

FortiCamera Mobile Release Notes

- **Activity Search** — Search historical camera events by face, vehicle, or license plate, and filter by camera, site, and time range.
- **Camera Audio** — Live camera streams with audio now include a mute/unmute button. The mute button automatically hides after a moment.
- **Adaptive Layout** — Improved UI layout for tablet screen sizes.
- **Camera Favorites** — Cameras can be starred and accessed via a dedicated Favorites tab.
- **Skip to Event** — Tap the video player to show previous/next buttons, then tap the button to jump to the motion detection on the timeline.
- **15 Second Seek** — Tap the video player to show rewind/fast forward buttons.
- **Recording Events on Timeline** — Gaps in recording are now shown on the timeline.
- **Filter Bar** — Organization/site/camera filter bar can be used in all tabs.
- **Dashboard Refresh and Detail** — Pull to refresh the Dashboard tab. Tap a status to show a list of cameras with that status.
- **API Compatibility Check** — Prompts the user to update the app if the server API version is not supported.
- **Force Refresh Snapshot** — Tap the refresh icon on a camera snapshot to manually trigger a snapshot refresh.
- **Swipe Between Cameras** — Swipe left/right on the camera video player to move to the previous or next camera.
- **Push Notification Navigation (iOS)** — Tap a push notification to go directly to the alert, even when the app is fully quit.
- **New Color Theme** — Updated dark color theme is now available.
- **System Language** — Language settings now include a "System" option to use the same language as iOS or Android if possible.
- **Localization** — All previously hard-coded UI strings are now localized.
