Integration Guide

Intro

Use this guide to add Sentry as a secure application in FortiCASB-SSPM's SaaS Security platform.

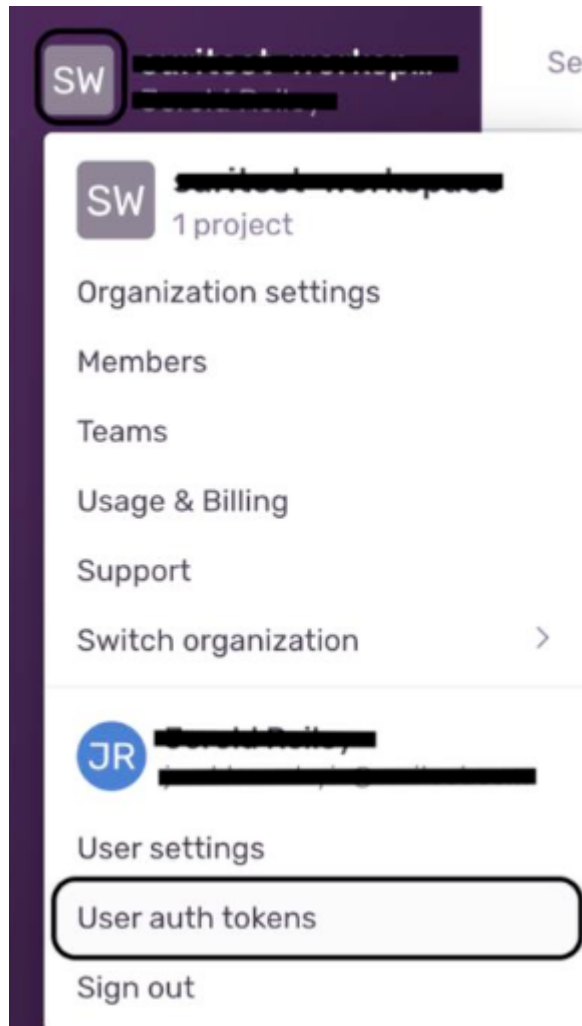

Part A: Preparing the Needed Parameters

1. Login to your Sentry account.

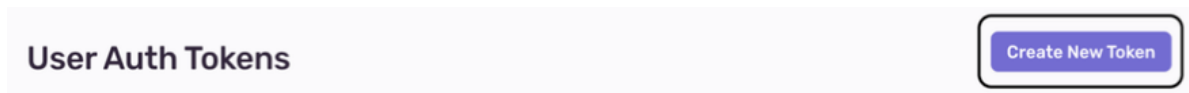

2. Navigate to User Auth Tokens Settings:

1. On the upper left corner, click on your organization icon and then under your user section click on "User auth tokens".

2. In the User Auth Tokens click on "Create New Token".

3. Give the new token a name and add the relevant scopes (member:read, org:read) and then click "Create Token":

4. Copy the Token's value and save it somewhere safe.

Create New User Auth Token

Authentication tokens allow you to perform actions against the Sentry API on behalf of your account. They're the easiest way to get started using the API.

For more information on how to use the web API, see our [documentation](#).

GENERAL

Name
A name to help you identify this token.

Suridata User Token

PERMISSIONS

Project
Projects, Tags, Debug Files, and Feedback

No Access

Team
Teams of members

No Access

Release
Releases, Commits, and related Files

No Access

Issue & Event
Issues, Events, and workflow statuses

No Access

Organization
Manage Organizations, resolve IDs, retrieve Repositories and Commits

Create New User Auth Token

Authentication tokens allow you to perform actions against the Sentry API on behalf of your account. They're the easiest way to get started using the API.

For more information on how to use the web API, see our [documentation](#).

⚠ Please copy this token to a safe place – it won't be shown again!

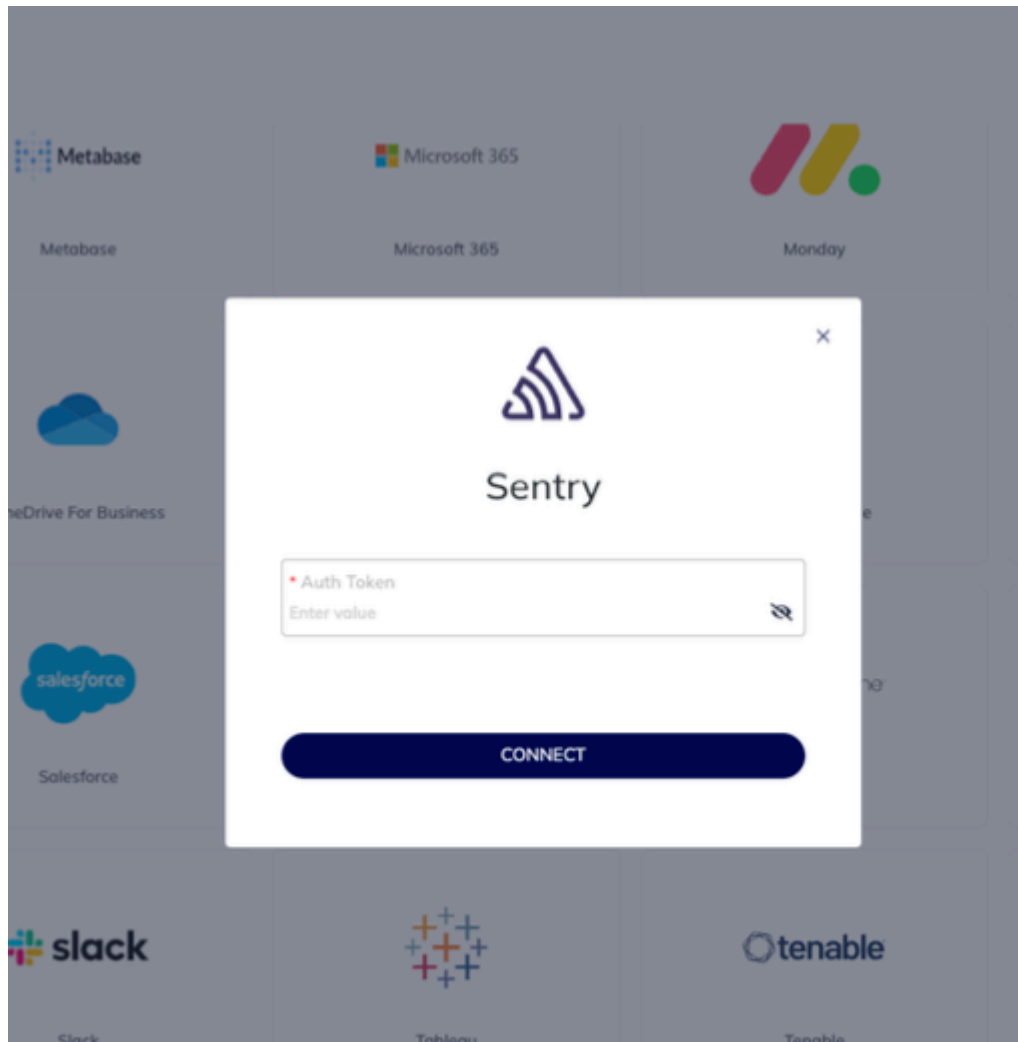

Token
You can only view this token when it was created.

665 [REDACTED]

Done

Part B: Entering the Parameters in FortiCASB-SSPM Product UI

1. Login to FortiCASB-SSPM > Navigate to the App Store > Click on Sentry

2. Enter the following parameters:

1. Auth Token:

- User Auth Token

3. Press "Connect"

That's it! You're all set.

Your SaaS security is our priority!
