- [What's new on page 5](#)

Supported FortiManager host models

For a list of FortiManager models that can host SD-WAN Orchestrator MEA 7.0.0.r1 management extension application and minimum system requirements, see the [FortiManager 7.0.0 Release Notes](#).

Licensing

SD-WAN Orchestrator MEA requires the following license:

- 360 FortiGate Protection or SD-WAN Orchestrator Entitlement License

SD-WAN Orchestrator MEA does not include a free license.

What's new

No new features are available with SD-WAN Orchestrator MEA 7.0.0.r1.

For information about what's new in FortiManager 7.0, see the [FortiManager 7.0 New Features Guide](#).

Special Notices

This section highlights some of the operational changes that administrators should be aware of in SD-WAN Orchestrator MEA 7.0.0.r1.

- [FortiSwitch profiles on page 6](#)

FortiSwitch profiles

If SD-WAN Orchestrator MEA prompts an exception when changing the profile of a device as reported in issue 064530, check if the two profiles meet the following conditions:

1. Compare VLANs in interface FortiLink with these two profiles, and check if there are VLANs that own same VLAN ID.
2. Compare VLANs in same interface (except interface FortiLink) with these two profiles, and check if there are VLANs that own same name, but have different VLAN IDs.
3. Compare VLANs in different interfaces (except interface FortiLink) with these two profiles, and check if there are VLANs that own same name.

Workaround:

1. Make sure the device is synchronized, and then enable the *override device LAN* setting.
2. Release resources (for example, IP pool, DHCP server, and so on) used by VLANs (except default, video, voice, rspan, onboarding, quarantine) in interface FortiLink.
3. Release resources used by VLANs that meet condition 2 above, and then delete these VLANs.
4. Release resources used by VLANs that meet condition 3 above, and then delete these VLANs.
5. Disable Switch/AP configuration in *Device LAN setting* page.
6. Wait 5-10 minutes until device's configuration state becomes *Modified*, and then trigger a manual deployment.
7. When device is synchronized, change profile.
8. After changing the profile, disable *override device LAN* setting.

Upgrade Information

Upgrade of SD-WAN Orchestrator MEA 6.4.1.r6 to 7.0.0.r1 is supported.

You must be in a 6.4 ADOM to access SD-WAN Orchestrator MEA. 6.4.1.rx.

When you upgrade FortiManager from 6.4.x to 7.0.0, SD-WAN Orchestrator MEA upgrades automatically to 7.0.0.r1.

If you upgraded to FortiManager 7.0.0 before SD-WAN Orchestrator MEA 7.0.0.r1 was released, you can manually upgrade SD-WAN Orchestrator MEA to 7.0.0.r1.

This section covers the following upgrade scenarios:

- [Upgrading SD-WAN Orchestrator MEA automatically on page 7](#)
- [Upgrading SD-WAN Orchestrator MEA manually on page 7](#)

Upgrading SD-WAN Orchestrator MEA automatically

In this scenario, you are starting the upgrade with the following items:

- FortiManager 6.4.x
- SD-WAN Orchestrator MEA 6.4.1.r6

To upgrade SD-WAN Orchestrator MEA:

1. Upgrade FortiManager to 7.0.0.
After FortiManager reboots, SD-WAN Orchestrator MEA is automatically upgraded to 7.0.0.r1.

Upgrading SD-WAN Orchestrator MEA manually

You can manually trigger an upgrade of SD-WAN Orchestrator MEA by using the GUI.

In this scenario, you are starting the upgrade with the following items:

- FortiManager 7.0.0
- SD-WAN Orchestrator MEA 6.4.1.r6

Although you can run SD-WAN Orchestrator MEA 6.4.1.r6 with FortiManager 7.0.0 and FortiGates running FortiOS 6.4.x in ADOM version 6.4, it is recommended to use FortiManager 7.0.0 and FortiGates running FortiOS 7.0.0 with SD-WAN Orchestrator MEA 7.0.0.r1.
