
```

diagnose sys session6 filter clear session-state1

Clear session-state1 filter.

```
diagnose sys session6 filter clear session-state1
```

diagnose sys session6 filter clear session-state2

Clear session-state2 filter.

```
diagnose sys session6 filter clear session-state2
```

diagnose sys session6 filter clear sintf

Clear source interface filter.

```
diagnose sys session6 filter clear sintf
```

diagnose sys session6 filter clear sport

Clear source port filter.

```
diagnose sys session6 filter clear sport
```

diagnose sys session6 filter clear src

Clear source IP filter.

```
diagnose sys session6 filter clear src
```

diagnose sys session6 filter clear vd

Clear virtual domain filter.

```
diagnose sys session6 filter clear vd
```

diagnose sys session6 filter dintf

Destination interface.

```
diagnose sys session6 filter dintf <xxxxx>
```

Parameter	Description	Type	Size
<xxxxx>	Interface name.	string	

diagnose sys session6 filter dport

Destination port.

```
diagnose sys session6 filter dport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys session6 filter dst

Destination IP address.

```
diagnose sys session6 filter dst <xxx:xxx::xxx:xxx> <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Destination IP (from).	string	
<xxx:xxx::xxx:xxx>	Destination IP (to).	string	

diagnose sys session6 filter duration

duration

```
diagnose sys session6 filter duration <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Duration (from).	string	
<xxx>	Duration (to).	string	

diagnose sys session6 filter expire

expire

```
diagnose sys session6 filter expire <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Expire (from).	string	
<xxx>	Expire (to).	string	

diagnose sys session6 filter ext-dst

Add a destination address to the extended match list.

```
diagnose sys session6 filter ext-dst <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Destination IP.	string	

diagnose sys session6 filter ext-dst-negate

Add a destination address to the negated extended match list.

```
diagnose sys session6 filter ext-dst-negate <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Destination IP.	string	

diagnose sys session6 filter ext-src

Add a source address to the extended match list.

```
diagnose sys session6 filter ext-src <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Source IP.	string	

diagnose sys session6 filter ext-src-negate

Add a source address to the negated extended match list.

```
diagnose sys session6 filter ext-src-negate <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Source IP.	string	

diagnose sys session6 filter negate

Inverse filter.

```
diagnose sys session6 filter negate
```

diagnose sys session6 filter negate dintf

Inverse destination interface.

```
diagnose sys session6 filter negate dintf
```

diagnose sys session6 filter negate dport

Inverse destination port.

```
diagnose sys session6 filter negate dport
```

diagnose sys session6 filter negate dst

Inverse destination IP.

```
diagnose sys session6 filter negate dst
```

diagnose sys session6 filter negate duration

Inverse duration.

```
diagnose sys session6 filter negate duration
```

diagnose sys session6 filter negate expire

Inverse expire.

```
diagnose sys session6 filter negate expire
```

diagnose sys session6 filter negate nport

Inverse NAT'd source port.

```
diagnose sys session6 filter negate nport
```

diagnose sys session6 filter negate nsrc

Inverse NAT'd source IP.

```
diagnose sys session6 filter negate nsrc
```

diagnose sys session6 filter negate policy

Inverse policy ID.

```
diagnose sys session6 filter negate policy
```

diagnose sys session6 filter negate proto

Inverse protocol.

```
diagnose sys session6 filter negate proto
```

diagnose sys session6 filter negate proto-state

Inverse protocol state.

```
diagnose sys session6 filter negate proto-state
```

diagnose sys session6 filter negate session-state1

Inverse session-state1.

```
diagnose sys session6 filter negate session-state1
```

diagnose sys session6 filter negate session-state2

Inverse session-state2.

```
diagnose sys session6 filter negate session-state2
```

diagnose sys session6 filter negate sintf

Inverse source interface.

```
diagnose sys session6 filter negate sintf
```

diagnose sys session6 filter negate sport

Inverse source port.

```
diagnose sys session6 filter negate sport
```

diagnose sys session6 filter negate src

Inverse source IP.

```
diagnose sys session6 filter negate src
```

diagnose sys session6 filter negate vd

Inverse virtual domain.

```
diagnose sys session6 filter negate vd
```

diagnose sys session6 filter nport

NAT'd source port.

```
diagnose sys session6 filter nport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys session6 filter nsrc

NAT'd source IP address.

```
diagnose sys session6 filter nsrc <xxx:xxx::xxx:xxx> <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	NAT'd source IP (from).	string	
<xxx:xxx::xxx:xxx>	NAT'd Source IP (to).	string	

diagnose sys session6 filter policy

Policy ID.

```
diagnose sys session6 filter policy <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Policy ID (from).	string	
<xxx>	Policy ID (to).	string	

diagnose sys session6 filter proto

Protocol number.

```
diagnose sys session6 filter proto <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	<0-255> (from).	string	
<xx>	<0-255> (to).	string	

diagnose sys session6 filter proto-state

Protocol state.

```
diagnose sys session6 filter proto-state <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	<0-255> (from).	string	
<xx>	<0-255> (to).	string	

diagnose sys session6 filter session-state1

Session state1.

```
diagnose sys session6 filter session-state1 <x> <x>
```

Parameter	Description	Type	Size
<x>	<0-FFFFFFFF>, state bits.	string	
<x>	<0-FFFFFFFF>, state bit mask.	string	

diagnose sys session6 filter session-state2

Session state2.

```
diagnose sys session6 filter session-state2 <x> <x>
```

Parameter	Description	Type	Size
<x>	<0-FFFFFFFF>, state bits.	string	
<x>	<0-FFFFFFFF>, state bit mask.	string	

diagnose sys session6 filter sintf

Source interface.

```
diagnose sys session6 filter sintf <xxxxx>
```

Parameter	Description	Type	Size
<xxxxx>	Interface name.	string	

diagnose sys session6 filter sport

Source port.

```
diagnose sys session6 filter sport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

diagnose sys session6 filter src

Source IP address.

```
diagnose sys session6 filter src <xxx:xxx::xxx:xxx> <xxx:xxx::xxx:xxx>
```

Parameter	Description	Type	Size
<xxx:xxx::xxx:xxx>	Source IP (from).	string	
<xxx:xxx::xxx:xxx>	Source IP (to).	string	

diagnose sys session6 filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys session6 filter vd <xxx>
```

Parameter	Description	Type	Size
<xxx>	Index of virtual domain. -1 matches all.	string	

diagnose sys session6 filter vd-name

name of virtual domain. -1 or "any" matches all.

```
diagnose sys session6 filter vd-name <...>
```

Parameter	Description	Type	Size
<...>	Name of virtual domain. -1 or "any" matches all.	string	

diagnose sys session6 full-stat

Fully stat session.

```
diagnose sys session6 full-stat
```

diagnose sys session6 help

IPv6 session help.

```
diagnose sys session6 help
```

diagnose sys session6 help add

Add session help.

```
diagnose sys session6 help add <name> <protocol> <port>
```

Parameter	Description	Type	Size
<name>	Help name.	string	
<protocol>	Protocol number.	string	
<port>	Help port.	string	

diagnose sys session6 help delete

Delete session help.

```
diagnose sys session6 help delete <protocol> <port>
```

Parameter	Description	Type	Size
<protocol>	Protocol number.	string	
<port>	Help port.	string	

diagnose sys session6 help list

List IPv6 session help.

```
diagnose sys session6 help list
```

diagnose sys session6 list

List IPv6 session.

```
diagnose sys session6 list
```

diagnose sys session6 list expectation

List IPv6 expectation session.

```
diagnose sys session6 list expectation
```

diagnose sys session6 stat

Stat session.

```
diagnose sys session6 stat
```

diagnose sys session6 sync

List session6 sync.

```
diagnose sys session6 sync
```

diagnose sys session6 sync reset

Reset session6 sync.

```
diagnose sys session6 sync reset
```

diagnose sys shmfile

shmfile related information.

```
diagnose sys shmfile
```

diagnose sys shmfile dump

dump.

```
diagnose sys shmfile dump
```

diagnose sys shmfile dump oid-app

oid-app information.

```
diagnose sys shmfile dump oid-app <path.name>
```

Parameter	Description	Type	Size
<path.name>	object's path.name.	string	

diagnose sys shmfile dump oid-slab

oid-slab information.

```
diagnose sys shmfile dump oid-slab <path.object>
```

Parameter	Description	Type	Size
<path.object>	vdom root object's information.	string	

diagnose sys shmfile dump slab-file

slab file information.

```
diagnose sys shmfile dump slab-file [file]
```

Parameter	Description	Type	Size
[file]	file name.	string	

diagnose sys shmfile dump table-count

table count information.

```
diagnose sys shmfile dump table-count
```

diagnose sys shmfile dump table-count total

total table count information.

```
diagnose sys shmfile dump table-count total <path.name>
```

Parameter	Description	Type	Size
<path.name>	object's path.name (e.g. system.interface).	string	

diagnose sys shmfile dump table-count vdom

vdom table count information.

```
diagnose sys shmfile dump table-count vdom <vdom-name> <path.name>
```

Parameter	Description	Type	Size
<vdom-name>	vdom name.	string	
<path.name>	object's path.name (e.g. system.interface).	string	

diagnose sys shmfile dump vdom

vdom information.

```
diagnose sys shmfile dump vdom <vdom-name>
```

Parameter	Description	Type	Size
<vdom-name>	vdom name.	string	

diagnose sys sip

SIP diagnostics.

```
diagnose sys sip
```

diagnose sys sip debug-mask

Mask for SIP kernel trace.

```
diagnose sys sip debug-mask <mask>
```

Parameter	Description	Type	Size
<mask>	For example, 0, 1, 2, 3 ...	string	

diagnose sys sip dialog

SIP dialog.

```
diagnose sys sip dialog
```

diagnose sys sip dialog clear

Clear SIP dialogs.

```
diagnose sys sip dialog clear
```

diagnose sys sip dialog list

List SIP dialogs.

```
diagnose sys sip dialog list
```

diagnose sys sip mapping

SIP mapping.

```
diagnose sys sip mapping
```

diagnose sys sip mapping list

List SIP mappings.

```
diagnose sys sip mapping list
```

diagnose sys sip status

Display SIP status.

```
diagnose sys sip status
```

diagnose sys sip-proxy

SIP proxy diagnostics.

```
diagnose sys sip-proxy
```

diagnose sys sip-proxy alg

SIP to ALG passing.

```
diagnose sys sip-proxy alg
```

diagnose sys sip-proxy alg bypass

Pass SIP to ALG but pass it directly through without parsing.

```
diagnose sys sip-proxy alg bypass
```

diagnose sys sip-proxy alg parse-only

Pass SIP to ALG and parse but do not modify.

```
diagnose sys sip-proxy alg parse-only
```

diagnose sys sip-proxy calls

SIP calls.

```
diagnose sys sip-proxy calls
```

diagnose sys sip-proxy calls clear

Clear all active SIP calls.

```
diagnose sys sip-proxy calls clear
```

diagnose sys sip-proxy calls idle

List idle SIP calls.

```
diagnose sys sip-proxy calls idle
```

diagnose sys sip-proxy calls invite

List SIP invite transactions.

```
diagnose sys sip-proxy calls invite
```

diagnose sys sip-proxy calls list

List active SIP calls.

```
diagnose sys sip-proxy calls list
```

diagnose sys sip-proxy config

Configuration details.

```
diagnose sys sip-proxy config
```

diagnose sys sip-proxy config list

Display SIP per-policy configurations.

```
diagnose sys sip-proxy config list
```

diagnose sys sip-proxy config profiles

Display SIP VoIP profiles.

```
diagnose sys sip-proxy config profiles
```

diagnose sys sip-proxy debug-console

Debug consoles.

```
diagnose sys sip-proxy debug-console
```

diagnose sys sip-proxy filter

Filter for listing meters and calls.

```
diagnose sys sip-proxy filter
```

diagnose sys sip-proxy filter clear

Erase the current filter.

```
diagnose sys sip-proxy filter clear
```

diagnose sys sip-proxy filter dst-addr4

Destination address range to filter by.

```
diagnose sys sip-proxy filter dst-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Destination IPv4 address (from).	string	
<ipv4-address>	Destination IPv4 address (to).	string	

diagnose sys sip-proxy filter dst-addr6

IPv6 destination address range to filter by.

```
diagnose sys sip-proxy filter dst-addr6 <ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Destination IPv6 address (from).	string	
<ipv6-address>	Destination IPv6 address (to).	string	

diagnose sys sip-proxy filter dst-port

Destination port to filter by.

```
diagnose sys sip-proxy filter dst-port <port>
```

Parameter	Description	Type	Size
<port>	Source port.	string	

diagnose sys sip-proxy filter list

Display the current filter.

```
diagnose sys sip-proxy filter list
```

diagnose sys sip-proxy filter negate

Negate the specified filter parameter.

```
diagnose sys sip-proxy filter negate
```

diagnose sys sip-proxy filter negate dst-addr4

Negate the dst-addr4 filter.

```
diagnose sys sip-proxy filter negate dst-addr4
```

diagnose sys sip-proxy filter negate dst-addr6

Negate the dst-addr6 filter.

```
diagnose sys sip-proxy filter negate dst-addr6
```

diagnose sys sip-proxy filter negate dst-port

Negate the dst-port filter.

```
diagnose sys sip-proxy filter negate dst-port
```

diagnose sys sip-proxy filter negate policy

Negate the policy filter.

```
diagnose sys sip-proxy filter negate policy
```

diagnose sys sip-proxy filter negate policy-type

Negate the policy-type filter.

```
diagnose sys sip-proxy filter negate policy-type
```

diagnose sys sip-proxy filter negate src-addr4

Negate the src-addr4 filter.

```
diagnose sys sip-proxy filter negate src-addr4
```

diagnose sys sip-proxy filter negate src-addr6

Negate the src-addr6 filter.

```
diagnose sys sip-proxy filter negate src-addr6
```

diagnose sys sip-proxy filter negate src-port

Negate the src-port filter.

```
diagnose sys sip-proxy filter negate src-port
```

diagnose sys sip-proxy filter negate vd

Negate the virtual domain filter.

```
diagnose sys sip-proxy filter negate vd
```

diagnose sys sip-proxy filter negate voip-profile

Negate the VoIP-profile filter.

```
diagnose sys sip-proxy filter negate voip-profile
```

diagnose sys sip-proxy filter policy

Policy to filter by.

```
diagnose sys sip-proxy filter policy <policy>
```

Parameter	Description	Type	Size
<policy>	policy	string	

diagnose sys sip-proxy filter policy-type

Policy-type to filter by.

```
diagnose sys sip-proxy filter policy-type
```

diagnose sys sip-proxy filter policy-type ipv4

Filter IPv4 policies.

```
diagnose sys sip-proxy filter policy-type ipv4
```

diagnose sys sip-proxy filter policy-type ipv6

Filter IPv6 policies.

```
diagnose sys sip-proxy filter policy-type ipv6
```

diagnose sys sip-proxy filter src-addr4

Source address range to filter by.

```
diagnose sys sip-proxy filter src-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Source IPv4 address (from).	string	
<ipv4-address>	Source IPv4 address (to).	string	

diagnose sys sip-proxy filter src-addr6

IPv6 source address range to filter by.

```
diagnose sys sip-proxy filter src-addr6 <ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Source IPv6 address (from).	string	
<ipv6-address>	Source IPv6 address (to).	string	

diagnose sys sip-proxy filter src-port

Source port to filter by.

```
diagnose sys sip-proxy filter src-port <port>
```

Parameter	Description	Type	Size
<port>	Source port.	string	

diagnose sys sip-proxy filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys sip-proxy filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose sys sip-proxy filter voip-profile

VoIP profile to filter by.

```
diagnose sys sip-proxy filter voip-profile <voip-profile>
```

Parameter	Description	Type	Size
<voip-profile>	voip-profile	string	

diagnose sys sip-proxy log-filter

SIP ALG debug log filter.

```
diagnose sys sip-proxy log-filter
```

diagnose sys sip-proxy log-filter clear

Clear the current filter.

```
diagnose sys sip-proxy log-filter clear
```

diagnose sys sip-proxy log-filter dst-addr4

IPv4 destination address range to filter by.

```
diagnose sys sip-proxy log-filter dst-addr4 <ip-address> <ip-address>
```

Parameter	Description	Type	Size
<ip-address>	Destination IPv4 address (from).	string	
<ip-address>	Destination IPv4 address (to).	string	

diagnose sys sip-proxy log-filter dst-addr6

IPv6 destination address range to filter by.

```
diagnose sys sip-proxy log-filter dst-addr6 <ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Destination IPv6 address (from).	string	
<ipv6-address>	Destination IPv6 address (to).	string	

diagnose sys sip-proxy log-filter dst-port

Destination port to filter by.

```
diagnose sys sip-proxy log-filter dst-port <port>
```

Parameter	Description	Type	Size
<port>	Source port.	string	

diagnose sys sip-proxy log-filter list

Display the current filter.

```
diagnose sys sip-proxy log-filter list
```

diagnose sys sip-proxy log-filter negate

Negate the specified filter parameter.

```
diagnose sys sip-proxy log-filter negate
```

diagnose sys sip-proxy log-filter negate dst-addr4

Negate the dst-addr4 filter.

```
diagnose sys sip-proxy log-filter negate dst-addr4
```

diagnose sys sip-proxy log-filter negate dst-addr6

Negate the dst-addr6 filter.

```
diagnose sys sip-proxy log-filter negate dst-addr6
```

diagnose sys sip-proxy log-filter negate dst-port

Negate the dst-port filter.

```
diagnose sys sip-proxy log-filter negate dst-port
```

diagnose sys sip-proxy log-filter negate policy

Negate the policy filter.

```
diagnose sys sip-proxy log-filter negate policy
```

diagnose sys sip-proxy log-filter negate policy-type

Negate the policy-type filter.

```
diagnose sys sip-proxy log-filter negate policy-type
```

diagnose sys sip-proxy log-filter negate src-addr4

Negate the src-addr4 filter.

```
diagnose sys sip-proxy log-filter negate src-addr4
```

diagnose sys sip-proxy log-filter negate src-addr6

Negate the src-addr6 filter.

```
diagnose sys sip-proxy log-filter negate src-addr6
```

diagnose sys sip-proxy log-filter negate src-port

Negate the src-port filter.

```
diagnose sys sip-proxy log-filter negate src-port
```

diagnose sys sip-proxy log-filter negate vd

Negate the virtual domain filter.

```
diagnose sys sip-proxy log-filter negate vd
```

diagnose sys sip-proxy log-filter negate voip-profile

Negate the VoIP-profile filter.

```
diagnose sys sip-proxy log-filter negate voip-profile
```

diagnose sys sip-proxy log-filter policy

Policy to filter by.

```
diagnose sys sip-proxy log-filter policy <policy>
```

Parameter	Description	Type	Size
<policy>	policy	string	

diagnose sys sip-proxy log-filter policy-type

Policy-type to filter by.

```
diagnose sys sip-proxy log-filter policy-type
```

diagnose sys sip-proxy log-filter policy-type ipv4

Filter IPv4 policies.

```
diagnose sys sip-proxy log-filter policy-type ipv4
```

diagnose sys sip-proxy log-filter policy-type ipv6

Filter IPv6 policies.

```
diagnose sys sip-proxy log-filter policy-type ipv6
```

diagnose sys sip-proxy log-filter src-addr4

IPv4 source address range to filter by.

```
diagnose sys sip-proxy log-filter src-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Source IPv4 address (from).	string	
<ipv4-address>	Source IPv4 address (to).	string	

diagnose sys sip-proxy log-filter src-addr6

IPv6 source address range to filter by.

```
diagnose sys sip-proxy log-filter src-addr6 <ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Source IPv6 address (from).	string	
<ipv6-address>	Source IPv6 address (to).	string	

diagnose sys sip-proxy log-filter src-port

Source port to filter by.

```
diagnose sys sip-proxy log-filter src-port <port>
```

Parameter	Description	Type	Size
<port>	Source port.	string	

diagnose sys sip-proxy log-filter vd

Index of virtual domain. -1 matches all.

```
diagnose sys sip-proxy log-filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose sys sip-proxy log-filter voip-profile

VoIP profile to filter by.

```
diagnose sys sip-proxy log-filter voip-profile <voip-profile>
```

Parameter	Description	Type	Size
<voip-profile>	voip-profile	string	

diagnose sys sip-proxy meters

Diagnostics for SIP rate limiting meters.

```
diagnose sys sip-proxy meters
```

diagnose sys sip-proxy meters list

List active SIP rate limiting meters.

```
diagnose sys sip-proxy meters list
```

diagnose sys sip-proxy redirect

Redirects

```
diagnose sys sip-proxy redirect
```

diagnose sys sip-proxy redirect list

List SIP redirects.

```
diagnose sys sip-proxy redirect list
```

diagnose sys sip-proxy restart

Restart SIP and SCCP.

```
diagnose sys sip-proxy restart
```

diagnose sys sip-proxy scheduler-times

Scheduler times.

```
diagnose sys sip-proxy scheduler-times
```

diagnose sys sip-proxy scheduler-times display

Display scheduler times.

```
diagnose sys sip-proxy scheduler-times display
```

diagnose sys sip-proxy scheduler-times start

Start measuring scheduler times.

```
diagnose sys sip-proxy scheduler-times start
```

diagnose sys sip-proxy scheduler-times stop

Stop measuring scheduler times.

```
diagnose sys sip-proxy scheduler-times stop
```

diagnose sys sip-proxy session

SIP sessions.

```
diagnose sys sip-proxy session
```

diagnose sys sip-proxy session list

List SIP sessions.

```
diagnose sys sip-proxy session list
```

diagnose sys sip-proxy ssl

SSL hardware support.

```
diagnose sys sip-proxy ssl
```

diagnose sys sip-proxy ssl hardware

Enable SSL hardware support (default) (will restart voip).

```
diagnose sys sip-proxy ssl hardware
```

diagnose sys sip-proxy ssl software

Disable SSL hardware support (will restart voip).

```
diagnose sys sip-proxy ssl software
```

diagnose sys sip-proxy stats

SIP proxy statistics.

```
diagnose sys sip-proxy stats
```

diagnose sys sip-proxy stats call

SIP proxy call statistics summary.

```
diagnose sys sip-proxy stats call
```

diagnose sys sip-proxy stats clear

Clear SIP proxy activity statistics.

```
diagnose sys sip-proxy stats clear
```

diagnose sys sip-proxy stats ha

SIP proxy HA statistics summary.

```
diagnose sys sip-proxy stats ha
```

diagnose sys sip-proxy stats list

SIP proxy activity statistics.

```
diagnose sys sip-proxy stats list
```

diagnose sys sip-proxy stats mem

Memory usage.

```
diagnose sys sip-proxy stats mem
```

diagnose sys sip-proxy stats mem full

Memory usage details.

```
diagnose sys sip-proxy stats mem full
```

diagnose sys sip-proxy stats mem summary

Memory usage summary.

```
diagnose sys sip-proxy stats mem summary
```

diagnose sys sip-proxy stats proto

SIP proxy general protocol statistics summary.

```
diagnose sys sip-proxy stats proto
```

diagnose sys sip-proxy stats ssl-auth

SIP proxy SSL authentication statistics.

```
diagnose sys sip-proxy stats ssl-auth
```

diagnose sys sip-proxy stats udp

SIP proxy UDP statistics summary.

```
diagnose sys sip-proxy stats udp
```

diagnose sys sip-proxy valgrind

Valgrind analysis.

```
diagnose sys sip-proxy valgrind
```

diagnose sys sip-proxy valgrind disable

Force daemon to restart.

```
diagnose sys sip-proxy valgrind disable
```

diagnose sys sip-proxy valgrind enable

Force daemon to restart.

```
diagnose sys sip-proxy valgrind enable
```

diagnose sys sip-proxy valgrind log

Valgrind logs.

```
diagnose sys sip-proxy valgrind log
```

diagnose sys sip-proxy valgrind log clear

Clear logs.

```
diagnose sys sip-proxy valgrind log clear
```

diagnose sys sip-proxy valgrind log show

Show logs.

```
diagnose sys sip-proxy valgrind log show
```

diagnose sys sip-proxy valgrind memcheck

Force daemon to restart.

```
diagnose sys sip-proxy valgrind memcheck
```

diagnose sys sip-proxy valgrind memcheck_less

Force daemon to restart.

```
diagnose sys sip-proxy valgrind memcheck_less
```

diagnose sys sip-proxy valgrind status

Show valgrind status.

```
diagnose sys sip-proxy valgrind status
```

diagnose sys sip-proxy vdom

Diagnostics for VDOM in VoIP Daemon.

```
diagnose sys sip-proxy vdom
```

diagnose sys sip-proxy vdom list

List active VDOMs in VoIP daemon.

```
diagnose sys sip-proxy vdom list
```

diagnose sys sip-proxy vip

VIPs

```
diagnose sys sip-proxy vip
```

diagnose sys sip-proxy vip real-server

Real server VIP list.

```
diagnose sys sip-proxy vip real-server
```

diagnose sys speedtest-server

speed test server.

```
diagnose sys speedtest-server
```

diagnose sys speedtest-server clients

Speed test clients.

```
diagnose sys speedtest-server clients
```

diagnose sys speedtest-server clients flush

Flush pending speed test clients.

```
diagnose sys speedtest-server clients flush
```

diagnose sys speedtest-server clients list

List pending speed test clients.

```
diagnose sys speedtest-server clients list
```

diagnose sys speedtest-server controller

Speed test controller

```
diagnose sys speedtest-server controller
```

diagnose sys speedtest-server controller add

Add a controller

```
diagnose sys speedtest-server controller add <interface>
```

Parameter	Description	Type	Size
<interface>	Name of the interface.	string	

diagnose sys speedtest-server controller del

Delete a controller

```
diagnose sys speedtest-server controller del <interface>
```

Parameter	Description	Type	Size
<interface>	Name of the interface.	string	

diagnose sys speedtest-server controller list

List controllers.

```
diagnose sys speedtest-server controller list <name>
```

Parameter	Description	Type	Size
<name>	Name of the controller.	string	

diagnose sys speedtest-server log

Speed test result log.

```
diagnose sys speedtest-server log
```

diagnose sys speedtest-server log del-file

Delete log file.

```
diagnose sys speedtest-server log del-file
```

diagnose sys speedtest-server log list

List result log cache.

```
diagnose sys speedtest-server log list
```

diagnose sys speedtest-server log load-disk

Load log file to memory.

```
diagnose sys speedtest-server log load-disk
```

diagnose sys speedtest-server log save-disk

Save result logs to file.

```
diagnose sys speedtest-server log save-disk
```

diagnose sys speedtest-server speedtest-dbg

Toggle speed test debug output

```
diagnose sys speedtest-server speedtest-dbg
```

diagnose sys tcp-auth-options

TCP auth options info.

```
diagnose sys tcp-auth-options
```

diagnose sys tcp-option

Enable/disable TCP option.

```
diagnose sys tcp-option
```

diagnose sys tcp-option dump

Show TCP option status

```
diagnose sys tcp-option dump
```

diagnose sys tcp-option sack

Enable/disable sack.

```
diagnose sys tcp-option sack
```

diagnose sys tcp-option sack disable

disable

```
diagnose sys tcp-option sack disable
```

diagnose sys tcp-option sack enable

enable

```
diagnose sys tcp-option sack enable
```

diagnose sys tcp-option timestamps

Enable/disable timestamps.

```
diagnose sys tcp-option timestamps
```

diagnose sys tcp-option timestamps disable

disable

```
diagnose sys tcp-option timestamps disable
```

diagnose sys tcp-option timestamps enable

enable

```
diagnose sys tcp-option timestamps enable
```

diagnose sys tcp-option window-scale

Enable/disable window scale.

```
diagnose sys tcp-option window-scale
```

diagnose sys tcp-option window-scale disable

disable

```
diagnose sys tcp-option window-scale disable
```

diagnose sys tcp-option window-scale enable

enable

```
diagnose sys tcp-option window-scale enable
```

diagnose sys tcpsock

TCP sock info.

```
diagnose sys tcpsock
```

diagnose sys tcpsock6

TCP sock6 info.

```
diagnose sys tcpsock6
```

diagnose sys top

Show top processes information.

```
diagnose sys top <value> <Integer> <value>
```

Parameter	Description	Type	Size
<value>	Delay in seconds (default 5).	string	
<Integer>	Maximum lines to display (default 20). Show all the running processes if larger than its total number.	string	
<value>	Iterations to run (default unlimited).	string	

diagnose sys top-all

Show top threads information.

```
diagnose sys top-all <value> <Integer> <value>
```

Parameter	Description	Type	Size
<value>	Delay in seconds (default 5).	string	
<Integer>	Maximum lines to display (default 20). Show all the running threads if larger than its total number.	string	
<value>	Iterations to run (default unlimited).	string	

diagnose sys top-fd

Display processes with the most active file descriptors (default 5 processes).

```
diagnose sys top-fd [process-count]
```

Parameter	Description	Type	Size
[process-count]	Number of processes to include info for (default 5).	string	

diagnose sys top-fd detail

Display per-process active fd info along with details (default 5 processes, 50 fds).

```
diagnose sys top-fd detail [process-count] [fd-count]
```

Parameter	Description	Type	Size
[process-count]	Number of processes to include info for (default 5).	string	
[fd-count]	Number of FDs to include (per process, default 50).	string	

diagnose sys top-mem

Display processes with the most used memory (default 5 processes).

```
diagnose sys top-mem [process-count]
```

Parameter	Description	Type	Size
[process-count]	Number of processes to include info for (default 5).	string	

diagnose sys top-mem detail

Display per-process memory info along with details (default 5 processes).

```
diagnose sys top-mem detail [process-count]
```

Parameter	Description	Type	Size
[process-count]	Number of processes to include info for (default 5).	string	

diagnose sys top-sockmem

Display processes with the most used socket memory (default 5 processes).

```
diagnose sys top-sockmem [process-count]
```

Parameter	Description	Type	Size
[process-count]	Number of processes to include info for (default 5).	string	

diagnose sys traffic

Traffic information

```
diagnose sys traffic
```

diagnose sys traffic app-stats

Traffic application statistics.

```
diagnose sys traffic app-stats
```

diagnose sys traffic app-stats add

Add traffic application statistics entry.

```
diagnose sys traffic app-stats add <app_id>
```

Parameter	Description	Type	Size
<app_id>	A decimal number.	string	

diagnose sys traffic app-stats del

Delete traffic application statistics entry.

```
diagnose sys traffic app-stats del <app_id>
```

Parameter	Description	Type	Size
<app_id>	A decimal number.	string	

diagnose sys traffic app-stats hash-stats

Traffic application hash statistics.

```
diagnose sys traffic app-stats hash-stats
```

diagnose sys traffic app-stats list

List traffic application statistics entry.

```
diagnose sys traffic app-stats list <app_id>
```

Parameter	Description	Type	Size
<app_id>	A decimal number.	string	

diagnose sys traffic statistics

Traffic statistics

```
diagnose sys traffic statistics
```

diagnose sys traffic statistics clear

Clear traffic stats.

```
diagnose sys traffic statistics clear
```

diagnose sys traffic statistics show

Show traffic stats.

```
diagnose sys traffic statistics show
```

diagnose sys traffic-priority

Traffic Priority (DSCP/TOS).

```
diagnose sys traffic-priority
```

diagnose sys traffic-priority list

List traffic priority settings.

```
diagnose sys traffic-priority list
```

diagnose sys udp-reserved-port

Reserved UDP ports.

```
diagnose sys udp-reserved-port
```

diagnose sys udp-reserved-port test

Test if port has been reserved.

```
diagnose sys udp-reserved-port test <port> [vdom]
```

Parameter	Description	Type	Size
<port>	UDP port that will be tested	string	
[vdom]	VDOM name. If not specified, global reserved UDP ports will be used to test	string	

diagnose sys udpsock

UDP sock info.

```
diagnose sys udpsock
```

diagnose sys udpsock6

UDP sock6 info.

```
diagnose sys udpsock6
```

diagnose sys upgrade-report

Upgrade reports.

```
diagnose sys upgrade-report
```

diagnose sys upgrade-report current

Display the stats currently.

```
diagnose sys upgrade-report current
```

diagnose sys upgrade-report generate

Generate upgrade report and replace the one on disk.

```
diagnose sys upgrade-report generate
```

diagnose sys upgrade-report on-disk

Display the stats saved on disk.

```
diagnose sys upgrade-report on-disk
```

diagnose sys uuid

UUID debug.

```
diagnose sys uuid
```

diagnose sys uuid allow-manual-set

Allow to set UUID manually.

```
diagnose sys uuid allow-manual-set
```

diagnose sys uuid allow-manual-set disable

Disable.

```
diagnose sys uuid allow-manual-set disable
```

diagnose sys uuid allow-manual-set enable

Enable.

```
diagnose sys uuid allow-manual-set enable
```

diagnose sys uuid generate

Generate a UUID.

```
diagnose sys uuid generate
```

diagnose sys var-zone

var-zone information.

```
diagnose sys var-zone
```

diagnose sys var-zone show

Show var-zone data.

```
diagnose sys var-zone show
```

diagnose sys vd

Virtual domain management.

```
diagnose sys vd
```

diagnose sys vd add

Add a Virtual System.

```
diagnose sys vd add <vdname>
```

Parameter	Description	Type	Size
<vdname>	Virtual Domain Name.	string	

diagnose sys vd delete

Delete a Virtual System.

```
diagnose sys vd delete <vdname>
```

Parameter	Description	Type	Size
<vdname>	Virtual Domain Name.	string	

diagnose sys vd list

List Virtual Domains.

```
diagnose sys vd list
```

diagnose sys vd set

Set current VDOM.

```
diagnose sys vd set <vdname>
```

Parameter	Description	Type	Size
<vdname>	Virtual Domain Name.	string	

diagnose sys vd stats

Show VDOM statistics.

```
diagnose sys vd stats
```

diagnose sys vdom-property

VDOM property information.

```
diagnose sys vdom-property
```

diagnose sys vlan

vlan

```
diagnose sys vlan
```

diagnose sys vlan list

List VLAN.

```
diagnose sys vlan list
```

diagnose sys vxlan

VXLAN diagnostics.

```
diagnose sys vxlan
```

diagnose sys vxlan device

VXLAN device.

```
diagnose sys vxlan device
```

diagnose sys vxlan device list

Display VXLAN devices.

```
diagnose sys vxlan device list
```

diagnose sys vxlan fdb

VXLAN forwarding DB.

```
diagnose sys vxlan fdb
```

diagnose sys vxlan fdb list

Display VXLAN forwarding DB.

```
diagnose sys vxlan fdb list <string>
```

Parameter	Description	Type	Size
<string>	Interface name.	string	

diagnose sys vxlan fdb stat

Display VXLAN forwarding DB statistics.

```
diagnose sys vxlan fdb stat <string>
```

Parameter	Description	Type	Size
<string>	Interface name.	string	

diagnose sys waninfo

Get WAN Information through FortiGuard.

```
diagnose sys waninfo
```

diagnose sys waninfo ipify

Get public IP through <https://api.ipify.org>.

```
diagnose sys waninfo ipify <ddd.ddd.ddd.ddd> or <interface name> <vdom>
```

Parameter	Description	Type	Size
<ddd.ddd.ddd.ddd> or <interface name>	Specify the source IPv4 address or interface name.	string	
<vdom>	Specify the Virtual Domain name.	string	

diagnose sys wccp

wccp

```
diagnose sys wccp
```

diagnose sys wccp delete

Delete one wccp service.

```
diagnose sys wccp delete <xxx>
```

Parameter	Description	Type	Size
<xxx>	Service ID.	string	

diagnose sys wccp flush

Flush wccp services.

```
diagnose sys wccp flush
```

diagnose sys wccp list

List wccp services.

```
diagnose sys wccp list
```

diagnose test analytics-pdf-report

Retrieve analytics PDF report from FortiSandbox.

This topic includes the following commands:

- [diagnose test analytics-pdf-report list on page 3336](#)
- [diagnose test analytics-pdf-report max on page 3336](#)
- [diagnose test analytics-pdf-report request on page 3337](#)
- [diagnose test analytics-pdf-report status on page 3337](#)

diagnose test analytics-pdf-report list

List the PDF report requested.

```
diagnose test analytics-pdf-report list
```

diagnose test analytics-pdf-report max

Maximum number of PDF reports to cache in this FortiGate (<1> - <100>, default = 10).

```
diagnose test analytics-pdf-report max
```

diagnose test analytics-pdf-report request

Send the checksum of file to download.

```
diagnose test analytics-pdf-report request
```

diagnose test analytics-pdf-report status

Send the checksum of file to query status.

```
diagnose test analytics-pdf-report status
```

diagnose test analytics-report

Retrieve analytics report from FortiSandbox.

This topic includes the following commands:

- [diagnose test analytics-report checksum on page 3337](#)

diagnose test analytics-report checksum

Checksum of file to query.

```
diagnose test analytics-report checksum
```

diagnose test application

application

This topic includes the following commands:

- [diagnose test application acd on page 3339](#)
- [diagnose test application acsd on page 3340](#)
- [diagnose test application autod on page 3340](#)
- [diagnose test application awsd on page 3340](#)
- [diagnose test application azd on page 3340](#)
- [diagnose test application bfd on page 3340](#)
- [diagnose test application cloudapid on page 3341](#)
- [diagnose test application cmdbsvr on page 3341](#)

- [diagnose test application csfd on page 3341](#)
- [diagnose test application ddnsd on page 3341](#)
- [diagnose test application dhcp6c on page 3342](#)
- [diagnose test application dhcp6r on page 3342](#)
- [diagnose test application dhcprelay on page 3342](#)
- [diagnose test application dlpfingerprint on page 3342](#)
- [diagnose test application dlpfpcache on page 3343](#)
- [diagnose test application dnsproxy on page 3343](#)
- [diagnose test application dsd on page 3343](#)
- [diagnose test application eap_supp on page 3343](#)
- [diagnose test application evpn on page 3344](#)
- [diagnose test application fas on page 3344](#)
- [diagnose test application fcnacd on page 3344](#)
- [diagnose test application fds_notify on page 3344](#)
- [diagnose test application fgtlogd on page 3344](#)
- [diagnose test application fnbamd on page 3345](#)
- [diagnose test application forticldd on page 3345](#)
- [diagnose test application forticron on page 3345](#)
- [diagnose test application fortimq on page 3345](#)
- [diagnose test application fsvrd on page 3346](#)
- [diagnose test application gcpcd on page 3346](#)
- [diagnose test application harelay on page 3346](#)
- [diagnose test application hasync on page 3346](#)
- [diagnose test application hatalk on page 3347](#)
- [diagnose test application ibmd on page 3347](#)
- [diagnose test application imap on page 3347](#)
- [diagnose test application init on page 3347](#)
- [diagnose test application iotd on page 3347](#)
- [diagnose test application ipamd on page 3348](#)
- [diagnose test application ipamsd on page 3348](#)
- [diagnose test application ipldbd on page 3348](#)

diagnose test application acid

Aggregate Controller.

```
diagnose test application acid <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application acsd

Ali Cloud Service daemon.

```
diagnose test application acsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application autod

Automation daemon.

```
diagnose test application autod <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application awsd

Amazon Web Services (AWS) daemon.

```
diagnose test application awsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application azd

Microsoft Azure daemon.

```
diagnose test application azd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application bfd

BFD daemon.

```
diagnose test application bfd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application cloudapid

Cloud service communication daemon.

```
diagnose test application cloudapid <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application cmdbsvr

cmdb server

```
diagnose test application cmdbsvr <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application csfd

Security Fabric daemon.

```
diagnose test application csfd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ddnsd

DDNS client daemon.

```
diagnose test application ddnsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application dhcp6c

DHCP6 client daemon.

```
diagnose test application dhcp6c <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application dhcp6r

DHCP6 relay daemon.

```
diagnose test application dhcp6r <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application dhcprelay

DHCP relay daemon.

```
diagnose test application dhcprelay <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application dlpfingerprint

DLP fingerprint daemon.

```
diagnose test application dlpfingerprint <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application dlpfpcache

DLP fingerprint cache daemon.

```
diagnose test application dlpfpcache <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application dnsproxy

DNS proxy.

```
diagnose test application dnsproxy <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

diagnose test application dsd

DLP Statistics daemon.

```
diagnose test application dsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application eap_supp

EAP Supplicant daemon.

```
diagnose test application eap_supp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application evpn

EVPN daemon.

```
diagnose test application evpn <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application fas

FortiToken Cloud daemon.

```
diagnose test application fas <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application fcnacd

FortiClient NAC daemon.

```
diagnose test application fcnacd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application fds_notify

Update Notification daemon.

```
diagnose test application fds_notify <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application fgtlogd

Fgtlog daemon.

```
diagnose test application fgtlogd <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

diagnose test application fnbamd

FortiGate non-blocking auth daemon.

```
diagnose test application fnbamd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application forticldd

FortiCloud daemon.

```
diagnose test application forticldd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application forticron

Forticron daemon.

```
diagnose test application forticron <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application fortimq

fortimq daemon.

```
diagnose test application fortimq <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application fsvrd

FortiService daemon.

```
diagnose test application fsvrd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application gcpd

Google Cloud Platform (GCP) daemon.

```
diagnose test application gcpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application harelay

HA relay daemon.

```
diagnose test application harelay <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application hasync

HA sync daemon.

```
diagnose test application hasync <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application hataalk

HA talk daemon.

```
diagnose test application hataalk <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ibmd

IBM Cloud Infrastructure daemon.

```
diagnose test application ibmd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application imap

IMAP proxy.

```
diagnose test application imap <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application init

init process.

```
diagnose test application init <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application iotd

IoT device info daemon.

```
diagnose test application iotd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ipamd

IP Address Management daemon.

```
diagnose test application ipamd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ipamsd

IPAM server daemon.

```
diagnose test application ipamsd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ipldbd

IP load balancing daemon.

```
diagnose test application ipldbd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ipsengine

IPS sensor.

```
diagnose test application ipsengine <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ipsmonitor

IPS monitor.

```
diagnose test application ipsmonitor <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ipsufd

IPS urlfilter daemon.

```
diagnose test application ipsufd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application kmipd

KMIP daemon.

```
diagnose test application kmipd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application kubed

Kubernetes daemon.

```
diagnose test application kubed <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application l2tpcd

L2TP client daemon.

```
diagnose test application l2tpcd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application lnkmttd

Link monitor daemon.

```
diagnose test application lnkmttd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application locallogd

Locallogd daemon.

```
diagnose test application locallogd <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

diagnose test application miglogd

Miglog logging daemon.

```
diagnose test application miglogd <Integer> <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

Parameter	Description	Type	Size
<Integer>	test level 26: 255 for all miglogds test level 31: 0 -- summary only, 1 -- each log summary, 2 -- log details test level 35: Replay log interval(default=100)	string	

diagnose test application mrd

Mobile router daemon.

```
diagnose test application mrd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application netxd

VMWare NetX service manager daemon.

```
diagnose test application netxd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application nntp

NNTP proxy.

```
diagnose test application nntp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ocid

Oracle Cloud Infrastructure.

```
diagnose test application ocid <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application openstackd

OpenStack SDN connector daemon.

```
diagnose test application openstackd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application ovrd

Override daemon.

```
diagnose test application ovrd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application pcpd

PCP server daemon.

```
diagnose test application pcpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application pop3

POP3 proxy.

```
diagnose test application pop3 <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application pptpcd

PPTP client.

```
diagnose test application pptpcd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application quarantined

Quarantine daemon.

```
diagnose test application quarantined <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

diagnose test application radius-das

Radius-das daemon.

```
diagnose test application radius-das <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application radiusd

RADIUS daemon.

```
diagnose test application radiusd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application radvd

radvd daemon.

```
diagnose test application radvd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application reportd

Report daemon.

```
diagnose test application reportd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application sdncd

SDN Connector daemon.

```
diagnose test application sdncd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application sdnd

SDN connector daemon.

```
diagnose test application sdnd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application sepmd

Symantec Endpoint Protection Manager daemon.

```
diagnose test application sepmc <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application sessionsync

Session sync daemon.

```
diagnose test application sessionsync <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application sflowd

sFlow daemon.

```
diagnose test application sflowd <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

diagnose test application sfupgraded

Security Fabric Upgrade daemon.

```
diagnose test application sfupgraded <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application smtp

SMTP proxy.

```
diagnose test application smtp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application snmpd

SNMP daemon.

```
diagnose test application snmpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application syslogd

Syslog daemon.

```
diagnose test application syslogd <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

diagnose test application updated

Update daemon.

```
diagnose test application updated <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application uploadd

Upload daemon.

```
diagnose test application uploadd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application urlfilter

URL filter daemon.

```
diagnose test application urlfilter <Integer> <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	
<Integer>	Daemon index.	string	

diagnose test application vned

Virtual network enabler daemon.

```
diagnose test application vned <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application vrrp

VRRP daemon.

```
diagnose test application vrrp <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application waagent

waagent daemon.

```
diagnose test application waagent <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application wad

WAD related processes.

```
diagnose test application wad <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application wccpd

WCCP daemon.

```
diagnose test application wccpd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application wf_monitor

WF monitor.

```
diagnose test application wf_monitor <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application wiredapd

Wiredapd daemon.

```
diagnose test application wiredapd <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test application zebos_launcher

ZEBOS Launcher daemon.

```
diagnose test application zebos_launcher <Integer>
```

Parameter	Description	Type	Size
<Integer>	Test level.	string	

diagnose test authserver

Test authentication server.

This topic includes the following commands:

- [diagnose test authserver cert on page 3359](#)
- [diagnose test authserver ext-idp on page 3359](#)
- [diagnose test authserver ldap on page 3360](#)
- [diagnose test authserver ldap-digest on page 3360](#)
- [diagnose test authserver ldap-direct on page 3360](#)
- [diagnose test authserver ldap-search on page 3360](#)
- [diagnose test authserver local on page 3360](#)
- [diagnose test authserver pop3 on page 3360](#)
- [diagnose test authserver radius on page 3361](#)
- [diagnose test authserver radius-direct on page 3361](#)
- [diagnose test authserver tacacs+ on page 3361](#)
- [diagnose test authserver tacacs+-direct on page 3361](#)
- [diagnose test authserver user on page 3361](#)

diagnose test authserver cert

Test certificate authentication.

```
diagnose test authserver cert
```

diagnose test authserver ext-idp

Test external identity provider.

```
diagnose test authserver ext-idp
```

diagnose test authserver ldap

Test LDAP server.

```
diagnose test authserver ldap
```

diagnose test authserver ldap-digest

Test LDAP HA1 password query.

```
diagnose test authserver ldap-digest
```

diagnose test authserver ldap-direct

Test LDAP server directly.

```
diagnose test authserver ldap-direct
```

diagnose test authserver ldap-search

Search LDAP server.

```
diagnose test authserver ldap-search
```

diagnose test authserver local

Test local user.

```
diagnose test authserver local
```

diagnose test authserver pop3

Test POP3 server.

```
diagnose test authserver pop3
```

diagnose test authserver radius

Test RADIUS server.

```
diagnose test authserver radius
```

diagnose test authserver radius-direct

Test RADIUS server directly.

```
diagnose test authserver radius-direct
```

diagnose test authserver tacacs+

test TACACS+ server.

```
diagnose test authserver tacacs+ <server_name> <username> <password>
```

Parameter	Description	Type	Size
<server_name>	Server name	string	
<username>	User name	string	
<password>	Pasword	string	

diagnose test authserver tacacs+-direct

Test TACACS+ server directly.

```
diagnose test authserver tacacs+-direct
```

diagnose test authserver user

Test user with group/user ID/name(s).

```
diagnose test authserver user
```

diagnose test guest

Guest user add/delete/list.

This topic includes the following commands:

- [diagnose test guest add on page 3362](#)
- [diagnose test guest del on page 3362](#)
- [diagnose test guest list on page 3362](#)

diagnose test guest add

Add a guest user.

```
diagnose test guest add
```

diagnose test guest del

Delete guest users.

```
diagnose test guest del
```

diagnose test guest list

List guest users.

```
diagnose test guest list
```

diagnose test scim

SCIM database queries.

This topic includes the following commands:

- [diagnose test scim get-group on page 3363](#)
- [diagnose test scim get-membership on page 3363](#)
- [diagnose test scim get-user on page 3363](#)
- [diagnose test scim list-clients on page 3363](#)
- [diagnose test scim list-groups on page 3363](#)
- [diagnose test scim list-users on page 3363](#)

diagnose test scim get-group

Get one group by client name and group name.

```
diagnose test scim get-group
```

diagnose test scim get-membership

Get membership by client name and user name.

```
diagnose test scim get-membership
```

diagnose test scim get-user

Get one user by client name and user name.

```
diagnose test scim get-user
```

diagnose test scim list-clients

List all clients in one vdom.

```
diagnose test scim list-clients
```

diagnose test scim list-groups

List all groups name belongs to client.

```
diagnose test scim list-groups
```

diagnose test scim list-users

List all users name belongs to client.

```
diagnose test scim list-users
```

diagnose test security

System security test.

This topic includes the following commands:

- [diagnose test security mount-invalid-flag on page 3364](#)
- [diagnose test security status on page 3364](#)

diagnose test security mount-invalid-flag

Test mounting with invalid flags.

```
diagnose test security mount-invalid-flag
```

diagnose test security status

Check system security enforcement status.

```
diagnose test security status
```

diagnose test update

Update daemon test.

This topic includes the following commands:

- [diagnose test update info on page 3364](#)
- [diagnose test update tzdb on page 3364](#)

diagnose test update info

Display debug info.

```
diagnose test update info
```

diagnose test update tzdb

Test TZDB.

```
diagnose test update tzdb
```

diagnose traffictest

Offloading traffic test using internal TX/RX

This topic includes the following commands:

- [diagnose traffictest client-intf on page 3365](#)
- [diagnose traffictest port on page 3365](#)
- [diagnose traffictest proto on page 3365](#)
- [diagnose traffictest proto 0 on page 3366](#)
- [diagnose traffictest proto 1 on page 3366](#)
- [diagnose traffictest run on page 3366](#)
- [diagnose traffictest server-intf on page 3367](#)
- [diagnose traffictest show on page 3367](#)

diagnose traffictest client-intf

Client interface.

```
diagnose traffictest client-intf <string>
```

Parameter	Description	Type	Size
<string>	Interface name	string	

diagnose traffictest port

TCP or UDP port number (1 - 65535).

```
diagnose traffictest port <port>
```

Parameter	Description	Type	Size
<port>	Port number	string	

diagnose traffictest proto

0 for TCP or 1 for UDP (default = 0).

```
diagnose traffictest proto
```

diagnose traffictest proto 0

TCP

```
diagnose traffictest proto 0
```

diagnose traffictest proto 1

UDP

```
diagnose traffictest proto 1
```

diagnose traffictest run

Start traffic.

```
diagnose traffictest run [-h/arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg] [arg]
```

Parameter	Description	Type	Size
[-h/arg]	Help/Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	

Parameter	Description	Type	Size
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	
[arg]	Multi-Arguments for client	string	

diagnose traffictest server-intf

Server interface.

```
diagnose traffictest server-intf <string>
```

Parameter	Description	Type	Size
<string>	Interface name	string	

diagnose traffictest show

Traffic settings show

```
diagnose traffictest show
```

diagnose user

User

This topic includes the following commands:

- [diagnose user banned-ip on page 3368](#)
- [diagnose user banned-ip add on page 3368](#)
- [diagnose user banned-ip add src4 on page 3368](#)
- [diagnose user banned-ip add src6 on page 3369](#)
- [diagnose user banned-ip clear on page 3369](#)
- [diagnose user banned-ip delete on page 3369](#)
- [diagnose user banned-ip delete src4 on page 3369](#)
- [diagnose user banned-ip delete src6 on page 3369](#)

- [diagnose user banned-ip list on page 3370](#)
- [diagnose user banned-ip list all on page 3370](#)
- [diagnose user banned-ip list src4 on page 3370](#)
- [diagnose user banned-ip list src6 on page 3370](#)
- [diagnose user banned-ip stat on page 3370](#)
- [diagnose user banned-ip stress-test on page 3370](#)
- [diagnose user device on page 3371](#)
- [diagnose user device clear on page 3371](#)
- [diagnose user device clear vd on page 3371](#)
- [diagnose user device del on page 3371](#)
- [diagnose user device get on page 3372](#)
- [diagnose user device list on page 3372](#)
- [diagnose user device list vd on page 3372](#)
- [diagnose user device stats on page 3372](#)

diagnose user banned-ip

Banned IP addresses.

```
diagnose user banned-ip
```

diagnose user banned-ip add

Add banned IP address.

```
diagnose user banned-ip add
```

diagnose user banned-ip add src4

IPv4 source ban.

```
diagnose user banned-ip add src4 <src-ipv4> <expiry> <ban-source> <creation-timestamp>
```

Parameter	Description	Type	Size
<src-ipv4>	Source IPv4 address.	string	
<expiry>	Expiry in seconds.	string	
<ban-source>	Ban source (admin/dlp/ips/av/dos/app).	string	
<creation-timestamp>	Optional, unix timestamp (seconds) for the creation date	string	

diagnose user banned-ip add src6

IPv6 source ban.

```
diagnose user banned-ip add src6 <src-ipv6> <expiry> <ban-source> <creation-timestamp>
```

Parameter	Description	Type	Size
<src-ipv6>	Source IPv6 address.	string	
<expiry>	Expiry in seconds.	string	
<ban-source>	Ban source (admin/dlp/ips/av/dos/app).	string	
<creation-timestamp>	Optional, unix timestamp (seconds) for the creation date	string	

diagnose user banned-ip clear

Clear all banned IP addresses.

```
diagnose user banned-ip clear
```

diagnose user banned-ip delete

Delete banned IP address.

```
diagnose user banned-ip delete
```

diagnose user banned-ip delete src4

IPv4 source ban.

```
diagnose user banned-ip delete src4 <src-ipv4>
```

Parameter	Description	Type	Size
<src-ipv4>	Source IPv4 address.	string	

diagnose user banned-ip delete src6

IPv6 source ban.

```
diagnose user banned-ip delete src6 <src-ipv6>
```

Parameter	Description	Type	Size
<src-ipv6>	Source IPv6 address.	string	

diagnose user banned-ip list

List banned IPs.

```
diagnose user banned-ip list
```

diagnose user banned-ip list all

List all bans.

```
diagnose user banned-ip list all
```

diagnose user banned-ip list src4

IPv4 source ban.

```
diagnose user banned-ip list src4
```

diagnose user banned-ip list src6

IPv6 source ban.

```
diagnose user banned-ip list src6
```

diagnose user banned-ip stat

stat

```
diagnose user banned-ip stat
```

diagnose user banned-ip stress-test

IPv4 stress test for SRC bans.

```
diagnose user banned-ip stress-test <ipv4> <expiry> <ban-counts> <ban-source>
```

Parameter	Description	Type	Size
<ipv4>	Starting IPv4 address.	string	
<expiry>	Expiry in seconds.	string	
<ban-counts>	Number of banned IP addresses.	string	
<ban-source>	Ban source (admin/dlp/ips/av/dos/app).	string	

diagnose user device

User devices.

```
diagnose user device
```

diagnose user device clear

Clear discovered hosts.

```
diagnose user device clear
```

diagnose user device clear vd

Clear discovered hosts in a specific virtual domain.

```
diagnose user device clear vd <name>
```

Parameter	Description	Type	Size
<name>	Virtual domain name to filter by.	string	

diagnose user device del

Remove a specific host.

```
diagnose user device del <mac>
```

Parameter	Description	Type	Size
<mac>	MAC address (xx:xx:xx:xx:xx:xx).	string	

diagnose user device get

List a specific host.

```
diagnose user device get <mac>
```

Parameter	Description	Type	Size
<mac>	MAC address (xx:xx:xx:xx:xx:xx).	string	

diagnose user device list

List known hosts.

```
diagnose user device list
```

diagnose user device list vd

List discovered hosts in a specific virtual domain.

```
diagnose user device list vd <name>
```

Parameter	Description	Type	Size
<name>	Virtual domain name to filter by.	string	

diagnose user device stats

User device stats.

```
diagnose user device stats
```

diagnose user-device-store

User device store diagnostics.

This topic includes the following commands:

- [diagnose user-device-store device on page 3374](#)
- [diagnose user-device-store device disk on page 3375](#)
- [diagnose user-device-store device disk clear on page 3375](#)

- [diagnose user-device-store device disk list on page 3375](#)
- [diagnose user-device-store device disk query on page 3375](#)
- [diagnose user-device-store device fortifone on page 3375](#)
- [diagnose user-device-store device fortifone add on page 3375](#)

diagnose user-device-store device

Device sessions info.

```
diagnose user-device-store device
```

diagnose user-device-store device disk

On disk session info.

```
diagnose user-device-store device disk
```

diagnose user-device-store device disk clear

Clear all records.

```
diagnose user-device-store device disk clear
```

diagnose user-device-store device disk list

List all records.

```
diagnose user-device-store device disk list
```

diagnose user-device-store device disk query

Query by SQL WHERE clause.

```
diagnose user-device-store device disk query
```

diagnose user-device-store device fortifone

Add/Delete FortiFone information.

```
diagnose user-device-store device fortifone
```

diagnose user-device-store device fortifone add

Test add FortiFone device by <mac> <ip> <extension> <name>.

```
diagnose user-device-store device fortifone add
```

diagnose user-device-store device fortifone delete

Test deleting a FortiFone device by <mac> <ip>.

```
diagnose user-device-store device fortifone delete
```

diagnose user-device-store device fortifone list

List FortiFone devices.

```
diagnose user-device-store device fortifone list
```

diagnose user-device-store device memory

In memory sessions info.

```
diagnose user-device-store device memory
```

diagnose user-device-store device memory list

List all records.

```
diagnose user-device-store device memory list
```

diagnose user-device-store device memory mac-host

Query/Add/Subscribe/Validate Operations on mac host.

```
diagnose user-device-store device memory mac-host
```

diagnose user-device-store device memory mac-host add

Add by <vdom> <mac> <ip> <interface-name>.

```
diagnose user-device-store device memory mac-host add
```

diagnose user-device-store device memory mac-host query

Query mac host info by <vdom> <mac> [flags].

```
diagnose user-device-store device memory mac-host query
```

diagnose user-device-store device memory mac-host subscribe

Enable/disable subscribe to mac host notifications.

```
diagnose user-device-store device memory mac-host subscribe
```

diagnose user-device-store device memory mac-host subscribe disable

Disable subscribe for mac host notifications.

```
diagnose user-device-store device memory mac-host subscribe disable
```

diagnose user-device-store device memory mac-host subscribe enable

Enable subscribe for mac host notifications.

```
diagnose user-device-store device memory mac-host subscribe enable
```

diagnose user-device-store device memory mac-host validate

validate mac host with <vdom> <mac> <generation> [flags].

```
diagnose user-device-store device memory mac-host validate
```

diagnose user-device-store device memory ot-purdue-set

OT purdue level set.

```
diagnose user-device-store device memory ot-purdue-set
```

diagnose user-device-store device memory query

Query by <type> <op> <value1|value2|...

```
diagnose user-device-store device memory query
```

diagnose user-device-store device memory uid

In memory devices info with UID present.

```
diagnose user-device-store device memory uid
```

diagnose user-device-store device memory uid add

Test add UID devices by <count>.

```
diagnose user-device-store device memory uid add
```

diagnose user-device-store device memory uid delete

Test delete UID device by <uid> <mac> <ip>.

```
diagnose user-device-store device memory uid delete
```

diagnose user-device-store device memory uid update

Test update UID device by <uid> <tags-value-delimited-by-;>.

```
diagnose user-device-store device memory uid update
```

diagnose user-device-store device memory vulnerability-clear

Clear all IoT vulnerabilities.

```
diagnose user-device-store device memory vulnerability-clear
```

diagnose user-device-store device memory vulnerability-clear-all

Clear all IoT vulnerabilities of a device.

```
diagnose user-device-store device memory vulnerability-clear-all
```

diagnose user-device-store device memory vulnerability-detected

Notify user-store a OT/IOT device is detected.

```
diagnose user-device-store device memory vulnerability-detected
```

diagnose user-device-store device memory vulnerability-query

Query device vulnerability info by MAC and IP.

```
diagnose user-device-store device memory vulnerability-query
```

diagnose user-device-store device memory vulnerability-update

Notify user-store a OT/IOT device is detected and query FGD without looking up in cache.

```
diagnose user-device-store device memory vulnerability-update
```

diagnose user-device-store device-stats-query

Device stats.

```
diagnose user-device-store device-stats-query
```

diagnose user-device-store device-stats-query filters-and

Query by <stats-type> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store device-stats-query filters-and
```

diagnose user-device-store device-stats-query filters-or

Query by <stats-type> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store device-stats-query filters-or
```

diagnose user-device-store email-stats

Email stats.

```
diagnose user-device-store email-stats
```

diagnose user-device-store email-stats list

List all records.

```
diagnose user-device-store email-stats list
```

diagnose user-device-store email-stats query

Query by <type> <op> <value1|value2|...

```
diagnose user-device-store email-stats query
```

diagnose user-device-store fsw-device-stats-query

Fortiswitch Device stats.

```
diagnose user-device-store fsw-device-stats-query
```

diagnose user-device-store fsw-device-stats-query filters-and

Query by <stats-type> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store fsw-device-stats-query filters-and
```

diagnose user-device-store fsw-device-stats-query filters-or

Query by <stats-type> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store fsw-device-stats-query filters-or
```

diagnose user-device-store ftcl-device-stats-query

Forticlient Device stats.

```
diagnose user-device-store ftcl-device-stats-query
```

diagnose user-device-store ftcl-device-stats-query filters-and

Query by <stats-type> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store ftcl-device-stats-query filters-and
```

diagnose user-device-store ftcl-device-stats-query filters-or

Query by <stats-type> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store ftcl-device-stats-query filters-or
```

diagnose user-device-store iot-ot-vuln

IoT/OT Vulnerabilities.

```
diagnose user-device-store iot-ot-vuln
```

diagnose user-device-store iot-ot-vuln list

List all records.

```
diagnose user-device-store iot-ot-vuln list
```

diagnose user-device-store iot-ot-vuln query

Query by <type> <op> <value1|value2|...>

```
diagnose user-device-store iot-ot-vuln query
```

diagnose user-device-store unified

Unified queries info.

```
diagnose user-device-store unified
```

diagnose user-device-store unified clear

Delete all unified queries.

```
diagnose user-device-store unified clear
```

diagnose user-device-store unified debug

Enable/Disable debug logs for unified queries.

```
diagnose user-device-store unified debug
```

diagnose user-device-store unified debug disable

Disable debug logs for unified queries.

```
diagnose user-device-store unified debug disable
```

diagnose user-device-store unified debug enable

Enable debug logs for unified queries.

```
diagnose user-device-store unified debug enable
```

diagnose user-device-store unified delete

Delete unified query by <query-id>.

```
diagnose user-device-store unified delete
```

diagnose user-device-store unified device-memory-query

Get Device records along with associated User records from memory.

```
diagnose user-device-store unified device-memory-query
```

diagnose user-device-store unified device-memory-query filters-and

Query by <iteration-count> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified device-memory-query filters-and
```

diagnose user-device-store unified device-memory-query filters-or

Query by <iteration-count> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified device-memory-query filters-or
```

diagnose user-device-store unified device-query

Get Device records along with associated User records from memory and disk.

```
diagnose user-device-store unified device-query
```

diagnose user-device-store unified device-query filters-and

Query by <iteration-count> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified device-query filters-and
```

diagnose user-device-store unified device-query filters-or

Query by <iteration-count> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified device-query filters-or
```

diagnose user-device-store unified dump

Dump unified query stats by <query-id>.

```
diagnose user-device-store unified dump
```

diagnose user-device-store unified list

List unified queries.

```
diagnose user-device-store unified list
```

diagnose user-device-store unified re-query

Retrieve Query by <query-id> <iteration-start> <iteration-count>

```
diagnose user-device-store unified re-query
```

diagnose user-device-store unified stats

Get Stats for unified queries.

```
diagnose user-device-store unified stats
```

diagnose user-device-store unified user-memory-query

Get User records along with associated Device records from memory.

```
diagnose user-device-store unified user-memory-query
```

diagnose user-device-store unified user-memory-query filters-and

Query by <iteration-count> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified user-memory-query filters-and
```

diagnose user-device-store unified user-memory-query filters-or

Query by <iteration-count> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified user-memory-query filters-or
```

diagnose user-device-store unified user-query

Get User records along with associated Device records from memory and disk.

```
diagnose user-device-store unified user-query
```

diagnose user-device-store unified user-query filters-and

Query by <iteration-count> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified user-query filters-and
```

diagnose user-device-store unified user-query filters-or

Query by <iteration-count> <start-time> <end-time> <type1;op1;values1-delimited-by-|;type2;op2;values2-delimited-by-|...>

```
diagnose user-device-store unified user-query filters-or
```

diagnose user-device-store user

User sessions info.

```
diagnose user-device-store user
```

diagnose user-device-store user disk

On disk session info.

```
diagnose user-device-store user disk
```

diagnose user-device-store user disk clear

Clear all records.

```
diagnose user-device-store user disk clear
```

diagnose user-device-store user disk list

List all records.

```
diagnose user-device-store user disk list
```

diagnose user-device-store user disk query

Query by SQL WHERE clause.

```
diagnose user-device-store user disk query
```

diagnose user-device-store user memory

In memory sessions info.

```
diagnose user-device-store user memory
```

diagnose user-device-store user memory list

List all records.

```
diagnose user-device-store user memory list
```

diagnose user-device-store user memory query

Query by <type> <op> <value1|value2|...>.

```
diagnose user-device-store user memory query
```

diagnose user-device-store user-count

User count info.

```
diagnose user-device-store user-count
```

diagnose user-device-store user-count list

List all group user count records.

```
diagnose user-device-store user-count list
```

diagnose user-device-store user-count query

Query by groupname <value>.

```
diagnose user-device-store user-count query
```

diagnose user-device-store user-stats

User stats.

```
diagnose user-device-store user-stats
```

diagnose user-device-store user-stats query

Query by <yyyy-mm-dd> <time-range days>

```
diagnose user-device-store user-stats query
```

diagnose vendor-mac

Vendor MAC Database.

This topic includes the following commands:

- [diagnose vendor-mac id on page 3388](#)
- [diagnose vendor-mac id-summary on page 3389](#)
- [diagnose vendor-mac info on page 3389](#)
- [diagnose vendor-mac match on page 3389](#)

diagnose vendor-mac id

Vendor MAC ID.

```
diagnose vendor-mac id <id>
```

Parameter	Description	Type	Size
<id>	Vendor MAC ID (a nonzero integer).	string	

diagnose vendor-mac id-summary

Vendor MAC ID summary.

```
diagnose vendor-mac id-summary <id>
```

Parameter	Description	Type	Size
<id>	Vendor MAC ID (a nonzero integer).	string	

diagnose vendor-mac info

MAC Address information.

```
diagnose vendor-mac info <xx:xx:xx:xx:xx:xx>
```

Parameter	Description	Type	Size
<xx:xx:xx:xx:xx:xx>	Service MAC address.	string	

diagnose vendor-mac match

Find Vendor MAC for a specific MAC address and mask.

```
diagnose vendor-mac match <xx:xx:xx:xx:xx:xx> <mask>
```

Parameter	Description	Type	Size
<xx:xx:xx:xx:xx:xx>	MAC address.	string	
<mask>	mask (0 - 48).	string	

diagnose vpn ike

IKE

This topic includes the following commands:

- [diagnose vpn ike admin on page 3392](#)
- [diagnose vpn ike config on page 3392](#)
- [diagnose vpn ike config list on page 3392](#)
- [diagnose vpn ike config list summary on page 3392](#)

diagnose vpn ike admin

IKE admin statistics.

```
diagnose vpn ike admin
```

diagnose vpn ike config

IKE configuration.

```
diagnose vpn ike config
```

diagnose vpn ike config list

List IKE configuration.

```
diagnose vpn ike config list
```

diagnose vpn ike config list summary

List IKE configuration summary.

```
diagnose vpn ike config list summary
```

diagnose vpn ike counts

IKE object counts.

```
diagnose vpn ike counts
```

diagnose vpn ike crash

IKE crash statistics.

```
diagnose vpn ike crash
```

diagnose vpn ike crypto

IKE crypto diagnostics.

```
diagnose vpn ike crypto
```

diagnose vpn ike crypto stats

IKE crypto statistics.

```
diagnose vpn ike crypto stats
```

diagnose vpn ike errors

IKE statistics.

```
diagnose vpn ike errors
```

diagnose vpn ike fragmentation-override

Override IKE fragmentation.

```
diagnose vpn ike fragmentation-override <flags>
```

Parameter	Description	Type	Size
<flags>	Bitmask of fragmentation override flags.	string	

diagnose vpn ike gateway

IKE gateways.

```
diagnose vpn ike gateway
```

diagnose vpn ike gateway clear

Clear IKE gateways.

```
diagnose vpn ike gateway clear
```

diagnose vpn ike gateway clear name

Clear gateway by name.

```
diagnose vpn ike gateway clear name <name>
```

Parameter	Description	Type	Size
<name>	Name of IKE gateway to clear.	string	

diagnose vpn ike gateway filter

IKE filter.

```
diagnose vpn ike gateway filter
```

diagnose vpn ike gateway filter clear

Erase the current filter.

```
diagnose vpn ike gateway filter clear
```

diagnose vpn ike gateway filter dst-port

Destination port range to filter by.

```
diagnose vpn ike gateway filter dst-port <port>
```

Parameter	Description	Type	Size
<port>	Destination port.	string	

diagnose vpn ike gateway filter ifindex

Index of the interface that IKE connection is negotiated over.

```
diagnose vpn ike gateway filter ifindex <index>
```

Parameter	Description	Type	Size
<index>	Interface index, 0 matches all.	string	

diagnose vpn ike gateway filter loc-addr4

IPv4 local gateway address range to filter by.

```
diagnose vpn ike gateway filter loc-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Local gateway IPv4 address (from).	string	
<ipv4-address>	Local gateway IPv4 address (to).	string	

diagnose vpn ike gateway filter loc-addr6

IPv6 local gateway address range to filter by.

```
diagnose vpn ike gateway filter loc-addr6 <ipv6-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Local gateway IPv6 address (from).	string	
<ipv4-address>	Local gateway IPv6 address (to).	string	

diagnose vpn ike gateway filter name

Phase1 name to filter by.

```
diagnose vpn ike gateway filter name <name>
```

Parameter	Description	Type	Size
<name>	Name to filter by.	string	

diagnose vpn ike gateway filter negate

Negate existing setting of the specified filter parameter.

```
diagnose vpn ike gateway filter negate
```

diagnose vpn ike gateway filter negate dst-port

Negate destination port.

```
diagnose vpn ike gateway filter negate dst-port
```

diagnose vpn ike gateway filter negate ifindex

Negate interface index.

```
diagnose vpn ike gateway filter negate ifindex
```

diagnose vpn ike gateway filter negate loc-addr4

Negate IPv4 local gateway address.

```
diagnose vpn ike gateway filter negate loc-addr4
```

diagnose vpn ike gateway filter negate loc-addr6

Negate IPv6 local gateway address.

```
diagnose vpn ike gateway filter negate loc-addr6
```

diagnose vpn ike gateway filter negate name

Negate name.

```
diagnose vpn ike gateway filter negate name
```

diagnose vpn ike gateway filter negate rem-addr4

Negate IPv4 remote gateway address.

```
diagnose vpn ike gateway filter negate rem-addr4
```

diagnose vpn ike gateway filter negate rem-addr6

Negate IPv6 remote gateway address.

```
diagnose vpn ike gateway filter negate rem-addr6
```

diagnose vpn ike gateway filter negate vd

Negate virtual domain.

```
diagnose vpn ike gateway filter negate vd
```

diagnose vpn ike gateway filter rem-addr4

IPv4 remote gateway address range to filter by.

```
diagnose vpn ike gateway filter rem-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Remote gateway IPv4 address (from).	string	
<ipv4-address>	Remote gateway IPv4 address (to).	string	

diagnose vpn ike gateway filter rem-addr6

IPv6 remote gateway address range to filter by.

```
diagnose vpn ike gateway filter rem-addr6 <ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Remote gateway IPv6 address (from).	string	
<ipv6-address>	Remote gateway IPv6 address (to).	string	

diagnose vpn ike gateway filter vd

Index of virtual domain. -1 matches all.

```
diagnose vpn ike gateway filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose vpn ike gateway flush

Synonym for clear.

```
diagnose vpn ike gateway flush
```

diagnose vpn ike gateway flush name

Clear gateway by name.

```
diagnose vpn ike gateway flush name <name>
```

Parameter	Description	Type	Size
<name>	Name of IKE gateway to clear.	string	

diagnose vpn ike gateway list

list

```
diagnose vpn ike gateway list
```

diagnose vpn ike gateway list name

List gateway by name.

```
diagnose vpn ike gateway list name <name>
```

Parameter	Description	Type	Size
<name>	Name of IKE gateway to list.	string	

diagnose vpn ike ikev2-cookie-enforce

Set IKEv2 SA_INIT cookie enforcement.

```
diagnose vpn ike ikev2-cookie-enforce <enforce>
```

Parameter	Description	Type	Size
<enforce>	Enable/Disable responder IKEv2 cookie.	string	

diagnose vpn ike log

IKE debug log.

```
diagnose vpn ike log
```

diagnose vpn ike log filter

IKE debug log filter.

```
diagnose vpn ike log filter
```

diagnose vpn ike log filter clear

Erase the current filter.

```
diagnose vpn ike log filter clear
```

diagnose vpn ike log filter dst-port

Destination port range to filter by.

```
diagnose vpn ike log filter dst-port <port>
```

Parameter	Description	Type	Size
<port>	Destination port.	string	

diagnose vpn ike log filter ifindex

Index of the interface that IKE connection is negotiated over.

```
diagnose vpn ike log filter ifindex <index>
```

Parameter	Description	Type	Size
<index>	Interface index, 0 matches all.	string	

diagnose vpn ike log filter list

Display the current filter.

```
diagnose vpn ike log filter list
```

diagnose vpn ike log filter loc-addr4

IPv4 local gateway address range to filter by.

```
diagnose vpn ike log filter loc-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Local gateway IPv4 address (from).	string	
<ipv4-address>	Local gateway IPv4 address (to).	string	

diagnose vpn ike log filter loc-addr6

IPv6 local gateway address range to filter by.

```
diagnose vpn ike log filter loc-addr6 <ipv6-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Local gateway IPv6 address (from).	string	
<ipv4-address>	Local gateway IPv6 address (to).	string	

diagnose vpn ike log filter mloc-addr4

Multiple IPv4 local gateway address to filter by.

```
diagnose vpn ike log filter mloc-addr4 <ipv4-address> <ipv4-address> <ipv4-address> <ipv4-address>  
<ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Local gateway IPv4 address 1, up to 6 IP addresses	string	
<ipv4-address>	Local gateway IPv4 address 2, up to 6 IP addresses	string	
<ipv4-address>	Local gateway IPv4 address 3, up to 6 IP addresses	string	
<ipv4-address>	Local gateway IPv4 address 4, up to 6 IP addresses	string	
<ipv4-address>	Local gateway IPv4 address 5, up to 6 IP addresses	string	
<ipv4-address>	Local gateway IPv4 address 6, up to 6 IP addresses	string	

diagnose vpn ike log filter mloc-addr6

Multiple IPv6 local gateway address to filter by.

```
diagnose vpn ike log filter mloc-addr6 <ipv6-address> <ipv6-address> <ipv6-address> <ipv6-address>  
<ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Local gateway IPv6 address 1, up to 6 IP addresses	string	
<ipv6-address>	Local gateway IPv6 address 2, up to 6 IP addresses	string	
<ipv6-address>	Local gateway IPv6 address 3, up to 6 IP addresses	string	
<ipv6-address>	Local gateway IPv6 address 4, up to 6 IP addresses	string	
<ipv6-address>	Local gateway IPv6 address 5, up to 6 IP addresses	string	
<ipv6-address>	Local gateway IPv6 address 6, up to 6 IP addresses	string	

diagnose vpn ike log filter mrem-addr4

Multiple IPv4 remote gateway address to filter by.

```
diagnose vpn ike log filter mrem-addr4 <ipv4-address> <ipv4-address> <ipv4-address> <ipv4-address>
<ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Remote gateway IPv4 address 1, up to 6 IP addresses	string	
<ipv4-address>	Remote gateway IPv4 address 2, up to 6 IP addresses	string	
<ipv4-address>	Remote gateway IPv4 address 3, up to 6 IP addresses	string	
<ipv4-address>	Remote gateway IPv4 address 4, up to 6 IP addresses	string	
<ipv4-address>	Remote gateway IPv4 address 5, up to 6 IP addresses	string	
<ipv4-address>	Remote gateway IPv4 address 6, up to 6 IP addresses	string	

diagnose vpn ike log filter mrem-addr6

Multiple IPv6 remote gateway addresses to filter by.

```
diagnose vpn ike log filter mrem-addr6 <ipv6-address> <ipv6-address> <ipv6-address> <ipv6-address>
<ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Remote gateway IPv6 address 1, up to 6 IP addresses	string	
<ipv6-address>	Remote gateway IPv6 address 2, up to 6 IP addresses	string	
<ipv6-address>	Remote gateway IPv6 address 3, up to 6 IP addresses	string	
<ipv6-address>	Remote gateway IPv6 address 4, up to 6 IP addresses	string	
<ipv6-address>	Remote gateway IPv6 address 5, up to 6 IP addresses	string	
<ipv6-address>	Remote gateway IPv6 address 6, up to 6 IP addresses	string	

diagnose vpn ike log filter name

Phase1 name to filter by.

```
diagnose vpn ike log filter name <name>
```

Parameter	Description	Type	Size
<name>	Name to filter by.	string	

diagnose vpn ike log filter negate

Negate existing setting of the specified filter parameter.

```
diagnose vpn ike log filter negate
```

diagnose vpn ike log filter negate dst-port

Negate destination port.

```
diagnose vpn ike log filter negate dst-port
```

diagnose vpn ike log filter negate ifindex

Negate interface index.

```
diagnose vpn ike log filter negate ifindex
```

diagnose vpn ike log filter negate loc-addr4

Negate IPv4 local gateway address.

```
diagnose vpn ike log filter negate loc-addr4
```

diagnose vpn ike log filter negate loc-addr6

Negate IPv6 local gateway address.

```
diagnose vpn ike log filter negate loc-addr6
```

diagnose vpn ike log filter negate mloc-addr4

Negate multiple IPv4 local gateway addresses.

```
diagnose vpn ike log filter negate mloc-addr4
```

diagnose vpn ike log filter negate mloc-addr6

Negate multiple IPv6 local gateway addresses.

```
diagnose vpn ike log filter negate mloc-addr6
```

diagnose vpn ike log filter negate mrem-addr4

Negate multiple IPv4 remote gateway addresses.

```
diagnose vpn ike log filter negate mrem-addr4
```

diagnose vpn ike log filter negate mrem-addr6

Negate multiple IPv6 remote gateway address.

```
diagnose vpn ike log filter negate mrem-addr6
```

diagnose vpn ike log filter negate name

Negate name.

```
diagnose vpn ike log filter negate name
```

diagnose vpn ike log filter negate rem-addr4

Negate IPv4 remote gateway address address.

```
diagnose vpn ike log filter negate rem-addr4
```

diagnose vpn ike log filter negate rem-addr6

Negate IPv6 remote gateway address.

```
diagnose vpn ike log filter negate rem-addr6
```

diagnose vpn ike log filter negate vd

Negate virtual domain.

```
diagnose vpn ike log filter negate vd
```

diagnose vpn ike log filter rem-addr4

IPv4 remote gateway address range to filter by.

```
diagnose vpn ike log filter rem-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	Remote gateway IPv4 address (from).	string	
<ipv4-address>	Remote gateway IPv4 address (to).	string	

diagnose vpn ike log filter rem-addr6

IPv6 remote gateway address range to filter by.

```
diagnose vpn ike log filter rem-addr6 <ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	Remote gateway IPv6 address (from).	string	
<ipv6-address>	Remote gateway IPv6 address (to).	string	

diagnose vpn ike log filter vd

Index of virtual domain. -1 matches all.

```
diagnose vpn ike log filter vd <index>
```

Parameter	Description	Type	Size
<index>	Index of virtual domain. -1 matches all.	string	

diagnose vpn ike log function-name

Enable/disable display function name.

```
diagnose vpn ike log function-name
```

diagnose vpn ike log function-name disable

Disable display of function name.

```
diagnose vpn ike log function-name disable
```

diagnose vpn ike log function-name enable

Enable display of function name.

```
diagnose vpn ike log function-name enable
```

diagnose vpn ike log terminal

IKE debug log terminal statistics.

```
diagnose vpn ike log terminal
```

diagnose vpn ike log terminal clear

Clear IKE debug log terminals.

```
diagnose vpn ike log terminal clear
```

diagnose vpn ike log terminal reset

Reset IKE debug log terminals.

```
diagnose vpn ike log terminal reset
```

diagnose vpn ike log terminal stats

Show IKE debug log terminal statistics.

```
diagnose vpn ike log terminal stats
```

diagnose vpn ike manager

IKE manager statistics.

```
diagnose vpn ike manager
```

diagnose vpn ike qkd

IKE QKD statistics.

```
diagnose vpn ike qkd <QKD-name>
```

Parameter	Description	Type	Size
<QKD-name>	IKE QKD server name.	string	

diagnose vpn ike restart

Restart IKE.

```
diagnose vpn ike restart
```

diagnose vpn ike routes

IKE routes.

```
diagnose vpn ike routes
```

diagnose vpn ike routes list

List IKE routes.

```
diagnose vpn ike routes list
```

diagnose vpn ike secrets

IKE secrets statistics.

```
diagnose vpn ike secrets
```

diagnose vpn ike stats

IKE statistics.

```
diagnose vpn ike stats
```

diagnose vpn ike status

IKE status.

```
diagnose vpn ike status
```

diagnose vpn ike status detailed

Detailed status.

```
diagnose vpn ike status detailed
```

diagnose vpn ike status summary

Status summary.

```
diagnose vpn ike status summary
```

diagnose vpn ike valgrind

Valgrind analysis.

```
diagnose vpn ike valgrind
```

diagnose vpn ike valgrind disable

Force daemon to restart.

```
diagnose vpn ike valgrind disable
```

diagnose vpn ike valgrind enable

Force daemon to restart.

```
diagnose vpn ike valgrind enable
```

diagnose vpn ike valgrind log

Valgrind logs.

```
diagnose vpn ike valgrind log
```

diagnose vpn ike valgrind log clear

Clear logs.

```
diagnose vpn ike valgrind log clear
```

diagnose vpn ike valgrind log show

Show logs.

```
diagnose vpn ike valgrind log show
```

diagnose vpn ike valgrind memcheck

Force daemon to restart.

```
diagnose vpn ike valgrind memcheck
```

diagnose vpn ike valgrind memcheck_less

Force daemon to restart.

```
diagnose vpn ike valgrind memcheck_less
```

diagnose vpn ike valgrind status

Show valgrind status.

```
diagnose vpn ike valgrind status
```

diagnose vpn ikecrypt

Multiprocess IKE crypto daemon diagnostics.

This topic includes the following commands:

- [diagnose vpn ikecrypt info on page 3410](#)
- [diagnose vpn ikecrypt restart on page 3410](#)
- [diagnose vpn ikecrypt valgrind on page 3411](#)
- [diagnose vpn ikecrypt valgrind disable on page 3411](#)
- [diagnose vpn ikecrypt valgrind enable on page 3411](#)
- [diagnose vpn ikecrypt valgrind log on page 3411](#)
- [diagnose vpn ikecrypt valgrind log clear on page 3411](#)
- [diagnose vpn ikecrypt valgrind log show on page 3411](#)
- [diagnose vpn ikecrypt valgrind memcheck on page 3412](#)
- [diagnose vpn ikecrypt valgrind memcheck_less on page 3412](#)
- [diagnose vpn ikecrypt valgrind status on page 3412](#)

diagnose vpn ikecrypt info

Display ikecrypt daemon information.

```
diagnose vpn ikecrypt info
```

diagnose vpn ikecrypt restart

Restart the ikecrypt daemon.

```
diagnose vpn ikecrypt restart
```

diagnose vpn ikecrypt valgrind

Valgrind analysis.

```
diagnose vpn ikecrypt valgrind
```

diagnose vpn ikecrypt valgrind disable

Force daemon to restart.

```
diagnose vpn ikecrypt valgrind disable
```

diagnose vpn ikecrypt valgrind enable

Force daemon to restart.

```
diagnose vpn ikecrypt valgrind enable
```

diagnose vpn ikecrypt valgrind log

Valgrind logs.

```
diagnose vpn ikecrypt valgrind log
```

diagnose vpn ikecrypt valgrind log clear

Clear logs.

```
diagnose vpn ikecrypt valgrind log clear
```

diagnose vpn ikecrypt valgrind log show

Show logs.

```
diagnose vpn ikecrypt valgrind log show
```

diagnose vpn ikecrypt valgrind memcheck

Force daemon to restart.

```
diagnose vpn ikecrypt valgrind memcheck
```

diagnose vpn ikecrypt valgrind memcheck_less

Force daemon to restart.

```
diagnose vpn ikecrypt valgrind memcheck_less
```

diagnose vpn ikecrypt valgrind status

Show valgrind status.

```
diagnose vpn ikecrypt valgrind status
```

diagnose vpn ipsec

General IPsec.

This topic includes the following commands:

- [diagnose vpn ipsec cpu on page 3412](#)
- [diagnose vpn ipsec cpu clear on page 3412](#)
- [diagnose vpn ipsec status on page 3413](#)

diagnose vpn ipsec cpu

Actions for software crypto CPU distributions.

```
diagnose vpn ipsec cpu
```

diagnose vpn ipsec cpu clear

Clear the stats.

```
diagnose vpn ipsec cpu clear
```

diagnose vpn ipsec status

Show status of IPsec.

```
diagnose vpn ipsec status
```

diagnose vpn l2tp

VPN L2TP.

This topic includes the following commands:

- [diagnose vpn l2tp status on page 3413](#)
- [diagnose vpn l2tp tunnel on page 3413](#)

diagnose vpn l2tp status

Display L2TP status.

```
diagnose vpn l2tp status
```

diagnose vpn l2tp tunnel

List L2TP tunnels.

```
diagnose vpn l2tp tunnel <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	IPv4 address of the client (all if don't specify)	string	

diagnose vpn mr

Multicast routing.

This topic includes the following commands:

- [diagnose vpn mr add on page 3414](#)
- [diagnose vpn mr del on page 3414](#)

- [diagnose vpn mr list-addr on page 3414](#)
- [diagnose vpn mr list-dev on page 3415](#)
- [diagnose vpn mr list-tun on page 3415](#)

diagnose vpn mr add

Add a multicast route.

```
diagnose vpn mr add <device> <tunnel-id> <mgrp> <vrf>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	
<tunnel-id>	IPsec tunnel id.	string	
<mgrp>	Multicast IP.	string	
<vrf>	VRF ID.	string	

diagnose vpn mr del

Delete multicast routes.

```
diagnose vpn mr del <device> <tunnel-id> <mgrp> <vrf>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	
<tunnel-id>	IPsec tunnel id.	string	
<mgrp>	Multicast IP.	string	
<vrf>	VRF ID.	string	

diagnose vpn mr list-addr

List by multicast address.

```
diagnose vpn mr list-addr <device> <address> <vrf>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	
<address>	Multicast address.	string	
<vrf>	VRF ID.	string	

diagnose vpn mr list-dev

List by device.

```
diagnose vpn mr list-dev <device>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	

diagnose vpn mr list-tun

List by tunnel.

```
diagnose vpn mr list-tun <tunnel>
```

Parameter	Description	Type	Size
<tunnel>	Name of IPsec tunnel.	string	

diagnose vpn mr6

IPv6 multicast routing.

This topic includes the following commands:

- [diagnose vpn mr6 add on page 3415](#)
- [diagnose vpn mr6 del on page 3416](#)
- [diagnose vpn mr6 list-addr on page 3416](#)
- [diagnose vpn mr6 list-dev on page 3416](#)
- [diagnose vpn mr6 list-tun on page 3417](#)

diagnose vpn mr6 add

Add a multicast route.

```
diagnose vpn mr6 add <device> <tunnel-id> <mgrp> <vrf>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	

Parameter	Description	Type	Size
<tunnel-id>	IPsec tunnel id.	string	
<mgrp>	Multicast IP.	string	
<vrf>	VRF ID.	string	

diagnose vpn mr6 del

Delete multicast routes.

```
diagnose vpn mr6 del <device> <tunnel-id> <mgrp> <vrf>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	
<tunnel-id>	IPsec tunnel id.	string	
<mgrp>	Multicast IP.	string	
<vrf>	VRF ID.	string	

diagnose vpn mr6 list-addr

List by multicast address.

```
diagnose vpn mr6 list-addr <device> <address> <vrf>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	
<address>	Multicast address.	string	
<vrf>	VRF ID.	string	

diagnose vpn mr6 list-dev

List by device.

```
diagnose vpn mr6 list-dev <device>
```

Parameter	Description	Type	Size
<device>	Name of IPsec device.	string	

diagnose vpn mr6 list-tun

List by tunnel.

```
diagnose vpn mr6 list-tun <tunnel>
```

Parameter	Description	Type	Size
<tunnel>	Name of IPsec tunnel.	string	

diagnose vpn pptp

VPN PPTP.

This topic includes the following commands:

- [diagnose vpn pptp status on page 3417](#)

diagnose vpn pptp status

Display PPTP status.

```
diagnose vpn pptp status
```

diagnose vpn ssl

Agentless VPN.

This topic includes the following commands:

- [diagnose vpn ssl app-session on page 3418](#)
- [diagnose vpn ssl blocklist on page 3418](#)
- [diagnose vpn ssl blocklist count on page 3419](#)
- [diagnose vpn ssl blocklist del on page 3419](#)
- [diagnose vpn ssl blocklist list on page 3419](#)
- [diagnose vpn ssl cmdb-cache-log on page 3419](#)
- [diagnose vpn ssl debug-filter on page 3420](#)
- [diagnose vpn ssl debug-filter clear on page 3420](#)
- [diagnose vpn ssl debug-filter list on page 3420](#)
- [diagnose vpn ssl debug-filter negate on page 3420](#)
- [diagnose vpn ssl debug-filter negate src-addr4 on page 3420](#)

- [diagnose vpn ssl debug-filter negate src-addr6 on page 3420](#)
- [diagnose vpn ssl debug-filter negate vd on page 3421](#)
- [diagnose vpn ssl debug-filter src-addr4 on page 3421](#)
- [diagnose vpn ssl debug-filter src-addr6 on page 3421](#)
- [diagnose vpn ssl debug-filter vd on page 3421](#)
- [diagnose vpn ssl dist-usr on page 3422](#)
- [diagnose vpn ssl dist-usr count on page 3422](#)
- [diagnose vpn ssl dist-usr del on page 3422](#)
- [diagnose vpn ssl dist-usr list on page 3422](#)
- [diagnose vpn ssl info on page 3423](#)
- [diagnose vpn ssl list on page 3423](#)
- [diagnose vpn ssl peer-name on page 3423](#)
- [diagnose vpn ssl peer-name count on page 3423](#)
- [diagnose vpn ssl peer-name del on page 3423](#)
- [diagnose vpn ssl peer-name list on page 3424](#)
- [diagnose vpn ssl saml-metadata on page 3424](#)
- [diagnose vpn ssl statistics on page 3424](#)
- [diagnose vpn ssl user-session on page 3424](#)
- [diagnose vpn ssl usr-chg on page 3425](#)
- [diagnose vpn ssl usr-chg count on page 3425](#)
- [diagnose vpn ssl usr-chg del on page 3425](#)
- [diagnose vpn ssl usr-chg list on page 3425](#)
- [diagnose vpn ssl web-mode-test on page 3426](#)

diagnose vpn ssl app-session

List all app session in db.

```
diagnose vpn ssl app-session <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display all app session for all VDOMs or given VDOM name or VDOM ID. Without argument, app session for current VDOM is shown.	string	

diagnose vpn ssl blocklist

Agentless VPN blocklist information

```
diagnose vpn ssl blocklist
```

diagnose vpn ssl blocklist count

Print counts of Agentless VPN blocklist

```
diagnose vpn ssl blocklist count <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN blocklist entries count for all VDOMs, given VDOM name or VDOM ID. Without argument, count for current VDOM is shown.	string	

diagnose vpn ssl blocklist del

Del Agentless VPN blocklist

```
diagnose vpn ssl blocklist del <all|vfid|addr>
```

Parameter	Description	Type	Size
<all vfid addr>	Delete block list entries for all VDOMs, given VDOM ID or address.	string	

diagnose vpn ssl blocklist list

List Agentless VPN blocklist

```
diagnose vpn ssl blocklist list <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN blocklist information for all VDOMs, given VDOM name or VDOM ID. Without argument, information for current VDOM is shown.	string	

diagnose vpn ssl cmdb-cache-log

Enable/disable Agentless VPN cmdb cache log.

```
diagnose vpn ssl cmdb-cache-log <enable>
```

Parameter	Description	Type	Size
<enable>	Enable Agentless VPN cmdb cache log. disable Disable Agentless VPN cmdb cache log.	string	

diagnose vpn ssl debug-filter

Agentless VPN debug message filter.

```
diagnose vpn ssl debug-filter
```

diagnose vpn ssl debug-filter clear

Erase the current filter.

```
diagnose vpn ssl debug-filter clear
```

diagnose vpn ssl debug-filter list

Display the current filter.

```
diagnose vpn ssl debug-filter list
```

diagnose vpn ssl debug-filter negate

Negate the specified filter parameter.

```
diagnose vpn ssl debug-filter negate
```

diagnose vpn ssl debug-filter negate src-addr4

IPv4 source address.

```
diagnose vpn ssl debug-filter negate src-addr4
```

diagnose vpn ssl debug-filter negate src-addr6

IPv6 source address.

```
diagnose vpn ssl debug-filter negate src-addr6
```

diagnose vpn ssl debug-filter negate vd

Virtual domain.

```
diagnose vpn ssl debug-filter negate vd
```

diagnose vpn ssl debug-filter src-addr4

IPv4 source address range.

```
diagnose vpn ssl debug-filter src-addr4 <ipv4-address> <ipv4-address>
```

Parameter	Description	Type	Size
<ipv4-address>	source IPv4 address (from)	string	
<ipv4-address>	source IPv4 address (to)	string	

diagnose vpn ssl debug-filter src-addr6

IPv6 source address range.

```
diagnose vpn ssl debug-filter src-addr6 <ipv6-address> <ipv6-address>
```

Parameter	Description	Type	Size
<ipv6-address>	source IPv6 address (from)	string	
<ipv6-address>	source IPv6 address (to)	string	

diagnose vpn ssl debug-filter vd

Name of virtual domain.

```
diagnose vpn ssl debug-filter vd <vdom name>
```

Parameter	Description	Type	Size
<vdom name>	Name of virtual domain.	string	

diagnose vpn ssl dist-usr

Agentless VPN distinct user information

```
diagnose vpn ssl dist-usr
```

diagnose vpn ssl dist-usr count

Print counts of Agentless VPN distinct user

```
diagnose vpn ssl dist-usr count <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN distinct user count for all VDOMs, given VDOM name or VDOM ID. Without argument, count for current VDOM is shown.	string	

diagnose vpn ssl dist-usr del

Del Agentless VPN distinct user

```
diagnose vpn ssl dist-usr del <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Delete distinct user for all VDOMs, given VDOM name or VDOM ID.	string	

diagnose vpn ssl dist-usr list

List Agentless VPN distinct users

```
diagnose vpn ssl dist-usr list <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN distinct user information for all VDOMs, given VDOM name or VDOM ID. Without argument, information for current VDOM is shown.	string	

diagnose vpn ssl info

Agentless VPN information

```
diagnose vpn ssl info <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN information for all VDOMs, given VDOM name or VDOM ID. Without argument, information for current VDOM is shown.	string	

diagnose vpn ssl list

List current connections.

```
diagnose vpn ssl list
```

diagnose vpn ssl peer-name

Agentless VPN Peer information

```
diagnose vpn ssl peer-name
```

diagnose vpn ssl peer-name count

Print counts of Agentless VPN peer information

```
diagnose vpn ssl peer-name count
```

diagnose vpn ssl peer-name del

Del Agentless VPN peer information

```
diagnose vpn ssl peer-name del
```

diagnose vpn ssl peer-name list

List Agentless VPN peer information

```
diagnose vpn ssl peer-name list
```

diagnose vpn ssl saml-metadata

Display Agentless VPN SAML SP metadata for given SAML name.

```
diagnose vpn ssl saml-metadata <SAML name>
```

Parameter	Description	Type	Size
<SAML name>	Name of SAML user.	string	

diagnose vpn ssl statistics

Agentless VPN statistics

```
diagnose vpn ssl statistics <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN statistics for all VDOMs or given VDOM name or VDOM ID. Without argument, statistics for current VDOM is shown.	string	

diagnose vpn ssl user-session

List all user session in db.

```
diagnose vpn ssl user-session <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display all user session for all VDOMs or given VDOM name or VDOM ID. Without argument, user session for current VDOM is shown.	string	

diagnose vpn ssl usr-chg

Agentless VPN user information with password modification

```
diagnose vpn ssl usr-chg
```

diagnose vpn ssl usr-chg count

Print counts of Agentless VPN user change information

```
diagnose vpn ssl usr-chg count <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN user change count for all VDOMs, given VDOM name or VDOM ID. Without argument, count for current VDOM is shown.	string	

diagnose vpn ssl usr-chg del

Del Agentless VPN user change information

```
diagnose vpn ssl usr-chg del <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Delete Agentless VPN user change information for all VDOMs, given VDOM name or VDOM ID.	string	

diagnose vpn ssl usr-chg list

List Agentless VPN user change information

```
diagnose vpn ssl usr-chg list <all|vdom-name|vfid>
```

Parameter	Description	Type	Size
<all vdom-name vfid>	Display Agentless VPN user change information for all VDOMs, given VDOM name or VDOM ID. Without argument, information for current VDOM is shown.	string	

diagnose vpn ssl web-mode-test

Enable/disable random session ID in proxy URL for testing.

```
diagnose vpn ssl web-mode-test <enable>
```

Parameter	Description	Type	Size
<enable>	Enable random session ID in proxy URL for testing. disable Disable random session ID in proxy URL for testing.	string	

diagnose vpn tunnel

IPsec tunnel.

This topic includes the following commands:

- [diagnose vpn tunnel bundle-list on page 3426](#)
- [diagnose vpn tunnel bundle-list name on page 3427](#)
- [diagnose vpn tunnel bundle-list vdom on page 3427](#)
- [diagnose vpn tunnel delinbsa on page 3427](#)
- [diagnose vpn tunnel deloutbsa on page 3427](#)
- [diagnose vpn tunnel dialup-list on page 3428](#)
- [diagnose vpn tunnel down on page 3428](#)
- [diagnose vpn tunnel fec on page 3428](#)
- [diagnose vpn tunnel flush on page 3429](#)
- [diagnose vpn tunnel key-life-time on page 3429](#)
- [diagnose vpn tunnel list on page 3429](#)
- [diagnose vpn tunnel list name on page 3429](#)
- [diagnose vpn tunnel list number on page 3429](#)
- [diagnose vpn tunnel route4-priority on page 3430](#)
- [diagnose vpn tunnel route6-priority on page 3430](#)
- [diagnose vpn tunnel stat on page 3430](#)
- [diagnose vpn tunnel stat flush on page 3430](#)
- [diagnose vpn tunnel up on page 3430](#)

diagnose vpn tunnel bundle-list

List all bundles.

```
diagnose vpn tunnel bundle-list
```

diagnose vpn tunnel bundle-list name

List bundle by interface.

```
diagnose vpn tunnel bundle-list name
```

diagnose vpn tunnel bundle-list vdom

List bundle by VDOM.

```
diagnose vpn tunnel bundle-list vdom
```

diagnose vpn tunnel delinbsa

Remove tunnel sa.

```
diagnose vpn tunnel delinbsa <name> <spi> <spi> <spi> <spi> <spi> <spi> <spi> <spi>
```

Parameter	Description	Type	Size
<name>	Name of tunnel.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	

diagnose vpn tunnel deloutbsa

Remove tunnel sa.

```
diagnose vpn tunnel deloutbsa <name> <spi> <spi> <spi> <spi> <spi> <spi> <spi> <spi>
```

Parameter	Description	Type	Size
<name>	Name of tunnel.	string	

Parameter	Description	Type	Size
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	
<spi>	SA SPI.	string	

diagnose vpn tunnel dialup-list

List dialup tunnel.

```
diagnose vpn tunnel dialup-list
```

diagnose vpn tunnel down

Shut down tunnel.

```
diagnose vpn tunnel down <phase2> <phase1> <serial>
```

Parameter	Description	Type	Size
<phase2>	Name of phase2.	string	
<phase1>	Name of phase1.	string	
<serial>	Phase2 serial number.	string	

diagnose vpn tunnel fec

FEC statistics.

```
diagnose vpn tunnel fec <phase1> <1>
```

Parameter	Description	Type	Size
<phase1>	Name of phase1.	string	
<1>	Clean the statistic.	string	

diagnose vpn tunnel flush

Flush tunnel SAs.

```
diagnose vpn tunnel flush
```

diagnose vpn tunnel key-life-time

Override configured IPsec SA lifetime with specified value.

```
diagnose vpn tunnel key-life-time <life-time>
```

Parameter	Description	Type	Size
<life-time>	Life-time in seconds.	string	

diagnose vpn tunnel list

List all tunnel.

```
diagnose vpn tunnel list
```

diagnose vpn tunnel list name

List tunnel by name.

```
diagnose vpn tunnel list name
```

diagnose vpn tunnel list number

List tunnel by number.

```
diagnose vpn tunnel list number <begin-index> <end-index>
```

Parameter	Description	Type	Size
<begin-index>	First index of tunnel.	string	
<end-index>	Last index of tunnel.	string	

diagnose vpn tunnel route4-priority

Update tunnel IPv4 route priority.

```
diagnose vpn tunnel route4-priority <name> <priority>
```

Parameter	Description	Type	Size
<name>	Name of tunnel.	string	
<priority>	Priority of IPv4 route.	string	

diagnose vpn tunnel route6-priority

Update tunnel IPv6 route priority.

```
diagnose vpn tunnel route6-priority <name> <priority>
```

Parameter	Description	Type	Size
<name>	Name of tunnel.	string	
<priority>	Priority of IPv6 route.	string	

diagnose vpn tunnel stat

Tunnel statistic info.

```
diagnose vpn tunnel stat
```

diagnose vpn tunnel stat flush

Flush tunnel stats by name.

```
diagnose vpn tunnel stat flush
```

diagnose vpn tunnel up

Activate tunnel.

```
diagnose vpn tunnel up <phase2> <phase1> <serial>
```

Parameter	Description	Type	Size
<phase2>	Name of phase2.	string	
<phase1>	Name of phase1.	string	
<serial>	Phase2 serial number.	string	

diagnose wacs

Web cache DB daemon.

This topic includes the following commands:

- [diagnose wacs clear on page 3431](#)
- [diagnose wacs restart on page 3431](#)
- [diagnose wacs stats on page 3431](#)

diagnose wacs clear

Remove all entries from the database.

```
diagnose wacs clear
```

diagnose wacs restart

Restart the daemon and reset the statistical parameters.

```
diagnose wacs restart
```

diagnose wacs stats

Show statistics.

```
diagnose wacs stats
```

diagnose wad

WAD diagnostics.

This topic includes the following commands:

- [diagnose wad access-proxy on page 3443](#)
- [diagnose wad access-proxy health-check on page 3443](#)
- [diagnose wad access-proxy health-check status on page 3443](#)

diagnose wad access-proxy

Show connectivity status with the real server.

```
diagnose wad access-proxy
```

diagnose wad access-proxy health-check

Show connectivity status with the real server.

```
diagnose wad access-proxy health-check
```

diagnose wad access-proxy health-check status

Show connectivity status with the real server.

```
diagnose wad access-proxy health-check status
```

diagnose wad config

CMDB share memroy.

```
diagnose wad config
```

diagnose wad config auth-rule

list firewall authentication rule

```
diagnose wad config auth-rule
```

diagnose wad config policy

list firewall policy details

```
diagnose wad config policy
```

diagnose wad config proxy-policy

list firewall explicit policy details

```
diagnose wad config proxy-policy
```

diagnose wad config summary

list basic stats while building share memory

```
diagnose wad config summary
```

diagnose wad console-log

Send WAD log messages to the console.

```
diagnose wad console-log
```

diagnose wad console-log disable

Disable logging.

```
diagnose wad console-log disable
```

diagnose wad console-log enable

Enable logging.

```
diagnose wad console-log enable
```

diagnose wad csvc

Cache service diagnostics.

```
diagnose wad csvc
```

diagnose wad csvc bytecache

Bytecache diagnostics.

```
diagnose wad csvc bytecache
```

diagnose wad csvc bytecache clear

Purge all entries.

```
diagnose wad csvc bytecache clear [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc bytecache flush

Reset statistics.

```
diagnose wad csvc bytecache flush [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc bytecache lists

Show entry lists.

```
diagnose wad csvc bytecache lists [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc bytecache stats

Show statistics.

```
diagnose wad csvc bytecache stats [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc bytecache toggle

Toggle operations to storage.

```
diagnose wad csvc bytecache toggle
```

diagnose wad csvc bytecache toggle all

Set/unset all operations as busy.

```
diagnose wad csvc bytecache toggle all [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc bytecache toggle create

Toggle create as busy.

```
diagnose wad csvc bytecache toggle create [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc bytecache toggle read

Toggle read as busy.

```
diagnose wad csvc bytecache toggle read [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc memcache

Memcache diagnostics.

```
diagnose wad csvc memcache
```

diagnose wad csvc memcache clear

Purge all entries.

```
diagnose wad csvc memcache clear [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc memcache flush

Reset statistics.

```
diagnose wad csvc memcache flush [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc memcache lists

Show entry lists.

```
diagnose wad csvc memcache lists [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc memcache stats

Show statistics.

```
diagnose wad csvc memcache stats [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc restart

Restart cache service.

```
diagnose wad csvc restart [<type>] [<index>]
```

Parameter	Description	Type	Size
[<type>]	CSVC type {0:web_cache, 1:byte_and_mem_cache} or all if not set.	string	
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache

Webcache diagnostics.

```
diagnose wad csvc webcache
```

diagnose wad csvc webcache clear

Purge all entries.

```
diagnose wad csvc webcache clear [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache flush

Reset statistics.

```
diagnose wad csvc webcache flush [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache lists

Show entry lists.

```
diagnose wad csvc webcache lists [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache stats

Show statistics.

```
diagnose wad csvc webcache stats [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle

Toggle operations to storage.

```
diagnose wad csvc webcache toggle
```

diagnose wad csvc webcache toggle abort

Toggle abort as busy.

```
diagnose wad csvc webcache toggle abort [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle add_ref

Toggle add_ref as busy.

```
diagnose wad csvc webcache toggle add_ref [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle all

Set/unset all operations as busy.

```
diagnose wad csvc webcache toggle all [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle append

Toggle append as busy.

```
diagnose wad csvc webcache toggle append [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle create

Toggle create as busy.

```
diagnose wad csvc webcache toggle create [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle read

Toggle read as busy.

```
diagnose wad csvc webcache toggle read [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle remove

Toggle remove as busy.

```
diagnose wad csvc webcache toggle remove [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle resolve

Toggle resolve as busy.

```
diagnose wad csvc webcache toggle resolve [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad csvc webcache toggle update

Toggle update as busy.

```
diagnose wad csvc webcache toggle update [<index>]
```

Parameter	Description	Type	Size
[<index>]	CSVC index or all cache services if not set.	string	

diagnose wad debug

Debug setting.

```
diagnose wad debug
```

diagnose wad debug clear

Clear debug setting.

```
diagnose wad debug clear
```

diagnose wad debug crash

Saved debug message.

```
diagnose wad debug crash
```

diagnose wad debug crash clear

Clear saved debug log.

```
diagnose wad debug crash clear
```

diagnose wad debug crash disable

Disable saving debug messages when process crashes.

```
diagnose wad debug crash disable
```

diagnose wad debug crash enable

Enable saving debug messages when process crashes.

```
diagnose wad debug crash enable
```

diagnose wad debug crash list

List a summary of crash logs.

```
diagnose wad debug crash list
```

diagnose wad debug crash max

Max save size. 1-10 (MB)

```
diagnose wad debug crash max <size>
```

Parameter	Description	Type	Size
<size>	1-10 (MB).	string	

diagnose wad debug crash read

Display saved debug log.

```
diagnose wad debug crash read <proc_type> <id>
```

Parameter	Description	Type	Size
<proc_type>	Please input proc_type number.	string	
<id>	Please input crash id.	string	

diagnose wad debug disable

Disable debug setting.

```
diagnose wad debug disable
```

diagnose wad debug disable category

Category debug setting.

```
diagnose wad debug disable category
```

diagnose wad debug disable category antiphish

Anti-Phishing

```
diagnose wad debug disable category antiphish
```

diagnose wad debug disable category auth

authentication

```
diagnose wad debug disable category auth
```

diagnose wad debug disable category autotest

auto test

```
diagnose wad debug disable category autotest
```

diagnose wad debug disable category bytecache

byte cache

```
diagnose wad debug disable category bytecache
```

diagnose wad debug disable category casb

casb

```
diagnose wad debug disable category casb
```

diagnose wad debug disable category cifs

cifs

```
diagnose wad debug disable category cifs
```

diagnose wad debug disable category cmgr

certificate management

```
diagnose wad debug disable category cmgr
```

diagnose wad debug disable category config

learn config

```
diagnose wad debug disable category config
```

diagnose wad debug disable category csvc

cache service

```
diagnose wad debug disable category csvc
```

diagnose wad debug disable category detail

troubleshoot detail

```
diagnose wad debug disable category detail
```

diagnose wad debug disable category devuln

device vulnerability

```
diagnose wad debug disable category devuln
```

diagnose wad debug disable category diag

debug daemon

```
diagnose wad debug disable category diag
```

diagnose wad debug disable category dispatcher

dispatcher

```
diagnose wad debug disable category dispatcher
```

diagnose wad debug disable category dns

DNS proxy

```
diagnose wad debug disable category dns
```

diagnose wad debug disable category dskd

cache disks

```
diagnose wad debug disable category dskd
```

diagnose wad debug disable category email

user email stats

```
diagnose wad debug disable category email
```

diagnose wad debug disable category ftp

ftp

```
diagnose wad debug disable category ftp
```

diagnose wad debug disable category tls_fingerprint

tls fingerprint

```
diagnose wad debug disable category tls_fingerprint
```

diagnose wad debug disable category tunnel

wanopt tunnel

```
diagnose wad debug disable category tunnel
```

diagnose wad debug disable category uih

uih

```
diagnose wad debug disable category uih
```

diagnose wad debug disable category video

cache video

```
diagnose wad debug disable category video
```

diagnose wad debug disable category vs

virtual server

```
diagnose wad debug disable category vs
```

diagnose wad debug disable category webcache

webcache

```
diagnose wad debug disable category webcache
```

diagnose wad debug disable category ztna_portal

ztna web portal

```
diagnose wad debug disable category ztna_portal
```

diagnose wad debug disable category ztna_rev_conn

ztna reverse connector

```
diagnose wad debug disable category ztna_rev_conn
```

diagnose wad debug display

Display setting.

```
diagnose wad debug display
```

diagnose wad debug display pid

Pid display in the trace.

```
diagnose wad debug display pid
```

diagnose wad debug display pid disable

Disable pid display.

```
diagnose wad debug display pid disable
```

diagnose wad debug display pid enable

Enable pid display.

```
diagnose wad debug display pid enable
```

diagnose wad debug enable

Enable debug setting.

```
diagnose wad debug enable
```

diagnose wad debug enable all

Enable all debug categories and set to the maximum level.

```
diagnose wad debug enable all
```

diagnose wad debug enable category

Category debug setting.

```
diagnose wad debug enable category
```

diagnose wad debug enable category all

all category

```
diagnose wad debug enable category all
```

diagnose wad debug enable category antiphish

Anti-Phishing

```
diagnose wad debug enable category antiphish
```

diagnose wad debug enable category auth

authentication

```
diagnose wad debug enable category auth

diagnose wad debug enable category bytecache

byte cache

```
diagnose wad debug enable category bytecache
```

diagnose wad debug enable category casb

casb

```
diagnose wad debug enable category casb
```

diagnose wad debug enable category cifs

cifs

```
diagnose wad debug enable category cifs
```

diagnose wad debug enable category cmgr

certificate management

```
diagnose wad debug enable category cmgr
```

diagnose wad debug enable category config

learn config

```
diagnose wad debug enable category config
```

diagnose wad debug enable category csvc

cache service

```
diagnose wad debug enable category csvc
```

diagnose wad debug enable category detail

troubleshoot detail

```
diagnose wad debug enable category detail
```

diagnose wad debug enable category devuln

device vulnerability

```
diagnose wad debug enable category devuln
```

diagnose wad debug enable category diag

debug daemon

```
diagnose wad debug enable category diag
```

diagnose wad debug enable category dispatcher

dispatcher

```
diagnose wad debug enable category dispatcher
```

diagnose wad debug enable category dns

DNS proxy

```
diagnose wad debug enable category dns
```

diagnose wad debug enable category dskd

cache disks

```
diagnose wad debug enable category dskd

diagnose wad debug enable category icbsvc

icb service

```
diagnose wad debug enable category icbsvc
```

diagnose wad debug enable category info

user device info

```
diagnose wad debug enable category info
```

diagnose wad debug enable category ips

ips

```
diagnose wad debug enable category ips
```

diagnose wad debug enable category mapi

mapi

```
diagnose wad debug enable category mapi
```

diagnose wad debug enable category memblk

memory block

```
diagnose wad debug enable category memblk
```

diagnose wad debug enable category monitor

worker health monitor

```
diagnose wad debug enable category monitor
```

diagnose wad debug enable category packet

packet

```
diagnose wad debug enable category packet
```

diagnose wad debug enable category policy

policy matching

```
diagnose wad debug enable category policy
```

diagnose wad debug enable category policy_test

firewall policy test

```
diagnose wad debug enable category policy_test
```

diagnose wad debug enable category proc

process management

```
diagnose wad debug enable category proc
```

diagnose wad debug enable category quic

quic

```
diagnose wad debug enable category quic
```

diagnose wad debug enable category quic_cc

quic congestion control and loss detection

```
diagnose wad debug enable category quic_cc
```

diagnose wad debug enable category rpc

rpc

```
diagnose wad debug enable category rpc
```

diagnose wad debug enable category scan

UTM scan

```
diagnose wad debug enable category scan
```

diagnose wad debug enable category scp

scp

```
diagnose wad debug enable category scp
```

diagnose wad debug enable category session

session

```
diagnose wad debug enable category session
```

diagnose wad debug enable category sftp

sftp

```
diagnose wad debug enable category sftp

ssh

```
diagnose wad debug enable category ssh
```

diagnose wad debug enable category ssl

ssl

```
diagnose wad debug enable category ssl
```

diagnose wad debug enable category stream

stream

```
diagnose wad debug enable category stream
```

diagnose wad debug enable category svc_conn

ztna service connector

```
diagnose wad debug enable category svc_conn
```

diagnose wad debug enable category sys

sys

```
diagnose wad debug enable category sys
```

diagnose wad debug enable category tfap

ztna traffic forward proxy

```
diagnose wad debug enable category tfap
```

diagnose wad debug enable category tls_fingerprint

tls fingerprint

```
diagnose wad debug enable category tls_fingerprint
```

diagnose wad debug enable category tunnel

wanopt tunnel

```
diagnose wad debug enable category tunnel
```

diagnose wad debug enable category uih

uih

```
diagnose wad debug enable category uih
```

diagnose wad debug enable category video

cache video

```
diagnose wad debug enable category video
```

diagnose wad debug enable category vs

virtual server

```
diagnose wad debug enable category vs
```

diagnose wad debug enable category webcache

webcache

```
diagnose wad debug enable category webcache
```

diagnose wad debug enable category ztna_portal

ztna web portal

```
diagnose wad debug enable category ztna_portal
```

diagnose wad debug enable category ztna_rev_conn

ztna reverse connector

```
diagnose wad debug enable category ztna_rev_conn
```

diagnose wad debug enable level

Level debug setting.

```
diagnose wad debug enable level
```

diagnose wad debug enable level error

error

```
diagnose wad debug enable level error
```

diagnose wad debug enable level info

information

```
diagnose wad debug enable level info
```

diagnose wad debug enable level verbose

verbose

```
diagnose wad debug enable level verbose
```

diagnose wad debug enable level warn

warning

```
diagnose wad debug enable level warn
```

diagnose wad debug ips-db

Inline-IPS database.

```
diagnose wad debug ips-db
```

diagnose wad debug ips-db status

Inline-IPS database status.

```
diagnose wad debug ips-db status
```

diagnose wad debug ips-filter

Inline IPS debug filter setting.

```
diagnose wad debug ips-filter
```

diagnose wad debug ips-filter aid

Enable debug for a list of attack IDs.

```
diagnose wad debug ips-filter aid <id,id,...>
```

Parameter	Description	Type	Size
<id,id,...>	Attack IDs	string	

diagnose wad debug ips-filter all

Enable debug filter for all rules

```
diagnose wad debug ips-filter all
```

diagnose wad debug ips-filter clear

Clear debug filter

```
diagnose wad debug ips-filter clear
```

diagnose wad debug ips-filter show

Show current debug filter

```
diagnose wad debug ips-filter show
```

diagnose wad debug ips-filter vid

Enable debug for a list of vulnerability IDs.

```
diagnose wad debug ips-filter vid <id,id,...>
```

Parameter	Description	Type	Size
<id,id,...>	Vulnerability IDs	string	

diagnose wad debug save-http-req-crash

Save HTTP request when WAD worker crashes.

```
diagnose wad debug save-http-req-crash
```

diagnose wad debug save-http-req-crash disable

Disable saving HTTP request when WAD worker crashes.

```
diagnose wad debug save-http-req-crash disable
```

diagnose wad debug save-http-req-crash enable

Enable saving HTTP request when WAD worker crashes.

```
diagnose wad debug save-http-req-crash enable
```

diagnose wad debug show

Show debug setting.

```
diagnose wad debug show
```

diagnose wad dev

Dev. diagnostics.

```
diagnose wad dev
```

diagnose wad dev fcnacd

Emulate fcnacd messages.

```
diagnose wad dev fcnacd
```

diagnose wad dev fcnacd delete

Delete a device by uid, sn, and tenant id. (EC_LLS_ZTNA_CMD_DEV_DELETE)

```
diagnose wad dev fcnacd delete
```

diagnose wad dev fcnacd ip-err

Generate an EMS IP address error response. (EC_LLS_ZTNA_CMD_FIND_BY_IPVD_ER_CODE)

```
diagnose wad dev fcnacd ip-err
```

diagnose wad dev fcnacd uid-err

Generate an EMS UID error response. (EC_LLS_ZTNA_CMD_FIND_BY_UID)

```
diagnose wad dev fcnacd uid-err
```

diagnose wad dev fcnacd update

Insert a dummy device. (EC_LLS_ZTNA_CMD_DEV_UPDATE)

```
diagnose wad dev fcnacd update
```

diagnose wad dev query-by

Query a device.

```
diagnose wad dev query-by
```

diagnose wad dev query-by ipv4

Query by IPv4 address.

```
diagnose wad dev query-by ipv4
```

diagnose wad dev query-by ipv6

Query by IPv6 address.

```
diagnose wad dev query-by ipv6
```

diagnose wad dev query-by uid

Query by UID.

```
diagnose wad dev query-by uid
```

diagnose wad dev-vuln

Device vulnerability diagnostics.

```
diagnose wad dev-vuln
```

diagnose wad dev-vuln query

Query dev-vuln by vendor=<xxx>&version=<xxx>&product=<xxx>&model=<xxx>

```
diagnose wad dev-vuln query
```

diagnose wad dev-vuln query-by-id

Query dev-vuln by vulnerability id=<xxx>.

```
diagnose wad dev-vuln query-by-id
```

diagnose wad dev-vuln query-ftgd

Query dev-vuln by vendor=<xxx>&version=<xxx>&product=<xxx>&model=<xxx>

```
diagnose wad dev-vuln query-ftgd
```

diagnose wad filter

Filter for listing sessions or tunnels.

```
diagnose wad filter
```

diagnose wad filter clear

Erase current filter settings.

```
diagnose wad filter clear
```

diagnose wad filter dport

Destination port range to filter by.

```
diagnose wad filter dport <port> <port>
```

Parameter	Description	Type	Size
<port>	Destination port (from).	string	
<port>	Destination port (to).	string	

diagnose wad filter drop-unknown-session

Enable drop message unknown sessions.

```
diagnose wad filter drop-unknown-session <Drop unknown sessions>
```

Parameter	Description	Type	Size
<Drop unknown sessions>	(1 = enable, 0 = do not drop).	string	

diagnose wad filter dst

Destination address range to filter by.

```
diagnose wad filter dst <ip-address> <ip-address>
```

Parameter	Description	Type	Size
<ip-address>	Destination IP address (from).	string	
<ip-address>	Destination IP address (to).	string	

diagnose wad filter dst6

Destination address6 range to filter by.

```
diagnose wad filter dst6 <ip-address6> <ip-address6>
```

Parameter	Description	Type	Size
<ip-address6>	Destination IPv6 address (from).	string	
<ip-address6>	Destination IPv6 address (to).	string	

diagnose wad filter explicit-policy

Index of explicit-policy. -1 matches all.

```
diagnose wad filter explicit-policy <index>
```

Parameter	Description	Type	Size
<index>	Index of explicit-policy. -1 matches all.	string	

diagnose wad filter firewall-policy

Index of firewall-policy. -1 matches all.

```
diagnose wad filter firewall-policy <index>
```

Parameter	Description	Type	Size
<index>	Index of firewall-policy. -1 matches all.	string	

diagnose wad filter list

Display current filter.

```
diagnose wad filter list
```

diagnose wad filter negate

Negate the specified filter parameter.

```
diagnose wad filter negate <parm>
```

Parameter	Description	Type	Size
<parm>	Filter parameter to negate.	string	

diagnose wad filter process-id

Select process ID to filter by.

```
diagnose wad filter process-id <Process ID>
```

Parameter	Description	Type	Size
<Process ID>	Process ID to filter (0 = disable).	string	

diagnose wad filter process-id-by-src

Process id affined with the selected source IPv4/IPv6 to filter by.

```
diagnose wad filter process-id-by-src <ip-address>
```

Parameter	Description	Type	Size
<ip-address>	Source IPv4/IPv6.	string	

diagnose wad filter process-type

Select process type to filter by.

```
diagnose wad filter process-type <Process types (0 = disable):>
```

Parameter	Description	Type	Size
<Process types (0 = disable):>	1. manager 2. dispatcher 3. worker 4. algo 5. informer 6. user-info 7. cache-service-cs 8. cache-service-db 9. cert-inspection 10. youtube-filter-cache-service 11. user-info-history 12. debug 13. config-notify 14. object-cache 15. byte-cache 16. traffic aggregator 17. preload daemon	string	

diagnose wad filter protocol

Select protocols to filter by.

```
diagnose wad filter protocol <http> <mapi> <cifs> <ftp> <tcp>
```

Parameter	Description	Type	Size
<http>	To match (1), otherwise (0).	string	

Parameter	Description	Type	Size
<mapi>	To match (1), otherwise (0).	string	
<cifs>	To match (1), otherwise (0).	string	
<ftp>	To match (1), otherwise (0).	string	
<tcp>	To match (1), otherwise (0).	string	

diagnose wad filter proxy-policy-list-increment

Increment in steps per proxy policy list call.

```
diagnose wad filter proxy-policy-list-increment <increment steps>
```

Parameter	Description	Type	Size
<increment steps>	Incremental steps per proxy policy call (10 - 100, default = 20)	string	

diagnose wad filter sport

Source port range to filter by.

```
diagnose wad filter sport <port> <port>
```

Parameter	Description	Type	Size
<port>	Source port (from).	string	
<port>	Source port (to).	string	

diagnose wad filter src

Source address range to filter by.

```
diagnose wad filter src <ip-address> <ip-address>
```

Parameter	Description	Type	Size
<ip-address>	Source IP address (from).	string	
<ip-address>	Source IP address (to).	string	

diagnose wad filter src6

Source address6 range to filter by.

```
diagnose wad filter src6 <ip-address6> <ip-address6>
```

Parameter	Description	Type	Size
<ip-address6>	Source IPv6 address (from).	string	
<ip-address6>	Source IPv6 address (to).	string	

diagnose wad filter vd

Virtual Domain Name.

```
diagnose wad filter vd <vdom>
```

Parameter	Description	Type	Size
<vdom>	Virtual Domain Name. ALL all vdoms	string	

diagnose wad health

Check WAD processes status for handling diagnose commands and file system health.

```
diagnose wad health
```

diagnose wad health debug

Check WAD debug daemon status for handling dianose commands.

```
diagnose wad health debug
```

diagnose wad health fs

Check file system health.

```
diagnose wad health fs <File system type (0 = all):> <Lines>
```

Parameter	Description	Type	Size
<File system type (0 = all):>	1. data file system 2. data2 file system 3. log file system	string	
<Lines>	Max write lines (1-50)	string	

diagnose wad health worker

Check WAD worker processes status for handling diagnose commands.

```
diagnose wad health worker
```

diagnose wad history

Statistics history.

```
diagnose wad history
```

diagnose wad history clear

Clear statistics history.

```
diagnose wad history clear
```

diagnose wad history list

List statistics history.

```
diagnose wad history list <proto> <period>
```

Parameter	Description	Type	Size
<proto>	All HTTP FTP CIFS MAPI TCP.	string	
<period>	10min hour day 30days.	string	

diagnose wad kxp

SSL KXP diagnostics.

```
diagnose wad kxp
```

diagnose wad kxp clear

Clear all KXP queue stats.

```
diagnose wad kxp clear
```

diagnose wad kxp list

List KXP queue size.

```
diagnose wad kxp list
```

diagnose wad memory

WAD memory diagnostics.

```
diagnose wad memory
```

diagnose wad memory monitor

Monitor wad memory usage.

```
diagnose wad memory monitor
```

diagnose wad memory monitor disable

Disable wad memory monitor.

```
diagnose wad memory monitor disable
```

diagnose wad memory monitor enable

Enable wad memory monitor.

```
diagnose wad memory monitor enable
```

diagnose wad memory monitor interval

Set the time interval (in min) for memory monitoring.

```
diagnose wad memory monitor interval <Integer>
```

Parameter	Description	Type	Size
<Integer>	Please enter an integer from <5> to <60>.	string	

diagnose wad memory monitor list

List wad memory monitor parameters.

```
diagnose wad memory monitor list
```

diagnose wad memory monitor max-report-files

Max number of report files to save.

```
diagnose wad memory monitor max-report-files <Integer>
```

Parameter	Description	Type	Size
<Integer>	Please enter an integer from <1> to <10>.	string	

diagnose wad memory monitor mem-threshold-red

Set threshold at which wad workers' total memory usage triggers saving memory report in a disk file.

```
diagnose wad memory monitor mem-threshold-red <Integer>
```

Parameter	Description	Type	Size
<Integer>	Please enter an integer from <0> to <100>.	string	

diagnose wad memory overused

List suspiciously overused WAD memory buckets.

```
diagnose wad memory overused <Integer>
```

Parameter	Description	Type	Size
<Integer>	Overused threshold filter value.	string	

diagnose wad memory report

List a report of wad memory usage.

```
diagnose wad memory report
```

diagnose wad memory sum

Sum all WAD process memory modules stats.

```
diagnose wad memory sum
```

diagnose wad memory track

Track cmem alloc.

```
diagnose wad memory track <Integer>
```

Parameter	Description	Type	Size
<Integer>	Id for cmem stats.	string	

diagnose wad memory workers

List WAD worker memory modules.

```
diagnose wad memory workers
```

diagnose wad process

Wad process diagnostics.

```
diagnose wad process
```

diagnose wad process YouTube-filter-cache-service

Diagnose YouTube-filter-cache-service process.

```
diagnose wad process YouTube-filter-cache-service <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process algo

Diagnose algo process.

```
diagnose wad process algo <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process byte-cache

Diagnose byte-cache process.

```
diagnose wad process byte-cache <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process cache-service-cs

Diagnose cache-service-cs process.

```
diagnose wad process cache-service-cs <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process cache-service-db

Diagnose cache-service-db process.

```
diagnose wad process cache-service-db <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process cert-inspection

Diagnose cert-inspection process.

```
diagnose wad process cert-inspection <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process cert-manager

Diagnose cert-manager process.

```
diagnose wad process cert-manager <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process config-notify

Diagnose config-notify process.

```
diagnose wad process config-notify <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process debug

Diagnose debug process.

```
diagnose wad process debug <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process dev-vuln

Diagnose dev-vuln process.

```
diagnose wad process dev-vuln <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process dispatcher

Diagnose dispatcher process.

```
diagnose wad process dispatcher <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process informer

Diagnose informer process.

```
diagnose wad process informer <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process inline-ips-pktlog

Diagnose inline-ips-pktlog process.

```
diagnose wad process inline-ips-pktlog <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process manager

Diagnose manager process.

```
diagnose wad process manager <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process object-cache

Diagnose object-cache process.

```
diagnose wad process object-cache <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process reverse-connector

Diagnose reverse-connector process.

```
diagnose wad process reverse-connector <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process staled-worker

Diagnose staled-worker process.

```
diagnose wad process staled-worker <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process user-info

Diagnose user-info process.

```
diagnose wad process user-info <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process user-info-history

Diagnose user-info-history process.

```
diagnose wad process user-info-history <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad process worker

Diagnose worker process.

```
diagnose wad process worker <index> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
<cmd> <cmd> <cmd> <cmd> <cmd> <cmd>
```

Parameter	Description	Type	Size
<index>	Process index to send command to. (0 for the 1st process; -1 for all)	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

Parameter	Description	Type	Size
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	
<cmd>	Diagnostic command (0 for help). Support up to 32 commands.	string	

diagnose wad report

A consolidated report and shorthand access to various 'diag test app xxx' commands.

```
diagnose wad report
```

diagnose wad report policy

Wad policy related diagnostics.

```
diagnose wad report policy
```

diagnose wad report session

Wad TCP, HTTP, and FTP session related diagnostics.

```
diagnose wad report session
```

diagnose wad report user

Wad user and auth related diagnostics.

```
diagnose wad report user
```

diagnose wad restore

Restore configuration defaults.

```
diagnose wad restore
```

diagnose wad restore cdn-rules

Restore default cdn rules.

```
diagnose wad restore cdn-rules
```

diagnose wad restore cdn-rules all

Restore default cdn rules.

```
diagnose wad restore cdn-rules all
```

diagnose wad session

Session diagnostics.

```
diagnose wad session
```

diagnose wad session clear

Clear all active sessions.

```
diagnose wad session clear
```

diagnose wad session list

List active sessions.

```
diagnose wad session list
```

diagnose wad session list-http2

List active http2 sessions.

```
diagnose wad session list-http2
```

diagnose wad stats

Statistics.

```
diagnose wad stats <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo

Show proc_algo statistics.

```
diagnose wad stats algo <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.antiphish

Show antiphish statistics.

```
diagnose wad stats algo.antiphish <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.casb

Show casb statistics.

```
diagnose wad stats algo.casb <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.dev_info

Show dev_info statistics.

```
diagnose wad stats algo.dev_info <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.dev_type

Show dev_stats statistics.

```
diagnose wad stats algo.dev_type <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.fw_policy

Show fw_policy statistics.

```
diagnose wad stats algo.fw_policy <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.icap_client

Show icap_client statistics.

```
diagnose wad stats algo.icap_client <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.ips

Show ipsscan statistics.

```
diagnose wad stats algo.ips <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.ips_builder

Show ips_builder statistics.

```
diagnose wad stats algo.ips_builder <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.proc_common

Show proc_common statistics.

```
diagnose wad stats algo.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.sec_prof

Show sec_prof statistics.

```
diagnose wad stats algo.sec_prof <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.ssl

Show ssl statistics.

```
diagnose wad stats algo.ssl <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats algo.url_filter

Show url_filter statistics.

```
diagnose wad stats algo.url_filter <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cache_service

Show proc_cache_service statistics.

```
diagnose wad stats cache_service <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cache_service.proc_common

Show proc_common statistics.

```
diagnose wad stats cache_service.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cache_service.tcp

Show tcp statistics.

```
diagnose wad stats cache_service.tcp <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cic

Show proc_cic statistics.

```
diagnose wad stats cic <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cic.proc_common

Show proc_common statistics.

```
diagnose wad stats cic.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr

Show proc_cmgr statistics.

```
diagnose wad stats cmgr <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.cert_cache

Show cert_cache statistics.

```
diagnose wad stats cmgr.cert_cache <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.cert_service

Show cert_service statistics.

```
diagnose wad stats cmgr.cert_service <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.dns_req

Show dns_req statistics.

```
diagnose wad stats cmgr.dns_req <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.http_engine

Show http_engine statistics.

```
diagnose wad stats cmgr.http_engine <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.proc_common

Show proc_common statistics.

```
diagnose wad stats cmgr.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.quic

Show quic statistics.

```
diagnose wad stats cmgr.quic <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.ssl

Show ssl statistics.

```
diagnose wad stats cmgr.ssl <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats cmgr.tcp

Show tcp statistics.

```
diagnose wad stats cmgr.tcp <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats common

Show proc statistics.

```
diagnose wad stats common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats common.dc_ad_dns

Show dc_ad_dns statistics.

```
diagnose wad stats common.dc_ad_dns <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats common.diag

Show diag statistics.

```
diagnose wad stats common.diag <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats common.sched

Show sched statistics.

```
diagnose wad stats common.sched <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats common.ses_stats

Show session statistics.

```
diagnose wad stats common.ses_stats <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats common.waps

Show waps statistics.

```
diagnose wad stats common.waps <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats config

Show proc_config statistics.

```
diagnose wad stats config <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats config.proc_common

Show proc_common statistics.

```
diagnose wad stats config.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats config.stream_scan

Show sscan statistics.

```
diagnose wad stats config.stream_scan <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats debug

Show proc_debug statistics.

```
diagnose wad stats debug <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats debug.crash_handler

Show crash_handler statistics.

```
diagnose wad stats debug.crash_handler <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats debug.proc_common

Show proc_common statistics.

```
diagnose wad stats debug.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dev_vuln

Show proc_dev_vuln statistics.

```
diagnose wad stats dev_vuln <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dev_vuln.dns_req

Show dns_req statistics.

```
diagnose wad stats dev_vuln.dns_req <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dev_vuln.proc_common

Show proc_common statistics.

```
diagnose wad stats dev_vuln.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dev_vuln.ssl

Show ssl statistics.

```
diagnose wad stats dev_vuln.ssl <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dev_vuln.tcp

Show tcp statistics.

```
diagnose wad stats dev_vuln.tcp <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dispatcher

Show proc_dispatcher statistics.

```
diagnose wad stats dispatcher <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dispatcher.cifs

Show cifs statistics.

```
diagnose wad stats dispatcher.cifs <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dispatcher.dns_proxy

Show dns_proxy statistics.

```
diagnose wad stats dispatcher.dns_proxy <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dispatcher.proc_common

Show proc_common statistics.

```
diagnose wad stats dispatcher.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dispatcher.ssh

Show ssh statistics.

```
diagnose wad stats dispatcher.ssh <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dispatcher.tcp

Show tcp statistics.

```
diagnose wad stats dispatcher.tcp <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats dispatcher.tunnel

Show tunnel statistics.

```
diagnose wad stats dispatcher.tunnel <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats informer

Show proc_informer statistics.

```
diagnose wad stats informer <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats informer.dev_info

Show dev_info statistics.

```
diagnose wad stats informer.dev_info <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats informer.dev_type

Show dev_stats statistics.

```
diagnose wad stats informer.dev_type <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats informer.proc_common

Show proc_common statistics.

```
diagnose wad stats informer.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats informer.usr_info_common

Show usr_info_common statistics.

```
diagnose wad stats informer.usr_info_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats informer.ztna_jwt

Show ztna_jwt statistics.

```
diagnose wad stats informer.ztna_jwt <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats mgr

Show proc_mgr statistics.

```
diagnose wad stats mgr <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats mgr.proc_common

Show proc_common statistics.

```
diagnose wad stats mgr.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats uih

Show proc_uih statistics.

```
diagnose wad stats uih <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats uih.proc_common

Show proc_common statistics.

```
diagnose wad stats uih.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info

Show proc_usr_info statistics.

```
diagnose wad stats usr_info <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info.dev_info

Show dev_info statistics.

```
diagnose wad stats usr_info.dev_info <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info.dev_type

Show dev_stats statistics.

```
diagnose wad stats usr_info.dev_type <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info.dns_req

Show dns_req statistics.

```
diagnose wad stats usr_info.dns_req <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info.proc_common

Show proc_common statistics.

```
diagnose wad stats usr_info.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info.ssl

Show ssl statistics.

```
diagnose wad stats usr_info.ssl <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info.tcp

Show tcp statistics.

```
diagnose wad stats usr_info.tcp <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats usr_info.usr_info_common

Show usr_info_common statistics.

```
diagnose wad stats usr_info.usr_info_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats vfcs

Show proc_vfcs statistics.

```
diagnose wad stats vfcs <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats vfcs.proc_common

Show proc_common statistics.

```
diagnose wad stats vfcs.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker

Show proc_worker statistics.

```
diagnose wad stats worker <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.antiphish

Show antiphish statistics.

```
diagnose wad stats worker.antiphish <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.app_mgr

Show app_mgr statistics.

```
diagnose wad stats worker.app_mgr <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.casb

Show casb statistics.

```
diagnose wad stats worker.casb <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.casb_eng

Show casb_eng statistics.

```
diagnose wad stats worker.casb_eng <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.cert_cache

Show cert_cache statistics.

```
diagnose wad stats worker.cert_cache <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.cifs

Show cifs statistics.

```
diagnose wad stats worker.cifs <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.config_delta

Show config_delta statistics.

```
diagnose wad stats worker.config_delta <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.conn_pool

Show conn_pool statistics.

```
diagnose wad stats worker.conn_pool <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.dev_info

Show dev_info statistics.

```
diagnose wad stats worker.dev_info <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.dev_type

Show dev_stats statistics.

```
diagnose wad stats worker.dev_type <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.digest

Show digest statistics.

```
diagnose wad stats worker.digest <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.dns_proxy

Show dns_proxy statistics.

```
diagnose wad stats worker.dns_proxy <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.dns_req

Show dns_req statistics.

```
diagnose wad stats worker.dns_req <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.fast_match

Show fast_match statistics.

```
diagnose wad stats worker.fast_match <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.fw_policy

Show fw_policy statistics.

```
diagnose wad stats worker.fw_policy <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.hauth_uid_cache

Show hash_cache statistics.

```
diagnose wad stats worker.hauth_uid_cache <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.http_engine

Show http_engine statistics.

```
diagnose wad stats worker.http_engine <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.http_ffbk

Show http_ffbk statistics.

```
diagnose wad stats worker.http_ffbk <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.http_scan

Show http_scan statistics.

```
diagnose wad stats worker.http_scan <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.http_srv_selector

Show http_srv_selector statistics.

```
diagnose wad stats worker.http_srv_selector <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.icap_client

Show icap_client statistics.

```
diagnose wad stats worker.icap_client <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.icap_parser

Show icap_parser statistics.

```
diagnose wad stats worker.icap_parser <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.icap_remote_server

Show icap_remote_server statistics.

```
diagnose wad stats worker.icap_remote_server <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.infection_cache

Show infection_cache statistics.

```
diagnose wad stats worker.infection_cache <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.ipseng

Show ipseng statistics.

```
diagnose wad stats worker.ipseng <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.pol_test

Show pol_test statistics.

```
diagnose wad stats worker.pol_test <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.policy_profile

Show policy_profile statistics.

```
diagnose wad stats worker.policy_profile <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.proc_common

Show proc_common statistics.

```
diagnose wad stats worker.proc_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.protos

Show protos statistics.

```
diagnose wad stats worker.protos <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.quic

Show quic statistics.

```
diagnose wad stats worker.quic <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.saml

Show saml statistics.

```
diagnose wad stats worker.saml <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.sec_prof

Show sec_prof statistics.

```
diagnose wad stats worker.sec_prof <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.ssh

Show ssh statistics.

```
diagnose wad stats worker.ssh <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.ssl

Show ssl statistics.

```
diagnose wad stats worker.ssl <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.systemem

Show systemem statistics.

```
diagnose wad stats worker.systemem <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.tcp

Show tcp statistics.

```
diagnose wad stats worker.tcp <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.traffic_mirror

Show traffic_mirror statistics.

```
diagnose wad stats worker.traffic_mirror <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.tunnel

Show tunnel statistics.

```
diagnose wad stats worker.tunnel <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.url_filter

Show url_filter statistics.

```
diagnose wad stats worker.url_filter <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.usr_info_common

Show usr_info_common statistics.

```
diagnose wad stats worker.usr_info_common <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.vs_cert_cache

Show hash_cache statistics.

```
diagnose wad stats worker.vs_cert_cache <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stats worker.ztna_jwt

Show ztna_jwt statistics.

```
diagnose wad stats worker.ztna_jwt <action>
```

Parameter	Description	Type	Size
<action>	show(default) clear history.	string	

diagnose wad stream-scan

Stream scan diagnostics.

```
diagnose wad stream-scan
```

diagnose wad stream-scan av-intf

Enable/disable AV interface.

```
diagnose wad stream-scan av-intf
```

diagnose wad stream-scan av-intf disable

Disable stream scan AV interface and restart workers.

```
diagnose wad stream-scan av-intf disable
```

diagnose wad stream-scan av-intf enable

Enable stream scan AV interface and restart workers.

```
diagnose wad stream-scan av-intf enable
```

diagnose wad stream-scan av-test

AV Engine diagnostics.

```
diagnose wad stream-scan av-test <command> <worker-id>
```

Parameter	Description	Type	Size
<command>	Command to pass into AV engine. Please double quote the command.	string	
<worker-id>	Optional worker index.	string	

diagnose wad toggle

Toggle diagnose method(direct/debug proc).

```
diagnose wad toggle
```

diagnose wad tunnel

Tunnel diagnostics.

```
diagnose wad tunnel
```

diagnose wad tunnel clear

Clear all active tunnels.

```
diagnose wad tunnel clear
```

diagnose wad tunnel list

List active tunnels.

```
diagnose wad tunnel list <id>
```

Parameter	Description	Type	Size
<id>	Optional tunnel ID.	string	

diagnose wad uih

User info history diagnostics.

```
diagnose wad uih
```

diagnose wad uih chart

Display summary or range of entries of Chart DB.

```
diagnose wad uih chart
```

diagnose wad uih chart range

Display chart DB entries for <vdom> from <start> to <end>.

```
diagnose wad uih chart range
```

diagnose wad uih chart summary

Display summary of Chart DB for <vdom>.

```
diagnose wad uih chart summary
```

diagnose wad user

User diagnostics.

```
diagnose wad user
```

diagnose wad user clear

Clear all users or clear a particular user using: `diagnose wad user clear <ID> <IP|IPv6> <VDM>`.

```
diagnose wad user clear <ID> <IP> <VDM>
```

Parameter	Description	Type	Size
<ID>	Please input user ID.	string	

Parameter	Description	Type	Size
<IP>	Please input user IP.	string	
<VDOM>	Please input VDOM name the user belongs to.	string	

diagnose wad user device

Get device info.

```
diagnose wad user device
```

diagnose wad user domain-controller

Test connectivity with domain-controller.

```
diagnose wad user domain-controller
```

diagnose wad user domain-controller dns

Test DNS resolve function.

```
diagnose wad user domain-controller dns
```

diagnose wad user domain-controller dns list

Show DNS discover status on all configured user domain-controller.

```
diagnose wad user domain-controller dns list
```

diagnose wad user domain-controller dns test

Test if DNS discover function works for all configured user domain-controller.

```
diagnose wad user domain-controller dns test
```

diagnose wad user exchange

Test connectivity with user-exchange.

```
diagnose wad user exchange
```

diagnose wad user exchange get-matches

Test exact match search for Administrator.

```
diagnose wad user exchange get-matches
```

diagnose wad user exchange query-rows

Show address-book database up to 50 entries.

```
diagnose wad user exchange query-rows
```

diagnose wad user exchange reset

Close all connections related to user-exchange.

```
diagnose wad user exchange reset
```

diagnose wad user exchange resolve-names

Test pattern match search for Administrator.

```
diagnose wad user exchange resolve-names
```

diagnose wad user exchange test-auto-discover

Test if automatic discovery can work on all configured user-exchanges.

```
diagnose wad user exchange test-auto-discover
```

diagnose wad user list

List proxy users.

```
diagnose wad user list [verbose]
```

Parameter	Description	Type	Size
[verbose]	Verbose mode.	string	

diagnose wad webcache

Web cache statistics.

```
diagnose wad webcache
```

diagnose wad webcache clear

Clear web cache statistics.

```
diagnose wad webcache clear
```

diagnose wad webcache list

List web cache statistics.

```
diagnose wad webcache list <period>
```

Parameter	Description	Type	Size
<period>	10min hour day 30days.	string	

diagnose wad worker

Worker diagnostics.

```
diagnose wad worker
```

diagnose wad worker async-ut

Async Unit Test.

```
diagnose wad worker async-ut [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker avscan

Scan results statistics.

```
diagnose wad worker avscan
```

diagnose wad worker avscan clear

Clear scan results statistics.

```
diagnose wad worker avscan clear
```

diagnose wad worker avscan list

List scan results statistics.

```
diagnose wad worker avscan list
```

diagnose wad worker bytcache

Bytecache diagnostics.

```
diagnose wad worker bytcache
```

diagnose wad worker bytcache clear

Purge all entries.

```
diagnose wad worker bytcache clear [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker bytcache flush

Reset statistics.

```
diagnose wad worker bytcache flush [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker bytecache stats

Show statistics.

```
diagnose wad worker bytecache stats [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker bytecache toggle

Toggle operations.

```
diagnose wad worker bytecache toggle
```

diagnose wad worker bytecache toggle all

Set/unset all operations as busy.

```
diagnose wad worker bytecache toggle all [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker bytecache toggle config

Toggle worker bytecache config.

```
diagnose wad worker bytecache toggle config [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker bytcache toggle create

Toggle create as busy.

```
diagnose wad worker bytcache toggle create [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker bytcache toggle read

Toggle read as busy.

```
diagnose wad worker bytcache toggle read [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker cookie

Cookie information.

```
diagnose wad worker cookie
```

diagnose wad worker cookie clear-cors

Clear cookie cors info.

```
diagnose wad worker cookie clear-cors
```

diagnose wad worker cookie list-cors

Show cookie cors info.

```
diagnose wad worker cookie list-cors
```

diagnose wad worker cookie map

Show cookie map info.

```
diagnose wad worker cookie map
```

diagnose wad worker filter

Show filter statistics.

```
diagnose wad worker filter
```

diagnose wad worker filter clear

Clear filter statistics.

```
diagnose wad worker filter clear
```

diagnose wad worker filter list

List filter statistics.

```
diagnose wad worker filter list
```

diagnose wad worker memcache

Memcache diagnostics.

```
diagnose wad worker memcache
```

diagnose wad worker memcache clear

Purge all entries.

```
diagnose wad worker memcache clear [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker memcache flush

Reset statistics.

```
diagnose wad worker memcache flush [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker memcache stats

Show statistics.

```
diagnose wad worker memcache stats [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker memcache toggle

Toggle operations.

```
diagnose wad worker memcache toggle
```

diagnose wad worker memcache toggle all

Set/unset all operations as busy.

```
diagnose wad worker memcache toggle all [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker memcache toggle config

Toggle worker memcache config.

```
diagnose wad worker memcache toggle config [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker memcache toggle create

Toggle create as busy.

```
diagnose wad worker memcache toggle create [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker memcache toggle read

Toggle read as busy.

```
diagnose wad worker memcache toggle read [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker peer

Show peer statistics.

```
diagnose wad worker peer
```

diagnose wad worker peer clear

Clear peer statistics.

```
diagnose wad worker peer clear
```

diagnose wad worker peer list

List peer statistics.

```
diagnose wad worker peer list
```

diagnose wad worker policy

Show policy statistics.

```
diagnose wad worker policy
```

diagnose wad worker policy clear

Clear policy statistics.

```
diagnose wad worker policy clear
```

diagnose wad worker policy list

List policy statistics.

```
diagnose wad worker policy list
```

diagnose wad worker restart

Restart workers.

```
diagnose wad worker restart [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker saml

Show saml sessions and GrpSID cache info.

```
diagnose wad worker saml [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker scripts

Show scripts statistics.

```
diagnose wad worker scripts
```

diagnose wad worker scripts clear

Clear scripts statistics.

```
diagnose wad worker scripts clear
```

diagnose wad worker scripts list

List scripts statistics.

```
diagnose wad worker scripts list
```

diagnose wad worker webcache

Webcache diagnostics.

```
diagnose wad worker webcache
```

diagnose wad worker webcache clear

Purge all entries.

```
diagnose wad worker webcache clear [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache flush

Reset statistics.

```
diagnose wad worker webcache flush [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache stats

Show statistics.

```
diagnose wad worker webcache stats [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache summary

List statistics summary.

```
diagnose wad worker webcache summary
```

diagnose wad worker webcache toggle

Toggle operations.

```
diagnose wad worker webcache toggle
```

diagnose wad worker webcache toggle abort

Toggle abort as busy.

```
diagnose wad worker webcache toggle abort [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle add_ref

Toggle add_ref as busy.

```
diagnose wad worker webcache toggle add_ref [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle all

Set/unset all operations as busy.

```
diagnose wad worker webcache toggle all [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle append

Toggle append as busy.

```
diagnose wad worker webcache toggle append [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle config

Toggle worker webcache config.

```
diagnose wad worker webcache toggle config [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle create

Toggle create as busy.

```
diagnose wad worker webcache toggle create [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle read

Toggle read as busy.

```
diagnose wad worker webcache toggle read [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle remove

Toggle remove as busy.

```
diagnose wad worker webcache toggle remove [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle resolve

Toggle resolve as busy.

```
diagnose wad worker webcache toggle resolve [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wad worker webcache toggle update

Toggle update as busy.

```
diagnose wad worker webcache toggle update [<index>]
```

Parameter	Description	Type	Size
[<index>]	Worker index or all workers if not set.	string	

diagnose wadbd

WAN accelerator DB daemon.

This topic includes the following commands:

- [diagnose wadbd clear on page 3572](#)
- [diagnose wadbd restart on page 3572](#)
- [diagnose wadbd stats on page 3572](#)

diagnose wadbd clear

Remove all entries from the database.

```
diagnose wadbd clear
```

diagnose wadbd restart

Restart the daemon and reset the statistical parameters.

```
diagnose wadbd restart
```

diagnose wadbd stats

Show statistics.

```
diagnose wadbd stats
```

diagnose waf

WAF diagnostics.

This topic includes the following commands:

- [diagnose waf dump on page 3573](#)
- [diagnose waf info on page 3573](#)

diagnose waf dump

Dump WAF name table.

```
diagnose waf dump
```

diagnose waf info

Init WAF name table.

```
diagnose waf info
```

diagnose webfilter bword

Web banned word match filter.

This topic includes the following commands:

- [diagnose webfilter bword matchfilter on page 3573](#)

diagnose webfilter bword matchfilter

Filtered list display.

```
diagnose webfilter bword matchfilter <filter string>
```

Parameter	Description	Type	Size
<filter string>	Filter string from end of web filter banned word log line. For example: '1-n8 4 0 1 4 10 nC 4'	string	

diagnose webfilter fortiguard

FortiGuard Web Filter information

This topic includes the following commands:

- [diagnose webfilter fortiguard cache on page 3574](#)
- [diagnose webfilter fortiguard cache dump on page 3574](#)
- [diagnose webfilter fortiguard cache obs on page 3574](#)

- [diagnose webfilter fortiguard cache prefix on page 3574](#)
- [diagnose webfilter fortiguard cache tree on page 3575](#)
- [diagnose webfilter fortiguard cache ttl on page 3575](#)
- [diagnose webfilter fortiguard override on page 3575](#)
- [diagnose webfilter fortiguard override all-admin-override on page 3575](#)
- [diagnose webfilter fortiguard override all-user-override on page 3575](#)
- [diagnose webfilter fortiguard override all-warning on page 3575](#)
- [diagnose webfilter fortiguard override obs on page 3576](#)
- [diagnose webfilter fortiguard override statistics on page 3576](#)
- [diagnose webfilter fortiguard statistics on page 3576](#)
- [diagnose webfilter fortiguard statistics flush on page 3576](#)
- [diagnose webfilter fortiguard statistics list on page 3576](#)

diagnose webfilter fortiguard cache

Display WF cache content.

```
diagnose webfilter fortiguard cache
```

diagnose webfilter fortiguard cache dump

Display WF cache contents.

```
diagnose webfilter fortiguard cache dump
```

diagnose webfilter fortiguard cache obs

Display WF cache OBS info.

```
diagnose webfilter fortiguard cache obs
```

diagnose webfilter fortiguard cache prefix

Display WF cache contents of prefix type.

```
diagnose webfilter fortiguard cache prefix
```

diagnose webfilter fortiguard cache tree

Display WF cache in tree format.

```
diagnose webfilter fortiguard cache tree
```

diagnose webfilter fortiguard cache ttl

Display WF cache TTL list.

```
diagnose webfilter fortiguard cache ttl
```

diagnose webfilter fortiguard override

Display override content.

```
diagnose webfilter fortiguard override
```

diagnose webfilter fortiguard override all-admin-override

Display admin override entries of all vdoms.

```
diagnose webfilter fortiguard override all-admin-override
```

diagnose webfilter fortiguard override all-user-override

Display user override entries of all vdoms.

```
diagnose webfilter fortiguard override all-user-override
```

diagnose webfilter fortiguard override all-warning

Display warning/authentication entries of all vdoms.

```
diagnose webfilter fortiguard override all-warning
```

diagnose webfilter fortiguard override obs

Display override cache OBS info.

```
diagnose webfilter fortiguard override obs
```

diagnose webfilter fortiguard override statistics

Display override cache statistics.

```
diagnose webfilter fortiguard override statistics
```

diagnose webfilter fortiguard statistics

Rating cache and daemon statistics.

```
diagnose webfilter fortiguard statistics
```

diagnose webfilter fortiguard statistics flush

Flush rating cache and daemon statistics.

```
diagnose webfilter fortiguard statistics flush
```

diagnose webfilter fortiguard statistics list

Display rating cache and daemon statistics.

```
diagnose webfilter fortiguard statistics list
```

diagnose webfilter quota

Urlfilter daemon quota information.

This topic includes the following commands:

- [diagnose webfilter quota list on page 3577](#)

diagnose webfilter quota list

Display urlfilter daemon quota list.

```
diagnose webfilter quota list
```

diagnose webfilter stats

Proxy and flow webfilter statistics.

This topic includes the following commands:

- [diagnose webfilter stats clear on page 3577](#)
- [diagnose webfilter stats list on page 3577](#)

diagnose webfilter stats clear

Clear webfilter statistics.

```
diagnose webfilter stats clear <vdname>
```

Parameter	Description	Type	Size
<vdname>	VDOM name or global.	string	

diagnose webfilter stats list

Display webfilter statistics.

```
diagnose webfilter stats list <vdname>
```

Parameter	Description	Type	Size
<vdname>	VDOM name or global.	string	

diagnose web-ui

Web user interface.

This topic includes the following commands:

- [diagnose web-ui api-cache on page 3578](#)
- [diagnose web-ui api-cache statistic on page 3578](#)
- [diagnose web-ui api-stats on page 3578](#)
- [diagnose web-ui api-stats disable on page 3579](#)
- [diagnose web-ui api-stats enable on page 3579](#)
- [diagnose web-ui api-stats list on page 3579](#)
- [diagnose web-ui api-stats reset on page 3579](#)
- [diagnose web-ui api-stats status on page 3579](#)
- [diagnose web-ui backtrace on page 3579](#)
- [diagnose web-ui backtrace clear on page 3580](#)
- [diagnose web-ui backtrace disable on page 3580](#)
- [diagnose web-ui backtrace enable on page 3580](#)
- [diagnose web-ui backtrace httpsd on page 3580](#)
- [diagnose web-ui backtrace status on page 3580](#)
- [diagnose web-ui cache on page 3581](#)
- [diagnose web-ui cache disable on page 3581](#)
- [diagnose web-ui cache enable on page 3581](#)
- [diagnose web-ui local-process-guard on page 3581](#)
- [diagnose web-ui local-process-guard disable on page 3581](#)
- [diagnose web-ui local-process-guard enable on page 3581](#)
- [diagnose web-ui local-process-guard status on page 3582](#)
- [diagnose web-ui localization on page 3582](#)
- [diagnose web-ui localization disable on page 3582](#)
- [diagnose web-ui localization enable on page 3582](#)

diagnose web-ui api-cache

shows statistics of REST API caching.

```
diagnose web-ui api-cache
```

diagnose web-ui api-cache statistic

Show REST API cache statistics.

```
diagnose web-ui api-cache statistic
```

diagnose web-ui api-stats

REST API performance statistics.

```
diagnose web-ui api-stats
```

diagnose web-ui api-stats disable

Disable REST API performance statistics.

```
diagnose web-ui api-stats disable
```

diagnose web-ui api-stats enable

Enable REST API performance statistics.

```
diagnose web-ui api-stats enable
```

diagnose web-ui api-stats list

List all REST API performance statistics.

```
diagnose web-ui api-stats list <api-uri>
```

Parameter	Description	Type	Size
<api-uri>	API access URI/prefix. (type.path.name.action)	string	

diagnose web-ui api-stats reset

Reset all REST API performance statistics.

```
diagnose web-ui api-stats reset
```

diagnose web-ui api-stats status

Status of REST API performance statistics.

```
diagnose web-ui api-stats status
```

diagnose web-ui backtrace

Web-ui backtrace.

```
diagnose web-ui backtrace
```

diagnose web-ui backtrace clear

Clear all backtrace log.

```
diagnose web-ui backtrace clear
```

diagnose web-ui backtrace disable

Disable web-ui backtrace.

```
diagnose web-ui backtrace disable
```

diagnose web-ui backtrace enable

Enable web-ui backtrace.

```
diagnose web-ui backtrace enable
```

diagnose web-ui backtrace httpsd

List all httpsd backtrace log.

```
diagnose web-ui backtrace httpsd <error|<pid>>
```

Parameter	Description	Type	Size
<error <pid>>	Details of httpsd backtrace log (error: httpsd error log, <number>: pid of request log).	string	

diagnose web-ui backtrace status

Status of web-ui backtrace.

```
diagnose web-ui backtrace status
```

diagnose web-ui cache

Enable/disable caching of static resources.

```
diagnose web-ui cache
```

diagnose web-ui cache disable

Disable caching of static resources.

```
diagnose web-ui cache disable
```

diagnose web-ui cache enable

Enable caching of static resources.

```
diagnose web-ui cache enable
```

diagnose web-ui local-process-guard

Enable/disable the REST API local process guard.

```
diagnose web-ui local-process-guard
```

diagnose web-ui local-process-guard disable

Disable the REST API local process guard.

```
diagnose web-ui local-process-guard disable
```

diagnose web-ui local-process-guard enable

Enable the REST API local process guard.

```
diagnose web-ui local-process-guard enable
```

diagnose web-ui local-process-guard status

View the status of the REST API local process guard.

```
diagnose web-ui local-process-guard status
```

diagnose web-ui localization

Enable/disable language localization.

```
diagnose web-ui localization
```

diagnose web-ui localization disable

Disable language localization.

```
diagnose web-ui localization disable
```

diagnose web-ui localization enable

Enable language localization.

```
diagnose web-ui localization enable
```

diagnose wireless-controller

Wireless controller.

This topic includes the following commands:

- [diagnose wireless-controller wlac](#) on page 3582
- [diagnose wireless-controller wlac_hlp](#) on page 3583

diagnose wireless-controller wlac

WLAN AC.

```
diagnose wireless-controller wlac <-c|-d|-k|-h> <value1> <value2> <value3> <value4> <value5>  
<value6> <value7> <value8> <value9> <value10> <value11> <value12>
```

Parameter	Description	Type	Size
<-c -d -k -h>	Control plane, data plane or help.	string	
<value1>	Value of command.	string	
<value2>	Value of command.	string	
<value3>	Value of command.	string	
<value4>	Value of command.	string	
<value5>	Value of command.	string	
<value6>	Value of command.	string	
<value7>	Value of command.	string	
<value8>	Value of command.	string	
<value9>	Value of command.	string	
<value10>	Value of command.	string	
<value11>	Value of command.	string	
<value12>	Value of command.	string	

diagnose wireless-controller wlac_hlp

WLAN AC HELPER.

```
diagnose wireless-controller wlac_hlp <-c|-h> <value1> <value2> <value3>
```

Parameter	Description	Type	Size
<-c -h>	Control plane or help.	string	
<value1>	Value of command.	string	
<value2>	Value of command.	string	
<value3>	Value of command.	string	

diagnose wpa

wpa daemon

This topic includes the following commands:

- [diagnose wpa wpaad on page 3584](#)

diagnose wpa wpad

wpad diagnostics.

```
diagnose wpa wpad <subcmd> <value1> <value2> <value3> <value4> <value5>
```

Parameter	Description	Type	Size
<subcmd>	sub command.	string	
<value1>	Value of command.	string	
<value2>	Value of command.	string	
<value3>	Value of command.	string	
<value4>	Value of command.	string	
<value5>	Value of command.	string	

CLI execute commands

Use execute commands to run system commands.

This section includes syntax for the following commands:

- [execute api-user on page 3587](#)
- [execute auto-script on page 3588](#)
- [execute azure on page 3590](#)
- [execute backup on page 3591](#)
- [execute batch on page 3602](#)
- [execute central-mgmt on page 3603](#)
- [execute cfg on page 3604](#)
- [execute clear-admin-password-history on page 3605](#)
- [execute clear-user-password-history on page 3605](#)
- [execute clear on page 3605](#)
- [execute cli on page 3606](#)
- [execute cloud-service on page 3606](#)
- [execute config-transaction on page 3607](#)
- [execute cpu on page 3608](#)
- [execute date on page 3609](#)
- [execute device-upgrade on page 3609](#)
- [execute dhcp on page 3610](#)
- [execute dhcp6 on page 3611](#)
- [execute disconnect-admin-session on page 3612](#)
- [execute disk on page 3612](#)
- [execute enter on page 3613](#)
- [execute erase-disk on page 3613](#)
- [execute extender on page 3613](#)
- [execute fabric-vpn on page 3618](#)
- [execute factoryreset-for-central-management on page 3619](#)
- [execute factoryreset-shutdown on page 3619](#)
- [execute factoryreset on page 3618](#)
- [execute factoryreset2 on page 3619](#)
- [execute fctems on page 3620](#)
- [execute federated-upgrade on page 3621](#)
- [execute fips on page 3623](#)
- [execute firewall on page 3623](#)
- [execute formatlogdisk on page 3624](#)
- [execute forticarrier-license on page 3624](#)
- [execute forticloud-sandbox on page 3625](#)

- [execute fortiguard-log on page 3625](#)
- [execute fortiguard-message on page 3626](#)
- [execute fortimanager on page 3627](#)
- [execute fortitoken-cloud on page 3630](#)
- [execute fortitoken-mobile on page 3632](#)
- [execute fortitoken on page 3627](#)
- [execute fsso on page 3633](#)
- [execute gen-token on page 3633](#)
- [execute ha on page 3634](#)
- [execute interface on page 3636](#)
- [execute internet-service4 on page 3637](#)
- [execute internet-service6 on page 3637](#)
- [execute ipam on page 3637](#)
- [execute iscsi on page 3638](#)

- [execute update-geo-ip on page 3720](#)
- [execute update-ips on page 3720](#)
- [execute update-now on page 3720](#)
- [execute update-src-vis on page 3721](#)
- [execute upload on page 3721](#)
- [execute vm-license-options on page 3724](#)
- [execute vm-license on page 3724](#)
- [execute vpn on page 3726](#)
- [execute wake-on-lan on page 3738](#)
- [execute webcache on page 3739](#)
- [execute webfilter on page 3740](#)
- [execute wireless-controller on page 3740](#)

execute api-user

api-user

This topic includes the following commands:

- [execute api-user generate-key on page 3588](#)

execute api-user generate-key

Generate key for API users.

```
execute api-user generate-key <name> <expiry>
```

Parameter	Description	Type	Size
<name>	API user name.	string	
<expiry>	Optional expiry of API key in minutes from now (valid range: 1 - 10080)	string	

execute auto-script

auto-script

This topic includes the following commands:

- [execute auto-script backup ftp on page 3588](#)
- [execute auto-script backup tftp on page 3589](#)
- [execute auto-script delete on page 3589](#)
- [execute auto-script result on page 3589](#)
- [execute auto-script start on page 3589](#)
- [execute auto-script status on page 3590](#)
- [execute auto-script stop on page 3590](#)
- [execute auto-script stopall on page 3590](#)

execute auto-script backup ftp

Backup output file to FTP sever.

```
execute auto-script backup ftp <name> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<name>	Script name.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	

Parameter	Description	Type	Size
<passwd>	FTP password.	string	

execute auto-script backup tftp

Backup output file to TFTP sever.

```
execute auto-script backup tftp <name> <tftp server>
```

Parameter	Description	Type	Size
<name>	Script name.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute auto-script delete

Delete output of executed scripts.

```
execute auto-script delete <name>
```

Parameter	Description	Type	Size
<name>	Script name.	string	

execute auto-script result

Display output of executed scripts.

```
execute auto-script result <name>
```

Parameter	Description	Type	Size
<name>	Script name.	string	

execute auto-script start

Start script.

```
execute auto-script start <name>
```

Parameter	Description	Type	Size
<name>	Script name.	string	

execute auto-script status

List of scripts currently running or executed.

```
execute auto-script status
```

execute auto-script stop

Stop script.

```
execute auto-script stop <name>
```

Parameter	Description	Type	Size
<name>	Script name.	string	

execute auto-script stopall

Stop all scripts currently running.

```
execute auto-script stopall
```

execute azure

azure

This topic includes the following commands:

- [execute azure vwan-payg-billing status on page 3590](#)
- [execute azure vwan-payg-billing usage on page 3591](#)
- [execute azure vwan-slb pull on page 3591](#)
- [execute azure vwan-slb show on page 3591](#)

execute azure vwan-payg-billing status

Display vwan payg billing status.

```
execute azure vwan-payg-billing status
```

execute azure vwan-payg-billing usage

Display all usage events that have been posted.

```
execute azure vwan-payg-billing usage
```

execute azure vwan-slb pull

Pull the Azure vWAN SLB online setting to local cmdb.

```
execute azure vwan-slb pull
```

execute azure vwan-slb show

Display the Azure vWAN SLB online setting.

```
execute azure vwan-slb show

- [execute backup yaml-config tftp on page 3602](#)

execute backup config flash

Backup config file to flash.

```
execute backup config flash <comment>
```

Parameter	Description	Type	Size
<comment>	Make a comment for this config backup.	string	

execute backup config ftp

Backup config file to FTP server.

```
execute backup config ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>  
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	

Parameter	Description	Type	Size
<passwd>	FTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup config management-station

Backup config file to management station.

```
execute backup config management-station <comment>
```

Parameter	Description	Type	Size
<comment>	Make a comment for this config backup.	string	

execute backup config sftp

Backup config file to SFTP server.

```
execute backup config sftp <string> <sftp server>[:sftp port] <user> <passwd> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the SFTP server.	string	
<sftp server>[:sftp port]	SFTP server IPv4, IPv6 can be attached with port.	string	
<user>	SFTP username.	string	
<passwd>	SFTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup config tftp

Backup config file to TFTP server.

```
execute backup config tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup disk alllogs ftp

Backup all log files to FTP server.

```
execute backup disk alllogs ftp <ftp server>[:ftp port] <Enter>|<user> <passwd> <Enter>|<string>
```

Parameter	Description	Type	Size
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <string>	Optional log file compression option [uncompressed compressed].	string	

execute backup disk alllogs tftp

Backup all log file(s) to TFTP server.

```
execute backup disk alllogs tftp <tftp server>
```

Parameter	Description	Type	Size
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute backup disk ipsarchives ftp

Backup IPS archive file(s) to FTP server.

```
execute backup disk ipsarchives ftp <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute backup disk ipsarchives tftp

Backup IPS archive file(s) to TFTP server.

```
execute backup disk ipsarchives tftp <tftp server>
```

Parameter	Description	Type	Size
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute backup disk log ftp

Backup specific log file(s) to FTP server.

```
execute backup disk log ftp <ftp server>[:ftp port] <user> <passwd> <string> <Enter>|<string>
```

Parameter	Description	Type	Size
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<user>	FTP username.	string	
<passwd>	FTP password.	string	
<string>	, traffic, event, virus, webfilter, ips, emailfilter, anomaly, voip, dlp, app-ctrl, waf, gtp, dns, ssh, ssl, file-filter, icap, sctp-filter, forti-switch, virtual-patch, casb, debug	string	
<Enter> <string>	Optional log file compression option [uncompressed compressed].	string	

execute backup disk log tftp

Backup specific log file(s) to TFTP server.

```
execute backup disk log tftp <tftp server> <string>
```

Parameter	Description	Type	Size
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<string>	, traffic, event, virus, webfilter, ips, emailfilter, anomaly, voip, dlp, app-ctrl, waf, gtp, dns, ssh, ssl, file-filter, icap, sctp-filter, forti-switch, virtual-patch, casb, debug	string	

execute backup full-config ftp

Backup full config file to FTP server.

```
execute backup full-config ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup full-config sftp

Backup full config file to SFTP server.

```
execute backup full-config sftp <string> <sftp server>[:sftp port] <user> <passwd>
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the SFTP server.	string	
<sftp server>[:sftp port]	SFTP server IPv4, IPv6 can be attached with port.	string	
<user>	SFTP username.	string	
<passwd>	SFTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup full-config tftp

Backup full config file to TFTP server.

```
execute backup full-config tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup ipsuserdefsig ftp

Backup user defined IPS signatures to FTP server.

```
execute backup ipsuserdefsig ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute backup ipsuserdefsig tftp

Backup user defined IPS signatures to TFTP server.

```
execute backup ipsuserdefsig tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute backup memory alllogs ftp

Backup all log files to FTP server.

```
execute backup memory alllogs ftp <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute backup memory alllogs tftp

Backup all log file(s) to TFTP server.

```
execute backup memory alllogs tftp <tftp server>
```

Parameter	Description	Type	Size
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute backup memory log ftp

Backup specific log file(s) to FTP server.

```
execute backup memory log ftp <ftp server>[:ftp port] <user> <passwd> <string>
```

Parameter	Description	Type	Size
<ftp server> [:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<user>	FTP username.	string	
<passwd>	FTP password.	string	
<string>	, traffic, event, virus, webfilter, ips, emailfilter, anomaly, voip, dlp, app-ctrl, waf, gtp, dns, ssh, ssl, file-filter, icap, sctp-filter, forti-switch, virtual-patch, casb, debug	string	

execute backup memory log tftp

Backup specific log file(s) to TFTP server.

```
execute backup memory log tftp <tftp server> <string>
```

Parameter	Description	Type	Size
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<string>	, traffic, event, virus, webfilter, ips, emailfilter, anomaly, voip, dlp, app-ctrl, waf, gtp, dns, ssh, ssl, file-filter, icap, sctp-filter, forti-switch, virtual-patch, casb, debug	string	

execute backup obfuscated-config ftp

Backup obfuscated config file to FTP server.

```
execute backup obfuscated-config ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>  
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup obfuscated-config management-station

Backup obfuscated config file to management station.

```
execute backup obfuscated-config management-station <comment>
```

Parameter	Description	Type	Size
<comment>	Make a comment for this config backup.	string	

execute backup obfuscated-config sftp

Backup obfuscated config file to SFTP server.

```
execute backup obfuscated-config sftp <string> <sftp server>[:sftp port] <user> <passwd>
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the SFTP server.	string	
<sftp server>[:sftp port]	SFTP server IPv4, IPv6 can be attached with port.	string	
<user>	SFTP username.	string	
<passwd>	SFTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup obfuscated-config tftp

Backup obfuscated config file to TFTP server.

```
execute backup obfuscated-config tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup obfuscated-full-config ftp

Backup obfuscated full config file to FTP server.

```
execute backup obfuscated-full-config ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup obfuscated-full-config sftp

Backup obfuscated full config file to SFTP server.

```
execute backup obfuscated-full-config sftp <string> <sftp server>[:sftp port] <user> <passwd>
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the SFTP server.	string	
<sftp server>[:sftp port]	SFTP server IPv4, IPv6 can be attached with port.	string	
<user>	SFTP username.	string	
<passwd>	SFTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup obfuscated-full-config tftp

Backup obfuscated full config file to TFTP server.

```
execute backup obfuscated-full-config tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup obfuscated-yaml-config ftp

Backup obfuscated YAML config file to FTP server.

```
execute backup obfuscated-yaml-config ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>  
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup obfuscated-yaml-config tftp

Backup obfuscated YAML config file to TFTP server.

```
execute backup obfuscated-yaml-config tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup yaml-config ftp

Backup YAML config file to FTP server.

```
execute backup yaml-config ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>  
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute backup yaml-config tftp

Backup YAML config file to TFTP server.

```
execute backup yaml-config tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Make a file name (path) on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Optional password to protect the backup content.	string	

execute batch

batch

This topic includes the following commands:

- [execute batch end on page 3603](#)
- [execute batch lastlog on page 3603](#)
- [execute batch start on page 3603](#)
- [execute batch status on page 3603](#)

execute batch end

Batch mode end.

```
execute batch end
```

execute batch lastlog

Read the result of last batch commands.

```
execute batch lastlog
```

execute batch start

Batch mode start.

```
execute batch start
```

execute batch status

Batch mode status.

```
execute batch status
```

execute central-mgmt

central-mgmt

This topic includes the following commands:

- [execute central-mgmt register-device on page 3603](#)
- [execute central-mgmt set-mgmt-id on page 3604](#)
- [execute central-mgmt unregister-device on page 3604](#)

execute central-mgmt register-device

Register device to FortiManager from unregistered device list.

```
execute central-mgmt register-device <fmg-serial-no> <fmg-register-password>
```

Parameter	Description	Type	Size
<fmg-serial-no>	FortiManager serial number.	string	
<fmg-register-password>	Register password in to FortiManager.	string	

execute central-mgmt set-mgmt-id

Management ID of Central Management Service.

```
execute central-mgmt set-mgmt-id <management id>
```

Parameter	Description	Type	Size
<management id>	Management ID (must be entered in encrypted format).	string	

execute central-mgmt unregister-device

Remove device from its manager's device list.

```
execute central-mgmt unregister-device <fmg-serial-no>
```

Parameter	Description	Type	Size
<fmg-serial-no>	FortiManager serial number.	string	

execute cfg

cfg

This topic includes the following commands:

- [execute cfg reload on page 3604](#)
- [execute cfg save on page 3605](#)

execute cfg reload

Reboot to reload the configs.

```
execute cfg reload
```

execute cfg save

Save configs.

```
execute cfg save
```

execute clear

clear

This topic includes the following commands:

- [execute clear system arp table on page 3605](#)

execute clear system arp table

Clear system ARP table.

```
execute clear system arp table
```

execute clear-admin-password-history

Clear admin user password history.

```
execute clear-admin-password-history <admin user>
```

Parameter	Description	Type	Size
<admin user>	Name of admin user	string	

execute clear-user-password-history

Clear auth user password history.

```
execute clear-user-password-history <auth user>
```

Parameter	Description	Type	Size
<auth user>	Name of auth user	string	

execute cli

cli

This topic includes the following commands:

- [execute cli check-template-status on page 3606](#)
- [execute cli status-msg-only on page 3606](#)

execute cli check-template-status

Check SCP script template running status.

```
execute cli check-template-status
```

execute cli status-msg-only

CLI standardized error output.

```
execute cli status-msg-only <enable/disable>
```

Parameter	Description	Type	Size
<enable/disable>	Enable/disable CLI standardized error output.	string	

execute cloud-service

cloud-service

This topic includes the following commands:

- [execute cloud-service gen-jwt-as-token on page 3607](#)
- [execute cloud-service list on page 3607](#)
- [execute cloud-service manual-gen-jwt-as-token on page 3607](#)

execute cloud-service gen-jwt-as-token

Generate a JSON Web Token from config to be used as bearer token.

```
execute cloud-service gen-jwt-as-token <string>
```

Parameter	Description	Type	Size
<string>	Cloud service name.	string	

execute cloud-service list

List cloud service information.

```
execute cloud-service list <string>
```

Parameter	Description	Type	Size
<string>	Cloud service name.	string	

execute cloud-service manual-gen-jwt-as-token

Manually generate a JSON Web Token to be used as bearer token.

```
execute cloud-service manual-gen-jwt-as-token <string> <string> <string> <string> <integer> <integer>
```

Parameter	Description	Type	Size
<string>	keyid.	string	
<string>	private key in clear text, consider quoting everything in ``, as `\\n` needs to be transcoded as a real new line.	string	
<string>	issuer.	string	
<string>	subject.	string	
<integer>	token in effective starting from (epoch seconds).	string	
<integer>	token lifetime (seconds).	string	

execute config-transaction

config-transaction

This topic includes the following commands:

- [execute config-transaction abort on page 3608](#)
- [execute config-transaction commit on page 3608](#)
- [execute config-transaction start on page 3608](#)

execute config-transaction abort

Abort configuration transaction.

```
execute config-transaction abort
```

execute config-transaction commit

Commit configuration transaction.

```
execute config-transaction commit
```

execute config-transaction start

Start configuration transaction.

```
execute config-transaction start <integer>
```

Parameter	Description	Type	Size
<integer>	Transaction timeout in minutes (1 - 60). Default value is 5.	string	

execute cpu

cpu

This topic includes the following commands:

- [execute cpu add on page 3608](#)
- [execute cpu show on page 3609](#)

execute cpu add

Activate new CPU.

```
execute cpu add <number>
```

Parameter	Description	Type	Size
<number>	New Active CPU Number.	string	

execute cpu show

Show CPU number.

```
execute cpu show
```

execute date

System date.

```
execute date <yyyy-mm-dd>
```

Parameter	Description	Type	Size
<yyyy-mm-dd>	yyyy: 2001-2037, mm: 1-12, dd: 1-31.	string	

execute device-upgrade

device-upgrade

This topic includes the following commands:

- [execute device-upgrade cancel on page 3609](#)
- [execute device-upgrade immediate on page 3610](#)

execute device-upgrade cancel

Cancel a Fortinet device's upgrade by removing it from the upgrade table.

```
execute device-upgrade cancel <serial>
```

Parameter	Description	Type	Size
<serial>	Serial number of the Fortinet device to upgrade.	string	

execute device-upgrade immediate

Configure a Fortinet device to upgrade immediately.

```
execute device-upgrade immediate <device-type> <serial> <major> <minor> <patch>
```

Parameter	Description	Type	Size
<device-type>	Fortinet device type to upgrade.	string	
<serial>	Fortinet device serial number to upgrade.	string	
<major>	Major version of the Fortinet OS image being upgraded to.	string	
<minor>	Minor version of the Fortinet OS image being upgraded to.	string	
<patch>	Patch version of the Fortinet OS image being upgraded to.	string	

execute dhcp

dhcp

This topic includes the following commands:

- [execute dhcp lease-clear on page 3610](#)
- [execute dhcp lease-list on page 3611](#)

execute dhcp lease-clear

Clear all DHCP leases.

```
execute dhcp lease-clear <IPv4 address> or <IPv4 starting address-IPv4 ending address> <all>
```

Parameter	Description	Type	Size
<IPv4 address> or <IPv4 starting address-IPv4 ending address>	Clear lease(s) on this IP address.	string	
<all>	Clear all leases.	string	

execute dhcp lease-list

List all DHCP leases.

```
execute dhcp lease-list <interface>
```

Parameter	Description	Type	Size
<interface>	List leases on this interface.	string	

execute dhcp6

dhcp6

This topic includes the following commands:

- [execute dhcp6 lease-clear on page 3611](#)
- [execute dhcp6 lease-list on page 3611](#)

execute dhcp6 lease-clear

Clear all DHCPv6 leases.

```
execute dhcp6 lease-clear <IPv6 address> or <IPv6 starting address-IPv6 ending address> <all>
```

Parameter	Description	Type	Size
<IPv6 address> or <IPv6 starting address-IPv6 ending address>	Clear lease(s) on this IPv6 address.	string	
<all>	Clear all leases.	string	

execute dhcp6 lease-list

List all DHCPv6 leases.

```
execute dhcp6 lease-list <interface>
```

Parameter	Description	Type	Size
<interface>	List leases on this interface.	string	

execute disconnect-admin-session

Disconnect logged-in admin user.

```
execute disconnect-admin-session <integer>
```

Parameter	Description	Type	Size
<integer>	Index of user to be disconnected in logged-users table.	string	

execute disk

disk

This topic includes the following commands:

- [execute disk format on page 3612](#)
- [execute disk list on page 3612](#)
- [execute disk scan on page 3612](#)

execute disk format

Format a partition.

```
execute disk format
```

execute disk list

List disk devices and partitions.

```
execute disk list
```

execute disk scan

Scan a partition and fix errors.

```
execute disk scan
```

execute enter

Select virtual domain.

```
execute enter <name>
```

Parameter	Description	Type	Size
<name>	VDOM name.	string	

execute erase-disk

Erase a disk.

```
execute erase-disk
```

execute extender

extender

This topic includes the following commands:

- [execute extender delete-fortiextender-image on page 3614](#)
- [execute extender install-forticloud-mdm-package on page 3614](#)
- [execute extender install-forticloud-os-image on page 3614](#)
- [execute extender list-fortiextender-image on page 3614](#)
- [execute extender lte-carrier add on page 3614](#)
- [execute extender lte-carrier del on page 3615](#)
- [execute extender lte-simmap add on page 3615](#)
- [execute extender lte-simmap del on page 3615](#)
- [execute extender push-fortiextender-image on page 3616](#)
- [execute extender push-fortiextender-stage-image on page 3616](#)
- [execute extender query-forticloud-mdmpkg-image on page 3616](#)
- [execute extender query-forticloud-os-image on page 3617](#)
- [execute extender reset-fortiextender on page 3617](#)
- [execute extender restart-fortiextender-daemon on page 3617](#)

- [execute extender upload-fortiextender-image ftp](#) on page 3617
- [execute extender upload-fortiextender-image tftp](#) on page 3618

execute extender delete-fortiextender-image

Delete FortiExtender images.

```
execute extender delete-fortiextender-image
```

execute extender install-forticloud-mdm-package

Install FortiExtender modem package from Cloud.

```
execute extender install-forticloud-mdm-package <filename> <sn>
```

Parameter	Description	Type	Size
<filename>	FortiExtender Cloud modem package version.	string	
<sn>	FortiExtender serial number.	string	

execute extender install-forticloud-os-image

Install FortiExtender OS image from Cloud.

```
execute extender install-forticloud-os-image <filename> <sn>
```

Parameter	Description	Type	Size
<filename>	FortiExtender Cloud image version.	string	
<sn>	FortiExtender serial number.	string	

execute extender list-fortiextender-image

List FortiExtender images.

```
execute extender list-fortiextender-image
```

execute extender lte-carrier add

Add a LTE carrier with string.

```
execute extender lte-carrier add <SN> <string> [<string>]
```

Parameter	Description	Type	Size
<SN>	FortiExtender serial number.	string	
<string>	Newly added carrier name on the FEXT.	string	
[<string>]	Optional and default as GENERIC. Base carrier name on the FEXT, where the PRI and FW is referred by the newly added carrier.	string	

execute extender lte-carrier del

Delete a LTE carrier with string.

```
execute extender lte-carrier del <SN> <string>
```

Parameter	Description	Type	Size
<SN>	FortiExtender serial number.	string	
<string>	Carrier name on the FEXT.	string	

execute extender lte-simmap add

Add a carrier based on MCC/MNC.

```
execute extender lte-simmap add <SN> <string> <string> <string>
```

Parameter	Description	Type	Size
<SN>	FortiExtender serial number.	string	
<string>	MCC number.	string	
<string>	MNC number.	string	
<string>	Carrier name on the FEXT.	string	

execute extender lte-simmap del

Delete a LTE carrier with string.

```
execute extender lte-simmap del <SN> <string> <string> <string>
```

Parameter	Description	Type	Size
<SN>	FortiExtender serial number.	string	
<string>	MCC number.	string	
<string>	MNC number.	string	
<string>	Carrier name on the FEXT.	string	

execute extender push-fortiextender-image

Push FortiExtender image to a managed FortiExtender.

```
execute extender push-fortiextender-image <vdom> <sn> <filename>
```

Parameter	Description	Type	Size
<vdom>	FortiExtender session VDOM.	string	
<sn>	FortiExtender serial number.	string	
<filename>	FortiExtender image filename.	string	

execute extender push-fortiextender-stage-image

Push FortiExtender stage image to a managed FortiExtender.

```
execute extender push-fortiextender-stage-image <vdom> <sn> <filename>
```

Parameter	Description	Type	Size
<vdom>	FortiExtender session VDOM.	string	
<sn>	FortiExtender serial number.	string	
<filename>	FortiExtender image filename.	string	

execute extender query-forticloud-mdmpkg-image

Query FortiExtender modem packages on Cloud.

```
execute extender query-forticloud-mdmpkg-image <all>|<filename> <sn>
```

Parameter	Description	Type	Size
<all> <filename>	FortiExtender Cloud modem packages.	string	
<sn>	FortiExtender serial number.	string	

execute extender query-forticloud-os-image

Query FortiExtender OS images on Cloud.

```
execute extender query-forticloud-os-image <all>|<filename> <sn>
```

Parameter	Description	Type	Size
<all> <filename>	FortiExtender Cloud OS images.	string	
<sn>	FortiExtender serial number.	string	

execute extender reset-fortiextender

Restart managed FortiExtender.

```
execute extender reset-fortiextender <all>|<SN>
```

Parameter	Description	Type	Size
<all> <SN>	FortiExtender serial number.	string	

execute extender restart-fortiextender-daemon

Restart ForExtender AC daemon.

```
execute extender restart-fortiextender-daemon
```

execute extender upload-fortiextender-image ftp

Upload FortiExtender image from FTP server.

```
execute extender upload-fortiextender-image ftp <string> <ftp server>[:ftp port] <Enter>|<user>  
<passwd>
```

Parameter	Description	Type	Size
<string>	FortiExtender image file name on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute extender upload-fortiextender-image tftp

Upload FortiExtender image from TFTP server.

```
execute extender upload-fortiextender-image tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute fabric-vpn

fabric-vpn

This topic includes the following commands:

- [execute fabric-vpn flush-setup on page 3618](#)
- [execute fabric-vpn update-setup on page 3618](#)

execute fabric-vpn flush-setup

Remove fabric VPN settings.

```
execute fabric-vpn flush-setup
```

execute fabric-vpn update-setup

Update fabric VPN setup.

```
execute fabric-vpn update-setup
```

execute factoryreset

Reset to factory default now.

```
execute factoryreset <keepvmlicense>
```

Parameter	Description	Type	Size
<keepvmlicense>	Keep VM license.	string	

execute factoryreset2

Reset to factory default except system.global.vdom-mode/system.global.long-vdom-name/VDOMS/system.virtual-switch/system.interface/system.settings/router.static/router.static6.

```
execute factoryreset2 <keepvmlicense>
```

Parameter	Description	Type	Size
<keepvmlicense>	Keep VM license.	string	

execute factoryreset-for-central-management

Reset to factory default except system.central-management.serial-number/system.central-management.fmg.

```
execute factoryreset-for-central-management <keepvmlicense>
```

Parameter	Description	Type	Size
<keepvmlicense>	Keep VM license.	string	

execute factoryreset-shutdown

Reset to factory default and shutdown.

```
execute factoryreset-shutdown <keepvmlicense>
```

Parameter	Description	Type	Size
<keepvmlicense>	Keep VM license.	string	

execute fctems

fctems

This topic includes the following commands:

- [execute fctems is-verified on page 3620](#)
- [execute fctems unverify on page 3620](#)
- [execute fctems verify on page 3620](#)

execute fctems is-verified

Check if Configured EMS server has a verified certificate.

```
execute fctems is-verified <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry id in CMDB.	string	

execute fctems unverify

Unverify FortiClient EMS server.

```
execute fctems unverify <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry id in CMDB.	string	

execute fctems verify

Verify FortiClient EMS server.

```
execute fctems verify <fctems>
```

Parameter	Description	Type	Size
<fctems>	FortiClient EMS table entry id in CMDB.	string	

execute federated-upgrade

federated-upgrade

This topic includes the following commands:

- [execute federated-upgrade cancel on page 3621](#)
- [execute federated-upgrade initialize on page 3621](#)
- [execute federated-upgrade quick-fortigate-upgrade on page 3621](#)
- [execute federated-upgrade quick-full-upgrade on page 3622](#)
- [execute federated-upgrade restart on page 3622](#)
- [execute federated-upgrade safe-cancel on page 3622](#)
- [execute federated-upgrade status on page 3622](#)

execute federated-upgrade cancel

Cancel the currently configured upgrade.

```
execute federated-upgrade cancel
```

execute federated-upgrade initialize

Set up a federated upgrade.

```
execute federated-upgrade initialize
```

execute federated-upgrade quick-fortigate-upgrade

Set up a 15 minute immediate mode upgrade for all FortiGates in the CSF tree.

```
execute federated-upgrade quick-fortigate-upgrade <major> <minor> <patch> <delay-minutes> <max-minutes>
```

Parameter	Description	Type	Size
<major>	Major version of the Fortinet OS image being upgraded to.	string	
<minor>	Minor version of the Fortinet OS image being upgraded to.	string	
<patch>	Patch version of the Fortinet OS image being upgraded to.	string	
<delay-minutes>	Minutes to delay before starting the upgrade setup.	string	

Parameter	Description	Type	Size
<max-minutes>	Number of minutes allowed for upgrade preparation.	string	

execute federated-upgrade quick-full-upgrade

Set up a 15 minute immediate mode upgrade for all CSF devices.

```
execute federated-upgrade quick-full-upgrade <major> <minor> <patch> <delay-minutes> <max-minutes>
```

Parameter	Description	Type	Size
<major>	Major version of the Fortinet OS image being upgraded to.	string	
<minor>	Minor version of the Fortinet OS image being upgraded to.	string	
<patch>	Patch version of the Fortinet OS image being upgraded to.	string	
<delay-minutes>	Minutes to delay before starting the upgrade setup.	string	
<max-minutes>	Number of minutes allowed for upgrade preparation.	string	

execute federated-upgrade restart

Restart the currently configured federated upgrade.

```
execute federated-upgrade restart
```

execute federated-upgrade safe-cancel

Cancel the currently configured upgrade via the safe cancel API. Only cancels user-created upgrades.

```
execute federated-upgrade safe-cancel
```

execute federated-upgrade status

Show the current status of federated upgrade.

```
execute federated-upgrade status
```

execute fips

fips

This topic includes the following commands:

- [execute fips tftp-drbg-entropy-source on page 3623](#)
- [execute fips tftp-test-vectors on page 3623](#)

execute fips tftp-drbg-entropy-source

tftp files and generate drbg entropy source samples

```
execute fips tftp-drbg-entropy-source <ip> <dir> <number> <number>
```

Parameter	Description	Type	Size
<ip>	IP address of the tftp server	string	
<dir>	directory for the entropy sample files	string	
<number>	samples size.	string	
<number>	total number of samples.	string	

execute fips tftp-test-vectors

tftp files and generate test vector results

```
execute fips tftp-test-vectors <ip> <dir> <file name>
```

Parameter	Description	Type	Size
<ip>	IP address of the tftp server	string	
<dir>	directory of the test files	string	
<file name>	The JSON file to test.	string	

execute firewall

firewall

This topic includes the following commands:

- [execute firewall ssh generate local-ca on page 3624](#)
- [execute firewall ssh generate local-key on page 3624](#)

execute firewall ssh generate local-ca

Generate the default ssh local key.

```
execute firewall ssh generate local-ca <string>
```

Parameter	Description	Type	Size
<string>	Local CA name.	string	

execute firewall ssh generate local-key

Generate the default ssh local key.

```
execute firewall ssh generate local-key <string>
```

Parameter	Description	Type	Size
<string>	Local key name.	string	

execute formatlogdisk

Format log disk.

```
execute formatlogdisk
```

execute forticarrier-license

forticarrier-license

```
execute forticarrier-license <activation-code>
```

Parameter	Description	Type	Size
<activation-code>	Format:0000-0000-0000-0000-0001 or <license-key> Format:0000-0000-0000-0000-0000-0000-00	string	

execute forticloud-sandbox

forticloud-sandbox

This topic includes the following commands:

- [execute forticloud-sandbox region on page 3625](#)
- [execute forticloud-sandbox update on page 3625](#)

execute forticloud-sandbox region

Get FortiCloud sandbox region.

```
execute forticloud-sandbox region
```

execute forticloud-sandbox update

Update FortiCloud sandbox contract.

```
execute forticloud-sandbox update
```

execute fortiguard-log

fortiguard-log

This topic includes the following commands:

- [execute fortiguard-log certificate-activation on page 3625](#)
- [execute fortiguard-log migration on page 3626](#)
- [execute fortiguard-log update on page 3626](#)

execute fortiguard-log certificate-activation

Activate FortiCloud certification.

```
execute fortiguard-log certificate-activation <code>
```

Parameter	Description	Type	Size
<code>	Activation code.	string	

execute fortiguard-log migration

Migrate standalone FortiGate Cloud account to FortiCloud.

```
execute fortiguard-log migration <password>
```

Parameter	Description	Type	Size
<password>	Password.	string	

execute fortiguard-log update

Update FortiCloud Contract.

```
execute fortiguard-log update
```

execute fortiguard-message

fortiguard-message

This topic includes the following commands:

- [execute fortiguard-message add on page 3626](#)
- [execute fortiguard-message info on page 3626](#)
- [execute fortiguard-message update on page 3627](#)

execute fortiguard-message add

Add FortiGuard Message Service activation code.

```
execute fortiguard-message add <activation code>
```

Parameter	Description	Type	Size
<activation code>	Activation code for FortiGuard Message Service.	string	

execute fortiguard-message info

Show info about FortiGuard Message Service.

```
execute fortiguard-message info
```

execute fortiguard-message update

Force to update FortiGuard Message Service.

```
execute fortiguard-message update
```

execute fortimanager

fortimanager

This topic includes the following commands:

- [execute fortimanager fetch on page 3627](#)
- [execute fortimanager register on page 3627](#)

execute fortimanager fetch

Fetch and verify the FortiManager certificate

```
execute fortimanager fetch
```

execute fortimanager register

Register Fortigate to Fortimanager

```
execute fortimanager register <ip>
```

Parameter	Description	Type	Size
<ip>	Fortimanager's ip that Fortigate will register to	string	

execute fortitoken

fortitoken

This topic includes the following commands:

- [execute fortitoken activate on page 3628](#)
- [execute fortitoken import ftp on page 3629](#)
- [execute fortitoken import tftp on page 3629](#)
- [execute fortitoken import usb on page 3629](#)
- [execute fortitoken import-sn-file on page 3629](#)
- [execute fortitoken sync on page 3630](#)

execute fortitoken activate

Activate FortiToken(s) with FortiGuard.

```
execute fortitoken activate <id> <id> <id> <id> <id> <id> <id> <id> <id> <id> <id> <id> <id> <id> <id> <id> <id>
```

Parameter	Description	Type	Size
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	
<id>	FortiToken ID.	string	

execute fortitoken import ftp

Import FortiToken seeds file from FTP server.

```
execute fortitoken import ftp <file name> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<file name>	FortiToken seeds file name.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute fortitoken import tftp

Import FortiToken seeds file from TFTP server.

```
execute fortitoken import tftp <file name> <tftp server>
```

Parameter	Description	Type	Size
<file name>	FortiToken seeds file name.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute fortitoken import usb

Import FortiToken seeds file from USB drive.

```
execute fortitoken import usb <file name>
```

Parameter	Description	Type	Size
<file name>	FortiToken seeds file name.	string	

execute fortitoken import-sn-file

Import FTK_200 serial number from FortiCare.

```
execute fortitoken import-sn-file <FTK_200 Serial Number>
```

Parameter	Description	Type	Size
<FTK_200 Serial Number>	FTK_200 serial number.	string	

execute fortitoken sync

Synchronize FortiToken by adjusting for drift of internal clock.

```
execute fortitoken sync <id> <code> <next code>
```

Parameter	Description	Type	Size
<id>	FortiToken ID.	string	
<code>	FortiToken code.	string	
<next code>	Next FortiToken code.	string	

execute fortitoken-cloud

fortitoken-cloud

This topic includes the following commands:

- [execute fortitoken-cloud migrate-ftm on page 3630](#)
- [execute fortitoken-cloud new on page 3631](#)
- [execute fortitoken-cloud show on page 3631](#)
- [execute fortitoken-cloud sync on page 3631](#)
- [execute fortitoken-cloud trial on page 3631](#)
- [execute fortitoken-cloud update on page 3631](#)

execute fortitoken-cloud migrate-ftm

Migrate FortiToken service to FortiToken Cloud.

```
execute fortitoken-cloud migrate-ftm <license number> <vdom>
```

Parameter	Description	Type	Size
<license number>	FortiToken mobile license number.	string	
<vdom>	VDOM name.	string	

execute fortitoken-cloud new

Send new activation code for a user.

```
execute fortitoken-cloud new <user name> <user type> <vdom>
```

Parameter	Description	Type	Size
<user name>	User name for new token.	string	
<user type>	Enter admin, local or remote.	string	
<vdom>	VDOM name.	string	

execute fortitoken-cloud show

Show service status of this FortiGate.

```
execute fortitoken-cloud show
```

execute fortitoken-cloud sync

Synchronize users to FortiToken Cloud.

```
execute fortitoken-cloud sync <user type>
```

Parameter	Description	Type	Size
<user type>	Enter <return>, all, local or remote.	string	

execute fortitoken-cloud trial

Activate free trial.

```
execute fortitoken-cloud trial
```

execute fortitoken-cloud update

Update VDOM list to FortiToken Cloud.

```
execute fortitoken-cloud update
```

execute fortitoken-mobile

fortitoken-mobile

This topic includes the following commands:

- [execute fortitoken-mobile import on page 3632](#)
- [execute fortitoken-mobile poll on page 3632](#)
- [execute fortitoken-mobile provision on page 3632](#)
- [execute fortitoken-mobile renew on page 3632](#)

execute fortitoken-mobile import

Import a list of tokens from FortiGuard to the FortiGate unit.

```
execute fortitoken-mobile import <code>
```

Parameter	Description	Type	Size
<code>	Software Token Redemption Certificate.	string	

execute fortitoken-mobile poll

Poll soft token states.

```
execute fortitoken-mobile poll
```

execute fortitoken-mobile provision

Provision a soft token.

```
execute fortitoken-mobile provision <sn>
```

Parameter	Description	Type	Size
<sn>	MobileToken serial number.	string	

execute fortitoken-mobile renew

Renew a locked mobile FortiToken.

```
execute fortitoken-mobile renew <sn>
```

Parameter	Description	Type	Size
<sn>	MobileToken serial number.	string	

execute fsso

fsso

This topic includes the following commands:

- [execute fsso refresh on page 3633](#)

execute fsso refresh

Refresh FSSO groups.

```
execute fsso refresh
```

execute gen-token

Generate bearer token.

```
execute gen-token <Type> <string> <Algorithm> <Expire>
```

Parameter	Description	Type	Size
<Type>	Type for token generation, by certificate or by pre-shared key. Available types: cert, key	string	
<string>	Certificate or preshared-key for token generation. Available certificates:	string	
<Algorithm>	Algorithm for token generation. Please ensure that the signing algorithm matches the type of certificate and its corresponding private key. Available Algorithms: RS256, RS384, RS512, ES256, ES384, ES512 for cert. HS256, HS384, HS512 for key.	string	
<Expire>	Expire interval in hours, 0 for long live token.	string	

execute ha

ha

This topic includes the following commands:

- [execute ha disconnect on page 3634](#)
- [execute ha failover set on page 3634](#)
- [execute ha failover status on page 3635](#)
- [execute ha failover unset on page 3635](#)
- [execute ha manage on page 3635](#)
- [execute ha synchronize on page 3635](#)

execute ha disconnect

Disconnect from HA cluster.

```
execute ha disconnect <string> <string> <ip> <netmask>
```

Parameter	Description	Type	Size
<string>	Serial number.	string	
<string>	Interface name.	string	
<ip>	IP or subnet of the interface.	string	
<netmask>	Netmask of the interface.	string	

execute ha failover set

Set the given virtual cluster as secondary and trigger failover. Argument optional; if argument omitted, all virtual clusters are affected.

```
execute ha failover set [integer]
```

Parameter	Description	Type	Size
[integer]	Virtual cluster ID. Optional; if not given, all virtual clusters are affected.	string	

execute ha failover status

Display whether the given virtual cluster has been set as secondary for failover. Argument optional; if no argument given, display statuses of all virtual clusters.

```
execute ha failover status [integer]
```

Parameter	Description	Type	Size
[integer]	Virtual cluster ID. Optional; if not given, all virtual clusters are affected.	string	

execute ha failover unset

If the given virtual cluster has been set as secondary before, unset it so HA will use normal criteria to decide the primary. May trigger a failover. Argument optional; if argument not given, all virtual clusters are affected.

```
execute ha failover unset [integer]
```

Parameter	Description	Type	Size
[integer]	Virtual cluster ID. Optional; if not given, all virtual clusters are affected.	string	

execute ha manage

HA cluster index.

```
execute ha manage <string> <string>
```

Parameter	Description	Type	Size
<string>	HA cluster index.	string	
<string>	Login admin name.	string	

execute ha synchronize

HA synchronize commands.

```
execute ha synchronize <string>
```

Parameter	Description	Type	Size
<string>	File type.	string	

execute interface

interface

This topic includes the following commands:

- [execute interface dhcp6client-renew on page 3636](#)
- [execute interface dhcpclient-renew on page 3636](#)
- [execute interface pppoe-reconnect on page 3636](#)

execute interface dhcp6client-renew

Renew DHCPv6 lease.

```
execute interface dhcp6client-renew <interface>
```

Parameter	Description	Type	Size
<interface>	Renew DHCPv6 lease on this interface.	string	

execute interface dhcpclient-renew

Renew DHCP lease.

```
execute interface dhcpclient-renew <interface>
```

Parameter	Description	Type	Size
<interface>	Renew DHCP lease on this interface.	string	

execute interface pppoe-reconnect

Reconnect to PPPoE server.

```
execute interface pppoe-reconnect <interface>
```

Parameter	Description	Type	Size
<interface>	Reconnect PPPoE on this interface.	string	

execute internet-service4

internet-service4

This topic includes the following commands:

- [execute internet-service4 refresh on page 3637](#)

execute internet-service4 refresh

Refresh Internet Service Database(IPV4).

```
execute internet-service4 refresh
```

execute internet-service6

internet-service6

This topic includes the following commands:

- [execute internet-service6 refresh on page 3637](#)

execute internet-service6 refresh

Refresh Internet Service Database(IPV6).

```
execute internet-service6 refresh
```

execute ipam

ipam

This topic includes the following commands:

- [execute ipam create-dhcp-server on page 3637](#)

execute ipam create-dhcp-server

Create a DHCP server managed by IPAM.

```
execute ipam create-dhcp-server <interface>
```

Parameter	Description	Type	Size
<interface>	Interface for the DHCP server.	string	

execute iscsi

iscsi

This topic includes the following commands:

- [execute iscsi login on page 3638](#)
- [execute iscsi logout on page 3638](#)
- [execute iscsi show on page 3638](#)

execute iscsi login

Login to iSCSI.

```
execute iscsi login <name>
```

Parameter	Description	Type	Size
<name>	iSCSI name.	string	

execute iscsi logout

Logout from iSCSI.

```
execute iscsi logout <name>
```

Parameter	Description	Type	Size
<name>	iSCSI name.	string	

execute iscsi show

Show iSCSI info.

```
execute iscsi show <name>
```

Parameter	Description	Type	Size
<name>	iSCSI name.	string	

execute kmip

kmip

This topic includes the following commands:

- [execute kmip create on page 3639](#)
- [execute kmip destroy on page 3639](#)
- [execute kmip get on page 3640](#)
- [execute kmip locate on page 3640](#)
- [execute kmip rekey on page 3640](#)

execute kmip create

Create Symmetric key(s) in KMIP server

```
execute kmip create <kmip server> <algo> <keylen> <name>
```

Parameter	Description	Type	Size
<kmip server>	KMIP server name.	string	
<algo>	Cryptographic Algorithm.	string	
<keylen>	Key size (in bits).	string	
<name>	Key name (separate with ' ' or '*' for multiple items).	string	

execute kmip destroy

Destroy Symmetric key(s) in KMIP server

```
execute kmip destroy <kmip server> <keyid>
```

Parameter	Description	Type	Size
<kmip server>	KMIP server name.	string	
<keyid>	Key ID (in hex string, separate with ' ' or '*' for multiple items).	string	

execute kmip get

Get Symmetric key(s) from KMIP server

```
execute kmip get
```

execute kmip locate

locate Symmetric key(s) in KMIP server

```
execute kmip locate <kmip server> <name>
```

Parameter	Description	Type	Size
<kmip server>	KMIP server name.	string	
<name>	Key name (separate with ' ' or '*' for multiple items).	string	

execute kmip rekey

Rekey Symmetric key(s) from KMIP server

```
execute kmip rekey <kmip server> <keyid>
```

Parameter	Description	Type	Size
<kmip server>	KMIP server name.	string	
<keyid>	Key ID (in hex string, separate with ' ' or '*' for multiple items).	string	

execute log

log

This topic includes the following commands:

- [execute log backup ftp on page 3641](#)
- [execute log backup local on page 3642](#)
- [execute log backup tftp on page 3642](#)
- [execute log chroot on page 3642](#)
- [execute log delete on page 3642](#)
- [execute log delete-all on page 3643](#)

- [execute log detail on page 3643](#)
- [execute log display on page 3643](#)
- [execute log filter category on page 3643](#)
- [execute log filter device on page 3643](#)
- [execute log filter dump on page 3644](#)
- [execute log filter field on page 3644](#)
- [execute log filter free-style on page 3644](#)

execute log backup ftp

Backup logs and report databases to remote FTP server.

```
execute log backup ftp <filename> <ftp server>[:ftp port] <user> <passwd>
```

Parameter	Description	Type	Size
<filename>	Make file name on the remote FTP server	string	
<ftp server> [:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	

Parameter	Description	Type	Size
<user>	FTP username.	string	
<passwd>	FTP password.	string	

execute log backup local

Backup logs and report databases to local storage device.

```
execute log backup local <path>
```

Parameter	Description	Type	Size
<path>	Path to store logs and report databases.	string	

execute log backup tftp

Backup logs and report databases to remote TFTP server.

```
execute log backup tftp <filename> <tftp server>
```

Parameter	Description	Type	Size
<filename>	Make file name on the remote TFTP server	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute log chroot

Drop/Gain CLI root privilege.

```
execute log chroot
```

execute log delete

Delete local logs of one category.

```
execute log delete
```

execute log delete-all

Delete all local logs and recreate report database.

```
execute log delete-all
```

execute log detail

Display utm log entries for a particular traffic log.

```
execute log detail <category> <utmref>
```

Parameter	Description	Type	Size
<category>	Category for UTM logs	string	
<utmref>	You can copy and paste it from log display result by tuning on it using 'exec log filter show-utm-ref 1'	string	

execute log display

Display filtered log entries.

```
execute log display
```

execute log filter category

Category.

```
execute log filter category <category>
```

Parameter	Description	Type	Size
<category>	Category name, press enter for options.	string	

execute log filter device

Device to get log from.

```
execute log filter device <device>
```

Parameter	Description	Type	Size
<device>	Device name, press enter for options.	string	

execute log filter dump

Dump current filter settings.

```
execute log filter dump
```

execute log filter field

Filter by field.

```
execute log filter field <name> <argument 1> <argument 2> <argument 3> <argument 4> <argument 5>  
<argument 6> <argument 7>
```

Parameter	Description	Type	Size
<name>	Field name, press enter for options.	string	
<argument 1>	Field search argument 1, press enter for more help.	string	
<argument 2>	<argument 2>	string	
<argument 3>	<argument 3>	string	
<argument 4>	<argument 4>	string	
<argument 5>	<argument 5>	string	
<argument 6>	<argument 6>	string	
<argument 7>	<argument 7>	string	

execute log filter free-style

Filter by free-style expression.

```
execute log filter free-style <expression>
```

Parameter	Description	Type	Size
<expression>	Log filter expression.	string	

execute log filter ha-member

HA member.

```
execute log filter ha-member <sn>
```

Parameter	Description	Type	Size
<sn>	Serial number of HA member.	string	

execute log filter local-search-mode

local log search mode

```
execute log filter local-search-mode <mode>
```

Parameter	Description	Type	Size
<mode>	Local log search mode, press enter for options.	string	

execute log filter max-checklines

Maximum number of lines to check.

```
execute log filter max-checklines <number>
```

Parameter	Description	Type	Size
<number>	0 or (100 - 1000000).	string	

execute log filter pre-fetch-pages

Number of pages to check in advance under on-demand log search mode.

```
execute log filter pre-fetch-pages <number>
```

Parameter	Description	Type	Size
<number>	(2 - 10).	string	

execute log filter reset

Reset filter.

```
execute log filter reset <enter|all|field>
```

Parameter	Description	Type	Size
<enter all field>	<enter all> to reset all, <field> to reset field only.	string	

execute log filter start-line

Start line to display.

```
execute log filter start-line <number>
```

Parameter	Description	Type	Size
<number>	>=1	string	

execute log filter view-lines

Lines per view.

```
execute log filter view-lines <number>
```

Parameter	Description	Type	Size
<number>	Number of lines to view (5 - 1000).	string	

execute log flush-cache

Write disk log cache of current category to disk in compressed format.

```
execute log flush-cache
```

execute log flush-cache-all

Write disk log cache of all categories to disk in compressed format.

```
execute log flush-cache-all
```

execute log fortianalyzer manual-failover

Manually failover to use the other server.

```
execute log fortianalyzer manual-failover
```

execute log fortianalyzer test-connectivity

Query FortiAnalyzer connection status.

```
execute log fortianalyzer test-connectivity
```

execute log fortianalyzer-cloud test-connectivity

Query FortiAnalyzer Cloud connection status.

```
execute log fortianalyzer-cloud test-connectivity
```

execute log fortianalyzer2 manual-failover

Manually failover to use the other server.

```
execute log fortianalyzer2 manual-failover
```

execute log fortianalyzer3 manual-failover

Manually failover to use the other server.

```
execute log fortianalyzer3 manual-failover
```

execute log fortiguard test-connectivity

Query FortiGuard connection status.

```
execute log fortiguard test-connectivity
```

execute log list

List current and rolled log files info.

```
execute log list <category>
```

Parameter	Description	Type	Size
<category>	Category name, press enter for options.	string	

execute log raw-backup ftp

Backup raw logs to remote FTP server.

```
execute log raw-backup ftp <remotedir> <ftp server>[:ftp port] <user> <passwd>
```

Parameter	Description	Type	Size
<remotedir>	Remote directory on FTP server	string	
<ftp server> [:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<user>	FTP username.	string	
<passwd>	FTP password.	string	

execute log raw-backup tftp

Backup raw logs to remote TFTP server.

```
execute log raw-backup tftp <remotedir> <tftp server>
```

Parameter	Description	Type	Size
<remotedir>	Existing remote directory on TFTP server	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute log restore

Restore logs and report databases from local storage device.

```
execute log restore <path>
```

Parameter	Description	Type	Size
<path>	Path to restore logs and report databases.	string	

execute log roll

Roll log files now.

```
execute log roll
```

execute log shift-time

Shift log time stamps.

```
execute log shift-time <hours>
```

Parameter	Description	Type	Size
<hours>	Hours to shift log and report time stamps by.	string	

execute log upload

Upload log and archives to FortiAnalyzer/FortiCloud.

```
execute log upload
```

execute log upload-progress

Check FortiCloud upload progress.

```
execute log upload-progress
```

execute mem

mem

This topic includes the following commands:

- [execute mem add on page 3649](#)

execute mem add

Online new memory blocks.

```
execute mem add
```

execute mrouter

mrouter

This topic includes the following commands:

- [execute mrouter clear dense-routes on page 3650](#)
- [execute mrouter clear igmp-group on page 3650](#)
- [execute mrouter clear igmp-interface on page 3651](#)
- [execute mrouter clear multicast-routes on page 3651](#)
- [execute mrouter clear sparse-mode-bsr on page 3651](#)
- [execute mrouter clear sparse-routes on page 3651](#)
- [execute mrouter clear statistics on page 3652](#)

execute mrouter clear dense-routes

Clear PIM dense mode routes.

```
execute mrouter clear dense-routes <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Group IP address.	string	
<xxx.xxx.xxx.xxx>	Source IP address.	string	

execute mrouter clear igmp-group

Clear all IGMP entries for one or all groups.

```
execute mrouter clear igmp-group <xxx.xxx.xxx.xxx> <string>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Group IP address.	string	
<string>	Interface name.	string	

execute mrouter clear igmp-interface

Clear all IGMP entries from one interface.

```
execute mrouter clear igmp-interface <string>
```

Parameter	Description	Type	Size
<string>	Interface name.	string	

execute mrouter clear multicast-routes

Clear all PIM dense mode and sparse mode routes.

```
execute mrouter clear multicast-routes <xxx.xxx.xxx.xxx>|<0-511> <xxx.xxx.xxx.xxx>|<0-511> <0-511>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx> <0-511>	Group IP address or VRF ID.	string	
<xxx.xxx.xxx.xxx> <0-511>	Source IP address or VRF ID.	string	
<0-511>	VRF ID.	string	

execute mrouter clear sparse-mode-bsr

Clear PIM-SM RP sets learned from the BSR.

```
execute mrouter clear sparse-mode-bsr <0-511>
```

Parameter	Description	Type	Size
<0-511>	VRF ID.	string	

execute mrouter clear sparse-routes

Clear PIM sparse mode routes.

```
execute mrouter clear sparse-routes <xxx.xxx.xxx.xxx>|<0-511> <xxx.xxx.xxx.xxx>|<0-511> <0-511>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx> <0-511>	Group IP address or VRF ID.	string	

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx> <0-511>	Source IP address or VRF ID.	string	
<0-511>	VRF ID.	string	

execute mrouter clear statistics

Clear PIM routing statistics.

```
execute mrouter clear statistics <xxx.xxx.xxx.xxx>|<0-511> <xxx.xxx.xxx.xxx>|<0-511> <0-511>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx> <0-511>	Group IP address or VRF ID.	string	
<xxx.xxx.xxx.xxx> <0-511>	Source IP address or VRF ID.	string	
<0-511>	VRF ID.	string	

execute mrouter6

mrouter6

This topic includes the following commands:

- [execute mrouter6 clear mld on page 3652](#)
- [execute mrouter6 clear sparse-routes on page 3652](#)

execute mrouter6 clear mld

Clear PIM6 MLD group cache entries.

```
execute mrouter6 clear mld <X:X::X:X> <string>
```

Parameter	Description	Type	Size
<X:X::X:X>	Group IPv6 address.	string	
<string>	Interface name.	string	

execute mrouter6 clear sparse-routes

Clear PIM6 sparse mode routes.

```
execute mrouter6 clear sparse-routes <X:X::X:X> <X:X::X:X>
```

Parameter	Description	Type	Size
<X:X::X:X>	Group IPv6 address.	string	
<X:X::X:X>	Source IPv6 address.	string	

execute nsx

nsx

This topic includes the following commands:

- [execute nsx group delete on page 3653](#)
- [execute nsx group import on page 3653](#)
- [execute nsx group list on page 3654](#)

execute nsx group delete

Delete NSX Security Groups.

```
execute nsx group delete <vdom> <filter>
```

Parameter	Description	Type	Size
<vdom>	VDOM.	string	
<filter>	Name Filter.	string	

execute nsx group import

Import NSX Security Groups.

```
execute nsx group import <name> <vdom> <filter>
```

Parameter	Description	Type	Size
<name>	SDN connector.	string	
<vdom>	VDOM.	string	
<filter>	Name Filter.	string	

execute nsx group list

List NSX Security Groups.

```
execute nsx group list <name> <filter>
```

Parameter	Description	Type	Size
<name>	SDN connector.	string	
<filter>	Name Filter.	string	

execute oqs

OQS command to see available PQC KEM algorithms and generate test data.

```
execute oqs
```

execute ping

PING command.

```
execute ping <ip>
```

Parameter	Description	Type	Size
<ip>	IP address or domain name.	string	

execute ping6

PINGv6 command.

```
execute ping6
```

execute ping6-options

ping6-options

This topic includes the following commands:

- [execute ping6-options adaptive-ping on page 3655](#)
- [execute ping6-options data-size on page 3655](#)
- [execute ping6-options interface on page 3656](#)
- [execute ping6-options interval on page 3656](#)
- [execute ping6-options pattern on page 3656](#)
- [execute ping6-options repeat-count on page 3656](#)
- [execute ping6-options reset on page 3656](#)
- [execute ping6-options source6 on page 3657](#)
- [execute ping6-options timeout on page 3657](#)
- [execute ping6-options tos on page 3657](#)
- [execute ping6-options ttl on page 3657](#)
- [execute ping6-options use-sdwan on page 3658](#)
- [execute ping6-options validate-reply on page 3658](#)
- [execute ping6-options view-settings on page 3658](#)
- [execute ping6-options vrf on page 3658](#)

execute ping6-options adaptive-ping

Adaptive ping <enable|disable>.

```
execute ping6-options adaptive-ping <string>
```

Parameter	Description	Type	Size
<string>	<enable disable>.	string	

execute ping6-options data-size

Integer value to specify datagram size in bytes.

```
execute ping6-options data-size <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [0,65507].	string	

execute ping6-options interface

Auto | <outgoing interface>.

```
execute ping6-options interface <string>
```

Parameter	Description	Type	Size
<string>	Auto <outgoing interface>.	string	

execute ping6-options interval

Integer value to specify seconds to wait between two pings.

```
execute ping6-options interval <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [1, 2147483647]	string	

execute ping6-options pattern

Hex format of pattern, e.g. 00ffaabb.

```
execute ping6-options pattern <string>
```

Parameter	Description	Type	Size
<string>	Hex format of pattern, e.g. 00ffaabb.	string	

execute ping6-options repeat-count

Integer value to specify how many times to repeat PING.

```
execute ping6-options repeat-count <string>
```

Parameter	Description	Type	Size
<string>	Integer value [1, 2147483647]	string	

execute ping6-options reset

Reset settings.

```
execute ping6-options reset
```

execute ping6-options source6

Auto | <source interface IPv6>.

```
execute ping6-options source6 <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>
```

Parameter	Description	Type	Size
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>	<source interface IPv6> Auto	string	

execute ping6-options timeout

Integer value to specify timeout in seconds.

```
execute ping6-options timeout <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [0, 2147483647]	string	

execute ping6-options tos

IPv6 type-of-service (traffic class) value.

```
execute ping6-options tos <integer>
```

Parameter	Description	Type	Size
<integer>	Hex number [0x00, 0xFF]	string	

execute ping6-options ttl

Integer value to specify time-to-live.

```
execute ping6-options ttl <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [1,255]	string	

execute ping6-options use-sdwan

Use SD-WAN rules to get output interface <yes | no>.

```
execute ping6-options use-sdwan <string>
```

Parameter	Description	Type	Size
<string>	<yes no>.	string	

execute ping6-options validate-reply

Validate reply data <yes | no>.

```
execute ping6-options validate-reply <string>
```

Parameter	Description	Type	Size
<string>	<yes no>.	string	

execute ping6-options view-settings

View the current settings for PING option.

```
execute ping6-options view-settings
```

execute ping6-options vrf

VRF ID.

```
execute ping6-options vrf <integer>
```

Parameter	Description	Type	Size
<integer>	<0-511>	string	

execute ping-options

ping-options

This topic includes the following commands:

- [execute ping-options adaptive-ping on page 3659](#)
- [execute ping-options data-size on page 3659](#)
- [execute ping-options df-bit on page 3659](#)
- [execute ping-options interface on page 3660](#)
- [execute ping-options interval on page 3660](#)
- [execute ping-options pattern on page 3660](#)
- [execute ping-options repeat-count on page 3660](#)
- [execute ping-options reset on page 3661](#)
- [execute ping-options source on page 3661](#)
- [execute ping-options timeout on page 3661](#)
- [execute ping-options tos on page 3661](#)
- [execute ping-options ttl on page 3661](#)
- [execute ping-options use-sdwan on page 3662](#)
- [execute ping-options validate-reply on page 3662](#)
- [execute ping-options view-settings on page 3662](#)
- [execute ping-options vrf on page 3662](#)

execute ping-options adaptive-ping

Adaptive ping <enable|disable>.

```
execute ping-options adaptive-ping <string>
```

Parameter	Description	Type	Size
<string>	<enable disable>.	string	

execute ping-options data-size

Integer value to specify datagram size in bytes.

```
execute ping-options data-size <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [0,65507].	string	

execute ping-options df-bit

Set DF bit in IP header <yes | no>.

```
execute ping-options df-bit <string>
```

Parameter	Description	Type	Size
<string>	<yes no>.	string	

execute ping-options interface

Auto | <outgoing interface>.

```
execute ping-options interface <string>
```

Parameter	Description	Type	Size
<string>	Auto <outgoing interface>.	string	

execute ping-options interval

Integer value to specify seconds between two pings.

```
execute ping-options interval <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [1, 2147483647]	string	

execute ping-options pattern

Hex format of pattern, e.g. 00ffaabb.

```
execute ping-options pattern <string>
```

Parameter	Description	Type	Size
<string>	Hex format of pattern, e.g. 00ffaabb.	string	

execute ping-options repeat-count

Integer value to specify how many times to repeat PING.

```
execute ping-options repeat-count <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [1, 2147483647]	string	

execute ping-options reset

Reset settings.

```
execute ping-options reset
```

execute ping-options source

Auto | <source interface IP>.

```
execute ping-options source <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	<source interface IP> Auto	string	

execute ping-options timeout

Integer value to specify timeout in seconds.

```
execute ping-options timeout <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [0, 2147483647]	string	

execute ping-options tos

IP type-of-service option.

```
execute ping-options tos <string>
```

Parameter	Description	Type	Size
<string>	default IP TOS defaults to 0 lowcost IP TOS minimize cost lowdelay IP TOS minimize delay reliability IP TOS maximize reliability throughput IP TOS maximize throughput	string	

execute ping-options ttl

Integer value to specify time-to-live.

```
execute ping-options ttl <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [1,255].	string	

execute ping-options use-sdwan

Use SD-WAN rules to get output interface <yes | no>.

```
execute ping-options use-sdwan <string>
```

Parameter	Description	Type	Size
<string>	<yes no>.	string	

execute ping-options validate-reply

Validate reply data <yes | no>.

```
execute ping-options validate-reply <string>
```

Parameter	Description	Type	Size
<string>	<yes no>.	string	

execute ping-options view-settings

View the current settings for PING option.

```
execute ping-options view-settings
```

execute ping-options vrf

VRF ID.

```
execute ping-options vrf <integer>
```

Parameter	Description	Type	Size
<integer>	<0-511>	string	

execute policy-packet-capture

policy-packet-capture

This topic includes the following commands:

- [execute policy-packet-capture delete-all on page 3663](#)

execute policy-packet-capture delete-all

Delete all captured packet.

```
execute policy-packet-capture delete-all
```

execute reboot

Reboot now.

```
execute reboot <comment> <string>
```

Parameter	Description	Type	Size
<comment>	comment	string	
<string>	Reboot comments.	string	

execute replace-device

replace-device

This topic includes the following commands:

- [execute replace-device fortiap on page 3663](#)
- [execute replace-device fortiswitch on page 3664](#)

execute replace-device fortiap

FortiAP.

```
execute replace-device fortiap <fortiap-id> <fortiap-id>
```

Parameter	Description	Type	Size
<fortiap-id>	Old FortiAP serial number.	string	
<fortiap-id>	New FortiAP serial number.	string	

execute replace-device fortiswitch

FortiSwitch.

```
execute replace-device fortiswitch <fortiswitch-id> <fortiswitch-id>
```

Parameter	Description	Type	Size
<fortiswitch-id>	Existing FortiSwitch serial number.	string	
<fortiswitch-id>	New FortiSwitch serial number.	string	

execute report

report

This topic includes the following commands:

- [execute report flush-cache on page 3664](#)
- [execute report recreate-db on page 3664](#)
- [execute report run on page 3665](#)
- [execute report sandbox-status on page 3665](#)

execute report flush-cache

Flush report caches

```
execute report flush-cache
```

execute report recreate-db

Recreate the report database

```
execute report recreate-db
```

execute report run

generate a report, only last 7-days data available

```
execute report run [layout name] [Start Time] [End Time]
```

Parameter	Description	Type	Size
[layout name]	Layout name for a report. If not provided, the default layout will be used.	string	
[Start Time]	Start time of the report time period ("yyyy-mm-dd hh").	string	
[End Time]	End time of the report time period ("yyyy-mm-dd hh").	string	

execute report sandbox-status

sending sandbox status for testing

```
execute report sandbox-status [status] [sha256]
```

Parameter	Description	Type	Size
[status]	The status of sandbox returning result	string	
[sha256]	SHA256 checksum	string	

execute report-config

report-config

This topic includes the following commands:

- [execute report-config reset on page 3665](#)

execute report-config reset

Reset report templates to the factory default

```
execute report-config reset
```

execute restore

restore

This topic includes the following commands:

- [execute restore av ftp on page 3666](#)
- [execute restore av tftp on page 3667](#)
- [execute restore config dhcp on page 3667](#)
- [execute restore config flash on page 3667](#)
- [execute restore config ftp on page 3668](#)
- [execute restore config management-station normal on page 3668](#)
- [execute restore config management-station script on page 3668](#)
- [execute restore config management-station template on page 3668](#)
- [execute restore config tftp on page 3669](#)
- [execute restore image flash on page 3669](#)
- [execute restore image ftp on page 3669](#)
- [execute restore image management-station on page 3670](#)
- [execute restore image tftp on page 3670](#)
- [execute restore image url on page 3670](#)
- [execute restore ips ftp on page 3670](#)
- [execute restore ips tftp on page 3671](#)
- [execute restore ipsuserdefsig ftp on page 3671](#)
- [execute restore ipsuserdefsig tftp on page 3671](#)
- [execute restore manual-license ftp on page 3672](#)
- [execute restore manual-license tftp on page 3672](#)
- [execute restore other-objects ftp on page 3672](#)
- [execute restore other-objects tftp on page 3673](#)
- [execute restore script ftp on page 3673](#)
- [execute restore script lastlog on page 3673](#)
- [execute restore script scp on page 3674](#)
- [execute restore script tftp on page 3674](#)
- [execute restore vmlicense ftp on page 3674](#)
- [execute restore vmlicense tftp on page 3675](#)

execute restore av ftp

Restore antivirus database from FTP server.

```
execute restore av ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Antivirus data base file name (path) on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore av tftp

Restore antivirus database from TFTP server.

```
execute restore av tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	Antivirus database file name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute restore config dhcp

Load config file via DHCP.

```
execute restore config dhcp <port> <Enter> | <vlanid>
```

Parameter	Description	Type	Size
<port>	Port to be DHCP client.	string	
<Enter> <vlanid>	Enter or specify VLAN ID to create a VLAN on the <port>.	string	

execute restore config flash

Load config file from flash to firewall.

```
execute restore config flash <revision>
```

Parameter	Description	Type	Size
<revision>	Revision ID on the flash.	string	

execute restore config ftp

Load config file from FTP server.

```
execute restore config ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>  
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Configure file name(path) on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <passwd>	Password may be needed to restore.	string	

execute restore config management-station normal

Load normal config file from management station to firewall.

```
execute restore config management-station normal <revision>
```

Parameter	Description	Type	Size
<revision>	Revision to retrieve, or enter '0' to get latest revision list.	string	

execute restore config management-station script

Load script config file from management station to firewall.

```
execute restore config management-station script <revision>
```

Parameter	Description	Type	Size
<revision>	Revision to retrieve, or enter '0' to get latest revision list.	string	

execute restore config management-station template

Load template config file from management station to firewall.

```
execute restore config management-station template <revision>
```

Parameter	Description	Type	Size
<revision>	Revision to retrieve, or enter '0' to get latest revision list.	string	

execute restore config tftp

Load config file from TFTP server to firewall.

```
execute restore config tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Password may be needed to restore.	string	

execute restore image flash

Restore image from flash.

```
execute restore image flash <revision>
```

Parameter	Description	Type	Size
<revision>	Image revision ID on flash.	string	

execute restore image ftp

Load image from FTP server.

```
execute restore image ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Image file name(path) on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore image management-station

Restore image from Management station.

```
execute restore image management-station <string>
```

Parameter	Description	Type	Size
<string>	Image ID on the server.	string	

execute restore image tftp

Restore image from TFTP server.

```
execute restore image tftp <string> <tftp address>
```

Parameter	Description	Type	Size
<string>	Image file name on the TFTP server.	string	
<tftp address>	TFTP server IPv4, IPv6, or FQDN.	string	

execute restore image url

Restore image from URL with HTTP/HTTPS protocols. Decrypt image if needed.

```
execute restore image url <string> <Enter>|<passwd>|<force> <Enter>|<force>
```

Parameter	Description	Type	Size
<string>	URL string with protocol prefix. e.g: https://example.com/image.aes	string	
<Enter> <passwd> <force>	Image encryption passphrase.	string	
<Enter> <force>	Bypass signature and validity checking.	string	

execute restore ips ftp

Restore IPS database from FTP server.

```
execute restore ips ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	IPS data base file name (path) on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore ips tftp

Restore IPS database from TFTP server.

```
execute restore ips tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	IPS database file name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute restore ipsuserdefsig ftp

Restore user-defined ips signatures file from FTP server.

```
execute restore ipsuserdefsig ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	User-defined ips signatures file on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore ipsuserdefsig tftp

Restore user defined IPS signatures file from TFTP server.

```
execute restore ipsuserdefsig tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute restore manual-license ftp

Restore Manual License from FTP server.

```
execute restore manual-license ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	FortiGuard Contract License file name on the FTP server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore manual-license tftp

Restore Manual License from TFTP server.

```
execute restore manual-license tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	FortiGuard Contract License file name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute restore other-objects ftp

Restore other FortiGuard packages from FTP server. Current support: Internet-service Database Apps/Maps, URL Allow List, DLP signatures and CASB signatures.

```
execute restore other-objects ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Other FortiGuard package file name on the FTP server.	string	

Parameter	Description	Type	Size
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore other-objects tftp

Restore other FortiGuard packages from TFTP server. Current support: Internet-service Database Apps/Maps, URL Allow List, DLP signatures and CASB signatures.

```
execute restore other-objects tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	Other FortiGuard package file name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute restore script ftp

Load script from FTP server.

```
execute restore script ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Script on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore script lastlog

Read the result of last restored script.

```
execute restore script lastlog
```

execute restore script scp

Load script from SCP server to firewall.

```
execute restore script scp <string> <ip> <user> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	File name on the SCP server.	string	
<ip>	IP address.	string	
<user>	User name.	string	
<Enter> <passwd>	Enter or input password.	string	

execute restore script tftp

Load script from TFTP server to firewall.

```
execute restore script tftp <string> <tftp server> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter> <passwd>	Password may be needed to restore.	string	

execute restore vmlicense ftp

Restore VM license from FTP server.

```
execute restore vmlicense ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	VM license file name(path) on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute restore vmlicense tftp

restore VM license from tftp server

```
execute restore vmlicense tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	VM license file name on the tftp server	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute revision

revision

This topic includes the following commands:

- [execute revision delete config on page 3675](#)
- [execute revision delete image on page 3675](#)
- [execute revision list config on page 3676](#)
- [execute revision list image on page 3676](#)

execute revision delete config

Delete config revision on local disk.

```
execute revision delete config <revision> <rev_id>
```

Parameter	Description	Type	Size
<revision>	Revision ID(s) on local disk. Eg. 1 3-6 8	string	
<rev_id>	place holder for multiple Revision IDs, at most 10 a time.	string	

execute revision delete image

Delete image revision on local disk.

```
execute revision delete image <revision> <rev_id>
```

Parameter	Description	Type	Size
<revision>	Revision ID(s) on local disk. Eg. 1 3-6 8	string	
<rev_id>	place holder for multiple Revision IDs, at most 10 a time.	string	

execute revision list config

List config revision on local disk.

```
execute revision list config
```

execute revision list image

List image revision on local disk.

```
execute revision list image
```

execute router

router

This topic includes the following commands:

- [execute router clear bfd session on page 3676](#)
- [execute router clear bgp all on page 3677](#)
- [execute router clear bgp as on page 3677](#)
- [execute router clear bgp dampening on page 3677](#)
- [execute router clear bgp external on page 3677](#)
- [execute router clear bgp flap-statistics on page 3677](#)
- [execute router clear bgp group on page 3678](#)
- [execute router clear bgp ip on page 3678](#)
- [execute router clear bgp ipv6 on page 3678](#)
- [execute router clear ospf process on page 3678](#)
- [execute router clear ospf6 process on page 3678](#)
- [execute router restart on page 3678](#)

execute router clear bfd session

Clear BFD session.

```
execute router clear bfd session <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx> <string>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP address.	string	
<xxx.xxx.xxx.xxx>	Destination IP address.	string	
<string>	Interface name.	string	

execute router clear bgp all

Clear all BGP peers.

```
execute router clear bgp all
```

execute router clear bgp as

Clear BGP peer by AS number.

```
execute router clear bgp as
```

execute router clear bgp dampening

Clear route flap dampening information.

```
execute router clear bgp dampening
```

execute router clear bgp external

Clear all external peers.

```
execute router clear bgp external
```

execute router clear bgp flap-statistics

Clear route flap statistics.

```
execute router clear bgp flap-statistics
```

execute router clear bgp group

Clear BGP peer by group.

```
execute router clear bgp group
```

execute router clear bgp ip

Clear BGP peer by IP address.

```
execute router clear bgp ip
```

execute router clear bgp ipv6

Clear BGP peer by IPv6 address.

```
execute router clear bgp ipv6
```

execute router clear ospf process

Clear and restart OSPF router.

```
execute router clear ospf process
```

execute router clear ospf6 process

Clear and restart OSPF6 router.

```
execute router clear ospf6 process
```

execute router restart

Restart routing software.

```
execute router restart
```

execute sdn

sdn

This topic includes the following commands:

- [execute sdn tag add nsx on page 3679](#)
- [execute sdn tag remove nsx on page 3679](#)

execute sdn tag add nsx

NSX tag VM.

```
execute sdn tag add nsx <name> <ip-addr> <tagname> <0/1>
```

Parameter	Description	Type	Size
<name>	NSX SDN connector name.	string	
<ip-addr>	VM IP address.	string	
<tagname>	Tag name.	string	
<0/1>	Disable/enable use of Spoofguard.	string	

execute sdn tag remove nsx

NSX remove VM from tag.

```
execute sdn tag remove nsx <name> <ip-addr> <tagname> <0/1>
```

Parameter	Description	Type	Size
<name>	NSX SDN connector name.	string	
<ip-addr>	VM IP address.	string	
<tagname>	Tag name.	string	
<0/1>	Disable/enable use of Spoofguard.	string	

execute sdn-vpn

sdn-vpn

This topic includes the following commands:

- [execute sdn-vpn discover aws-tgw on page 3680](#)
- [execute sdn-vpn discover aws-vgw on page 3680](#)

execute sdn-vpn discover aws-tgw

Discover AWS virtual private gateways.

```
execute sdn-vpn discover aws-tgw <name>
```

Parameter	Description	Type	Size
<name>	SDN Connector name.	string	

execute sdn-vpn discover aws-vgw

Discover AWS virtual private gateways.

```
execute sdn-vpn discover aws-vgw <name>
```

Parameter	Description	Type	Size
<name>	SDN Connector name.	string	

execute send-fds-statistics

Send FortiGuard statistics.

```
execute send-fds-statistics
```

execute send-fmg-list

Send connected FortiManager list to FortiGuard.

```
execute send-fmg-list
```

execute set

set

This topic includes the following commands:

- [execute set system session filter clear all on page 3681](#)
- [execute set system session filter clear dport on page 3682](#)
- [execute set system session filter clear dst on page 3682](#)
- [execute set system session filter clear duration on page 3682](#)
- [execute set system session filter clear expire on page 3682](#)
- [execute set system session filter clear policy on page 3682](#)
- [execute set system session filter clear proto on page 3682](#)
- [execute set system session filter clear sport on page 3683](#)
- [execute set system session filter clear src on page 3683](#)
- [execute set system session filter clear vd on page 3683](#)
- [execute set system session filter dport on page 3683](#)
- [execute set system session filter dst on page 3683](#)
- [execute set system session filter duration on page 3684](#)
- [execute set system session filter expire on page 3684](#)
- [execute set system session filter list on page 3684](#)
- [execute set system session filter negate dport on page 3684](#)
- [execute set system session filter negate dst on page 3684](#)
- [execute set system session filter negate duration on page 3685](#)
- [execute set system session filter negate expire on page 3685](#)
- [execute set system session filter negate policy on page 3685](#)
- [execute set system session filter negate proto on page 3685](#)
- [execute set system session filter negate sport on page 3685](#)
- [execute set system session filter negate src on page 3685](#)
- [execute set system session filter negate vd on page 3686](#)
- [execute set system session filter policy on page 3686](#)
- [execute set system session filter proto on page 3686](#)
- [execute set system session filter sport on page 3686](#)
- [execute set system session filter src on page 3687](#)
- [execute set system session filter vd on page 3687](#)

execute set system session filter clear all

Clear session filter.

```
execute set system session filter clear all
```

execute set system session filter clear dport

Clear destination port.

```
execute set system session filter clear dport
```

execute set system session filter clear dst

Clear destination IP.

```
execute set system session filter clear dst
```

execute set system session filter clear duration

Clear duration.

```
execute set system session filter clear duration
```

execute set system session filter clear expire

Clear expire.

```
execute set system session filter clear expire
```

execute set system session filter clear policy

Clear policy ID.

```
execute set system session filter clear policy
```

execute set system session filter clear proto

Clear protocol.

```
execute set system session filter clear proto
```

execute set system session filter clear sport

Clear source port.

```
execute set system session filter clear sport
```

execute set system session filter clear src

Clear source IP.

```
execute set system session filter clear src
```

execute set system session filter clear vd

Clear virtual domain.

```
execute set system session filter clear vd
```

execute set system session filter dport

Destination port.

```
execute set system session filter dport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

execute set system session filter dst

Destination IP address.

```
execute set system session filter dst <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Destination IP (from).	string	
<xxx.xxx.xxx.xxx>	Destination IP (to).	string	

execute set system session filter duration

duration

```
execute set system session filter duration <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Duration (from).	string	
<xxx>	Duration (to).	string	

execute set system session filter expire

expire

```
execute set system session filter expire <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Expire (from).	string	
<xxx>	Expire (to).	string	

execute set system session filter list

List system session filter.

```
execute set system session filter list
```

execute set system session filter negate dport

Inverse destination port.

```
execute set system session filter negate dport
```

execute set system session filter negate dst

Inverse destination IP.

```
execute set system session filter negate dst
```

execute set system session filter negate duration

Inverse duration.

```
execute set system session filter negate duration
```

execute set system session filter negate expire

Inverse expire.

```
execute set system session filter negate expire
```

execute set system session filter negate policy

Inverse policy ID.

```
execute set system session filter negate policy
```

execute set system session filter negate proto

Inverse protocol.

```
execute set system session filter negate proto
```

execute set system session filter negate sport

Inverse source port.

```
execute set system session filter negate sport
```

execute set system session filter negate src

Inverse source IP.

```
execute set system session filter negate src
```

execute set system session filter negate vd

Inverse virtual domain.

```
execute set system session filter negate vd
```

execute set system session filter policy

Policy ID.

```
execute set system session filter policy <xxx> <xxx>
```

Parameter	Description	Type	Size
<xxx>	Policy ID (from).	string	
<xxx>	Policy ID (to).	string	

execute set system session filter proto

Protocol number.

```
execute set system session filter proto <xx> <xx>
```

Parameter	Description	Type	Size
<xx>	<0-255> (from).	string	
<xx>	<0-255> (to).	string	

execute set system session filter sport

Source port.

```
execute set system session filter sport <xxxx> <xxxx>
```

Parameter	Description	Type	Size
<xxxx>	<0-65535> (from).	string	
<xxxx>	<0-65535> (to).	string	

execute set system session filter src

Source IP address.

```
execute set system session filter src <xxx.xxx.xxx.xxx> <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	Source IP (from).	string	
<xxx.xxx.xxx.xxx>	Source IP (to).	string	

execute set system session filter vd

Index of virtual domain. -1 matches all.

```
execute set system session filter vd <xxx>
```

Parameter	Description	Type	Size
<xxx>	Index of virtual domain. -1 matches all.	string	

execute shutdown

Shutdown now.

```
execute shutdown <comment> <string>
```

Parameter	Description	Type	Size
<comment>	comment	string	
<string>	Shutdown comments.	string	

execute speed-test

A bandwidth measuring tool.

```
execute speed-test <interface> <server> <mode>
```

Parameter	Description	Type	Size
<interface>	auto <outgoing interface name>.	string	
<server>	server name.	string	
<mode>	optional, Auto(default), TCP or UDP.	string	

execute speed-test-custom

Run speed test to a custom server.

```
execute speed-test-custom <interface> <server>
```

Parameter	Description	Type	Size
<interface>	Speed test interface.	string	
<server>	Server address.	string	

execute speed-test-ipsec

Measure the bandwidth of the underlay of a IPSec tunnel.

```
execute speed-test-ipsec <interface> <tunnel_name>
```

Parameter	Description	Type	Size
<interface>	ipsec phase1 interface.	string	
<tunnel_name>	all <specific tunnel name>.	string	

execute speed-test-options

speed-test-options

This topic includes the following commands:

- [execute speed-test-options blksize on page 3689](#)
- [execute speed-test-options burst on page 3689](#)
- [execute speed-test-options ctrl-port on page 3689](#)

- [execute speed-test-options duration on page 3690](#)
- [execute speed-test-options get-token on page 3690](#)
- [execute speed-test-options max-down on page 3690](#)
- [execute speed-test-options max-up on page 3690](#)
- [execute speed-test-options protocol on page 3691](#)
- [execute speed-test-options reset on page 3691](#)
- [execute speed-test-options reset-token on page 3691](#)
- [execute speed-test-options server-port on page 3691](#)
- [execute speed-test-options set-shaper on page 3691](#)
- [execute speed-test-options show on page 3692](#)
- [execute speed-test-options tos on page 3692](#)

execute speed-test-options blksize

Set blksize.

```
execute speed-test-options blksize <blksize>
```

Parameter	Description	Type	Size
<blksize>	0-2147483647	string	

execute speed-test-options burst

Set number of burst packet in UDP test.

```
execute speed-test-options burst <burst>
```

Parameter	Description	Type	Size
<burst>	0-2147483647	string	

execute speed-test-options ctrl-port

Set test controller port.

```
execute speed-test-options ctrl-port <port>
```

Parameter	Description	Type	Size
<port>	0-65535	string	

execute speed-test-options duration

Set test duration in seconds.

```
execute speed-test-options duration <duration>
```

Parameter	Description	Type	Size
<duration>	5-2147483647	string	

execute speed-test-options get-token

Obtain test token via ipsec tunnel.

```
execute speed-test-options get-token <ipsec-p1-name> <tunnel>
```

Parameter	Description	Type	Size
<ipsec-p1-name>	IPSec phase1 interface.	string	
<tunnel>	tunnel name.	string	

execute speed-test-options max-down

Set maximum downloading rate (kbps).

```
execute speed-test-options max-down <max-down>
```

Parameter	Description	Type	Size
<max-down>	0-2147483647	string	

execute speed-test-options max-up

Set maximum uploading rate (kbps).

```
execute speed-test-options max-up <max-up>
```

Parameter	Description	Type	Size
<max-up>	0-2147483647	string	

execute speed-test-options protocol

Set protocol.

```
execute speed-test-options protocol <protocol>
```

Parameter	Description	Type	Size
<protocol>	TCP or UDP	string	

execute speed-test-options reset

Reset options to default.

```
execute speed-test-options reset
```

execute speed-test-options reset-token

Reset saved token.

```
execute speed-test-options reset-token
```

execute speed-test-options server-port

Set test server port.

```
execute speed-test-options server-port <port>
```

Parameter	Description	Type	Size
<port>	0-65535	string	

execute speed-test-options set-shaper

Notify server to set egress shaper based on test results.

```
execute speed-test-options set-shaper <enable | disable>
```

Parameter	Description	Type	Size
<enable disable>	<enable disable>	string	

execute speed-test-options show

Show options.

```
execute speed-test-options show
```

execute speed-test-options tos

Set TOS.

```
execute speed-test-options tos <tos>
```

Parameter	Description	Type	Size
<tos>	TOS	string	

execute speed-test-server

speed-test-server

This topic includes the following commands:

- [execute speed-test-server download on page 3692](#)
- [execute speed-test-server list on page 3692](#)

execute speed-test-server download

Download server list from FortiGate Cloud.

```
execute speed-test-server download
```

execute speed-test-server list

List all available servers.

```
execute speed-test-server list
```

execute ssh

Simple SSH client.

```
execute ssh <user@host> <port>
```

Parameter	Description	Type	Size
<user@host>	User-name @ IP address or domain name.	string	
<port>	port.	string	

execute ssh6

Simple IPv6 SSH client.

```
execute ssh6 <user@host> <port>
```

Parameter	Description	Type	Size
<user@host>	User-name @ IPv6 address or domain name.	string	
<port>	port.	string	

execute ssh6-options

ssh6-options

This topic includes the following commands:

- [execute ssh6-options interface on page 3693](#)
- [execute ssh6-options reset on page 3694](#)
- [execute ssh6-options source6 on page 3694](#)
- [execute ssh6-options view-settings on page 3694](#)

execute ssh6-options interface

Auto | <outgoing interface>.

```
execute ssh6-options interface <string>
```

Parameter	Description	Type	Size
<string>	Auto <outgoing interface>.	string	

execute ssh6-options reset

Reset settings.

```
execute ssh6-options reset
```

execute ssh6-options source6

Auto | <source interface IPv6>.

```
execute ssh6-options source6 <xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>
```

Parameter	Description	Type	Size
<xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx:xxxx>	<source interface IPv6> Auto	string	

execute ssh6-options view-settings

View current settings for SSH (IPv6) option.

```
execute ssh6-options view-settings
```

execute ssh-options

ssh-options

This topic includes the following commands:

- [execute ssh-options interface on page 3694](#)
- [execute ssh-options reset on page 3695](#)
- [execute ssh-options source on page 3695](#)
- [execute ssh-options view-settings on page 3695](#)

execute ssh-options interface

Auto | <outgoing interface>.

```
execute ssh-options interface <string>
```

Parameter	Description	Type	Size
<string>	Auto <outgoing interface>.	string	

execute ssh-options reset

Reset settings.

```
execute ssh-options reset
```

execute ssh-options source

Auto | <source interface IP>.

```
execute ssh-options source <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	<source interface IP> Auto	string	

execute ssh-options view-settings

View the current settings for SSH option.

```
execute ssh-options view-settings
```

execute ssh-regen-keys

Regenerate SSH server keys.

```
execute ssh-regen-keys
```

execute switch-controller

switch-controller

This topic includes the following commands:

- [execute switch-controller custom-command on page 3697](#)
- [execute switch-controller diagnose-connection on page 3697](#)
- [execute switch-controller diagnose-connection-v6 on page 3698](#)
- [execute switch-controller flapguard reset on page 3698](#)
- [execute switch-controller get-conn-status on page 3698](#)
- [execute switch-controller get-physical-conn dot on page 3698](#)
- [execute switch-controller get-physical-conn standard on page 3699](#)
- [execute switch-controller get-sync-status all on page 3699](#)
- [execute switch-controller get-sync-status group on page 3699](#)
- [execute switch-controller get-sync-status serial on page 3699](#)
- [execute switch-controller get-sync-status switch-id on page 3700](#)
- [execute switch-controller get-upgrade-status on page 3700](#)
- [execute switch-controller ssh on page 3700](#)
- [execute switch-controller switch-action 802-1X clear-auth-mac on page 3700](#)
- [execute switch-controller switch-action 802-1X clear-auth-port on page 3701](#)
- [execute switch-controller switch-action bpdu-guard reset on page 3701](#)
- [execute switch-controller switch-action cable-diag on page 3701](#)
- [execute switch-controller switch-action factory-reset on page 3701](#)
- [execute switch-controller switch-action flow-tracking delete-flows-all on page 3702](#)
- [execute switch-controller switch-action flow-tracking expire-flows-all on page 3702](#)
- [execute switch-controller switch-action igmp-snoop clear-learned on page 3702](#)
- [execute switch-controller switch-action loop-guard reset on page 3702](#)
- [execute switch-controller switch-action mac-device-reset dynamic on page 3703](#)
- [execute switch-controller switch-action mac-device-reset nac on page 3703](#)
- [execute switch-controller switch-action mac-limit-violation reset all on page 3703](#)
- [execute switch-controller switch-action mac-limit-violation reset interface on page 3704](#)
- [execute switch-controller switch-action mac-limit-violation reset vlan on page 3704](#)
- [execute switch-controller switch-action mclag stats clear icl on page 3704](#)
- [execute switch-controller switch-action mclag stats clear mlag on page 3704](#)
- [execute switch-controller switch-action physical-ports led-flash switch-group on page 3705](#)
- [execute switch-controller switch-action physical-ports led-flash switch-id on page 3705](#)
- [execute switch-controller switch-action physical-ports led-flash tier1 on page 3705](#)
- [execute switch-controller switch-action physical-ports led-flash tier2plus on page 3706](#)
- [execute switch-controller switch-action poe reset on page 3706](#)
- [execute switch-controller switch-action restart delay all on page 3706](#)
- [execute switch-controller switch-action restart delay switch-group on page 3706](#)
- [execute switch-controller switch-action restart delay switch-id on page 3707](#)
- [execute switch-controller switch-action restart swtp all on page 3707](#)
- [execute switch-controller switch-action restart swtp switch-group on page 3707](#)
- [execute switch-controller switch-action restart swtp switch-id on page 3707](#)
- [execute switch-controller switch-action set-standalone on page 3708](#)

- [execute switch-controller switch-action sticky-mac delete-unsaved all on page 3708](#)
- [execute switch-controller switch-action sticky-mac delete-unsaved interface on page 3708](#)
- [execute switch-controller switch-action sticky-mac save all on page 3709](#)
- [execute switch-controller switch-action sticky-mac save interface on page 3709](#)
- [execute switch-controller switch-software cancel all on page 3709](#)
- [execute switch-controller switch-software cancel switch-group on page 3709](#)
- [execute switch-controller switch-software cancel switch-id on page 3710](#)
- [execute switch-controller switch-software delete on page 3710](#)
- [execute switch-controller switch-software list-available on page 3710](#)
- [execute switch-controller switch-software stage all on page 3710](#)
- [execute switch-controller switch-software stage switch-group on page 3710](#)
- [execute switch-controller switch-software stage switch-id on page 3711](#)
- [execute switch-controller switch-software upgrade on page 3711](#)
- [execute switch-controller switch-software upload ftp on page 3711](#)
- [execute switch-controller switch-software upload tftp on page 3712](#)
- [execute switch-controller virtual-port-pool request on page 3712](#)
- [execute switch-controller virtual-port-pool return on page 3712](#)
- [execute switch-controller virtual-port-pool show on page 3713](#)
- [execute switch-controller virtual-port-pool show-by-pool on page 3713](#)
- [execute switch-controller virtual-port-pool show-by-property on page 3713](#)
- [execute switch-controller virtual-port-pool show-by-tag on page 3713](#)

execute switch-controller custom-command

Push a FortiSwitch custom command to a FortiSwitch device.

```
execute switch-controller custom-command <cmd-name> <target-switch>
```

Parameter	Description	Type	Size
<cmd-name>	Names of commands to be pushed to this FortiSwitch device, as configured under config switch-controller custom-command.	string	
<target-switch>	FortiSwitch device to push the custom command to.	string	

execute switch-controller diagnose-connection

Get FortiSwitch connection diagnostics.

```
execute switch-controller diagnose-connection <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller diagnose-connection-v6

Get FortiSwitch IPv6 connection diagnostics.

```
execute switch-controller diagnose-connection-v6 <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller flapguard reset

Reset flapguard on port.

```
execute switch-controller flapguard reset <switch-name> <port>
```

Parameter	Description	Type	Size
<switch-name>	Name.	string	
<port>	FortiSwitch port.	string	

execute switch-controller get-conn-status

Get FortiSwitch connection status.

```
execute switch-controller get-conn-status <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller get-physical-conn dot

Get FortiLink connectivity graph in dot output format.

```
execute switch-controller get-physical-conn dot <fortilink-name>
```

Parameter	Description	Type	Size
<fortilink-name>	FortiLink name.	string	

execute switch-controller get-physical-conn standard

Get FortiLink connectivity graph in standard output format.

```
execute switch-controller get-physical-conn standard <fortilink-name>
```

Parameter	Description	Type	Size
<fortilink-name>	FortiLink name.	string	

execute switch-controller get-sync-status all

Get FortiSwitch sync status.

```
execute switch-controller get-sync-status all
```

execute switch-controller get-sync-status group

Get FortiSwitch sync status by group.

```
execute switch-controller get-sync-status group <group>
```

Parameter	Description	Type	Size
<group>	Group Name.	string	

execute switch-controller get-sync-status serial

Get FortiSwitch sync status by switch serial number.

```
execute switch-controller get-sync-status serial <switch-serial-number>
```

Parameter	Description	Type	Size
<switch-serial-number>	Serial Number.	string	

execute switch-controller get-sync-status switch-id

Get FortiSwitch sync status by switch.

```
execute switch-controller get-sync-status switch-id <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller get-upgrade-status

Get FortiSwitch upgrade status.

```
execute switch-controller get-upgrade-status
```

execute switch-controller ssh

SSH to FortiSwitch.

```
execute switch-controller ssh <user> <switch>
```

Parameter	Description	Type	Size
<user>	user.	string	
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action 802-1X clear-auth-mac

Clear FortiSwitch MAC entry.

```
execute switch-controller switch-action 802-1X clear-auth-mac <switch> <mac>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<mac>	MAC address.	string	

execute switch-controller switch-action 802-1X clear-auth-port

Clear FortiSwitch MAC entries on a single interface.

```
execute switch-controller switch-action 802-1X clear-auth-port <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch port.	string	

execute switch-controller switch-action bpdu-guard reset

Reset BPDU guard on switch-interface.

```
execute switch-controller switch-action bpdu-guard reset <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch port.	string	

execute switch-controller switch-action cable-diag

Run a TDR diagnostic test on the specified FortiSwitch port.

```
execute switch-controller switch-action cable-diag <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch port.	string	

execute switch-controller switch-action factory-reset

Set FortiSwitch to factory default settings.

```
execute switch-controller switch-action factory-reset <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action flow-tracking delete-flows-all

Delete all flows in the FortiSwitch.

```
execute switch-controller switch-action flow-tracking delete-flows-all <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action flow-tracking expire-flows-all

Expire all flows in the FortiSwitch.

```
execute switch-controller switch-action flow-tracking expire-flows-all <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action igmp-snoop clear-learned

Clear FortiSwitch IGMP snooping multicast Groups and Queriers.

```
execute switch-controller switch-action igmp-snoop clear-learned <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action loop-guard reset

Reset loop-guard on switch-interface.

```
execute switch-controller switch-action loop-guard reset <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch port.	string	

execute switch-controller switch-action mac-device-reset dynamic

Remove specific or all DPP devices.

```
execute switch-controller switch-action mac-device-reset dynamic <mac>
```

Parameter	Description	Type	Size
<mac>	MAC address of the DPP device.	string	

execute switch-controller switch-action mac-device-reset nac

Remove NAC devices and return MAC to onboarding VLAN.

```
execute switch-controller switch-action mac-device-reset nac <mac>
```

Parameter	Description	Type	Size
<mac>	MAC address of the NAC device.	string	

execute switch-controller switch-action mac-limit-violation reset all

Reset all MAC learning limit violations in FortiSwitch.

```
execute switch-controller switch-action mac-limit-violation reset all <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action mac-limit-violation reset interface

Reset MAC learning limit violations on a FortiSwitch interface.

```
execute switch-controller switch-action mac-limit-violation reset interface <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch ports.	string	

execute switch-controller switch-action mac-limit-violation reset vlan

Reset MAC learning limit violations on a FortiSwitch VLAN.

```
execute switch-controller switch-action mac-limit-violation reset vlan <switch> <vlan-id>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<vlan-id>	FortiSwitch VLAN ID.	string	

execute switch-controller switch-action mclag stats clear icl

Clears MCLAG inter-chassis-link statistics.

```
execute switch-controller switch-action mclag stats clear icl <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action mclag stats clear mlag

Clears MCLAGs statistics for MCLAG enabled trunk.

```
execute switch-controller switch-action mclag stats clear mlag <switch> <mclag-trunk-name>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<mclag-trunk-name>	MCLAG's trunk name.	string	

execute switch-controller switch-action physical-ports led-flash switch-group

Enable LED flash mode on FortiSwitches in the switch-group.

```
execute switch-controller switch-action physical-ports led-flash switch-group <switch-group ID> <time>
```

Parameter	Description	Type	Size
<switch-group ID>	FortiSwitch group ID.	string	
<time>	FortiSwitch LED flash mode in minutes < disable 5 15 30 60 >.	string	

execute switch-controller switch-action physical-ports led-flash switch-id

Enable FortiSwitch LED flash mode by switch name.

```
execute switch-controller switch-action physical-ports led-flash switch-id <switch> <time>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<time>	FortiSwitch LED flash mode in minutes < disable 5 15 30 60 >.	string	

execute switch-controller switch-action physical-ports led-flash tier1

Enable LED flash mode on all tier 1 FortiSwitch units.

```
execute switch-controller switch-action physical-ports led-flash tier1 <time>
```

Parameter	Description	Type	Size
<time>	FortiSwitch LED flash mode in minutes < disable 5 15 30 60 >.	string	

execute switch-controller switch-action physical-ports led-flash tier2plus

Enable LED flash mode on all tier 2 and lower FortiSwitch units.

```
execute switch-controller switch-action physical-ports led-flash tier2plus <time>
```

Parameter	Description	Type	Size
<time>	FortiSwitch LED flash mode in minutes < disable 5 15 30 60 >.	string	

execute switch-controller switch-action poe reset

Reset PoE port on FortiSwitch.

```
execute switch-controller switch-action poe reset <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch port.	string	

execute switch-controller switch-action restart delay all

Restart delay all FortiSwitch devices.

```
execute switch-controller switch-action restart delay all
```

execute switch-controller switch-action restart delay switch-group

Restart delay FortiSwitch devices belonging to switch-group.

```
execute switch-controller switch-action restart delay switch-group <switch-group ID>
```

Parameter	Description	Type	Size
<switch-group ID>	Switch group ID.	string	

execute switch-controller switch-action restart delay switch-id

Restart delay FortiSwitch device identified by switch name.

```
execute switch-controller switch-action restart delay switch-id <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action restart swtp all

Restart all FortiSwitch devices.

```
execute switch-controller switch-action restart swtp all
```

execute switch-controller switch-action restart swtp switch-group

Restart FortiSwitch devices belonging to switch-group.

```
execute switch-controller switch-action restart swtp switch-group <switch-group ID>
```

Parameter	Description	Type	Size
<switch-group ID>	Switch group ID.	string	

execute switch-controller switch-action restart swtp switch-id

Restart FortiSwitch device identified by switch name.

```
execute switch-controller switch-action restart swtp switch-id <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action set-standalone

Set FortiSwitch to local/non-FortiLink mode.

```
execute switch-controller switch-action set-standalone <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action sticky-mac delete-unsaved all

Delete all unsync Sticky MAC entries on FSW.

```
execute switch-controller switch-action sticky-mac delete-unsaved all <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action sticky-mac delete-unsaved interface

Delete specific interface's unsync Sticky MAC entries on FSW.

```
execute switch-controller switch-action sticky-mac delete-unsaved interface <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	Delete unsaved Sticky MAC entries for the specified interface.	string	

execute switch-controller switch-action sticky-mac save all

Sync and save all Sticky MAC entries to config file (loads entries on boot).

```
execute switch-controller switch-action sticky-mac save all <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-action sticky-mac save interface

Sync and save specific interface Sticky MAC entries to config file (loads entries on boot).

```
execute switch-controller switch-action sticky-mac save interface <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	Save Sticky MAC entries for the specified interface.	string	

execute switch-controller switch-software cancel all

Cancel staged image to all FortiSwitch devices.

```
execute switch-controller switch-software cancel all
```

execute switch-controller switch-software cancel switch-group

Cancel staged image to FortiSwitch devices belonging to switch-group.

```
execute switch-controller switch-software cancel switch-group <switch-group ID>
```

Parameter	Description	Type	Size
<switch-group ID>	Switch group ID.	string	

execute switch-controller switch-software cancel switch-id

Cancel staged image to FortiSwitch device identified by switch name.

```
execute switch-controller switch-software cancel switch-id <switch>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	

execute switch-controller switch-software delete

Delete FortiSwitch image.

```
execute switch-controller switch-software delete <all>|<image-name>
```

Parameter	Description	Type	Size
<all> <image-name>	Delete all images or specific image.	string	

execute switch-controller switch-software list-available

List FortiSwitch image(s) available on FortiGate.

```
execute switch-controller switch-software list-available
```

execute switch-controller switch-software stage all

Stage image to all FortiSwitch devices.

```
execute switch-controller switch-software stage all <filename>
```

Parameter	Description	Type	Size
<filename>	FortiSwitch image filename.	string	

execute switch-controller switch-software stage switch-group

Stage image to FortiSwitch devices belonging to switch-group.

```
execute switch-controller switch-software stage switch-group <switch-group ID> <filename>
```

Parameter	Description	Type	Size
<switch-group ID>	Switch group ID.	string	
<filename>	FortiSwitch image filename.	string	

execute switch-controller switch-software stage switch-id

Stage image to FortiSwitch device identified by switch name.

```
execute switch-controller switch-software stage switch-id <switch> <filename>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<filename>	FortiSwitch image filename.	string	

execute switch-controller switch-software upgrade

Upgrade FortiSwitch image to a managed FortiSwitch device.

```
execute switch-controller switch-software upgrade <switch> <filename>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<filename>	FortiSwitch image filename.	string	

execute switch-controller switch-software upload ftp

Upload a FortiSwitch image from FTP server.

```
execute switch-controller switch-software upload ftp <string> <ftp server>[:ftp port]  
<Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	FortiSwitch image name on the FTP server.	string	

Parameter	Description	Type	Size
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute switch-controller switch-software upload tftp

Upload a FortiSwitch image from TFTP server.

```
execute switch-controller switch-software upload tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	FortiSwitch image name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute switch-controller virtual-port-pool request

Request virtual port from pool.

```
execute switch-controller virtual-port-pool request <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch port.	string	

execute switch-controller virtual-port-pool return

Return virtual port to pool.

```
execute switch-controller virtual-port-pool return <switch> <port>
```

Parameter	Description	Type	Size
<switch>	FortiSwitch device ID.	string	
<port>	FortiSwitch port.	string	

execute switch-controller virtual-port-pool show

Show details of virtual ports in pool.

```
execute switch-controller virtual-port-pool show
```

execute switch-controller virtual-port-pool show-by-pool

Show details of virtual ports in pool by pool name.

```
execute switch-controller virtual-port-pool show-by-pool <pool>
```

Parameter	Description	Type	Size
<pool>	Pool Name.	string	

execute switch-controller virtual-port-pool show-by-property

Show details of virtual ports in pool by property name.

```
execute switch-controller virtual-port-pool show-by-property <property>
```

Parameter	Description	Type	Size
<property>	Property Name.	string	

execute switch-controller virtual-port-pool show-by-tag

Show details of virtual ports in pool by tag name.

```
execute switch-controller virtual-port-pool show-by-tag <tag>
```

Parameter	Description	Type	Size
<tag>	Tag Name.	string	

execute sync-IPSec

Sync all IPSec from peers.

```
execute sync-IPSec
```

execute sync-session

Sync all sessions from peers.

```
execute sync-session
```

execute system

system

This topic includes the following commands:

- [execute system custom-language import on page 3714](#)
- [execute system fortisandbox test-connectivity on page 3714](#)

execute system custom-language import

Import a custom language from the TFTP server.

```
execute system custom-language import <string> <string> <ip>
```

Parameter	Description	Type	Size
<string>	The language name.	string	
<string>	The file name on the TFTP server.	string	
<ip>	IP address of the TFTP server.	string	

execute system fortisandbox test-connectivity

Query FortiSandbox connection status.

```
execute system fortisandbox test-connectivity
```

execute tac

tac

This topic includes the following commands:

- [execute tac report on page 3715](#)

execute tac report

Debug report.

```
execute tac report
```

execute telnet

Simple telnet client.

```
execute telnet <dest> <port>
```

Parameter	Description	Type	Size
<dest>	IP address or domain name.	string	
<port>	port	string	

execute telnet-options

telnet-options

This topic includes the following commands:

- [execute telnet-options interface on page 3715](#)
- [execute telnet-options reset on page 3716](#)
- [execute telnet-options source on page 3716](#)
- [execute telnet-options view-settings on page 3716](#)

execute telnet-options interface

Auto | <outgoing interface>.

```
execute telnet-options interface <string>
```

Parameter	Description	Type	Size
<string>	Auto <outgoing interface>.	string	

execute telnet-options reset

Reset settings.

```
execute telnet-options reset
```

execute telnet-options source

Auto | <source interface IP>.

```
execute telnet-options source <xxx.xxx.xxx.xxx>
```

Parameter	Description	Type	Size
<xxx.xxx.xxx.xxx>	<source interface IP> Auto	string	

execute telnet-options view-settings

View the current settings for TELNET option.

```
execute telnet-options view-settings
```

execute test

test

This topic includes the following commands:

- [execute test tftp-analytics-report on page 3716](#)

execute test tftp-analytics-report

tftp analytics report.

```
execute test tftp-analytics-report <ip> <dir> <checksum>
```

Parameter	Description	Type	Size
<ip>	IP address of the TFTP server.	string	
<dir>	Directory for the analytics report.	string	
<checksum>	Checksum for the analytics report.	string	

execute time

System time.

```
execute time <hh:mm:ss>
```

Parameter	Description	Type	Size
<hh:mm:ss>	hh: 0-23, mm: 0-59, ss: 0-59.	string	

execute traceroute

Traceroute {IP|hostname}.

```
execute traceroute <dest>
```

Parameter	Description	Type	Size
<dest>	IP address or hostname.	string	

execute traceroute-options

traceroute-options

This topic includes the following commands:

- [execute traceroute-options device on page 3718](#)
- [execute traceroute-options queries on page 3718](#)
- [execute traceroute-options reset on page 3718](#)

- [execute traceroute-options vrf on page 3719](#)

execute traceroute-options device

Auto | <iface>.

```
execute traceroute-options device <string>
```

Parameter	Description	Type	Size
<string>	Auto <iface>	string	

execute traceroute-options queries

Integer value to specify number of queries per hop.

```
execute traceroute-options queries <integer>
```

Parameter	Description	Type	Size
<integer>	Integer value [1, 10].	string	

execute traceroute-options reset

Reset settings.

```
execute traceroute-options reset
```

execute traceroute-options source

Auto | <source interface IP>.

```
execute traceroute-options source <string>
```

Parameter	Description	Type	Size
<string>	Auto <source interface IP>.	string	

execute traceroute-options use-sdwan

Use SD-WAN rules to get output interface <yes | no>.

```
execute traceroute-options use-sdwan <string>
```

Parameter	Description	Type	Size
<string>	<yes no>.	string	

execute traceroute-options view-settings

View the current options of traceroute.

```
execute traceroute-options view-settings
```

execute traceroute-options vrf

VRF ID.

```
execute traceroute-options vrf <integer>
```

Parameter	Description	Type	Size
<integer>	<0-511>	string	

execute tracert6

Traceroute for IPv6.

```
execute tracert6
```

execute update-av

Update AV engine/definitions.

```
execute update-av
```

execute update-eip

Update external IP.

```
execute update-eip
```

execute update-external-resource

Download external resource.

```
execute update-external-resource <name>
```

Parameter	Description	Type	Size
<name>	External resource name	string	

execute update-ffdb-on-demand

Update ondemand FFDB from FDS.

```
execute update-ffdb-on-demand
```

execute update-geo-ip

Update IP Geography DB.

```
execute update-geo-ip
```

execute update-ips

Update IPS engine/definitions.

```
execute update-ips
```

execute update-now

Update now.

```
execute update-now
```

execute update-src-vis

Update src-vis object.

```
execute update-src-vis
```

execute upd-vd-license

Update VDOM license.

```
execute upd-vd-license <license key>
```

Parameter	Description	Type	Size
<license key>	VDOM license key.	string	

execute upload

upload

This topic includes the following commands:

- [execute upload config ftp on page 3721](#)
- [execute upload config tftp on page 3722](#)
- [execute upload image ftp on page 3722](#)
- [execute upload image tftp on page 3723](#)
- [execute upload report-img ftp on page 3723](#)
- [execute upload report-img tftp on page 3723](#)

execute upload config ftp

Load config file from FTP server.

```
execute upload config ftp <string> <comment> <ftp server>[:ftp port] <Enter>|<user> <passwd>  
<Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	Configure file name(path) on the remote server.	string	
<comment>	comments	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter> <passwd>	Password may be needed to restore.	string	

execute upload config tftp

Load config from TFTP server to local disk.

```
execute upload config tftp <string> <comment> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<comment>	comments	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute upload image ftp

Load image from FTP server.

```
execute upload image ftp <string> <comment> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Image file name(path) on the remote server.	string	
<comment>	comments	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute upload image tftp

Load image from TFTP server to local disk.

```
execute upload image tftp <string> <comment> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<comment>	comments	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute upload report-img ftp

upload report image file from ftp server

```
execute upload report-img ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd> <Enter>
```

Parameter	Description	Type	Size
<string>	Image file name(path) on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	
<Enter>		string	

execute upload report-img tftp

upload report image file from tftp server

```
execute upload report-img tftp <string> <tftp server> <Enter>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<Enter>		string	

execute vm-license

Download VM license from FortiCare.

```
execute vm-license <token> <proxy>
```

Parameter	Description	Type	Size
<token>	VM License Token.	string	
<proxy>	HTTP Proxy URL.	string	

execute vm-license-options

vm-license-options

This topic includes the following commands:

- [execute vm-license-options account-id on page 3724](#)
- [execute vm-license-options account-password on page 3724](#)
- [execute vm-license-options count on page 3725](#)
- [execute vm-license-options government on page 3725](#)
- [execute vm-license-options interval on page 3725](#)
- [execute vm-license-options proxy on page 3725](#)
- [execute vm-license-options reset on page 3726](#)
- [execute vm-license-options show on page 3726](#)
- [execute vm-license-options token on page 3726](#)

execute vm-license-options account-id

Account ID.

```
execute vm-license-options account-id <string>
```

Parameter	Description	Type	Size
<string>	Account ID.	string	

execute vm-license-options account-password

Account password.

```
execute vm-license-options account-password <string>
```

Parameter	Description	Type	Size
<string>	Account password.	string	

execute vm-license-options count

FortiFlex license download count (default=1, 0 means infinite).

```
execute vm-license-options count <integer>
```

Parameter	Description	Type	Size
<integer>	API call count.	string	

execute vm-license-options government

For government use <yes | no>.

```
execute vm-license-options government <string>
```

Parameter	Description	Type	Size
<string>	<yes no>.	string	

execute vm-license-options interval

FortiFlex license download interval (1-3600 sec, default=60).

```
execute vm-license-options interval <integer>
```

Parameter	Description	Type	Size
<integer>	API call interval.	string	

execute vm-license-options proxy

HTTP proxy URL.

```
execute vm-license-options proxy <string>
```

Parameter	Description	Type	Size
<string>	HTTP proxy URL.	string	

execute vm-license-options reset

Reset options.

```
execute vm-license-options reset
```

execute vm-license-options show

Show options.

```
execute vm-license-options show
```

execute vm-license-options token

Token.

```
execute vm-license-options token <string>
```

Parameter	Description	Type	Size
<string>	Token.	string	

execute vpn

vpn

This topic includes the following commands:

execute vpn certificate ca export tftp

Export CA certificate to a TFTP server.

```
execute vpn certificate ca export tftp <string> <string> <ip>
```

Parameter	Description	Type	Size
<string>	CA certificate name.	string	
<string>	File name on the TFTP server.	string	
<ip>	IP address of TFTP server.	string	

execute vpn certificate ca import auto

Import CA certificate via SCEP.

```
execute vpn certificate ca import auto <string> <string> <ip> <fingerprint>
```

Parameter	Description	Type	Size
<string>	URL of the CA server.	string	
<string>	CA Identifier (optional).	string	
<ip>	Source-IP for communications to the CA server (optional).	string	
<fingerprint>	Fingerprint for authenticating CA certificate from server (optional).	string	

execute vpn certificate ca import bundle

Import certificate bundle from a TFTP server.

```
execute vpn certificate ca import bundle <string> <ip>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<ip>	IP address of TFTP server.	string	

execute vpn certificate ca import est

Import CA certificate via EST.

```
execute vpn certificate ca import est <string> <string> <string> <string> <ip> <string> <string>  
<string> <string>
```

Parameter	Description	Type	Size
<string>	URL of the CA server. (e.g. https://example.com:1234).	string	
<string>	CA Identifier (optional).	string	
<string>	Verify CA server using this certificate (optional).	string	
<string>	Client certificate (optional).	string	
<ip>	Source-IP for communications to the CA server (optional).	string	
<string>	TLS-SRP Username (optional).	string	
<string>	TLS-SRP Password (optional).	string	
<string>	HTTP Authentication Username (optional).	string	
<string>	HTTP Authentication Password (optional).	string	

execute vpn certificate ca import tftp

Import CA certificate from a TFTP server.

```
execute vpn certificate ca import tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute vpn certificate crl import auto

Update CRL.

```
execute vpn certificate crl import auto <string>
```

Parameter	Description	Type	Size
<string>	CRL name.	string	

execute vpn certificate ems_ca import tftp

Import Testing EMS CA certificate from a TFTP server.

```
execute vpn certificate ems_ca import tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute vpn certificate hsm-local gch-get-versions

List available crypto-key-versions.

```
execute vpn certificate hsm-local gch-get-versions <string> <string>
```

Parameter	Description	Type	Size
<string>	hsm-local certificate name.	string	
<string>	Access token or JSON Web Token to be used as bearer token in request.	string	

execute vpn certificate hsm-local status

Status check for an hsm-local certificate.

```
execute vpn certificate hsm-local status <string> <string>
```

Parameter	Description	Type	Size
<string>	hsm-local certificate name.	string	
<string>	Access token or JSON Web Token to be used as bearer token in request.	string	

execute vpn certificate hsm-local verify

Verify between hsm-local certificate and its private key.

```
execute vpn certificate hsm-local verify <string> <string>
```

Parameter	Description	Type	Size
<string>	hsm-local certificate name.	string	
<string>	Access token or JSON Web Token to be used as bearer token in request.	string	

execute vpn certificate local export tftp

Export local certificate or certificate request to a TFTP server.

```
execute vpn certificate local export tftp <string> <string> <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	Local certificate name.	string	
<string>	Certificate file type ('cer' 'p12' 'csr').	string	
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute vpn certificate local generate cmp-ec

Generate a ECDSA certificate request over CMPv2.

```
execute vpn certificate local generate cmp-ec <string> <string> <string> <string> <string>
<string> <string> <string> <string> <string> <ip>
```

Parameter	Description	Type	Size
<string>	Local certificate name.	string	
<string>	Elliptic curve name: secp256r1, secp384r1 and secp521r1.	string	
<string>	Server ('ADDRESS:PORT' for CMP server).	string	
<string>	Path (Path location inside CMP server)	string	
<string>	SrvCert (CMDB name of CMP server's certificate/root-CA)	string	
<string>	AuthCert (CMDB name of client's current certificate)	string	
<string>	User (Username for doing the IR with a pre-shared key)	string	
<string>	Password (Password for doing the IR with a pre-shared key)	string	
<string>	Subject (optional, e.g. "CN=User,O=Org,OU=Unit").	string	
<string>	Subject alternative name (optional, e.g. "DNS:dns1.com,IP:192.168.1.99").	string	
<ip>	Source-IP for communications to the CMP server (optional).	string	

execute vpn certificate local generate cmp-rsa

Generate a RSA certificate request over CMPv2.

```
execute vpn certificate local generate cmp-rsa <string> <number> <string> <string> <string>
<string> <string> <string> <string> <string> <ip>
```

Parameter	Description	Type	Size
<string>	Local certificate name.	string	
<number>	Key size: 1024, 1536, 2048, 4096.	string	
<string>	Server ('ADDRESS:PORT' for CMP server, add 'https://' before address to enable ssl/tls).	string	
<string>	Path (Path location inside CMP server)	string	
<string>	SrvCert (CMDB name of CMP server's certificate/root-CA)	string	
<string>	AuthCert (CMDB name of client's current certificate)	string	
<string>	User (Username for doing the IR with a pre-shared key)	string	

Parameter	Description	Type	Size
<string>	Password (Password for doing the IR with a pre-shared key)	string	
<string>	Subject (optional, e.g. "CN=User,O=Org,OU=Unit").	string	
<string>	Subject alternative name (optional, e.g. "DNS:dns1.com,IP:192.168.1.99").	string	
<ip>	Source-IP for communications to the CMP server (optional).	string	

execute vpn certificate local generate default-gui-mgmt-cert

Generate the default GUI mgmt admin-server certificate.

```
execute vpn certificate local generate default-gui-mgmt-cert
```

execute vpn certificate local generate default-ssl-ca

Generate the default CA certificate used by SSL Inspection.

```
execute vpn certificate local generate default-ssl-ca
```

execute vpn certificate local generate default-ssl-ca-untrusted

Generate the default untrusted CA certificate used by SSL Inspection.

```
execute vpn certificate local generate default-ssl-ca-untrusted
```

execute vpn certificate local generate default-ssl-key-certs

Generate the default RSA, DSA and ECDSA key certs for ssl resign.

```
execute vpn certificate local generate default-ssl-key-certs
```

execute vpn certificate local generate default-ssl-serv-key

Generate the default server key used by SSL Inspection.

```
execute vpn certificate local generate default-ssl-serv-key
```

execute vpn certificate local generate ec

Generate an elliptic curve certificate request.

```
execute vpn certificate local generate ec <string> <string> <string> <string> <string> <string>
<string> <string> <string> <string> <string> <string> <ip> <string> <string> <string> <string>
```

Parameter	Description	Type	Size
<string>	Local certificate name.	string	
<string>	Elliptic curve name: secp256r1, secp384r1 and secp521r1.	string	
<string>	Subject (Host IP/Domain Name/E-Mail).	string	
<string>	Country name (e.g. Canada) or country code (e.g. ca).	string	
<string>	State.	string	
<string>	City.	string	
<string>	Org.	string	
<string>	Unit(s); ',' as delimiter.	string	
<string>	Email.	string	
<string>	Subject alternative name (optional).	string	
<string>	URL of the CA server for signing via SCEP (optional).	string	
<string>	Challenge password for signing via SCEP (optional).	string	
<ip>	Source-IP for communications to the CA server (optional).	string	
<string>	CA identifier of the CA server for signing via SCEP (optional).	string	
<string>	Password for private-key (optional).	string	
<string>	Installed CA certificate for generating fingerprint for validating CA from SCEP server (optional).	string	
<string>	Fingerprint for authenticating CA certificate from SCEP server. Ignored if valid CA for generating fingerprint is specified (optional).	string	

execute vpn certificate local generate est

Generate an certificate via Enrollment over Secure Transport.

```
execute vpn certificate local generate est <string> <string> <string> <string> <string> <string>
<string> <string> <string> <string> <string> <ip> <string> <string>
```

Parameter	Description	Type	Size
<string>	Local certificate name.	string	
<string>	Cryptography algorithm: rsa-1024, rsa-1536, rsa-2048, rsa-4096, ec-secp256r1, ec-secp384r1, ec-secp521r1	string	
<string>	URL of the CA server. (e.g. https://example.com:1234).	string	
<string>	Subject (optional, e.g. "CN=User,O=Org,OU=Unit").	string	
<string>	Subject alternative name (optional, e.g. "DNS:dns1.com,IP:192.168.1.99").	string	
<string>	HTTP Authentication Username (optional).	string	
<string>	HTTP Authentication Password (optional).	string	
<string>	CA Identifier (optional).	string	
<string>	CA Server certificate (optional).	string	
<string>	Password for private-key (optional).	string	
<string>	Client certificate (optional).	string	
<ip>	Source-IP for communications to the CA server (optional).	string	
<string>	TLS-SRP Username (optional).	string	
<string>	TLS-SRP Password (optional).	string	

execute vpn certificate local generate rsa

Generate a RSA certificate request.

```
execute vpn certificate local generate rsa <string> <number> <string> <string> <string> <string>
<string> <string> <string> <string> <string> <string> <ip> <string> <string> <string> <string>
```

Parameter	Description	Type	Size
<string>	Local certificate name.	string	
<number>	Key size: 1024, 1536, 2048, 4096.	string	
<string>	Subject (Host IP/Domain Name/E-Mail).	string	

Parameter	Description	Type	Size
<string>	Country name (e.g. Canada) or country code (e.g. ca).	string	
<string>	State.	string	
<string>	City.	string	
<string>	Org.	string	
<string>	Unit(s); ',' as delimiter.	string	
<string>	Email.	string	
<string>	Subject alternative name (optional).	string	
<string>	URL of the CA server for signing via SCEP (optional).	string	
<string>	Challenge password for signing via SCEP (optional).	string	
<ip>	Source-IP for communications to the CA server (optional).	string	
<string>	CA identifier of the CA server for signing via SCEP (optional).	string	
<string>	Password for private-key (optional).	string	
<string>	Installed CA certificate for generating fingerprint for validating CA from SCEP server (optional).	string	
<string>	Fingerprint for authenticating CA certificate from SCEP server. Ignored if valid CA for generating fingerprint is specified (optional).	string	

execute vpn certificate local import tftp

Import the signed certificate from a TFTP server.

```
execute vpn certificate local import tftp <string> <tftp server> <string> <Enter>|<passwd>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	
<string>	Certificate file type ('cer' 'p12').	string	
<Enter> <passwd>	Password for PKCS12 file.	string	

execute vpn certificate local verify

Verify certificate and private key files match and regenerate if mismatched.

```
execute vpn certificate local verify <string>
```

Parameter	Description	Type	Size
<string>	Local certificate name.	string	

execute vpn certificate remote export tftp

Export REMOTE certificate to a TFTP server.

```
execute vpn certificate remote export tftp <string> <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	REMOTE certificate name.	string	
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute vpn certificate remote import tftp

Import REMOTE certificate from a TFTP server.

```
execute vpn certificate remote import tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute vpn ikecrypt dhperf compute

Run DH generate and compute benchmark.

```
execute vpn ikecrypt dhperf compute <rounds>
```

Parameter	Description	Type	Size
<rounds>	Number of DH generate and compute rounds to perform per group <1-100000>.	string	

execute vpn ikecrypt dhperf generate

Run DH generate benchmark.

```
execute vpn ikecrypt dhperf generate <rounds>
```

Parameter	Description	Type	Size
<rounds>	Number of DH generate rounds to perform per group <1-100000>.	string	

execute vpn ipsec tunnel down

Shut down the specified IPsec tunnel.

```
execute vpn ipsec tunnel down <phase2> <phase1> <serial>
```

Parameter	Description	Type	Size
<phase2>	Phase2 name.	string	
<phase1>	Phase1 name.	string	
<serial>	Phase2 serial number.	string	

execute vpn ipsec tunnel up

Activate the specified IPsec tunnel.

```
execute vpn ipsec tunnel up <phase2> <phase1> <serial>
```

Parameter	Description	Type	Size
<phase2>	Phase2 name.	string	
<phase1>	Phase1 name.	string	
<serial>	Phase2 serial number.	string	

execute vpn sslvpn del-all

Delete all connections under current VDOM.

```
execute vpn sslvpn del-all <tunnel>
```

Parameter	Description	Type	Size
<tunnel>	Press <Enter> to delete all or type "tunnel" to delete session only.	string	

execute vpn sslvpn del-tunnel

Delete session connection.

```
execute vpn sslvpn del-tunnel <index>
```

Parameter	Description	Type	Size
<index>	Session index.	string	

execute vpn sslvpn del-web

Delete web connection.

```
execute vpn sslvpn del-web <index>
```

Parameter	Description	Type	Size
<index>	Web index.	string	

execute vpn sslvpn list

List connections.

```
execute vpn sslvpn list <web|tunnel>
```

Parameter	Description	Type	Size
<web tunnel>	Web or session.	string	

execute wake-on-lan

Wake On LAN command.

```
execute wake-on-lan <interface> <host-mac> <protocol> <port> <ip> <password>
```

Parameter	Description	Type	Size
<interface>	Network interface to send out WoL packets.	string	
<host-mac>	Host MAC address to be woken up.	string	
<protocol>	Protocol used by WoL packets (1-WoL, 2-UDP, default = 2).	string	
<port>	Port used by UDP WoL packets, (0, 7, or 9, default = 9).	string	
<ip>	Broadcast IP used by UDP WoL packets.	string	
<password>	Password of the destination host if SecureOn is enabled.	string	

execute webcache

webcache

This topic includes the following commands:

- [execute webcache delete regular-expression on page 3739](#)
- [execute webcache delete simple-string on page 3739](#)
- [execute webcache delete status on page 3740](#)
- [execute webcache delete wildcard on page 3740](#)

execute webcache delete regular-expression

Delete objects matching a regular expression in webcache.

```
execute webcache delete regular-expression <pattern>
```

Parameter	Description	Type	Size
<pattern>	Pattern.	string	

execute webcache delete simple-string

Delete objects matching a simple string in webcache.

```
execute webcache delete simple-string <pattern>
```

Parameter	Description	Type	Size
<pattern>	Pattern.	string	

execute webcache delete status

Query pattern deletion status.

```
execute webcache delete status
```

execute webcache delete wildcard

Delete objects matching a wildcard in webcache.

```
execute webcache delete wildcard <pattern>
```

Parameter	Description	Type	Size
<pattern>	Pattern.	string	

execute webfilter

webfilter

This topic includes the following commands:

- [execute webfilter quota-reset on page 3740](#)

execute webfilter quota-reset

Reset the WF quota for a given user.

```
execute webfilter quota-reset <wf-profile> <endpoint>
```

Parameter	Description	Type	Size
<wf-profile>	Web filter profile.	string	
<endpoint>	Authenticated user or IP address.	string	

execute wireless-controller

wireless-controller

This topic includes the following commands:

- [execute wireless-controller create-sae-pk on page 3741](#)
- [execute wireless-controller delete-wtp-image on page 3741](#)
- [execute wireless-controller hs20-icon backup-icon ftp on page 3742](#)
- [execute wireless-controller hs20-icon backup-icon tftp on page 3742](#)
- [execute wireless-controller hs20-icon delete-hs-icon on page 3742](#)
- [execute wireless-controller hs20-icon list-hs-icon on page 3742](#)
- [execute wireless-controller hs20-icon upload-icon ftp on page 3743](#)
- [execute wireless-controller hs20-icon upload-icon tftp on page 3743](#)
- [execute wireless-controller led-blink on page 3743](#)
- [execute wireless-controller list-wtp-image on page 3743](#)
- [execute wireless-controller mpsk-key create-keys on page 3744](#)
- [execute wireless-controller push-wtp-image on page 3744](#)
- [execute wireless-controller reset-wtp on page 3744](#)
- [execute wireless-controller restart-acd on page 3745](#)
- [execute wireless-controller rolling-wtp-upgrade on page 3745](#)
- [execute wireless-controller spectral-scan on page 3745](#)
- [execute wireless-controller upload-wtp-image ftp on page 3745](#)
- [execute wireless-controller upload-wtp-image tftp on page 3746](#)

execute wireless-controller create-sae-pk

Create SAE PK keys.

```
execute wireless-controller create-sae-pk <string> <string>
```

Parameter	Description	Type	Size
<string>	SSID.	string	
<string>	Curve: prime256v1 secp384r1 secp521r1.	string	

execute wireless-controller delete-wtp-image

Delete WTP images.

```
execute wireless-controller delete-wtp-image <all>|<all-pushing>|<image-name>
```

Parameter	Description	Type	Size
<all> <all-pushing> <image-name>	Delete all images or specific image.	string	

execute wireless-controller hs20-icon backup-icon ftp

Backup a hotspot icon to FTP server.

```
execute wireless-controller hs20-icon backup-icon ftp <string> <ftp server>[:ftp port]  
<Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Icon file name on AC.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute wireless-controller hs20-icon backup-icon tftp

Backup a hotspot icon to TFTP server.

```
execute wireless-controller hs20-icon backup-icon tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	Icon file name on AC.	string	
<tftp server>	IP/IPv6 or FQDN address of TFTP server.	string	

execute wireless-controller hs20-icon delete-hs-icon

Delete hotspot icons.

```
execute wireless-controller hs20-icon delete-hs-icon
```

execute wireless-controller hs20-icon list-hs-icon

List hotspot icons.

```
execute wireless-controller hs20-icon list-hs-icon
```

execute wireless-controller hs20-icon upload-icon ftp

Upload a hotspot icon from FTP server.

```
execute wireless-controller hs20-icon upload-icon ftp <string> <ftp server>[:ftp port]  
<Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	Icon file name on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute wireless-controller hs20-icon upload-icon tftp

Upload a hotspot icon from TFTP server.

```
execute wireless-controller hs20-icon upload-icon tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	Icon file name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

execute wireless-controller led-blink

Blink status LED or power LED of managed FortiAP.

```
execute wireless-controller led-blink <wtp-id> <mode> <duration>
```

Parameter	Description	Type	Size
<wtp-id>	WTP ID.	string	
<mode>	[on off]	string	
<duration>	Blink duration in seconds (0 = unlimited).	string	

execute wireless-controller list-wtp-image

List WTP images.

```
execute wireless-controller list-wtp-image
```

execute wireless-controller mpsk-key create-keys

Create random MPSK keys.

```
execute wireless-controller mpsk-key create-keys <string> <string> <string> <string> <int> <int>
```

Parameter	Description	Type	Size
<string>	VDOM.	string	
<string>	MPSK profile name.	string	
<string>	MPSK group name.	string	
<string>	Key prefix.	string	
<int>	Key count.	string	
<int>	Key length.	string	

execute wireless-controller push-wtp-image

Push WTP image to a managed WTP.

```
execute wireless-controller push-wtp-image <vdom> <wtp-id> <filename>
```

Parameter	Description	Type	Size
<vdom>	WTP session VDOM.	string	
<wtp-id>	WTP ID.	string	
<filename>	WTP image filename.	string	

execute wireless-controller reset-wtp

Restart managed WTP.

```
execute wireless-controller reset-wtp <all>|<SN>|<wtp-group>
```

Parameter	Description	Type	Size
<all> <SN> <wtp-group>	WTP serial number or WTP group.	string	

execute wireless-controller restart-acd

Restart wireless controller daemon.

```
execute wireless-controller restart-acd
```

execute wireless-controller rolling-wtp-upgrade

Rolling upgrade managed WTP.

```
execute wireless-controller rolling-wtp-upgrade <all>|<SN>|<wtp-group>
```

Parameter	Description	Type	Size
<all> <SN> <wtp-group>	WTP serial number or WTP group.	string	

execute wireless-controller spectral-scan

Enable/disable spectral scan.

```
execute wireless-controller spectral-scan <wtp-id> <radio-id> <mode> <duration> <channel> <report-interval>
```

Parameter	Description	Type	Size
<wtp-id>	WTP ID.	string	
<radio-id>	Radio ID	string	
<mode>	[on off scan-only keep-alive clear]	string	
<duration>	Spectrum scan duration in seconds (0 = unlimited).	string	
<channel>	Spectrum scan channels separated by commas. (0 or empty = all supported channels).	string	
<report-interval>	Time between two spectral reports from the AP in millisecond (<min> - <max>, 0 or empty = 1000ms).	string	

execute wireless-controller upload-wtp-image ftp

Upload a WTP image from FTP server.

```
execute wireless-controller upload-wtp-image ftp <string> <ftp server>[:ftp port] <Enter>|<user> <passwd>
```

Parameter	Description	Type	Size
<string>	WTP image file name on the remote server.	string	
<ftp server>[:ftp port]	FTP server IPv4, IPv6, or FQDN can be attached with port.	string	
<Enter> <user>	FTP username may be needed.	string	
<passwd>	FTP password.	string	

execute wireless-controller upload-wtp-image tftp

Upload a WTP image from TFTP server.

```
execute wireless-controller upload-wtp-image tftp <string> <tftp server>
```

Parameter	Description	Type	Size
<string>	File name on the TFTP server.	string	
<tftp server>	TFTP server IPv4, IPv6, or FQDN.	string	

Included devices

This reference includes commands from the following FortiGate model:

- FortiGate-1000D
- FortiGate-1000F
- FortiGate-1001F
- FortiGate-100F
- FortiGate-101F
- FortiGate-1100E
- FortiGate-1101E
- FortiGate-120G
- FortiGate-121G
