

## Softclient for Android 7.0.9 Release Notes

This document provides a summary of new features, support information, and upgrade instructions in this FortiFone Softclient for Android 7.0.9 release, build 207.

### Special notices

- Bluetooth connectivity is supported in most vehicles.
- Smart watches are not supported currently.

### Supported platforms

FortiVoice phone system and FortiVoice Cloud support the FortiFone Softclient for Android 7.0.9 release.

The FortiFone Softclient for Android 7.0.9 release has the following platform requirements:

- FortiVoice phone system using firmware version 7.0.8 GA and later.
- Operating system Android version 9.0 and later.

### Upgrade information

To update to the latest FortiFone Softclient for Android release, visit the [Google Play Store](#).

### What's new

The following features are being introduced in the FortiFone Softclient for Android 7.0.9 release:

## Chat

"Last seen" information is now available for chat contacts who are offline. Users can view this information in a chat conversation in the top bar of the app.

## Video calling

Users can place and receive video calls. Administrators must enable the H.264 video codec in the FortiVoice GUI:

1. Go to **Phone System > Profile > SIP > New > Mobile**.
2. In the **SIP Profile** dialog, under **Codec**, add H.264 to the **Video** setting.

After the administrator has made this setting, when a user begins to enter a number in the dialpad of FortiFone Softclient for mobile, the video icon appears, allowing them to place a video call to the callee.

For more information, see the section **Placing a call** in the Softclient for Android 7.0.9 [User Guide](#).

## Resolved issues

The following issue is fixed in this release:

Bug ID: 1234894—No audio while mobile softclient is using IPv6 in SIP header/SDP.
